There is mystery in this exhortation. This cleaving is an unseen thing. But it need not on that account seem strange. We meet with equal mysteries in nature. I have seen a heavy piece of solid iron hanging on another, not welded, not linked, not glued to the spot; and yet it cleaved

with such tenacity as to bear not only its own weight, but mine too, if I chose to seize it, and hang upon it. A wire charged with an electric current is in contact with its mass, and hence its adhesion. Cut that wire through, or remove it by a hair's-breadth, and the piece of iron drops dead to the ground, like any other unsupported weight. A stream of life from the Lord, in contact with a human spirit, keeps that spirit cleaving to the Lord so firmly, that no power in earth or hell can wrench the two asunder. From Christ the mysterious life-stream flows; through the being of a disciple it spreads, and to the Lord it returns again. In that circle the feeblest Christian is held safely; but if the circle be broken, the dependent spirit instantly drops off.

The phraseology of the Evangelist designates the “heart” as the point of contact in this cleaving. Here the Scripture coincides with the laws of nature. All moral attractions hold by the heart. The connecting link is love. We love him because he first loved us. They who propose to keep a human being close to God in a conscientious obedience, by brandishing the terrors of the judgment in his face, misunderstand the essential principles of the case. They turn the wrong pole of the magnet to the steel, and thereby repel, instead of attracting it. You may as well expect a stone to rise from the ground spontaneously, and float in the air, as expect that a human being will cleave to the Lord whom he dreads. I cannot keep close to Christ until I learn to love him, and I cannot learn to love him until I see that he offers his love to me. When he holds me by my heart, he holds me fast, and holds me for ever.

But there must be “purpose” or predetermination as well as love, in order to attain a trustworthy permanent attachment. Random impulses will not suffice. There must be method even in the affections. The understanding must be engaged as well as the heart. It is not wise, it is not safe to leave our highest interests at the mercy of varying mental states, and varying mental circumstances. Frame a plan and execute it. Without forethought and method and stern resolution, we do not expect to be successful in any department of effort. In point of fact no man does business by fits and starts. Those who are bent on wealth do not grudge a sleepless night now and then, in addition to laborious days. They look far forward, and towards either side. They anticipate adverse forces, and provide the means of counteracting them. In short, the children of this world are wise in their generation, and this forethought is not their reproach but their praise. The prevalent diligence in prosecuting worldly business, is a standing reproof of negligence in matters which we confess are inconceivably more momentous. If half of the skill and forethought and perseverance which are expended in this community in the acquisition of wealth, were applied to the gains of godliness, we would soon have great treasures laid up at God's right hand. Take home that plain and tender word of the Lord Jesus, “Martha, Martha, thou art careful and troubled about many things; but one thing is needful, and Mary hath chosen that good part, which shall not be taken from her.”

W. ARNOT.

FOUR DIFFICULTIES SOLVED IN JESUS CHRIST.

BY THE EDITOR.

WHEN Jesus was on earth, he was in his own person, "Immanuel, God with us." He was "God manifest in the flesh." So that he could say of himself, "He who seeth me seeth my Father." "The Word," says the apostle John, "was God; and the Word was made flesh, and dwelt among us (and we beheld his glory, the glory as of the only begotten of the Father), full of grace and truth."

Now, while we believe that this Immanuel was God with us once, do we believe that he is God with us still? Are we not apt to think of him only as one who lived and died here eighteen centuries ago, and not as one who "was dead, and is alive, and liveth for evermore?" But when Jesus ascended up on high, he did not—blessed be his name!—leave anything less than himself to be his substitute here;—such as doctrines of religion, however true; or a system of morals, however perfect; or a book, however sacred; or a church, however holy; or a ministry, however duly appointed; or sacraments, however efficacious. He did not bestow these gifts, however precious, to be to us now what he himself, the living personal Saviour, had been to the people among whom he once lived, and whom he taught, healed, and comforted; for then, verily, should we have lost rather than have gained by his ascension, and it would not have been expedient for us that he should have gone away. Instead of rejoicing that he went to the Father, we should then be rather disposed to be very mournful, with the disciples, or to clasp his feet, as Mary did, and to retain him, if possible, among us. True it is, that he promised the living personal Sanctifier and Comforter, the Holy Ghost, who should be in us and with us for ever; but not, thereby, that Jesus himself should be forgotten, or thought of as one dead, or removed far away; or that all real personal intercourse should henceforth cease between him and his people! He sent his Spirit rather that we should abide in the Son, and know him better, and that all might possess him everywhere more truly than his disciples could have done, even while with him in the flesh. "He shall testify of me," said Jesus of the Holy Ghost; "He shall glorify me, and receive of mine, and show it unto you." The Church, therefore, does not depart from Christ during succeeding ages, as a stream departs from its fountain-head, ever increasing its distance as it flows on its way. But even as the earth revolves round the sun, and is now as near that centre and source of light and life as at creation's dawn, so is the Church, and each member of it, as near Jesus now as were the

apostles at the last supper,—or as was John when he pillowed his head upon his bosom, or stood by his cross! Christianity accordingly, as a fact without us, as a revelation to us, is the revelation by the letter and the spirit of a living person;—God in Christ, who is to us more than any one thing ever said or done by him. And Christianity, as a possession of living power within us, is supreme love to this Divine Person.

We have each of us then to do, not with a principle, but with a Person; not with a truth only, but with him who is true; not with the revelation only, but with the Revealer,—with nothing less than "Immanuel, God with us," who tests our character by this one question, "Lovest thou me?" and who guides us in our path by this one command, "Follow thou me!" How intensely did the great apostle Paul realize this, and how carefully and constantly he taught it. To him the truth of all truths—the sum and substance of all the gospel he knew, and loved, and preached, of all he rejoiced in, lived by, suffered for, and was willing to die for—was the personal Saviour, Jesus Christ and him crucified. What, for example, was the secret of his life? "I live by faith in the Son of God." "I live—yet not I—Christ liveth in me!" What was the ground of his hope of glory? "Christ in us the hope of glory." What was death? To be "without Christ." What was life? "To know him and the power of his resurrection," etc. Who were anathema? Any man "who loved not the Lord Jesus Christ." What was his future heaven? "To be with Christ." What was the theme of all his preaching? It was a person; but not Paul, or Apollos—not even Cephas the Stone—no mere man—for said he, "Let no one glory in men;" but it was *Jesus Christ*. No other foundation could any man lay than this. Everything else was put aside. "I determined not to know anything else save Jesus Christ." In one word, with him there was neither Jew nor Gentile, bond nor free, but *Christ* was all and in all! And his love and blessing were poured out on those who were like-minded—"all who loved the Lord Jesus Christ in sincerity." The Christianity of Paul is that of all time; and with us, as with him, it must consist in the *knowledge and love of a living Person, Jesus Christ*, "Immanuel, God with us," whom "not having seen we love!" "This is life eternal, to know thee, the only true God, and Jesus Christ whom thou hast sent." And the more we believe this truly, and act upon our belief, the more shall we know in our own experience how it is our very life and

strength to come into spirit-contact, so to speak, with Jesus himself—to meet him face to face—to sit at his feet, learn of him with childlike confidence and love—to cleave to him, and to abide in him. For if the difference is great between knowing only *about* a person on earth from the mere dead materials of their history, and knowing that person himself, as one who meets the varied wants of our being by fitting words and tender ministrations; equally great is the difference experienced by the man who, amidst his doubts and difficulties—his speculations, arguments, and the ceaseless Babel of human tongues and endless reasonings—discovers that there is One living who knows and understands *him* as he cannot understand himself,—who loves and has ever loved him as he cannot love himself—to whose sight he is never lost in the crowd of life—to whose heart he is never so lost as to become an object of indifference, so as to be forgotten or unknown,—and that that One is none else than Jesus his brother, but Jesus also as “Immanuel, God with us,” and with all—“the same yesterday, to-day, and for ever!”

But instead of dwelling upon the fact that Jesus is God with us now, let me illustrate by a few examples, gathered out of many from the field of Christian experience, how faith in a personal Saviour is the best method of solving difficulties, speculatively and practically.

I.

The first difficulty I notice is that of prayer. By prayer I do not mean, of course, any mere form, but a real intercourse between spirit and spirit. Now, how many have been hindered from earnest and peaceful prayer by such thoughts of God as inspired them with feelings of fear rather than of love! They have thought of him as a dread, impalpable, and mysterious Being, occupying some far-off unknown place in the universe. His throne surrounded by clouds and darkness—not as God at hand, but far off; and they have felt themselves to be unnoticed, uncared-for items amidst the vast sum of things with which they were surrounded, and themselves as parts of nature but not as children of God, and far too insignificant to call forth the regards of the Almighty Maker of the heavens and the earth, whom they could not address as their “Father in heaven.” Others, again, have been pained and perplexed, while endeavouring to reconcile prayer with God’s orderly government of the universe by fixed and unchangeable laws; and while seeking to comprehend what has been termed the philosophy of prayer, prayer itself has been in the meanwhile neglected, or has been allowed to degenerate into an empty, and therefore an impious form of words without meaning—adoration without reverence—confession without penitence—petitions with-

out the hope of a reply—and thanksgivings without the emotion of gratitude. Now, without pausing to consider by what other methods such false views of God may be changed into those more consistent with the true spirit of prayer, let this method only be adopted of setting before the eye of faith *Jesus Christ* himself, as “Immanuel, God with us”—the same person who, when on earth, was the hearer and answerer of prayer; and let us come to him now in spirit, with the same simple feelings of faith and love as prompted those who then so eagerly sought his aid, and so surely found it. For do you think that the poor and needy who then longed for his approach, or who journeyed far to meet him—who crowded round him, and pressed through every obstacle to see him, to hear him, to touch him, and fall at his feet—that they could have been driven from that presence by any metaphysics about the being and attributes of God, or hindered from pouring out their sorrowing hearts before him by any subtle reasonings which man’s wit or logic could invent about the laws of nature or the government of the universe? The presence and the power of Jesus—the love which beamed in every look, and was breathed in every word—would solve every doubt, if any disturbed their minds, and banish away fear, if any disturbed their hearts. Do we not all feel how natural and right it was for the blind men in their darkness to grope after him, saying, “Son of David, have mercy upon us;”—for the afflicted father, in his deep distress, to beseech him, saying, “Come down, ere my child die;”—for Peter, when sinking, to cry, “Lord, save me;”—and for the poor thief, in the midnight of the crucifixion, and in the last minutes of his own miserable existence, to address him, saying, “Lord, remember me!” And do we wonder that Jesus heard their prayers, and rejoiced in the confidence which prompted them? But why was this right in men then, and not right in us now? Has all such real living personal intercourse between human beings and Jesus Christ ceased? Surely not! For when Jesus ascended up on high, he did not leave to us a mere precept or doctrine regarding prayer. We have himself still as the hearer and answerer of prayer. He revealed himself at one time, but it was for all time—to some men, but it was for all men. And did we only thus believe in him, a living person, “Immanuel, God with us,” then should we be able, like those who prayed to him while in the flesh, to pour out our hearts before him! When the doubting Thomas fell at his feet, and worshipped him as his Lord and God, Jesus said to him and to us, “Because thou hast *seen* me, thou hast believed; blessed are those *who have not seen*, yet have believed.”

And let me just add, that if prayer thus offered to God in Christ is the result and evidence of faith,

so does prayer answered by him reward and strengthen faith. For though we may never be able to communicate to others, or prove to others, *how* the Lord answers our prayer, yet the apostle John says, "We have this confidence, that if we ask anything according to his will, he heareth us;" and "we may know that we have the petitions which we desired of him." And if so, then to ourselves one answer to prayer, not to speak of answers many and manifold, will be evidence very awing and very overpowering, of the presence, the power, and the love, of "Immanuel, God with us;" so that with peculiar emphasis we shall be able to exclaim, "I love the Lord, *because* he hath heard my voice and my supplications."

II.

Have not many persons been perplexed and harassed, in seeking peace with God, by questions relating to His eternal decrees, His foreknowledge, or sovereign fore-determination of events, until their faith was shaken in the certainty of His love and good-will towards them individually, or in their own personal responsibility for returning that love to him with heart, soul, and strength? I do not pause to consider how much truth or falsehood are involved in such questions; and I pass by all other processes of thought or of argument by which such erroneous impressions of God's character as I have hinted at may be removed, and his love to mankind and freeness of the gospel reconciled with such doctrines as predestination and election. But I am persuaded that we should never fail in truly knowing God, and what his will is in regard to us, if we only turned away from such abstract problems to the living person—from God, the I Am, and the Infinite, and Everlasting, to "Immanuel, God with us." In his presence we cannot, we dare not, doubt the reality of infinite knowledge, yea, of his knowledge of us, and infinite love towards us. Think only how all the mists and clouds, which might otherwise have concealed the character of God as our Father, must have vanished before that Sun of righteousness, as he rose in the glory of the Father upon our benighted world! Never did any of those questionings, which may disturb our peace as we think of God in the abstract, for one moment disturb those who desired to know Jesus as "Immanuel, God with us," when he was manifest in the flesh. The scribes and doctors of the Jews may, in their self-sufficiency, have become entangled in the meshes of their own argumentative net-work; but never the really hungry and thirsty souls who, in their great need, sought the great Saviour. Oh, what cared they about reconciling man's free-will with God's sovereign will, or man's responsibility with God's foreknowledge, ere they flew to Christ, and trusted Christ, and perilled soul and body upon

his love! He invited all the weary and heavy-laden to come to him for rest, and they believed his word, and were not put to shame. Lepers in body, wandering in desert places, outcasts from their homes—lepers in soul, wandering in the crooked paths, and outcasts from all but the merciful heart of God—Mary Magdalene, with seven devils, and the Gadarene demoniac with a legion,—all, all sought him, and found in him life and peace! It is perfectly possible that, in their hey-day of health and prosperity, when no sorrow burdened them, and no sense of guilt and sin galled them as with a servile yoke, and no longing possessed them for a good and peace never as yet enjoyed—that God's will might have been a nice problem, his character a mystery, his love to them an argument, his hatred of sin and their own personal responsibility a dream. But when brought into deep waters, in which they had to struggle for life, and the one mighty question pressed itself upon them, What shall we do to be saved?—when the hurricane of God's chastising providence had swept away all their old dwelling-places of rest and safety, and exposed them, naked and defenceless, to the angry sky, and they wildly gazed around for any place of refuge—and when, in this state of utter helplessness and hopelessness, they met with Jesus Christ, conversed with him, and sought his aid,—then how must all doubts have vanished of the love and sympathy of this Immanuel, God with them! When they beheld the marvellous works which he did, and heard the gracious words which proceeded from his lips; when they perceived evidences of a power and good-will which were inexhaustible; when they contemplated his holy and sympathizing look, his tender and gentle manners, and that indescribable something which hung around him like the beauty of the setting sun—a mingling of splendour contributed by earth and heaven, when the very clouds of this lower world become magnificent from the glory which they in part conceal,—then, in the presence of this Jesus, must all other thoughts have been absorbed in the one irresistible conviction of a present God, mighty to save to the uttermost all who came to him! Each one, the very worst, the most degraded, the most miserable, must have been constrained to feel and to confess, "I have at last found him whom I was unconsciously seeking after! If there is one place of rest in the universe for me, it is here. If there is one to whom I can unbosom my sin and misery, sure of being understood, felt for, and delivered, he is here. 'Lord, I believe: help my unbelief: Lord, save me, or I perish!'" Yes, such earnest spirits and broken-hearted penitents might not have been able, if they tried it, to catch what may be denied to angels—a glimpse of the unseen and mysterious ground on which the infinite know-

ledge and sovereign will of God meet in harmony with man's free-will and personal responsibility; nor might they have been able to pierce the skirts of the awful cloud which surrounds the throne of the Infinite King; *but clear as the sun in heaven was the love of Jesus*—the profound interest he took in them—his unutterable longing for their good—his overwhelming sorrow, visible in the tears which he shed for their sin, “because they would not know the things of their peace.” Here there was no darkness, no doubt, no mystery; and in what he was to them they saw the Father, for this was Immanuel, *God with them*. And would not we too experience a health and refreshing, if, like them, feeling our need, we realized a Personal Saviour—“the same yesterday, to-day, and for ever,” and, not forgetful of his omniscience and omnipotence, we had childlike faith in his presence and in his love!

III.

How many sincere persons, seeking peace with God, have in every age been greatly perplexed by what are termed Church questions—questions regarding the organization of the Church, its authority on earth, the power of the clergy, the virtue of the sacraments, and the like, too many to enumerate. Now it is quite unnecessary to enter into any examination, or to express any opinion whatever upon the class of doctrines I have alluded to, the essential spirit of which is not peculiar to any church on earth. Enough that they have always occupied a large portion of men's thoughts, and proved to be heavy burdens to many a human spirit. But is there no hope of peace for a poor sinner in God until he has understood and mastered these “Church” questions, and obtained intelligent convictions regarding the truth or falsehood of some or all of them? Time is passing with fearful rapidity, and eternity is as rapidly advancing!—this night our souls may be required of us! No wonder we should, as dying, responsible beings, be anxiously inquiring whether, leaving such questions in the meantime unanswered, there is not some method, in God's mercy, by which, whatever may be true or false in them, a weary soul may find rest, and a lost soul salvation? Can we not go to Christ *first*, whatever becomes of “the Church” afterwards? As sure as Christ exists, we can! No power in the universe can hinder any man from going directly to himself, and being made welcome to all good and every blessing. “Whosoever cometh unto me I will in no wise cast out.” So men found when he was on earth, and so may all men find it still,—for “he is not far from any one of us.” True, indeed, there were questions similar to those I have mentioned canvassed in the days of our Lord, and

repeated in Synagogue and Sanhedrim by learned doctors and scribes, who could hardly breathe the air of heaven or see its light, so crushed and hemmed in were they by the traditions of the elders and by the commandments of men. Even in Samaria it was a grand subject of dispute, “whether men ought to worship God in this mountain or on that.” But when weary souls did find Jesus himself, and sat at his feet to be taught by him, they felt that nothing on earth could be to them what he himself was, for he was the perfection and power of Love, and that to obtain good from him, simple faith in him was all that was required, and that to find good itself was to find Christ himself. Whatever, therefore, was true or false about the Church questions of the day—whatever authority was vested in Synagogue or Sanhedrim, in the Priesthood or the Temple—all true disciples of Jesus felt that when they found him they found “*the way, the truth, and the life*,”—that “never man spake like this man,”—that here was authority which subdued the whole being of man under its sway—a searching of the character down to its hidden depths, and a pouring of healing oil into its every wound. There was no difficulty, no mystery, in trusting this living One for all which he could mercifully and righteously bestow; and so I doubt not that doctors, priests, systems, and schools were forgotten in the presence of this great and glorious Prophet, Priest, and King, Jesus Christ! And since God has thus revealed himself in Christ, with how much greater confidence should each man go *first* to him now—assured, that whatever else is doubtful to do, this is, at all events, *right*. We cannot trust Christ too much, or ourselves too little. “Be not carried about,” says the apostle, “with every wind of doctrine; for Jesus Christ is the same yesterday, to-day, and for ever.” The wind of doctrine may shift with the opinions of men, but Jesus Christ never does. Oh, blessed be that Church or system, by whatever name it may be called, which directs sinners to the Saviour, and which helps to withdraw every veil that would conceal his glory, and to remove every object which would attract the eye from his beauty, or the heart from his love! And woe be to that Church or system, by whatever name it may be called, which shakes man's faith in him, or promises any real good or enduring peace to the soul, except in the knowledge and love of Immanuel, “God with us!”

IV.

Faith in a present Saviour, as Immanuel, God with us, also solves many doubts which otherwise beset us with reference to things right and wrong in our every-day life. How much evil, for example,

may be undetected in the spirit or temper in which we live—in the judgments which we pass on what demands our approval or disapproval—in our thoughts of others, and our conduct towards them, so long as we compare what we are or what we do with variable standards made to suit ourselves, with a mere system of religion, or even with the mere letter of God's perfect law? But how soon would light banish all this darkness, if we only placed ourselves consciously, not before a principle or law, but before a Person, the Lawgiver, even Immanuel, God with us, and honestly asked the question—"Lord, what thinkest thou?" Behold the Man, and say what fellowship can he have with *this*! We thankfully remember, indeed, how, when on earth, he welcomed the greatest sinners to come to him—how the worst could open their hearts to him, sure of his help and blessing, when seeking to turn from sin to himself; but equally certain is it that no one would have dared to ask his approval of irreverence or unbelief, unkindness or selfishness, unthankfulness or hypocrisy, or sin of any kind and in any degree. And thus it is, that until we see him who is invisible, we may practically deny him, and, like Peter, have no feeling of sin or of fears; but if, like Peter, we caught but one glance of that holy and loving eye gazing upon us, no argument in favour of iniquity, or of aught that was out of harmony with his mind or spirit, would avail us. Like Peter, we might weep bitterly, repent, and sin no more; but we could not but see and realize in Immanuel, God with us, the majesty of a character in whose sight no sin could escape, or find a place of darkness in which to hide itself.

By the same simplicity which in Christ should we also see to determine, not only what was wrong,

but what was right, with reference to what otherwise might be doubtful in duty. Ought this to be done? is this a work in which I can take a part? are questions which, in some form or other, constantly demand a reply from us. And how often will that reply be unerringly suggested when, without any positive command or expressed will to guide us, we are able in truth to ask, as it were, in the presence of Immanuel, God with us, "Lord, what wilt thou have me to do?"—with what truthful intuition, so to speak, should we discern the right! How surely would all that was true, and lovely, and of good report, commend itself to us! With what assurance should we labour in whatever relieved the poor and needy, healed the broken-hearted, raised up the oppressed and bowed down, made our fellow-men better and happier, and advanced over the earth that kingdom which is righteousness, peace, and joy in the Holy Ghost; feeling that in all this we were not working alone, but were "fellow-workers" with him who is Immanuel, God with us!

Let us, then, daily seek to grow in the knowledge and love of this glorious One, by a careful perusal of his blessed Record of what he said and did, by possessing the Holy Spirit of wisdom and revelation in the knowledge of him, by cultivating personal intercourse with him in prayer, and by walking even as he himself walked. Let the thought of Immanuel, God with us, ever prove our strength and comfort. In all time of our tribulation—in all time of our wealth—in the hour of death and in the day of judgment—may that good Lord deliver us!

HIGHLAND FLORA.

SHE sat beside her open chest,
That girl so stern and cold;
Though serving in a genial house,
Her heart would ne'er unfold
To the kindly tones of sympathy,—
That feminine Freemasonry
Whose touch is felt by rich and poor,
And loved by young and old.

Slowly she dragged her daily round
Of duties, never done;
No thought had she for the master's meals;
No smile for the children's fun;
No care for earth; no hope for heaven;
No gratitude for faults forgiven
E'er touched her heart, if nature had
Provided her with one.

The young ones weari'd for "the term,"
For nurse was heard to say,
"You'll have no pleasure in the house
Till Flora goes away.
I can't get on with her at all,
Her very blood seems turned to gall;
And if mamma keeps Flora on,
Poor nurse must leave at May."

Yet there she sat by her open chest,
That girl so stern and cold,
And fondly round her fingers twined
A curl of shining gold.
And gently in her lap was laid—
Simple and plain, but neatly made—
An infant's tiny dress. And thus
Her withering tale she told:—

"Yes, ma'am, it is a baby's frock—
It is a baby's hair:
Had you but seen the bairn himsel',
Sae fat, an' oh, sae fair!
Yes! where's the use to tell a lee?
He was my ain, an' dear to me
As the heather-bell to the honey-bee,
Or the braird to the mountain-hare.

Yes, ma'am, he's deid, my laddie's deid:
Oh that he'd ne'er been born!
My curse be on the coward heart
That wrought this shame and scorn!
Black shame an' sorrow may he see;
No, no, ma'am! never 'whist' at me!
I'll curse him till the day I dee;
I wish it was the morn.

It's wrang! but, oh! I dianna care:
There's whiles I wish the Clyde
Was rowin' ower the yellow hair
That ance was a' my pride—
The yellow hair he used to crown
Wi' bunches o' the red, red row'n;
An' aye he said I was the belle
O' a' the country-side.

I was a young warm-hearted thing,
Wi' nane to counsel me;
My mother des'd o' cholera;
My faither drown'd at sea.
Oh! weel I mind my mother's word;
A sweeter voice I never heard;
An' a' its sweetness was my ain,
For she had nane but me.

Oh, mother dear! oh, mother dear!
Whene'er I mind o' you,
Your face has on that awfu' look,—
I think I see't the noo;
Aye when she turned that look on me
I kent that she was gaun to dee,
An' then I danced, and screeched, an' cried,
'Oh! tak' wee Flora too!'

I creepit up ahint her back,
An' tried if I could dee;
My heart was faint for want o' meat,
An' sorrow sicken'd me.
The choking sabs cam' lang an' deep,
I thought it death,—it was but sleep;
An' oh! the sicht the morning licht
Showed to my waukening e'e!

We had nae grand Venetian blinds,
Nae curtains there to close;
We gaed to bed when it was dark,
An' wi' the licht we rose.
I hate the morning sun to shine
Into my bed; it gars me min'
The day I lost the only frien'
That e'er I had to lose.

That morning was baith warm an' bricht,
The lark sang in the skies,
The big flees buzzed about the bed,
An' the sad wailing cries
O' the wee lambs cam' doon the hill;
But a' within the house was still,
An' oh! I missed the kind, kind voice,
That coaxed me aye to rise.

I listen'd lang wi' steekit e'en,
My head was dazed an' queer;
I kind o' felt they werena like
The sounds I used to hear.
I missed the fire, that crack'd sae crouse,
I missed the step aboot the house,
I felt she was beside me there,
But oh! she didna steer.

My heart gaed like a threshing-mill,
My head began to spin,
An' roon' aboot, an' roon' aboot,
I saw the hail house rin.
There cam' a dark'nin' o' the licht,
A fistlin' sound—a cry o' fricht!
'God help the bairn! her mother's deid;'
But nane would venture in.

Isprang richt up, and oot the bed;
I was baith young an' wee,
But mothers, ay, an' bearded men,
Turned white at sicht o' me.
I dash'd the window in their face,
I said they were 'a coward race,
That daurna lend a han' to help,
But left her there to dee.'

I told them—but, och-hone-o-ree!
I canna tell to you,
A' that I said—I hadna then
The English I have noo.
But, oh! your English is so weak,
It tak's the Gaelic tongue to speak
The bitter, burning word o' scorn
That gars the brave heart grue.

I dianna ken what happen'd next,
I drappit like a stane;
I think they laid me in a barn,
An' left me there my lane,
For fear I had the trouble too,—
I wish—I wish it had been true!
But, oh! no, it was only just
A fever o' the brain.

An' then I thoct that I was deid,
An' by her side I lay,
An' roon' aboot, an' roon' aboot
The house gaed nicht an' day.
An' when my heed cam' richt, I fand
That I was in anither land—
Living wi' frien's I didna ken—
Frien's? did I daur to say!

What frien's the eagle to the lamb?
Such frien's were they I trow;
What frien's the greedy glowrin' gled
To the wee croodlin' doo?
What frien's the hunter to the hare?
Its baby-cries ne'er made him spare.
Braw coats can cover cruel hearts—
My frien's were gentry too.

My lady said that hers was but
'A very distant tie
To her that's gone. They were not like—
Atweel! and so thoct I—
My mother 'was not near so young;'
I struggled sair to hand my tongue,
But in ablow my breath I said,
'You lie!—you lie!—you lie!'

Did I no ken that they were twins,
Born in ae winter's nicht;
Although her hair was like a craw,
My mother's like the licht
O' a warm summer's afternoon,
Just as the sun is sinking down
Ahint the hills—an' mine's the same,
Though maybe no sae bricht.

Did I no ken how she hersel',
By some grand frien' was ta'en,
While her poor twinnie cried wi' grief
At being left her lane.
Little she thoct I kent it a',
An' how my lady ran awa'
Wi' the young laird;—I kent a deal
Though I was but a wean.

I kent my mother got a bribe,
O' some twa pounds or three,
After my faither's wherry sank
In that big storm at sea.
The grief maist killed her; an' I ken
That this fine lady cam'; an' then
She gart her promise no to tell
What frien' she was to me.

I was just playing through the house,
But tho' I ran an' played,
I minded aye to listen weel
To every word they said.
Maybe they thoct I was so wee,
That I could neither hear nor see;—
I saw my auntie, an' I heard
I was to be her maid.

Aweel ! Aweel !—I bow'd my neck
To bear the friendly yoke ;
I learned to talk the English too,
As weel asither folk.
An' soon I cam to like it fine,
Young hearts are licht !—an' so was mine.
Oh ! when I think what's coming next,
I feel just like to choke.

But yet you've been so kind—that I
Would like to tell it too ;
For ch, it's but a poor return
That I have made to you ;
I think my heart's just like a coal,
That burned as lang as it could thole ;
Now it's a cinder black and cauld,
Oh ! dear—what will I do !

Oh ! no, ma'am, no, I daurna stop,
Although it gives me pain ;
For, if I dinna tell't the noo,
I'll never tell't again.
Maybe !—wha kens—afere the morn
I'll be as if I'd ne'er been born.
I wonder will he think on me,
When I am deed an' gane ?

I lived wi' her for five lang years,
Or ever he cam' hame.
An' if I wasna happy then,
I had mysel' to blame.
She liket aye to see me drest,
But though I lived among the rest,
She had a way that made me feel
I wasna just the same.

She said I was 'as tall and straight
As a young poplar tree.'
What gart her wonder that her son
Should think the same o' me ?
She's ta'en the licht frae my young life,
I might hae been his happy wife ;
But for her pride—I hate her noo,
I'll hate her till I dee !

I did my best to please, and I
Ne'er heard a word o' blame ;
She spoke ; for ever spoke of him,
An' wished that he was hame.
She said she knew I'd like him well ;
Good right had she to blame hersel'
When a' cam true ;—she fann'd the fire,
Then thocht to freeze the flame.

I needna tell you that he cam',
Her braw, braw sodger son,
But this I'll tell to clear mysel',
I wasna lichtly won ;
He watched me late, he watched me sune,
He followed me baith out and in ;
But I thocht on his mother's pride,
An' a' the risk I run.

But, oh ! I loved him wi' a heart
So pure an' true, so free
Frae thocht o' world's wealth ; his love
Was dearer far to me
Than a' the world held beside ;
But still, I wouldna be his bride
Without his mother's free consent,
And that could never be.

And oh ! I loved the rowan tree,
An' the bonnie hazel dell,
An' the daisy bank where he sat wi' me
Beside the mossy well.
Oh ! mony a time he led me there,
An' mony a time he deck'd my hair,
But aye I fear'd his mother's pride,
An' soon she broke the spell.

My lady call'd me to her room,
An' lectured me so fine !
She thocht, she did, that 'every bird
Should marrow wi' its kin'.
I kent whase blood was in my veins,
But, no ! I wadna tak the pains
To tell her ; if her heart was proud—
My word ! an' so was mine.

I look't her in the face an' saw
Her colour ebb and flow ;
Her heart was pleading on my side,
But pride—cauld pride said—No.
She says to me, wi' angry e'en,
'Why do you stand there like a queen ?'
'Because I feel like aye,' said I ;
And then I turn'd to go.

She slept atween me an' the door,
An' pushed me back again ;
Wha wad hae thocht, to see us then,
I was her sister's wean ?
I stood there, an' I bore it a'
For sake o' her that was awa ;
Though they were false an' cruel words,
I managed to refrain.

Then, turning round, I said 'fareweel,'
But nae fareweel said she ;
I made her gowns an' trimmed her caps,
She couldna part wi' me ;—
Besides, he soon would be away :—
But lang afore the licht o' day,
I slippit oot unseen by aye.
Why did he follow me ?

Why did he swear to find me out,
Wherever I could hide ?
Why did he say no earthly power
Should rob him of his bride ?
Why did he vow by heaven above,
To shield me with a husband's love ?
I thocht his equal didna live
In a' the world wide.

He track'd me as the fierce blood-hound
Tracks down the panting slave ;
I had no mother's heart to warn,
No brother's arm to save.
He pressed me to become his bride ;
Lang, lang I strove my love to hide,
But oh ! I thocht him good an' kind,
An' beautiful an' brave.

The villain told me that he brocht
Her free consent to me ;
An' we were married, as I thocht,—
But, oh ! 't was a' a lee.
I never dreamt to doot his word,
As soon would I misdoot the Lord
That made the heavens and the earth,
When He said, 'Let there be.'

Mistress, you see the wee bit frock,
You see the sunny hair,
My marriage was a heartless cheat,
Oh ! what need I say mair ?
But yet, in justice to mysel',
I think it's only right to tell,
As soon 's I found I was betrayed,
I left him then an' there.

He had me in his power, an' thocht
That I would yield to be
A' that he wished ; he little knew
The soul that was in me.
My only fault afore the Lord,
Was trusting to his faithless word ;
I couldna live a life o' shame,—
No, I would sooner dee !

I left him, an' for weary months
I struggled on mysel',
But what I suffered a' that time,
No tongue on earth can tell;
An' when at last my boy was born,
I had to bide the bitter scorn,
An' cruel, cutting words o' shame,
That gart my proud heart swell.

At last my siller a' was spent,
My landlady was poor,
An' though I pleaded sair for time,
She turned me to the door.
I couldna go to seek a place,
Starvation stared me in the face;
I took my baby in my arms,
An' travelled ower the moor.

Oh! then I rued the pride that flang
His money at his feet;—
No for mysel', although it's hard
To want the bite o' meat.
But oh! I rued it for my pet,
That cried for what he couldna get,
I grieved to see the weary face,
An' hear the waeft' greet.

I tried to curse him, but I felt
Like Balaam on the hill;
It seem'd as if I lost the power,
Although I had the will.
The wee bit lamb I loved so well,
Look't up at me so like himsel',
I couldna speak the bitter words,
For oh! I loved him still.

Yes; heartless coward though he was,
An' though I kent him weel,
I loved the very daisy flower
He crushed beneath his heel.
I loved him, but I scorned him too;
God help me! what was I to do?
I tried to pray, but oh, my heart
Felt hard and cauld as steel.

And then I thocht, come weal, come woe,
I'll see him ance again;
I wanted naething for mysel',
But food to save my wean.
Wi' me, I kent he couldna live,
For I had naething noo to give;
Hunger was tearing at my heart,
An' burning in my brain.

At last, I reached the Lochan-side,
And saw the rowan-tree,
And flang me on the daisy bank,
Where he aye sat wi' me.
Wi' bitter thoughts o' black despair,
I twined the berries in my hair,
An' said, when we're ta'en oot the Loch,
He'll ken that this is me.

An' then I took my baby up,
And kiss'd him o'er an' o'er;
But somehow, when I tried to walk,
I couldna reach the shore.
My burning brain began to shoot,
An' roon' aboot, an' roon' about,
Went loch, an' hill, an' tower an' tree,
An' then I felt no more.

I waken'd in my ain wee room,
Weel did I mind it a';
The very knots into the door,
The stains upon the wa'.
My Lady thocht it was the damp
Wee Jenny kent it was the lamp,
I kent mysel', but didna tell,
She let the cruizie fa'.

Oh! Jenny was the blithe wee lass,
Wi' such a blinkin' e'e;
It's queer how a' her fun that nicht,
Cam' floating back to me.
She gied us Archie's boulie walk
An' Butler Geordie's English talk.
The Minister himsel' wad laugh,
Had he been there to see.

I saw upon the window-sole,
Lang plaits o' yellow hair;
My han' gaed slipping up to feel,
An' oh, my heed was bare!
Then a' cam' rushing through my brain,—
The rowan-tree, the loch, the wean;
I felt a' roon' aboot the bed,
But no; he wasna there.

An' while I tried to think, I heard
A hand upon the door;
A wee roon' face look'd in on me,
But whiter than before.
'Oh, Jenny lass, come in an' tell
What's wrang wi' me! I'm no mysel'.
An' then such questions as I speer'd,
Till I could talk no more.

She hush'd me like a wearied wean,
An' told me no to speak;
An' when I lookit up, I saw
The big tears on her cheek.
I kent it must be something bad,
That made even lauchin' Jenny sad;
But she said it was only grief,
At seeing me so weak.

I couldna haud my tongue, I cried,
'Oh, Jenny! where's my wean?
Just tell me where my baby is,
An' I'll no speak again.'
She threw her arms about my neck,
An' cried as if her heart would break,
Then sabbit oot, 'Oh, Flora dear,
He's by the reach o' pain!'

I thocht I would be awfu' wild,
If he was ta'en awa';
But no; I lay an' heard, as if
He wasna mine ava'.
I had nae strength to storm an' rave;
So when she saw me bear't so brave,
In spite o' doctor or o' deil,
She sat an' tell't me a'.

She said, he had been lang frae hame;
'Twas just twa weeks or three
Since he cam' back, an' then he asked,
If they had heard o' me.
But oh, my Lady raged like mad,
An' ca'd me everything that's bad;
An' said that if he sought me oot,
Her face he ne'er would see.

Then every day he took his gun,
An' wander'd roon' the place;
An' aye he tried to hear o' me,
But couldna find a trace;
Until ae gloaming, after tea,
He saunter'd to the rowan-tree;
And there he saw a sight, that drove
The colour frae his face.

As he was walking down, he heard
A wailing cry o' pain,
An' at the Lochan-side he found
A woman and a wean.
It was the wee bit bairnie's cry
He heard as he was passing by,
An' baith were lying stiff an' cauld,
An drookit wi' the rain.

He little thocht that it was me
That lay afore him there,
Till, lifting up my heed, he saw
The row'ns amang my hair.
He kent the baby was his ain;
He kent that sorrow, shame, and pain,
Had drained the red blood frae my cheeks,
An' drove me to despair.

He took the infant in his arms;—
While conscience gall'd him sore;—
Wee Jenny said 'he look'd like death
When he gaed in the door.'
He laid it on his mother's knee;
Bade them mak' haste, an' come for me,
'For I was lying like a corp
Beside the Lochan-shore.'

An' then he kissed the bonnie boy
Upon his mother's knee,
An' told her that if I was deed,
'Twas him that murder'd me;
But oh! if I was spared in life,
I yet would be his own true wife.
My lady sat wi' white, white lips,
But not one word said she.

They laid me in my ain wee bed;
The doctor cam' an' saw
That there was life intill me yet,
But said my chance was sma'.
An' then the fever took my brain,
An' a' gaed roon', an' roon' again;
An' aye when ane was at my side
I thocht that there was twa.

But oh! the doctor couldna save
My wean—my bonnie wean;
Mistress, I never saw his match—
I'll never see't again.
He died without a mother's kiss,
Wi' nane to comfort, nane to bless:
For oh! her heart was cauld as ice,
An' hard as ony stane.

Weel, Jenny's news just made me waur:
They thocht that I would dee;
An' then my lady brought her son
To tak' fareweel o' me.
There stood the servants frae the ha',
Wi' him an' her amang them a',
When up I started like a ghost,
An' spoke twa words or three.

It wasna muckle that I said,—
I hadna breath for more,—
But little as it was, it sent
My lady to the door.
I told them a' I had to tell;
I said 'she was my Auntie Bell—
My mother's twin'—'twas news to them
They never heard afore.

Weel, after a', I didna dee;
I think I'm like a cat,—
I'm hard to kill. My lady wished
That I had joined 'my brat.'
She couldna bear my very name;
She said I brought disgrace an' shame
On her an' hers; 'twas lies I told;—
But few would credit that.

For at the kirk folk stared at us ;
 An' mony a ane has said,
 I should be sister to the laird,
 An' no his mother's maid.
 We were as like as twa could be ;
 The same bright hair, the same blue e'e ;
 Oh ! if his heart had been as like,
 His vows would a' been paid.

But, no ! he daurna ; soon I heard
 That baith were gaun awa'—
 His very servants sneered at him
 When he gaed through the ha'.
 They said that he should mak' a stan',
 An' speak his mind oot like a man ;
 His mind's a weathercock, that turns
 Wi' a' the winds that blaw.

Aweel ! aweel ! they gaed abroad,
 An' left me lying there ;
 An' what cam' ower me after that,
 My lady didna care.
 If she was kind to me, she knew
 That folk would think it a' was true ;
 An' that it was her sister's wean
 She'd driven to despair.

As soon as I was fit to walk,
 I cam' an' socht a place ;
 But everybody looks as if
 They kent o' my disgrace.
 I canna work, I canna think,
 An' if I try to sleep a wial,
 I see my mother—an' that look
 Is aye upon her face.

Oh ! mother darling, could you see,
 Sweet mother, did you know,
 In that last hour of agony
 You spent wi' me below,—
 The shame, the sorrow, an' the pain
 That lay afore your orphan wean,
 Nae wonder that you turned on me
 That look of speechless woe.

Oh ! yes, ma'am, I would like to pray,
 But daurna trust mysel',
 There's bitter feelings in my heart,
 An' thochts I'm fear'd to tell.
 But, oh ! my mother is in heaven—
 Her sorrows past, her sins forgiven ;
 I'm sure that she will plead wi' Him,
 For her she loved so well.

I daurna breathe His holy name,
 He says it is not meet
 That the same fountain should bring forth
 The bitter and the sweet.
 Oh, dear ! I wish I could forgive,
 But to the latest day I live,
 I'll say, he is a heartless knave,
 A coward, and a cheat !

They say he's got an English wife,
 An' thinks nae mair o' me ;
 But there's a cloud upon his life
 He daurna choose but see.
 Ay, when he's sleeping wi' his bride,
 He'll dream about the Lochan-side ;
 An' see the sicht he saw that nicht
 Beside the rowan-tree.

An' if he ever lives to feel
 Her infant's balmy breath,
 A voice will whisper to his heart,
 The voice of Him, who saith,
 'Vengeance is mine : I will repay.'
 His living child will melt away ;
 And in its place, he'll see his face—
 His, that was starved to death.

An' now, ma'am, you maun let me go,
 Life is no lang for me ;
 An' I must reach that Lochan-shore,
 An' see the rowan-tree ;
 An' fling me on the caul' caul' stane,
 That lies aboon my bonnie wean ;
 Oh, maybe then, and maybe there,
 The Lord will let me dee !"

But still she sits by her open chest,
 No longer stern and cold,
 And sadly round her fingers twines
 Her baby curl of gold.
 A hopeless lunatic is she,
 With clusters from the rowan-tree,
 Gleaming amid her sunny hair,
 Like rubies set in gold.

And still "in justice to hersel',"
 Her withering tale she tries to tell,
 In sad unmeaning words ;—alas !
 Poor Flora's tale is told.

AN EXHIBITION HOMILY.

WHEN a matter of universal public interest is occupying our thoughts, it is not to be wished that we should forget it in the place of our gathering together before God. It is important that here in church, where we ought to view everything in its truest light, we should bring before our minds for serious consideration that which elsewhere we may be discussing more lightly in the manner and spirit of ordinary intercourse. It will be profitable, I hope, thus to consider what has lately been upon all our tongues. The International Exhibition represents a most characteristic feature in the present condition of the world,—I mean the growth of human industry under the fostering nurture of free commerce. There is scarcely a more urgent or more practical question which we could ask than

this, How does the movement, represented by the vast collection at Kensington, stand related to the principles of our Christian belief and worship ?

We may observe signs of a reaction against the confidence which hoped too much, or was supposed to hope too much, from the similar union, on a former occasion, of the many countries of the world in industrial and artistic competition. The Exhibition of eleven years ago was a tempting symbol of universal peace, but the promise it appeared to hold out has been terribly belied. Crimean, Italian, and American wars have proved that material progress has no power to extinguish the passions of mankind, but that when nations or portions of a nation go to war together it can make their encounters more fearful and destructive.

There is, therefore, no general disposition at the present time to base exaggerated hopes of the extinction of war upon an international competition of industry and art. We are probably in greater danger of looking upon our second Exhibition with some scorn, as entirely without moral or spiritual bearings, useful only for passing amusement, and as a stimulus to material production.

There are views, indeed, of the Exhibition, and of what it represents, which would reasonably excite our scorn. If it be still supposed by any that wars and fightings amongst men can be *mechanically* suppressed by the mere multiplication of the links of common interest, such a supposition is degrading to human nature and contradictory to experience. Wealth and commerce do not, as a matter of fact, of themselves put down war; if they did, it could only be at the price of making the spirits of men flat and tame, instead of quick and generous. You cannot buy out war; and if you could, it might cost too much. The peace which would reign through the indifference of men to any but material considerations would be an ignoble and inhuman peace; and a cruel war coming to break it might well be a blessing to mankind. It is a folly then to trust in a mere extension of commerce as a guarantee for the preservation of peace. Such a trust cannot be Christian; it is a belief in dead things—in the flesh, and not in the Spirit of peace, who gives life.

Again, a great delight in the increase of luxuries and comforts, and of the various instruments of civilized life, as if man's life consisted in the abundance of the things which he possesses, cannot be the feeling of a true Christian. For man's life, we are taught, does *not* consist in the multitude of things which he possesses. Nor does a nation's highest life consist in its wealth, however broadly and beneficially that wealth be spread. A nation which learnt to value material wellbeing as the chief good would be drawing down upon itself, according to our Christian faith, the anger of God; and that anger would speedily show itself, we have reason to believe, in the decay even of the material prosperity. Great Exhibitions would therefore do us harm if they taught or tempted us to worship the things which may be shown in them, as the ends for which we are to live. The knowledge of God, the true service of God, God's kingdom and righteousness, are the proper objects of the highest aims of men, the objects for which we, singly and in nations, ought to strive.

But, whilst the Scriptures everywhere testify concerning material things, that neither the power nor the glory belongs to them, but to the Father in heaven,—that they cannot of themselves work out the deliverance of human beings, and that they have no right to the allegiance of men's

hearts,—it is also true, that in the Scriptures the good and fair and useful things of the visible world are always treated with respect, as gifts of God, for which men ought to be thankful. The principle laid down by St. Paul in the words, "Every creature of God is good, and nothing to be refused, if it be received with thanksgiving," forbids us to think of anything which God has made as being really evil or contemptible. The invisible things are more precious than the visible; but the visible things also may be signs of the invisible, may bring to our thoughts the bounty, the order, the tenderness which have their source in the Divine nature; and therefore they are good, if they are received as God's gifts, with thanksgiving. And let no one suppose that the works of man's art and genius are not God's works and gifts. In a country which has long been inhabited, it is scarcely possible to find anything, even a tree or a blade of grass, which does not owe something, which does not in a sense owe its existence, to the hand of man. The saying of the gentle Christian poet, "God made the country, but man made the town," is but a sentimental fallacy. The art of the husbandman has made the country, in this England of ours, almost as much as the art of the builder has made the town. Both the country and the town are God's works, so far as the wisdom which God has given to man has moulded them according to God's own designs. What a contradiction it would be to see the hand of God only in that which is wild and uncultivated, and to recognise nothing for which we ought to give thanks to God, in the efforts of human thought, and in applications to human uses! Let us be sure that there is work of God's in the products of human art, and that the living spirit of a man, with its capacity and inventiveness, is a higher work and more useful gift of God, than anything from which the breath of spiritual life is absent.

I say, then, brethren, that we are taught to regard all things commended to us by beauty or use, with interest and thankfulness, as tokens of God bestowed upon us by Him. We are taught to say with adoration, "O Lord, how manifold are thy works! in wisdom hast thou made them all; the earth is full of thy riches." A further thought is presented to us in the Scriptures, that an abundance of the treasures of the visible world is a *reward* which God assigns to the nations which serve him. The Old Testament declares this truth to us, rather than the New; but the law was one for all time, and fulfils itself in every generation. It is not safe, indeed, to argue back from material prosperity, and to conclude that the nation which is enjoying the most of it is the most righteous nation of the earth. It is best simply to abstain from such judgments, because we do not know

enough to make us secure in forming them. But it would be almost universally true to say, that material prosperity represents some antecedent loyalty to the God of heaven, it may be the loyalty of a past generation. It represents temperance and frugality, respect for God's laws, adherence to order in civil life, delight in the principles according to which God has constructed our world. And, unquestionably, the prophets of God have always held forth the promise, which no teacher can help holding forth still, that a nation which seeks first the kingdom of God and his righteousness, shall have the interests and the obligations of material well-doing added to it.

We may justly say, then, looking at the astonishing products of our own empire, and at the products of other peoples beside them,—These things show forth God's glory and God's righteousness. They are of his giving, and he promises to give them without stint to those who do his will. If we would not lose these things, and the power and skill to produce them, we must not worship them; we must set the perfect will of God above them.

And without sending our imaginations very far, we may see how the activity of trade and of industry and of invention does bless men as with a Divine reward. The products brought together for our inspection tell of many a population stirred up from abject and desponding and perhaps brutish poverty into a better and happier life by some new development of manufactures and commerce. As a general rule, wherever a few capitalists are made rich, multitudes are made less poor. It need not be with a selfish or money-worshipping joy that we rejoice in the blessings of material prosperity. Nay, our very benevolence might tempt us to an idolatrous worship of it. Take but one example. Cotton is the material of one of the most important, the most highly elaborated, the most wealth-producing manufactures in the world. Its supply is checked; and what is the consequence? Thousands, millions, of our fellow-countrymen, sink down from independence into indigence and pauperism and the most terrible temptations. God be thanked that they are now proving by their patience and self-restraint, that they have not been corrupted by any prosperity they have enjoyed. But what human interests, what domestic virtues, what political developments, hang upon the abundance of one article of commerce! But look also at the more hopeful aspect of this same crisis. What blessings may not be in store for India, what for Africa, what a new birth for whole races of mankind, if they are enabled to supply us in part with the raw material for the want of which our manufacturing districts are now languishing! Who does not see that, mere instruments as these visible

things are, the Maker of heaven and earth does use them to lift up and to cast down the lives of men and of societies? And it is a true ground of rejoicing and thankfulness, when, through the growth of property or the applications of art or science, human beings are relieved from dull or excessive labour, and so they are raised from the state of drudges to that of free men. This tendency of modern industry may be defeated in particular cases; but it is its tendency, and one which the study of a general Exhibition would soon teach us to recognise.

There is another view of an International Exhibition in which as Christians we may rightly rejoice. I mean its action, as international, in bringing different nations together. Let us rate as low as we please the actual power of an Exhibition, and even of the linking interests of commerce and personal friendships, to secure the peace of the world. Let us commit the peace of the world to higher hands. Nevertheless, it is a noble and a glorious thing to see how the Creator has settled various races in various parts of the earth, making each supplementary to the rest, and bearing witness of what He would have his universal human family to be. International regard, such as a contemplation of the purposes of Him "who giveth to all life and breath and all things, and hath made of one blood all nations of men, for to dwell on all the face of the earth, and hath determined the times before appointed, and the bounds of their habitation," would be sure to foster in our hearts, need no more weaken our patriotism, than our patriotism as citizens is found to weaken our family feelings. According to our Christian faith, the Almighty Father has made households, nations, a universal human family. If we English have learnt his lessons to some purpose when he teaches us to love our homes and our country, shall we not listen to his teaching when he bids us regard foreign nations with sympathy and respect, as children with us of the same Father in heaven? Let not religious exclusiveness stand in the way of such sympathy. If God has taught us more of his pure truth than he has taught to others, he never meant us to look down upon them; nor is a self-complacent contempt of other nations the best way to lead them with us to a truer knowledge of the one God.

Certainly, the mutual intercourse and co-operation represented by the work just completed, though it would not prevent our quarrelling with our neighbours, is a witness against the self-esteem and insolence which lead to quarrels. A high-minded people ought to learn and practise courtesy in such intercourse: a Christian people ought to look up with reverence to the God who puts two of his families side by side, to be helpers and not hinderers of each other. Our faith would not

inspire us with the paltry ambition of being citizens of the world; but it certainly would make us desire that English citizens should be friendly and respectful towards the people of every country under the sun.

Let us not believe that, in opposition to all that our Christian faith teaches us, industry and commerce can only be carried on selfishly, with a hostile pursuit of one-sided interest. It is not so, I believe, as a matter of fact, even as much as it appears to be. The faith that all commerce is mutually beneficial, when, at least, it is honest and intelligent, must have a sustaining and elevating effect on the minds of many who seem to be immersed in the pursuits of business. And why should not the highest views of mutual dealings be more clearly received, and more widely cherished? Would not every thinking man like to know and feel that when he is honestly carrying on his trade, he is not merely yielding to a justifiable necessity, but is carrying out the good purposes of the one Father? Would not this faith be a precious preservative against dishonesty, and in many cases a support of diligence against idleness? There is no work more needed by this generation, than that the varied pursuits of business should be placed firmly upon the foundation of duty towards God in heaven, and therefore of help and mutual advantage towards brethren upon earth; that those who produce and who trade should regard one another not as adversaries, but as workers in different provinces of a common cause. Superficial appearances join with natural greediness in protesting against such a theory of human labour, but all the great testimonies, and amongst these, that of an International Exhibition, are in favour of it.

I cannot refrain from quoting a documentary testimony from one of the most glorious periods of our own history. At the time of the Reformation there was in England an astonishing outburst of enterprise of every kind, in which commercial enterprise had its part. A striking proof of this was the formation of a company of merchants to send out vessels to discover places as yet unknown. One of their earliest expeditions was sent to the north-east, and succeeded in gaining the first direct access on the part of this country to the immense Empire of Russia. With that expedition a letter was sent by King Edward VI., addressed to any kings or chiefs whose dominions the expedition might approach. And it began thus, after a courteous salutation:—

"Forasmuch as the great and almighty God hath given unto mankind above all other living creatures such an heart and desire, that every man seeks to join friendship with other, to love and be loved, also to give and receive mutual benefits, it is

therefore the duty of all men according to their power, to maintain and increase this desire in every man, with well-deserving to all men, and especially to show this good affection to such as, being moved with good desire, come to them from far countries. . . . Furthermore, the examples of our fathers and predecessors do invite us hereunto, who have ever gently and lovingly treated such as of friendly mind came to them, . . . committing themselves to their protection; and if it be right and just to show such humanity towards all men, doubtless the same ought chiefly to be shown to merchants, who, wandering about the world, search both land and sea, . . . as well that the people to whom they go may not be destitute of such commodities as their countries do not produce, and that they themselves may be partakers of such things wherein they abound. For the God of heaven and earth, greatly providing for mankind, would not that all things should be found in one region, to the end that one should have need of another, that by this means friendship might be established among all men, and every one seek to gratify all." This, brethren, is surely a noble theory of commerce. Mark that, whereas it might be urged that it is well to cultivate friendship with other countries, *in order that* benefits may be received, King Edward and his advisers profess their belief that the friendship is *the end*, in the designs of God, and the exchange of benefits the means. The difference is an important one. Those who carry on dealings in the faith, however feebly held, that the good God seeks by means of them to bring men into such real fellowship as would be pleasing in his eyes, cannot but be raised by so generous a sentiment. To foster trade for the sake of a living peace, is a higher work than to cultivate abstinence from war for the sake of trade.

It is remarkable that a Russian charter, written two years later, conveying certain privileges to English subjects, seems to reciprocate the same views, laying down the principles, that "God hath planted all realms and dominions in the whole world with sundry commodities, so as the one hath need of the amity and commodities of the other, and by means thereof traffic is used from one to another, and amity is thereby increased;" and that "amongst men nothing is more to be desired than amity, without which no creature, being of a natural good disposition, can live in quietness." And then it proceeds to apply these principles to the intercourse between England and Russia. It seems clear that we have not advanced further than the men of three hundred years ago in the apprehension of the great truths of a common humanity and a universal fellowship. And we have not the courage to profess an equal

reverence for the purposes of the Almighty Maker, or an equal sense of obligation to execute his will in all the work of our lives.

You will have gone with me, I think, thus far in drawing from the Scriptures true grounds of satisfaction and hope in beholding a great International Exhibition of Industry and Art. But it is possible that we may be visited with some sense of discrepancy in comparing those views, however Scriptural, with the more vital doctrines of our faith. We recall to our minds the doctrine of the Cross, the vocation of the true believer in Jesus Christ, and we may ask, What has the believer, he whose thoughts are set upon the eternal world, to do with the things of this perishing earth? Do the bright visions of commercial prosperity accord with the life of him who strives to abstract himself from the world, that he may follow a suffering Saviour more perfectly? Our services for to-day,* and that holy communion in which we are invited to partake, bring before us the most sacred aspect of our Christian calling. "Hereunto were ye called: because Christ also suffered for us, leaving us an example, that we should follow his steps." We pray accordingly that we may always most thankfully receive this inestimable benefit of the sacrifice of the only Son of God, and may daily endeavour ourselves to follow the blessed steps of his most holy life. If we are disciples of Jesus Christ, and take up our cross and follow him, is it consistent to allow ourselves in such thoughts and feelings as those which I have been endeavouring to suggest?

Looked at superficially, our Christian vocation might seem to debar us from such sympathy with a striving, wealth-producing, rejoicing world. There have been Christians at all times, as there have been followers of all religions, who have so interpreted the call which bids a man forsake the world, as to suppose that they were to separate themselves from the common interests of mankind. It has not been a difficult attainment of human experience to look with disgust upon everything going on in the world, and to read "vanity" inscribed on all the doings of men. The preacher of old, uttering in his enigmatical sentences the thoughts of many hearts, tells us how he looked abroad on the world to see what was that good for the sons of men which they should do under the heaven all the days of their life, and that the report brought back to him by his wisdom and experience was, "Vanity of vanities: all is vanity." "I made me great works," he says; "I builded me houses; I planted me vineyards; I made me gardens and orchards, and I planted trees in them of all kinds of fruits; I made me pools of water, to water there-

with the wood that bringeth forth trees; I got me servants and maidens, and had servants born in my house; also I had great possessions of great and small cattle above all that were in Jerusalem before me; I gathered me also silver and gold, and the peculiar treasure of kings and of the provinces; I gat me men-singers and women-singers, and the delights of the sons of men, as musical instruments, and that of all sorts. So I was great, and increased more than all that were before me in Jerusalem: also my wisdom remained with me. And whatsoever mine eyes desired I kept not from them; I withheld not my heart from any joy: for my heart rejoiced in all my labour; and this was my portion of all my labour. Then I looked on all the works that my hands had wrought, and on the labour that I had laboured to do; and, behold, all was vanity and vexation of spirit, and there was no profit under the sun." A most sad conclusion, and containing this permanent truth, that the works and treasures of the earth are not satisfying in themselves, and cannot fill the craving of a true human spirit. But it was not true, and it is not true, that therefore those treasures of the earth, and its glories and its labours, are to be spurned with disdain by those who seek after God, and who count the reproach of Christ greater riches than the treasures in Egypt. The truth pressed upon our minds from all sides is, that the right attitude towards these things is what is wanted. The doctrine of the Cross, the example of the Saviour, who, though he was rich, for our sakes became poor, the lives of his followers, bid us think the true riches of infinitely greater value than the material riches; they call upon us to cherish a magnanimity of spirit which shall be content to want and to suffer; they remind us that it is generally easier to be faithful to God in suffering and privation than in affluence. But they do not forbid us to admire what is fair, to rejoice in the comfort and prosperity of our fellow-men, to desire that those belonging to us should have the advantages of knowledge and culture which God may put in their way.

It was said when the Saviour was opening his kingdom upon the earth, "How *hardly* shall they that have riches enter into the kingdom of heaven!" It has always been found "*hard*" for the rich and prosperous to be humble, self-denying, courageous, thoughtful for others, as citizens of the heavenly kingdom should be. But what do we infer from this difficulty?—not that those who enter the kingdom are to reduce themselves to poverty, and to do nothing to promote the wellbeing of the earth, and of their fellow-men upon it; but that by all classes, at all times, the sacrifice and the example of the suffering Son of God should be kept steadfastly in view. Those who are making

* The second Sunday after Easter.

money and getting on, and who are interested in the pleasant and beautiful things of the world, ought to be the most careful to remember the cross of their Master and their own vocation ; because they are under such terrible temptations to become worldly, selfish, sensual, and effeminate, and also because the truest and best spirit for every man in the most thriving and active and cultivated community would be the spirit of self-sacrifice and of obedience to the law of Christ. Remember that the spirit of Christ is not a mere asceticism ; it is not an arbitrary abstinence from this and that and the other of God's works, which he has created for use and enjoyment ; but it is a living spirit of self-control and temperance, a spirit of kindness and sympathy and service. Is not this wanted by the well-to-do ? Is there no scope for this in their lives ? May not the daily course of the most prosperous man or woman be as continual a struggle for a true and joyful subjection to the will of God, for the exercise of self-denial and love, as that of the poorest sufferer upon the earth ?

I say, then, that there is no necessary discord between the following of the crucified Jesus, and a thankful contemplation of all things that God has made or has enabled man to make, to be admired and to be used. The following of Christ might work great changes, indeed, in men's dealings with earthly treasures. The habits of the rich might be greatly altered ; the distribution of wealth might be affected ; checks might be put upon the eagerness of production and of trade ; the modes of art might have to yield to new and unbending laws ;—but if such changes were to be enforced by the bidding of the gospel of Christ, the world, as the Christian must boldly testify, would be a gainer and not a loser. In order that these or any beneficial changes may be wrought ; in order that mankind may learn by experience what good the Creator intended to come out of the forces of nature and the inventiveness of the human mind ; in order that the evils which flow from riches may be

stopped, and accumulated treasures may be servants to the spirit of man, and not masters ;—for these ends it is necessary that the name of Christ should be proclaimed in all the hives and marts of human industry, that he should be confessed to be the Lord of men's activity and ambition, as well of their leisure and of their prayers ; and that the proudest of men should still be called upon to become as little children in submission to the righteousness and love of the heavenly Father, that they may enter into the kingdom of heaven.

Yes, my Christian brethren, we are permitted to be thankful for all products of human skill and industry without fear or misgivings, if only we will be *thankful* ;—if we will remember God the giver, and the infinitely better gifts which he has bestowed upon us. To worship them without God is a sin, and will bring down a curse. To use them, and spread the use of them, as God's bounties, giving thanks to God and the Father in the name of the Lord Jesus Christ, is right and is therefore safe. The unselfish admiration of a childlike heart is a sister to duty and sacrifice. "O world, as God has made it, all is beauty ; and knowing this is love, and love is duty : what further may be sought for or declared ?" But that our admiration may be innocent, let us take heed to duty first. Let us bear in mind that, before all, we are servants of Him who came to declare the divine righteousness and love in humiliation. God will open the gates of prosperity, that *the righteous nation which keepeth the truth* may enter in. Let us listen to the voice which came by the prophet of old— "Thus saith the Lord, let not the wise man glory in his wisdom, neither let the mighty man glory in his might, let not the rich man glory in his riches : but let him that glorieth glory in this, that he understandeth and knoweth me, that I am the Lord which exercise loving-kindness, judgment, and righteousness in the earth : for in these things I delight, saith the Lord."

J. LL. DAVIES.

THE EAST.

BY THE COUNTESS DE GASPARIN, AUTHOR OF "THE NEAR AND HEAVENLY HORIZONS."

LAND of Egypt, sweet to the eye, soft to the foot, I fly to thee ! Oh, who will give me to inhale thy perfumes ; oh, river Nile, who will give me to drink of thy waters ! The sea, dotted here and there with sparks, stretches out into immeasurable depths ; sometimes it reflects the sun like a shield, sometimes it is blue beneath the east wind ; near the coast some island, some rock darkens it with its shadow ; nothing besides but sea and sky.

Courage, my wings ; cleave the air. Already the breathings of the south caress you ; a golden line cuts the horizon. I recognise thee, Scanderoon,

eternally seated on the shore of thy beautiful Mediterranean, pressed on by the desert, and dreaming of thy past. But to me thou hast a greater charm than when philosophers debated beneath thy porticos ; thou art more touching than when thy great bishops, supported by thy monks, defied the powers of the Cæsars. I love thee as thou art,—a widow and desolate.

The Arabs move rapidly about the harbour ; the sun of Africa has darkened the bronze of their faces. The women, with blue drapery, and a fillet of coral round their brow, walk, tinkling their

silver bracelets at each step. Soft emanations of an atmosphere, all impregnated with warm dews, I inhale you in long draughts. Yes, it is indeed I, and it is indeed you! I had not thought ever to see you again. Sometimes a breeze used to blow on our cold northern regions,—a breeze that had ruffled your leaves, mimosas of the Nile; when-

ever I felt it, my heart would stand still. And there you are once more. Everything; I must revisit everything around. The needle of Cleopatra is still lying on the shore! Say, wilt thou ever raise thyself again? Wilt thou ever lift thy sharp angles of pink granite, thy polished sides, covered with hieroglyphics, through the limpid air?

Gardens of banana trees cast their shadow everywhere on the ground; their smooth, spiral trunks rising at random, and their green volutes languidly folding over. Every now and then the feathery tuft of the tamarisk soars above them; each breeze that comes from the desert displaying its lacework on the azure sky. Meanwhile, I

wander in this twilight, interpenetrated with rays. Through the openings in the trees they fall in a rain of gold; it is warm and laughing day; there where the leaves are thickest, is the transparency of the emerald. Verily, life spent here would let its hours glide away as a necklace drops pearls, one after the other, all equal.

River of the hidden source ; river that counteth thy years by thousands ; thou that hast seen the Pharaohs in all their glory ; Moses and the people groan beneath the oppressors ; the miracles of the Lord, traversing the ethereal air with their thunders ; river of the wide smooth current ;—I bathe my brow in thy waters. On both sides the banks have lowered. The full majesty of the wide horizon appears ; limitless perfection, with here and there an almost imperceptible swelling of the ground. The Fellah village ranges its huts on the water sides ; poor buildings, which retain the architecture of the great propylones. Through the holes of the dove-cote swarms of pigeons come and go. The young girl descends to the stream, plunges in her urn, places it on her head, then slowly re-ascends, her profile defined against the clear horizon. Far away we see the caravan losing itself in the desert. Close by, the dromedary is lying in the grass, languidly moving its graceful head to and fro as it inhales the moist air ; the Arab standing by its side seems to grow taller as the land smiles in the distance. There are bays of incomparable calmness ; tranquil lakes ; their shores fringed with palm trees without a human habitation near. There the dawn breaks with unwitnessed glory ; golden hangings are suspended from the zenith to the ground ; their folds are fastened by the stems of the date-tree. The sun rises, clad in purple ; myriads of wandering birds salute him with piercing cries ; they flutter up out of the reeds ; they trace mysterious arabesques in the air ; higher, still higher, till their capricious mazes disappear in the ethereal abyss.

What a crowd is moving on the shore ! Let us land. That is the road taken by the Fellahs, that by the dromedaries, swift and light as the swallow. At its extremity, the mountain El Mokattam ! Vapours float around its base ; they quickly rise ; the minarets appear ; a ray strikes the crescent of the mosques. Eabekeyeh, I see thy sycamores ; El Mussr el Kahira, I see thy palaces. I do indeed ; and here are thy water-carriers, thy hawkers of sherbet in japan cups. Here are thy fruit-sellers, piles of oranges on the backs of their hands, and sweet-smelling baskets on their heads, and occasionally a black child, with brilliant eyes and shaved head, seated on their shoulders. Oh, yes, thou art indeed the pearl of the East, the queen among thy sisters. I am walking now through thy streets, under the awning of thy bazaars. I am looking at thy merchants squatting there. Their muslin turban-frames in their visage ; they are taciturn and dreamy ; near them sings the narguileh. Amid shops tapestried with embroidered saddles, and red slippers with marvellous patterns, shining with bracelets, and ribboned phials of attar of roses, glides a grave and self-possessed population. The camel-driver utters his guttural note ; the file of camels rub their load against both sides of the way, their feet put noiselessly down. Their line undulates ; the trappings, ornamented with shells from the Red Sea, clash at each step with crystalline sound. Amongst them trot some spirited asses ; they carry some lady of the harem, wrapped in the *habarah*. All at once the fife gives out its piercing notes, a singular cadence. Room for the army of the Pasha ! Black faces, physiognomies as untamed as their

music. There you may see a descendant of the prophet gliding about ; an old green-turbaned man, in the glory of his silvery beard, with austere lips, on which seldom plays a smile ; eyes in which the fire is dying down, and a robe with vast folds confined with the cashmere scarf. Wherever in some solitary street the door of a house half opens, I see columns of alabaster, marble pavements, the leap of the fountain,—a mere lightning flash. The doors close, everything is again sordid and bare.

At this hour,—twelve,—the sand is sparkling around the tombs of the Mamelukes. The mausoleums rear their cupolas in the solitude, the Mokattam forming for them a rude background, which suits with them well. It is there that the remains of these men of blood rest. The air, all flooded with light, glides over the transparent domes, the turbans, the broken outline. Some horde of vagrant dogs, bent on a distant expedition, howl at the dead. That is all. But I know a spot full of freshness and charm. Shooobra, it is thy grove of sycamores with their gloomy arcades. It extends as far as the eye can reach, shady, bordered with meadows whence rise odorous exhalations. There reigns a verdant night, there wanders the Copt in his black robe and white turban, with those delicate features, pale complexion, and ideal outline, which makes one think of the statue of Osiris. At the far end, looking like a red spark, mounted on his mehari, appears a janissary of the Pasha. He dilates the steel of his scimitar, throws out a flame ; he has passed by. The mollah drags his yellow slippers ; the tradesman trots along on his ass with scarlet trappings ; the camels advance, laden with odorous grass enclosed in a network of cords. In these impenetrable retreats coo the turtle-doves. The light only comes in from below. It is refracted on the tufts of the *durrah*. Gateway of Shooobra, I pass beneath thy creeping plants. Labyrinths of myrtle hedges, I lose myself in your mazes. The citron-trees stretch out to me their branches in flower, the rose-trees put forth their encircling branches, the jessamines let their garlands trail, the tuberoses swings its balmy spikes, the fountains weep tear after tear in the porphyry basins. Some black slave beguiles his sorrows amidst the enchantments of this fairy land. He dreams of the desert, of the wadis with their few palms ; he dreams of the Sennaar, of the source lost in the sands. Mussr el Kahira, farewell ! The river calls me, and the mysteries of Egypt.

Night has come down. The boats are moored. The moon rises higher in the sky. Everything sleeps. My wings, fold yourselves here. Girgeh, thy heaps of corn red as copper crowd the bank. From afar I salute the Pyramids, seated on the confines of the desert—their mighty lines cut against the pale horizon. Thy couching sphinx watches over them eternally. The desert gains upon it, throwing its sandy waves, which glide along the granite sides like the froth of the sea. Memphis, thy date-trees wave their coronals where once thronged thy palaces. Of all thy magnificence nothing remains but the Colossus recumbent on the ground. The perfect profile stands out against a velvet back-ground ; the marble has kept its whiteness. He smiles,—the Sesostriis,—he smiles with

that divine far-seeing smile which the dead wear. He smiles at his vanished grandeur, at the generations that are past. He has seen them all pass away; the sadness of knowledge, a sadness interpenetrated with brightness, broods over his noble face.

The breeze has gone down. Children, cross the stream. Land! take the towing-line, and pull with all your strength. Eh Ouallah! Eh lessah! eh lessah! Harmonious cries flung on the air, who can describe your poetry there on the great river, under the wide heavens! And now you see an Arab wedding threading its way through the tamarisk grove. The bride, veiled from head to foot, sways languishingly on her dromedary. The tambourine scatters a shower of metallic sounds. The women running along on each side with brilliant bursts of song. Sometimes a town thickly dotted with minarets rises from among the trees. There the Arabs are grouped along the river; the women come down to it, and fill their urns; the children roll in the sand. An Alme, face uncovered, brow bound with golden coins, comes to wander on the bank. And then again solitudes, fields of cotton-plants with their large flowers, their marvellous buds; again the mimosas, with their delicate leaves and their little yellow tufts, whence escapes a perfume that intoxicates.

At the close of day the sky and the river vie in magnificence. There are prodigies of light and colour; orange, carmine washed over with milk, with purple and sulphur tones, violet or copper-coloured mists. The moon looks large, as it pierces through. The river runs rubies, topazes,—is all on fire; then suddenly it is quenched; nothing to be seen but the stars ranged round their sovereign. They escort her at a distance. Then the moon outshines them, and pursues her course through space alone. In this luminous night; this night when the date-trees cast a long shadow, let us go and see the Fellah village. Before each dwelling young girls recline, looking at the river flowing, the boat passing by. They speak to each other in a low voice. The dove-cots are silent. A few palms which have sprung up here and there thrill beneath the evening, a motion full of sweetness, like a vague sigh that is lost in air. Our Nubians walk after us, their lances on their shoulders, the flames of the different hearths sketching their forms as they move on from door to door.

The wind has risen again, boatman; keep the middle of the current. Upper Egypt opens out before us. Look! rugged masses have cleft the waters. Look! there they are, clearly visible on the island. Old crocodiles, with your shining scales, your jaws open wide, and motionless. One might take you for some bas-relief of the times of Joseph. How I rejoice in meeting with you, monsters though ye be, you denizens of burning latitudes, you genuine Egyptians; to-night the boat will not anchor. It glides on, under sail. The boatmen, rolled up in their robes, sleep at the prow; one Nubian alone, crouching on the deck, holds the end of the large sail in his hand, prepared to let it go the moment the wind freshens. The pilot too watches, standing at the helm on the roof of the pavilion,—a noble figure wrapped in the graceful folds of his white robe. And while the boat glides on, sometimes erect, some-

times skimming the waters with its sail; while the parted water is gurgling against the keel, the pilot sings his song in an under-tone. He sings it in some key to us unknown, he sings it with modulations so capricious, the very fairies could not emulate them. It alternates between the minor and the major. Hardly audible at times, lighter than the transparent wing of a peri, it scatters its notes one by one in the perfumed air. Sometimes full of irony, sometimes sad even to tears, it plays with the rigging, it floats on the surface of the waves, it swells, it dies down, always the same, yet always different. Song of the pilot, nights of Egypt, murmurs of the stream, when all these sounds return to my mind, the tears flow and inundate my face. Thou art a land of harmony, O land of Egypt! The very cries of thy children burst forth in chords whose wailing is melodious. The fellah sings while drawing water from the shadoofs. The heavily laden women keep the sense of fatigue at bay by suiting their steps to a cadenced sigh. When the boatman plunges his pole in the mud of the river, when he leans his chest upon it, a sonorous plaint, sung in chorus, fills the air with its grave notes. If he crosses the stream, energetic syncopations seem to propel the boat at every swell. A symphony of which our orchestras can never attain either the boldness or the nicety, resounds throughout Egypt. It was thus that our boat mounted the river amidst endless concerts.

While I dream, the boat has anchored. The giant statues, Memnon and his companion, command the plain. Phantoms seated there in the sacred attitude, more sombre than night itself, they are taller by their whole busts than the Libyan chain. Mystery wraps them round; the spirit of ancient Egypt hovers there. At their feet the young and flowery earth,—green, enamelled, breathing of spring. Buffalos, black masses with heavy gait, are seen, carrying hither and thither the beautiful alabaster bird that perches on their manes; the flocks of camels browse with long and silken-haired goats; the Arab woman, crouching near, brings a fold of her dress over her face when the stranger draws near.

I wander amongst thy columns, Karnac, in that avenue of mutilated sphinxes; beneath thy propylones, portals with the wide base, which become more ideal in proportion as they rise. Beneath them Sesostrius returned in triumph; beneath them came chariots of war, Jewish prisoners, Ethiopians carrying bars of gold, ostriches, gazelles, giraffes brought from the tropics. Now, on a shallow pool of water, in the midst of the utter solitude, a flight of wild-ducks are taking their pastime. There are crowds of columns, incommensurable ruins: the sunlight streams in everywhere. The ages have in some sort laid the mystery bare. The pages of the Bible are immutably written on the wall of those temples overthrown.

Phile, I greet thee. Thy porphyry rocks resist the foam of the cataract. The red granite, upheaved in blocks of inconceivable boldness, cuts the sleeping water. The Egyptian temple crushes the island with its prodigious propylone; projects its carved peristyles on the shore. The Grecian temple, at the end of a promontory adorned by two

or three palm-trees bending towards the river, watches the stream flow by. Come under the portals, walk along the pavement. The Nile glides beside us; we see its swift course through the columns. It was thus that walked the daisies of Pharaoh's palace; thus that the moon made their golden fillets shine. They walked on dreamily, in all the pride of their youth, dark and graceful, while the gay barks descended and ascended the stream with the same songs.

The boat has passed the rapids; it pursues its way on the Nubian waters. The scene has suddenly become austere; the river is now a sapphire-coloured highway, enchased on both sides in granite.

Giants of Abou Simbal, I salute you. The sands have swelled up to your knees. Impassive, you let them rise. They have not filled the home that you have guarded for so many thousand years. The two rows of pillars raised by Sesostrius still bear up the roof. The caves of the mountains, in their mysterious retreats, have always the same atmosphere. The same ideal smile imprints on the features of the monarchs the same divine character. Venus Athor, thou still openest on the Nile thy temple's peristyle, with giant heads adorned by the symbolic crescent. The sanctuary, far within the rocks, still wraps in the same obscurity its trinity of hideous idols. Again the Nile beats against the basalt. A black promontory projects into the midst of the tumult. The eye dwells upon the lonely conflict; it is the cataract of Nubia. Everywhere the desert. To the north, Wady Alfah—three buildings in the sand. To the south, on the side of Sennaar, the shining river. It rises, runs deep, a ladder of light. Down there, Meroe. Farther, plain on plain to the very centre of Africa.

My wings, open wide; a flight to Asia! There are names which cause hidden sources of poetry to gush from our heart.

Africa, Asia, and yon fountain of Moses, Elim, Wady Peyran, Sinai; your magic letters carried me even as a child away into regions so saturated with sunshine, where such ideal visions passed before me, into a land so completely the country of my soul and my aspiration, that, until the day when God gave me to see you with my bodily eye, a species of home-sickness preyed upon me. At length my feet tread on your eternal sands. My eyes meet your beautiful stone heaps, painted flame-hues by the burning sky. I breathe that invigorating air, that air replete with liberty which resembles only the icy breeze of an Alpine peak. At great distance a granite mountain, a mere ridge of rainbow-tinted sandstone, stands out against the sky. The Bedouin, with tightly-drawn leathern girdle, the folds of his robe raised, the woollen scarf thrown over his head, and his head bound with a camel-hair cord, is walking before us. When he turns round, I see his manly figure,—eyes of fire in a grave and supremely energetic countenance. There are moments of absolute silence. Not an insect, not a breath. Nothing is heard but the indolent tread of the dromedary. All at once the voice of some Arab fills the expanse with his acclamation. It is wild as a lion's roar; it is the true music of the true desert; it calls out rude action; it flies through the gloomy immensity, dies away

unexplored solitudes. The bearing of these men is indeed that of the masters of the desert, elastic and victorious. They have the exquisite manners of the East. Each one of them feels himself a king. Witness their morning salaam; never did noble advance with such an air of courteous subjection, respectful and chivalrous, to kiss his lady's hand. In the evening of one of those days, when no living creature has crossed the caravan, a nomade of the tribe, with stick or club bent over his shoulder, appears as we turn the corner of some rocky projection, suddenly rises in the sandy plain; the whole procession stops; the sheik detaches himself from the rest; with slow step moves forward to meet his brother; extends his hand to him, and, while the fingers remain clasped, the two Arabs exchange benedictions.

The ground sometimes perfectly level, sometimes indented, is hard as stone. The light falls on it inexorably; dazzling day in all sunlit places; night where the shadows fall. No trees; no clouds. Either plain on plain, as far as the eye can reach, or a confusion of calcined stones, as if in a burned-up world. Then, if on one of those mornings, torrid from the very dawn, you perceive afar the spot of shade that some bare rock projects, you whisper in the ear of your dromedary the right Arabian word; he sets off; he gets over the ground; the rocks approach; you can distinguish their angles; there they are, freshness that not even our forests give! To stretch one's-self there; to bare one's forehead in the darkened air; to put to one's lips the water which flows from the *zincamiehs*. Upon this great rock a bird is singing; the first, the only one. Whence comest thou? Has the west wind which traverses Egypt, borne thee upon its wing? His throat swells; he sends out his joyous notes through the desert. With the same breath did that west wind bring thy mate hither as well? Do you two live together alone, happy? Have you suspended your nest to the branches of that withered acacia? The caravan has resumed its march; it unwinds its links; it undulates through the arid valleys; there it passes,—a nation has passed, the people of God.

Moses the patient conqueror bends beneath the immeasurable weight of this multitude, alternately rebellious and repentant as it is. "Have I conceived all this people? have I begotten them that thou shouldest say to me, Carry them in thy bosom, as a nursing father beareth the sucking child?"

And the Lord calms the rage of the frantic people. It is the same who said "Fear not" to the fishermen tossed on the sea of Tiberias, who speaks to Moses face to face, as a man speaketh with his friend.

Soon the morning breeze makes the tent shiver. The sheik awakes; the Bedouins have brought in the camels; the tent is struck. On Allah! forward! Magnificence of night in the desert, refreshing sleep of the bivouac, primitive life, happy he who has known you. He possesses a magic shield against sinking of the spirits, against the tyranny of the prosaic, in yon hours of energy and daring, in yon hours of freedom, yon hours of savage poetry, above all, yon blessed hours spent in prayer alone with God!

ON GLACIERS.

PART II.

THE MIDDLE GLACIER REGION—*continued*,

Ablation or loss of the surface of the Glacier.—

Throughout all the middle and lower glacier region the ice is thawing at its surface, at least during the day, and for a considerable portion of the year. Not only the direct effect of the sun's rays, but the frequent washing of rain, and the mere contact of the warm atmosphere (especially the south winds called *föhn* in German Switzerland), contribute to this effect. The amount varies extremely, according to season, exposure, and absolute height above the sea. It may amount to three or four inches of thickness removed from the entire glacier surface, in a summer's day, above the Montanvert. But allowing for variation of weather, perhaps a foot a week may be a sufficiently high estimate, even for the warmest part of the year; while on the more elevated surface of the glacier of the Aar, with a colder exposure, M. Agassiz has estimated the yearly ablation at only ten feet.

The most sensible effect of this liquefaction of the ice at the surface of the glacier, is to swell the torrent which issues from its lower extremity. Some portion of the water is no doubt derived from springs issuing from the rocks on which the ice reposes, and a part also from the small amount of action of the earth's proper heat upon the glacier. The greater portion by far, is no doubt due to the superficial fusion or "Ablation." "Comparing Maury's careful calculations as to the drainage of the valley of the Mississippi, with the observations of Mr. Dollfuss on the torrent issuing from the lower glacier of the Aar, . . . we learn that the single glacier of the Aar pours down as much water on a fine summer's day, as the average daily drainage of 1636 square miles in one of the best watered districts of the globe."*

But there are also other results of this fusion. The annual ablation is, of course, greatest in the portions of the glacier nearest to the valleys, and as each year's amount of ice thawed is added to the loss of the preceding ones, it is plain that the vertical thickness of the glacier must be diminishing from this cause, and in an accelerated proportion as it advances in its slow and measured course along its bed. The glacier, in fact, ceases to exist exactly where the ablation becomes so rapid as to be no longer compensated by the supply of the material from a higher level.

Effect of Ablation on the Moraines.—Where the ice is covered by moraines, the strong blocks afford a tolerably efficient protection against the action both of sun and rain. Hence the fact already

referred to, that the great medial moraines of first-class glaciers appear like gigantic causeways elevated in the centre (as in the case of the glacier of the Lower Aar), sometimes as much as 140 feet above the general level. It is a strange and imposing spectacle to see this vast ridge stretching for miles along the axis of that great river of ice. Stranger still it is to discover that the apparent heaping up of stones is not occasioned by their being piled on one another, but that with rare exceptions, each and every block rests on pure pellucid ice, and that the dorsal ridge is in fact composed of the very substance of the glacier, defended by the scaly panoply of blocks longitudinally disposed, as we have in the previous section attempted to explain.

Glacier-Tables.—The greater the block the more effectual is the protection which it gives to the glacier beneath. To do so efficiently it must be thick enough to absorb effectually the solar heat, or transmit it only insensibly to the ice on which it rests. A large tabular block is most efficient in this way. Lying on its flat side it defends no small portion of ice from the ablation which acts on its exposed surface. The stone *seems* to rise from the level of the glacier on an icy pedestal, which certainly has not sprouted from beneath, as some whom one would not like to class amongst the ignorant, at one time quaintly imagined. It is merely a record of the antecedent general level of the ice, similar to those earthy pillars which railway excavators leave in the progress of their operations, in order to gauge the mass removed.* Such a granitic

* A natural illustration even more apposite deserves here a passing notice on its own account. In several districts of the Alps natural pillars of soil or friable strata, capped with rocky boulders, present, on an even exaggerated scale, the appearance of Glacier Tables. (See Fig. 3.) In some instances geological agencies, of a remote date—not unconnected, perhaps, with prehistoric glaciers—have deposited, near the mouths of certain valleys, vast masses of earthy materials; over these again lie rolled masses of transported rock of very considerable size. In the cases referred to, the subsoil, being of a tenacious character, has been preserved in consistent pillars, under the protection of a stony capital; while, as on the glacier, the matter around has been washed away by the action of the weather. At La Rua, near St. Veran, in Dauphiné, I have seen such pillars rising to a height of at least 100 feet, composed of friable limestone, which has given way to the continued action of the weather, save when protected by blocks of euphotide or diallage rock (whose endurance is proverbial), derived probably from a neighbouring summit. Similar pillars occur near Stalden, where the valleys of Saas and St. Nicolas unite. Near Botzen, in the Tyrol, and,

* *Edinburgh Review*, January 1861, p. 228.

slab, of noble dimensions, 23 feet long, 17 broad, and $3\frac{1}{2}$ thick, lay for some years on the central portion of the Mer de Glace of Chamouni, and, in the year 1842, when first taken notice of and sketched by the present writer, rested on a magnificent icy pillar of 13 feet high and upwards. Such perfect specimens of what are called *Glacier-Tables*

FIG. 3.—Pyramids of La Ruse—Dauphine.

are rare, but the fact is everywhere observable that blocks of considerable size tend to rise above the general level. Though perpetually risking engulfment in yawning crevasses, they seem, through what at first appears like enchantment, to rise the more conspicuously the heavier the mass. Indeed, the exact contrary occurs with many light foreign bodies falling on the surface of the ice. A chip of slate, the wing of a moth, or a stray leaf carried by tempests over distant mountain chains, attracting solar heat by its dark colour, and speedily transmitting it to the ice, sinks into a cup or hollow excavated beneath it; in consequence of which the glacier presents in many places a honey-combed appearance, every cell having a dark speck at the bottom.

Gravel Cones—Moulins.—Intimately connected with the phenomena just described, but occurring much more rarely, are the "gravel cones" for which the Lower Glacier of the Aar is particularly remarkable. They have been fully described by M. Agassiz and his companions. The woodcut, Fig. 4, p. 409, is taken from a sketch made from memory by the writer of this article, and is not intended to portray exactly any real scene. It represents, however, with tolerable accuracy, the features of

I believe, in one or two places in the east of Switzerland, such curious natural obelisks may also be seen.

these wonderful cones, and the greatest size which they perhaps ever attain.* The height may be about 12 feet, and the circumference nearly 40. The geometrical figure of the cones, and their dark colour, contrasting with the dazzling purity of the glacier, give them a strangely artificial aspect. It is very difficult to believe that the gravel and sand which is exposed at the surface does not compose the entire mound. But a touch or a blow of the hammer dissipates the illusion. The cone is of substantial ice, coated merely with the gravelly deposit. When decapitated with a hatchet the glassy material is exposed, and seems quite as dark as bottle-glass, the light being prevented from entering by the opaque coating. The explanation of their occurrence seems to be the following:—

In glaciers of large and even surface with small inclinations (of which that of the Lower Aar is a striking instance), the conversion of ice into water by the heat of the sun gives rise to numerous streams of pellucid water, which pursue their ramified course for considerable distances, until at length they reach some crevasse or hole in which the rivulet is of course engulfed, thundering down with tremendous noise into the bowels of the glacier. Such a cascade, or "moulin," as it is called at Chamouni, is represented to the left of the cone in Fig. 4. One such stream was found by M. Agassiz and his companions to run a course of two-thirds of an English mile, in almost a straight line, and with its tributaries drained an area of 250,000 square metres, or about 62 English acres. During hot weather the mass of water was of course very large, and it was delivered into a vertical shaft of great depth. These shafts are the relics of closed crevasses, and they are superseded when a new crevasse is formed, as the glacier advances, in the rear of the old one. Now the glacier rivulet, during its course, hurries along with it a certain amount of sand and gravel borne into it by the rains and thaw from the masses of rubbish which form the medial moraines of the glacier. These comminuted fragments gradually accumulate within the heart of the glacier in some of the innumerable sinuosities and "pot-holes" which the sub-glacial water-course presents. In process of time these are left dry by the shifting of the stream, and the slow but certain process of ablation of the superficial ice inevitably exposes them to daylight, after a submersion, it may be, of ten or twenty years. Arrived at the surface, the mass of gravel thus exposed exerts its characteristic influence of protecting the ice beneath it, and as it gradually rises, or seems to rise, above the general level of the ice,

* In the illustration, the opening of the shaft or "Moulin" is too extensive, and the area of the glacier appears much too small with reference to the objects in the foreground.

the cone is formed with sloping sides, whose declivity is accurately measured by the degree of friction of the sandy particles. It is a strange and also an uncommon phenomenon; and does not cease to excite surprise even when it has been so far explained.

Rejection of foreign bodies from the ice of Glaciers.—Inference as to the average velocities of some Glaciers.—It is not many years since there was ascribed, even by intelligent persons, to the ice of glaciers an almost inherent power of rejecting from its mass the impurities which accident has forced into it—for example, by the falling of stones into the crevasses. Some writers attributed this result (if the terms they used may be strictly interpreted) to a species of organic function, nearly resembling vital action. Such ideas still linger amongst the peasantry of all parts of the Alps. The general explanation of the facts which occur must be already tolerably clear from what has been stated in the last two or three paragraphs. The surface of the glacier is ever new. The foreign body, wedged in a crevasse, or otherwise engorged into the ice, is rejected, not by its ascent through the thickness of the ice, but by the descent of the surface to its level, which practically comes to the same thing. After M. Agassiz had made a deep vertical perforation into the solid ice of the glacier of the Aar, with a view to ascertaining its temperature, he had the happy thought of placing in it plugs of wood, at regular intervals, before he quitted the glacier at the close of summer; and the successive discharge of these plugs upon the surface of the ice aptly illustrates the so-called "rejection," of foreign bodies from the glacier, and gives an accurate estimate (of which in a former paragraph we made use) of the average annual "ablation" of the surface.

When, to the infallible nature of the causes which produce to open day the long-entombed spoils of the glacier, we add the well-known influence of perpetual frost in preserving organic substances, whether vegetable or animal, from decay, we can fully account for some remarkable incidents which have more or less recently occurred, connected with the history of glaciers and their explorers. The particulars of some of these cases which are of a nature to interest the reader, and which are personally or otherwise well known to the writer of these pages, will now be given.

I. De Saussure, the most eminent of Alpine travellers, visited in 1788 the Col du Géant, which lies at the head of one of the branches of the *Mer de Glace* of Chamouni, where he spent no less than seventeen days at the great elevation of 11,000 English feet, employed in making observations of a very interesting kind, still well remembered and highly valued. On his ascent, a ladder was left near the spot called "La Noire," where the crevassed state of the glacier had rendered its use indispens-

able. In due time this ladder of course disappeared in the glacier, and was no more thought of until the year 1832, when its fragments were "rejected" by the ice in the middle region of the glacier in almost its flattest part, and on the very Medial Moraine* which descends from the "Pointe de la Noire," thus bearing testimony to its origin, and its course during the long interval of forty-four years. Besides this evidence for its identification, the writer may add that the fragments were seen and collected by himself on the glacier in 1832; that among the fragments Captain Sherwill also found parts of the rounds of the ladder; and that the writer's guide, J. M. Coutet, knew from his father (who had accompanied De Saussure), that the ladder was really abandoned as stated above. The wood, undecayed by forty-four years of submersion in the ice, but broken to fragments and triturated by the intestine motion of the glacier, was at last by the unerring operation of natural causes revealed to open day. As the spots both of the loss and of the recovery were sufficiently well marked, it became practicable, when a survey was some years later made of the glacier, to measure the space moved over, which was of course the same with that of the ice in which it was imbedded. The distance was approximately 13,000 English feet, which divided by forty-four (the number of years) gives nearly 300 feet for the annual progress.

II. In July 1846, when the present writer was staying at the Montanvert, he learned that fragments of a knapsack had been discovered on the glacier, by a guide named David Coutet, and recognised by him as belonging to one lost ten years before, under remarkable circumstances, in a crevasse of the glacier of Talèfre. After a full and personal inquiry and visitation of the localities, the writer found that the fact was really so. He himself recovered from the ice, portions of the blue and white cotton stuff (much worn by friction, but by no means rotten), with portions of straps and loops of figured tape, which had formed the loops and shoulder-straps of the knapsack. It had belonged to David Coutet, who ten years before rented the Pavilion at Montanvert, and who was in the habit of lending the knapsack to guides for holding the provisions of travellers whom they accompanied to the Jardin. Coutet naturally knew his property well enough. Now it had happened that on the 29th July 1836 (or ten years all but five days from the time of recovery of these fragments), a guide named Julien Dévonassou, accompanying a single traveller to the Jardin, had borrowed the article in question, but in traversing the glacier of Talèfre he sunk through treacherous snow into a crevasse of considerable depth, leaving the tourist in utter

* See page 308 of the former article, and *note*.

bewilderment, who, unable to obtain any answer to his cries, made his way back, as best he could, to the Montanvert in quest of assistance. Meanwhile, the guide having reached the bottom of the crevasse with but little hurt, managed, after disembarassing himself of the knapsack, to regain with much labour the surface of the ice, having formed rude steps with his pocket-knife in the walls of the crevasse. The knapsack was soon forgotten, but the glacier, faithful to its charge, delivered it after the appointed time upon the surface of the ice far below, where it was found as has been described, and its identity further proved by the testimony of the identical Dévouassou himself. The fragments are preserved by the writer along with those of De Saussure's ladder. The course of these relics was a remarkable one, for the interval travelled over includes the ice-fall of that glacier of Talèfre, where the mighty mass of the glacier is precipitated over a rapid a thousand feet in height. The horizontal distance moved over in ten years was found to be 4300 feet, or 430 feet per annum; a quantity not far from one-half greater than in the case of the ladder, which corresponds very well with the more considerable slope.

III. The next instance to be noticed admits of less detail, while it illustrates the same law. In 1842, when the author was engaged in a survey of the Mer de Glace, he attempted to sound the depth of a "moulin" on the Glacier de Lechaud (the south-eastern tributary of the Mer de Glace). The cascade had disappeared, and the shaft was partly choked with snow. A geological hammer was used for a weight to attach to a cord, and it was lowered to a considerable depth. It got engaged in snow, and could neither be lowered nor got up. In 1857, after a submersion of fifteen years, it was found on the surface of the glacier; and, singularly enough, the finders were the writer's friend, Mr. Alfred Wills, and his faithful guide, Auguste Balmat, who had been present at, and well recollected the circumstances of the loss, and the identity of the hammer.

IV. A disentanglement of relics, in some respects more remarkable than any of these, has occurred near Chamouni still more recently. It is a circumstance very generally known, that the most disastrous of all the ascents of Mont Blanc took place (or rather was attempted) in 1820 by Dr. Hamel, of St. Petersburg, and two Englishmen, Messrs. Dornford and Henderson, accompanied by eight guides. They slept as usual at the Grands Mulets rocks, on the 17th August 1820, and proceeded next morning, over freshly-fallen snow, towards the summit. In making the traverse from the Grand Plateau towards the Rochers Rouges, where a somewhat steep snow incline had to be passed over horizontally, the pathway formed by the successive footsteps of eleven men seems to have

deprived of its support the upper part of the new-fallen stratum of loose snow, which, descending noiselessly, carried the whole caravan off their feet, covering them with a coating of snow. The unfortunate men who were foremost in the file were driven, by the greater violence of the snow-slide or avalanche, over an ice precipice, on their left, into the terrific chasms of the glacier beneath. Their fate was sealed by the terrible mass of snow which followed and entombed them. The travellers (who happened to be in the rear of the party) all escaped, and, with the other five guides, found themselves unable to afford the smallest assistance. The names of the lost guides were Pierre Balmat, Pierre Carrier, and Auguste Tairraz, all of Chamouni. The event made a profound and still well-remembered sensation.

The glacier in which the unfortunate men were engulfed was the highest portion of the glacier of Bossons, that noble icy torrent so conspicuous from Chamouni, which extends in an unbroken mass and with a nearly rectilinear course from the very base of the highest dome of Mont Blanc down to the pastures of the valley not far from the river Arve. In July or August 1861, some guides crossing the comparatively level part of the glacier, where it is usually visited by strangers, not very far from its lower extremity, found unmistakable traces of the lost party. A knapsack, lantern, crampons, two skulls, and portions of human extremities with the flesh still adhering in places, bore melancholy testimony to the fatality of the accident, and to the unerring laws by the operation of which the most precipitous and tumultuous of all the glaciers of Mont Blanc had concealed, preserved, and finally yielded up to daylight the spoils committed to it. The faithful and intelligent Auguste Balmat, on hearing of the occurrence, recollected and announced that the probability of the recovery of these relics had been discussed between him and the writer of these pages so recently as 1859, when Balmat visited Scotland, and that it was then intimated that the remains might probably be soon perceptible, that is, in forty or forty-five years from the date of the accident. Such an anticipation or prediction could not be otherwise than somewhat vague. But at least its near verification indicates that progress has been made in the science of glaciers since the time when Dr. Hamel in his account of the accident, alluding to the possible reappearance of the remains of his guides, had supposed that *some thousands of years* might be requisite!

With the data which experience has furnished in this instance, we are now enabled to define with considerable accuracy the rate of annual progress of a glacier moving under very remarkable conditions. It would be indeed difficult to arrive at such a result by any pre-designed form of experiment.

Dr. Hamel estimated the elevation at which the accident took place at 13,800 French, or 14,700 English feet (only 1000 feet, therefore, below the summit of Mont Blanc). The spot where the remains were recovered was approximately 4400 feet above the sea. The vertical descent was therefore no less than 10,300 feet. The horizontal distance along the glacier between the two places, estimated from a survey made by the present writer, may be stated at very nearly 20,000 feet, or less than double the vertical height, giving the great average slope of $27^{\circ} 15'$. The flexures of the glacier bed are inconsiderable. This space having been described in forty-one years, the hori-

zontal motion amounts to 490, or, in round numbers, 500 feet per annum.* This, it will be seen, exceeds considerably those previously found in other instances. This is the natural effect of the great declivity, which would indeed have appeared still more visibly, but for the counteracting influence of the absolute elevation of the glacier, which, by increasing the cold and prolonging the effect of winter, tends, according to well-known laws, to shorten the season of rapid motion.

The following table (now for the first time published) shows in one view the interesting results of these various observations on the progression of glaciers:—

TABLE showing the Circumstances of Loss and Recovery of various Objects on the Glaciers of Chamouni.

Objects lost.	Name of Glacier.	Duration of Submersion in Ice.	Horizontal Distance moved over.	Difference of Level.	Slope.	Mean Elevation above Sea.	Annual Motion (horizontal).
De Saussure's Ladder, .	Géant.	1788-1832.	13,000 feet.	1,600 ft.	$7^{\circ} 1'$	7900 feet.	295 feet.
Dévonassou's Knapsack,	Talèfre.	1836-1846.	4,300 "	1,145 "	$14^{\circ} 55'$	8100 "	430 "
Geological Hammer, . .	Mer de Glace.	1842-1857.
Remains of Dr. Hamel's } Guides, }	Bossons.	1820-1861.	20,000 "	10,300 "	$27^{\circ} 15'$	9500 "	490 "

III.—THE UPPER GLACIER OR NÉVÉ—THE HOCH-EIS.

We now come to the third and highest portion of the glacier, which is also by far the most extensive.

To understand the essential difference of character, externally and internally, which it presents, we must remind the reader once more of the existence of perpetual snow on the higher slopes of mountains, a phenomenon commencing with a certain degree of regularity when we attain a height above the sea, which is, however, not absolutely constant even in the same mountain range. In central Switzerland it may be stated at about 8200 English feet, but around Mont Blanc and Monte Rosa it reaches 9000 feet, and in certain exposures more.

Distinction of Glacier and Névé.—The snow-line signifies the boundary or level, not where snow never melts, but where less snow melts than falls in the course of the year. The surface of the glacier offers no exception to the general rule. The winter's snow disappears as regularly from the Glacier Proper as from the rocks and turf which bound it. Indeed, we have seen that the glacier loses by fusion during each summer not only all the snow which falls upon it but a great deal of its own substance also. At a level somewhat, but not much inferior to that at which the snow of winter does not wholly disappear from the mountains, it remains permanent on the glacier likewise. The glacier there, instead of suffering "ablation,"

grows in thickness year by year, through incorporation of fresh material. Where this important and essential change commences, the Glacier Proper is said to pass into the state of *Névé*. The *Névé* is in German Switzerland called *Firn*.

Every glacier has a *Névé*. It is the very condition of its existence; for a body of which the waste exceeds the supply cannot be permanent. As is the area or extent of the *Névé* or snowy feeder of the glacier, so is the area of the glacier itself. It is also a measure of its power of stretching towards the lower valleys, and of resisting the efforts of rapid fusion there.

The upper glacier or *Névé* has necessarily an aspect and a constitution of its own. Its Aspect resembles in many respects that of the hills of our own country during winter, or of Polar countries. With exceptions presently to be noticed, the colour is pure white, the boundaries of ice and rock are less clearly defined, the slopes more rounded, the areas much more extensive, crevasses less obvious, and all the forms less angular. On a nearer inspection we find the Material to be far less perfect ice than in the Glacier Proper, and to pass through every degree of consistence from a granular state (resembling that of common water ice prepared for the table), to the condition of powdery snow. It is opaque rather than pellucid, granular not crys-

* Measured along the slope, it would be one-eighth greater.

talline, friable not brittle, compressible not hard resisting and splintery. In Colour the interior of the *Névé* presents shades of the most delicate green, passing into pure white: the blue colour of the true glacier is almost entirely wanting. Moreover, it is distinctly stratified, at least near its surface; and these strata evidently correspond to successive falls of snow, whether representing annual deposits (which, when compacted by pressure, may amount to two or three feet in thickness) or to the products of individual snow-storms.

Crevassees in the Névé.—The composition of the *Névé* is best seen in the chasms or crevassees by

which it is occasionally traversed. These have a different character from the crevassees of the perfectly formed glacier, and they are oftener wholly wanting. When they occur, they have a width and magnitude much greater than in the Middle Glacier. M. Agassiz estimated one at 1000 feet long, 60 wide, and 250 deep. De Saussure, on his ascent of Mont Blanc, describes one "100 feet wide, and of which the bottom could nowhere be seen." These terribly beautiful abysses sometimes extend quite from side to side of a wide valley; at other times, and not unfrequently, their form is distinctly oval in plan. As might be inferred from

FIG. 4.—Moulin—Gravel Cone.

the incoherent character of the half-consolidated snow, when a glacier in the state of *Névé* is forced over great inequalities of surface, it breaks into cubical masses of gigantic dimensions called "*Seracs*,"* and presents a scene of desolate confusion, of which it is difficult to form a conception. The beautiful illustrations of Mr. Coleman's "*Scenes from the Snowfields*" of Mont Blanc, a work of great interest, have given for the first time an accurate representation of these astonishing scenes. A stereograph by Messrs. Bisson of an "ice cavern"

(sold in many shops), gives a representation of the interior structure of the *Névé*, in its way perhaps still more admirable.

In many or most cases, however, the *Névé* is not thus wildly scarred with fissures and ravines. Its snow-white surface is often unbroken over whole acres of extent; and the traveller bent upon crossing some of the wilder *cols* or *passes*, or upon attaining some peak buried amidst the recesses of the Alps, must tread for many a weary hour over the seemingly endless snow-plains of the *Névé*, almost blinded by the dazzling surface, wading ankle-deep or more in powdery snow, tormented by thirst, yet removed from a single rill of

* So called by the Savoyards, from their resemblance to broken masses of curd, which are so called in the language of the *châlets* of Savoy.

liquid water: An awfully unbroken silence prevails, and an eternal monotony has superseded the comparative activity of the Lower Glacier world. There are no moraines. A fixed rock but here or there is thrust up through the perpetual snow; indeed for hours he may meet with none. His attention is only roused from the plodding labour of following in the footsteps of his guide, by the alarm of that footing being no longer secure. For it is distinctive of the *Névé* that its chasms are often concealed under a seemingly unbroken surface of smoothly drifted snow, and the safety of the traveller and his party then depends upon the attachment of each man of the single file to a rope, by means of which the victim of a false step may be at once rescued from the pitfall ready to receive him by those of his party who preserve a firm footing. The persevering use of the rope, and the diligent "sounding" of the snow by the Alpenstock or pole of the leading guide in order to ascertain its capability of supporting a man's weight, ought to afford in all cases sufficient security for the safety of the traveller. The neglect of these simple precautions may of course lead to fatal results, as in the case of the Russian traveller lost two or three years ago on one of the glaciers of Zermatt.

Red Snow.—In some parts of the Alps, towards the end of summer, Red Snow not unfrequently occurs on the *Névé*. The colour is due to a minute and obscure organism, which may be separated from the snow by evaporation. It imparts a dullish red to the surface, and occurs in patches; but when stirred by the foot the colour is more vivid. The writer recollects to have seen the effect most strikingly on the glaciers of the Oberland, when a slight fall of fresh snow had made the surface dazzlingly white; but the footstaps which displaced it, and stirred the older snow, left behind a blood-red track.

The *Névé*, like the Lower Glacier, is in motion towards the valley, more slowly, no doubt, in consequence of the large areas of the upland recesses in which it lodges. Rendu described glaciers long ago, as either Reservoirs or Overflows of ice. The Reservoirs are the *Névé*s, and they naturally have a comparatively stagnant character. Having traversed their surface, always slowly ascending, we come at length to the rocky ribs or mighty frame-work of the skeleton of the "everlasting hills" which form those glorious peaks, domes, and cliffs, which we contemplate with admiration from below. These frequently rise precipitously and inaccessibly out of the snow basin of the *Névé*. But the climber bound for the highest summits usually seeks a place where snow and ice nestle in some ravine, and preserve the continuity of the glacier formation up to the very

summit of the loftiest Alps. This connexion is nowhere better seen than on Mont Blanc, where, as has been already indicated, the ice is continuous from the very summit of the "Calotte," to the lowest level of the Glacier of Bossons.

Hoch-Eis.—*Bergschrund.*—The *Névé* is almost invariably divided from the ice which clothes the higher slopes and summits (which, for want of a better name, we call with the Germans *Hoch-Eis*) by a fracture or formidable crevasse, called by the Swiss peasantry *Bergschrund*. This increases in width towards the end of summer, when the subsidence and forward motion of the *Névé* has effected a considerable separation. It is a formidable obstacle to the climber unprovided with a ladder, and in descending it is not less dangerous, as, though the depth of the crevasse may not be excessive, it may yet be quite enough to injure or kill a man falling into it. The guides of Dr. Hamel may be considered to have perished in the *Bergschrund*.

With the *Bergschrund* we take leave of the Glacier. The icy masses which cling to the highest tops afford but imperceptible contributions to the ice-rivers, which we have now traced from their termination to their origin. We may remark, however, that until De Saussure ascended Mont Blanc and other elevated summits it was not known that true ice could exist so high. The fallacy that above the Snow Line snow never melts, gave rise, no doubt, to the persuasion that these dazzling heights were crowned with incoherent snow. In truth, however, probably no mountain, even in the Himalaya, attains such a height that the sun's heat does not, in summer, thaw the snow, which again, hardened by nocturnal frost, is converted into ice of a character far more perfect than that of the *Névé*, and comparable with the material of the true glacier. Where the shape of the mountain allows of accumulation, as at Mont Blanc, the thickness may be great and also variable, so that the monarch of mountains may have a perceptible difference of absolute height one year with another. The writer well recollects observing from the Stelvio Pass the peculiar effect of translucency imparted in certain lights to the upper part of the "Monte Crystallo," one of the tops of the Ortler, on the Tyrolean frontier, giving the effect of being a cake of ice of immense thickness. On the more precipitous and acute summits of the Alps the highest pinnacle is generally of rock, and would frequently be altogether inaccessible but for the foothold afforded by steps, artificially cut in the icy *coulours*, by means of which these last fastnesses of nature are annually scaled by the adventurous members of the now popular institution of the "Alpine Club."

J. D. FORBES.

HOUSES AND HOMES.

I AM here at the request of working men, to say a few words about "Houses and Homes." Think of the matter for a moment, and you will find that a house is often enough *not* a home; it may also happen that a home may not be a house. A house, you know well, is simply a building—four walls, so much stone, so much lime, so many joists and beams, so much plaster and lath. A home, as you know by the many pleasant feelings and beautiful sayings connected with the word, represents a very different kind of idea.

What is the difference? What is a home as distinguished from a house? Perhaps we shall come at it by looking at the word, because I need not say that all words did at one time contain, if they do not now contain, ideas. A word cannot come into existence without having some idea at the root of it. The idea may disappear in the course of time; the word may become a mere shell that once contained a thought. Generally speaking, however, a word contains a thought; and if you look well at the word you will be able, more or less firmly, to lay hold of the thought. Now, a home, or a *hame*—to use the Scotch word, which is a great deal nearer the original word than the present English form—*hame*, which is the Anglo-Saxon *ham*, is a word that contains within it the idea of privacy, secrecy, living apart. The Germans have it now in an adjective that they call *heimlich*, which means secret, or private, clandestine, often used in a bad sense, but sometimes also in the sense of domestic or common, a sense partly good and partly indifferent, as we say in the proverb, "Home is home, be it never so *homely*." And they also talk about going home and coming home; and they talk, as we do, very pathetically and poetically about being home-sick; nay, they put it much better than we do, for they call it, *heim-weh*; as if we should say, *Woe's me for my hame!* And death, to the German, is a *heim-gang*, a going home, poetically speaking; which, I take it, is essentially a Christian idea of death, as opposed to the Pagan notion of going over to the majority—"ad plures," as the Romans had it. You go, not to an unknown crowd, but to your God and Father,—you go home. Therefore there is no doubt that in that grand and sturdy old German or Teutonic stock, from which we Anglo-Saxons have in great part descended, there was a word and an idea exactly corresponding to our word "home." But, unfortunately, the Germans have lost the use of that simple noun or name, *heim*; they only use it in combination, or as an adverb; they do not now-a-days use any word corresponding exactly to our word *home*. The French are still more destitute, for they have no word in the least degree corresponding to our word *home*. A majority, in fact, of the continental nations absolutely have not in their language a single word like the English word *home*, or the Scotch word *hame*—surely a very significant fact. It shows something very different in the ideas and ways of living of these continental nations, from our habits and ideas. I am not going to speak of the causes of that difference at present, but remember that *home* is in a very peculiar sense

an Anglo-Saxon or ancient German idea, naturalized in this country above all others, and, therefore, specially interesting to us, and bound up with all our history and all our manners and customs.

A home, then, is not merely a house. It is not the four walls. You may have a home in a tent—in the desert—in a cave of the rock—on the sea—in a ship—in a caravan—anywhere. For the essential idea of a home is a place where two or three are gathered together, and where they do all things in common; where they eat and drink in common, and worship God in common, and sit down and talk together, and make a family apart from the world at large. If you look into the statute-book, and see what the laws of this great country maintain and enforce as regards the home, you will find a great deal bearing out what I have now told you. The idea of the privacy of the home is guarded by the law in the most jealous manner. "An Englishman's house"—that is to say, his home—"is his castle," as you have all heard. What does that mean? It means that the intrusion upon the privacy of the home is a crime in the eye of the law, to be punished in a peculiarly severe manner. The crime called *burglary*, you know, is a great deal more severely punished than mere *robbery*, and the essence of burglary is the breaking in stealthily upon the privacy of the home. Burglary is the corruption of two Latin words (*burgi latrocinium*) meaning the robbery of the *burg*, the castle,—that is to say, the house which is the Englishman's castle, and which he has a right to keep to himself and his family, so long as he and his family are lawfully employed in it. The corresponding Scotch or old English term* was "*hameseucken*"—the sacking or robbery of the *hame*—and that crime of burglary or *hameseucken*, was, not very long ago, punishable with death; so jealous was the law of the rights of the family, and so careful of the privacy of the home. In the eye of the law, the home is a place that the man that owns it is to be responsible for; nobody is to interfere with him, even for his good. It is to be his own blame if the home is not what it should be. Society protects him in making it absolutely his own, with power to do what he likes with it; to make it happy, or to make it miserable; to make it healthy, or to make it unhealthy; to make it a scene of happiness and comfort, of love and peace and good-will, or to make it the abode of a tyrant and his slaves, a place of hate and fear, of drunkenness and rags and starvation. In a word, so long as the law is not broken by positive crime, society says to us through the law, "The home, the family is your own; do with it what you please; no man shall interfere."

Now then, let us think for a moment of what is required of each of us in the view of this tremendous responsibility; what is required that we may do justice, even in the point of view of health and material comfort, to this great institution of the Creator, the family,—this great institution of the law, the home. I take up this question—which is

* Blackstone's Commentaries, iv. 16. The modern use of the word "*hameseucken*" implies the use of personal violence, and is to this extent different.

the doctor's question—What must we do to make our homes healthy; and to the extent of health and comfort at least, happy? For although you may have a certain amount of happiness without health, it scarcely requires proof that health is a great aid to happiness; that it is difficult to have happiness without a fair share, at least, of good health and bodily comfort. Now, health is not a matter of mere chance or accident. We have reason to know, from very numerous and very careful inquiries, that we can state, generally speaking, in figures to what extent our homes are healthy or unhealthy; in other words, to what extent whole populations are subject to the causes of disease and of death. These figures I mean to make available for your instruction, if you will take the trouble to follow me for a little.

The way in which we calculate health is by calculating death or mortality. If you can show me the amount or proportion of mortality in a given population, as compared with others, its neighbours, or with the country at large, I will show you the relative amount of health in that population. Of course, in general terms, the amount of health is the opposite of the amount of mortality. Where there is much mortality there is little health, and where there is little mortality there is much health.

Now the first broad result we arrive at is, that in different parts of England and Scotland, in towns and country districts, and so on, there is an immense variation in regard to the amount of health or of mortality. And we calculate it in this way. Take the whole population, number them as is done in the census,—number the whole of them, men, women, and children, old and young; then find out from the register of deaths, which is now kept regularly in every district of the country, how many die in one year, or in a number of separate years; next, according to the rule of three, make a calculation that if of so many thousands of persons, so many hundreds die annually, then in each separate thousand a certain number die in proportion. That number, the number that die out of a thousand, is called the death-rate of that population; and in the death-rate we have a fact that guides us as to the health of that population; for, of course, the fewer the deaths in each thousand of the living, the greater is the health of that population.

I do not enter here into the whole broad question of what are called the statistics of mortality, because that would occupy me a great deal too long. I want to keep to the part of that subject which can be made practically and easily available for you. Therefore let it suffice just to direct your attention to a table, which I am in the habit of calling the *barometer of public health*, as it shows the difference between different districts of England as regards the number that die annually. Here you have marked on the scale of this table or health-barometer, the names of some parts of England where only fifteen persons die annually in each thousand. But then you can run your eye down the scale to 16, 17, 20, 22, and so on, until you find other parts of England where 37, and some, I believe, where even as many as 39 or 40 persons in each thousand of the whole population

die in each year. Now mark, *there must be some reason for this great difference in the death-rate of different places*; for we are quite certain that the difference is not one that happens one year one way, and another year another way; it is a difference that is found from year to year in the same places within comparatively small limits of variation. It must, then, have a cause. There is something in the state of those great populations which die at the rate of 37 or 39 in a thousand different from the state of the populations that die at the rate of only fifteen in a thousand in the year. That something may be very difficult to find out; nay, very often, it is difficult to find out; but still it may, in all probability, be found out by taking trouble; and one of the objects of modern science has been to detect these causes of difference in the health of large populations, and to remedy them as far as they can be remedied. Now, in trying to trace out the causes of these differences, we find that we can easily carry the matter a step further by means of the health-barometer, as I have called it. I need hardly say that all very large populations are composed of people of very different ages, of different proportions of the two sexes, of different ranks of society, and so on. Well, it will simplify our inquiry a good deal, if we can pick out one or two particular ages, separate them from all the rest, and calculate from them alone the proportion of deaths in the different populations that we have been looking at,—make a barometer of health specially for them. You may have such a barometer of health, for instance, calculated for children under five years of age; you will thus see at once what a very great difference there is between the figures as regards children under five years of age, and the figures as regards the whole population. The children die everywhere in much larger proportion than the rest of the population; and the varieties, the range of the barometer, as between different places, is in the case of the children much more considerable. The best or highest place in the scale of the barometer of health of the whole population, for instance, is fifteen deaths in the thousand, the worst or lowest place in the scale is thirty-seven deaths in the thousand. In other words, in the most unhealthy districts of England, the whole population dies at somewhat more than double the rate at which it dies in the best districts; but in the case of the children, even the most healthy populations die at the rate of thirty-eight in the thousand, and the least healthy at the rate of 114 in a thousand. You see, then, that for children under five years of age, there is not only a larger proportion of deaths, but there is a greater variation in the amount of deaths. Now, if you limit the inquiry still more, and look to children under one year, you find that the amount of mortality, and the variations of the mortality, are greater still; for of children under one year, the very smallest death-rate in all England is seventy-seven in a thousand, while in some unhappy localities, the death-rate of these little innocents runs up to the enormous figure of very nearly three hundred annually out of each thousand. A most appalling fact, if you will think of it even for a moment;

and one bearing very directly on the subject of this lecture. For in the rearing of very young children, we have the most sensitive of all tests to apply to the state of the home; and I should not hesitate to risk the whole question of the health, and comfort, and morality of the home on this single issue,—the mortality of the children under one year old among any considerable number of the population.

It is on this very point, among others, that Dr. Strang has lately given us some very valuable and startling information, which you will find in detail in his most admirable and complete Report for last year on the Vital, Social, and Economic Statistics of Glasgow. There is a well-to-do quarter in Glasgow, in the neighbourhood of Blythswood Square, which may be taken as representing about the most fashionable and wealthy population in the city; and there are other districts, such as the Central District, the High Church, and the Clyde Districts, which are by no means so well off. What is the difference between these districts as regards the mortality? We find that in the Blythswood district the annual mortality of the whole population amounts to fifteen in a thousand; in the Central District, it amounts to thirty-four in a thousand; in the High Church District, it is thirty-seven in a thousand; and in the Clyde District it is thirty-one in a thousand. In other words, these last districts of Glasgow are fatal to the whole population to an extent more than double the best districts. Now there is a reason for that, of course. Under the providence of God, nothing, I believe, happens without a reason, and it is our business, if we can, to find out that reason. But the case is still stronger when we come to the infants. Dr. Strang tells us, that even in the Blythswood district about one in eight of all the infants born died during the first year of life. Quite enough, if you think of it, that one in eight of all these innocent young children just born into the world, not having learned to talk or to walk as yet, is cut off before the first year of their lives is out! Ah! but that is the best, the wholesomest, the healthiest, the airiest, the least crowded district of all Glasgow! Look at some of the others that I have mentioned. You will find there that the proportion is in some cases one in seven; in others, one in six and a half; and in some, even one in five. You will find that in the Clyde district one of every five infants born dies in the first year of life; and even that does not exhaust the whole tale of mortality. For if you recollect that the Clyde district itself can be subdivided into better and worse; that there must be many places in this very district of the Clyde in Glasgow that are paradise compared with other places,—you will see that this figure of one in five must be again split down; and that, in all probability, within this Clyde district, there are places where infants die at the rate of one in four, perhaps one in three, perhaps (who knows) at a higher rate still during the first year of their existence. It is frightful to think that there may be places in the midst of many of our wealthiest and most important cities (for I will assume that what is true of Glasgow is true of others also), where about one out of every two or three infants born is simply born to die;

where this immense mortality takes place as surely, year after year, as if these innocent children were slaughtered in the streets, and all on account of faults and blunders in the conduct of the home—for that is what we are coming to presently.

But since we are determined to look this terrible truth in the face, let us examine the facts still more completely, and let us take the very best and the very worst that we can find in all Glasgow. It would be well, if we could find an answer to it, to ask this question, *What is the least mortality that can possibly happen to infants under a year old?* Is it absolutely necessary that even one in eight of them should die? I showed you that, in the best parts of Glasgow, taken overhead, about one in eight die. Is that necessary? No, not at all. By picking out of the best districts of Glasgow some places which are better than others in these districts, Dr. Strang has shown that one in eight do not die. He has selected two parts, the Crecents and the Blackfriars, as the types of the best and the worst streets in all Glasgow; and although the figures which I am going to give you are not without a possible fallacy, I will explain them immediately in such a way as to enable you to correct it. Dr. Strang finds that of all the infants under one year old, living at the time of the Census, in the whole city of Glasgow, between one in five and one in six died during the last year; while, on the other hand, in the very best parts of Glasgow, only one in fifty-six died during last year. That seems too good to be true, you will say. Well, it is too good to be true. Let us not attempt to make the thing better than it is. The truth is, that there is an important error there, because a great number of those fashionable, rich families of the West End live out of town for a certain portion of the year, and, of course, some of the deaths of their infants happen out of Glasgow. The infants are enumerated in Glasgow at the time of the Census, and, consequently, the figures that indicate the mortality are too small. Very well, double the figure (and that is surely more than enough to avoid the fallacy); let us say that instead of one in fifty-six, the proportion that die is in reality one in twenty-eight in the best streets. Just see what an enormous difference there is between the best and the worst places. In the best, one in twenty-eight infants dies; in the worst, one in five or six. An immense difference that, which surely requires to be accounted for!

Now, in speaking of the whole population, the causes of variation in the rates of mortality are very complicated. It is difficult to see clearly what they are. It may be bad habits, it may be dissipation, it may be unwholesome trades; part of the cause may be avoidable, and part of it unavoidable. But when you tell me that these young infants, just born, having engaged in no occupation except sucking their mothers' breasts, die at that enormously varying rate, I say the fault is not with the infants surely—the fault is with the parents. It may be neglect, it may be want, it may be cold, it may be starvation, it may be poisoning, it may be downright murder, that has destroyed these children. But this we are sure of, it is not the fault of the children them-

selves; it is the fault of the family. It is something wrong in regard to that private assemblage of persons which the law will not touch; some violation of our most sacred and personal duties; duties so absolutely our own that the law won't even guide us in the performance of them—won't lay its hand upon us and say we must do them. We do them or neglect them at our own pleasure, and at our own peril, here and hereafter; and this is the terrible consequence.

Now, do not let us exaggerate at all. There are, beyond doubt, a great many things in this world for which we are not responsible; we cannot make them either better or worse; they are practically beyond our reach, if they lead to good, it is not our good; if they lead to evil, it is not our evil. But here is one thing for which we are at least to some considerable extent responsible; and it is very easily made a matter of calculation, whether, on the great scale, our duty is fulfilled or not.

Go about among your own friends and inquire about it. I do not say that every family is to blame that loses its child; no, that would be wrong. We know that there are many sad accidents. We know that there are many chances far beyond human foresight. But we know—we cannot avoid knowing—that families where the children are always going wrong in their bodily health are very likely to be living in violation of some of the laws of health. And whenever you see this on a scale that throws such accidents as I have alluded to out of the question, you may be perfectly sure that you have to do with something or other that is wrong, and that might be put right, and that is worth inquiring into with the determination to put it right, if possible.

Now then, seeing that the sure penalty of an unhealthy home, or of an ill-ordered family, is the immensely increased mortality of the young children, let us also try to see, if we can, what is required to avoid this terrible forfeit.

To have a healthy home there are certain things that cannot possibly be dispensed with; and you cannot get even these absolutely necessary things without a little trouble. Some things are to be got with less trouble than others; but we must put ourselves about a little for everything that is good in this world. And surely that is a wise dispensation in the wise providence of the Creator, that no great good is to be got, either in this world or the next, without taking some considerable trouble to get it. You cannot secure even good health, that greatest of all earthly blessings, unless you take pains to do so. To make our homes healthy, therefore, we must study the matter, think of it, and lay it to heart, so that we may instinctively, almost, put into action the results of our thought.

The first requisite of a healthy home is pure air. Without pure air none of us can possibly be healthy, neither grown-up people nor children; and I need not say that air is the cheapest of all things. It is not a thing that costs money; you can all get it by going out into the street or the fields for it. But you cannot have even this cheapest of all things in your homes without taking a little trouble to have it. Now let me put just two or three plain-

speaking questions to you upon this subject. Is there any part of your own homes—for I must come *home* with my question, or it will do no good—is there any part of your own homes where there is not a perfectly pure air? Are there any bad smells? Is there a feeling of closeness and oppression at times? Are you apt to go to sleep with a stifling sensation, or what is just as bad, do you ever awake oppressed and half-choked, instead of refreshed? Does the burning of gas or of candle make you uncomfortable, and cause an unpleasant odour? Are the bed-rooms in the morning close and stifling, when a person goes into them who has been out in the open air, and thus knows and feels the difference? In any or all of these cases, be sure that there is a want of pure air in the house; there is a fatal flaw in the home, and the time will come when that flaw will be converted into the terrible shape of sickness or of death to yourselves and to your children. You cannot keep out epidemic disease; you cannot keep out fevers, and small-pox, and measles, and cholera, not to say a host of less notable diseases, in any other way than by having, among other things, a perfectly pure air, and plenty of it, at all times, night and day, in every part of the home. Whenever, therefore, you have a bad smell, or whenever you have a close, stifling state of the air in any room of a house, then be sure there is a lurking danger. You have to avoid that danger. There is only one way to avoid it—by making arrangements for plenty of pure air; and there is only one way to get pure air, and that is *to let it in*. Let there be a constant renewal of it. You are always vitiating it by your breath; you must have it constantly renewed, and the only way to renew it is to have good fires, so that you may have the means of warmth, and then to have doors and windows open occasionally (especially to have all your windows made so as to come *down at the top*), taking pains, both night and day, to let in plenty of pure air, so that nothing can possibly make it unfit for the sustenance of life and health.

Air is very cheap, but still we don't manage to get it always pure. Water is a still more difficult thing to get pure and well supplied. But that does not depend altogether upon each one of you individually, and therefore all I can say here is, that you ought to lay your heads together, and see that you get it. If you have not enough of pure water you should not rest satisfied till you get it. It is not enough to have it at the public pump-wells, you ought to insist upon getting it all through the town, and *into every house*. Get the means of cleanliness for yourselves and for your children; and get good wholesome water to drink, always at hand. I believe much fewer people would drink spirits if they had plenty of pure water to drink. And knowing, as we doctors do, how many diseases smuggle themselves into the home under cover of bad or poisoned water (though I have no time to enlarge upon this subject), I cannot help telling you plainly, that it is very clearly the duty of everybody, every community, every little town, and every little village, to insist upon a supply of water, very pure and plenty of it, in every house. In this country such a

plentiful supply can very readily be got if you like to lay your heads together about it. It has been shown over and over again that there is hardly a place in this kingdom where water could not be provided in every house at a cost of something under a penny a week for the labouring man—say a penny a week at the very outside for people paying £5 of rent. Water has been provided for some towns in the north of England at a cost of tenpence in the pound of rent, and for less than that in other cases. But let us say, giving a margin, that the cost would be about a penny a week for houses paying £5 of rent. Is that worth considering, for one single moment, in comparison with health in the home? Surely not. Get pure water then,—insist on getting it. And then remember that pure water brings with it so many other things. If you have not abundance of water, you cannot get the filth washed away. If you have pure water, plenty of water, and soil-pipes to take it away, you will be clean; if not, you cannot avoid being dirty. And with dirt comes the terribly-increased chance of disease, not to say anything of what you may call the luxury, or elegance, or even the plain moral and religious duty—for that I hold it to be—of cleanliness. It may not be to-day, or to-morrow, or next day; but when disease is among us, it will come to you in particular, either because the water is not pure, or because you do not make enough of use of the pure water if you have got it.

These, then, are two great elements of a healthy home, pure air and pure water; and then there is food. Now, we are coming from the cheap to the more expensive things. I need not say that food costs money; but there is another question about food besides the mere cost of it. It is very important to have wholesome food, no doubt,—very important to have the raw material of food wholesome; but it is also very important, when you have got the raw material wholesome, to be able to cook it in a wholesome and palatable way. Cookery is a most important science and art,—important to you all, not as a luxury or a mere indulgence, but because it is necessary to the health of the home. Cookery is a vital point in the study of the health of the family; and I say particularly to the women, and most of all to the young women here, who have their duties to learn, that unless they are good cooks, they can never hope to be really good wives, at least good wives for working men. And, moreover, it is one of the very great misfortunes of this country, that eating and drinking ever were dissociated. It is a very great misfortune to all, whether belonging to the working or other classes, when the eating is done at home, and the drinking is done at the tavern or public-house, or at the club, whether fashionable or not. Now, there is no specific so sure to prevent that misfortune, as to make the eating and the drinking good and comfortable and *nice* at home. If the cookery be good, if the place for eating and drinking, and the means for eating and drinking, be provided carefully and regularly, and with attention to little likings and dislikings at home, it will pave the way for making the home comfortable in the first instance, and for preventing

some people (we shall not say whom) from running away to the public-house.

Now, that leads me to the question of occupations, and of dissipation, and of rest, and to a great many other questions that enter into the health of the body. But I must be content to pass these over, and to content myself with a few brief final remarks, for we must now draw to a close. I have a question to put to you, and I should like your own experience to answer it. Every one knows that an uncomfortable, neglected home is often the effect of vice and dissipation. But the question I have to put is this,—Do you not also see reason to believe that an uncomfortable home may be the *cause*, more or less directly, of a great deal of dissipation and vice? It appears to me more than likely that it is so. I do not mean to say that a man is never dissipated in the midst of comfort, and still less that a man cannot be a temperate and a truly good man even in an uncomfortable home, for which he is not responsible; but I do mean to say that he has very great temptations to be the contrary; and, moreover, that these temptations will, with the great majority of men, and women too, very often prove irresistible, and that men, in particular, will soon come to neglect and avoid the home, and even to hate or to despise it in their hearts, if comfort and happiness are not to be found there, as well as the bare necessities of life. Is not that very clear? Is it not very plain that every single element of comfort and pleasure added to the home is so much added to the attractions of a virtuous life, and so much taken away from the distractions of a vicious life? And would it not be far better to overcome evil with good, than to keep constantly and ineffectually denouncing, and persecuting, and prosecuting evil; trying in vain, in fact, to prosecute evil out of existence? Would it not be far better to make the home attractive than to aim merely at putting down the public-house? Let us rather set up the private house against the public in the way of competition. I have no doubt that this could be done, to a great extent, if we had the means of instructing the people about the things that bear on their health and comfort; if we could follow out that terrible fact of infant mortality in detail, and bring the instruction home where it is needed; if we could show people, in such a way that there could be no possible mistake about it, the consequences of their neglect; and, at the same time, point out to them, in a friendly way, the things that require to be done in order to make the home what it should be. This is what I call the doctor's *home-mission*, and I wish we could have it spread all over the country, for I believe it would do a vast deal of good.*

But I must draw to a close. I have shown you that the penalty of a disordered home is bad health, the destruction of the family, the destruction especially of the little innocent infants (and that is the most pathetic and terrible part of the story), in an enormous proportion. If we have the least grain of tender-heartedness in us, we cannot, surely, think of that without horror. If we were

* I have developed this idea in a late work on *Public Health*, in the chapter on "Sanitary Organization."

to go and get drunk, or otherwise behave ill, and the evil results were to fall only upon ourselves individually, even then I would not, certainly, say, "Go and do it, and take the consequences;" but in that case we should at least be doing it at our own risk. But to go and get drunk, or to be dissipated, careless, and slovenly, with the full knowledge—for that is what it comes to, as I have proved to you to-night—that the penalty of our wickedness or neglect is the death of those innocent young children—ah! I cannot imagine anything more wicked and more base than that. I am sure that there is no man and no woman that thinks of those terrible consequences even for one moment, but must feel the most ardent desire to do everything that is in his or her power to avoid them. Now I have showed you, in some degree, the way to avoid them. Every comfort added to the home is a real preservative against death; it is not to be viewed as a mere comfort; it is not a mere pleasure. Every reasonable and true comfort, every means of health and of a happy life added to the home, is a preservative against death in the family,—against the death especially of the young infants; for we know but too well that the places in which those infants die in such terrible proportions are the very places where the mothers are away busying themselves, sometimes in honest occupations, sometimes in dishonest occupations; where the fathers are drunken; where the mothers perhaps are drunken and degraded, or at least slovenly and careless; and where both of them, therefore, instead of concurring to make the home and the family that private and sacred and happy institution that God meant it to be, destroy and disturb the order of the family altogether. The man flies to the public-house, or to worse places still—perhaps the woman flies to the public-house too; the infants are neglected, perhaps poisoned, perhaps murdered, perhaps only starved; nobody knows. That is the worst form of the evil. That is the extreme. We must always hold up the extreme picture, but there are a great many shades in the picture. There are a great many differences between four per cent. and twenty-five per cent. There are a great many differences between one in three or four dying, and one in twenty dying. And that is the difference between a good and a bad population as regards the home.

Now, I say again, that none of those comforts—none of those preservatives against an undue mortality of which I have spoken—are to be had without a little trouble and a little forethought; and some of them are not to be had without a little expense. But every expense incurred of that kind—every new comfort in the shape of air, water, food, clothing—nay, even every book you can procure—every picture or print that you can put on the wall—every little attraction—every little pleasant thing the husband can give to the wife, or the wife to the husband, in order to make the home something like what it ought to be,

—a place that a man can wish to live and die in,—all of these are so many inducements to the family to stay at home and keep together, to do their duty to each other, and thus, for that is the consequence and the end, to keep the children alive, and happy, and good. Now, all these things are to be had if you take a little thought to have them, and if you don't grudge to sacrifice for them other things which are not only unnecessary but which are often positively unwholesome and injurious.

The upshot of all this is that I would have you think, at all times, of the immense importance of having a healthy home, and, therefore, I would have you think often and carefully of what can be done to make the home more attractive, happy, and healthy. Make a point of having in your homes the first elements of health; pure air and pure water, in the first place; and afterwards, as many of the other elements of health as possible. And, in order that you may do all this, make it a rule and a principle to *save money*. Don't spend your money upon unwholesome indulgences; don't spend it upon indulgences at all, even though not unwholesome, that do not fulfil this primary condition of making the family, taken as a whole—not the man, the wife, or the children alone, but the family taken as a whole—healthier and happier. And be sure that whenever you and those whom you love are healthier and happier, if it is in any degree the result of your self-denial and your deliberate purpose, if, in short, you feel in the end that you have done your duty, you will be holier too—more thankful to God for the mercies he bestows upon you. If you take pains to obtain those mercies for yourselves, you will be thankful to God, without whom you could not have obtained them, and who has put it into your hearts so to act as to obtain them.

I believe that health is a large part of happiness, and therefore, I say, don't neglect even the grossest and most material elements of happiness. Don't neglect pure air, pure water, light, and fires, food, cookery, the clean shirt, the little plot of trim garden, books, music, pictures, easy-chairs, ornaments of the table and the mantel-piece,—don't neglect any of the little pleasures of life. And that you may have these in abundance, *save money*. Go and put it into the Post-Office Savings' Bank. Don't spend your money—I do not say on drunkenness, or on unwholesome and evil indulgences, I leave that to other instructors to warn you about—but don't spend it at all upon things that take it away from its proper application. If you have a home, see that it really is a home, and not merely the four walls of a house. See that you know the difference between a house and a home, and keep that in view, and carry it out in your daily practice; and then look humbly, but yet with perfect confidence and trust, for God's blessing upon all your efforts.

W. T. GAIRDNER.

MISTRESS AND MAID.

A HOUSEHOLD STORY.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

CHAPTER XIV.

WHEN Miss Hilary reached home, Elizabeth opened the door to her; the parlour was deserted.

Miss Leaf had gone to lie down, and Miss Selina was away to see the Lord Mayor's Show with Mr. Peter Ascott.

III—27

"With Mr. Peter Ascott!" Hilary was a little surprised; but, on second thoughts, she found it natural; Selina was glad of any amusement,—to her, not only the narrowness but the dulness of their poverty was inexpressibly galling. "She will be back to dinner, I suppose?"

"I don't know," said Elizabeth, briefly.

Had Miss Hilary been less pre-occupied, she would have noticed something not quite right about the girl—something that at any other time would have aroused the direct question, "What is the matter, Elizabeth?" For Miss Hilary did not consider it beneath her dignity to observe that matters might occasionally go wrong with this solitary young woman, away from her friends, and exposed to all the annoyances of London lodgings, that many little things might be happening to worry and perplex her. If the mistress could not set them right, she could at least give the word of kindly sympathy, as precious to "a poor servant" as to the Queen on her throne.

This time, however, it came not, and Elizabeth disappeared below stairs immediately.

The girl was revolving in her own mind a difficult ethical question. To-day, for the first time in her life, she had not "told Miss Hilary everything." Two things had happened, and she could not make up her mind as to whether she ought to communicate them.

Now, Elizabeth had a conscience, by nature a very tender one, and which, from circumstances, had been cultivated into a much higher sensitiveness than, alas! is common among her class, or, indeed, in any class. This, if an error, was Miss Hilary's doing: it probably caused Elizabeth a few more miseries, and vexations, and painful shocks in the world than she would have had, had she imbibed only the ordinary tone of morality, especially the morality of ordinary domestic servants; but it was an error upon which, in summing up her life, the Recording Angel would gravely smile.

The first trial had happened at breakfast-time. Ascott, descending earlier than his wont, had asked her, Did any gentleman, short and dirty, with a hooked nose, inquire for him yesterday?

Elizabeth thought a minute, and recollected that some person answering the above not too flattering description, had called, but refused to leave his name, saying he did not know the ladies, but was a particular friend of Mr. Leaf's.

Ascott laughed. "So he is—a very particular friend; but my aunts would not fancy him, and I don't want him to come here. Say, if he calls, that I'm gone out of town."

"Very well, sir. Shall you start before dinner?" said Elizabeth, whose practical mind immediately recurred to that meal, and to the joint, always contrived to be hot on the days that Ascott dined at home.

He seemed excessively tickled. "Bless you, you are the greatest innocent! Just say what I tell you, and never mind—hush! here's Aunt Hilary."

And Miss Hilary's anxious face, white with long

wakefulness, had put out of Elizabeth's head the answer that was coming; indeed, the matter slipped from her mind altogether, in consequence of another circumstance, which gave her much more perplexity.

During her young mistress's absence, supposing Miss Selina out too, and Miss Leaf up stairs, she had come suddenly into the parlour without knocking. There, to her amazement, she saw Miss Selina and Mr. Ascott standing, in close conversation, over the fire. They were so engrossed that they did not notice her, and she shut the door again immediately. But what confounded her was, that she was certain, absolutely certain, Mr. Ascott had his arm round Miss Selina's waist!

Now, that was no business of hers, and yet the faithful domestic was a good deal troubled; still more so, when, by Miss Leaf's excessive surprise at hearing of the visitor who had come and gone, carrying Miss Selina away to the city, she was certain the elder sister was completely in the dark as to anything going to happen in the family.

Could it be a wedding? Could Miss Selina really love, and be intending to marry, that horrid little man? For, strange to say, this young servant had, what many a young beauty of rank and fashion has not, or has lost for ever,—the true, pure, womanly creed, that loving and marrying are synonymous terms; that to let a man put his arm round your waist when you do not intend to marry him, or to intend to marry him for money or anything else when you do not really love him, are things quite impossible and incredible to any womanly mind. A creed somewhat out of date, and perhaps existing only in stray nooks of the world; but, thank God! it does exist. Hilary had it, and she had taught it to Elizabeth.

"I wonder whether Miss Hilary knows of this? I wonder what she would say to it?"

And now arose the perplexing ethical question aforesaid, as to whether Elizabeth ought to tell her.

It was one of Miss Hilary's doctrines—the same for the kitchen as for the parlour, nay, preached strongest in the kitchen, where the mysteries of the parlour are often so cruelly exposed—that a secret accidentally found out should be kept as sacred as if actually confided; also, that the secret of an enemy should no more be betrayed than that of a beloved and trusting friend.

"Miss Selina isn't my enemy," smiled Elizabeth; "but I'm not over fond of her, and so I'd rather not tell of her, or vex her if I can help it. Anyhow, I'll keep it to myself for a bit."

But the secret weighed heavily upon her, and besides, her honest heart felt a certain diminution of respect for Miss Selina. What could she see to like in that common-looking, commonplace man,

whom she could not have met a dozen times, of whose domestic life she knew nothing, and whose personality Elizabeth, with the sharp observation often found in her class, probably because coarse people do not care to hide their coarseness from servants, had speedily set down at her own valuation—"Neither carriage nor horses, nor nothing, will ever make *him* a gentleman."

He, however, sent Miss Selina home magnificently in the said carriage; Ascott with her, who had been picked up somewhere in the City, and who came in to his dinner, without the slightest reference to going "out of town."

But in spite of her Lord Mayor's Show, and the great attention which she said she had received from "various members of the Common Council of the City of London," Miss Selina was, for her, meditative, and did not talk quite so much as usual. There was in the little parlour an uncomfortable atmosphere, as if all of them had something on their minds. Hilary felt the ice must be broken, and if she did not do it, nobody else would. So she said, stealing her hand into Johanna's, under shelter of the dim fire-light—

"Selina, I wanted to have a little family consultation. I have just received an offer."

"An offer!" repeated Miss Selina, with a visible start. "Oh, I forgot: you went to see your friend Miss Balquidder this morning. Did you get anything out of her? Has she any nephews and nieces wanting a governess?"

"She has no relations at all. But I will just tell you the story of my visit."

"I hope it's interesting," said Ascott, who was lying on the sofa, half asleep—his general habit after dinner. He woke, however, during his Aunt Hilary's relation, and when she reached its climax, that the offer was for her to manage a stationer's shop, he burst out, heartily laughing—

"Well, that is a rich idea. I'll come and buy of you. You'll look so pretty standing behind a counter."

But Selina said angrily, "You cannot even think of such a thing. It would be a disgrace to the family."

"No," said Hilary, clasping tightly her eldest sister's hand—they two had already talked the matter over: "I cannot see any disgrace. If our family is so poor that the women must earn their living as well as the men, all we have to see is that it should be honestly earned. What do you say, Ascott?"

She looked earnestly at him; she wanted sorely to find out what he really thought.

But Ascott took it, as he did everything, very easily. "I don't see why Aunt Selina should make such a fuss. Why need you do anything, Aunt Hilary? Can't we hold out a little longer,

and live upon tick till I get into practice? Of course, I shall then take care of you all; I'm the head of the family. How horribly dark this room is!"

He started up, and gave the fire a fierce poke, which consumed in five minutes a large lump of coal, that Hilary had hoped—oh, cruel, sordid economy!—would have lasted half the evening.

She broke the uneasy silence which followed, by asking Johanna to give her opinion.

Johanna roused herself and spoke—

"Ascott says right; he is the head of the family, and by and by I trust will take care of us all. But he is not able to do it now, and, meantime, we must live."

"To be sure we must, Auntie."

"I mean, my boy, we must live honestly; we must not run into debt;" and her voice sharpened, as with the reflected horror of her young days, if, alas! there ever had been any youth for Henry Leaf's eldest daughter. "No, Ascott, out of debt, out of danger. For myself," she laid her thin old fingers on his arm, and looked up at him with a pitiful mixture of reliance and hopelessness, "I would rather see you breaking stones in the road, than living like a gentleman, as you call it, and a swindler—as I call it—upon other people's money."

Ascott sprang up, colouring violently. "You use strong language, Aunt Johanna. Never mind. I daresay you are right. However, it's no business of mine. Good-night, for I have an engagement."

Hilary said gravely, she wished he would stay and join in the family consultation.

"Oh, no; I hate talking over things. Settle it among yourselves. As I said, it isn't my business."

"You don't care, then, what becomes of us all? I sometimes begin to think so."

Struck by the tone, Ascott stopped in the act of putting on his lilac kid gloves. "What have I done? I may be a very bad fellow, but I'm not quite so bad as that, Aunt Hilary."

"She didn't mean it, my boy," said Aunt Johanna tenderly.

He was moved, more by the tenderness than the reproach. He came and kissed his eldest aunt in that warm-hearted, impulsive way which had won him forgiveness for many a boyish fault. It did so now.

"I know I'm not half good enough to you, Auntie, but I mean to be. I mean to work hard, and be a rich man some day; and then you may be sure I shall not let my Aunt Hilary keep a shop. Now, good-night, for I must meet a fellow on business—really business—that may turn out good for us all, I assure you."

He went away whistling, with that air of untroubled, good-natured liveliness peculiar to Ascott Leaf, which made them say continually that he was "only a boy," living a boy's life, as thoughtless and as free. When his handsome face disappeared, the three women sat down again round the fire.

They made no comments on him whatever; they were women, and he was their own. But—passing him over as if he had never existed—Hilary began to explain to her sisters all particulars of her new scheme for maintaining the family. She told these details in a matter-of-fact way, as already arranged; and finally hoped Selina would make no more objections.

"It is a thing quite impossible," said Selina with dignity.

"Why impossible? I can certainly do the work; and it cannot make me less of a lady. Besides, we had better not be ladies, if we cannot be honest ones. And, Selina, where is the money to come from? We have none in the house; we cannot get any till Christmas."

"Opportunities might occur. We have friends."

"Not one in London: except, perhaps, Mr. Ascott, and I would not ask him for a farthing. You don't see, Selina, how horrible it would be to be helped—unless by some one dearly loved. I couldn't bear it! I'd rather beg, starve; almost steal!"

"Don't be violent, child."

"Oh, but it's hard!" and the cry of long-smothered pain burst out. "Hard enough to have to earn one's bread in a way one doesn't like; harder still to have to be parted from Johanna from Monday morning till Saturday night. But it must be. I'll go. It's a case between hunger, debt, and work; the first is unpleasant; the second impossible; the third is my only alternative. You must consent, Selina, for I *will* do it."

"Don't!" Selina spoke more gently, and not without some natural emotion—"don't disgrace me, child; for I may as well tell you,—I meant to do so to-night,—Mr. Ascott has made me an offer of marriage, and I—I have accepted it."

Had a thunderbolt fallen in the middle of the parlour at No. 15, its inmates—that is, two of them—could not have been more astounded.

No doubt this surprise was a great instance of simplicity on their part. Many women would have prognosticated, planned the thing from the first; thought it a most excellent match; seen glorious visions of the house in Russell Square; of the wealth and luxury that would be the portion of "dear Selina," and the general benefit that the marriage would be to the whole Leaf family.

But these two were different from others. They

only saw their sister Selina, a woman no longer young, and not without her peculiarities, going to be married to a man she knew little or nothing about; a man whom they themselves had endured rather than liked, and for the sake of gratitude. He was trying enough merely as a chance visitor. But to look upon Mr. Ascott as a brother-in-law, as a husband—

"O Selina, you cannot be in earnest?"

"Why not? Why should I not be married as well as my neighbours?" said she sharply.

Nobody arguing that point, both being indeed too bewildered to argue at all, she continued majestically—

"I assure you, sisters, there could not be a more unexceptionable offer. It is true, Mr. Ascott's origin was rather humble; but I can overlook that. In his present wealth, and with his position and character, he will make the best of husbands."

Not a word was answered; what could be answered? Selina was free to marry if she liked, and whom she liked. Perhaps, from her nature, it was idle to expect her to marry in any other way than this; one of the thousand and one unions where the man desires a handsome, lady-like wife for the head of his establishment, and the woman wishes an elegant establishment to be mistress of; so they strike a bargain—possibly as good as most other bargains.

Still, with one faint lingering of hope, Hilary asked if she had quite decided?

"Quite. He wrote to me last night, and I gave him his answer this morning."

Selina certainly had not troubled anybody with her "love affairs." It was entirely a matter of business.

The sisters saw at once that she had made up her mind. Henceforward there could be no criticism of Mr. Peter Ascott.

Now all was told, she talked freely of her excellent prospects.

"He has behaved handsomely—very much so. He makes a good settlement on me, and says how happy he will be to help my family, so as to enable you always to make a respectable appearance."

"We are exceedingly obliged to him."

"Don't be sharp, Hilary. He means well. And he must feel that this marriage is a sort of—ahem! condescension on my part, which I never should have dreamt of twenty years ago."

Selina sighed: could it be at the thought of that twenty years ago? Perhaps, shallow as she seemed, this woman might once have had some fancy, some ideal man whom she expected to meet and marry; possibly a very different sort of man from Mr. Peter Ascott. However, the sigh was but momentary; she plunged back again into all the arrangements of her wedding, every one of which,

down to the wedding-dress, she had evidently decided.

"And, therefore, you see," she added, as if the unimportant, almost forgotten item of discussion had suddenly occurred to her, "it's quite impossible that my sister should keep a shop. I shall tell Mr. Ascott, and you will see what he says to it."

But when Mr. Ascott appeared next day in solemn state as an accepted lover, he seemed to care very little about the matter. He thought it was a good thing for everybody to be independent; did not see why young women—he begged pardon, young ladies—should not earn their own bread if they liked. He only wished that the shop were a little farther off than Kensington, and hoped the name of Leaf would not be put over the door.

But the bride-elect, indignant and annoyed, begged her lover to interfere, and prevent the scheme from being carried out.

"Don't vex yourself, my dear Selma," said he drily—how Hilary started to hear this stranger use the household name,—“but I can't see that it's my business to interfere. I marry you; I don't marry your whole family.”

"Mr. Ascott is quite right; we will end the subject," said Johanna, with grave dignity: while Hilary sat with burning cheeks, thinking that, miserable as the family had been, it had never till now known real degradation.

But her heart was very sore that day. In the morning had come the letter from India, never omitted, never delayed; Robert Lyon was punctual as clockwork in everything he did. It came, but this month it was a short and somewhat sad letter,—hinting of failing health, uncertain prospects; full of a bitter longing to come home, and a dread that it would be years before that longing was realized.

"My only consolation is," he wrote, for once betraying himself a little, "that however hard my life out here may be, I bear it alone."

But that consolation was not so easy to Hilary. That they two should be wasting their youth apart, when just a little heap of yellow coins—of which men like Mr. Ascott had such profusion—would bring them together; and, let trials be many, or poverty hard, give them the unutterable joy of being once more face to face and heart to heart,—oh, it was sore, sore!

Yet when she went up from the parlour, where the newly-affianced couple sat together, "making-believe" a passion that did not exist, and acting out the sham courtship, proper for the gentleman to pay, and the lady to receive,—when she shut her bedroom door, and there, sitting in the cold, read again and again Robert Lyon's letter to Johanna, so good, so honest; so sad, yet so bravely

enduring,—Hilary was comforted. She felt that true love, in its most unsatisfied longings, its most cruel delays, nay, even its sharpest agonies of hopeless separation, is sweeter ten thousand times than the most "respectable" of loveless marriages, such as this.

So, at the week's end, Hilary went patiently to her work at Kensington, and Selma began the preparations for her wedding.

CHAPTER XV.

IN relating so much about her mistresses, I have lately seemed to overlook Elizabeth Hand.

She was a person easy enough to be overlooked. She never put herself forward, not even now, when Miss Hilary's absence caused the weight of housekeeping and domestic management to fall chiefly upon her. She went about her duties as soberly and silently as she had done in her girlhood; even Miss Leaf could not draw her into much demonstrativeness: she was one of those people who never "come out" till they are strongly needed, and then— But it remained to be proved what this girl could be.

Years afterwards, Hilary remembered with what a curious reticence Elizabeth used to go about in those days: how she remained as old-fashioned as ever; acquired no London ways, no fripperies of dress, or flippancies of manner. Also, that she never complained of anything; though the discomforts of her lodging-house life must have been great,—greater than her mistresses had any idea of at the time. Slowly, out of her rough, unpliant girlhood, was forming that character of self-reliance and self-control, which, in all ranks, makes of some women the helpers rather than the helped, the labourers rather than the pleasure-seekers; women, whose constant lot it seems to be to walk on the shadowed side of life, to endure, rather than to enjoy.

Elizabeth had very little actual enjoyment. She made no acquaintances, and never asked for holidays. Indeed, she did not seem to care for any. Her great treat was when, on a Sunday afternoon, Miss Hilary sometimes took her to Westminster Abbey or St. Paul's; when her pleasure and gratitude always struck her mistress, nay, even soothed her, and won her from her own many anxieties. It is such a blessing to be able to make any other human being, even for an hour or two, entirely happy!

Except these bright Sundays, Elizabeth's whole time was spent in waiting upon Miss Leaf, who had seemed to grow suddenly frail and old. It might be that living without her child six days out of the seven, was a greater trial than had at first appeared to the elder sister, who until now had never parted with her since she was born;

or it was perhaps a more commonplace and yet natural cause, the living in London lodgings, without even a change of air from room to room; and the want of little comforts and luxuries, which, with all Hilary's care, were as impossible as ever to their limited means.

For Selina's engagement, which, as a matter of decorum, she had insisted should last six months, did not lessen expenses. Old gowns were shabby, and omnibuses impossible, to the future Mrs. Ascott of Russell Square; and though, to do her justice, she spent as little as her self-pleasing nature could do, still she spent something.

"It's the last; I shall never cost you any more," she would say, complacently; and revert to that question of absorbing interest, her *trousseau*, an extremely handsome one, provided liberally by Mr. Ascott. Sorely had this arrangement jarred upon the pride of the Leaf family; yet it was inevitable. But no personal favours would the other two sisters have accepted from Mr. Ascott, even had he offered them—which he did not—save a dress each for the marriage, and a card for the marriage-breakfast, which, he also arranged, was to take place at an hotel.

So, in spite of the expected wedding, there was little change in the dull life that went on at No. 15. Its only brightness was when Miss Hilary came home from Saturday to Monday. And in those brief glimpses, when, as was natural, she on her side and they on theirs, put on their best face, so to speak, each trying to hide from the other any special care, --it so fell out that Miss Hilary never discovered a thing which, week by week, Elizabeth resolved to speak to her about, and yet never could. For it was not her own affair; it seemed like presumptuously meddling in the affairs of the family. Above all, it involved the necessity of something which looked like tale-bearing and backbiting of a person she disliked, and there was in Elizabeth—servant as she was—an instinctive chivalrous honour which made her especially anxious to be just to her enemies.

Enemy, however, is a large word to use; and yet day by day her feelings grew more bitter towards the person concerned, namely, Mr. Ascott Leaf. It was not from any badness in him; he was the sort of young man always likely to be a favourite with what would be termed his "inferiors," easy, good-tempered, and gentlemanly, giving a good deal of trouble certainly, but giving it so agreeably, that few servants would have grumbled, and paying for it—as he apparently thought everything could be paid for—with a pleasant word and a handful of silver.

But Elizabeth's distaste for him had deeper roots. The principal one was his exceeding indifference to his aunts' affairs, great and small, from the

marriage, which he briefly designated as a "jolly lark," to the sharp economies which, even with the addition of Miss Hilary's salary, were still requisite. None of these latter did he ever seem to notice, except when they pressed upon himself; when he neither scolded nor argued, but simply went out and avoided them.

He was now absent from home more than ever, and apparently tried as much as possible to keep the household in the dark as to his movements—leaving at uncertain times, never saying what hour he would be back, or if he said so, never keeping to his word. This was the more annoying, as there were a number of people continually inquiring for him, hanging about the house, and waiting to see him "on business:" and some of these occasionally commented on the young gentleman in such unflattering terms, that Elizabeth was afraid they would reach the ear of Mrs. Jones, and henceforward tried always to attend to the door herself.

But Mrs. Jones was a wide-awake woman. She had not let lodgings for thirty years for nothing. Ere long she discovered, and took good care to inform Elizabeth of her discovery, that Mr. Ascott Leaf was what is euphuistically termed "in difficulties."

And here one word, lest in telling this poor lad's story, I may be supposed to tell it harshly or uncharitably, as if there was no crime greater than that which a large portion of society seems to count as none; as if, at the merest mention of the ugly word *debt*, this rabid author flew out, and made all the ultra-virtuous persons whose history is here told, fly out, like turkeys after a bit of red cloth, which is a very harmless scrap of red cloth after all.

Most true: some kind of debt deserves only compassion. The merchant suddenly failing; the tenderly reared family who by some strange blunder or unkind kindness have been kept in ignorance of their real circumstances, and been spending pounds for which there was only pence to pay; the individuals, men or women, who, without any laxity of principle, are such utter children in practice, that they have to learn the value and use of money by hard experience, much as a child does, and are little better than children in all that concerns *L. s. d.* to the end of their days.

But these are debtors by accident, not error. The deliberate debtor, who orders what he knows he has no means of paying for; the pleasure-loving debtor who cannot renounce one single luxury for conscience' sake; the well-meaning, lazy debtor, who might make "ends meet," but does not, simply because he will not take the trouble; upon such as these it is right to have no mercy,—they deserve none.

To which of these classes young Ascott Leaf be-

longed, his story will show. I tell it, or rather let it tell itself, and point its own moral; it is the story of hundreds and thousands.

That a young fellow should not enjoy his youth would be hard; that it should be pleasant to him to dress well, live well, and spend with open hand upon himself, as well as others, no one will question. No one would ever wish it otherwise. Many a kindly spendthrift of twenty-one makes a prudent paterfamilias at forty, while a man who in his twenties showed a purposeless niggardliness, would at sixty grow into the most contemptible miser alive. There is something even in the thoughtless liberality of youth to which one's heart warms, even while one's wisdom reproves. But what struck Elizabeth was that Ascott's liberalities were always towards himself, and himself only.

Sometimes when she took in a parcel of new clothes, while others, yet unpaid for, were tossing in wasteful disorder about his room, or when she cleaned indefinite pairs of handsome boots, and washed dozens of the finest cambric pocket-handkerchiefs, her spirit grew hot within her to remember Miss Hilary's countless wants and contrivances in the matter of dress, and all the little domestic comforts which Miss Leaf's frail health required—things which never once seemed to cross the nephew's imagination. Of course not, it will be said, how could a young man be expected to trouble himself about these things?

But they do though. Answer, many a widow's son; many a needful brother of orphan sisters; many a solitary clerk living and paying his way upon the merest pittance; is it not better to think of others than one's self? Can a man, even a young man, find his highest happiness in mere personal enjoyment?

However, let me cease throwing these pebbles of preaching under the wheels of my story; as it moves on, it will preach enough for itself.

Elizabeth's annoyances, suspicions, and conscience-pricks as to whether she ought or ought not to communicate both, came to an end at last. Gradually she made up her mind that, even if it did look like tale-bearing, on the following Saturday night Miss Hilary must know all.

It was an anxious week; for Miss Leaf had fallen ill. Not seriously: and she never complained until her sister had left, when she returned to her bed and did not again rise. She would not have Miss Hilary sent for, nor Miss Selina, who was away paying a ceremonious pre-nuptial visit to Mr. Ascott's partner's wife at Dulwich.

"I don't want anything that you cannot do for me. You are becoming a first-rate nurse, Elizabeth," she said, with that passive peaceful smile, which almost frightened the girl; it seemed as if she were slipping away from this world and all its cares, into

another existence. Elizabeth felt that to tell her anything about her nephew's affairs was perfectly impossible. How thankful she was that in the quiet of the sick-room her mistress was kept in ignorance of the knocks and inquiries at the door, and especially of a certain ominous paper which had fallen into Mrs. Jones's hands, and informed her, as she took good care to inform Elizabeth, that any day "the bailiffs" might be after her young master.

"And the sooner the whole set of you clear out of my house the better; I'm a decent respectable woman," said Mrs. Jones, that very morning; and Elizabeth had had to beg her as a favour, not to disturb her sick mistress, but to wait one day, till Miss Hilary came home.

Also, when Ascott, ending with a cheerful and careless countenance his ten minutes after-breakfast chat in his aunt's room, had met Elizabeth on the staircase, he had stopped to bid her say if anybody wanted him he was gone to Birmingham, and would not be home till Monday. And on Elizabeth's hesitating, she having determined to tell no more of these involuntary lies, he had been very angry, and then stooped to entreaties, begging her to do as he asked, or it would be the ruin of him. Which she understood well enough, when all the day, she—grown painfully wise, poor girl!—watched a Jewish-looking man hanging about the house, and noticing everybody that went in or out of it.

Now, sitting at Miss Leaf's window, she fancied she saw this man disappear into the gin-palace opposite, and at the same moment a figure darted hurriedly round the street-corner, and into the door of No. 15.

Elizabeth looked to see if her mistress were asleep, and then crept quietly out of the room, shutting the door after her. Listening, she heard the sound of the latch-key, and of some one coming stealthily up-stairs.

"Hollo!—Oh, it's only you, Elizabeth!"

"Shall I light your candle, sir?"

But when she did, the light was not pleasant. Drenched with rain, his collar pulled up, and his hat slouched, so as in some measure to act as a disguise, breathless and trembling—hardly anybody would have recognised in this discreditable object that gentlemanly young man, Mr. Ascott Leaf.

He staggered into his room, and threw himself across the bed.

"Do you want anything, sir?" said Elizabeth, from the door.

"No—yes—stay a minute. Elizabeth, are you to be trusted?"

"I hope I am, sir."

"The bailiffs are after me. I've just dodged them. If they know I'm here, the game's all up—and it will kill my aunt."

Shocked as she was, Elizabeth was glad to hear him say that—glad to see the burst of real emotion with which he flung himself down on the pillow, muttering all sorts of hopeless self-accusations.

"Come, sir, 'tis no use taking on so," said she, much as she would have spoken to a child, for there was something childish rather than man-like in Ascott's distress. Nevertheless, she pitied him, with the unreasoning pity a kind heart gives to any creature who, blame-worthy or not, has fallen into trouble. "What do you mean to do?"

"Nothing. I'm cleaned out. And I haven't a friend in the world."

He turned his face to the wall in perfect despair.

Elizabeth tried hard not to sit in judgment upon what the catechism would call her "betters;" and yet her own strong instinct of almost indefinite endurance turned with something approaching contempt from this weak lightsome nature, broken by the first touch of calamity.

"Come, it's no use making things worse than they are. If nobody knows that you are here, lock your door and keep quiet. I'll bring you some dinner when I bring up Missis's tea; and not even Mrs. Jones will be any the wiser."

"You're a brick, Elizabeth; a regular brick!" cried the young fellow, brightening up at the least relief. "That will be capital. Get me a good slice of beef, or ham, or something. And mind you, don't forget! a regular stunning bottle of pale ale."

"Very well, sir."

The acquiescence was somewhat sullen, and had he watched Elizabeth's face, he might have seen there an expression not too flattering. But she faithfully brought him his dinner, and kept his secret; even though, hearing from over the staircase Mrs. Jones resolutely deny that Mr. Leaf had been at home since morning, she felt very much as if she were conniving at a lie. With a painful, half-guilty consciousness she waited for her mistress's usual question, "Is my nephew come home?" but fortunately it was not asked. Miss Leaf lay quiet and passive, and her faithful nurse settled her for the night with a strangely solemn feeling, as if she were leaving her to her last rest, safe and at peace before the overhanging storm broke upon the family.

But all shadow of this storm seemed to have passed away from him who was its cause. As soon as the house was still, Ascott crept down and fell to his supper with as good an appetite as possible. He even became free and conversational.

"Don't look so glum, Elizabeth. I shall soon weather through. Old Ascott will fork out; he couldn't help it. I'm to be his nephew, you know. Oh, that was a clever catch of Aunt Selina's. If only Aunt Hilary would try another like it."

"If you please, sir, I'm going to bed."

"Off with you, then, and I'll not forget the gown at Christmas. You're a sharp young woman, and I'm much obliged to you." And for a moment he looked as if he were about to make the usual unmannerly acknowledgment of civility from a young gentleman to a servant maid, viz., kissing her, but he pulled a face and drew back. He really couldn't; she was so very plain.

At this moment there came a violent ring, and "Fire!" was shouted through the key-hole of the door. Terrified, Elizabeth opened it, when, with a burst of laughter, a man rushed in, and laid hands upon Ascott.

It was the sheriff's-officer.

When his trouble came upon him, Ascott's manliness returned. He turned very white, but he made no opposition,—had even enough of his wits about him—or something better than wits—to stop Mrs. Jones from rushing up in alarm and indignation to arouse Miss Leaf.

"No; she'll know it quite soon enough. Let her sleep till morning. Elizabeth, look here." He wrote upon a card the address of the place he was to be taken to. "Give Aunt Hilary this. Say, if she can think of a way to get me out of this horrid mess—but I don't deserve it. Never mind. Come on, you fellows."

He pulled his hat over his eyes, jumped into the cab, and was gone. The whole thing had not occupied five minutes.

Stupified, Elizabeth stood, and considered what was best to be done. Miss Hilary must be told; but how to get at her in the middle of the night, thereby leaving her mistress to the mercy of Mrs. Jones? It would never do. Suddenly she thought of Miss Balquidder. She might send a message. No; not a message—for the family misery and disgrace must not be betrayed to a stranger—but a letter, to Kensington.

With an effort, Elizabeth composed herself sufficiently to write one—her first—to her dear Miss Hilary.

"HONOURED MADAM,—Mr. Leaf has got himself into trouble, and is taken away somewhere; and I dare not tell missis; and I wish you was at home, as she is not well, but better than she has been, and she shall know nothing about it till you come. —Your obedient and affectionate servant,

"ELIZABETH HAND."

Taking Ascott's latchkey, she quitted the house, and slipped out into the dark night, almost losing her way among the gloomy squares, where she met not a creature except the solitary policeman, plashing steadily along the wet pavement. When he turned the glimmer of his bull's-eye upon her she started

like a guilty creature, till she remembered that she really was doing nothing wrong, and so need not be afraid of anything. This was her simple creed, which Miss Hilary had taught her, and it upheld her, even till she knocked at Miss Balquidder's door.

There, poor girl, her heart sank, especially when Miss Balquidder, in an anomalous costume and a severe voice, opened the door herself, and asked who was there, disturbing a respectable family at this late hour?

Elizabeth answered, what she had before determined to say, as sufficiently explaining her errand, and yet betraying nothing that her mistress might wish concealed.

"Please, ma'am, I'm Miss Leaf's servant. My missis is ill, and I want a letter sent at once to Miss Hilary."

"Oh! come in, then. Elizabeth, I think, your name is?"

"Yes, ma'am."

"What made you leave home at this hour of night? Did your mistress send you?"

"No."

"Is she so very ill? It seems sudden. I saw Miss Hilary to-day, and she knew nothing at all about it."

Elizabeth shrank a little before the keen eye that seemed to read her through.

"There's more amiss than you have told me, young woman. Is it because your mistress is in serious danger that you want to send for her sister?"

"No."

"What is it, then? You had better tell me at once. I hate concealment."

It was a trial; but Elizabeth held her ground.

"I beg your pardon, ma'am; but I don't think missis would like anybody to know, and therefore I'd rather not tell you."

Now the honest Scotswoman, as she said, hated anything underhand, but she respected the right of every human being to maintain silence if necessary. She looked sharply in Elizabeth's face, which apparently reassured her, for she said not unkindly—

"Very well, child, keep your mistress's secrets by all means. Only tell me what you want. Shall I take a cab, and fetch Miss Hilary at once?"

Elizabeth thanked her, but said she thought that would not do; it would be better just to send the note the first thing to-morrow morning, and then Miss Hilary would come home just as if nothing had happened, and Miss Leaf would not be frightened by her sudden appearance.

"You are a good, mindful girl," said Miss Balquidder. "How did you learn to be so sensible?"

At the kindly word and manner, Elizabeth, bewildered and exhausted with the excitement she had gone through, and agitated by the feeling of having, for the first time in her life, to act on her own responsibility, gave way a little. She did not actually cry, but she was very near it.

Miss Balquidder called over the stair-head, in her quick imperative voice,—

"David, is your wife away to her bed yet?"

"No, ma'am."

"Then tell her to fetch this young woman to the kitchen, and give her some supper. And afterwards, will you see her safe home, poor lassie? She's awfully tired, you see."

"Yes, ma'am."

And, following David's grey head, Elizabeth, for the first time since she came to London, took a comfortable meal in a comfortable kitchen, seasoned with such stories of Miss Balquidder's goodness and generosity, that when, an hour after, she went home and to sleep, it was with a quieter and more hopeful spirit than she could have believed possible under the circumstances.

MATTHEW CLAUDIUS, HOMME DE LETTRES.

SOMEWHERE about that year 1775, which Goethe has designated the intellectual spring of Germany, there issued from the editorial desk of a petty village, and printed on dusky tea-paper, an invitation to all men to buy a book. Critics and newspaper writers could have it for three Hamburg marks, but to the general reader, as one indifferent to honest worth, it was made over for two. Subscriptions were to be addressed to "Matthew Claudius, *Homme de Lettres à Wandsbeck*." Now, of Men of Letters much has been written, and by the very skilfullest hand, enough, indeed, for this generation; and in the next they are likely to take care of themselves. Already, they are too many to be heroes;

too common to sing pæans over them; too strong to be helped up or put down. Yearly, monthly, daily, by tons of printed books, and magazines, and newspapers, they spread their works to the four winds, and whatever fifth wind may carry them down the tide of the future. Literature is reduced to a profession, to the detriment of romance and hero-worship, but every other way a gain. The struggle, and hardship, and stern fight even down to death; the bitterness, and poverty, and mere hazard of success are almost passed. For the true type of literary hero we must go back at least a century. He may be heroic to-day, but it is the common heroism of a

thousand besides ; and on the whole, he is sure of being made comfortable, and well-paid, and kindly and fairly dealt with. It is hard to evoke any greatness out of a man's availing himself of such uncommonly good arrangements. And with Men of Letters, as such, either past or present, this paper has no concern. But there is a Man of Letters of whom we have but one or two examples, whose rarity invests him with some interest, and who has hitherto been slurred over with the paltriest notice — the Christian Man of Letters. He is not to be confounded with the maker of Christian books, familiar to the librarians of the British Museum, and readers of literary advertisements, and generally to the religious public, a useful man in his way. Nor is he to be confounded, on the other hand, with the Christian teacher, whose accredited office is to teach, and who, for the most part, teaches nobly and well. He is a Christian, but as a writer he is peculiarly a Man of Letters. That is his profession, sole vocation that he recognises ; his business is with literature for its own sake, and literature in the broadest sense, but at the same time he is one who humbly believes in Christ. Perhaps by the very necessity of the case this combination is rare. And for other reasons Claudius is unique ; a character and life for which there is no parallel. So peculiar a type of thinker must be worth looking at, independent of any merit and originality in his thoughts ; and his writings, unfortunately not yet accessible in English, furnish abundant material for the purpose.

Matthew Claudius was born in the vicarage of Reinfeld, in Schleswig, on the 15th August 1740. He was of a clerical family, that had its line of preachers unbroken from the Reformation ; and for at least four generations, had settled itself in quiet secluded cures. Their simple lives seem to have flowed evenly enough ; nor did they make much noise in the world, being given to do their work, and no more ; faithful, honest, God-fearing, and long-lived men, from whom at length sprung the Claudius that was to preserve them all in the tangled story of the world. Certain mellow and genial influences he brought with him out of that placid, pastoral ancestry that had taken so many generations to ripen its fruits ; a meditative and calm habit that never could rightly accommodate itself to the city whirl and strife ; and a devout bent of mind and simple reverence for truth that single him from his better-known contemporaries. Certain other influences he drew from that hearty, sturdy peasantry to whom his father and grandfather had preached,—thorough German souls, with scarce a touch of foreign weakness ; primitive in manners, and speech, and morals ; a race on the whole of very notable and decided character. A deep impression was left by his father. He describes him as “ a mild star shining out of better worlds,” from which his life drew blessing and soft radiance ; and in some verses on his death, he says, with great simplicity :—

“ A good man lies beneath this stone,
And he was more to me.”

For the rest, he was influenced, as most of us are, by teachers, and books, and men.

A school was found for him about eighteen miles away, where he went through the usual training to fit him for the university ; it being determined that he was to follow his father into the ministry. Beyond an occasional whimsical glance back at his rector, we learn little of his school-days. All the teaching was in Latin, and this was irksome to one that was to write a German as idiomatic and popular as Cobbett's English. Punishments were frequent, and altogether the rector was a man of no great amiability, answering in many respects to famous James Bowyer, immortalized by Coleridge and Lamb ; for he was a scholar and made scholars, although given to hard flogging, and a rough sort of wit by way of running accompaniment. At nineteen, Claudius joined his brother Josias at Jena, and entered the university as a student of law. It was not the profession that had been chosen for him ; not that he would have chosen for himself, if indeed he would have chosen any ; but a threatening of consumption compelled him to relinquish the ministry, and of necessity he turned to something else, slowly drifting all the while into his proper calling. His university impressions were vivid through life, though he gained little from his teachers there.

“ I have been at the University, and studied. Well, I did not study ; but I was at the University, and know all about it. I was acquainted with some students, and they were the whole University to me. The students sit together on benches as if they were at church ; and by the window there is a stool, and there sits the professor, and delivers about this thing and the other all kinds of addresses, and they call that teaching. He that sat on the stool when I was there was a master, and wore a great frizzed wig, and the students said his learning was even greater and frizzier than his wig, and that, privately, he was as great a free-thinker as ever a one in England or France. He could demonstrate as quick as lightning. When he undertook a subject, he just began, and before you could look round it was demonstrated. He would demonstrate, for example, that a student is a student, and not a rhinoceros. For, he would say, a student is either a student or a rhinoceros ; but a student can't be a rhinoceros, or else a rhinoceros must be a student ; but the rhinoceros is no student : therefore a student is a student. You may think that was intelligible of itself ; but one of us knew better ; for he said, ‘ that a student is not a rhinoceros, but a student,’ is a first principle of all philosophy. Then he came upon learning and the learned, whereupon he let himself loose against the unlearned. Whether God is, and what He is, philosophy alone teaches, he said ; and without philosophy you can have no thoughts of God. Well, no one can say, with any truth, that I am a philosopher ; but I never go through a wood that I don't fall thinking who made the trees grow. Then he spoke of hills and valleys, and sun and moon, as if he had helped to make them. I used to think of the hyssop upon the wall, but, to say the truth, it never came into my head that our master was as wise as Solomon. It strikes me that he that knows what is right, must, must—if I only saw such an one, I would know him, and I could sketch him with his clear, bright, quiet

eye, his calm large consciousness. Such an one must not give himself airs, least of all despise and scold others. Oh, self-conceit is a poisonous thing; grass and flowers cannot grow in the neighbourhood."

Clearly, such teachers could do little for him; and, as he says, his university was a group of friendly students. And, to more than him, such are the truest Alma Mater that their later life recognises,—living books from which they have drawn endless variety of living teaching. The genial collision of fresh and eager minds, and interchange of open friendly opinion; country walks, sustained with keen and humorous debate; and evenings in friendly chambers, where the converse runs gloriously on into the night,—it is these that have helped on the thought that a hundred lectures would never have reached. Nothing has been preserved of that Jena circle which, we are told, grouped itself into a "German Society," and strove after higher things than beer and the duello; nor is there other notice of that university career, save one, characteristic in its very sorrow. Josias died of the complaint that had threatened his brother, and young Matthew, then twenty, uttered a funeral oration, after the somewhat barbarous custom, before the faculty and students, on the thesis, *Whether and how far God determines the death of men*.

Three years later, he made his first literary venture, and left the University. The book was of no value, and but one trifling poem was rescued by his later judgment; but it was significant. Book-writing was manifestly to be his vocation, and he took no steps to any other. In Germany, the law throws open a variety of occupations inconceivable in this country; yet he remained passive at home. It may have been "shyness," as some suggest, or the "demand of a contemplative nature." Probably it was something more commonplace, a defective business faculty, and a poor knowledge of his profession. He expressed to Herder a modest view of his acquirements in that direction:—"I can write and cipher; I don't know much of law, either national or international; I could once write Italian, and still write French grammatically but not idiomatically; I understand Greek, Latin, English, Danish, Dutch, and some Swedish and Spanish; I heard lectures on the Institutes, and Pandects, and history, but I really know nothing more of Institutes, Pandects, and history than bare necessity compels." To those acquirements he might have added mathematics, a science that he pursued with uncommon zeal and skill, and even taught with some success; music, for which he had a genuine passion; the modern literature of his country, and a faculty of verse. Yet none of them promised much help to the lawyer; and young authors cannot afford to live on the strength of a book that no one will buy. So he went for a year to Copenhagen, as secretary to a Count von Holstein, then loitered three years again at Reinfield, and, in 1768, went to Hamburg as a writer for the press.

The poetic life within him was struggling into activity, and from the day of his acquaintance with Klopstock, poetry wore a new meaning. "Mr. Ahrens used to say to us at school, 'No, no; these are not verses; verses must rhyme.' He would put

me before him, and pull me first by the one ear and then by the other, and say, 'There's an ear, and there's an ear, that rhymes; and verses must rhyme.' Why, I can read two hundred verses an hour, and it is much the same as wading through water; but here [it is Klopstock's *Odes*] I cannot lift my eyes from the book, and it is as if forms I had once seen in dreams stood before me.

I had heard from Mr. Ahrens that verses were a kind of foamy froth that must rhyme; but my cousin says that they must not froth at all, but must be clear as drops of dew, and penetrating as the sighs of love." Another acquaintance was exercising no little influence upon him. This was Schönborn, the son of a Holstein pastor, whose brilliant intellect and energy won him a place among the best men of his time; "with a face," as Claudius describes him to Herder, "like oak-bark, a heart like the down of flowers, and the mind of Newton and Cartesius." Intercourse with other minds was bringing him into personal contact with the questions of the day. It was when the long reign of lifeless orthodoxy and propriety was drawing near its end, and the reign of doubt was beginning. The younger intellects were on the side of scepticism; they were impatient of mathematical demonstrations of truth and right; the old world of thought had become hollow and artificial; and honest inquirers shrunk from it in dismay. Lifeless orthodoxy had almost ended in lifeless scepticism; and should any life come into scepticism, orthodoxy was in danger of being wholly swept away. The older men clung to the church and its forms and its rules with a desperate tenacity; as for any living power in the word of truth that carried its force of conviction within itself, they knew nothing, nothing but bare formulas. The younger men were weary, and sought something higher and worthier; but in the search they went adrift over the great sea of speculation, and took no guide. To them also the Word had no living power, and they cast it aside; but they looked for what *had* power, and believed they could find it, enthusiastic and warm as they were with the heat of youth. Such opposite parties were likely to stir many questions, and among them the very deepest. There was already beginning the strange and chaotic ferment of opinion that closed the century. And Claudius was now fairly in the fight with the rest. He had learned something in Copenhagen, been at least roused and startled there; he had gained much in the leisure years of thought that followed; and at Hamburg he was thrown again into the strife. Lessing, Herder, Klopstock, were among his friends; at the house of the younger Reimarus he met the freethinkers; at the Sieveking's whatever of true culture and intellect and goodness there was in Hamburg. His own powers rapidly developed; energy stimulated their growth; and instead of being a mere unit in the brilliant literary society, he became one of its noted members.

His connexion with the first newspaper was dropped in less than two years, and he was only saved from absolute want by obtaining a place in the "Wandsbeck Messenger." This petty paper was printed at Wandsbeck, a pretty little village

just out of Hamburg, and thither Claudius removed, and was content; though on how little, let under-writers for the German press declare. In one of his papers he alludes in his jesting way to Tycho Brahe's residence at Wandsbeck: "for you have no doubt heard that Tycho, maker-of-calendars, and peeper-at-the-stars, used in his time to observe the course of the stars from Wandsbeck, and that this Tycho Brahe had a nose of silver and gold and wax, since in the night-time a nobleman had duelled off his nose of flesh. I call him to witness that I have no nose of gold and silver and wax, and that *by consequence* I do not observe the courses of the stars from Wandsbeck." If the pay is little and the wit is dull, and of that peculiar character known in Germany as *humor*, at least the writer is in good spirits, and looks cheerfully and bravely out at the world from the little red-roofed village street, not dreaming as yet that Wandsbeck would be better known to after generations by its sad-coloured and over-scanty *Messenger*, than by any number of observations on the heavens.

Other stars than heavenly, indeed, he found leisure to observe, for, watching the village street, Claudius caught a new interest that absorbed him for the time. There are schools in Germany for knitting, and other housewifery work of that patient kind,—excellent institutions in their way, although not intended for what came of one in the sexton's house at Wandsbeck. Passing to the school, an "uncommonly beautiful, lively and lovable" young girl threw her pleasant shadow across the editor's window twice a day. This was too much for a poet, and *homme de lettres*. He learned that she was the best answer in the catechizing at church and that her father was a carpenter, and struck up an acquaintance by a true lover's ingenuity. He found that he wanted a large table, and that no one could make it but the carpenter Behn, yet so many alterations came about in that piece of furniture (happily still extant), and so many visits must be paid to carpenter Behn's house, that having one day invited some Hamburg friends and a clergyman, he surprised them by pulling the licence out of his pocket, and begging them remember they were wedding guests. The marriage was as happy in its results as odd in its conception; and the charming purity and reality of the family life, so naively described by Claudius in his letters to Andrew, was long a healthy and noble protest against the Wertherisms and other hollow sentimentalities that at that time overran Europe. "She had a pair of blue eyes," he says himself, "and her face was white and red. As it many a time happens that a blind hen finds a corn, so it was now. *De gustibus non est disputandum*; in short, once she pressed my hand under four eyes, and said that I was the one, and that so I should remain. I can never say what a stone fell off my heart, and how short the day and night grew, and how easy everything went." And in a poem to his wife on her silver wedding-day he says with deeper earnestness:—

"Fortune and weal of all my life art thou,
Full wise was I to find thee for my own:
And yet not I. God gave thee then and now,
Such blessings come from His dear hand alone."

Wandsbeck was the place for an idyl, and Claudius and his young wife entered on life in a purely idyllic way. Voss, the translator of Homer, and editor of the Göttingen "Almanack of the Muses," was there, and he writes:—"We are all day with brother Claudius, and commonly lie in the shaded arbour of the bowling-green, and listen to the cuckoo and the nightingale. His wife lies beside us, dressed as a shepherdess, with loose flowing hair, and her child in her arms. We drink coffee and tea, smoke a pipe, and prattle, or compose something for the *Messenger*." And even some years later, Voss's wife, beautiful, true-hearted Ernestine Boie, supplies a companion picture. "We visited Claudius' mother-in-law very often. She had a hostelry for honest citizen's families, and, with her two daughters, was right well skilled in serving the guests. There were two nine-pin alleys in her garden, and we took possession of one. Claudius was president of the society, and no one was invited without his permission. Every luxury was strictly forbidden, even coffee and tea. There was only Kaltenhof beer (Claudius' ideal), and pure water from the well, bread and butter, cheese, and cold meat. Many a time we played till ten o'clock, and in the moonlight." But life is more than playing nine-pins and dressing like shepherdesses; and when two daughters were born, and the semiquarto *Messenger* remained almost stationary, life assumed a rough and anxious aspect, and the prattling under green trees was exchanged for eager letters for help. To this end, Herder was busy at Darmstadt, and obtained at last a secretaryship to the Chancellerie. Claudius, whose wishes were rather for "some quiet post, such as director of an hospital, or other charity, in a wood; steward of a hunting-seat, garden-inspector, village-bailiff," or other like modest work, shrunk from the higher station. He tried republishing his contributions to the *Messenger*; his friends tried for a situation; he even betook himself to translation, most hazardous and toilsome of all literary expedients. And he went about it with a buoyancy and simplicity of soul, and freedom from final apprehension, that tell much for his family peace. He was, indeed, never meant for a mere writing-machine. He would only write when he could, when his thoughts needed writing; and to go on pouring out words in continuous flow for a return of so much bread, was a task-work, and sacrifice of truth and dignity, that was impossible. Yet he was a Man of Letters,—born for that as it seemed.

At this juncture the problem was solved by another Darmstadt offer; and to Darmstadt he repaired, to be one of the Commissioners of Land, with 600 florins of income. It has never been clearly made out what that office was in Claudius' mind. "Munsen asked him what he had to do? 'Nothing,' he replied; 'but let everything go on!'" He lived "pleasantly and quietly," had some genial literary intercourse, yet longed for the arbours of Wandsbeck. And when the Land Commission broke down within a year, he made joyful speed to the pretty idyllic village, with these thoughts for the future:—"Translation, continuation of *Assmus*, and commit thou all thy ways." This slender provision is characteristic. Life might be

rough and harsh upon occasions, but he met it with the simple smile of present trust. He had few wants, and, if only he could live it was enough. For two years, the sons of the philosopher Jacobi were boarded with him, and helped somewhat. But when they left, and he saw eight children about him, and felt how little his pen could do for so many, he took a singular step. For he wrote to the King of Denmark, then Regent, for "some post, not very lucrative;" and as he felt himself incapable of all posts, he begged the Crown Prince "to speak a word of power, and to order for him what he was fit for." Probably no one but Claudius would have thought of such a letter, and quite certainly no one else could have written it. The result came, with scarce any delay, in the shape of a bank appointment at Altona, involving no change of residence, requiring little attention, and bringing a salary of £150 a year. From this time he could write his fancies in peace, secure against the hunger-fiend. As a mercantile transaction, it was scarcely prudent; and it would not be for the interest of banks to appoint every dreamy Man of Letters a director, and to leave them wooing the Muses in every pretty village of their liking. But it would not be in the interest of the world that Men of Letters should die of hunger; and it never has been in the interest of the world that it suffered its Men of Letters to starve in garrets, and roam through the homeless streets, and languish without hope in Grub Street. That has been so much of the truest light that was in the world extinguished, trampled out by that world with its careless foot, while it strode haughtily on in its darkness. It is becoming slowly conscious of that now, establishing pensions and civil lists, and like institutions. Its Men of Letters are a glory to it; it would wear them as decorations, as many as can show on its broad breast. It would even pet and huzzas them—when they have shown that they cannot be put down. But it has not yet got to feel that they are its workers, as genuine and necessary as any other. And until then, we must accept such clumsy and harmless expedients as drew Claudius an income out of the Altona bank, and honour them as instalments of what is due, and as isolated, righteous, and beneficent acts.

As Man of Letters, Claudius was true to his calling. Perhaps it is the best thing that can be said of him as such. He felt it to be something noble, almost sacred, not to be paltered with for bread or reward, not to be lowered into mere drudge work, counted out by the page, and weighed by the silver. He had no foolish scorn for the money value of thought. He had set himself to live by thought, if it would support him. "I beg all editors of newspapers, and the rest," he wrote half piteously, "not to clip out my book into their columns, for it is my staff of life." But if such thoughts as he could fairly write would not support him, he would use no other. He wrote with a high and earnest purpose, as one who knew he uttered the inarticulate thoughts of many, and that when they became articulate they would, in whatever feeble way, be a power in the world, and influence the hearts and lives of men; and it concerned him that it should be such influence as he could honestly stand over. Soon after settling at Wandsbeck he

had republished his contributions to the *Messenger*, and the success of that venture induced him to continue. What he had to say was thus given to the world in thin and irregular volumes, appearing at intervals between 1774 and 1814, and bearing the name of "Collected Writings of the Wandsbeck Messenger, or *Asmus omnia sua Secum portans*." It was of the most various and miscellaneous character: epigram, parable, essay, song, speculations on philosophy, criticism on current literature, letters, proverbs, dialogues with the Emperor of Japan, flights at politics, religious musings, all clustered together without effort at arrangement. From his editorial desk he looked out on the broad world as on some huge extent of panorama, slowly unfurling, and passed his remarks freely on whatever caught his notice, or sat silent as it pleased him. He is intensely personal, holds you by the button till he delivers his opinion; a pleasant, satirical, not voluble companion, and never egotistical. Bidding farewell to his readers, he says, "I make no apology for my writings. I am not a learned man, and never gave myself out for it. What I have done has been to the best of my ability, and I say in all frankness, that I could have brought together nothing better." This earnestness and honesty of purpose, and frankness of self-estimate, give character to the eight volumes; his own presence in every page lends them a peculiar piquancy and charm. He reveals himself in the pleasantest little touches of character, with the ease of being perfectly natural. He tells us how the tears sprung into his eyes while his mother told him that the moon went seeking Endymion through the sky; that he could not bear to see even a dog die; that he loved to wander through the deep woods singing his Psalm; that he and his wife used to walk out under the silent, solemn stars; and when Paul (the thief!) had stolen his hard-earned crowns, he walked into the country, and saw a river and soft meadow-land and horses and cows and sheep on the bank, and the cows well up in the water, leisurely drinking, "and I forgave him in my heart where I stood, and went home." It was so gentle a nature, so exquisitely sensitive to all influences of earth and sky, so humble and tender and reverent and pure. There never was an evening hymn as compact of calm and loving and holy thoughts, as truly a bridal of earthly beauty and heavenly peace, as his *Now rest the woods again*, for which readers are referred to Miss Winkworth's excellent translation. Yet there was nothing sentimental about him, but, on the other hand, great moral strength and healthiness. "If the sunrise does not move you, and you must squeeze tears into your eyes, then spare such made water, and let the sun rise without tears." "Poor Werther," he says again, "if he had only just travelled to Paris or Pekin!" And his parallel between Shakspeare and Voltaire is worth preserving: "The one is what the other only appears. Voltaire tells you, 'Now, I shall weep,' and Shakspeare weeps." No modern German poet has written a healthier song than his *Rheinweinlied*, mighty and strong as the Rhine itself. His "Peasant's Song" has all the breadth and manliness of Robert Burns, and what Burns had not, an outspoken and thankful faith in God: for, as he says himself, "a poet

should be a pure flint from which the fair heavens and the fair earth and our holy religion strike out clear, bright sparks."

Claudius, however, was more than Man of Letters. His instincts and tastes were purely literary; his life was a literary venture; but the literature was the noblest. He was a sturdy fighter for truth in an age when doubt was put forward as a healthy condition of mind. He loved, and searched, and battled for it with a passionate devotion. And it was the one absolute truth, *the truth as it is in Jesus*. To this end he wrote with a unity of purpose that underlies the most humorous and playful of his utterances, and gives his papers a completeness that so fragmentary and often whimsical a writer could never otherwise have attained. From the opening of the *Messenger*, his deep loving reverence for the Bible shows itself in contrast as much to the dogmatic orthodoxy as the rude unbelief of his time. "From my youth up," he says, "I have delighted to read in the Bible. Every word that proceeded out of the mouth of Christ, every movement of His hand—His very shoe-latchet, are sacred to me;" while over the very portal of his life as Man of Letters there are these words: "Most of all, I love St. John. There is something altogether wonderful in him. Twilight-dusk and night, and the quick start of the lightning through it! Soft evening clouds, and behind them the great full moon bodied forth. There is something so pensive, and lofty, and foreseeing, that one can never have enough. When I read in John, I always feel as if I saw him before me, lying on the Master's breast at the Last Supper; as if his angel held me the light, and at certain passages fell upon my neck and whispered in my ear." He would often pause from his chapter, in silent tears, and fold his hands and pray. The orthodox partisan said the Bible was true; would prove it, as his old teacher would prove a student not to be a rhinoceros. Claudius felt it, and spoke only as he felt. Religion which "is not in shallow dogmatics, nor unbelief, nor among the degenerate sons and whitened sepulchres of faith, which is not of the pure reason, nor orthodoxy, nor monachism" was to him for children. And in the spirit of a child he searched the Scriptures. Take, for instance, his comments on the Lord's Prayer:—

"When I am to pray it, I think first of my father, and how good he was to me while he lived, and how willingly he gave to me. And then I put the whole world before me as my Father's house, and all the people in Europe, Asia, Africa, and America are then my brothers and sisters in my thoughts; and God sits in heaven on a golden throne, His right hand stretched forth over the sea and even to the ends of the earth, and His left hand full of salvation and good, and the tops of the mountains smoke, and then I begin:—

*Our Father, who art in heaven,
Hallowed be thy name.*

I do not yet quite understand that. It may be the Jews knew certain mysteries of the name of God. I let that alone, and only wish that the thought of God, and every step by which we could reach to know Him, were above everything else great and holy to me and all men.

Thy kingdom come.

At this I think upon myself, what currents drive me hither and thither, and how one thing and another rules me, and that it is all vexation of spirit, and I never find a green twig. And then I think how good it would be if God would make an end of all strife, and rule in me.

Thy will be done on earth, as it is in heaven.

At this I see heaven, with the holy angels who do His will with joy, and that never a sorrow vexes them, and they rejoice night and day; and then I think: if it were also so upon earth!

Give us this day our daily bread.

Everybody knows what daily bread is, and that we must eat as long as we are in the world, and that it is a right pleasant thing. And I think upon it. And my children come into my mind, for they are so ready to eat, and run so quickly and heartily to the dish. Then I pray that our dear God will always give us something to eat.

And forgive us our debts, as we forgive our debtors.

It is hard to suffer wrong, and revenge is sweet to man. That is my own experience, and I could have a great desire to revenge; but then I seem to see the wicked servant out of the gospel; and I have no heart for it, and I determine to forgive my fellow-servant, and will never say a word to him about the hundred pence.

And lead us not unto temptation.

Here I think of examples of every kind, of people who, under different circumstances, have quitted and turned away from the good, and that it would be no better with me.

But deliver us from evil.

Temptations are still in my mind here, and that a man can be so easily led astray, and wander from the right path. At the same time I think of the burden of life, of consumption and old age, of childbirth, and gangrene, and idiocy, and of the thousand pains and sorrows that are in the world, and whereby poor human beings are plagued and martyred, and no one can help them. And you will find, Andrew, if the tears have not come into your eyes before, that here they will come of a certainty, and one has such pitiful longings, and is as sorrowful and cast down as if there were no help. Yet must one be of good courage, and lay the finger on the lips, and march on as if in triumph:—

*For thine is the kingdom, and the power,
and the glory, for ever. Amen.*

With what *naïveté*, and what singular depth and accuracy this is written; a strictly personal comment in which the writer takes you into his confidence; nothing formal or elaborated, but only a personal experience; yet where else in the same compass should we look for so much poetry of feeling and exquisite perception of truth? This childlike spirit he carried into the great religious, rather irreligious controversies of his time, and met the doubts and innuendoes and assaults of the sceptic with the positive strength of a man of faith. Religion was to him a personal matter, and had its surest ground

and reality in the personal relation to God. It was out of this that his appeal went forth, and it was in this that his real power lay. His relation to his time,—to its scientific theology, and philosophical doubting, and incipient rationalism,—may be seen in such passages as these:—

"Certain deistical gentlemen and Chinese wise-
acres have equipped a host of objections and doubts out of Aristotle's *Organon*, Count Welling's *Salzlehre*, Descartes' Mathematics, Wolfen's Experimental Physics, Geriken's Air-Pump Theories, etc., and have advanced to make a breach in the Mosaic cosmogony. Light, for example, should not have appeared on the first day, and the sun three days too late; grass and trees should not have grown on the third day, when there was no sky till the fourth, and so on. And certain theological gentlemen and broad-minded philosophers have raised up a host of answers and solutions against them, even out of Geriken's Air-Pump Theories, Wolfen's Experimental Physics, Descartes' Mathematics, Count Welling's *Salzlehre*, Aristotle's *Organon*, etc., and thereby have made the breach yet wider, seeing that the Mosaic cosmogony is not measured off according to Aristotle's *Organon*, Geriken's Air-Pump Theories, Descartes' Mathematics, Count Welling's *Salzlehre*, nor Wolfen's Experimental Physics, and therefore is neither to be assailed nor defended by these. But if the Mosaic cosmogony is to be justified by none of these, it is not the fault of the lock but the locksmith. It needs no such artificial justification, and soars away on the wings of the morning high above all objections and doubts, yea, and triumphs."

"Some famous learned men have thought out another plan of nature. Species, they say, are only resting-points and steps, where Nature rests and collects herself in order to go on further, and always from the lower to the higher and more developed, so that an oyster ends in a crocodile, and a gnat in a serpent, and from the most developed of the lower animals come at last men and angels. This is put forward cleverly enough; only that the first and chief argument against it is, it is not true. So little does Nature advance from one species to another, that she never alters the same species or makes it more perfect. The autumn spider spun its web among the Romans in the same wonderful mathematical form, with peripheries, radius, and centre, and already Ælian remarks that it does its work without Euclid. He relates, moreover, that it sits in ambush in the centre of its web, as we see it sit after more than a thousand years."

"*Emperor of Japan*. As I hear the world is everywhere the same, of course, then, you don't want in Europe for objections and doubts against religion?

Amus. Mr. Lessing recently gave to the public various doubts of an anonymous writer, some of which are truly learned and clear. He has refuted them, however.

E. Mr. Lessing belongs to the bench of philosophers?

A. I should say that your Majesty had better set him on his own chair. The common benches do not suit him, or rather he does not suit the benches.

E. How has he managed with those doubts?

A. In the usual way. He that is right will maintain the right. He ought to maintain it, and dare not shun the open field. So Mr. Lessing lets the doubts march on with upper and under arms, and the man with the truth marches against them. But as a troop of religious doubts is like a rattle-snake, and falls upon the first unarmed man, he will not allow that, and therefore he puts a muzzle upon every doubt; something to gnaw at, until a learned and understanding theologian is equipped. And, says he, we must meet the foe honourably; and no one is to cry victory because he has fired off an old rusty musket with powder only; and no one is to take up more ground than he can defend, and than the foot of religion needs.

E. Mr. Lessing pleases me. Do you think he would care to come to Japan?

A. I am not aware, Sire; your Majesty at least must make the conditions very minute and conclusive, for he must see everything clearly with his own eyes.

E. It seems the refutation is not of much importance?

A. Of none at all, Sire. By the help of Mr. Lessing's electric spark I seem to see Religion as a medicine, and the doubter as Dr. Peter, and the refuter as Dr. Paul, and they quarrel over the medicine as it lies before them on the table. If I stood sick and wretched beside the table and the two doctors, and would willingly be relieved, and Dr. Paul was right, yet I would not be cured if I did not take the medicine; and if I did take it, and it were good, I would be cured, even though Dr. Peter were right. So the maintaining of what is right is only for the gentlemen who can look on and listen; but the taking of the medicine is the real business; and one patient, Sire, who was cured, would prove more for those gentlemen who listen, than a hundred victories of Paul over Peter."

Should it be inquired what was the secret of the influence he wielded as a Christian thinker, it was just this, that he was a Christian thinker. He was content to be that, and his contemporaries were not. He clung to positive truth, not as a bulwark against infidelity, but as the life and joy of his own heart. The rest were looking at it critically, scientifically, poetically, as men of taste, and learning, and feeling. He looked at it as his possession, of which if a man robbed him, he might as soon rob him of life. There were certainly greater men in his day, though not so much greater as his modesty made him believe; men who speculated and wrote on the questions that came up in his papers; yet there is not one that has left the same healthy influence. Lessing opened a door to doubt which he was not willing to close; Herder preached himself into an unconscious pantheism; Jacobi was philosophically neutral; Stolberg followed sentiment into the Church of Rome.

Claudius held on by Christ as by a rock; wrote letters to Andrew on the miracles; expounded Christianity to his children; put forward essays on prayer; and each new volume became more thoroughly imbued with Christian thought. We know little of the way by which he was led to Christ as a Saviour. Hamann and Lavater seem to have had much

power over him at the time, and he turns back to them with thankfulness. It would seem he had to pass through much personal struggle, and "to wander in defiles and labyrinths before reaching the doors of peace." It would seem also that from this time old friends separated from him, dropped at least the constancy of their intercourse. As years rolled on he kept more within the family life at Wandsbeck, where the days passed in the cheerfulness of simplicity. One daughter, Christiana, died; another, Caroline, was married to Perthes the bookseller. Of Christiana he has touchingly written:

"A star rose in the sky,
And flung mild radiance down,
And softly shone and high,
Softly and sweetly down.

"I knew the very spot
Of sky that hid its light,
Each sundown had I sought,
And found it every night.

"The star is sunk and gone;
I search the sky in vain:
The other stars come one by one,
But it comes never again."

Caroline's life is before the world, and has been, and will long be, a strength and comfort to many hearts. In those noble womanly letters that are the greatest charm of the *Life of Perthes*, she has revealed the genuine force and tenderness of that Wandsbeck home. Another daughter was married to young Jacobi. And while his family was scattering from him, friends were passing away. Schönborn, it is true, had returned, a sluggish old man, wrapped for most of the day in a dressing-gown, not of the cleanest, or standing in the doorway in long loose overcoat; silent as if in a dream, or rude of speech, with rough Low-Saxon idiom; talking the boldest and grandest thoughts; "the most thorough sceptic that ever existed;" perfectly friendless, and cast among a new generation of literary men; a nuisance on the whole, but with a kingly mind, and so reluctant to die that he absolutely refused for more than a week, shocking all the proprieties of medicine. Claudius could not have much intercourse with him. Schlosser, Lavater, Klopstock, Herder, Princess Gallitzin, and young Runge, the painter, were already gone. He might have said with Wordsworth:—

"Like clouds that rake the mountain summits,
Or waves that own no curbing hand,
How fast has brother followed brother
From sunshine to the sunless land!
Yet I, whose lids, from infant slumber,
Were earlier raised, remain to hear
A timid voice that asks in whispers,
'Who next will drop and disappear?'"

He did not long survive the trials of the French occupation. On New Year's Day, 1814, he published a Lay Sermon to the German people. "Sorrowful and anxious ones," it concluded, "who weep over your loss, for your sons, your friends, your well-loved, do not despair; and if the comfort that they have suffered and died for freedom and fatherland, cannot comfort you, there is in Jesus Christ a prospect which can raise you over death and the grave, and all that is earthly, and thoroughly dry your tears." Next New Year's Day he lay on his death-bed in Hamburg. "I

have all my life," he said, "reflected on these hours, and now they are come." He was quiet and joyful, and retained all his originality and peculiarities. He was constantly in prayer. One afternoon it was, *Lead me not into temptation, but deliver me from evil.* "An hour later he said *Good-night* several times, and in the moment of departure, he opened his eyes, and looked lovingly upon his wife and children." "The expression of the whole person," writes Perthes immediately after, "is still very striking; there is an air of weariness, as if he were satisfied and pleased to have done with the earthly; while the brow retained its beauty and power, and the mouth all the fullness of affection, which characterized them in life. The end of this man was indeed great and noble."

The calm of that awaited death is in harmony with the rest. The shrewdness, and irony, and whim are stilled in the silent and thankful communion with God, and the veil is drawn softly over the sickly face and the "heavenly blue eye," over five-and-seventy years of a life that was not without its harshness, and coarse, strong lines, but that, as quaint, original, sincere, devout, was unsurpassed. Age had ripened his Christian faculties, and made him only more decided for the truth. "You write, Andrew, that it makes your hair grey to see Christ denied and despised. You, dear, righteous soul, and well it may; but whose carries grey hairs for Christ carries a crown." "Whoever," he wrote again, "will not believe in Christ, must just see how to get on without Him. You and I cannot." He translated Fénelon in his latter days, grew somewhat mystical about the inner life, dwelt upon the perfect union of the soul with Christ, and wrote so earnestly that men said the old Messenger had got tiresome. To many he was scarce intelligible. They had relished the *Man of Letters*; they grew weary and dull over the *Man of God*. Often Novalis is unintelligible for the same reason. When he rises into the sphere of religious feeling, readers and critics, and very friends, apologise for his obscurity. Knowledge of the intricacies of German thought is not enough to interpret him, though that impression is left by a recent and otherwise fair writer on *Guessers at Truth*. Knowledge of spiritual life is more essential; sympathy with spiritual thought. And Novalis has been unfortunate in being edited and reviewed, and introduced to us in England by those who frankly disavow a power of spiritual perception in any positive Christian sense. It is for the Christian thinker he has the profoundest interest, and to him he will yield the richest fruits. And it will be found that, where Claudius repels the mere literary seeker, there are hidden, but easily-yielded treasures for the spiritual mind.

Wandsbeck still draws an occasional pilgrim to its shrine. The Messenger has passed into other lands; his writings flourish in a seventh edition in his own. There is not a German student that does not sing his songs; there is not a Holstein peasant that does not hum his pleasant rhymes. But deeper than all, he has struck root in the religious heart of Germany, and survives as the simple-minded *Man of Letters* who was not ashamed of the Gospel of Christ.

W. FLEMING STEVENSON.

SOME VERSES WRITTEN BY A WORKING MAN
FOR THE CHILDREN TO SING AT AN ANNIVERSARY MEETING IN HERTFORDSHIRE.

THE SABBATH DAY.

The merry Birds are singing,
And from the fragrant sod
The Spirits of a thousand flowers
Go sweetly up to God :
While in His holy temple
We meet to praise and pray,
With cheerful voice, and grateful heart,
This Summer Sabbath Day.

We thank thee, Lord, for one day
To look Heaven in the face !
The Poor have only Sunday ;
The sweeter is the grace.
'Tis then they make the music
That sings their week away :
Oh, there's a sweetness infinite
In the Poor Man's Sabbath Day.

'Tis as a burst of sunshine—
A tender fall of rain,
That set the barest life a-bloom—
Make old hearts young again.
The dry and dusty roadside
With smiling flowers is gay;
'Tis very heaven once a week,
The Poor Man's Sabbath Day.

'Tis here the weary Christian
Doth reach his House of Ease;
That blessed House called "Beautiful,"
And that soft chamber "Peace."
The River of Life runs through his dream,
And the leaves of Heaven are at play:
He sees the Golden City gleam,
This shining Sabbath Day.

Take heart, ye faint and fearful,
Your cross with courage bear;
There's many a face now tearful
Shall shine in glory there!
Where all the sorrow is banished,
All tears are wiped away;
And all eternity shall be
One endless Sabbath Day.

Ah! there are empty places,
Since last we mingled here,
And there'll be missing faces
When we meet another year!
But heart to heart before we part
We'll altogether pray
That we may meet in heaven, to spend
The eternal Sabbath Day.

OUR SAVIOUR'S VOICE.

BEHOLD me standing at the door,
And hear me pleading evermore;
With gentle voice above the din,
"May I come in? May I come in?"

I fought for thee with Death's grim wave,
I burst the dungeons of the grave;
I would my rightful guerdon win.
"May I come in? May I come in?"

Wearing the cruel thorns for thee,
I listen long and patiently,
To hear the footsteps from within.
"May I come in? May I come in?"

Poor soul! so dismal is thy sight,
And lo, I am the Living Light,
That smiles away all mists of sin.
"May I come in? May I come in?"

There's surely room upon thy breast,
For one more loving head to rest;
One empty place for kith and kin.
"May I come in? May I come in?"

I would not have thee beat in vain,
My Father's door, and plead in pain,
When Heaven and all its joys begin.
"May I come in? May I come in?"

THE PARENT'S PRAYER FOR THE CHILDREN.

CHRIST on Earth, in Heaven the King,
As we heard the Children sing;
How the thought within us smiled—
Thou wert once a little Child.

Hover near then, Heavenly Dove,
With thine overshadowing love;
Keep them pure and undefiled:
Thou wert once a little Child.

See them playing on the sands,
Twixt two tides with helpless hands;
Save them when the waves grow wild:
Thou wert once a little Child.

Bless them in their joyousness,
Hear them, help them, in distress;
Be their Shepherd when beguiled:
Thou wert once a little Child.

Let their feet be firmly shod;
Let them not go back to God,
With immortal Jewels soiled:
Thou wert once a little Child.

Take them, when the Peril's past,
To thy Father's Home at last;
He remembers, and is mild,
Thou wert once a little Child.

OUTSIDE.

THERE is a tremendous difference between being Inside and being Outside. The distance in space may be very small: but the distance in feeling is vast. Sometimes the outside is the better place, sometimes the inside: but I have always thought that this is a case in which there is an interruption of Nature's general law of gradation. Other differences are shaded off into each other. Youth passes imperceptibly into age: the evening light melts gradually into darkness: and you may find some mineral production to mark every step in the progress from lava to granite, which (as you probably do not know) are in their elements the same thing. But it is a positive and striking fact, that you are outside or inside. There is no gradation nor shading off between the two. I am sitting here on a green knoll: the ground slopes away steeply on three sides, down to a little river. The grass is very rich and fresh: and it is lighted up with innumerable buttercups and daisies. You can see that the old monks, who used to worship in that lovely Gothic chapel, brought these acres under cultivation in days when what is now the fertile country round, was a desolate waste. And the warm air of one of the last days of May is just stirring the thick trees around. But all this is because I am outside. There is an inside hard by where things are very different. Down below this green knoll, but on a rock high above the little river, you may see the ruins of an old feudal castle. Last night I passed over the narrow bridge that leads to the rock on which the ruins stand: and a young fellow, moderately versed in its history, showed me all that remains of the castle. You go away down, stair after stair, and reach successive ranges of chambers, all of stone, formerly guardrooms and kitchens. These chambers are sufficiently cheerful; for though on one side far underground, on the other side they are high above the glen and the river. The setting sun was streaming into their windows: and the fresh green of beeches and pines looked over from the other side of the narrow gorge. But now the young fellow mentioned that the dungeons were still far beneath: and in a pitch-dark passage, he made me feel a small doorway, black as night, going down to the horrible dark recesses below, to which not a ray of light was admitted, and to which not a breath of the fragrant spring air without could ever come. You could not but think what it must have been, long ago, to be dragged through those dark passages, and violently thrust through that narrow door, and down to the black abyss. You felt how thoroughly hopeless escape would be:

how entirely you were at the mercy of the people who put you there. And coming up from those dungeons, climbing the successive stairs, you reached the daylight again: and descending the steep walks of the garden, you reached a place just outside the dungeons: which on this side are far above ground. There was the pleasant summer sunset: there were the milk-white hawthorns and the fragrant lilacs: there was an apple-tree, whose pink-and-white blossoms were gently swayed by the warm wind against the outside of the dungeon wall. And, almost hidden by green leaves, you could hear the stream below, whose waters (it is to be confessed) had suffered somewhat from the presence, a few miles above, of various paper-mills. And here, I thought, were the outside and the inside: only six feet of wall between: but in all their aspect, and above all in the feeling of the crushed captive within, a thousand miles apart. Of course, there was no captive there now: but all this scene was the same in the days when those dungeons were fully inhabited. And doubtless, many of those who were then thrust into those dismal places, liked them just as little as you and I should; and were missed and needed by some outside, just as much as you or I could be.

In this case, you observe, it is better to be outside than to be inside. But there are many cases in which it is otherwise.

You may be outside physically: as you would be if you were to fall, unnoticed, and in the night, overboard from a ship; and it to pass on, and leave you to perish in the black waters. Many human beings have done that: an old school-fellow of mine did. It must be a dreadful thing. It would be better, in such a case, not to be able to swim: for then the suffering would be the sooner over; and the mind would be in such a bewildered, hurried state, that there would be less room for the agony of thought. But in warmer seas, where the chill of the water would not speedily benumb into loss of power and consciousness, the single hour through which, as Cowper tells us, an unaided swimmer might sustain himself in life, would seem like a lifetime. I know a man who supported himself for a whole night, by the help of two oars, after his vessel had gone down in the Indian Ocean. His wife and child went with it: and after desperate efforts to save them, he found himself in the water, clinging to his two oars. Three times, through that awful night, he cast the oars away from him, and dived deep under the surface, hoping that he might never come up: but the in-

stinctive clinging to life was too strong : and each time he faintly struggled back to his oars again.

Then you may be outside morally. You may somehow have turned out of the track in which those who started with you are going on in life. Perhaps through folly : perhaps through sin : you have got beyond the pale. There is a narrow passage in a certain city, a steep and narrow passage of evil odours, through which many clergymen are wont to go to a certain building, in which a great ecclesiastical council meets. In a dark recess, opening into that narrow passage, and leading to various wretched dwellings, I have beheld a deposed and degraded minister standing in the darkest shadow he could find, and watching those who were once his brethren going up by the way he once used to go : but shrinking back from their notice. Alas for the poor outsider : so near physically to the place where he used to be : but morally so far away ! Surely his case is worse than that of the castaway, swept from the deck into the boiling ocean. After that sad instance, we shall feel the less sympathy for such moral outsiders as those who suffer through the existence of lines of social cleavage : the people who chafe at being excluded from the society of the great and exclusive First Circle of a little country town ; or who complain keenly that some wealthy or perhaps noble neighbour keeps them on the outside of his dwelling. Probably you have known people feel this moral exclusion very bitterly. You may have heard a lady in some small community complain with extreme severity that she was thus made an outsider ; and that, in the festive tea-parties which went on in the halls of light around her she was permitted to have no part. At the same time she probably showed, with great force of statement and argument, that she was in all respects a great deal better than the people inside that charmed circle to whose outside she was condemned. You could but sympathize with the individual in her sorrow ; and advise her not to mind. Every one has known the wrath and jealousies which have arisen from thus putting people morally outside : from not sending them cards on the occasion of a marriage : from not inviting them to some entertainment. You may remember a classical instance of the wrathful spirit awakened in a human being stung by the sense of being outside. Mr. Samuel Warren describes a man as standing in Hyde Park on an afternoon in the fashionable season : seeing all that gay life going on ; and feeling that he had nothing to do with it ; and bestowing on the whole system of things his extremest malison. Perhaps a worthier nature might have looked on in kindly interest at a class of concerns and a mode of existence in which he had no share : and hoped that all paths

through this world, however far apart in time, might yet end and meet in the same happy place together. We may wish well, my reader : and I trust we shall wish well : even to those with whom we have little in common ; even to those beyond the circle of whose sympathies we stand, and beyond whose comprehension our great interests lie.

Moral outsideness may co-exist with physical insideness. This truth is well known to unpopular officers in regiments, who though physically inside are morally outside : also to schoolboys who for some offence have been temporarily sent to Coventry by their young companions. And probably such find it a heavy trial to be placed outside the pale of society : to sit on a form at school with thirty other boys, none of whom will speak to them : to be cut off from joining in the games of the playground. There used to be a vulgar expression current among Scotch schoolboys : probably it is current still : which was founded on this principle : that a human being though physically an insider may be morally an outsider. You spoke of being in *with* such a youthful companion ; and *out with* such another. You are aware how consignment to moral outsideness often serves as a fearful punishment of offences to which laws cannot reach. To be entirely repudiated and cast off by the society amid which you live, whether lofty or lowly : to be made a social outlaw and outsider : is something not easily borne even by the most callous : something which right-thinking men could support only by the firm conviction that solemn principle prompted the conduct which brought down this reprobation. It is not nearly so lonely a thing to dwell in the wilderness, never seeing a human face : as it would be to live in the town in which you were born and brought up : and to see, as you walked its streets, scores of faces you know well, but each averted as you pass. You may have seen poor women bear this : with what crucifixion of the whole nature they only know : you may have beheld them face the unconsciousness of their presence on the part of old friends with a disdainful smile ; or meet it with the look that betokened a breaking heart. I have witnessed this, my reader, more than once ; and I doubt not you have done so too. As for men, they can stand all this better. *They* can always find a certain class who are content to associate with them : a class of people like themselves. And with a great injustice, not indeed without some reasons in its favour, you know how even the most reputable society passes lightly in a man what it visits with its severest reprobation in a woman. Yes : you may have witnessed a brazen outsider, who ought never to have been suffered inside again, gradually elbowing himself, by force of face, into weight in the senate of a certain moral country. You may have known an unrepenting

blackguard, once cast out by the society of the town and the county, and who never afforded the faintest reason why he should be let in, step by step getting in again; till at length the aged reprobate was in high favour in families abounding in girls, and saw clergymen of great pretensions seated at his hospitable board. Yet, in the main, a man becomes an outsider by deserving it. I mean an outsider with people with whom he would wish to be an insider. With others, it may be different. I have heard of a young midshipman who was made an outsider because he read his Bible morning and evening; and because he would not get drunk when the rest did. A man would be made an outsider in certain parts of this empire, unless he helped to screen the sneaking, cowardly murderer who shoots his landlord from shelter of a tree, because asked to pay his rent. And there are parts of America in which you would become an outsider unless you spoke in praise of the biggest and blackest outrage on humanity that the sun looks down on: I mean negro slavery. Of course, among thieves you must say nothing against stealing: or they might turn you out. But in the main, in this country, people are put outside because it serves them rightly. And the punishment is a fearfully severe one: reaching to sins and to people not otherwise easily punished. You have known persons obliged, by this moral outlawry, to go away from the district or the country where all their interests lay: even great wealth and rank have not sufficed to prevent a man's feeling bitterly that he was made an outsider. You may have seen the fair mansion and the noble trees which their owner could never enjoy, because he durst not show his face where he was known. There was once a man of no small position who was master of a pack of fox-hounds, let us say in Ethiopia. On a certain Sunday, that man chose to amuse himself by taking out his hounds, and chasing a fox which he had caught: having cut off the poor fox's feet previously to turning it out to be chased. Of course, the brute (I mean the master of hounds) was brought before the magistrates of that part of Ethiopia; and heavily fined. The law could do no more: and the punishment was most insufficient. The brute probably cared very little for that. But he probably cared a good deal when in a day or two he received a communication from all the princes and nobles of that district, in which they told him that they withdrew from his hunt and cut his acquaintance. Prompt and resolute outsidings inflicted justice in the most satisfactory way.

I have more to say of moral outsiders: but at this point I cannot help looking round, and thinking what a blessing it sometimes is to be physically outside. Not far away, there lies the great city,

Inside it the writer lives; and he judges it the best of cities: but now he is beyond it: he is an outsider for three days of perfect rest in the quiet country. It is often worth while to go in, that you may fully appreciate the blessing of coming out. Did you ever, reader, live in July, on that most beautiful Frith of Clyde? After a week in that pure air, and amid that scenery that combines so wonderfully richness and magnificence, you cease fully to understand what a privilege you are enjoying. But go up for a day to the hot, choky Glasgow of July! Remain for five hours in that sweltering atmosphere, hurrying from place to place on business, and stunned by the ceaseless whirl of that hearty and energetic town: and then go back to the seaside! Oh, how delightful to get away into the clear air and the quiet again! And in this green place, I think of the city already spoken of; and of much work and worry there: and feel that here for a little one is outside it all. I think of a certain Gothic building, in which is now sitting a council I much revere. I think of the hot atmosphere: of the buzz: of the excitement: of the speeches so very interesting and so very long. I observe from the newspaper that yesterday two gentlemen spoke four hours each. And then I look at that rich sycamore, with foliage so thick: and at the hawthorn blossoms: and at the yellow broom: and at the green grass (for there is "much grass in this place"): and thank God for all!

Last night, on the little village green, I saw several moral outsiders: I mean members of a class from which respectable folk would for the most part shrink away. There were four poor fellows, acrobats or tumblers: and a girl who is a rope-dancer. They had sent in advance a large bill, which was stuck on a tree, to say there was a grand entertainment coming. The entertainment hardly came up to its description. Still the men did many really wonderful gymnastic feats. They had a striking scene in which to display their ability. It was a beautiful twilight: the little green had fine large trees round it: in the distance there was a great purple hill: and close by was the grey old chapel. The only drawback was a very cold wind. There was a large assemblage of country folk, not very hearty or appreciative spectators: and all evidently regarding themselves as on a totally different level from the poor wanderers. The four men turned somersaults and the like: the poor girl, in her sorry finery, stood by: wrapped in a large shawl till the time of her performance should come. I observed that when the hat went round, the rustic audience evinced great economy in their gifts. The Fool, poor fellow, his face bedaubed with coarse red and white, and wearing a cap with two ears, simulated great spirits, and made many jokes. I looked at him with great

pity: and wondered if any human being ever deliberately chooses that way of earning his bread: or whether some men are gradually hedged up to it, without having had a chance of anything else. I was specially sorry for the poor girl, standing with the cold wind blowing through her thin dress. The rustics roared with laughter, as the fool quoted Shakespere. He was evidently a man of better education than the rest. His most effective point was when he took up a small looking-glass, which was to be given as a prize in some way I did not make out: and looking into the glass, exclaimed, "Ah, that face: that fine old face! He was a man, take him for all in all,"—and so forth. Not since I was a child have I seen such people: and I was greatly touched by the sight of them, and by thinking what kind of life they must lead. I wondered if they ever went to church; or if any clergyman cared for them when they might be sick or dying. And if I had been able, I should assuredly, in defiance of all the laws of Political Economy, have seized them, and taken them away from their sorry occupation: and set them to respectable work: and made them go regularly to church: and in short, brought them inside!

There is a curious feeling of the difference of being inside and outside, when you are sitting in the cabin of a ship at sea. It is so, even if you be making a voyage no longer than that from Glasgow to Liverpool. It is more so, if you be sailing on distant seas. Fancy a snug little sleeping-cabin; and you lying there in a comfortable berth placed against the side of the ship. You lazily lay your head upon the end of the pillow next the ship's side: about six inches distant from you, but outside, there is a huge shark rubbing its nose against the vessel. Your head, and the horrible head of the strange monster, are but a few inches apart: happily you are inside, and the monster outside. Somehow it seems as if it were a more remarkable thing for a homely Scot, who went in his youth to a Scotch parish school, and a Scotch parish church, to be eaten by a shark in a far-away place, than it would be for almost any other human being to meet a like end. The parish school and the Shorter Catechism are things wholly inconsistent with a man's living any other than a decent life, or meeting any other than a quiet Christian close. You know how pleasant and refreshing it is, when you are walking along a dusty road in June, outside some beautiful park, to come to a spot whence you have a view into a green recess of the woods within. And probably you know a city where, as you walk the glaring summer streets, you can look in many places through iron rails into depths of cool grass and verdant leaves that gladden eyes and heart together. And if you pay a yearly subsidy for a

share in such a place, you know that when the iron gate swings noisily into its place behind you, and you pass from the pavement to the neat gravelled walk or the cool turf, though it be but for a quarter of an hour at the close of a busy afternoon, you have felt that there is far more than a physical difference between the outside and the inside: you have felt that breaths of balmy country air come back to you, and the remembrance of pleasant country cares. There are human beings, the possessors of fair domains, who seek by lofty walls to keep their fellow-creatures outside their belongings: even to prevent their fellow-creatures from refreshing their weary eyes by looking upon green expanses which they are not likely to tread. It is a narrow and unworthy mind that feels it cannot fully enjoy its own possessions, unless all mankind be kept definitively outside them! But it testifies to a truly noble nature, when we see what may be seen in many places now: the possessor of a beautiful stretch of landscape around his dwelling, cordially welcoming his humbler neighbours to its paths and glades: giving up the prettiest portion of his park for a cricket-ground for the lads of the adjoining village: and judging that his charming acres look all the more charming when they cease to be a charming solitude, and are lighted up by happy faces. But a sweet country place is usually in the midst of a sweet country: and there is no place where you value green grass and green trees so much, as when you see them in contrast to the streets of a town; and especially to the ugliest streets of a town. I know a spot, which on a summer day, is peculiarly stifling and dusty: the dust being mainly the dust of coal. There is a suburban railway station: there are various mills: there are houses of unattractive exterior: everything is glaring in the sunshine: everything is covered with dust. But you enter by a door in a lofty wall: and you feel the difference between being outside and inside. There is a curious old-fashioned house, surrounded by a pretty garden, laid out with much taste. Everything is green, fresh, cool, quiet. It would be a pleasant spot anywhere: but being where it is, it is a true feast to the eyes. You enjoy the inside so much more keenly, for the contrast with the outside. Green grass: green trees: clear water: abundant flowers and blossoms: freshness and fragrance in the air. And outside the coal-dust, the glaring pavements, the railway station!

I suppose most people like to contrast insides and outsides, that they may relish one or other the more. Did you ever, my reader, sit in your warm, cheerful library, on a cold winter night, away in the country, which in winter (it must be confessed) looks dreadfully bleak to people accustomed to the town? Your curtains are drawn, and your lamp is

lit; and there are your familiar books all round, with their friendly-looking backs. There is the blazing fire: and notwithstanding the condemnation of a certain great Bishop, you do not think it wrong to possess various easy-chairs. All this is pleasant. There is an air of snugness and comfort: and you feel very thankful, it is to be hoped, to the Giver of all. But you do not know, from the survey of the mere interior, how pleasant it is. Go away out; and look at the cold wall outside your chamber. There it is, dark with the splashes of rain, which the howling blast bitterly beats against it. There are the leafless trees, shivering in the blast. There is the stormy sky, with the racking clouds; which the chilly moon is wading through. If you try to make out the landscape as a whole, there is nothing but a dense gloom, with a spectral shape here and there, which you know to be a gate or a tree. On a moonless night, the country is terribly dark. It is dark to a degree that town-folk, with their abundant street lamps, have no idea of. After beholding all these things outside, come in again: and you will understand in some measure how well off you are. You will know the distance there may be, between the two sides of a not very thick wall.

Less than a wall may make the distance. You have probably travelled in a railway carriage through a dark stormy night. If you are a quiet, stay-at-home person, who do not travel so much that all railway travelling has come to be a mere weariness to you, you will enjoy such a night with considerable freshness of interest. And especially, you will feel the distance between being outside and being inside. Inside, the thick cushions: the two great powerful lamps, which give abundant light: the warm rugs and wraps: the hot water stool for your feet: the newspapers, and the new magazine: one or two pleasant companions, who do not trouble you by talking, except at the stations: the stations forty miles apart. There you lie in luxury, with the feeling that you may honestly do nothing: that you may rest. And looking through the window, there is the bleak, dark landscape, with all kinds of strange shapes which you cannot make out: the glare cast upon cuttings through which you tear: the fearful hissing and snorting of a passing engine: the row of lighted windows of a passing train: the lurid flame of distant furnaces: the lights of sleeping towns. Yes, a night's travelling between Edinburgh and London is as wonderful a thing as anything recorded in the *Arabian Nights*, if it were not that it has grown so cheap and common!

Looking out of the carriage-window over the tracts on either side; and thinking how little parts you from them: you may call to mind a certain ghastly journey by a night-train. A deliberate

and cruel murderer, who had committed (it was believed) more than one or two murders for gain, was very justly sentenced to be hanged. He was tried and sentenced in London: and then he was conveyed in a railway carriage a journey of a hundred and forty miles to the place of execution. He sat, manacled, between two officers of justice, through these hours of travelling. It must have been an extraordinary journey! It was a near glimpse of freedom for a man to have when the tightest meshes of the law had grasped him. There he was, inside: a person going to a dreadful death: and outside, stretching away and away, the free fields: and only the two or three inches between that inside and that outside! I can imagine how the poor wretch thought, Oh if I could but get into the middle of that thick wood: if I could but hide under that ivied bridge: if I could but put a hundred yards of midnight darkness between me and those terrible keepers who have me in their charge! I can imagine how, as he felt rapid mile after mile bringing him nearer the scaffold, he would wish for some terrible accident: some awful smash: nothing could come amiss to him: nothing could make him worse! But in such a case, of course, the little partition between the inside and the outside,—the couple of inches of timber and cloth, the eighth of an inch of glass,—was the little indication of an awful gulf, that had been making for months and perhaps years. Sometimes, indeed, the grievous moral lapse that puts a man in the cage of which he can never get out; or that puts him outside the pale through which he can never afterwards get in: may be the doing of a very short time. The hasty blow: the terribly wrong turning: may have marked a change as definite as that when the poor castaway is swept from the ship's deck into the waves of the Atlantic.

In old days, when society was unsettled, it seems as if one would have felt, more vividly than now, the difference between being inside and being outside, in the matter of safety. There must have been a pleasant feeling of security in looking over the battlements of a great castle, and thinking that you were safe inside them. The sense of danger with which men must in those days have gone abroad, would be compensated by the special enjoyment of safety when they were fairly inside some place of strength. Human nature is so made that even though you are aware that no one desires to attack or injure you, still there is a pleasure in thinking, that even if any one had such a desire, he could not. You know how children like to imagine some outer danger, that they may enjoy the sense of safety inside. It is with real delight that your little boy, sitting on your knee, suddenly hides his face in your breast,

exclaiming loudly that there is a great bear coming to eat him. He feigns a danger outside, that he may enjoy the feeling of being safe from it. So you will find a man who has been labouring hard, going away for a little rest to some remote quiet place. He tells you, no one can get at him there. The truth is, nobody wants to get at him; but like the child with the great bear, he calls up some vague picture of a great number of people coming to worry him about a great many matters, that he may have the pleasant feeling that he is safe from them where he is. You can think of a man who has committed some crime, flying from justice: and as he puts mile after mile of desolate country between him and the place from which he has fled, thinking that surely he is safe in this retreat. You can think of the forger, a few years since, who fled across the Atlantic: fled from the American seaboard and penetrated deeper and deeper into the backwoods, till he stopped in an utter solitude somewhere in the Far West. You can think how, as week after week went on, he began to feel as if he might breathe in peace at last: and think of the poor wretch, sitting one evening in his little log-house, when two London detectives walked in, having tracked him all this way!

Did you ever see a foolish duck dive at a hole made in the ice; and come up again under the ice at a hopeless distance from the opening? It is a sad thing to see even that poor creature perishing, with only an inch or two of transparent ice between it and the air. You hasten to break a hole near it to let it escape: but by the time the hole is made, the duck is twenty yards off. The duck I have seen: but it must be a fearful case when a human being gets into the like position. You may have lately read how a man was at the bottom of a deep well, when the earth near the top fell together and shut him in. There were ready hands to rescue him: and he was not so shut in but that his voice could be heard hurrying his deliverers. He told them that the water was rising: that it was at his knees, at his breast, at his neck: and the workers above were too late to save him. I suppose it is quite ascertained that in those wicked and cruel ages which ignorant people call the good old times, it was not unusual to wall up a nun in a niche of a massive wall, and leave her there to perish. *Vade in pacem*, were the words that sentenced to this doom; which the reader probably knows, mean not *Depart in peace*, but *Go to rest*. Such was the kindly repose pro-

vided in those happy days. And another dismal inside is that of which Samuel Rogers tells us the true story: the massive chest of oak in which a poor Italian girl hid herself, which closed with a spring-lock, and never chanced to be opened for fifty years. You can think of the terrible rush of confused misery in the poor creature's heart when she felt herself shut in, and heard the voices that seemed approaching her die away. But half a century after, when the chest was drawn out to the light and its lid was raised, there was no trace in the mouldering bones of the thrilling anguish which had been endured within that little space. It is a miserable story. Yet perhaps it has its moral analogies not less miserable. There are human beings who by some wrong or hasty step have committed themselves like the poor girl that perished: who have, in a moral sense, been caught, and who can never get out.

Yes: it is a great question, Outside or Inside: and I remember, drawing these desultory thoughts to a close, that the testing question which puts all mankind to right and left, is just the question, in its most solemn significance, which may be set out in that familiar phrase. There is the Christian fold: there is the outer world: and we are either within the fold of the Good Shepherd of souls, or without it. It is not a question of degree, as it might be if it founded on our own moral character and deservings. It is the question, have we confided our souls to the Saviour or not: are we right or wrong: are we within or without? And the two great alternatives, we know, are carried out, without shading off between, into the unseen world. We know that there, when some have gone in to the feast, the door is shut: and others may stand without, and find no admission. Let us humbly pray, that He who came to seek and to save that which was lost, may find each reader of this page, a lost sheep by nature, a poor wanderer in the outer wilderness; and draw all with the cords of love within his fold. And let us humbly pray that at the last, we may all, however our earthly paths have varied, find entrance into that Golden City, which has a wall great and high, whose building is of jasper, and which shall exclude all sin and sorrow: through whose gates, though not shut at all by day (and there shall be no night there), "there shall in no wise enter into it anything that defileth:" and where the blessed inhabitants "shall go no more out," but be safe in their Father's house for ever!

A. K. H. B.

At Home in the Scriptures.

A SERIES OF FAMILY READINGS FOR THE SUNDAY EVENINGS OF JULY.

FIRST EVENING.

THE MEETING.

"Then they that feared the Lord spake often one to another: and the Lord hearkened, and heard it; and a book of remembrance was written before him for them that feared the Lord, and that thought upon his name."—MAL. iii. 16.

In the foreground of the old Hebrew prophet's vision lies a dull sad earth; but in the distance a bright heaven shines. Here, some faithful men go forth weeping, bearing precious seed; but, yonder, they are bringing back the sheaves rejoicing. What good men spake to each other on the earth, God heard and recorded in heaven. Such is the twofold message that Malachi proclaimed. He tells us first of the spoken words, and then of the written record. These two in their order and relations correspond, in some measure, to the Meeting and the Minute-Book.

THE MEETING.—"Then they that feared the Lord spake often one to another."

1. *The Persons.* "They that feared the Lord." The appellation is generic, and not specific. It indicates generally what side they had chosen, but does not specify particularly what character they bore. They were the religious men of that day, as distinguished from their profane or vicious contemporaries. From the time of Cain and Abel these two classes have lived together in the world, more or less commingled; and they will live together in the world, in spite of all human ministries, until angel-reapers shall finally separate the tares from the wheat at the second coming of the Lord. That primeval pair of brothers were typical as well as historical personages. Then, as now, the fear of God and a regard for man were associated features of human character. When the first was wanting, the second also disappeared.

They who fear the Lord are, like Abel, at once devotional and humane. Tenderness to a brother is the under side of trust in God. Scripture and reason unite in discrediting the profession of godliness in the heart, if brotherliness do not appear in the life. "In this the children of God are manifest, and the children of the devil: whosoever doeth not righteousness is not of God, neither he that loveth not his brother."—1 John iii. 10.

The expression "fear of the Lord," employed in its generic sense to designate the godly, is spread over the whole Bible—like the Old Testament and the New. The fear of the Lord, specifically understood, conveys not only a different but even an opposite meaning. Fear grows in guilt, and hides from the holy. Its descriptive characteristic is, that it "hath torment." This fear fades away before reconciliation. "Perfect love casteth out fear." They who generically fear the Lord are specifically free from fear. The original fear that possessed the heart of the sinful is, through faith in Jesus, resolved into its elements, reverence of the Divine, and dread of the Pure. Pardon be-

stowed and accepted dissolves the dread, and leaves the reverence in all its integrity. Reverence of the Divine, left in possession and relieved of its carnal complement, assumes to itself a filial confidence as its fellow. Henceforth, in the new nature, fear and trust constitute one character, known, in the Scriptures, by the general term fear, but as widely different from guilty terror, as day is from night. In the dear child's love of his heavenly Father, there is as much fear as suffices to guard against every approach to presumption; and in the creature's fear of the righteous Judge, there is as much filial love as suffices to eliminate all the terror. Those whom Malachi designates as the God-fearers of his day approached the altar, as the disciples afterwards departed from the sepulchre of Jesus, "with fear and great joy." These two, when normally combined in the spiritual life, constitute a character more lovely and more precious than either ingredient when it stands alone.

2. *The Period.* "Then," the godly in Israel met and held converse. The date of the transaction is important. Indeed, in all events, ancient and modern, civil and sacred, it is impossible to over-estimate its importance. Facts, however great and however clearly reported, lose often half their value, if we are not able to ascertain when they occurred. The religious men of Malachi's day bore their testimony to truth in a peculiar crisis of the nation; and the peculiarity of the crisis affected the conduct of the witnesses. They stood on a narrow ledge with a deep dark chasm on either side. Behind, was a restless sea of individual wickedness and national apostasy; before, a long dark night was lowering over a trackless desert. They were already on the edge of that broad dark border that separated the revelation of the Old Testament from that of the New. It was, spiritually, a waste howling wilderness that lay between Malachi and the Baptist; and although, throughout the ten times forty years of Israel's wandering there, a human leader sometimes rose up to take the place of Moses, no light from heaven appeared instead of the ancient guiding pillar. To thoughtful men, it was a more solemnizing position than that of their fathers when they stood on the edge of the desert, and strained in vain to look across the dreary interval that lay between them and the Promised Rest. The setting sun threw a melancholy red light from the great sea athwart the mountains that stand round Jerusalem; and a long, long night must intervene before the dawning of another day. True, they possessed the promise, "Unto you that fear my name, shall the Sun of

righteousness arise with healing in his wings;" but as sight failed, and faith was feeble, no wonder that their hearts were sad.

It was a season of national degeneracy. The testimony of their latest prophet is singularly clear and specific. He openly charges them with ungodliness, and specifically libels the details of their guilt. They refused to serve God, and then justified their disobedience by blasphemy. Their words were stout against the God of their fathers, and their life was one long violation of His law.

It was in such a crisis that pious men sought out each other, and held meetings for consultation and prayer. Thus it has ever been. When Sodom has nearly filled up the measure of her guilt, and the final judgment is about to descend, then the Abrahams of the time and place may be seen on the brow of the neighbouring hill, pleading with God for mercy, or urging men to repent. The faithful, in an evil day, constitute the preserving salt of an apostate community; but the community, in the nature of the case, cannot recognise their benefactors. To know and acknowledge the worth of the worthy would imply already repentance and reformation. Meantime it is consoling to observe in such an example, that all things work together for good to them that love God. The darkness of the night quickened the watchmen's longings for the dawn. The wickedness of men drove the faithful closer to God. The want of sympathy on earth increased their intercourse with heaven.

3. *The Transaction.* They "spoke often one to another." Meetings and mutual counsel were not peculiar to the faithful in those days, and are not peculiar to them in ours. Other classes also held conferences, and exchanged views. Like drew to like. Birds of a feather flock together, whether the feather be white or black. Those who had sown much and reaped little would doubtless have something to say about the failure of their crops. Perhaps there were philosophers in those days who traced effects to their causes, and discovered that mildew and caterpillars were generated according to the laws of nature. Perhaps they said smart things about the softness of the saints in supposing that the blood of a lamb reverently poured on the altar could have any effect on the corn-fields. The merchants also, who earned much money, and then lost it all through holes in the bag—through the failure of the investments which they had deemed profitable and safe—the merchants were able to demonstrate that the commercial crisis was due to the conjunction of a bad harvest with civil commotion, and that these, again, were caused by the elements of nature on the one hand, and the ambition of powerful chiefs on the other. Fortified by this investigation, they could boldly proclaim that the same misfortunes would have certainly befallen them, although they had sacrificed a hecatomb, and spent all their days and nights in saying prayers. Satisfied with philosophy, they dispensed with faith. Having discovered Nature, they discarded God.

Probably the saints of that day did not find it necessary, in accepting one of these two, to reject the other. They may have been able to see as far as their neighbours into the generation of cater-

pillars, and the failure of trade. But after they had pushed their inquiries as far as the line of reason could reach, they did not venture to determine and pronounce that no God lived, judged, and acted in the unexplored region beyond. Although they observed the operation of the natural laws, they believed in a personal, living Lawgiver. The Supreme Ruler was their Father and their friend. They felt his chastisement, and yet did not distrust his love.

A group of these good men have congregated casually at the gate. Some bargains must be made, and some balances settled; but when these transactions have been completed, this knot of grave Hebrews still remains upon the spot. They are conversing now upon a subject that bulks more largely in their hearts than the business of the day. The nation's apostasy, the judgments of God, the duty of the faithful—these and similar themes circulate with bated breath in earnest whispers. Look on those men! These are the Lord's remembrancers. This company constitute the unobserved conductor that receives the lightning from the sky, and guides it to the ground. The proud tower still stands erect, because this saviour stood between it and its doom.

We give up hypocrites of all degrees to the will of their enemies. From non-believers we ask no quarter for any lie. Wherever and whenever falsehood is detected, let it be unsparingly condemned. But we venture to believe that, after the spurious profession has been all eliminated, a large residuum of true godliness remains in our own land in our own day. A multitude whom no man can number walk with God in white along the common paths of life. We rejoice, we exult in the belief that this land teems with true disciples of the Lord Jesus. Accusations of hypocrisy flung out at random will neither destroy their title nor change their character. Let Christians take the hint for their own benefit that no efforts by adversaries can do them any harm. If they are true to themselves, nothing else will hurt them.

When Christians meet in small companies, or in large assemblies; on the Sabbath, or during the week; in the place of business, at the family hearth, or in the reunion for prayer,—they should have somewhat to say to one another about the kingdom of God within their own hearts and throughout the world. It is said in Scripture that where the treasure is there will the heart be also: the principle might be safely employed in constructing a parallel rule,—where the treasure is, thither will the conversation tend. We do not prescribe it as a duty that people, when they meet in the house or on the highway, should call to mind their profession, and bring in a bit of religious conversation in order to preserve their consistency. No; this is the province of the heart and the will, rather than of the memory and judgment. Good things put on after this manner never fit closely. The religious conversation must spring up like water in a well. But when the spiritual affections are stirred, they should not be artificially suppressed. Permit them to flow freely. When a few persons meet, who have a common interest in one great event or project, they instantly fall into conversation upon the sub-

ject. If they should remain silent, or speak on some trivial theme, the fact would prove that they were under restraint. As soon as they feel themselves free, they will glide into the subject that lies nearest their hearts. The disciples of Jesus, when they meet, should freely hold intercourse regarding the kingdom of God. Sometimes of set purpose in meetings for reading the Scriptures and prayer, sometimes casually, or rather providentially, when brothers and sisters of God's family meet on the edge of the world's broad highway, they should take counsel together as to the growth

or fading of grace in their own hearts; and in the Church at large.

If your hope is bright, brother, and your faith firm, do not hide under a bushel the light that the Lord has given you. Your neighbours need your aid. By introducing gently, naturally, modestly, the preciousness of Christ as a subject of conversation, you may be the means of fanning into strength some expiring spark of grace, or of kindling first conviction in some dark soul. The children of the kingdom should have something to say to one another about the King.

SECOND EVENING.

THE MINUTE-BOOK.

"A book of remembrance was written before him for them that feared the Lord, and that thought upon his name. And they shall be mine, saith the Lord of hosts, in that day when I make up my jewels.—MAL. iii. 16, 17.

"THE Lord hearkened and heard, and a book of remembrance was written before him." We are familiar with the thought that God is the "hearer of prayer;" but in this case no mention is made of prayer offered by the knot of believing Hebrews who conversed with each other in the gate; and yet the words which they spoke on earth were heard in heaven. The voice of prayer is not the only voice that reaches the ears of the Lord of hosts. The Redeemer and Judge of men hears what we say to each other as well as what we say to himself. The Divine omniscience is dreadful to man until he is reconciled to God. It makes indifference in religion impossible. Suppose you should discover to-day that some one has heard every word that you have spoken, and known every thought that has passed through your mind, with what feeling would you henceforth regard him? Not with indifference: that is no longer possible. If you do not confide in him with a perfect love, you hate him with all the force of your being. Whether they confess it or not, unreconciled sinners hate God for hearing them, and searching their hearts.

But while the intrusion of an alien into the deepest privacy of your soul is unspeakably distasteful, the presence of a friend, especially in times of darkness, is unspeakably sweet. In a multitude of cases the same words of Scripture convey to one class a promise, to another class a threat. "The Lord hearkened and heard" what men said to each other in their companies, casual or pre-arranged. What then? The intimation is comfort to every dear child of God's family, but terror to every alienated heart. "Rightly dividing the word of truth" is the occupation and the art of every faithful minister; but the word of truth sometimes divides itself without the intervention of human ministry, sending out from the same sentence on one side a sharp arrow to pierce a hard heart, and on the other side the oil of gladness to heal a broken one. Different, opposite emotions are awakened in different persons by the simple intimation that God hears the softest whispers in which a friend confides his secret to a friend. Would that you and I, reader, were so at peace

with God in the Mediator, that we should absolutely have no wish, although we had the power, to keep a secret from his ken. In this matter the only two methods enduring are that of hiding all, and that of having nothing to hide. These two are conceivable, but the latter alone is possible to man. The first is the plan which the wicked vainly try; the second is the plan which the ransomed of the Lord successfully adopt.

"A Book of Remembrance was written before Him." This is one of those accommodations to human conceptions and human forms of speech which abound in the Scriptures, and which must abound in any revelation from God that shall be intelligible to man. What sort of a book it is, and how it is written we do not know. It is called specifically a book of remembrance. This phrase suggests that it is more closely analogous to human memory than to books that are made by human hands. The memory is a more wonderful thing than a book. How many facts and dates and figures can be written over and over each other on its single page, without effacement or confusion! Consider a human memory with its crowded record of threescore and ten years, all legible still at the close, and then think of its duration and its power multiplied by infinity. As all events lie in the Divine prescience before they happen, so they all abide remembered in the omniscient mind after they have emerged into fact. The book is "written before him." We are writing it from day to day, and from hour to hour. They photograph a criminal now, and by aid of the picture detect him more surely when he commits another crime. Our hearts, throwing out a stream of thoughts as they heave, are all and always open in the sight of Him with whom we have to do. It is as if the words and the seed-thoughts whence they spring should rise invisible like water evaporated in the sun, and strike against the outspread canopy of heaven, and print themselves indelibly on its ample page. There they remain recorded till the judgment is set and the books are opened.

But although it is in the main a consolation to the children of God to know that all their words and thoughts are written in their Father's book,

does not this intimation prove too much, and cast down again by its terror those whom in tenderness it lifted up? The record cannot be partial; and if all is written, how can the holiest stand?

True, even a renewed man dare not in the judgment appeal to the record of his life. In the words of the Psalmist he abandons that plea: "If thou, Lord, shouldest mark iniquity, O Lord, who shall stand?" But when the law closes one door, the gospel opens another. The alternative immediately follows, "But there is forgiveness with thee."

A Christian's page in God's book is like some accounts that I have seen in the processes of commerce; the page is double, and it is written on both sides, on the left hand and on the right. The two sides are corresponding and opposite. The one is called Charge and the other Discharge. I observe in settled accounts, although on the side of charge the vast page may be crowded with a multitude of entries, while on the side of discharge there may be only a single line, yet the amounts at the bottom are equal and balancing. I see some name written underneath; that name written gives and secures the discharge. Ah, the life-course of a disciple fills up his charge in God's book, and that account at life's close is a heavy debt; but Christ's name and merit are marked to his account, and all is thereby blotted out. No man could hope to meet the opened book in the great day unless his Redeemer's name were written there. It is on the letters of that blessed name that a humble believer looks when he dares

"To read with glistening eyes,
His title to a mansion in the skies."

You may boldly read your own sin-debts, my brother, with your own eyes in God's book of judgment at the great day, when you see them written over the Discharger's name.

The persons for whom the book is written are characterized, not only generally, as those who feared the Lord, but also specifically, as those who "thought upon his name." This last characteristic of ancient Hebrew piety possesses a peculiar interest when set in the light of their institutions and their history. It was not lawful to write in full, or to speak articulately the awful name, Jehovah. All the more reverently and intensely on that account did the faithful think upon it in an evil day. That hidden name is now unveiled. The Father is manifested in the incarnation of the Son. "The Word was made flesh, and dwelt among us, and we beheld his glory." "No man hath seen God at any time: the only begotten Son, who is in the bosom of the Father, he hath declared him." Between the ministry of Malachi and the preaching of the Baptist, there were, doubtless, always some faithful witnesses, although from our standpoint they are "hidden ones." Those devout thinkers on God's great name had successors running in an unbroken line through the intervening generations until it leant on Christ. In the course of those ages their name was changed, but their nature and their occupation remained the same. In Malachi's time they thought upon Jehovah's name; in the Baptist's day, they "waited for the consolation of Israel." Those watchful hearts and straining eyes were at length gladdened by the dawn. The Sun

of righteousness arose with healing in his wings. The perennial promise of the New Testament is "to them that look for him, He shall appear."

Nor should we fail to notice—for under the full light of the gospel, the minute and half-hidden trait springs up into first-rate importance—that the Book of Remembrance is written for the persons who spoke to each other and thought on the Lord's name, rather than for the words which they uttered, and the thoughts which they cherished. The Scriptures contain distinct reference to two books. To have my name written in the Lamb's Book of Life is one thing; to have my thoughts, words, and actions recorded in God's book of judgment is another. I may be personally dear to the Lord that bought me; while my life at the best has been evil, not only in God's sight, but even in my own. Let the book be written for me, and not for my words and thoughts. Blot out all my life, Lord, from thy book of judgment, but blot not me from the Book of Life. To those who look on the gospel of Christ as they look on a mathematical problem or a theory in political economy, the distinction may seem a very small point; but to a soul that has been convinced of sin, and drawn to the Redeemer, it is a point on which life or death eternal turns round. If my life-deeds are marked mine in the great day, I perish; if these are all blotted out, and my name recorded as one of the Lord's redeemed, I shall hear the welcome, "Come, ye blessed of my Father." I stake all on this. "Not by works of righteousness which we have done, but according to his mercy he saved us, by the washing of regeneration and renewing of the Holy Ghost."

"And they shall be mine, saith the Lord of hosts, in that day when I make up my jewels." Not obscurely, considering the time and circumstances of the revelation, a great glory of the gospel shines through the prophetic imagery here. Not only is the Saviour precious to his people; his people are also precious to the Lord. He is their portion,—that is one truth; but another and greater is, they are His. In the New Testament, Christ invites sinful men to come to himself and be saved; cries aloud to them when they disregard his word; weeps for them when they will not heed his cry; rejoices over them when they come; sees in them of the travail of his soul when they are saved, and is satisfied with them as his company for ever. "My jewels:" that is the name by which the Redeemer knows his believing people. He counts on them for setting in his crown. How safe they are! None shall be able to pluck them out of his hand. How highly he values them!—how highly, therefore, should they esteem themselves! Here lies the strongest motive to practical purity. Defile not these jewels that are destined to be set in Christ's glorious crown.

And, last not least, under the folds of Malachi's prophetic drapery lies a lesson, all the more acceptable that it is found where it was not expected, on patience in tribulation. Sharp strokes and hard rubs should not surprise the dear children of God's family, nor make them doubt a Father's love. This discipline is all needed, that the jewels may be more shapely and more shining, when the trials are over and the rest begins.

THIRD EVENING.

A QUESTION ASKED IN SORROW.

"O wretched man that I am! who shall deliver me from the body of this death?"—ROM. vii. 24.

A Christian Frenchman, still living, of great attainments and high position, owes his conversion, instrumentally, to the skill of a village shoemaker in explaining the difficult doctrinal writings of Paul. The philosopher had, by other means, been led to make inquiry for himself on religious subjects. He began to search the Scriptures, as he had previously been in the habit of searching nature, with a simple desire to discover truth. Advancing step by step in his investigation, like a traveller attempting to cross a stream, he came at last to a place beyond his depth, in the 3d chapter of the Epistle to the Romans. Conscious of a certain pure sublimity in the tone of the whole, but unable intellectually to comprehend the parts and their relations, he halted, and remained for some time in a condition of suspense. Having mentioned his effort, and indicated his position to a lady in whose house he was a visitor, she assured him that a shoemaker lived in the neighbouring village who could solve his difficulties. Curious, but incredulous, he suffered himself to be led to the cottage of the untought theologian. There, from a humble artisan, he learned what he had not been able by his own researches to discover. He found the key, and opened the mystery. He saw the light, and felt its power; he became and remains a trustful disciple of Jesus.

The facts are well authenticated. The case is striking, but neither unprecedented nor inexplicable. The themes of the Pauline theology, when they are at once ardently and exactly studied, are eminently fitted to exercise and develop the intellectual faculties. More especially when a mind of great natural vigour, awakened by a sound elementary education, and not distracted by other inquiries, concentrates its strength on these themes, as they lie in their germ in the evangelical histories, and spread out into their logical developments in the Pauline epistles, a character emerges which has grown, indeed, according to natural laws, but seems a prodigy to the onlooker when he first discovers it. Besides, when a man of good natural ability has been spiritually enlightened, he possesses an advantage over a mere scholar, even in ascertaining and comprehending intellectually the deep things of the Scripture. According to the express testimony of the Master himself, a man who is not born again "cannot see the kingdom of God," however distinctly it may be revealed in the gospel. No one who is acquainted with the early history of missions to India will count it a thing impossible that a shoemaker could unravel the knotty points of Paul to a French philosopher. Our own Carey, "the sanctified cobbler" of contemporary wits, is already a bright particular star not only in the circle of Christ's disciples, but also among the great men of his land and his day.

The doctrinal discussions which abound in the writings of Paul, besides their direct and highest use in explaining how the sinful may be saved, have, by a secondary subordinate operation, proved

an unspeakable boon to Protestant Christendom. The study of these writings makes the learner both acute and grave. It gives sail and ballast at once. Peasants who have devoutly tunnelled their way through the Epistle to the Romans may generally be governed without the aid of an armed police. Although, as the annals of Scotland testify, they stand in a tyrant's way, they constitute a pillow, without a thorn, on which the head that wears a righteous crown may sleep in peace.

We approach, at this time, one of the great apostle's weighty sayings, hoping that, through the teaching of the promised Spirit, we may in some measure perceive its meaning, taste its sweetness, and submit to its power. In such an exercise we labour under the disadvantage of dealing with a single sentence, arbitrarily broken off from a discourse whose texture is continuous and close. But this disadvantage may be practically reduced to a minimum, if not altogether removed, in a land where every reader has a Bible at hand, and is already in some measure acquainted with the context.

The portion which we have selected for examination consists of a question and its answer, emerging by way of conclusion from a lengthened process of spiritual self-dissection, recorded in the preceding part of the chapter. The question and its answer, both in essence and in form, constitute an impassioned exclamation. In point of fact, the emotional characterizes the writings of Paul as much as the intellectual. Although his words are always cutting, they are never cold. They glow as they penetrate, and therefore they kindle while they convince.

"O wretched man that I am!" Obviously he is suffering; and the cause of his distress is something that he calls "the body of this death." What may that be? The expression is peculiar; yet by aid of the context, and the analogy of the Scripture at large, its import may be substantially, and even accurately, ascertained. The three principal terms are, (1.) *Death*; (2.) *This Death*; and, (3.) the *Body of this Death*. We must examine these terms separately and in their reciprocal relations.

1. *Death*. We can scarcely err here. Natural death is not the apostle's theme in this passage. He is not speaking, he is not thinking of it. The death of which he speaks is something from which he would fain be delivered. But the man is living, and no immediate danger threatens his life. He is not in, he is not near death temporal; and therefore it is not death temporal of which he speaks when he prays for deliverance from its power. It is death spiritual. It is sin. No reader of Scripture will be at loss to realize this conception. The death which the man feels, and of which he complains, is sin in his own heart and life. What aspect of his own sin his exclamation indicates will immediately appear.

2. *This Death*. The preceding context is a

vivid narrative of his own present spiritual experience. It is a sun-picture of the inner man, as he then was and felt himself to be. The ailment is present and personal. Throughout those keen, self-dissecting sentences, the patient appears writhing in agony before the spectators. His eye, meantime, is not straining into the dim, troubled future,—striving to catch the outline of unknown but apprehended terrors; his eye is turned inward upon the thoughts of his own heart. It is *this* death that troubles him,—the death that gnaws his vitals now.

That death is an object of terror to many who sit at ease in *this* one. The distress that the earliest convictions generally produce in the conscience consists in the dread of a death that threatens to overtake, rather than the loathing of a death that has already overtaken the guilty. In short, and to speak without a metaphor, the punishment of sin hereafter is often dreaded more than the pollution and power of sin now. A test whereby one may try the truth of his religion is supplied here: Would you be comfortable and content in *this* death, which is already in your soul, if you could make sure of escaping that death which threatens the guilty from the judgment-seat of God?

"O wretched man that I am!" and wherefore wretched? Is it because "the wicked shall be turned into hell?" If this be all, the devils are as far advanced in religion as you are; for they tremble at the prospect of that second death. Let it be distinctly conceded, however, that a dread of punishment from God for sin is neither wrong nor useless. In itself, and as far as it goes, it is not evil, and may lead to good. But fear of punishment is not sorrow for sin. If it linger alone in the soul, and do not lead forward to something better than itself, it becomes a symptom of love to sin, and of grief that God does not love it too.

3. *The Body of this Death.* The language is figurative, and the figure is abrupt and bold; but in nature and in Scripture we shall find analogies sufficient to direct our inquiry, and insure a safe result. Spiritual death—another name for sin—is personified. It is conceived and spoken of as an existing substantive being, capable of acting and suffering. Thus "sin, when it is finished, bringeth forth death;" and "O death, where is thy sting?"

From the conception of death or sin as a person and a power, it is only one step to the conception of it as consisting of soul and body. In this view, it was its body, and not its soul, that afflicted Paul throughout his Christian course, from his conversion to his departing hour. The soul of sin had in him and for him been destroyed at the moment of his union to Christ in faith. When he became one with his Saviour as a branch is one with the vine in which it grows, when his life was hid with Christ in God, he was in one important sense delivered finally from sin. The sentence of guilt was then removed. He was at peace with God. "There is now no condemnation to them that are in Christ Jesus." He was reconciled. He counted thenceforth on God's favour for Jesus' sake. Sin could neither rule him while he lived, nor cast him away when he died. The soul of sin was for him destroyed. Its immortal part was taken away. It had not now that terrible vitality and immortality

which makes it dreadful. It could not outlive the man, and meet him again at the judgment-seat.

Yet Paul, when forgiven and justified, was not done with sin. It was no longer his master, but it availed to torment him still. It could not cut off the future life of blessedness, but it disturbed the present life of trial. It could not reign over the man with sovereign power, but it lingered in the man with a defiling presence. The serpent that possessed Saul of Tarsus had been thrust through, so that its spirit fled; but its body lay in Paul the apostle a loathsome and noisome carcase, dimming all his joys and impeding him at every step of his course.

The body of sin, then, represents the actual impurity that remains in the heart and life of a Christian after he has been forgiven and renewed. Sin as a reigning power, as a nature in the man, and an enmity against God in his soul,—*sin* in these aspects has been taken away. It has been blotted out in the blood of the Lamb; but *sinning* still continues more or less in the life of renewed men. The life, the power, the soul of sin has been destroyed, and the remaining imperfections of the Christian constitute its body, which defiles and disturbs him all his days.

Observe, it is of the body, and not the soul, of this death that the apostle complains. This was a new complaint. It began on the way to Damascus, when he fell to the ground at the feet of Jesus, and rose again at his word. This death, this sin, was in Saul when he kept the clothes of the ruffians who murdered Stephen. It was in him then uninjured, soul and body too, but he did not loathe the inhabitant of his own heart, and did not cry for deliverance. Why? Because it was not then the body, or corpse of this death. It was the living person, his companion, his inhabitant, himself. No man truly desires to be delivered from sin, as long as sin lives uninjured in his breast. As long as it is living, he cherishes it. He has no desire to be free from its embrace. While spiritual death is complete in a sinful man, the sinful man does not feel uneasy under spiritual death. The body of this death is not disagreeable as long as the soul is in it.

It is when his sin is pardoned that a sinner truly dislikes sin. While it has power to cast him into hell, he loves it: when it can no longer do him permanent harm, then he fears and hates it. This is one of those paradoxes which consist of more condensed and intensified truth. At this point, the bold figure of the text greatly aids our conception. A wicked companion, if he has won your heart, and holds it as by a spell, is loved, and at all hazards held to your bosom. But if the fascinating serpent that coils round your heart, as if his folds were its own fibres, be secretly smitten dead by the hand of a Mighty One who wisely loves you, while the material folds of the dead ensnarer remain still warped about your being, your love is infallibly turned into loathing. You will be constrained to cry, O wretched man that I am, who shall deliver me from the body, the carcase, of this reptile! The sins that still linger in his soul, contrary to the will of his new nature, are loathsome to a converted and forgiven man, as the corrupting carcase of a dead companion would be if it remained hanging on his living limbs.

FOURTH EVENING.

THE ANSWER GIVEN IN GLADNESS.

"I thank God through Jesus Christ our Lord."—ROM. vii. 25.

BEFORE going forward to consider directly the glad, grateful answer which Paul got and gave to his own sad question, it will be expedient to recur for a moment to the doctrine which the question contains. The theme is difficult; but it is deeply interesting, and its difficulties are by no means insoluble. They are precisely such difficulties as might be expected to occur in the revelation of God's will. We might expect that Revelation, although not beyond men's understanding, would exercise it to the full. They who cast the Scriptures aside, because in some parts they are not so easy and interesting as the last novel, do violence to the doctrines of Natural Theology, as well as to the letter of Scripture. The truth taught in this text is, moreover, of a kind that will bear and repay some repetition in the effort to expound it. If it glide over the surface at the first enunciation, we may grasp and retain it at the second.

If the body of sin were wholly removed at the moment when its spirit is destroyed, there would be no interval of discipline for Christians in the body. If a man were for ever absolutely sinless from the moment his sin was forgiven, no such cry of spiritual distress as Paul emitted could be heard on earth. But in the purpose of God and the experience of his people, a period of trial intervenes between the decisive turning from sin and the attainment of perfect holiness. After the soul of this spiritual death has departed at conversion, the body of it remains a while; and it is when the soul of it is gone that the body of it is felt to be loathsome. When a man's love of sin has departed, and his sinning still remains, he becomes wretched, and cries for deliverance. While your favourite lives and lies in your bosom, although he is destroying you, you are content with his company; but when he dies, and therefore can no longer deeply or permanently hurt you, you loathe his lifeless frame. "O wretched man that I am, who shall deliver me from the body of this death?"

You may discover here the explanation of a fact on which many have stumbled. Both in the Scriptures and in the present experience of Christians, you find that those who are furthest advanced in holiness complain most bitterly of their own sinfulness. To one who looks on the Christian experience from without, this seems an anomaly. Both publicly and privately these expressions have in many cases been credited to the account of hypocrisy. When a Christian counts and calls himself a chief sinner, they say that he really is a better man than most of his neighbours, and that he knows the fact right well. They regard his profession of humility as a disguise to cover his pride. This judgment is a mistake founded on ignorance. When a pardoned and renewed man confesses that he is more vile than others, his judgment is just. As the stars, in the beginning of Genesis, in respect to the sun and the moon, are rightly called "lesser lights," although most of them are absolutely larger; so, in the quickened inquirer's view, his own sins

are greater than the sins of all the world besides. Small portions of corrupting dead flesh lying in your bosom are more loathsome to you than heaps of corpses at a distance. So, when the spiritual sensibility has become pure and tender, a man is, in point of fact, more disgusted with the impurity within his own heart, than with all the impurities that adhered to other men. In the sensations of the soul, as in those of the body, the revulsion from vileness is strong not in proportion to its quantity but in proportion to its nearness. Those who hate sin truly at all, hate their own most, because it is their own. To mark and stigmatize the failings of a neighbour and overlook our own is ever a sure mark of self-deception.

Notice now the glad, hopeful answer which the apostle has given to his own interrogation, "I thank God." His confidence is as sure a mark of discipleship as his plaint. If he had not been a true Christian, he would not have been troubled by such a grief; he would not have been animated by such a gladness. How readily he falls in with the precept "in everything give thanks"! If any condition could claim exemption from that rule it was his. A wretched man, with the body of sin coiled round his heart, and no deliverance yet wrought, whatever hope there might be in the future,—if any man might be excused from the duty of thankfulness to God, it was this man. But he no more desires exemption than a thirsty man desires exemption from the duty of drinking water. Already, while he is a sufferer, and the deliverance which he sought lying far in the future, already he breaks forth into thanksgiving. He is not content with registering a vow that he will thank God if he is delivered, and when he is delivered. In his agony he begins a hymn of praise.

And well he may. There is hardly anything, short of an actual entrance into heaven, better fitted to make a sinful man glad than to feel that his own sins have begun to trouble him. Ah, friend, when your sin begins to be your tormentor, fall down on your knees and give thanks to God for the fact. Your enemy would not have done this. The Tempter would have kept you in a deep sleep if he could. When a patient has fainted so profoundly that his friends are in doubt whether he has died, the sight that relieves them is the quivering of his hand under the sense of pain when they prick its flesh. The feeling of pain is a sign of life. When my own sins become loathsome to my own heart, my deliverance is sure in God's good time. I shall praise him now for the symptoms of complete redemption coming soon.

These are strange bedfellows! Grief and gladness lie side by side in this man's heart. There is a wretchedness that draws a scream of agony from his lips; and, at the same moment, a joy that bursts into an anthem of praise. Ah, when your sin is your sorrow, your comfort is near! The Spirit of God who made this wound is ready on the instant to pour in the healing balm. Cooling

water is at hand; the thirsty soul will soon be satisfied. But the soul that is not thirsty? Ah! for that soul, the living water springs up in vain.

But, although he is glad already, he has not yet obtained the deliverance for which he pleaded. As yet he holds the boon only by hope. He does not, and cannot say, My God has delivered me; grammatically and logically the answer must be filled in from the question. It runs thus: "Who shall deliver me? I thank God, He shall." Let it never be forgotten that he had already obtained one deliverance, and is now crying for a second. He is already freed from the soul of sin, and now he longs to be freed also from its body. Or to speak without a figure, he has been redeemed by the blood of Christ from the guilt and curse of sin, and he desires to be also emancipated wholly from the habit and acts of sinning. Sin cannot condemn him at last; but he weeps, because it defiles him now. The salvation that he has already obtained consists in pardon of sin and reconciliation with God; the salvation he still seeks is perfect holiness of heart and life. This latter side of his redemption lies yet in the future, and he holds it only by hope. He knows it is coming, but, alas! he feels in bitterness that it has not come. He does not count that he has attained. He forgets the things that are behind, and reaches forward to the things that are before. He presses toward the mark—a mark that God has fixed on high, and on which his longing eyes are steadfastly set—the mark,—"Be ye holy as I am holy." Besides ascribing his expected deliverance to God, the giver of all good, he specifically names the name of Jesus, as the channel through which the blessing flows. The full expression is, I thank God; for he shall deliver me from the body of this death through Jesus Christ our Lord. This leads us back yet once more to the cardinal principle of our exposition. It is through Christ we know that he obtained the first part of redemption; and now we learn that it is through Christ also, that he expects the second. We know he owes justification to the one Mediator between God and man; and here he confesses that sanctification must come through the same channel.

The death of Christ destroys, as it were, the soul of sin in his people, deprives it of life and immortality. After that mortal wound, its body, although its filthy fragments may long adhere, will inevitably drop off at last. Stated in the forms of systematic theology, it stands thus:—When the guilt of sin has been freely pardoned, the power of sin will inevitably wane away, and at last perish utterly. Justification is the certain germ of sanctification. If sin is not now reckoned to your account, it cannot always reign in your members.

The text is difficult; and the sermon too. The subject does not suit an indolent or frivolous mind. It demands close, sustained attention. It puts the faculties upon the strain. Perhaps the understanding, put upon the strain, is wearied by the effort. Possibly there may be a measure of resentment, as if we should do well to be angry with any one who demanded attention to a theological argument. Let me entreat my readers to beware how they entertain, and how they dismiss this subject. God has folded up in these sentences something unspeakably precious for you. That which he has

laid up here for you is your life. It is at your peril that you miss or neglect it. Beware lest any irksomeness in the exposition of the word, tempt you to fling the word away. Nay, cast it not away, for a blessing is in it. If you do not get the blessing that is bound up there, you remain under the weight of your own guilt.

Suppose you were led through an agricultural museum. Besides specimens of implements, soils, and manures, you observe the various kinds of grain, each in its own place under a glass covering, and each labelled with an uncouth name. Perhaps you are wearied. You have no taste for these classifications. You see no beauty in those dry, mummy-like specimens. Well; you may perhaps not lose much by your neglect of these scientific arrangements, and that harsh nomenclature; but, if from dislike to the arranged and labelled specimens of grain, you refuse or neglect to eat bread, the neglect will cost you your life.

Some may have not much power to apprehend theological argument; and no taste for theological terms. Be it so; but if you neglect our exposition, neglect not the things which we have endeavoured to expound. Our method of arranging and naming the cereals may be intricate and difficult; but bread is to you a necessity of life.

Sin at first lives in you, and reigns over you, and holds you bound over to the second death. As long as it has the power and mastery you love it, and cling to it. If you are comfortable in its company at present, it has power to cast you away at last; whereas, if it distresses you now, you will soon be quit of it for ever. The Apostle, describing his internal conflict in the preceding portion of the chapter, exclaims, "I am carnal!" We know well that by this time he was spiritual. What then? Is his complaint real and true? Yes, and it could not have been true in any other conjunction of circumstances. Although he is spiritual, he truly laments his carnality; nay more, *because* he is now spiritual he laments that he is carnal. While he was carnal,—that is, a self-pleasing, unconvicted, unconverted sinner,—he made no complaint. He was carnal to the heart's core while he kept the clothes of Stephen's murderers, and as soon as one foul job was done started for Damascus on the scent of another; but in those days no self-accusing cry ever escaped his lips. He is now a better man; but precisely because he is better, he counts and calls himself worse. A carnal man, whatever form of words he may repeat, never truthfully complains that he is carnal. None but the living complain sincerely of the presence of "this death." Thus the paradox, when subjected to analysis, turns out to be "truth and soberness."

These two things are needful: First, your sin must be blotted out, all forgiven through the death of Christ; this destroys the soul of your destroyer. Next, acts and habits of actual sin, remaining still in your thoughts and actions, must be loathsome as the carcass of the dead clinging to your living body. When your heart detests them thus, you will with all your might put them away; and when you put them away with all your might, a might greater than your own will be given to you; you will be more than conqueror through Him that loved you.

W. ARNOT.

RAMBLING NOTES ON A RAMBLE TO NORTH ITALY.

BY THE EDITOR.

WE would never urge any man or woman to cross the Channel, until they were tolerably well acquainted with the chief things worth seeing on this side of it. We are old-fashioned enough to believe that this "nice little, tight little island" contains within its rocky shores as wondrous a combination, and as great a variety of scenery as can be found in any one portion of the Continent of Europe twice its extent in surface. We back Great Britain and Ireland—not omitting even "the adjacent islands of the Great and Little Cumbraes"—against the world, for possessing the richest treasures of all that is beautiful, grand, and loveable in Nature. We may be pitied as ignorant provincials for such beliefs; but we are as nearly as possible in sober earnest when we declare them to be ours, after comparing both sides of the Channel many a time and oft during these last thirty years: and so with our whole hearts we sing with Coleridge—

"O dear Britain! O my mother isle!

Needs must thou prove a name most dear and holy," etc.

You know the rest, good reader: if not, please read for yourself "Fears in Solitude," for there are many things in the poem worth marking and digesting at the present time.

There is one good at least which is gained by going abroad that cannot so well be obtained at home;—we are thereby helped to the possession of the rare enjoyment of being able more easily to forget ourselves, by getting quit of a hundred things which at home constantly remind us of our existence,—State politics and Church politics, all the vexatious and troublesome questions which one is compelled to think about and talk about are left behind, and we go forth unknowing and unknown, desiring only to keep alive the consciousness that we are men and Christians. With Clough we exclaim,—

"It is a blessing, no doubt, to be rid, at least for a time, of all one's friends and relations,

All the *assujettissement* of having been what one has been,

What one thinks one is, or thinks that others suppose one."

We enjoyed a short tour in Italy during May and June of this year. Leaving Paris we crossed Mont Cenis, and proceeded by railway to Genoa, where we made our first halt for a few days. From thence we proceeded, by vetturino, along the Riviera shore, to Pisa and Florence, crossed the Apennines to Bologna, and reached Venice *via* Ferrara and Padua. From Venice we proceeded to

Lakes Como, Lugano, and Maggiore, thence to Milan, and finally to Courmayeur and Mont Blanc, recrossing the Alps by the Pass of the Great St. Bernard, and returning to Paris by Martigny, Neuchâtel, and Basle.

Considering all that was to be seen we could afford but "a peep" at the chief attractions of the route.

Travellers who have abundance of time and money at their disposal—"old stagers," as they are called—who every year loiter for months on the Continent, until their faces are as familiar to hotel-keepers as those of "commissionnaires," are no doubt disposed to look with feelings like contempt upon those less favoured brethren of the pilgrim-staff whose time and money necessarily limit their journey, or condense it into a mere "peep." I admit that in the old days of travel, before railways gridironed the earth, there was a sense of distance, a sense of being really abroad, which it is hardly possible to realize now, when a few days or hours suddenly convey us from the busy streets of London to the solitudes of the Alps, or the sunny shores of the Mediterranean. In the days when we were young—"ah! woful, when!"—the distant points of chief interest in Europe were reached slowly, and by such sacrifices of time and comfort as enhanced the value of the long-wished-for result. The stage-coach journey first from Scotland, for example, to London; the lumbering diligence, rattling for days and nights along the strait lines of paved roads, when towns, which are now passed with the speed of wind, were necessary resting-places for dusty and deliquescent passengers; in all this there was a respectful, solemn approach made to Vienna, Rome, or even Switzerland, which one felt to be more becoming their dignity than to rush impetuously into their presence in a cloud of steam. We naturally valued more the object attained by such labour, and did not, therefore, hastily part from it. Letters took weeks to reach the *poste restante*. We began to feel soft-hearted, on our first journey, as we thought of our absent friends; and it is possible even that we sung "Home, sweet home," with tears. We thus seemed to be gradually educated to see the Continent with the eyes of continentals; becoming acclimatized, so as to grow out of its soil, and expand in its atmosphere. But now it is difficult to get quit of the presence of Edinburgh, Dublin, or London. We fall asleep in these home cities, and dose on until our passports are demanded, or our luggage is examined in some foreign country, about which long books of travels were written "when we were

young." The novelty, the wonder, the freshness have vanished with "Bradshaw." Yet, after all, these days of prosaic railways and of rapid travelling have their advantages, especially for the class—in railway nomenclature, 2d and 3d—to which so many of us belong, who have little time and money, but who nevertheless wish to get even a peep at some of the glories of nature and art beyond the Channel. Most places of interest on the Continent can now be reached in a space of time much shorter than those who never leave home, and have not been educated to study vulgar "Bradshaw," the more learned and aristocratic "Murray," or the sensible "Shilling Guide," have any idea of. Last month, for example, we reached Genoa very early one Saturday, having left Paris on Thursday night. A friend who was obliged by business to part from us at Venice on Monday morning, reached Edinburgh on Thursday morning. Then, again, as to expense, it is the old story of one pound per day, on an average, to cover the expenses of the most rapid travelling compatible with comfort and seeing anything in peace, while for half that sum days may be spent at the best hotels, *en pension*, or as boarders. The great benefit of railways is that they enable the traveller to hurry over distances which have no special interest, and to spend the more time in those which have. And it is quite a mistake to suppose that comparatively little time for what is called "sight-seeing" (that intolerable bore!) is incompatible with seeing sights which, once seen, can never be forgotten, but must remain as photographs upon the mind for ever, to be reproduced at will in after years, when sickness or old age may confine the traveller to a journey from his bed to his chair, and when those old visions will "flash upon that inward eye," accompanied by many of the delightful feelings and associations with which they were at first beheld. Let any man, for instance, who wishes to receive an undying impression of Alpine grandeur, spend but a day on the G6rner Grat, above Zermatt, and gaze upon the glacier world around Monte Rosa and the gigantic Matterhorn; or let him with reverence look up to the august "monarch of mountains" from the All6e Blanche at Courmayeur; or if he would fill his soul with a sense of the beautiful, let him at Genoa "the superb" ascend the old lighthouse, and look from its summit at the city, its surrounding hills, and along the winding shore; or for one evening sit in silence on a balcony at Belaggio, hanging over the waters of Lake Como; or stand on the heights of Fiesole as the sunset is steeping Florence and its plain in its golden glory; or if he wishes to see what no other spot on earth can disclose anything like, let him row down the Grand Canal from the Rialto to St. Mark's, and

watch a sunset on the Alps from the Giudecca; or, if he desires to obtain a glimmer of art-glory which will surpass all he has ever conceived of, let him stand in silence before the masterpieces of painting and sculpture, in one spot in one gallery, such as in the tribune in the Pitti Palace; or, if he would receive some impression of the majesty, power, and beauty of architecture, he may do so within those wondrous spots in Pisa and Florence, which are each occupied by their respective campanile, cathedral, and baptistry, or let him pass as in some enchanting dream around the Place of St. Mark's in Venice, or ascend the spire of Milan, and while able to see afar off Monte Rosa "glowing in roseate hues at even," and beneath him the great sea of the Lombard plain, he will find himself—

" Amid that a6rial host
Of figures human and divine,
White as the snows of Apennine
Indurated by frost,"

that must fill him with a sense of the beautiful as well as the grand, which even the more majestic Cologne does not impart—let him do even this much, and all this he can do in a few weeks, and though he may almost weep because he has only days instead of months to take in the grandeur from nature and from art, and from many memories, yet he must feel that he has become possessed of treasures whose value no time nor money can express. The peep may be short, but it is like a peep into paradise!

The practical conclusion from all this is, that it is better to have seen in haste than never to have seen at all.

But we must break up this tour a little more into some of its most interesting portions.

The scenery best worth seeing, as we have already hinted, is unquestionably the Italian lakes; the Riviera stretching between Genoa and Massa; and the Mont Blanc from Courmayeur. I do not mean to affirm that the other portions of the route were stupid; for, except where one crosses the dead, flat plain of Lombardy—which has its own peculiar interest—every mile almost was worth seeing. The line of railway from Chamb6ry until it ends at Mont Cenis, is highly picturesque; so is the Mont Cenis Pass itself, and the Suza Valley, which leads to Turin; so is the line from Venice to Milan, which skirts the Alps; and the road from Ivrea to Courmayeur is one of the most interesting I ever journeyed.

Of most of those beautiful scenes I need not say anything, nor of the Italian lakes, as every person who has visited the north of Italy is acquainted with them. But one word or two about others, which are not so frequently visited. The road from Nice to Genoa (the *Corniche*, as it is called)

is of the same character with its continuation along the Riviera from Genoa to Pisa, or at least to beyond Spezzia, as far perhaps as Massa. We travelled the latter portion only by vetturino, —that is, with a hired carriage driven with two horses, for about £2 per day. The journey occupied two and a half days, sleeping the first night at Sestri, and the second at Spezzia. It would be difficult to exaggerate the beauty of this excursion, which can hardly be matched perhaps in the world, except on the Neapolitan or Sicilian coast. The Apennines here run, a few miles off, parallel to the Mediterranean, to which they connect themselves by long spurs or ridges which rise up into conical hills, wind round deep valleys, range themselves into high mountain passes with rock and precipice, open out at the sea into wide bays with beaches of pure sand, or end in bold headlands, like Porto Fino, which abruptly plunge themselves into deep water. But who can describe the endless beauties of this scene, when every turn of the road reveals some new grouping of marvellous beauty! To the right, is the glorious ocean; is it green as emerald, blue as lapis-lazuli? or do not the colours of the topaz and amethyst mingle with these? It is dotted with pure white sails, like sea-birds on its bosom, and loses itself in the horizon on the way to Egypt and Palestine. The road sometimes passed so near its margin that one gazed down into the crystal depths, and heard the laughter of the waves on the shore; the air was loaded with the perfume of orange-trees and the most subtle and delicate odours; everywhere, as far as the eye could see inland, were festooned vineyards, groves of olives, with figs, chestnuts, dark cypresses—every shade of green lighted up by flowers of every hue; everywhere, from sea to mountain, white cottages like specks of light relieving the foliage; villages perched on the sides, and on the tops of the hills, nestling deep down or far up in the valleys, and each with its attendant church spire, all filling the air at evening with the echoing chimes of bells;—and then overhead the dome of the blue sky that no art ever can picture, and all day enjoying an atmosphere which glorified every object with its luminous splendour! Ding, ding, ding, rung the bells of our little horses, as we wheeled through this scene hour after hour, until, from expressing our wonder as every moment some new view burst upon us, we became weary of speech, and gazed in silent and absorbed admiration, until some object for a moment concealed the view, and then we drew our breath and gave vent to our common sense of the surpassing beauty around us. If the reader ever visits Genoa and cannot take this journey, let him even go four miles out to Quarto, where Garibaldi's villa is, and let him stand on the point

on which is reared the small obelisk below his home, which marks the little bay from whence he and his brave band sailed on that memorable expedition to free Sicily—and if he goes no farther, I promise him that he will “rest, and be thankful.” But should he go the whole way, he will never forget the pictures presented by Chiavari, Sestri, or Spezzia. The detour by Carrara to Massa, though a very rough drive, is, I have been told, well worth another day's labour to those who have strength and time to undertake it.

I have seen nothing like the scenery of these southern lakes and coasts anywhere in the North. The lakes of Killarney are beautiful and lonely; many of the lakes of Scotland have rare beauty, as Loch Awe, Loch Lomond, through the Trosachs, etc., and most of our “lochs” are characterized by wild and dreary grandeur. The lakes of Sweden are desolate and tame. The lakes of North America—I mean Lake George and Lake Champlain, for the great lakes are but inland oceans—are beautiful also, with an undefined Indian wilderness-grandeur about them; but no lakes, except those of Westmoreland, comprise beauty, cultivation, and *inhabitiveness*, with mountain wildness, as do those of Italy. The richness of the shores, with the magnificence of the Alpine background, form a combination which nowhere else can be found, unless on the lakes of Switzerland such as those of Lucerne and Zurich. Then again, as to the coast scenery of the North, it must in every case (except perhaps on the Devon coast) yield to the South in rich and varied beauty. The coast of Finland is interesting with its endless archipelago of wooded islands, and on shore its many small lakes, wild forests, and fantastic boulders; but it has no variety and less beauty. The Irish coast is wildly picturesque and full of interest, as, for example, at the Killeries and Antrim. The Scottish coast in many respects stands alone with its grand ocean-line, its islands, headlands, precipices, bays, distant mountain ranges, and vast stretch of view. There is hardly in the world a grander scene (when the day is favourable!) than mid-channel between Oban and Mull, or when voyaging between the point of Ardnarmurchan and Skye. But the coasts of Italy, taking into account at once the sea, sky, atmosphere, vegetation, and cultivation, stand alone for perfect beauty. But as I am writing of the beauty of the South, I must here notice a scene, which verily comes under that designation, although in the midst of a crowded city. There are in Venice a band of singers, numbering about twenty, who, for about two shillings a head, will give a concert upon the water. A few of us united to hire them. We met in our gondolas about nine at night, beneath the Bridge of the Rialto. The first chorus

is always sung here on such occasions, probably to gain effect, from the reverberations of the arch over-head. The gondola with the singers then slowly floats down the Grand Canal, followed by the other gondolas with the listeners, song after song being sung until midnight. The night we tried this experiment, last June, was perfect. A full moon shone from a cloudless sky,

"And looked round her with delight, the heavens all bare."

The water glanced in golden waves. Palaces and churches were steeped in the calm brilliancy of the southern night. There was a silence such as could not reign in any other city on earth. A whisper,—one's very breathing might be heard. Every palace was visible as in daylight, and, except for the forms of dark gondolas which glided past, or a few lights that, like fire-flies, darted amidst the darkness of the mysterious water-streets which opened into the Grand Canal; the city seemed as if dead. The beauty of the scene, combined with memories of the past, and all that Venice was and is, lay upon the heart, suggesting thoughts and feelings dim, impalpable, oppressive, yet most exciting to the imagination, and which were relieved though not changed by the next choral burst of some old Venetian boat-song, which rose from the shadowy gondola that was leading us onwards. Venice is Venice still! Even the Austrians cannot destroy its attractions.

Let us turn to a very different scene: Mont Blanc. The Italian side of Mont Blanc can be reached from various points; in two days or more, for example, from Chamouni, by the Col de Bon Homme; or walking sixteen hours, by the difficult pass from the Mer de Glace over the Col du Geant; or from Martigny by the Col de Ferret in eleven hours' riding; or by the Great St. Bernard in twelve, which latter route joins at Aosta the one we necessarily took, ascending from Italy. The easiest approach from the north side of the Alps is, therefore, for one who is not a pedestrian, by the St. Bernard, as the whole road can be driven, except two hours on mules, ascending from St. Pierre, and two hours descending to St. Remy—along a perfectly safe and easy path. The hotels at Courmayeur are good. We were the first visitors this season, and had all to ourselves. As we approached the hotel, it seemed to be wrapt up in the frost of winter. The air was bitterly cold, although we had left scorching heat in the valley. As we drove into the large court of the hotel late in the afternoon, all was silent. The "Casino"—which by an immense advertisement on a board, hung up with vulgar impudence opposite Mont Blanc and its glaciers, promised us all sorts of English periodical literature, from

the *Times* to the *Ladies' Magazine*—was not yet opened except to spiders. Not a dog was heard, nor a landlord's voice, as up to the door we hurried. But soon an astonished waiter, who seemed to have been hibernating since the previous season, appeared adjusting a white neckcloth, and then an amazed landlord rushed out of hiding, and all seemed to ask, "What has sent you here in the depth of winter? It is only the month of June!" No bedroom was ready, and we were ushered for a time into a *salle à manger* with closed window-shutters, which, when opened, disclosed a long room with a horse-shoe table, capable of dining about 150 people, with chairs and sofas piled up on it, as if they had fled from some avalanche, the whole room being a dim prophecy of expected summer and expected guests. A wood fire gave some life to it and us.

I have never seen any mountain view, or rather the view of any mountain, to be for a moment compared to the view of Mont Blanc from the Italian side. The approach to it from Aosta is in every respect worthy of the great monarch into whose presence it leads. Every mile increases in beauty, while some portions of the road have gorges as deep and wild almost as the *Via Mala*, with most picturesque villages, noble mediæval castles, and ever and anon never-to-be-forgotten glimpses of Mont Blanc, with everywhere snowy peaks marking the summits of the high Alps. As to the immediate view of the great mountain itself, I cannot imagine anything on earth more overpoweringly magnificent. The Chamouni side we had formerly seen in most favourable weather; but while it has its own peculiar glory, which must ever make it one of the most interesting centres of attraction in Switzerland, yet from the *Allée Blanche* alone, near Courmayeur, can be viewed the whole glory of the Monarch, from his footstool on the green earth up to his crown of pure snow in the azure sky. The great advantage of this view is, that without any difficulty, and in an easy ride or walk of two hours, one can get to the very base of the mountain, and then look up from, as from above the *Glacier de la Brenva*, for example, up to its *Névé*, and up, up, through ice-falls, alabaster snow, black jutting rocks and gigantic precipices,—up, up, until almost in the zenith overhead the eye rests on that pure white dome, reposing on the pure blue sky—up where no mountain-top was ever seen by you before—up, where you have been accustomed to gaze only on fleecy clouds or silent stars—up, for miles untrodden by foot of man, though perhaps by passing angel in his flight, for well might he fold his wings on some message of love and grace and rest upon those pure heights, as on a throne in the third heavens. As one looks in silence upon this

marvellous panorama from the *aiguilles*, which rise like a wall from amidst the flowers of the Allée Blanche, along the mighty mass of precipice and glacier, until the view is bounded by the tremendous buttress of the Grande Jorasse,—the lips fail to express in words the emotions of the heart, but tears will come uncalled to the eye, from a sense of joy and blessedness in being able to see and possess such an inheritance as this on earth.

We had a well-known guide with us, Chabot, commonly called Turin. I know not how it is, but famous Swiss guides,—such men as Balmat, for instance,—who have, like high priests, entered reverently into these holy places in the high Alps, fill me with great respect. There is a quiet dignity about them, that shrewd, thoughtful, demonstrative look, such as one sees in old pilots or old brave soldiers, and that belongs to men only who have been in the habit of meeting and encountering great perils. They possess a solemn earnestness, yet cheerful hopefulness, with a humility and modesty which are singularly attractive. Turin professed the greatest admiration for the English "Lords." "Bah!" he said, "these Italian gentlemen go from caffè to caffè, from theatre to theatre, but these young Englishmen walk from glacier to glacier, and from one mountain peak to another."

We returned, as I have already said, by the St. Bernard, reaching the Hospice with great ease in twelve hours, from Courmayeur. After enduring for a few hours excessive heat in the valley we again entered upon bitter cold at St. Bernard. The mist hung like a damp sheet over the small lake on the summit, and partially revealed the high white walls of the Hospice, like a ghost rising from the grave. We found the monks and dogs in good health, and passed through the usual routine so familiar to travellers, who know the comfort afforded by this convenient ecclesiastical hotel.

We received the courteous attention of one of the brethren; enjoyed music in the evening from performances on a pianoforte presented by many noble ladies in England, and a fine harmonium gracefully sent by the Prince of Wales to cheer the wintry solitude. In the morning at six we were roused by the organ of the chapel booming through the corridor, then after taking a peep into the morgue, that temple of death in all its vileness, and depositing our money in the poor's-box, and paying the waiter, we departed, and soon were among the green pastures, alive with the herds of cattle belonging to the Hospice.

It is impossible, when passing along this route, to forget the famous march of Napoleon, when, for twenty days, he poured his legions over these snows, and along those mountain tracks, to the plains of Italy. The grave of Dessaix, killed at

Marengo, and his monument in the lonely Chapel of St. Bernard, vividly recal that memorable period. But not more so than does the fortress of Bard, which so nearly checkmated the First Consul. A more formidable opponent than it presents in the gorge of the valley, between Ivrea and Chatillon, can hardly be imagined. It rises, a sharp conical rock, like a small and impregnable Gibraltar, covered with batteries, tier above tier, like a six-decker. Abrupt precipices rise on each of its flanks; the separating space on the one side being filled up by the raging glacier-torrent of the Doire (for the road now cut out of the rock is recent), and on the other, by a small village which nestles between the fortified rock and the mountain wall, as if in the ditch of the citadel. Through this village the old road along the valley passes. And it is only when one sees the wild and steep ravine, two miles or so from the fortress, up which Napoleon led all his army, by a pass which descends beyond it on the south side, and wholly concealed the enemy, that one fully realizes the daring and *elan* of that army and its general. The carriage of his artillery under the very guns of the fort, along the streets of the village, laid with straw to conceal the noise, strikes one in looking at the scene as being hardly possible, without either detection or destruction.

But I must conclude my rambling remarks upon this short tour. The Editor commands the writer to stop. I regret, therefore, that I am thus prevented from giving my readers such solid information upon Italy and the Italians as every man is charitably understood to possess who has entered the country—more especially when he is practising, as I must do, that silence and reticence which are so frequently accepted as signs of deep wisdom, and of thoughts too weighty to be easily or rapidly rolled out of the teeming head. Methinks, however, I hear those who have been good-natured enough to begin this article, inquire with some ill-nature, as it is about to end, "Can you really give us nothing new or worth knowing from Italy?" About what, inquiring reader? I patiently wait for your questions, and will reply to the best of my ability. But they and the answers must be brief. "What sort of man is Victor Emanuel?" I have seen his likeness only; he seems very ugly, and is, I hear, a remarkably healthy, active, powerful animal, but yet is honest as a king. "What of Art in Italy?" Much more beautiful, I assure you, and better worth seeing than Victor Emanuel. But until the Editor gives me room for several articles on the subject (which I hope he won't do, as I don't understand a bit about it), I must refer you to Ruskin, Kugler, and Murray. I am bound, however, to confess that I am a confirmed pre-Raphaelite, and would return, if to see nothing

more than the frescoes of Giotto. "What of men and manners, then?" I know nothing of either, except what I gathered from meeting waiters and vetturinos. "What know you of the Piedmontese or the Neapolitans?" Little of the one and nothing of the other. The former look like men, and I believe are almost equal to ourselves in sense and courage; but I have been credibly informed that the great mass of the Neapolitans are the veriest cowards and rascals on earth. "Do you know the present phases of Italian politics?" Only from the English papers, and also from having sat in the Parliament House in Turin,—when no person happened to be in it but myself. I proposed that Ratazzi should be dismissed, as too much of the mere lawyer, and Ricasoli recalled as the right man; but there being no one to second my motion, it was negatived without a division. The people also seem fond of newspapers, and eagerly devour them. This is more than I can say of the people of Venice or Verona. The Austrians are so sunk in ignorance that, begging the Editor's pardon, they don't seem to know even the existence of *Good Words*! "Can you tell us anything of the priests?" Nothing except what every person has known during many centuries,—that they are very numerous, some being good, many of them bad in every sense, and all aliens from the commonwealth, and that, except English perverts, no man of any education has faith in them.

"And, finally"—I am glad it has come to this—"what of Protestantism and its prospects?" The hardest question of all! How shall I answer it seriously? I may do so safely by saying that I really know little about it beyond what one reads in religious papers, and hears from one-sided sources. To know a country and its people, one must live in it for many years, and mingle intelligently with all classes of society and with all parties. As to the prospects of true religion in Italy, I believe that though as yet there have been but few and very doubtful conversions from Romanism, hopeful signs are not wanting of coming good. There are honest and able men in Italy who preach the gospel, and others who (like the Free Church missionaries) wisely aid the native churches. Many thousand Bibles are everywhere sold. But, above all, sufficient political and religious liberty exist to enable sensible and good men to make known to others what they believe to be the truth. In this respect the revolution in Italy is immense. An age seems to have passed since the old regime existed, which wicked men, and some political dotards on both sides of the Channel, would dare to bring back. Let us have patience. It may be that as none of the slavish and ignorant generation which left Egypt could form the germ of

a new nation, but were left to die out in the wilderness, so perhaps must this generation in Italy pass away, save here and there a Caleb and a Joshua, ere a united, and educated, and free nation is established. Forty years is surely not too long a period to wait for such a boon! Then as to the Church of the future in Italy, one may question whether as yet there exists its faintest shadow. In the meantime, it would be well if the several small Christian societies who meet together for worship would each attend to their own work, without meddling with their neighbours;—that "Plymouthists," who are as likely to become the Church of the future as wild-flowers are to become oaks, would let the Vaudois and other bodies alone; that the Vaudois would return the compliment, and not be disappointed if Italy refuses to be moulded by these northern mountaineers;—that all would concentrate themselves upon one work, preaching eternal truth by word and life to the human heart and human conscience, leaving the results to God, who may rear up a church which will gather into its bosom old and new elements of life from the Catholic clergy and laity,—a church which, rooting itself in the historical past of Italy may, in its development follow more the type of the English than that of any other Reformation. Anyhow, let us labour, pray, and hope. The darkest hour may be nearest dawn, in spite of Pope or Kaiser. He who has ceased to be afraid of the devil gaining possession of the world, need not fear his earthly agents; and he who believes that Jesus, the world's Maker and possessor, "must reign" until all the enemies of righteousness are put under his feet, may be at peace regarding the future even in Italy or Rome.

And now I must conclude, having no time or space to say anything about palaces and pictures; antiquities from the days of the Etruscans downwards; banditti, and various adventures by sea and land; with sketches of Yankees, their mouths full of the war and tobacco; remembrances of many pleasant travelling acquaintances full of adieus that are fresh in memory; with many other observations upon literature, agriculture, art, science, politics; the last authentic news about Venetia; the present state of society in Turin, Florence, Milan, Venice; with luminous sketches of the past history of the Italian republics, including notices of all the great rogues who once ruled and fought in turn, as well as of the great poets and artists from Dante downwards, and finally, the real policy of Austria, as told me in confidence by a Hungarian drummer,—all of which I grieve to think must be lost to posterity from the paltry jealousy and tyranny of the Editor

VISTAS IN THE RUSSIAN CHURCH.

PART FIRST.

"THE longer we live, and the older grows the world, by just so much the more do we come to know of early times and primeval races of men," exclaimed lately, in an apparent paradox, one of our public chroniclers of passing events. He was partly led to his involuntary remark by recent news from the Mediterranean, descriptive of the excavation of an Athenian building in such perfect preservation, as to show for the first time clearly, to modern men, some of the pristine social regulations customary in ancient Greece; and to this, having added accounts of discoveries among Etrurian tombs, and of further researches in Egypt, with successful translation of its sacred character; and then, taking all these in connexion with that grandest as well as least-expected series of revelations of Nineveh's royal palaces and public records, brought, within a few years past, to the light of day once again,—he insisted that the idea, so far from being paradoxical in a fallacious point of view, was in reality, and as we ourselves also are inclined to think, nothing but simply and absolutely true.

This increased knowledge of ancient times and things is, indeed, one of the most remarkable among the many signs of the age in which we live; pervading, as it does, almost all our thoughts, occupations, and pursuits, but none of them more than religion itself; and there, to the utter confusion of that materialistic calculation, which vainly announced the other day, in a neighbouring country, as a necessary result of anything with which man had to do, that in precisely such and such a number of years the Christian faith must literally wear out, fade away, and be forgotten in the world. The principal fallacy in the so-called calculation must be too apparent before all our readers to need being specially pointed out for them; and it rather accords with our present object to remark, on the irrepressible impulse which seems day by day to be growing on Christians of every denomination, to ascend continually upwards, through, and beyond—but not leaving behind—their home instruction, their school teaching, their church ordinances, and their national traditions,—to the very origin and fountain-head on earth of their sacred faith; there to study anew the language in which the Gospels were first written; and learn, by actual visitation of the grand memorials left behind in the East, both the fulfilment of prophecy and the exact nature of the very circumstances and surroundings of the daily life

of our Saviour, when in the streets of Jerusalem or on the hills of Judah.

Not otherwise is it in principle, though the chief purpose be less prominent, that in ordinary literary pursuits hardly any theological question can now be raised amongst us, without reference not merely to existing, but to past, authorities; not only to the opinion of early reformers in these realms, but, if it admits of that treatment, to the fathers of the Vatican as well; and all their experience for a thousand years before our Church was born, is tested and re-examined that we may profit thereby.

In all this we must and do rejoice, and thankfully share in the lessons of wisdom which are thus prepared equally from the failings, as the successes, of whole ages of past men. There is no fault, too, to be found either in the scope or breadth with which, both in time and geographical space, these researches are being carried on by our professional writers,—unless, indeed, we venture to hint that there is one failing frequent amongst them, quite the rule apparently with almost all denominations in the west of Europe; and that is, to say nothing, or next to nothing, of nearly all such events as are connected with the Russian, and more generally the Eastern, Catholic Church; in fact, practically to ignore its existence, though it numbers upwards of sixty-four millions of living souls, and is professed over a chief part of the earth; or, as a Russian author has it, "may count her children from the shores of the Adriatic to the bays of the Eastern Ocean on the coast of America, from the ice-fields which grind against the Solovetsky Monastery on its savage islet in the north, to the heart of the Arabian and Egyptian deserts, on the verge of which stands the Lavra of Sinai."*

In extenuation apparently of such an omission, we are told, in some quarters, that the Russian Church is not worth studying, that it has been barren from its origin, and never enriched by that brilliance of illustration which the more independent genius and deeper learning of Western Europe has thrown around every form of faith ever domiciled there.

Yet such is neither a just nor charitable line of argument; and may indeed call up in some minds amongst us a historical remembrance, of how the pure belief in Christ was at one time in these

* Blackmore's Translation of Mouravieff's *History of the Russian Church*.

realms of the West rather too much interfered with, and even so entirely overlaid, by man's devices, that our whole people was obliged to rise in protest and for reform; and when the nation had accordingly thus reformed itself and become Protestant, it was then found far nearer in many points to the so-called unimproved Eastern, than

to the formerly dominant Roman, Catholic Church. So near, we may add, that it seems there actually was, about 150 years ago, a proposal seriously entertained in the existing Anglican Church, of making a "solid union" with the Church of Russia.

Though, too, hardly anything is openly said now-a-days, there is little doubt that an under-cur-

One of the middle panels, from the ancient brazen gates of Kerson, at Novgorod.

rent is beginning again to flow in the same direction, through some parts of Scotland too, as well as England; manifesting itself occasionally in unexpected quarters, at certain times very admirably, but at others merely by some eloquent statesman, who, from his devotion to ecclesiastic furnishings of the richest designs, had been thought by many to be half a Roman Catholic, yet, notwithstanding, break-

ing out in frequent fierce tirades against the Papal rule, and with more determined opposition than Presbyterians themselves.

It is doubly necessary therefore for us, as well as philosophically advisable, to know something in the present day of the real characteristics of the Eastern Russian Church, the most flourishing branch of that earlier one which once and for so long

divided the rule of the world with Rome; and while the great events which undoubtedly marked its plantation and gradual development cannot but be historically instructive, there will be found, by those who take the trouble to inquire, many lesser features far more edifying to the soul, than those too prominent ones of church adornments, occa-

sionally thought to be the only lessons it teaches; indeed, there would seem to be some things of purest promise and most spiritual tendency for the Church of the future.

Such, at least, was the nature of many of the views opened up to ourselves on actually visiting Russia, and striving when there, while steadily

One of the upper panels, from the ancient brzen gates of Kerson, at Novgorod.

and perseveringly seeing and hearing all things, to cull always the best. A slow process though for a stranger; for all the surrounding circumstances in Russia are so perfectly different to what we are accustomed to in Britain, that, on a first visit, extreme surprise must be the leading impression; and this is again so immediately succeeded in too

many cases by distaste, or repugnance, arising out of strangeness, that understanding is a long time in following; and until that be well established, vainly may one wait for either kindly feelings or charitable sympathy to supervene.

An immense deal of Russian experience therefore requires to be waded through, before the work-

ings of the Russian mind can be fully appreciated by any one of another nation; and though, in the space of this short article, little more can be attempted than merely to indicate the leading nature of much of the information to be collected on the spot, yet it may possibly prove of service to many in this country, to exhibit a glance here and a glade there of scenes which had to be passed through, before finally arriving at what appeared in our humble estimation the more precious results.

THE CHURCH OF ST. PETERSBURG.

In a very short time after arriving in the modern capital of Russia, any and every stranger must have easily discovered that he is amongst a population greatly guided and very deeply impressed by religion,—impressed, too, more from inward feelings and convictions of their own, than the mere domination of priestly rule. A mighty source, therefore, such a quality for moral national agency; though as yet, and at least so far as meets the untutored eye, there has been little founded upon it except one of the grandest of Church and State establishments.

Symptoms of this practical result meet one everywhere, and as it appropriately forms one of the first problems to be studied, let us sail with the stream; and then, beginning with mere architecture, immediately we behold the great capital on the banks of the Neva, beaming with gold-adorned churches. Not only are the terminal crosses thereof both large and golden always, but the huge surfaces of the domes, where that is the style of building, are either decorated with gold or completely gilt, or actually plated with sheets of the precious metal. On the new Izak Cathedral, its one grand dome and four smaller surrounding ones,—a very frequent arrangement in the city,—there is spread gold to the value, as it is said, of £50,000; and neither there, nor in the little golden dome on the summit of the Alexander Nevski Chapel on the Nikolayevski Bridge—a mere sentry-box affair for size,—is there the smallest fear of violence or plunder by night from any member of a true Russian population; for sacrilege is a thing they would most extraordinarily abhor.

Some again of the churches aim, architecturally, at the tallest and thinnest of spires; as that of St. Peter and St. Paul in the Fortress, 393 feet in height: but all the spires are plated more or less with burnished gold; producing under a powerful continental sun, and in varied positions of the spectator and illuminating orb, a thousand brilliant, and to a certain extent, pertinent effects; for sometimes, in the approaching shades of evening, you see a pillar of living light extending as it were from earth to heaven, and think of the mira-

culous march of the Israelites; while sometimes again, at noon-day, you look up to the giant dome of St. Izak, 250 feet high from the ground, and behold a magnificent crown, composed of reflected solar images, laid on the general rotund surface obliquely, and as it were a testimony, by all nature, in remembrance of the cruel crown of thorns.

Of the structure otherwise of St. Petersburg churches, there is little to be said; for it is not so much national, as savouring of State and bureaucratic arrangements; each church being erected generally by official order, and in slavish political imitation of western countries and the fanes of a foreign faith. Since the time of Peter the Great, in truth, the power of government over all the material of ecclesiasticism has been strong indeed; and in his own city, under the immediate eye of the ruler, the people have their churches built for them, whether they like it or not, by the Imperial Architectural Department, which is of no necessary religious profession whatever.

The citizens, however, both high and low, are docile; and crowd devoutly to their appointed places of worship. Every church floor is completely thronged with them, both men and women; they all stand, for there are no seats of any description; while a service is performed before them by the priesthood, which is without doubt descended nearly unchanged from very early times; and, in the opinion of their orthodox writers, “enables us to see with our own eyes those very things which Christians saw in the times of the Apostles, and to make the same confessions of faith as they did.” “The holy doctrine of our faith,” they also insist, “the offices of the priest, the prayers, the very robes of the ministers of the altar of our Lord, all breathe the first ages of Christianity; for the Russian Catholic Church remains hitherto the same, both as far as regards the ancient external appearance of its rites, as well as the internal spirit of its unchangeable doctrines;—its divine doctrines which it has preserved entire and unchanged as they were taught by Christ, without adding to them anything from the spirit of human sophistry; and the yearly circle of our services includes in its chantings the full course of ancient orthodox theology, serving as a perpetual and lively testament of the primitive Church to the remotest ages.”

To the eye, nevertheless, of a Protestant stranger, the Russian service appears, at first sight, only far too like the rich displays in a Roman Catholic cathedral, amid golden candlesticks and jewelled pictures; and he must find great difficulty, though ever so well inclined, in reconciling the gorgeous robes of priests clothed in purple and gold and the richest of silk, with the modest raiment of certain poor fishers in the Sea of Galilee, apostles of a

faith which the rich man was ever proverbially to find untoward of entrance to all of his kind. Yet patient attention is soon rewarded; for, before long, one peculiar feature after another becomes evident, and manifests itself to be as different as anything well can be from the Church of Rome.

The service, for instance, is in the people's own language, the Slavonian; rather an ancient variety perhaps, but fully understood by the mass of them. There are no musical instruments, only the human voice being thought to be apostolically enjoined, or to be really worthy, to be employed in praising the Lord. The Holy Bible is abundantly read from, and not out of any enclosed pulpit-height, accessible solely to the presiding priest, but in the middle of the floor of the church amongst all the people, priests and laymen there mingling with each other like brethren met together in unity.

Even on the occasion of the celebration of our Lord's Supper, there is no turning of the priest's back to the people, and appropriation to himself of the most precious symbolic part of the sacrament; for, on the contrary, nearly everything is done looking the people full in the face, and not despising them, but considering them, in law and in love, an honourable and essential portion of the Church. Or as Platon more particularly describes these solemn proceedings:—"Being assembled in the holy temple, as in Zion's Court, we begin the praises of God by singing psalms; then, after reading certain passages out of the Holy Scriptures, the servant of Christ, according to our Lord's example, bleseth and giveth thanks to our heavenly Father, that is, enumerates all his benefits to the children of men, and particularly that he sent His only begotten Son, and delivered Him up for us all; and for this, in the name of the whole Church, he offers up most sincere thanksgiving. After having thus sanctified the holy gift by invocation of the Holy Ghost, he partakes of the communion himself, and then distributes unto all the communicants, who partake of both signs. I know not therefore, what answer the superstitious Pope will be able to give at the awful day of judgment, for having, in evident opposition to the words of the Lord, taken away the cup of communion from the common people, and for giving them the communion only in unleavened wafers."

But then, again, the interior of the building all this time is almost darkened of ordinary daylight, and a flickering of wax-candles introduced in its place, to the no small emblazonment of the temporal riches around; while each person crosses himself continually, or even prostrates on the floor, and a kissing of frames of pictures is frequent! Russian divines attempt to excuse these things on the plea of "traditions which have the prestige of all antiquity, are not contrary to the Word of God,

and though salvation does not consist in them, yet they have a share of usefulness;" therefore, add they, "We use candles in our churches as a mark of our burning faith; we incense with a censer as a mark of the offering up of our prayers; we cross ourselves, thereby testifying our faith in the crucified Saviour; we consecrate the waters in remembrance of the Lord's baptism as well as of our own; we adorn our churches with honourable pictures, that in beholding them we may be excited to imitate those whom they represent; and we keep different holidays in remembrance of the gracious acts of God, and thereby we are the more excited to godliness."

But this is far from satisfactory to many fervent Christians; for a sad increase of liability to abuse and of stumbling to the weaker brethren creeps in; and more inquiry into both the history and working, as well as individual estimation, of these things must be instituted. From the new metropolis, therefore, that has sprung up of late years, like a Jonah's gourd, in the north-west of Russia, let us hasten southward and eastward to the longer established and more central city of Moskva (usually, though improperly, written Moscow in non-Russian countries), "the heart," as they fondly term it all over the empire, "of the orthodox faith."

THE CHURCH OF MEDIEVAL RUSSIA.

Approached from either the south, or west, the city of Moskva exhibits even more than a fair sight, flashing along several miles of horizon, with its thousand of glittering golden domes, each of them invariably marking the position of a church. A "sorok sorokof," or forty times forty, of churches, the "Holy Mother city" is by some actually said to contain: not indeed that number of separate buildings—for many fanes, each complete in itself, and furnished with everything necessary for what is there thought the decent and fit mode of conducting a public religious service, are grouped under a single general roof. But the effect is striking when viewed, as well from the country without as the city within; for there, whether with wisdom or not, the spectator must confess, is a region wherein has been, and is still, manifested great zeal for the Lord. To their largest temples too, and their smallest chapels, the inhabitants crowd to offer up their prayers; and at all hours of the day and night their active devotions may be witnessed; for many are there who, finding no vacant space within the walls, throw themselves down on their knees or their faces in the streets outside, and wrestle in prayer or praise, repentance or thanksgiving, as though they were still of the number of early Christians chastising their souls, in contrite seclusion of the lone wilderness.

The simplicity of primitive times is thus strongly

mixed up both with the grandeur properly belonging to the capital of a state "ruling over the ninth part of the globe, which scarcely finds room upon its surface for one such empire as Russia;" and with the commerce and manufactures of a busy, wealthy population. The church buildings are as various as they are numerous, and no two churches are erected alike, though they generally display some common features in the tendency to a multitude of small domes, five or seven, or nine, or even eleven and thirteen, grouped on the general roof; and "because," they say, "the Holy College or Synod of the apostles on Mount Zion serves as the foundation and type of all the college or cathedral churches of our country."

The domes are more generally golden, though sometimes of silver, and sometimes merely coloured, but always surmounted by vast crosses and chains of gold, and are further distinguished by much refined art in the beauty of the curved outline; but below, the building shows little save unmanly brick, plastered and whitewashed; for in all the wide alluvial plains of central Russia, hardly a trace of proper building stone is to be found; and even when good specimens are brought, at great expense, from remote distances, the severity of Russian drought in summer, and cold in winter, quickly destroy them when employed for any outside work. The interiors, therefore, rather than the exteriors, of Russian churches, are where we have chiefly to look for traces of the antiquity that is amongst them, and for all such precious things as they have for long ages cherished up in their affections. Just so, too, must we endeavour to get at the national faith of Russians, not by noting solely their outward observances, but by hearing and discussing with them the feelings under which they act.

It may be a dangerous argument to prosecute too far, that material wealth and a kingdom in this world have necessarily accrued to a nation through its possession of true Christian religion; though this line is sometimes employed even by the most evangelical of our writers, from the simple step of describing a Polynesian family, when Christianized, being found markedly better dressed and more comfortably housed than their neighbours; to the millions of money which Britain once paid out for the freedom of her slaves, being returned again into her bosom, full measure, pressed down and running over; or to the vigorous and improving character of all Protestant countries, and to that large copy of the Bible exhibited at the International Exhibition of manufactured goods, with the motto placed over it by the hand of man, "the source of all national greatness." But really, in presence of the city of Moskva, with its several successive ring-like growths, the Slobodi, Zemlianoi-

gorod, Beloi-gorod, with the Kitai-gorod, and the sainted Kremlé in the centre, we must give place for a time to the feelings of every Russian, who humbly yet steadfastly looks on all these things as gracious acts of approval from on high, and connects indissolubly his national advancement with the growth of his national faith.

The existing size and splendour of his mediæval metropolis every Muscovite does indeed regard with wonder, love, and fear, giving glory to God, and acknowledging that without his direct assistance such a result could never have been obtained; and not, in this, merely looking to actual city growth, but through and by means of that, seeing all the story of the formation of Russian tribes into a great nation, their arriving at a knowledge of religion and morals, and more especially the lifting their head out of Tahtar bondage.

Without our attaining to some vital appreciation of the terrible greatness of Tahtar power in its day of victory, the dreadful oppression of its despotic rule over Russia, and the isolated position which the latter country was left in by all the rest of Christendom during three hundred years of misfortune, no common line of thought or feeling with a single native Russian will ever be obtained. To that nation it was indeed an age of agony and woe, of bearing and enduring, of striving and attempting all things, until by the help of God and their own right arms, they emerged from the sea of slavery. Like many other patriots they came out of their struggle ragged, maimed, and greatly lost to the amenities of that civilisation which had in the meantime grown up in western countries. They were therefore called barbarous; but little recked they, so long as they possessed their souls subdued to pride and attuned to Christian precepts; and they still remember how it was in the midst of their blackest night, when the Tahtar tyranny seemed most grinding upon them, that with accompaniments of tears and lamentations, Moskva was chosen for their capital city; a church of penitence and prayer was erected in the enclosure of its Kremlé hill; and from that moment (A.D. 1326), though at first and for long very slowly, the dawn of better things for them as a nation began.

Of those who assisted in commencing this new movement, and leading the nation to public repentance of past sins and submission to God's mercy, Peter, then the metropolitan of Vladimir, contributed more than all, through the example of his meek and chastened spirit. Unity, both in love and faith, he desired so above all things to see amongst his countrymen, that when an envious ecclesiastic had lodged a slanderous accusation against him, and arraigned him before a Synod,—Peter, still looking to the general weal more than

his own individual position in the world, requested the council, "if he was the cause of that storm, to throw him, like Jonah, out of the ship, and all would be still." But the trial was carefully gone into, and when his innocence was at last proved incontestably, and he was restored to power, he only said to his slanderer, "Peace be with thee, my son! This was no deed of thine, but his, who from the beginning is the envier of the human race, the devil; as for thee, take care of thyself for the future; and for the past, may God forgive thee."

It was one of the last acts then, of this man's noble life, to begin the erection of the first church, now the Uspenski Sobore, on the Kremlé hill of Moskva; and dying within a year after, his remains were enclosed in a tomb which he had himself built in its deep-laid foundations. How the walls of the Kremlé became afterwards "as a roll on which were inscribed each of the successive glorious advances in the sacred history of the country," space forbids us now to say more; but through all the most troublous periods, when division was still in the camp, and the enemy at the gate, and the church the sole bond of union to the nation, endeavouring to heal its wounds, persuade to union and concord, and promote the return of peace and prosperity,—it is most noteworthy, that Russian missionary enterprise was then also most active and flourishing. Not indeed by going forth in ships to distant islands of the ocean, but by travelling on foot through the plains more than ocean broad of central Europe and Asia, to the innumerable heathen tribes of diverse origin scattered thereabout; and if the Russian empire now looms so mighty before the smaller kingdoms of the West, it is to no inconsiderable degree in consequence of the success that was poured forth on those early missionary enterprises, concerning which we have hitherto cared to inquire so little. Yet not to their full extent, were they known or appreciated even by the rulers of their own time and country, for these works were generally the spontaneous result of a few earnest private men, sent forth by their own consciences to do the will of the Lord.

Thus we read in the historian, under date A.D. 1417, merely as one example, "that not far from Bielo-ozero, one of the princes of that place discovered a whole community of monks on a desolate and rocky island of the Koubensky Lake, who occupied themselves solely with preaching the Word of God to savage tribes of the Tchoudes;" and again, that "Great Perm was acquired to Russia by a single monk, through the preaching of the name of Christ. This man, Stephen, penetrated with an apostolic zeal, felt his heart pained at the gross heathenism of the inhabitants of Perm, and having thoroughly known their tongue from

a child, invented letters for it. He went alone to preach Christ in the deep and silent woods of Perm, and by faith overcame all the opposition of the heathen priests, who were his enemies. He founded for them their first church, a poor and simple structure, on the river Viuma, and from thence, by little and little, the doctrine of salvation was spread abroad."

THE CHURCH OF VLADIMIR, KIEV, AND NOVGOROD.

Directing our glance next to these several cities, each in its turn the metropolis of Russia before the day of Moskva had begun, we open up at once a view of both the founding of the Russian Church, and some of the more trying of her subsequent persecutions.

The seat of government, as well as the abode of the metropolitan, had been already removed from Kiev to Vladimir, when the Mongol invasion under Batu Khan took place, A.D. 1240; but both cities, with their inhabitants, alike suffered siege, slaughter, and burning. Under the ashes of her towns, the land was quiet at last; and the peasants, mostly decimated and led off to a life of slavery, had only the satisfaction of occasionally meeting each other in the wilds of Tahtary, exchanging the names of the villages in beloved Russia from which they were taken, and strengthening themselves mutually in their Christian faith.

Then, far removed from the ministrations of any organized priesthood, beamed forth the advantage of their long having had the Bible translated into their own Slavonic tongue, so as to be accessible to the heart and understanding of every one Russian born. This had been mainly the doing of Yaroslav, son of Vladimir the Great (A.D. 1037), and he was followed in idea by many of the churchmen, especially the metropolitan Cyrill, who, desiring of the canons of the Fathers, and of any other writings then in theological esteem, that they should, to use his own expression, "not be veiled to his countrymen as by a cloud, under the wisdom of the Greek tongue, but that they should shine clear and enlighten all with rational light," assiduously employed himself in their translation.

But the remnants of inhabitants left behind in the land fared little better than the deported prisoners, especially in the western districts, for no sooner had the Tahtars retired therefrom, than Swedes, Lithuanians, Poles, and Hungarians, advanced and subjugated to themselves all Russia west of the Dnieper. They cut it off from wholesome access to the sea in the north-west, and separated several of the finest provinces of the empire of St. Vladimir the Great; and though some have since been regained, Galich has never been recovered; Galich, which, with its loyal princes, went forth to the

earliest battles against the Tahtars, and had ever furnished its quota in resisting Polovtsi, Petchenagues, and all Russia's eastern enemies; Galich, with its Greek communion, and its severed men of Russian descent, still a standing example of the perfidy of neighbouring Christian states in the time of Russia's distress from the infidels.

Yet none of these conquered provinces seem to have been treated so cruelly as those which fell under the dominion of the turbulent monarchy of Poland. There, nothing was constant, nothing steady, except the persevering designs of the Church of Rome to oblige captive Russians to leave their own religion and adhere to the Latin. Persecution was tried in various forms on both clergy and laity without effect, until at length the scheme of the "Unia" was invented. The Russians might retain their books, their priests, their services, everything except this one point, viz., that they were to leave off saying that "Jesus Christ was the Head of their Church," and to acknowledge the Pope of Rome in his stead. Some congregations did assent, but they obtained none of the promised political advantages; while, the small end of the wedge having once been introduced, they soon found one article of their faith after another prohibited. Romish priests simulating the Greek were introduced into their churches, and at last the Slavonian language was exchanged, by order, for the Latin; or, if any still remained orthodox, their churches were given ingeniously on loan to Jews, who extorted their own prices for every act of devotion performed in them to the Saviour they themselves denied, and whom they still rejoiced to persecute in His followers; and then, when despair at last provoked resistance and unavailing war, many miserable Russians were boiled in caldrons, or burned on coals, or spitted on sharp spits, or torn with iron-cats in the squares of Warsaw.

Such scenes, however, only prepared the way for the subsequent fall of Poland, caused the Russians to adhere more strongly than ever to their religion, and keep vividly in their remembrance, as though it were but yesterday, the times of their great Prince Vladimir, the more than Charlemagne, the Constantine rather, of the North, under whom, A.D. 992, their nation changed at once from paganism to almost exactly its present form of faith. On revisiting now the scenes of the overthrow of their ancient idols, and the baptism of the Russians in crowds, as a nation, in the waters of the Dnieper

and the Volkov, the whole surrounding country appears to teem with reminiscences of the almost incredible event. The memory of most of their later emperors pales in the minds of the peasant population, before that of him who procured them the inestimable opening to spiritual salvation; and who prayed in the midst of his triumph, "O great God! who hast made heaven and earth, look down upon these thy new people, and grant them, O Lord, to know thee, the true God, as thou hast been made known to Christian lands; and confirm them in a true and unailing faith."

The churches which Vladimir immediately thereupon erected are still pointed out, and the schools which he established, and the missionary enterprises on which he set out, in company with his bishops, are yet spoken of; even too the very gates, or at the least, brazen gates for long ages believed to be those, of Kerson in the Crimea, which he brought away with him from thence in token of his own conversion and baptism there, are presently shown in the cathedral of St. Sophia in Novgorod.

Two panels, about one thirteenth part of the whole, from these interesting relics—carefully engraved from photographs taken by ourselves from the originals in 1859—are prefixed to this article; and when taken in combination with what may still be seen in Novgorod as impressive as ever, of that broad flowing Volkov river; of the dark wood-bearing plains, with horizons interminable; of the sea-like expanse and sounding waters of the ever-agitated Ilmen lake; and the occasional modest square block of a church, of primitive type but with its little golden dome, which is sure to be found wherever two or three wooden huts are gathered together over the vast solitude, islets of light scattered at distant intervals over Russia's world-wide plains,—all these things may tend to enable one to appreciate a something of that early period in which the Russian established Church had its rise, and from which time it declares itself never to have changed.

Let it be so, for the moment; but nevertheless grant us leave to inquire, how nearly that establishment now satisfies individual consciences, illuminated as they should be by the greater knowledge at present existing in the world, concerning earlier times still than those of the Great Vladimir; and guided by more extensive and habitual searching of Scripture.

C. PIAZZI SMYTH.

OUR NEIGHBOUR.

BY THE EDITOR.

I. ON LOVING OUR NEIGHBOUR.

A POOR working man is apt to think that he is of very little importance in the world. I do not wonder at this. He hears the rich, the great, the eloquent, and the powerful, much spoken of; and he perceives of what importance *they* are; but as for himself, he is hardly known, even by name, to his nearest neighbours. Whether he is happy or sorrowful, well-doing or ill-doing, alive or dead, what matters it to them! how much less to the town, or to the parish in which he lives—nothing at all to the great world! He thus fancies himself to be like a leaf in the forest, unnoticed while it grows, and never missed when it withers and dies. He feels himself a small, valueless fraction, in the immense mass of mankind, whose presence does not sensibly increase, or whose absence does not sensibly diminish the great whole. Such thoughts as these often produce a careless, selfish spirit; and if they do not stir up a wicked and unloving feeling towards God (as if even he did not know, or care for us!) they frequently give rise to unkindness towards our fellow-men. For I have more than once heard a working man ask, in the bitterness of his soul, "What am I to others, and what are others to me?" I have known many, under the influence of such feelings, "hide themselves from their own flesh;" and nothing is more common than to hear people say, and that too with pride and self-satisfaction, "We don't meddle with our neighbours, and we do not wish our neighbours to meddle with us." "We keep ourselves to ourselves." Now, I am sure you will admit, that wherever this spirit exists, it is not the spirit which is breathed in this beautiful command:—"Let every one of us please his neighbour for his good to edification;" nor is it the spirit of him by whose example the command is enforced, "for even Christ pleased not himself."

But yet no two errors are more common in daily life, than supposing, either that others are of no importance to us; or that we are of no importance to others. These errors stand and fall together. The moment we discover how much our state is affected by others, that moment we also discover how much the state of others is affected by our own. Now, when you ask, "What are others to me?"—as if they really were nothing to you!—it is impossible that you seriously believe this to be true, or that you can imagine yourself to be so separated from your kind as to be beyond the reach of their influence. Let us consider the matter calmly. If you were in deep family affliction—if you had lost a beloved wife or child, and your heart was breaking beside your lonely fireside—and if a neighbour who was hitherto almost a stranger to you, entered your house, and spoke kind and sympathizing words to you—shed his tears with yours, and convinced you by his whole manner, that he felt for you with a brother's

heart,—could you say then, "My neighbour is nothing to me?" If you and your family were confined to beds of sickness, with little in the house to support you, and everything going to wreck and ruin; and if this man or woman visited you, cheered you up with words of hope, shared their food gladly with you and your children, and with ready hand performed those little domestic duties to your household, which restored a look of comfort and neatness to your dwelling,—would such neighbours be nothing to you? If you were in spiritual difficulties and soul distresses; if in your hour of darkness, when temptations were overcoming you, when you were backsliding from God, or when you had fallen into sin, and were, by your own carelessness and godlessness, becoming separated from your best friends; yea, if when you were seeking to live without God in the world, a Christian neighbour came to you—not in the spirit of anger to upbraid you, or in the spirit of pride to trample you down—but, in the spirit of meekness and of love, to carry your heavy burden, making it his own; grieving over your misery; helping to restore you to God, and to restore you to yourself; if he affectionately warned you, encouraged you, read God's Word to you, and earnestly prayed with you,—tell me, would such a neighbour as this be nothing to you? I will not multiply the various ways in which a neighbour might please you for your good. And I need not ask, if such brotherly kindness would touch your heart. I know it would. Deeds far less considerate than these excite your gratitude; you feel that such neighbours would make the world look to you far brighter than it now does, and that life, in spite of its sorrows, would be a very sunshine. After such experience of goodwill from your fellow-men, you would never again say, "My neighbour is nothing to me;" but you would rather confess with thankfulness: "my neighbour is everything to me; he is my help, my counsellor, my friend. I know not what I should have done without him." Ah! then, you cannot choose but see what an effect such neighbours would have upon your good and happiness. And why? Is it because they were rich? No! for they are poor working people like yourself. Have they learning? not what the world calls learning. They can read God's Word, to be sure; and maybe have gathered no small share of wisdom from Bunyan, and Howe, and Henry, and Flavel, and Baxter, and Willison,—those holy companions of many a Scottish home. Are your neighbours much spoken about, then? Does the world know or care for them? No! They are humble unknown men and women; poor and unknown, as were Jesus Christ and his parents for many a day. What have they, then, which has made them of such importance to you? They have *hearts*,—hearts touched with the love of God and man.

Silver and gold they had none; but what they had they gave to you,—tender sympathy, willing aid, sincere prayers, sweet and tender charity; and this, thank God, the poor can give the poor; and upon the giving of this depends the world's good and happiness, more than on aught else beside! Your neighbour has learned this grand lesson from his Master,—not to please himself, but to please you for your good; he has trampled under foot the selfish and unchristian saying, "I keep myself to myself;" and he has put in its place one more worthy of a follower of Christ, "I give myself to thee." And though this poor neighbour is of little importance to the big, noisy world, he is of great importance to you. He is like the candle or the food in your house,—if the one was extinguished, and the other removed, neither would be missed by the world; but they would be greatly missed by yourself and by your family.

But if you now see clearly how others may tell upon your good and happiness, I hope you also see how, in the very same way, you may tell upon the good and happiness of others. What does any neighbour do to you which you may not do to others? He commenced this kind intercourse. Until he entered your door, you had no idea there was so much love in the world,—you had hard thoughts of men; but this kind brotherly dealing gives you a new view of things. You begin to think that such Bible texts as these,—*"Be kindly affectioned one towards another, in honour preferring one another;"* *"Bear ye one another's burdens, and so fulfil the law of Christ;"* *"Consider one another, and provoke to love and to good works;"* *"Love seeketh not her own;"*—are not heard from the pulpit or read in a book merely, but are seen in living epistles and are read in the lives of Christian men. Nay, that Christian neighbour has brought out of your own heart feelings of gratitude, kindness, and sympathy, which you thought were dead; but which were only sleeping there; and, by so doing, he has made you better,—he has made you happier. Well, then, *what he has been to you, you may be to others.* Go thou and do likewise. Some of your neighbours have hard or indifferent thoughts of you, as you once had of the world. Go and change them! Some are saying, *"We have heard of Christianity. We should like to see a Christian."* Go and show them one by opening to them a Christian's heart and life, and not a Christian's opinions merely. And as that good neighbour made you feel he was of importance to you, so may you, as a good neighbour, make yourself felt to be of importance to others. I repeat it, you need nothing else than a heart which truly loves God and man—that is the heart of a child of God—to be an unspeakable blessing, and of immense importance in your present place in society. Your words and example may awaken in many a now miserable home a note of gladness, which will be echoed on earth through many generations, and endure for ever in heaven. No man is commonplace who loves God and his fellow-men; this makes every man great. Pray to God, then, to deliver you from the cursed spirit of selfishness, and to help you every day to be more and more like Jesus Christ, who pleased not him-

self,—who gave himself a sacrifice for others,—and whose common saying was, *"It is more blessed to give than to receive."* Pray for more of the spirit of self-sacrificing love, which can alone overthrow the many terrible barriers which now separate between man and man. Finally, *act.* Do not spend your time in reading or hearing about the right thing which should be done by others; but do the right thing yourself. *Some one must begin;* and if you are a professed follower of Christ, who should begin before you? You are not responsible for others, you are responsible for yourselves. See, then, that you never again shut your heart against your neighbour, nor with a Cain-like spirit ask, *"Am I my brother's keeper?"* but rather, with a Christ-like spirit, seek *"to please him for his good to edification,"* and to *"love him as yourself!"* and I doubt not you will very soon, even in this world, have your reward,—the highest reward which a loving heart seeks—to be loved in return.

II. ON PLEASING OUR NEIGHBOUR.

"LET every one of us please his neighbour for his good to edification," says the Apostle Paul. There is a pleasing of our neighbour which is very different from this;—a pleasing him by chiming in with his prejudices—by flattering his infirmities—by complying with his sinful wishes—by laughing at his wicked jokes—by countenancing him in his evil ways; in short, by doing, or *not* doing, that which will insure us *popularity* with our neighbour, though at the expense of principle in ourselves. This is indeed pleasing him, as we please the drunkard when we give him drink, or the self-willed when we give them their own way; but it is not pleasing him *"for his good to edification,"* but rather for his injury to his destruction. And nothing, I repeat it, is more common than this sort of pleasing of each other. It is done, people say, *"for the sake of peace,"* *"to give no offence,"* *"because to find fault is none of our business."* With these plausible excuses, men cloak over their own unprincipled and slothful selfishness and want of love to their neighbours. For if they really loved their neighbour,—if they felt themselves responsible for their conduct towards him,—if they were concerned for his *good*, they would seek to please him, consistently with that good, and in such a way as he would thank them for when on his dying bed, or at the day of judgment. What we all must learn, is to seek our neighbour's well-being, so that his evil should be our burden, and his good our happiness and reward. We must learn *so* to love him, as that we shall, if necessary, *displease* him, and put him to pain, and make him perhaps angry with us for a time, if in this way only we can do him good *in the end*; just as a kind surgeon will put us to pain in order to save our lives.

"Every one of us" must thus please his neighbour; because every one has some neighbour thus to please. Do you ask, *"Who is my neighbour?"* I reply, that person, whoever he be, with whom God in his providence brings you in contact; whether you meet him by accident for a few minutes only, or associate with him every day of your life; the person, in short, who can in any way be in-

fluence? by you,—by what you are, as well as by what you do: that person is *your* neighbour; he is more or less closely "bound up in the bundle of life" with you—and in as far as you can by word, look, or action, "please him for his good," so far it is your duty and privilege, as fellow-workers with God, to do so. And a moment's consideration will show you, that there is no one, however poor, however unknown, however unlearned, but has, at least, *one* talent of influence which he may use, and which he *dare* not lay up in a napkin. Not only so, but that he possesses greater opportunities of influencing one or more individuals, than any other on earth has. I ask you, reader, is there not some one whom you know better, and come in contact with more frequently than any others do? It may be your child or parent, your brother or sister, your fellow-workman or daily acquaintance; but some one there is whom *you* know better than any one else does, and who is, therefore, in a *special* sense, your neighbour,—for whom you are, in a special sense, responsible. This one talent, I say, every man possesses, while thousands, from their position in society, possess many more: this one work each one of us may do for others, and, perhaps, no one else can do it so well. The opportunity of doing this good is a power given us by God, which is peculiarly our own. You cannot point to a single case in which this will not hold true. That old decrepit woman, for instance, who cannot stir from her chair by the fireside, may, day by day, "please" the children who play around her knee, "for their good to edification,"—a good which may tell upon families yet unborn. That poor invalid who can scarcely move or speak, may, by patience, and love, and meekness, and consideration of the feeling of others, springing from trust in God, shed a holy influence around her dying bed. That sick-nurse, who watches beside this other sleepless sufferer, may, in the silence of the night, speak words which, by God's blessing, may end in life everlasting. That infirm man, who, for support, leans on his staff, may, by his affectionate advices to the young—his pious visits, rich in prayer, to his sick neighbours; his kindly words, and peaceful, happy walk before all,—scatter blessings round him while he lives, and leave them behind him in the hearts of many when he dies. But not to multiply instances, or to select them from higher walks in life, it will suffice to say, in conclusion, that if we only remember how each one of us comes in contact with many individuals every year, and how every hour we cannot but exercise some influence upon others, we must see how we never can want neighbours, whom we have the means of "pleasing for their good to edification." This talent of doing good or evil to others is a very solemn one. But it is a fact; and no power of ours can alter it; nor should we seek to have it otherwise; for all God's appointments are good, both for the world and for us. In order to make this great talent gain other talents, one thing alone is needful; but that is everything, viz., *that we be good ourselves*. If we first please God, by giving him our hearts for our own good to salvation, then we cannot but choose to please our neighbour for his good to edification.

III—30

III. ON THE GREAT EXAMPLE OF LOVE.

THE apostle sets before us Jesus Christ as the great example of self-sacrificing love, when he says "Even Christ pleased not himself." Even Christ! he who is "the first-born of every creature, heir of all things,"—"in whom dwelt the fulness of the Godhead,"—"who is God over all, blessed for ever." Even *he* "pleased not himself," but sacrificed himself for the good of others. By this glorious example does the apostle, in writing to the Philippians, exhort Christians to consider the well-being of others. "Let nothing be done through strife or vain glory; but in lowliness of mind, let each esteem others better than themselves. Look not every man on his own things, but every man also on the things of others. Let this mind be in you, which was also in Christ Jesus; who, being in the form of God, thought it not robbery to be equal with God; but made himself of no reputation, and took upon him the form of a servant, and was made in the likeness of man; and being found in fashion as a man, he humbled himself, and became obedient unto death, even the death of the cross."

"Even Christ pleased not himself." These words describe his character. For the sake of others, he came into the world; for others he lived; for others he prayed; for others he wept; for others he died; for others he intercedes; and for others he will come again! The words and words of every day he spent upon earth are a comment upon this beautiful picture, "He pleased not himself."

That you may realize to yourselves the unselfishness—if I may so speak—of our blessed Master's character, let us glance at that portion of his history which is embraced in the last week of his life; and see how, in the most overwhelmingly trying circumstances, he ever forgot himself in seeking the good of others.

A few days before his crucifixion, he entered Jerusalem as a King: multitudes met him by the way and welcomed him with loud hosannahs: never before had he been so honoured or received. It was the only day of triumph he had in his life. He reached the brow of the hill which overlooked Jerusalem. "He beheld the city!"—the city so long highly favoured by God, and now about to perish for its impenitence, and that sight absorbs his whole thoughts. He thinks not of himself; nor is he attracted by the applauses of the people. His heart is with his eye; and both rest upon desolate Zion. He weeps bitter tears; and his wailing cry is, "O Jerusalem, Jerusalem! O that thou, even thou, hadst known the things of thy peace!" In the beautiful language of Jeremy Taylor, "He wet the palms with his tears, sweeter than the drops of manna, or the little pearls that descended on Mount Hermon; weeping, in the midst of his triumph, over obstinate, perishing, malicious Jerusalem. For this Jesus was like the rainbow; he was half made of the glories of the light, and half of the moisture of a cloud; in his best days he was but of half triumph, and half sorrow!" Behold him again the evening before his death, seated at the paschal supper with his disciples! What an utter forgetfulness of himself

—what a seeking of the good of others—does he manifest in all he said, and in all he did! He does not ask his disciples to comfort *him*, to sympathize with *him*, though *he* was to be the sufferer. His whole time is occupied in “pleasing *them* for their good to edification.”—“Let not *your* hearts be troubled, neither let them be afraid.” There is not a thought about himself expressed. He warns, he exhorts, he instructs, he cheers his disciples, and prepares them for coming trial, and for temptation. He is indeed troubled in spirit; but it is when making the sad announcement, that one whom he had always trusted as his friend is about to betray him.

The supper is over; “his hour was come that he should depart out of this world to his Father.” Yet, “having loved his own which were in the world, he loved them to the end.” That love, like all true love, will stoop to do the humblest acts, in order to do good to the beloved object. We read, accordingly, that “Jesus knowing that the Father had given all things into his hands, and that he was come from God, and went to God,”—what then? with the full knowledge of the glory which he had left, and to which he was about to return, and of the universal dominion which the Father had given,—yet, oh! marvellous love, which seeketh not her own,—“he riseth from supper, and laid aside his garments, and girded himself, and poureth water into a basin, and began to wash the disciples’ feet, and to wipe them with the towel wherewith he was girded.” How true is it, that “even Christ pleased not himself!”

Our Lord is in the garden of Gethsemane. He is about to pass through unheard-of agony, as our atoning Saviour—agony immeasurable, incomprehensible! But he thinks of the good of his disciples, while “the chastisement of our peace was upon him.” He leaves them, in order to be alone in his sorrow. The sight was too trying for their weak faith. “Sit ye here, while I go and pray yonder.” When he finds them asleep, there are no reproaches for their want of sympathy with him. How tender the slight rebuke! How mingled with it is the comfort!—“What! could ye not watch with me one hour? The spirit is willing, but the flesh is weak!” Even Peter’s special danger, from overweening confidence, is not overlooked by him. He would quicken him to watch and pray against temptation, by the question,—“Simon, sleepest thou?” In all this he was mindful of the good of others.

The cruel band of soldiers, led by the traitor, approach; they surround Jesus. His first thoughts are for the safety of his disciples.—“Let these,” he says, “go away.” Peter wounds Malchus; Jesus attends to the sufferer, though an enemy, and heals him!

But he is at last alone, and in the presence of his tormentors; all his disciples have forsaken him. He is standing before the High Priest, at early dawn, after his night of toil and horror; he is buffeted, insulted, blasphemed. Yet even then

he thinks of others. He is yearning over the fallen disciple. He hears him curse and swear that he knew him not,—“And the Lord turned and looked upon Peter,”—a look of pity, reproach, and love, which broke his heart with godly sorrow, and saved his soul.

Jesus is carrying his cross; the women of Jerusalem alone feel for him, and they accompany him on his way with bitter lamentations. But he “will seek the good of Zion,” rather than the comfort offered by “Zion’s daughters.” “Women of Jerusalem,” he says, “weep not for me; but weep for yourselves!” and he warns them of the coming destruction of their city!

Jesus is hanging on the cross! Never was there such an hour as this in the history of the universe. Who but God can measure the greatness of our Saviour’s sufferings when nailed to the accursed tree? “There was no sorrow like his sorrow.” Can he think of others then? Yes. The infinite love which brought him into the world in order to live and die for others; which enabled him, for the salvation of guilty men, to drink the cup in Gethsemane, and to endure the cross, and despise the shame on Calvary; that self-sacrificing love was displayed to all around him, while “wounded for our transgressions, and bruised for our iniquities.” He thinks of his weeping, agonized mother, and commends her to his beloved disciple, saying, “Woman, behold thy son; son, behold thy mother!” He thinks of a dying thief, who cries, “Remember me!” and gives peace to his troubled soul by the blessed assurance, “This day shalt thou be with me in paradise.” And before he resigned his spirit into his Father’s hands, he thinks of his cruel murderers, and cries, “Father, forgive them, they know not what they do!” Such is Jesus. Well might the Apostle say, “He pleased not himself.” And such is the “mind” which must be in us if we are “in him.” “We that are strong ought to bear the infirmities of the weak, and not to please ourselves. Let every one of us please his neighbour for his good to edification. For even Christ pleased not himself. Now the God of patience and consolation grant you to be like-minded one toward another, according to (i.e., after the example of) Jesus Christ.” Let the enmity to the living God which is in our natural hearts, be slain by faith in his love to us through Christ, and then shall all enmity to our fellow-men be slain also. Let God’s love to us be shed abroad upon our hearts by the Holy Spirit, and then shall these hearts be shut no longer by wicked selfishness against our neighbour. Let us carry our Lord’s cross, and then we shall carry our brother’s burden. “Hereby,” says the apostle John, “perceive we the love of God, because he laid down his life for us—and we ought to lay down our lives for the brethren.” “This is my commandment,” says our Lord, “that ye love one another, as I have loved you!”

WICLIF'S VERSION OF THE NEW TESTAMENT.

It was in or about the year 1380 that Wiclif published his English Bible. Of all the books that have been published in this land, Wiclif's version of the Scriptures is certainly one of the most interesting to British Christians, partly because of the light which it throws on the character and growth of the English language, but chiefly because of the great influence which it exerted in bringing about the Protestant Reformation. It is intended in this paper to lay before the readers of *Good Words* a few of the peculiarities of Wiclif's version, and, lest the field should prove too extensive, all the instances referred to will be taken from the New Testament.

Wiclif translated from the Vulgate, and his version, therefore, partakes of the Vulgate's imperfections. It is almost needless to observe, that it is in many respects inferior to that which was published in 1611, and which is called the Authorized Version. It is to be presumed that each translation and revision, from 1380 to 1611, was an improvement on its predecessors, and, without entering into the question of the expediency of a new translation or revision, this much may be said, that there is no reason to suppose that in the version of 1611 perfection was attained. In many respects, then, Wiclif's version is not equal to the authorized, but in a few it is perhaps superior. I have noticed a considerable number of passages to which, I think, this remark applies; to some of these passages I shall presently refer, and the reader shall judge for himself.

The change that has taken place in the English language during the last 500 years is certainly very great. Many words that were commonly used in Wiclif's time have utterly disappeared; many others have been strangely altered in their orthography; and others, again, are no longer used in the sense which they formerly bore. In the course of a few generations Wiclif's version will be as unintelligible to the unlearned Englishman as the Vulgate from which it was taken.

Already it is difficult for the English reader to recognise in Wiclif's version some of the proper names in Scripture with which he is most familiar. The difficulty is enhanced by the fact that Wiclif so often gives proper names of both persons and places without an initial capital. Perhaps "pilat of pounce" may easily be made out; nor does "farao" puzzle us much; nor is it hard to recognise in "tite" the good man whom Paul left in Crete; but it is no easy matter to discover in "sache," "Zaccheus;" in "caym," "Cain;" in "astrak," "Aristarchus;" in "coid poul," "Paul the aged;" in "a mighti man," "Tyranus;" in the "chepinge of Appius," "Appii Fordm;" in "a child mak," "Aceldama."

Again, the reader is sometimes perplexed by the fact that there are words which Wiclif has not translated, and for which English equivalents are given in the Authorized Version. For instance, the gospel is often with Wiclif "the evangeli;" the pearl of great price is "o precious margerite;" the music which the elder brother heard in his

father's house is "symfonye;" the napkin in which the pound was laid up is a "sudari;" the governor of the wedding feast at Cana appears as the "architriclyn;" the feast of tabernacles is the "senofegia;" the place that is called the pavement is the "lithostratos;" the festival of the new moon is the "neomynye." There is, however, one word which Wiclif has very sensibly translated, and which in the Authorized Version is untranslated: that word is Mammon. Wiclif leaves the unlearned reader in no doubt as to this word,— "ye moun not serve God and ricchesse."

Occasionally, too, a Latinism of unusual form perplexes the plain unlettered Englishman, as he reads Wiclif. He will meet with the "loaves of proposisioun," instead of the shew-bread; for principality and power, "principat and potestat;" for idols, "symylacris." Generally, however, this last word is rendered by an equivalent even more perplexing to the English reader than "symylacris." Wiclif's almost constant word for idols is "mawmets;" a very curious word with a very curious history, as will be seen on consulting the following extract from Selden's *Table Talk*, Art. Popery:—"We charge the prelatical clergy with Popery, to make them odious; though we know they are guilty of no such thing; just as, heretofore, they called images mammets, and the adoration of images mammetry, that is, Mahomet and Mahometry; odious names; when all the world knows the Turks are forbidden images by their religion." Anything, however false, that could bring the Mahometans into disrepute, was welcome, and so they were represented as worshippers of idols, although iconoclasm was a main article of their religion. Mahomet, mawmet, and idol, became equivalent terms, and Wiclif, falling in with the general prejudice, adopts this product of spleen and misrepresentation, and says, "Little children, keep yourselves from mawmetis."

Wiclif's version has also much of this defect, viz., the numberless multiplication of English words where there is but one in the original. Our own version is by no means free from this fault. In one verse we have the untranslated word Areopagus, and three verses afterwards the very same word is translated Mar's Hill. One of the noblest words in Scripture is, without any reason, sometimes rendered by love, sometimes by charity; another is translated atonement here, and reconciliation there. Dean Trench, in his work on the Revision of the New Testament, points out many cases of the needless multiplication of English words, where one would have answered better. This fault appears often in Wiclif. Thus the chief priests are sometimes called the "Princis of Priests," sometimes "Bischopis"— "the Bischopis answeride we have no kyng but the emperour." For the sop that was given to the traitor we have three words, "soppe," "mossel," and "mussel;" and for one and the same word we have "elder men," "senyouris," and "preestis." Wiclif, how-

ever, does not commit the egregious blunder of calling the passover Easter; with him the passover, I believe, is always, or almost always, "pask." And I have observed instances in which two words given in the original, which are translated by one in the authorized version, are properly distinguished by Wiclif. For example, in the beginning of Luke vii. we read of the centurion's servant whom Jesus healed. In the authorized version the word servant is used all through the narrative. But in the original, two words are used: one denoting a servant or slave; the other also denoting a servant, but having, in addition, the sense of child, a term indicative of affection. Now, we read that the servant was dear to the centurion. In the first place, the servant is spoken of as a servant; but when the centurion speaks of him in verse 7, the word indicative of affection is used. This distinction, which is overlooked in the authorized version, is preserved by Wiclif. Verse 2, "A servant of a centurion, that was precious to him, was sike." Verse 7 (here the centurion speaks), "Seie bi word, and my child schal be heleid." How beautifully does the affection, asserted in verse 2, come out in verse 7, where this word has full justice done to it. Here, I think, Wiclif is decidedly in advance of the authorized version. Dean Trench complains of the authorized version, that it often renders by one English word several not perfectly synonymous Greek words. He mentions in particular two cases, in each of which there are twelve Greek words, and but one English equivalent in the authorized version. Now, on consulting Wiclif, it will be found that for the first twelve he gives six English words, and for the other twelve, seven. In these cases, notwithstanding the enrichment of our language, which took place between the years 1380 and 1611, we find the earlier version much wealthier than the later.

It is very curious to observe what extraordinary alterations have taken place, since Wiclif's time, in the accepted meaning of words. Thus the verb to sue has now an almost exclusively legal signification; to sue a man is to prosecute a man for the payment of a debt. But this is Wiclif's word for follow, although he uses follow as well. Christ said to Matthew, "Sue thou me: and he rose and followed him." In connexion with Matthew's call, we have another word which is used in a very different manner now. In our version we read that Matthew, when called, was sitting at "the receipt of custom." Wiclif tells us that he was sitting "in a tolbothe." The word tolbooth now means a Scotch prison, but it was originally applied to a hut erected at a fair for the purpose of accommodating the takers of tolls or customs; and, so, Wiclif is perfectly correct; and, indeed, the "tolbothe" is a rather better rendering than "the receipt of custom." As Wiclif calls the "receipt of custom," or, rather, the custom-house, a "tol bothe," so, when he translates the passage "custom to whom custom," he renders it, "to whom tol, tol." The word duke is another that has been somewhat altered in its range of application. Wiclif applies it to Christ in Matt. ii. 6. Sovereign is a word of very high import now, and is set apart for the greatest person in the state;

but Wiclif gives it to Christian ministers. "Have ye mynde of youre sovereyns that have spokun to you the word of God." One of the most singular specimens of change in the application of words is to be seen in this passage:—"Also I preie and the german felowe." My readers may well wonder what German felowe is to be found in the New Testament; they will discover him in Phil. iv. 3, "And I entreat thee also, true yoke-fellow." If an Englishman, utterly unacquainted with the authorized version, were to take up Wiclif, he would be astonished to find what a number of castles Jesus and his disciples visited. Their whole progress seems to have been a series of journeys from one castle to another. "Jesus made iournee bi citees and castels prechyng." "Jesus came not yit in to the castel." Castle is Wiclif's usual word for village. But his use of the word town is still more curious. It is rather startling to find one of the men who excused themselves from the supper saying, "I have bought a toun, and I have nede to go and see it." But town is Wiclif's word for a field. Indeed, I may say that toun is Wiclif's word for country. In our version we read that Simon the Cyrenean was coming out of the country when he was compelled to carry Christ's cross. Wiclif tells us that he was coming "fro the toun." It seems to be a hopeless contradiction, but it is not; both are right, because town is a word which properly signifies any enclosed space; in fact, its radical meaning seems to be a hedge; it is, therefore, applicable to a field, to a farm, in fact, to the country. Sad is a word which Wiclif uses in a manner which, to the modern Englishman, must appear very strange. With us it has an exclusively mournful signification, and suggests nothing but sorrow and affliction. Having only this idea of the word, we may well be perplexed on finding it asserted that the wise builder's house fell not, because it was founded on "a sad stoon;" that Paul rejoices to behold in the Colossians the "sadnesse" of their faith in Christ; that Peter warns Christians not to fall away from their "sadnesse;" that hope is a "sad" anchor of the soul. But such is Wiclif's word for firm, steadfast, and it is, in fact, the past participle of the verb to set. Cunning was once a very noble word; used as a noun it meant knowledge, science, skill; used as an adjective it had a corresponding signification. It has been degraded, the crown has fallen from its head. To be called cunning was once the highest compliment, the application of such an epithet we should now resent as an insult, because the word savours of rascality; its better meaning is rapidly disappearing, and probably can never be restored. In Wiclif's time it was a word capable of the highest service, and incapable of any base occupation. With Wiclif, the key of knowledge is "the key of kunnyng." Paul has great satisfaction in feeling that the Christians in Rome are filled with all "kunnyng;" he thanks God that the Corinthians are rich in all "kunnyng;" and in one of the apostle's most magnificent passages, he says, "Oh the depth of the riches both of the wisdom and 'kunnyng' of God." Wit, originally synonymous with cunning, has, like its synonyme, gone the downward road, though not in the same

direction, nor in so discreditable a direction. It has not a bad sense like cunning, but it has acquired a somewhat paltry sense. Wit now shows itself for the most part in joking; it used to show itself in every form of intellectual effort; it is now that which makes men laugh, it was that which made men think; in fact, it was wisdom, it was understanding. And, so, Wiclif translates Paul as exhorting the Corinthians not to be children in "wittis," to be in malice children, but in "wittis" men. Gal. iii. commences thus: "O unwitti Galathians;" and in Rom. xi. 33, we have this question, "For whi, who knewe the witte of the Lord?" As it is with families, so it is with words; some go down and some go up. Cunning and wit have each fallen from the noblest position; the one has become a knave, and the other a trifier. There is, however, one word at least which, since Wiclif's time, has evidently improved itself, and is now used in better service than that which it frequently discharged 500 years ago. I refer to the word virtue. This word Wiclif generally uses in its ancient sense of strength; it is his standard word for power, whether physical or spiritual, but he uses it altogether irrespectively of any moral value. The miracles of Christ are with Wiclif virtues, of which application a remnant exists in the authorized version, where we read, concerning the Saviour, that "there went virtue out of him, and healed them all." But in Wiclif the word is of perpetual occurrence. Paul is persuaded that neither angels, nor principalities, nor "virtues," shall be able to separate us from the love of God; and in 2 Thess. ii. 9, he speaks of that wicked one, "whose coming is after the working of Satan, in all 'vertu,' and signs, and lying wonders." Virtue, we thus perceive, was ascribed to Satan and other wicked beings; virtues were among those elements which might tend to separate Christians from the love of God; the word has been rescued from this degradation, and now has an exclusively good signification. Much the same honourable history pertains to the word famous. It has not attained the same moral standing as virtue, but still it is so far on the side of goodness that we are obliged to use its exact contrary—"infamous"—when we speak of something particularly bad. But the word famous had not, in Wiclif's time, established for itself a good character, for I find that Pilate had a "famous" prisoner called Barabbas. There is another word which, I think, has very properly been degraded, or rather, it has been restored to its proper position from a higher, which all, excepting very ill-natured people, will agree it never ought to have occupied. I refer to the word leech. Wiclif, in common with many later writers, applies this term to physicians. The woman with an issue of blood had "receyved many thingis of ful many lechis;" and instead of "Luke the beloved physician," we have "luk the leche moost dere." Wiclif's version brings before us another word which, unhappily, has suffered in the lapse of time. Health is a word which has now an almost exclusively physical meaning, or at most a physical and intellectual one. We speak of bodily and mental health, and, in a figurative sense, we speak of a healthy trade; but we do not apply either health or healthy in a purely spiritual

sense. This, however, is Wiclif's constant practice. Health is, in fact, his standard word for salvation; the knowledge of salvation is "the science of helthe;" the gospel of salvation is "the gospel of helthe;" the way of salvation is "the way of helthe." A thoroughly Saxon word instead of the Latin, and a word, perhaps, better than salvation in some respects, because it seems to carry with it the idea of sanctification as well as that of justification, which, to most persons, salvation does not; for salvation, as generally understood, means deliverance from some external evil, *e.g.*, hell torments. But this word health teaches us to consider the subjective in religion; it reminds us not only of danger, but of danger proceeding from disease; it tells us that salvation must be wrought in us as well as for us, that it is a subjective as well as an objective process. It were well if this fine word could be restored to its former position, if the spiritual could be again associated with it; so that every man might be reminded that, however strong he may be in body and in mind, he is not in a healthy state unless he is a believer in the Son of God. A thoroughly religious man is the only healthy man. Such is the train of thought suggested by Wiclif's use of this word.

Some of Wiclif's words have altogether gone out of common use. The loss of some of them will not perhaps be very much regretted; for example, "bilipre," for which we have "measure;" "volatilis," for which we have "fatlings;" "chepyng," which is Wiclif's word for market, and which, perhaps, still exists in its old signification in Cheapside. We can also dispense with "erhetilurs," although it is much more to the purpose than husbandmen; for why a husbandman should be a farmer any more than a blacksmith it would be very difficult to show; judge serves as well as "domesman," and officer as well as Wiclif's "maisterful axer," who casts the insolvent debtor into prison; murderers, too, are neither better nor worse than "manquellers," and we understand talents better than "besauntis," and unleavened bread better than "therf loaves." But there are some words the loss of which we have, I think, reason to regret; such, for example, are "soth" and "sothfast." Truth and truthful are as good, but still for words which, happily, are in such great request, the more synonyms the better. "Soth" and its kindred terms appear often in Wiclif. "Sothli, sothli," for verily, verily; Nicodemus says to Christ, "Maister, we witen that thou art sothfast;" the Ephesians are exhorted "to stand, having their loins girt about with 'sothfastness,'" and Paul asks the Galatians whether he was become their enemy because he tells them the "sothe." This word, however, has almost disappeared, and what traces are left of it are discreditable; as, for instance, in forsooth, which is a word of contempt, and in soothsaying, which is anything but truthsaying. If the loss of the word "soth" is to be regretted, much more may we regret the loss of the word "ruth." This is one of Wiclif's favourites; it means compassion, and is a fine Saxon equivalent for this Latin word which has superseded it, but is by no means its superior: Jesus had "ruth"

upon the multitude. And now what is left of this word? We certainly have it, we have it entire, but we have it with an addition that destroys it—ruthless. What shall we say? Is it true that we have lost the “ruth,” and are indeed ruthless? Our language, at all events, is all but ruthless, seeing that “ruth” is scarcely recognised amongst its words, certainly not amongst its leading words. But it will be said we have rueful, which is equivalent to ruthless. Yes, we have rueful; but rueful is not, as used by us, the opposite to ruthless; that is to say, rueful does not mean compassionate, unless it be compassion for one’s-self. Rue and rueful are used exclusively in a subjective sense. I do not rue another man’s mistakes or misfortunes, but my own; my countenance is rueful when I contemplate my own misery, not when I contemplate my neighbour’s sorrows. Thus, what little of “ruthfulness” is left us we keep to ourselves; it has become so scarce that we have none to spare for others; and the word is chiefly known by its appearing simply in order to deny itself in “ruthless.” According to Wiclif, John the Baptist tells the soldiers (whom Wiclif always calls “knyghtis”) to be content with their “soudis.” These “soudis,” meaning wages, are so intimately connected with soldiers, that they seem to favour that melancholy and discreditable etymology which connects soldier and sell, and which, in fact, proclaims a soldier to be a man who has sold himself for pay. On this derivation, however, I venture to offer no further opinion.

The Authorized Version is justly admired and prized as a noble specimen of the Anglo-Saxon tongue; but, as the reader will naturally expect, Wiclif is still more Anglo-Saxon than those who lived more than 200 years after him; and perhaps it is not until we read Wiclif that we are forcibly reminded of the great extent to which the Latin element pervades the Authorized Version. Without being very careful in my search, I have found more than fifty distinct words and phrases which Wiclif renders in his own native tongue, but for which the translators of 1611 have had recourse to the Latin. Some of these Anglo-Saxon words have died out, or nearly so; for instance, “stie,” which Wiclif constantly uses for ascend: “Ye shall see heaven opened, and the angels of God ‘stiyng’ up and coming down upon the Son of man;” or, as Wiclif generally, if not always renders it, “mannes sone.” This word, I suppose, is still found in “stairs,” things by which we “stie” or go up. “Outakun” may also be regarded as obsolete, although the reader will perceive that it is exactly equivalent to except. Wiclif’s most usual word for except, however, is *but* = *be-out*; that is to say, *minus*; e.g., “But a man be borun agen he mai not se the kingdom of God.” “Sourdough” is a word which can scarcely be looked upon as extant, although each of its component parts is in general use; at all events, sourdough is a term no longer employed in the sense in which it occurs in Wiclif, viz., as equivalent to leaven. “The kingdom of heaven is like to sourdough.” “Beware of the sourdough of Pharisees and Saducees.” Again, we scarcely ever use the word “fieldy;” Wiclif speaks of a plain as “a fieldi place.” Compare Matt. xxiii. 12, in the

authorized version, with Wiclif, and you will find a good specimen of old Anglo-Saxon, and its capability of expressing ideas which are now commonly expressed in terms derived from the Latin: “For he that higheth hym self shall be mekid, and he that mekith hym self schal be enhaunsid.” This last verb, it should be remarked, is not Saxon. Another and very similar instance will be found in John iii. 30, “It bihoveth hym to wexe, but me to be made lasse.” Another old English word is “arede,” used by Wiclif instead of prophesy, which we have in our present version, “Thou crist, arede to us who is he that smote thee” (Matt. xxvi. 68).

The following are specimens of Saxon terms in Wiclif which are represented by Latin in the authorized version. It should, however, be observed that Wiclif does not constantly use these words; thus, for example, he has redemption as well as “agenbiyng,” and “regeneracioun” as well as “agenbigete.” Still, “agenbiyng” is his usual word for redemption. “Thou were slayn, and agenboughtest us to God in thy blood,” Rev. v. 9. So, again, his usual word for resurrection is “agenrisyng;” “I am demed of the hope and of agenrisyng of deed men,” Acts xxiii. 6. Then we have in Wiclif “endid,” for perfected; “goyng out,” for decease; “hunger,” for famine; “gode doers,” for benefactors; “token,” for sign; “showid,” for revealed; “teeld out,” for declared; “dwellyngis,” for mansions; “putte,” for ordained; “make redi,” for prepare; “likes,” for similitude, and for parable; “gilte,” for offence; “lived agen,” for revived; “feynyng,” for dissimulation, and for hypocrisy; “schepardis,” for pastors; “gilour,” for deceiver; “beheestis,” for promises, and “bi-hote,” for promised; “halowynge of the temple,” for dedication; “holi men,” for saints; “goostli,” for spiritual; “sle” (slay), for mortify; “undeedlines,” for immortality; “sight,” for vision; “nigh goyng,” for access; “turnynge up so down the folk,” for perverting the nation; “moot halle,” for judgment hall. Instead of “suppose,” Wiclif generally has “gesse,” using it exactly as the people of the United States use it now, e.g.,—“Tell me, therefore, which of them will love him most? Simon answered and said, I ‘gesse’ that he to whom he forgave most.” We also find the word “dresse” used by Wiclif where the authorized version has direct, e.g., “But God himself, and our Father, and our Lord Jesus Christ, ‘dresse’ our way unto you.” This meaning of the word “dress” still lingers in “address;” that which directs a visitor or a letter to a man’s house. But, perhaps, the most remarkable of all Wiclif’s Saxonisms is that by which he avoids the Latin word “create.” To create is not to make up or fashion anything out of existing materials, but to bring it into existence out of nothing. “Create” and “creator” are, certainly, very convenient words, as will be seen when we notice Wiclif’s rather clumsy substitutes, e.g., “For thy pleasure they are and were created;” “for thy wille the werun and ben made of nought” (Rev. iv. 11). “A faithful creator;” “the faithful maker of nought” (1 Peter iv. 19).

In some of the above instances it will, I think, be seen that, for the unlearned Englishman, Wiclif

is, even now, a better translator than the learned divines of 1611. Ministers find that they must explain such words as similitude, parable, and redemption; but "liknes" and "agenbynge" explain themselves; put them into modern orthography, and every man who can read them will understand them. Other cases might be given; for example, the word "prevent" has become so altered in its meaning that we may truly say that it suggests an idea exactly the reverse of that which it once conveyed, and when we read, "We which are alive, and remain unto the coming of the Lord, shall not prevent them which are asleep," we find it necessary to enter upon an explanation, if we have to address ignorant persons; but Wiclif, using instead of prevent "come bifor," gives the apostle's meaning clearly and at once. In the authorized version of John x. 1, the words thief and robber do tolerably well convey the distinction implied in the original terms, the thief being the man who secretly appropriates that which is another's; while the robber does so openly and with violence; but this distinction, if not more accurately marked, is much more strongly given, by Wiclif, who calls these characters respectively, "a night thief and a day thief." Dean Trench considers it probable that in the expression "which strain at a gnat" an error has crept into our version, through the carelessness of some printer, and that the translators intended us to read "which strain out a gnat." However this may be, "straining at a gnat" is a phrase almost destitute of meaning. Wiclif reads, "blinde leders clensynge a gnat, but swolowynge a camel;" this, though not very clear, seems a nearer approach to the idea of carefully removing a gnat from the cup than the authorized version affords. When we read that the Baptist's head was put into a charger, we have by no means so plain a statement as Wiclif gives us by using the word "dische." "Do violence to no man," seems to be rather a strange injunction to soldiers, who are in the same sentence told to be content with their wages, and who, therefore, are permitted to continue in the service. Wiclif's version, if not so literal, seems to be more in accordance to the spirit of the passage,—"smyte ye wrongfulli no man." "Thou fool! this night thy soul shall be required of thee;" here our version is certainly not literal, nor does it well express our Lord's meaning. Wiclif renders the passage thus, "Fool, in this night thi shalle take thi liif fro thee." To whomsoever the plural pronoun refers, the original is plural, and the propriety of altering the expression into an impersonal form is, at least, questionable. "How hardly shall they that have riches enter into the kingdom of God." I do not know that I have ever met with a man who thought himself rich; as long as any person knows of another who is wealthier than himself, he thinks himself very poor; and so these solemn words are words which

often fail to reach a rich man's conscience; while a comparatively poor man, however greedy of gain, thinks that because he has not £10,000 a year the text cannot have any reference to him. Now, I think that Wiclif's version is more literal, and at the same time more calculated to impress us all with the danger arising from the love of gain,— "How hard thei that han money schuln entre into the kyngdom of God." Most justly do we find fault with the epithet which the authorized version introduces in the passage, "who shall change our vile body" (Phil. iii. 21). Alford, Ellicott, and others, reject this adjective in a most decided manner, and read, "the body of our humiliation." But Wiclif anticipated our modern scholars, "whiche schal reforme the bodi of our mekenesse." When in our version we read, "Whether it be to the king, as supreme" (1 Peter ii. 13), we apply to a creature an epithet which seems more fitting for the Creator, whom, accordingly, we call "The Supreme Being." I do not know whether it was the desire to gratify James I.'s lofty notions of the royal prerogative that induced the translators of 1611 to adopt this word; I believe it is not to be found in any of the earlier English versions of the passage. Wiclif does full justice both to the text and to the king by reading the clause thus:—"Be ye suget . . . to the kyng as to hym that is higher in state." Our version tells us that the prophets testified concerning the sufferings of Christ and the glory that should follow" (1 Peter i. 11). Glory is in the original a plural noun, and so Wiclif has rendered it, giving us, as the inspired author intended to give us, a better, a more comprehensive idea than our version suggests. Not one glory but many followed the Saviour's sufferings. Once more, the phrase "a peculiar people" (1 Pet. ii. 9), is so utterly incapable of conveying the sense of the original to the generality of readers, that it has to be most carefully explained. For anything that appears to the contrary, the word peculiar may refer to this or that quality, property, or characteristic of Christians; to anything that causes them to differ from the unconverted. To very few readers will it occur that the great doctrine of redemption is contained in this word. Such, however, is the fact, and Wiclif shows it, not perhaps in the very clearest manner, but still in such a manner that nothing but great stupidity can permit any reader to miss it. Wiclif reads, "a people of purchasyng;" i.e., a people whom Christ has bought with his blood; this it is that makes Christians "a peculiar people."

I have thus endeavoured to present some of the most remarkable features of the version made by our great Reformer; and I hope that, whether considered in a literary or a theological light, this article may prove not altogether destitute of interest and instruction.

HUGH STOWELL BROWN.

ON SOLITUDE.

We can journey from London to Paris in ten hours. The tourist can cross the Alps as lightly and swiftly almost as the breeze or the rain-cloud. Messages are continually travelling through the midnight of the sea; the reader of the daily newspaper has brought to him every morning the execution in the remote country-town, the scandalous revelations of the law courts, the last night's speeches in Parliament, the details of American battles, the arrests in Paris, the sputter of musketry in Warsaw,—whispers, in fact, from

every quarter of the planet. This is very wonderful. In the crowd and tumult of modern life, we cannot help thinking the world must have been very silent two centuries ago. And the railroad and the telegraphic wire are not mechanical triumphs alone: by the one, a man is not merely transported swiftly from one quarter of the world to another; by the other, distant countries are not merely, as it were, brought within speaking distance. These things have in truth to do with other matters than our persons, our pleasures, our ledgers. They

subserve spiritual interests; they feed the spirit. They quadruple experience; in some respects a single life led in the present century is worth a dozen lives led in the sixteenth century. On the one hand, from the crowd of transcendent interests in which one is immersed, we snatch a certain taste of immortality; on the other, and for the same reason, we are made more loth to die. Having seen so much of the game, we naturally desire to see it played out. Which amongst us does not wish to know, for instance, what will be the upshot in France and in Europe of the death of the present French Emperor. This is not an idle curiosity; and I can conceive a dying man—who has taken an intelligent interest in the events of his period, and who is perfectly alive to the personal solemnities of his condition—curiously interested in his last morning's *Times*. Was not the great Prince, whom we so recently lost, think you, anxious what reply America would make to England's message on the matter of the *Trent*? And did not the knowledge that he *could* not know embitter his last hours as much as the last hours of so good a man, and one so much beloved, could be embittered? We are curious about dead kings, and old battles, and extinct forms of government, and it is not unnatural that we should be curious about the events of our own time. These will be history some day, and will breathe potent lessons enough. But, admitting to the full the advantages of the railroad, the telegraphic wire, the daily newspaper, one may be permitted to say that they have their disadvantages. There is no gain without a corresponding loss. And among the disadvantages attendant on the present state of things may be reckoned the decrease amongst men of the solitary taste, the impossibility almost of procuring anywhere a solitude. It is true enough, that poets and philosophers inform us that a man may be as solitary in the Strand as in the desert; but then they refer to the painful feeling of solitude—the lonely sense of being a unit amongst a multitude, the weight of unknown identities pressing one into an intenser consciousness of one's own identity—rather than to that habit of mind which seeks removal from the crowd, and finds its happiness alone. There is no spot so remote that an echo from the world will not reach. "The world is too much with us." We gad through all the bazaars of vanity, listen eagerly to the babble of the market-place, and are as seldom as possible at home. We know everything except ourselves. Modern life is against the solitary habit. Wordsworth was one of the last of our lovers of solitude; but before he died, he could see red embankments and troops of navvies creeping along the Cumberland vales, and launching a beautiful but ineffectual sonnet at the advancing locomotive, the indignant

bard turned on his heel. There are no hermits amongst us, and seclusion cannot readily be procured in a country like this.

The tourist visits Rome; he glides in a gondola along the Venetian lagoons; he climbs the pyramids; he sails on the Mediterranean; but he does not know, with any intimacy, the features of his native country. In a little book now before me, I find the following passage:—"There is a story told of a gentleman who, having boasted that he travelled far to see a celebrated landscape on the Continent, was put to the blush by being compelled to own that he had never visited a scene of superior loveliness which was situated on his own estate, and near which he had spent the greater portion of his life." I take it we all make the mistake of this gentleman. We travel abroad for what we can find more easily at home. We know everything, as I have said, but ourselves.

And the truth is, a man measures everything by himself. His own experience is the candle which he takes into the world with him; and he perceives only what the brightness and the extent of the flame allows him; his vision ceases without the range of that illumination. If I have never loved, what mean all the raptures of the poets about that passion? Romeo is at once stricken with idiocy. When I read the poets or the essayists, and cry out "how fine," "how true," I am really recognising in the admired passage a bit of myself. I have found a consummate expression of my obscure feeling; and immediately after reading the poet's lines or the essayist's sentences, I feel as if I had written them. This feeling it is that the philosopher refers to when he tells us, that in reading books our own thoughts are constantly coming back upon us with a certain majesty. And the more a man knows about his own thoughts, the more he is given to the habit of solitariness and meditation, the more frequently does he experience this,—the more frequently does he find himself kin with great writers, Dante, Shakspeare, Montaigne, and the rest. He is continually explaining them, they are continually explaining him. Unless we can take and give in this way, we need not read at all. Without this, Chinese is as intelligible as English. Then the solitary habit of mind induces a certain stoicism and a moral hardihood, which are a man's best armour in the battle of life. The estimates of the solitary man are different from the estimates of the crowd. He knows that the bad man is often apparently happy; that the stupid man has often a popular ascription of intellect; that prosperity comes and goes like the tide; that gold brings cares; that content may often reside with scanty furniture and hard fare; and that the applause or censure which follows an act are not infallible

measures of the merit or demerit of the act. Consequently, he takes the laurel crowns out of the keeping of the world, and holds them in his own. As a wise man, he despises none of the good things of this life; he values reputation and wealth, and soft living and troops of friends; but he is not the slave of any of these. He does not lose his head in prosperity; misfortune does not drive him to despair. Vanity and despair are the destroyers of mankind; and he is to a certain extent unaffected by either. I admire much the man, in Mr. Helps' Essay, who declared that, given a pure conscience and one side of a sufficient iron grating, he could listen to the hisses of the whole of Europe on the other side with tolerable equanimity. It is quite curious when one thinks of it—and particularly when one considers how many blockheads there are in the world,—how much men are affected by public opinion. A sneer makes supply the firmest resolve. A laugh demolishes your carefully concerted scheme, as the touch of a hand demolishes a castle of cards. Praise makes your forehead strike stars. You are uncomfortable if you hear that the foolishlest person of your acquaintance has spoken ill of you. When you are flattered, and when you are perfectly conscious that you *are* flattered, have you not, if you choose to confess, in your inmost spirit, a secret titillation of pleasure? Lord Byron, it is said, would have gone into hysterics had a tailor laughed at him. In bitter enough mood Burns walked the shady side of the Dumfries street when the well-dressed ladies and gentlemen, who did not care to recognise him, promenaded on the other. He could have despised any single member of the crowd, but their number crushed him. And then, how men cling to the memory of their former greatness or riches, when the greatness and the riches are gone! "I once dined off silver plate, drove my carriage, drank the finest wines, had lords at my table—fellows who won't speak to me to-day," says the broken Timon, with a gulp in his throat, to his chance acquaintance in the twopenny cook-shop. "What a genius I once was," cried the great Swift, withering atop, as he gazed on one of his early productions. Think with what bitterness Napoleon, at St. Helena, remembered the cheers of Arcola and the sun of Austerlitz. Now, all this is weakness, and should be struggled against. Fortune, misfortune, wealth, poverty, reputation, neglect, are neither me nor you; they are merely our appurtenances, our furniture, our clothing. In a world like this, it is wisdom to deaden our most sensitive nerve. Then the man with a taste for solitude is generally a great reader, and has an imaginative sympathy with alien circumstances of life. He tastes the wealth of Cæsar, he touches Juliet's lip, he groans with Job under the exhortations of his friends. By this curious sympathy, he projects

himself into distant times and lands. He passes into Abraham's tent: for him Pharaoh is not a mummy; Cleopatra has not lost her swarthy bloom. He peoples vacancy; he selects his friends from the race, and depends neither for solace nor amusement nor interest on contemporary acquaintance. The man who is familiar with Homer and Shakspeare need not tear his hair because Tomkins omits to leave his card. And, in this way, knowing all forms and conditions of life—success, reverse, health, illness, wealth, poverty—the vicissitudes of fortune do not surprise him, or take him off his guard. If he is called upon to fight, he fights like a general on ground which he has carefully reconnoitred. In whatever circumstances he is placed, he is never lonely; such a man has companionship on a throne or in a dungeon. Wherever he goes he is walking in human footsteps, and he knows in whose footsteps he walks. I can feel no pain which some one has not felt before me; and no valuable, spiritual or material, can come into my possession which has not already belonged to some one.

Lord Bolingbroke discourses thus on Exile—the sorest evil, perhaps, which can befall an ambitious politician, and the bitterness of which the writer had tasted: "Let us march, therefore, intrepidly wherever we are led by the course of human accidents. Wherever they lead us, on what coast soever we are thrown by them, we shall not find ourselves absolutely strangers. We shall meet with men and women, creatures of the same figure, endowed with the same faculties, and born under the same laws of nature. We shall see the same virtues and vices, flowing from the same general principles, but varied in a thousand different and contrary modes, according to that infinite variety of laws and customs which are established for the same universal end, the preservation of society. We shall feel the same revolution of seasons, and the same sun and moon will guide the course of our year. The same azure vault, bespangled with stars, will be everywhere spread over our heads. There is no part of the world from whence we may not admire those planets, which roll, like ours, in different orbits round the same central sun: from whence we may not discover an object still more stupendous, that army of fixed stars, hung up in the immense space of the universe, innumerable suns, whose beams enlighten and cherish the unknown worlds which roll around them; and whilst I am ravished by such contemplations as these, whilst my soul is thus raised up to heaven, it imports me little what ground I tread upon."

This is noble rhetoric, you must admit; but perhaps you have an uneasy suspicion that it is noble rhetoric only. Ravished with that vision of the fixed stars, it may import but little on what ground

Lord Bolingbroke treads; it may import but little whether his Lordship had a guinea in his pocket; whether next morning he might have a breakfast on his table. When the fixed stars are considered, the one matter seems of as little consequence as the other. Rapt in admiration of nocturnal splendours, is not the payment of my tailor's bill—six months overdue perhaps—a very paltry affair? In any case, the contemplation of these sublime objects will be as ravishing from Pope's Villa at Twickenham as from France, to which country Lord Bolingbroke had withdrawn with an angry enough heart. Exile is exile, you will say, not to be sweetened, save in the slightest degree, by any such considerations. The stars are brightest when viewed from one's native soil. The Southern Cross is not so dear to us as the familiar constellation of the Plough. His Lordship's eloquence is brilliant special-pleading. To pooh-pooh what we are never likely to possess, is wonderfully easy. The confirmed celibate is loudest in his denunciations of matrimony. In *Æsop*, it is the tail-less fox that advocates the disuse of tails. It is the grapes we cannot reach that we call sour. The sentences I have written in praise of the solitary life, you may suppose open to the objection which I imagine you to raise against Lord Bolingbroke's periods. You may say that no man is a solitary who can be anything else. That disappointment, unfitness for the world and its duties, a melancholy temperament, a diseased vanity, are the things which drive men to solitude, and that nurse the solitary taste. And I frankly admit there is something in what I have supposed you to have urged, but it does not cover the whole matter.

It is true enough that men are driven into solitude by wounded vanity, by disappointed ambition, or disappointment in the passions; but many others seek it by native instinct as a duckling seeks water. Personally I have taken to solitude, such as it is, impelled by an indolent turn of mind, and by an imaginative sympathy which re-creates the past for me: the past of the world, as well as that which belongs to me as an individual, and which makes me independent of the passing moment. I see every one struggling, the grocer as well as the Premier, after the unattainable; but I struggle not. I sit where I am, and save myself the pangs of disappointment and disgust! I have no ventures at sea, and I do not fear the arrival of evil news. I have no great desire to act any prominent part in this world; but I am prompted by an unappeasable curiosity as to the men who act. Adam Smith thanked God that he knew Milton wore latches in his shoes; in like manner, I am grateful for the merest crumb of information respecting great men. I am not an actor, but a spectator. My sole occupation is sight-seeing. I am continually

feeling pulses. Ambition! What do I care for ambition? The oyster with much pain produces its pearl. I take the pearl. Why should I produce one after the miserably painful fashion? Probably it would be but a flawed one at best. These pearls I can pick up by the dozen. The production of them is going on all around me, and there will be a nice crop for the solitary man of the next century. Look at a certain silent Emperor, for instance: a hundred years hence *his* pearl will be handed about from hand to hand; will be curiously examined and valued; will be set in its place in the world's cabinet. I confess, as I confessed before, that I should like to see the completion of that filmy orb. Will it be pure in colour? Will it be suffused with a sanguine flush? Of this I am certain, that in the cabinet in which the world keeps these peculiar treasures no one will be looked at more frequently, or will provoke a greater variety of opinions as to its intrinsic worth. Why should I be ambitious? Shall I write verses? I am not likely to surpass Mr. Tennyson or Mr. Browning in that walk. Shall I be a musician? The blackbird singing this moment from the tree-top in my garden puts me to instant shame. Shall I paint? The intensest scarlet on an artist's palette is but as ochre to that I saw this morning at sunrise burning over the German Sea. No, no; let me enjoy Mr. Tennyson's verse, and the blackbird's song, and the colours of sunrise, but do not let me emulate them. I am happier as it is. The cook makes the dinner, the guest eats it, and the last, not without reason, is considered the happier man.

I am indolent, but then I have a sufficient reason for my indolence. My life is not an active one because I do not see what good will result from activity. I prefer other men's experience to my own, and I do not care much to verify their experiences. I would rather make love with Romeo than make love in my own person. I am content that Alexander conquered the world, and then blubbered for the moon; even if I had the power, I would not care to repeat the feat of the Macedonian—and then to blur the glory with a drunkard's tears! I am quite contented as I am. I inherit the world. I do not live my own life, I live the life of the planet. I go into my library, and, like some great panorama, all history unrolls before me. I breathe the morning air of the world, while the scent of Eden's roses yet linger in it, when it was thickened only by the sigh of Eve. I see the pyramids building; I hear Memnon murmur, as the first morning sun touches him; I see the Sphinx when she first began to ask her eternal question. I sit as in a theatre; the stage is time, the play is the play of the world. What a spectacle it is! what kingly pomp, what processions pass by, what cities burn to heaven, what crowds of captives are dragged at

the wheels of conquerors ! I hiss or cry "bravo" when the great actors come on shaking the stage. In my solitude I am only myself at intervals. I am a Roman emperor when I look at a Roman coin. I lift Homer, and I shout with Achilles in the trenches. The silence of the unpeopled Syrian plains, the outcomings and outgoings of the patriarchs, Abraham and Ishmael, Isaac in the fields at eventide, Rebekah at the well, Jacob's guile, Esau's face reddened by desert sun-heat, Joseph's splendid funeral procession,—all these things I can find within the boards of my Old Testament. What a silence in these old books, what green pastoral rest, and yet what indubitable human existence. Across the brawling centuries of blood and war that lie between, I can hear the bleating of Abraham's sheep, the tinkling of the bells of Rebekah's camels. O men and women, so far separated yet so near, so strange yet so well known, by what miraculous power do I know you all ! Books are the true Elysian fields where the spirits of the dead converse, couched on flowers, and to these fields a mortal may venture unappalled. What king's court can boast such company ? What school of philosophy such wisdom ? All the wit of all the world is glancing and flashing there. There is Pan's pipe, there are the songs of Apollo. Sitting in my library at night, and looking on the silent faces of my books, I am occasionally visited by a strange sense of the supernatural. They are not collections of printed pages, they are ghosts. I take one down, and it immediately speaks with me, it may be in a tongue not now heard on earth ; it may be of men and things of which it alone possesses knowledge. I call myself a solitary, but sometimes I think I misapply the term. No man sees more company than I do. I travel with mightier cohorts around me than ever did Tamerlane or Genghis Khan on their fiery marches. I am a sovereign in my library, but it is the dead not the living that attend my levees.

I think if I have any faculty more than ordinarily developed, it is the faculty of watching people. I watch from no motive of censoriousness, from no proclivity to batten on the evil and the weakness of human nature, but simply from an intense interest in men and women, and, it may be at times, for my own amusement. A market-day in the little town in which I dwell, a social party at the house of one or other of my neighbours, is to me as good as a novel. People, to an observant eye, *do* wear their hearts upon their sleeves. Culture the human garden as carefully as you will, a bit of aboriginal soil, in which blow the wild-flowers of character, is sure to be left in some unnoticed corner. I think I can read a biography in a tone of the voice, in a turn of the head. A bluff farmer in the market-place is a study to me. A white-muslin young lady at one

of our evening parties is a charming enigma. Her lover would be jealous if he knew how much she fills my thoughts. I parry her music, her pretty airs, her smiles, and strive to reach her heart. I always feel on meeting a man for the first time as if I had visited a foreign country. I don't care so much what kind of man he is : he may be a fertile Lombardy, with vineyards, and marble cathedrals, and picture-galleries ; he may be a sandy Sahara, fluctuating only less than the sea ; he may be an ice-bound Labrador ; it doesn't matter ; he is new, he is a puzzle, he piques me. I wish to travel over him, and look up his beauties and visit his "lions." Of course, living as I do here, one has no great opportunity of seeing strangers. My acquaintance are few, my friends fewer still. There is my friend the doctor ; constantly in his gig, skirting along the country roads, fighting valiantly against disease, continually helping boys and girls into this rough world, continually smoothing the passage of old people into the next, scaring blue devils everywhere by his portly presence and hearty laugh. There is my dear friend the clergyman—a flesh-and-blood edition of the "Whole Duty of Man," bound in clerical black—with his grey hair, his mild eye, a certain sacredness in his lightest conversation, as if one of his sermons had been melted down into it. His discourses are not very brilliant, perhaps ; but I do not care much for brilliant discourses in a country place. The green graves in the churchyard throw all their weight on the side of the text. In a great city it is different. His life is a better sermon than any he has written or ever will write. And then there is my pleasantest friend of all, "the town fool" who runs my messages for me, and who occasionally trims my garden borders. With him I hold frequent converse, and people here, I have been told, think we have certain points of sympathy. Although this is not meant for a compliment, I take it for one. The poor faithful creature's brain has strange visitors ; now 'tis fun, now wisdom, and now something that seems in the queerest manner to be compounded of both. He lives in a kind of twilight which obscures objects, and his remarks seem to come from another world than that in which ordinary people live. He is the only distinctly original person of my acquaintance ; his views of life are his own, and form a singular commentary on those generally accepted. He is dull enough at times, poor fellow ; but anon he startles you with something, and you think he must have wandered out of one of Shakspeare's plays into this out-of-the-way place. I know the banker who has for daughters the white-muslin young ladies already referred to ; some half dozen farmers, learned in guano and top-dressing ; the postmistress from whom I get my newspapers ; and a tall, gaunt atrabilious confectioner, who has a hankering after red repub-

licanism and the destruction of Queen, Lords, and Commons—Guy Fawkes is, I believe, the only martyr in his calendar—the sourest-tempered man, I think, that ever engaged in the manufacture of sweetmeats. I wonder if the oddity of the thing never strikes himself. I constantly expect that he will put poison in his lozenges. If he does not, his practice is better than his profession. It is true, I have no great variety of character within my reach, not a single hero or heroine, but then I have sufficient to satisfy me, sufficient to interest me, and watching these people there is always something new turning up. You never completely know a man. You may be his intimate friend for years, you understand every nook and cranny of his character, you think, but suddenly something in him surprises you, overturns all your preconceived notions; the friend whom you supposed stood so close to you that you could hear his heart beat, is in a moment a thousand miles away. But in any case, even if men were not constantly bewildering their most intimate friends, the half-dozen people or so I have mentioned are sufficient to keep the blood in circulation. Chess is eternally new in its combinations, although you play always with same pawns, knights, bishops, kings, and queens.

Clustering its peaked and red-tiled houses in a crescent sandy bay, the little town I dwell in looks sleepily seaward. Along that crescent of yellow sands, stretched from pole to pole, nets are continually streaming to the drying wind. A whole congregation of fishing-boats lie lazily on their sides there, the pitch with which they are covered cracking and sweating in the hot sunshine. Tarry fishermen with great boots and strangely-fashioned hats, and coloured shirts, stand in groups about the boats, or mend nets just where the grey grass ends and the sand begins, or sit on the little jetty smoking short pipes and discoursing of their craft. A mile or two out to sea rises a great rock;—once a prison in old cruel times; now the sea-mews perch by thousands on its shelves, and sweep like smoke-drifts around its precipices. On the high shore just opposite this rock towers a ruined castle with innumerable chambers in which the ancient man-at-arms heard the thunder of the sea far below on stormy nights—heard and crossed himself, and turned to sleep again. It thrilled to the trumpet's cry once that old castle, feasts were spread in its halls, it shook out its banners to the breeze, and foe-men's arrows pattered on its walls like hail, occasionally finding through a loophole an inlet to a defender's brain. Now it topples over the flood like old Lear, with heath and fumer, and all kinds of wild-flowers stuck in his grey hairs. There is not much stir in the place save on market-days. Existence moves on sleepily here; and on the links which adjoin the sea, just beyond the fishing-boats, a couple of ancient golfers are pursuing the devious flying ball. In their scarlet coats the ancient worthies look like poppies on the sward. Far away to the east hangs the grey city, picturesque, smoke-wreathed—smouldering at this moment in pale vapour against the darkness of a shower. On the other side of the Firth, the shores curve into sandy bays like our own, with little sea-towns like our own nestling under the rising grounds, where boats also lie on their sides in the sunshine, where nets also dry

in the wind. They are bordered also with links, on which (with a telescope) ancient red-coated gentlemen can be seen pursuing their game. Existence is just as sleepy there as here. The life of the picture is to be found on the broadening Firth; the steamer passes by, the war-ship stored with thunder, fleets of brown fishing-boats come out from the sleepy sea-towns on either side; all the towered vapours of the summer firmament are mirrored on its broad expanse; morning and afternoon it is transfigured, illuminated. Sunrise runs up into it blood red from the ocean; after receiving the falling sun it runs down into the ocean in sleek and molten gold.

The house I dwell in stands apart from the little town, and relates itself to the other houses as I do to the inhabitants. It sees everything, but is itself unseen, or at all events unregarded. My study window looks down upon the sea, houses, the sandy beach on which in silence the lazy wave curls and breaks in foam, the boats, fishermen, golfers, like a meditative eye. Without meaning it, I feel I am a spy on the ongoings of the quiet town. Around my house there is an old-fashioned, rambling garden, with close-shaven grassy plots, and fantastically clipped yews standing in gloomy procession, and dials in which the sun is continually telling his age, and statues weed-grown and green with neglect and the stains of the weather. My stony nymphs might almost be mistaken for mermaids with fairy locks crouching in the shrubbery. The garden I love more than any place on earth; it is a better study than the room inside the house which is dignified by that name. I like to pace its gravelled walks, to sit at noonday in the moss-house, always filled with a tender gloom, and warm and cozy as a bird's nest, to enjoy the feast of colour spread for me in the curiously-shaped floral spaces. My garden, with its silence, and the pulses of fragrance that come and go on the airy undulations, affects me like sweet music. Care stops at the gates, and looks at me wistfully through the bars. Among my flowers and trees, nature takes me into her own hands, and I breathe as freely as the first man. It is curious, pathetic almost, I sometimes think, how deeply seated in the human breast is the liking for gardens and gardening. The sickly seamstress in the narrow city lane tends her box of sicklier mignonette. The retired merchant is as fond of tulips as ever was Dutchman in the famous mania. The author finds a garden the best place to think out his thoughts. In the disabled statesman every restless pulse of regret or ambition is stilled when he looks upon his blossoming apple-trees. Is the fancy too far brought that this love for gardens is a reminiscence, haunting the race, of that remote time in the world's dawn when but two persons existed,—a gardener, named Adam, and a gardener's wife, called Eve? In my garden, I spend the greater portion of my time; for there, silently as the day upon my dials, is the year measured out to me in a crescendo of colour and odour. First out of the wet mould come pure bunches of snowdrops—then yellow crocuses flame along the walks like the footlights in a theatre—then the rhododendron cracks into broad purples—the crimson deepens on the cheek of the tulip—roses bud—the laburnum shakes out her golden hair—the chest-

nut puts forth its multitudes of milky cones—and the spare and slender mountain-ash is white with patches of fragrant snow. From the love I bear to flowers, and from the pleasure I take in watching their progress, I can fancy the feelings of a father as he notices, day by day, character unfolding itself in his little boy or girl. The flowers you have sown, the trees you have planted, become in a sense your children. You are the author of their beings; but for you they had not been, and you take an interest in them as if they were living things. A man may be a miser of his wealth; he may tie up his talent in a napkin; he may hug himself in his reputation; but he is always generous in the matter of his love. Love cannot stay at home; a man cannot keep it to himself. Like light, it is constantly travelling. A man must spend it, must give it away. If matters had turned out differently years ago, I might have had voices on my stairs and the patter of little feet on my floors; and round arms thrown round my neck for a morning's kiss—these things cannot be now, and the love which might have made happy children of my own is wasted on flowers and trees. And yet *not* wasted. One must love something. The prisoner in his dungeon loves the bright-eyed mice which he feeds with crumbs, and which play around his chains, and the death of one of them shakes him as the death of a father or a mother shakes a happier man. Sterne, if placed in a desert, has told us, he would have loved a tree. So I love my trees and flowers; they are all I have. They are my children silent and beautiful, untouched by any passion, unpolluted by evil tempers; they cannot bring me to shame, 'tis an affection that knows no heartache. They die in Autumn, or put off their rich apparel, but next year they are back again with dresses as fair as ever. When people speak of their girls, I point to my roses white and red; when of boys, I point to my monstrous vegetable marrows lolling on their slates in the hot sunshine. And so like a wise man I content myself with what I have, and eke out my riches with my fancies. It is the coins in my own pocket, not those in the pockets of my neighbours that are of use to me. Envy never has a do it in her purse, and discontent is the most poverty-stricken of the passions.

This spring a chaffinch built a nest in one of my yew-trees. The particular yew, which the bird did me the honour to select, had been clipped long ago into a similitude of Adam. The resemblance to a human figure was of course remote; but the intention was good. In the black, shock head of our first parent, did the birds establish their habitation. A prettier, rounder, more comfortable nest I never saw, and many a wild swing it got when Adam bent his back, and bobbed and shook his head, when the bitter east wind was blowing. The nest interested me, and I visited it every day from the time that the first, stained turquoise sphere was laid in the warm lining of moss and horse-hair, till when I chirped, four red hungry throats eager for worm or slug, opened out of a confused mass of feathers. What a hungry brood it was, to be sure, and how often father and mother were put to it to provide sustenance for their family! I went but the other day to have a peep, and behold brood

and parent birds were gone, the nest was empty and cold, Adam's visitors had departed. Peace go with them! I do not think the world contains a prettier sight than the nests of some of our common birds, when the eggs are laid. I can remember perfectly well the first bird's nest I ever saw. It was a hedge-sparrow's, and was built in a bush which overhung a tiny streamlet. The lining of it gave me a sense of warmth, far more than my own crib at home did; the five gleaming eggs dazzled me. Talk of the Pleiades in comparison. Bah! Although far from my home, I visited it often, and one day I found it "harried"—as we say in Scotland—to my intense grief. I do verily believe that for a week after my loss, the world seemed a place hardly worth living in. I have had greater misfortunes since, but I don't think I ever felt one so much. For more than twenty years now, the train running between two great cities passes over the spot where the bush stood which contained my treasure. Time changes man and places so. In the corner of my bed-room window I have a couple of swallows' nests, and nothing can be pleasanter in these summer mornings than to lie in a kind of half dream, perfectly conscious all the while of the chatterings and endearments of the man-loving creatures. Beautifully restless they are; they dart like lightnings round their nests in the window corners. All at once there is a great twittering and noise; something of moment has been seen, something of importance has occurred in the swallow world, perhaps a fly of unusual size and savour has been bolted. Clinging with their feet, and with heads turned charmingly awry, they chatter away with great sweetness and volubility; then with a gleam of silver they are gone, and in a trice one is poisoning itself in the wind above my tree-tops, while the other dips her wing as she darts after a fly through the arches of the bridge which lets the slow stream down to the sea. I know not what of romance attaches in my mind to the swallow. It is a biblical bird, and has its biblical associations. Abraham knew it, and David, and it built its nest in the pinnacles of Solomon's temple. It has no native country; it is a stranger and visitor everywhere. It follows summer round the world; it makes its home with man. The swallows at my window have occupied the same nest for several years now, and where they go I cannot tell. They may chatter on dewy mornings around the kraal of the Hottentot, skim in golden air above the mosques of the Mahometan, or hang their procreant cradles from the capital of one of the six pillars of Baalbec.

This, then, is the solitude I have shaped for myself; in this manner my life flows on. You see it contains no great event,—the watching of life in a small fishing town,—sunrise and sunset,—the nest and eggs of a chaffinch,—the blowing of flowers,—the chattering of swallows at my window. But it is enough for happiness. Even I have hope and expectation. In a month my sun-flowers will ray out gorgeous orange from their chocolate disks; in a month my hollyhocks will have blossomed like the rod of Aaron. I can live for that.

ÆNEAS SAGE.

ALBERT'S TOMB.

SOME two-and-twenty golden years ago,
A noble Wooer to our England came;
To-day he has won her! but lies pale and low.
Albert the Good we write his royal name.

The Power that sits enthroned by open graves
Hath risen to rule the air. His death-bell tolls,
And rolls upon us in dull heavy waves,
Sepulchral shadows over living souls.

On every loaded wind the sound is borne,
Invisibly swift the sparks electric slide;
Till, under archways of full many a morn,
The darkness of our loss will visibly glide.

The meanest doorway darkens at this cloud,
The poorest poor have lost a personal friend;
Down to one level are the loftiest bowed;
In the large clasp of nature all hearts blend.

And dark in His extinguished light we stand,
In every face we read how much bereft!
A sterner pressure of the grasping hand
Tells of our loss, and clings to what is left.

For he was one of those we never know
Till they have left us, nor how great the love
We bore them; they are all too meek to show
Their dearness, till they stand our praise above.

We met him coldly, and we look back now
To see how naturally he kindled mist
And murk into a glory for his brow;
And all our dimness into splendour kissed.

At last our clouds of earth are cleared away:
Albert the Good and patient goes to God,
Smiling back to us with his clear blue day;
And leaving shining footprints where he trod.

How could we mirror truly when a breath
Sets all the surface in a blurring strife?
We are calmer now!—touched by the hand of
Death!
To hold the lustrous image of his life.

We know that when our mortal work is done,
Few to the Master's keeping will return
A fairer copy of the life His Son
Once left us, or a warmer "well done" earn.

Down goes the scaffolding; the work is crown'd;
Much that was hidden from us may be read,
And for the first time we can look all round
The Statue of his life now perfected.

In the cold hand we fain would place the palm;
Tried in the fire our love comes forth pure gold!
We loved more than we knew. We would embalm
Our Dead with honey, as they did of old.

We see the glory in the goodness veiled;
The greatness that in bounds so narrow moved:
Our peaceful Hero—King who reigned unhailed,
And ruled by loving, and by being loved.

The Flower of Chivalry upon the height,
He could as featly bend to lowliest place;
With something in him of the lofty light
That shone in Philip Sidney's cordial face.

His natural kingliness made crowns look wan,
Whom God had set amongst the Lords of Earth,
To show them how the majesty of Man
May shine above the starriest badge of Birth.

He made the Palace fragrant with fresh health;
He strove to set his jewels in God's light;
He was a light 'twixt Poverty and Wealth;
He wrought for all and revered only Right.

The broad daylight of truth was on his face,
That made the silence golden with its smile;
He tempered our harsh judgments with his grace,
And kept his covenant without gloss or guile.

He held for ever hallowed the dear breasts
Where nestling Love and its sweet babes had lain;
For ever sacred kept Home's secret nest
Of purest pleasure and of proudest pain.

His life, cut down, smells sweet as hay new-mown;
In England's heart we find our throne for him;
His memory shall add to England's crown
One of the precious gems Time cannot dim.

A calm, high life, crown'd with a quiet death:
His robe of pain around him folding, he
Was not the man to waste his dying breath;
Who nobly lives, can die with dignity.

The gentle spirit did not wish to hear
The women moaning thro' the house for him,
But only sought to feel its darlings near
Enough to bless them when 'twas getting dim!

No need of courtly lies for comforting;
For he can face the truth, tho' stern and wild:
Thro' spiritual rehearsal, he can wring
The victory! and his soul within him smiled.

And 'tis not near so hard for one to bow
 And enter the dark door-way of the tomb,
 Who has learned to meet Death kneeling with
 bent brow ;
 Whose inner light can pierce that inner gloom.

And while in sorrow here we dimly sit,
 We lift the head, to ease an aching breast,
 And, looking up, behold the Stars are lit ;
 And there's another in the realms of Rest.

Rest, happy soul, in thy salvation deep ;
 The top of life, and endless day for thee ;
 While in the valley here we sit and weep
 Among the shadows of Eternity.

We can but kneel, and grope, and kiss His feet
 Who takes thee to His infinite embrace ;
 We feel transfigured if our touch may meet
 His garment's hem ; but *thou* dost see His face.

Poor widowed Queen ! we see her as she trod
 The Aisle where Music's mellow thunders rolled,
 And Heaven opened, and the smile of God
 In sunbeams crown'd her head with saintly gold.

And how we listened—knowing she was bless'd—
 To the proud murmurs of the brooding dove ;
 Home-pleasures round the royal Mother pressed,
 And God gave many voices to her love.

And now the cloud of this calamity
 Darkens the crown we set on her young brow :
 Ah, look up to the side next heaven, and see
 'Tis God Himself that crowns our lady now !

With all hearts aching for the dear bowed face,
 We can but grasp His hand in prayer for her !
 So lonely in her desolate, high place ;
 And leave her with the Eternal Comforter.

Though two be parted in that shadow drear,
 Where one must walk alone, yet is it given
 For the dear blessed spirit to be near ;
 The human vision with the voice in heaven.

It is my faith they tend us in our need ;
 With tender chords they draw us where they
 move ;
 And often at the noon of night they feed
 With dews of Heaven the lilies of their love.

Warm whispers will come stealing like a glow
 Of God, to kiss the spirit's inner eyes
 Till they be opened, and true love doth know
 Its marriage garden blooms in Paradise.

Here hearts may beat so close that two lives make
 Only one shadow in the sun we see,
 But, in the light we see not, these shall wake
 One angel—wedded for eternity.

This mourning shall be made majestic mirth ;
 This grief shall be a glory elsewhere ;
 The music that we hear no more on earth
 Will help to make up Heaven when we are there.

And Thou, Young Prince, whose Pilot saw thee tide
 Safe o'er the reefs beyond the harbour-bar,
 Then left thee, o'er the waters as ye ride,
 This Star of morn shall rise, thy evening Star.

Think of the dear face dark beneath the mould,
 And be thou to us what he would have been ;
 So shall the secret springs of sorrows old
 Give to thy future paths a gladder green.

May thy life flourish, ripen hour by hour,
 And heavenward draw the virtues of thy root ;
 Our eyes have seen the beauty of the flower,—
 Do thou unfold the glory of the fruit.

We build his Monument, but men may see
 His steady lustre live in thee and thine ;
 And thou mayest bear, to Empires yet to be,
 The goodness and the glories of thy line.

This is a waiting hour of wonder for
 A world ; our England looks across her waves !
 Will the Dove seek her bosom, or red War,
 Whose footprints stamp deep pits for bloody
 graves ?

Is it the kiss of Peace and Righteousness,
 That softly thrills the husht, grim silence through,
 Or Battle's bugle-cry that makes us press
 All sail—send up our brave old bit of blue ?

We know not. But, if foot to foot we stand,
 On slippery boarding-plank, or ruddied sward,
 'Twill be the sturdier stroke for this dear Land
 That holds another noble grave to guard.

And all is well that makes a People one,
 Even though the meeting-place be Albert's tomb :
 We gather grapes of joy up in the sun,
 But God's best wine must ripen in the gloom.

Many true hearts have mouldered down to enrich
 The roots of England's greatness underground ;
 Until, below, as wide and strong they stretch,
 As overhead the branches reach around.

And so our England's glory ever grows,
 And so her stature rises ever higher,
 Until the faces of her farthest foes
 Darken with envy, overshadowed by her.

So climb the heavens, Old Tree, until the gold
 Stars glisten as thy fruitage—heave thy breast
 Yet broader, till the fiercest storms shall fold
 Their wings within thy shelter and find rest.

GERALD MASSEY.

MISTRESS AND MAID.

A HOUSEHOLD STORY.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

**CHAPTER XVI.**

NEXT morning, while with that cheerful un-anxious countenance, which those about an invalid must learn continually to wear, Elizabeth was trying to persuade her mistress not to rise, she heard

a knock, and made some excuse for escaping. She well knew what it was, and who had come.

There, in the parlour, sat Miss Hilary, Mrs. Jones talking at her rather than to her, for she hardly seemed to hear. But that she had heard everything, was clear enough. Her drawn white

face, the tight clasp of her hands, showed that the ill tidings had struck her hard.

"Go away, Mrs. Jones," cried Elizabeth, fiercely.

"Miss Hilary will call when she wants you."

And with an ingenious movement that just fell short of a push, somehow the woman was got on the other side of the parlour-door, which Elizabeth immediately shut. Then Miss Hilary stretched her hands across the table, and looked up piteously in her servant's face.

Only a servant; only that poor servant to whom she could look for any comfort in this sore trouble, this bitter humiliation. There was no attempt at disguise or concealment between mistress and maid.

"Mrs. Jones has told me everything, Elizabeth. How is my sister? She does not know?"

"No; and I think she is a good deal better this morning. She has been very bad all week; only she would not let me send for you. She is really getting well now; I'm sure of that."

"Thank God!" And then Miss Hilary began to weep.

Elizabeth also was thankful, even for those tears, for she had been perplexed by the hard, dry-eyed look of misery, deeper than anything she could comprehend, or than the circumstances seemed to warrant.

It was deeper. The misery was not only Ascott's arrest; many a lad has got into debt and got out again—the first taste of the law, proving a warning to him for life; but it was this ominous "beginning of the end." The fatal end—which seemed to overhang like an hereditary cloud, to taint as with hereditary disease, the Leaf family.

Another bitterness (and who shall blame it, for when love is really love, have not the lovers a right to be one another's first thought?)—what would Robert Lyon say? To his honest Scotch nature poverty was nothing; honour everything. She knew his horror of debt was even equal to her own. This, and her belief in his freedom from all false pride, had sustained her against many doubts lest he might think the less of her because of her present position, might feel ashamed could he see her sitting at her ledger in that high desk, or even occasionally serving in the shop.

Many a time things she would have passed over lightly on her own account, she had felt on his; felt how they would annoy and vex him. The exquisitely natural thought which Tennyson has put into poetry—

"If I am dear to some one else,
Then I should be to myself more dear"—

had often come, prosaically enough perhaps, into her head, and prevented her from spoiling her little hands with unnecessarily rough work, or carelessly passing down ill streets and byways,

where she knew Robert Lyon, had he been in London, would never have allowed her to go. Now what did such things signify? What need of taking care of herself? These were all superficial, external disgraces, the real disgrace was within. The plague-spot had burst out anew; it seemed as if this day were the re-commencement of that bitter life of penury, misery, and humiliation, familiar through three generations to the women of the Leaf family.

It appeared like a fate. No use to try and struggle out of it, stretching her arms up to Robert Lyon's tender, honest, steadfast heart, there to be sheltered, taken care of, and made happy. No happiness for her! Nothing but to go on enduring and enduring to the end.

Such was Hilary's first emotion: morbid perhaps, yet excusable. It might have lasted longer—though in her healthy nature it could not have lasted very long, had not the reaction come, suddenly and completely, by the opening of the parlour-door and the appearance of Miss Leaf.

Miss Leaf—pale, indeed; but neither alarmed nor agitated, who hearing somehow that her child had arrived, had hastily dressed herself, and come down stairs, in order not to frighten Hilary. And as she took her in her arms, and kissed her with those mother-like kisses, which were the sweetest Hilary had as yet ever known—the sharp anguish went out of the poor girl's heart.

"Oh, Johanna! I can bear anything as long as I have you."

And so in this simple and natural way, the miserably secret about Ascott came out.

Being once out, it did not seem half so dreadful; nor was its effect nearly so serious as Miss Hilary and Elizabeth had feared. Miss Leaf bore it wonderfully; she might almost have known it beforehand; they would have thought she had, but that she said decidedly she had not.

"Still you need not have minded telling me; though it was very good and thoughtful of you, Elizabeth. You have gone through a great deal for our sakes, my poor girl."

Elizabeth burst into one smothered sob—the first and the last.

"Nay," said Miss Leaf, very kindly; for this unwonted emotion in their servant moved them both. "You shall tell me the rest another time. Go down now, and get Miss Hilary some breakfast."

When Elizabeth had departed, the sisters turned to one another. They did not talk much; where was the use of it? They both knew the worst, both as to facts and fears.

"What must be done, Johanna?"

Johanna, after a long pause, said, "I see but one thing—to get him home."

Hilary started up, and walked to and fro along the room.

"No, not that. I will never agree to it. We cannot help him. He does not deserve helping. If the debts were for food now, or any necessities; but for mere luxuries, mere fine clothes; it is his tailor who has arrested him, you know. I would rather have gone in rags! I would rather see us all in rags! It's mean, selfish, cowardly, and I despise him for it. Though he is my own flesh and blood, I despise him."

"Hilary!"

"No," and the tears burst from her angry eyes, "I don't mean that I despise him. I'm sorry for him; there is good in him, poor dear lad; but I despise his weakness; I feel fierce to think how much it will cost us all, and especially you, Johanna. Only think what comforts of all sorts that thirty pounds would have brought to you!"

"God will provide," said Johanna earnestly. "But I know, my dear, this is sharper to you than to me. Besides, I have been more used to it."

She closed her eyes, with a half shudder, as if living over again the old days—when Henry Leaf's wife and eldest daughter used to have to give dinner-parties upon food that stuck in their throats, as if every morsel had been stolen; which in truth it was, and yet they were helpless, innocent thieves; when they and the children had to wear clothes that seemed to poison them like the shirt of Dejanira; when they durst not walk along special streets, nor pass particular shops, for the feeling that the shop-people must be staring and pointing and jibing at them, "Pay me what thou owest."

"But things cannot again be so bad as those days, Hilary. Ascott is young; he may mend. People can mend, my child; and he had such a different bringing-up from what his father had, and his grandfather, too. We must not be hopeless yet. You see," and making Hilary kneel down before her, she took her by both hands, as if to impart something of her own quietness to this poor heart, struggling as young, honest, upright hearts do struggle with something which their whole nature revolts against, and loathes, and scorns,—“you see, the boy is our boy; our own flesh and blood. We were very foolish to let him away from us for so long. We might have made him better if we had kept him at Stowbury. But he is young; that is my hope of him; and he was always fond of his aunts, and is still, I think.”

Hilary smiled sadly. "Deeds, not words. I don't believe in words."

"Well, let us put aside believing, and only act. Let us give him another chance."

Hilary shook her head. "Another, and another, and another,—it will be always the same. I know it will. I can't tell how it is, Johanna; but whenever I look at you, I feel so stern and hard to Ascott. It seems as if there were circumstances when pity to some, to one, was wicked injustice to others; as if there were times when it is right and needful to lop off, at once and for ever, a rotten branch, rather than let the whole tree go to rack and ruin. I would do it! I should think myself justified in doing it."

"But not just yet. He is only a boy,—our own boy."

And the two women, in both of whom the maternal passion existed strong and deep, yet in the one never had found, and in the other never might find, its natural channel, wept together over this lad, almost as mothers weep.

"But what can we do?" said Hilary at last. "Thirty pounds, and not a halfpenny to pay it with; must we borrow?"

"Oh! no, no," was the answer, with a shrinking gesture; "no borrowing. There is the diamond ring."

This was a sort of heirloom from eldest daughter to eldest daughter of the Leaf family, which had been kept, even as a sort of superstition, through all temptations of poverty. The last time Miss Leaf looked at it, she had remarked, jestingly, it should be given some day to that important personage, talked of for many a year among the three aunts—Mrs. Ascott Leaf.

"Who must do without it, now," said Johanna, looking regretfully at the ring. "That is, if he ever takes to himself a wife, poor boy."

Hilary answered, beneath her breath, "Unless he alters, I earnestly hope he never may." And there came over her, involuntarily, a wild despairing thought, Would it not be better that neither Ascott nor herself should ever be married, that the family might die out, and trouble the world no more?

Nevertheless, she rose up to do what she knew had to be done, and what there was nobody to do but herself.

"Don't mind it, Johanna; for, indeed, I do not. I shall go to a first-rate, respectable jeweller, and he will not cheat me; and then I shall find my way to the sponging-house—isn't that what they call it? I daresay many a poor woman has been there before me. I am not the first, and shall not be the last, and nobody will harm me. I think I look honest, though my name is Leaf."

She laughed—a bitter laugh; but Johanna silenced it in a close embrace; and when Hilary rose up again, she was quite her natural self. She summoned Elizabeth, and began giving her all domestic directions, just as usual; finally, bade

her sister good-bye in a tone as like her usual tone as possible ; and left her settled on the sofa in content and peace.

Elizabeth followed to the door. Miss Hilary had asked her for the card on which Ascott had written the address of the place where he had been taken to ; and though the girl said not a word, her anxious eyes made piteous inquiry.

Her mistress patted her on the shoulder.

"Never mind about me ; I shall come to no harm, Elizabeth."

"It's a bad place ; such a dreadful place, Mrs. Jones says."

"Is it ?" Elizabeth guessed part, not the whole of the feelings that made Hilary hesitate, shrink even, from the duty before her, turning first so hot, and then so pale. Only as a duty could she have done it at all. "No matter, I must go. Take care of my sister."

She ran down the door-steps, and walked quickly through the Crescent. It was a clear, sunshiny, frosty day ; such a day as always both cheered and calmed her. She had, despite all her cares, youth, health, energy ; and a holy and constant love lay like a sleeping angel in her heart. Must I tell the truth, and own that before she had gone two streets' length, Hilary ceased to feel so very, very miserable ?

Love—this kind of love of which I speak—is a wonderful thing ; the most wonderful thing in all the world. The strength it gives, the brightness, the actual happiness, even in hardest times, is often quite miraculous. When Hilary sat waiting in the jeweller's shop, she watched a little episode of high life,—two wealthy people choosing their marriage-plate ; the bride, so careless and haughty ; the bridegroom, so unutterably mean to look at, stamped with that innate smallness and coarseness of soul which his fine clothes only made more apparent. And she thought—oh, how fondly she thought !—of that honest, manly mien ; of that true, untainted heart, which, she felt sure, had never loved any woman but herself ; of the warm, firm hand, carving its way through the world for her sake, and waiting patiently till it could openly clasp hers, and give her everything it had won. She would not have exchanged him, Robert Lyon, with his penniless love, his half-hopeless fortunes, or maybe his lot of never-ending care, for the "brawest bridegroom" under the sun.

Under this sun—the common, every-day, winter sun of Regent and Oxford Streets—she walked now as brightly and bravely as if there were no trouble before her, no painful meeting with Ascott, no horrid humiliation from which every womanly feeling in her nature shrunk with acute pain. "Robert, my Robert !" she whispered in her heart,

and felt him so near to her that she was at rest, she hardly knew why.

Possibly, grand, or clever, or happy people, who condescend to read this story, may despise it ; think it un-ideal, uninteresting ; treating of small things and common people ; "poor persons," in short. I cannot help it. I write for the poor ; not to excite the compassion of the rich towards them, but to show them their own dignity, and the bright side of their poverty. For it has its bright side ; and its very darkest, when no sin is mixed up therewith, is brighter than many an outwardly prosperous life.

"Better is a dinner of herbs, where love is, than a stalled ox and hatred therewith."

"Better is a dry morsel, and quietness therewith, than a house full of sacrifices and strife."

With these two sage proverbs — which all acknowledge, and scarcely any really believe, or surely they would act a little more as if they did—I leave Johanna Leaf sitting silently in her solitary parlour, knitting stockings for her child ; weaving many a mingled web of thought withal, yet never letting a stitch go down ; and Hilary Leaf walking cheerily and fearlessly, up one strange street and down another, to find out the "bad" place, where she once had no idea it would ever have been her lot to go. One thing she knew, and gloried in the knowledge, that if Robert Lyon had known she was going, or known half the cares she had to meet, he would have re-crossed the Indian seas,—have risked fortune, competence, hope of the future, which was the only cheer of his hard present,—in order to save her from them all.

The minute history of this painful day I do not mean to tell. Hilary never told it till, years after, she wept it out upon a bosom that could understand the whole, and would take good care that, while the life beat in his, *she* never should go through the like again.

Ascott came home—that is, was brought home—very humbled, contrite, and grateful. There was no one to meet him but his Aunt Johanna, and she just kissed him quietly, and bade him come over to the fire ; he was shivering, and somewhat pale. He had even two tears in his handsome eyes, the first Ascott had been known to shed since he was a boy. That he felt a good deal, perhaps as much as was in his nature to feel, there could be no doubt. So his two aunts were glad and comforted ; gave him his tea and the warmest seat at the hearth ; said not a harsh word to him, but talked to him about indifferent things. Tea being over, Hilary was anxious to get everything painful ended before Selina came home,—Selina, who, they felt by instinct, had now a separate interest from themselves, and had better not be told this sad story if possible ; so she asked her

nephew "if he remembered what they had to do this evening?"

"Had to do? Oh, Aunt Hilary, I'm so tired! can't you let me be quiet? Only this one night. I promise to bring you everything on Monday."

"Monday will be too late. I shall be away. And you know you can't do without my excellent arithmetic," she added, with a faint smile. "Now Ascott, be a good boy—fetch down all those bills, and let us go over them together."

"His debts came to more than the thirty pounds then?" said his Aunt Johanna, when he was gone.

"Yes. But the ring sold for fifty." And Hilary drew to the table, got writing materials, and sat waiting, with a dull, silent patience in her look, at which Johanna sighed and said no more.

The aunt and nephew spent some time in going over that handful of papers, and approximating to the sum total, in that kind of awful arithmetic when figures cease to be mere figures, but grow into avenging monsters, bearing with them life or death.

"Is that all? You are quite sure it is all?" said Hilary at last, pointing to the whole amount, and looking steadily into Ascott's eyes.

He flushed up, and asked what she meant by doubting his word?

"Not that, but you might easily have made a mistake; you are so careless about money matters."

"Ah, that's it. I'm just careless, and so I come to grief. But I never mean to be careless any more. I'll be as precise as you. I'll balance my books every week—every day if you like—exactly as you do at that horrid shop, Aunt Hilary."

So he was rattling on, but Hilary stopped him by pointing to the figures.

"You see, this sum is more than we expected. How is it to be met? Think for yourself. You are a man now."

"I know that," said Ascott sullenly; "but what's the use of it?—money only makes the man, and I have none. If the ancient Peter would but die now, and leave me his heir, though to be sure Aunt Selina might be putting her oar in. Perhaps—considering I'm Aunt Selina's nephew—if I were to walk into the old chap now he might be induced to fork out! Hurrah! that's a splendid idea."

"What idea?"

"I'll borrow the money from old Ascott."

"That means, because he has already given, you would have him keep on giving—and you would take and take and take—Ascott, I'm ashamed of you."

But Ascott only burst out laughing. "Nonsense!—he has money and I have none; why shouldn't he give it me?"

"Why?"—she repeated, her eyes flashing and her little feminine figure seeming to grow taller while she spoke,—“I'll tell you, since you don't seem yourself to understand it. Because a young man, with health and strength in him, should blush to eat any bread but what he himself earns. Because he should work at anything and everything, stint himself of every luxury and pleasure, rather than ask or borrow, or, except under rare circumstances, rather than be indebted to any living soul for a single halfpenny. I would not, if I were a young man."

"What a nice young man you would make, Aunt Hilary!"

There was something in the lad's imperturbable good humour at once irritating and disarming. Whatever his faults, they were more negative than positive; there was no malice preposse about him, no absolute personal wickedness. And he had the strange charm of manner and speech which keeps up one's outer surface of habitual affection towards a person, long after all its foundations of trust and respect have hopelessly crumbled away.

"Come now—my pretty aunt must go with me. She will manage the old ogre much better than I. And he must be managed somehow. It's all very fine talking of independence, but isn't it hard that a poor fellow should be living in constant dread of being carried off to that horrid, uncleanly, beastly den—bah! I don't like thinking of it—and all for want of twenty pounds? You must go to him, Aunt Hilary."

She saw they must, there was no help for it. Even Johanna said so. It was after all only asking for Ascott's quarterly allowance three days in advance, for it was due on Tuesday. But what jarred against her proud, honest spirit was the implication that such a request gave of taking as a right that which had been so long bestowed as a favour. Nothing but the great strait they were in could ever have driven her to consent that Mr. Ascott should be applied to at all: but since it must be done, she felt that she had better do it herself. Was it from some lurking doubt or dread that Ascott might not speak the entire truth, as she had insisted upon its being spoken, before Mr. Ascott was asked for anything? Since whatever he gave, must be given with a full knowledge on his part of the whole pitiable state of affairs.

It was with a strange, sad feeling—the sadder because he never seemed to suspect it, but talked and laughed with her as usual—that she took her nephew's arm, and walked silently through the dark squares, perfectly well aware that he only asked her to go with him in order to do an unpleasant thing which he did not like to do himself, and that she only went with him in the character of watch, or supervisor, to try and save him from

doing something which she herself would be ashamed should be done.

Yet he was ostensibly the head, hope, and stay of the family. Alas! many a family has to submit to, and smile under an equally melancholy and fatal sham.

CHAPTER XVII.

MR. ASCOTT was sitting, half asleep, in his solitary dining room, his face rosy with wine, his heart warmed also, probably from the same cause. Not that he was in the least "tipsy," that low word applicable only to low people, and not to men of property, who have a right to enjoy all the good things of this life. He was scarcely even "merry," merely "comfortable," in that cosy, benevolent state which middle-aged or elderly gentlemen are apt to fall into after a good dinner and good wine, when they have no mental resources, and the said good dinner and good wine constitutes their best notion of felicity.

Yet wealth and comfort are not things to be despised. Hilary herself was not insensible to the pleasantness of this warm, well-lit, crimson-atmosphered apartment. She as well as her neighbours liked pretty things about her, soft harmonious colours to look at and wear, well-cooked food to eat, cheerful rooms to live in. If she could have had all these luxuries with those she loved to share them, no doubt she would have been much happier. But yet she felt to the full that solemn truth, that "a man's life consisteth not in the abundance of things that he possesses;" and though hers was outwardly so dark, so full of poverty, anxiety, and pain, still she knew that inwardly it owned many things, one thing especially, which no money could buy, and without which, fine houses, fine furniture, and fine clothes—indeed, all the comforts and splendours of existence, would be worse than valueless, actual torment. So, as she looked around her, she felt not the slightest envy of her sister Selina.

Nor of honest Peter, who rose up from his arm-chair, pulling the yellow silk handkerchief from his sleepy face, and, it must be confessed, receiving his future connexions very willingly, and even kindly.

Now, how was he to be told? How, when she and Ascott sat over the wine and dessert he had ordered for them, listening to the rich man's complaisant pomposities, were they to explain that they had come a-begging, asking him, as the climax to his liberalities, to advance a few pounds, in order to keep the young man whom he had for years generously and sufficiently maintained, out of prison? This, smooth it over as one might, was, Hilary felt, the plain English of the matter, and as minute after minute lengthened, and nothing was said of their errand, she sat upon thorns.

But Ascott drank his wine and ate his walnuts quite composedly.

At last Hilary said, in a sort of desperation, "Mr. Ascott, I want to speak to you."

"With pleasure, my dear young lady. Will you come to my study.—I have a most elegantly furnished study, I assure you. And any affair of yours"—

"Thank you, but it is not mine; it concerns my nephew here."

And then she braced up all her courage, and while Ascott busied himself over his walnuts—she had the grace to look excessively uncomfortable—she told, as briefly as possible, the bitter truth.

Mr. Ascott listened, apparently without surprise, and anyhow, without comment. His self-important loquacity ceased, and his condescending smile passed into a sharp, reticent, business look. He knitted his shaggy brows, contracted that coarsely-hung, but resolute mouth, in which lay the secret of his success in life, buttoned up his coat, and stuck his hands behind him over his coat-tails. As he stood there on his own hearth, with all his comfortable splendours about him—a man who had made his own money, hardly and honestly, who from the days when he was a poor errand-lad had had no one to trust to but himself, yet had managed always to help himself, ay, and others too—Hilary's stern sense of justice contrasted him with the graceful young man who sat opposite to him, so much his inferior, and so much his debtor. She owned that Peter Ascott had a right to look both contemptuous and displeased.

"A very pretty story, but I almost expected it," said he.

And there he stopped. In his business capacity he was too acute a man to be a man of many words, and his feelings, if they existed, were kept to himself.

"It all comes to this, young man," he continued, after an uncomfortable pause, in which Hilary could have counted every beat of her heart, and even Ascott played with his wine-glass in a nervous kind of way,—"you want money, and you think I'm sure to give it, because it wouldn't be pleasant just now to have discreditable stories going about concerning the future Mrs. Ascott's relatives. You're quite right, it wouldn't. But I'm too old a bird to be caught with chaff for all that. You must rise very early in the morning to take me in."

Hilary started up in an agony of shame. "That's not fair, Mr. Ascott. We do not take you in. Have we not told you the whole truth? I was determined you should know it before we asked you for one farthing of your money. If there were the smallest shadow of a chance for Ascott in any other way, we never would have come to you at all. It is a horrible, horrible humiliation!"

It might be that Peter Ascott had a soft place in his heart, or that this time, just before his marriage, was the one crisis which sometimes occurs in a hard man's life, when, if the right touch comes, he becomes malleable ever after: but he looked kindly at the poor girl, and said in quite a gentle way,—

"Don't vex yourself, my dear. I shall give the young fellow what he wants; nobody ever called Peter Ascott stingy. But he has cost me enough already; he must shift for himself now. Hand me over that cheque-book, Ascott, but remember this is the last you'll ever see of my money."

He wrote the memorandum of the cheque inside the page, then tore off the cheque itself, and proceeded to write the words "Twenty pounds," date it, and sign it, lingering over the signature, as if he had a certain pride in the honest name "Peter Ascott," and was well aware of its monetary value on 'Change and elsewhere.

"There, Miss Hilary, I flatter myself that's not a bad signature, nor would be easily forged. One cannot be too careful over—What's that? a letter, John?"

By his extreme eagerness, almost snatching it from his footman's hands, it was one of importance. He made some sort of rough apology, drew the writing materials to him, wrote one or two business-looking letters, and made out one or two more cheques.

"Here's yours, Ascott; take it, and let me have done with it," said he, throwing it across the table folded up. "Can't waste time on such small transactions. Ma'am, excuse me, but five thousand pounds depends on my getting these letters written and sent off within a quarter of an hour."

Hilary bent her head, and sat watching the pen scratch, and the clock tick on the mantel-piece; thinking if this really was to be the last of his godfather's allowance, what on earth would become of Ascott? For Ascott himself, he said not a word. Not even when, the letters despatched, Mr. Ascott rose, and administering a short, sharp homily, tacitly dismissed his visitors. Whether this silence was sullenness, cowardice, or shame, Hilary could not guess.

She quitted the house with a sense of grinding humiliation almost intolerable. But still the worst was over; the money had been begged and given—there was no fear of a prison. And spite of everything, Hilary felt a certain relief that this was the last time Ascott would be indebted to his godfather. Perhaps, this total cessation of extraneous help might force the young man upon his own resources, compel his easy temperament into active energy, and bring out in him those dormant qualities that his aunts still fondly hoped existed in him.

"Don't be down-hearted, Ascott," she said; "we will manage to get on somehow, till you hear of a practice, and then you must work—work like a 'brick,' as you call it. You will, I know!"

He answered nothing.

"I won't let you give in, my boy," she went on kindly. "Who would ever dream of giving in, at your age, with health and strength, a good education, and no incumbrances whatever—not even aunts! for we will not stand in your way, be sure of that. If you cannot settle here, you shall try to get out abroad, as you have sometimes wished, as an army-surgeon or a ship's doctor; you say these appointments are easy enough to be had. Why not try? Anything; we will consent to anything, if only we can see your life busy and useful and happy."

Thus she talked, feeling far more tenderly to him in his forlorn despondency, than when they had quitted the house two hours before. But Ascott took not the slightest notice. A strange fit of sullenness or depression seemed to have come over him, which, when they reached home, and met Aunt Johanna's silently questioning face, changed into devil-may-care indifference.

"Oh yes, aunt, we've done it; we've got the money, and now I may go to the dogs as soon as I like."

"No," said Aunt Hilary, "it is nothing of the sort: it is only that Ascott must now depend upon himself, and not upon his godfather. Take courage," she added, and went up to him and kissed him on the forehead; "we'll never let our boy go to the dogs! and, as for this disappointment, or any disappointment, why it's just like a cold bath, it takes away your breath for the time, and then you rise up out of it, brisker and fresher than ever."

But Ascott shook his head with a fierce denial. "Why should that old fellow be as rich as Croesus, and I as poor as a rat? Why should I be put into the world to enjoy myself, and can't? Why was I made like what I am, and then punished for it? Whose fault is it?"

Ay, *whose*? The eternal, unsolvable problem rose up before Hilary's imagination. The ghastly spectre of that everlasting doubt, which haunts even the firmest faith sometimes—and which all the nonsense written about that mystery which,

"Binding nature fast in fate,
Leaves free the human will,"

only makes darker than before—oppressed her for the time being with an inexpressible dread.

Ay, *why* was it that the boy was what he was? From his inherited nature, his temperament, or his circumstances? What, or more awful question still, *who* was to blame?

But, as Hilary's thoughts went deeper down, the question answered itself—at least as far as it ever can be answered in this narrow, finite stage of being. Whose will—we dare not say whose blame—is it that evil must inevitably generate evil? that the smallest wrong-doing in any human being, rouses a chain of results which may fatally involve other human beings in an almost incalculable circle of misery? The wages of sin is death. Were it not so, sin would cease to be sin, and holiness, holiness. If He, the All-holy, who for some inscrutable purpose saw fit to allow the existence of evil, allowed any other law than this, in either the spiritual or material world, would He not be denying Himself, counteracting the necessities of His own righteous essence, to which evil is so antagonistic, that we cannot doubt it must be in the end cast into total annihilation—into the allegorical lake of fire and brimstone, which is the "second death?" Nay, do they not in reality deny Him and His holiness almost as much as Atheists do, who preach that the one great salvation which He has sent into the world is a salvation *from punishment*—a keeping out of hell and getting into heaven—instead of a salvation *from sin*, from the power and love of sin, through the love of God in Christ?

I tell these thoughts, because like lightning they passed through Hilary's mind, as sometimes a whole chain of thoughts do, link after link, and because they helped her to answer her nephew quietly and briefly; for she saw he was in no state of mind to be argued with.

"I cannot explain, Ascott, why it is that any of us are what we are, and why things happen to us as they do; it is a question we none of us understand, and in this world never shall. But if we know what we ought to be, and how we may make the best of everything, good or bad, that happens to us, surely that is enough, without perplexing ourselves about anything more."

Ascott smiled, half contemptuously, half carelessly; he was not a young fellow likely to perplex himself long or deeply about these sort of things.

"Anyhow, I've got £20 in my pocket, so I can't starve for a day or two. Let's see; where is it to be cashed? Hillo! who would have thought the old fellow would have been so stupid! Look there, Aunt Hilary!"

She was so unfamiliar with cheques for £20, poor little woman, that she did not at first recognise the omission of the figures "£20" at the left-hand corner. Otherwise, the cheque was correct.

"Ho, ho!" laughed Ascott, exceedingly amused, so easily was the current of his mind changed. "It must have been the £5000 pending that muddled the 'cute old fellow's brains. I wonder

whether he will remember it afterwards, and come posting up to see that I've taken no ill-advantage of his blunder; changed this 'Twenty' into 'Seventy.' I easily could, and put the figures £70 here. What a good joke!"

"Had ye not better go to him at once, and have the matter put right?"

"Rubbish! I can put it right myself. It makes no difference who fills up a cheque, so that it is signed all correct. A deal you women know of business!"

But still Hilary, with a certain womanish uneasiness about money matters, and an anxiety to have the thing settled beyond doubt, urged him to go.

"Very well; just as you like. I do believe you are afraid of my turning forger."

He buttoned his coat with a half-sulky, half-defiant air, left his supper untasted, and disappeared.

It was midnight before he returned. His aunts were still sitting up, imagining all sorts of horrors, in an anxiety too great for words; but when Hilary ran to the door, with the natural "Oh, Ascott, where have you been?" he pushed her aside with a gesture that was almost fierce in its repulsion.

"Where have I been? taking a walk round the Park; that's all. Can't I come and go as I like, without being pestered by women? I'm horribly tired. Let me alone,—do!"

They did let him alone. Deeply wounded, Aunt Johanna took no further notice of him than to set his chair a little closer to the fire, and Aunt Hilary slipped down stairs for more coals. There she found Elizabeth, who they thought had long since gone to bed, sitting on the stairs, very sleepy, but watching still.

"Is he come in?" she asked; "because there are more bailiffs after him. I'm sure of it; I saw them."

This, then, might account for his keeping out of the way till after twelve o'clock, and also for his wild haggard look. Hilary put aside her vague dread of some new misfortune; assured Elizabeth that all was right: he had got wherewithal to pay everybody on Monday morning, and would be safe till then. All debtors were safe on Sunday.

"Go to bed now,—there's a good girl; it is hard that you should be troubled with our troubles."

Elizabeth looked up with those fond grey eyes of hers. She was but a servant, and yet looks like these engraved themselves ineffaceably on her mistress's heart, imparting the comfort that all pure love gives, from any one human being to another.

And love has its wonderful rights and rewards. Perhaps Elizabeth, who thought herself nothing at all to her mistress, would have marvelled to know how much closer her mistress felt to this poor,

honest, loving girl, whose truth she believed in, and on whose faithfulness she implicitly depended, than towards her own flesh and blood, who sat there moodily over the hearth; deeply pitied, sedulously cared for, but as for being confided in, relied on, in great matters or small, his own concerns or theirs,—the thing was impossible.

They could not even ask him,—they dared not, in such a strange mood was he,—the simple question, had he seen Mr. Ascott, and had Mr. Ascott been annoyed about the cheque? It would not have been referred to at all, had not Hilary, in holding his coat to dry, taken his pocket-book out of the breast-pocket, when he snatched at it angrily.

"What are you meddling with my things for? Do you want to get at the cheque, and be peering at it, to see if it's all right? But you can't; I've paid it away. Perhaps you'd like to know who to? Then you shan't. I'll not be accountable to you for all my proceedings. I'll not be treated like a baby. You'd better mind what you are about, Aunt Hilary."

Never, in all his childish naughtiness, or boyish impertinence, had Ascott spoken to her in such a tone. She regarded him at first with simple astonishment, then hot indignation, which spurred her on to stand up for her dignity, and not submit to be insulted by her own nephew. But then came back upon her her own doctrine, taught by her own experience, that character and conduct alone constitutes real dignity or authority. She had, in point of fact, no authority over him; no one can have, not even parents, over a young man of his age, except that personal influence which is the strongest sway of all.

She said only, with a quietness that surprised herself—"You mistake, Ascott; I have no wish to interfere with you whatever; you are your own master, and must take your own course. I only expect from you the ordinary respect that a gentleman shows to a lady. You must be very tired and ill, or you would not have forgotten that."

"I didn't; or, if I did, I beg your pardon," said he, half subdued. "When are you going to bed?"

"Directly. Shall I light your candle also?"

"Oh, no; not for the world; I couldn't sleep a wink. I'd go mad if I went to bed. I think I'll turn out, and have a cigar."

His whole manner was so strange that his Aunt Johanna, who had sat aloof, terribly grieved, but afraid to interfere, was moved to rise up and go over to him.

"Ascott, my dear, you are looking quite ill. Be advised by your old auntie. Go to bed at once, and forget everything till morning."

"I wish I could; I wish I could. O Auntie, Auntie!"

He caught hold of her hand, which she had laid upon his head, looked up a minute into her kind, fond face, and burst into a flood of boyish tears.

Evidently his troubles had been too much for him; he was in a state of great excitement. For some minutes his sobs were almost hysterical: then by a struggle he recovered himself, seemed exceedingly annoyed and ashamed, took up his candle, bade them a hurried good-night, and went to bed.

That is, he went to his room; but they heard him moving about overhead for a long while after; nor were they surprised that he refused to rise next morning, but lay most of the time with his door locked, until late in the afternoon, when he went out for a long walk, and did not return till supper, which he ate almost in silence. Then, after going up to his room, and coming down again, complaining bitterly how very cold it was, he crept in to the fireside with a book in his hand, of which, Hilary noticed, he scarcely read a line.

His aunts said nothing to him; they had determined not; they felt that further interference would be not only useless, but dangerous.

"He will come to himself by and by; his moods, good or bad, never last long, you know," said Hilary, somewhat bitterly. "But, in the meantime, I think we had better just do as he says—let him alone."

And in that sad hopeless state they passed the last hours of that dreary Sunday—afraid either to comfort him or reason with him; afraid, above all, to blame him, lest it might drive him altogether astray. That he was in a state of great misery, half sullen, half defiant, they saw, and were scarcely surprised at it; it was very hard not to be able to open their loving hearts to him, as those of one family should always do, making every trouble a common care, and every joy a universal blessing. But in his present state of mind—the sudden obstinacy of a weak nature conscious of its weakness, and dreading control—it seemed impossible either to break upon his silence or to force his confidence.

They might have been right in this, or wrong; afterwards Hilary thought the latter. Many a time she wished and wished, with a bitter regret, that instead of the quiet "Goodnight, Ascott," and the one rather cold kiss on his forehead, she had flung her arms round his neck, and insisted on his telling out his whole mind to her, his nearest kinswoman, who had been half aunt and half sister to him all his life. But it was not done: she parted from him, as she did Sunday after Sunday, with a sore sick feeling of how much he might be to her, to them all, and how little he really was.

If this silence of hers was a mistake—one of those mistakes which sensitive people sometimes make—it was, like all similar errors, only too sorrowfully remembered and atoned for.

CHAPTER XVIII.

THE week passed by, and Hilary received no ill tidings from home. Incessant occupation kept her from dwelling too much on anxious subjects: besides, she would not have thought it exactly right, while her time and her mental powers were for so many hours per diem, legally Miss Balquidder's—to waste the one, and weaken the other, by what is commonly called "fretting." Nor, carrying this conscientious duty to a higher degree, and towards a higher Master, would she have dared to sit grieving overmuch over their dark future. And yet it was very dark. She pondered over what was to be done with Ascott, or whether he was still to be left to the hopeless hope of doing something for himself:—how long the little establishment at No. 15 could be kept together, or if, after Selina's marriage, it would not be advisable to make some change that should contract expenses, and prevent this hard separation, from Monday to Saturday, between Johanna and herself.

These, with equally anxious thoughts, attacked her in crowds, every day and every hour; but she had generally sufficient will to put them aside: at least till after work was done, and they could neither stupify nor paralyse her. Trouble had to her been long enough familiar to have taught her its own best lesson—that the mind can, in degree, rule itself, even as it rules the body.

Thus, in her business duties, which were principally keeping accounts; in her management of the two young people under her, and of the small domestic establishment connected with the shop, Hilary went steadily on, day after day; made no blunders in her arithmetic, no mistakes in her housekeeping. Being new to all her responsibilities, she had to give her whole mind to them; and she did it; and it was a blessing to her—the sanctified blessing which rests upon labour, almost seeming to neutralize its primeval curse.

But night after night, when work was over, she sat alone at her sewing—the only time she had for it—and her thoughts went faster than her needle. She turned over plan after plan, and went back upon hope after hope, that had risen and broken like waves of the sea—nothing happening that she had expected: the only thing which had happened, or which seemed to have any permanence or reality, being two things which she had never expected at all—Selina's marriage, and her own engagement with Miss Balquidder. It often happens so, in most people's lives, until at last they learn to live

on from day to day, doing each day's duty within the day, and believing that it is a righteous as well as a tender hand which keeps the next day's page safely folded down.

So Hilary sat, glad to have a quiet hour, not to grieve in, but to lay out the details of a plan which had been maturing in her mind all week, and which she meant definitely to propose to Johanna when she went home next day. It would cost her something to do so, and she had had some hesitations as to the scheme itself, until at last she threw them all to the winds, as an honest-hearted, faithful, and faithfully-trusting woman would. Her plan was, that they should write to the only real friend the family had—the only good man she believed in—stating plainly their troubles and difficulties about their nephew; asking his advice, and possibly his help. He might know of something—some opening for a young surgeon in India, or some temporary appointment for the voyage out and home, which might catch Ascott's erratic and easily-attracted fancy; give him occupation for the time being, and at least detach him from his present life, with all its temptations and dangers.

Also, it might result in bringing the boy again under that influence which had been so beneficial to him while it lasted, and which Hilary devoutly believed was the best influence in the world. Was it unnatural, if, mingled with an earnest desire for Ascott's good, was an underlying delight that that good should be done to him by Robert Lyon?

So when her plan was made, even to the very words in which she meant to unfold it to Johanna, and the very form in which Johanna should write the letter, she allowed herself a few brief minutes to think of him—Robert Lyon,—to call up his eyes, his voice, his smile; to count, for the hundredth time, how many months—one less than twenty-four, so she could not say years now—it would be before he returned to England. Also, to speculate when and where they would first meet, and how he would speak the one word—all that was needful to change "liking" into "love," and "friend" into "wife." They had so grown together during so many years, not the less so during these years of absence, that it seemed as if such a change would hardly make any difference. And yet—and yet—as she sat and sewed, wearied with her day's labours, sad and perplexed, she thought—if only, by some strange magic, Robert Lyon were standing opposite, holding open his arms, ready and glad to take her and all her cares to his heart, how she would cling there! how closely she would creep to him, weeping with joy and content, neither afraid nor ashamed to let him see how dearly she loved him!

Only a dream! ah, only a dream! and she

started from it at the sharp sound of the door-bell—started, blushing and trembling, as if it had been Robert Lyon himself, when she knew it was only her two young assistants whom she had allowed to go out to tea in the neighbourhood. So she settled herself to her work again; put all her own thoughts by in their little private corners, and waited for the entrance and the harmless gossip of these two orphan girls, who were already beginning to love her, and make a friend of her, and towards whom she felt herself quite an elderly and responsible person. Poor little Hilary! It seemed to be her lot always to take care of somebody or other. Would it ever be that anybody should take care of her?

So she cleared away some of her needle-work, stirred the fire, which was dropping hollow and dull, and looked up pleasantly to the opening door. But it was not the girls: it was a man's foot, and a man's voice.

"Any person of the name of Leaf living here? I wish to see her; on business."

At another time she would have laughed at the manner and words, as if it were impossible so great a gentleman as Mr. Ascott could want to see so small a person as the "person of the name of Leaf," except on business. But now she was startled by his appearance at all. She sprang up only able to articulate, "My sister"—

"Don't be frightened; your sisters are quite well. I called at No. 15, an hour ago."

"You saw them?"

"No; I thought it unadvisable, under the circumstances."

"What circumstances?"

"I will explain, if you will allow me to sit down, bah! I've brought in sticking to me a straw out of that confounded shaky old cab; one ought never to be so stupid as to go anywhere except in one's own carriage. This is rather a small room, Miss Hilary."

He eyed it curiously round: and, lastly, with his most acute look, he eyed herself, as if he wished to find out something from her manner, before going into further explanations.

But she stood before him, a little uneasy, and yet not very much so. The utmost she expected was some quarrel with her sister Selina; perhaps the breaking off of the match, which would not have broken Hilary's heart at all events.

"So you have really no idea what I'm come about?"

"Not the slightest."

"Well!" said Peter Ascott, "I hardly thought it; but when one has been taken in, as I have been, and this isn't the first time by your family"—

"Mr. Ascott! will you explain yourself?"

"I will, ma'am. It's a very unpleasant busi-

ness I come about; any other gentleman but me would have come with a police-officer at his back. Look here, Miss Hilary Leaf,—Did you ever set eyes on this before?"

He took out his cheque-book, turned deliberately over the small memorandum halves of the page, till he came to one in particular, then hunted in his pocket-book for something.

"My banker sent in to-day my cancelled cheques, which I don't usually go over oftener than three months; he knew that, the scamp!"

Hilary looked up.

"Your nephew, to be sure. See!"

He spread before her a cheque, the very one she had watched him write, seven days before, made payable to "Ascott Leaf, or bearer," and signed, with the bold, peculiar signature, "Peter Ascott." Only instead of being a cheque for twenty pounds, it was for seventy.

Instantly the whole truth flashed upon Hilary: Ascott's remark about how easily the T could be made into an S; and what a "good joke" it would be; his long absence that night; his strange manner; his refusal to let her see the cheque again; all was clear as daylight.

Unfortunate boy! the temptation had been too strong for him. Under what sudden, insane impulse he had acted; under what delusion of being able to repay in time; or of Mr. Ascott's not detecting the fraud; or if discovered, of its being discovered after the marriage, when to prosecute his wife's nephew would be a disgrace to himself, could never be known. But there, unmistakable, was the altered cheque: which had been presented and paid, the banker, of course, not having the slightest suspicion of anything amiss.

"Well, isn't this a nice return for all my kindness? So cleverly done, too. But for the merest chance, I might not have found it out for three months. Oh, he's a precious young rascal, this nephew of yours. His father was only a fool, but he—Do you know that this is a matter of forgery, —forgery, Ma'am," added Mr. Ascott, waxing hot in his indignation.

Hilary uttered a bitter groan.

Yes, it was quite true. Their Ascott, their own boy, was no longer merely idle, extravagant, thoughtless; faults bad enough, but capable of being mended as he grew older: he had done that which to the end of his days he could never blot out. He was a swindler and a forger.

She clasped her hands tightly together, as one struggling with sharp physical pain, trying to read the expression of Mr. Ascott's face. At last she put her question into words.

"What do you mean to do? Shall you prosecute him?"

Mr. Ascott crossed his legs, and settled his neck-

cloth, with a self-satisfied air. He evidently rather enjoyed the importance of his position. To be dictator, almost of life and death, to this unfortunate family was worth, certainly fifty pounds.

"Well, I haven't exactly determined. The money, you see, is of no moment to me, and I couldn't get it back anyhow. He'll never be worth a half-penny—that rascal. I might prosecute, and nobody would blame me; indeed, if I were to decline marrying your sister, and cut the whole set of you, I don't see," and he drew himself up, "that anything could be said against me. But—"

Perhaps, hard man as he was, he was touched by the agony of suspense in Hilary's face, for he added—

"Come, come, I won't disgrace your family; I won't do anything to harm the fellow."

"Thank you!" said Hilary, in a mechanical, unnatural voice.

"As for my money, he's welcome to it, and much good may it do him. 'Set a beggar on horseback, and he'll ride to the devil,' and in double quick time too. I won't hinder him. I wash my hands of the young scapegrace. But he'd better not come near me again."

"No," acquiesced Hilary, absently.

"In fact," said Mr. Ascott, with a twinkle of his sharp eye, "I have already taken measures to frighten him away, so that he may make himself scarce, and give neither you nor me any farther trouble. I drove up to your door with a policeman, asked to see Mr. Leaf, and when I heard that he was out—a lie, of course—I left word I'd be back in half an hour. Depend upon it," and he winked confidentially—"he will smell a rat, and make a moonlight flitting of it, and we shall never hear of him any more."

"Never hear of Ascott any more?" repeated Hilary, and for an instant she ceased to think of him as what he was—swindler, forger, ungrateful to his benefactors, a disgrace to his home and family. She saw only the boy Ascott, with his bright looks and pleasant ways, whom his aunts had brought up from his cradle, and loved with all his faults—perhaps loved still. "Oh! I must go home. This will break Johanna's heart."

Mr. Peter Ascott possibly never had a heart—or it had been so stunted in its growth—that it had never reached its fair development. Yet he felt sorry in his way for the "young person," who looked so deadly white, yet tried so hard not to make a scene; nay, when her two assistants came into the one little parlour, deported herself with steady composure; told them that she was obliged suddenly to go home, but would be back, if possible, the next morning. Then, in that orderly, accurate way which Peter Ascott could both understand and appreciate, she proceeded to arrange

with them about the shop and the house, in case she might be detained till Monday.

"You're not a bad woman of business," said he, with a patronizing air. "This seems a tidy little shop; I daresay you'll get on in it."

She looked at him with a bewildered air, and went on speaking to the young woman at the door.

"How much might your weekly receipts be in a place like this? And what salary does Miss—Miss What's-her-name give to each of you? You're the head shop-woman, I suppose?"

Hilary made no answer; she scarcely heard. All her mind was full of but one thing. "Never see Ascott any more!" There came back upon her all the dreadful stories she had ever heard of lads who had committed forgery, or some similar offence, and in dread of punishment, had run away in despair, and never been heard of for years; come to every kind of misery; perhaps even destroyed themselves. The impression was so horribly vivid, that when, pausing an instant in putting her books in their places, she heard the door-bell ring, Hilary with difficulty repressed a scream.

But it was no messenger of dreadful tidings; it was only Elizabeth Hand: and the quiet fashion in which she entered showed Hilary at once that nothing dreadful had happened at home.

"Oh, no; nothing has happened," confirmed the girl. "Only Miss Leaf sent me to see if you could come home to-night instead of to-morrow. She is quite well, that is, pretty well; but Mr. Leaf—"

Here catching sight of Miss Hilary's visitor, Elizabeth stopped short. Peter Ascott was one of her prejudices. She determined in his presence to let out no more of the family affairs.

On his part, Mr. Ascott had always treated Elizabeth as people like him usually do treat servants, afraid to lose an inch of their dignity, lest it should be an acknowledgment of equal birth and breeding with the class from which they are so terribly ashamed to have sprung. He regarded her now with a lordly air.

"Young woman—I believe you are the young woman who this afternoon told me that Mr. Leaf was out. It was a fib, of course."

Elizabeth turned round indignantly. "No, sir; I don't tell fibs. He was out."

"Did you give him my message when he came in?"

"Yes, sir."

"And what did he say, hey?"

"Nothing."

This was the literal fact; but there was something behind which Elizabeth had not the slightest intention of communicating. In fact, she set herself, physically and mentally, in an attitude of

dogged resistance to any pumping of Mr. Ascott. For though, as she had truly said, nothing special had happened, she felt sure that he was at the bottom of something which had gone wrong in the household that afternoon.

It was this. When Ascott returned, and she told him of his godfather's visit, the young man had suddenly turned so ghastly pale, that she had to fetch him a glass of water; and his Aunt Johanna—Miss Selina was out—had to tend him and soothe him for several minutes before he was right again. When at last, he seemed returning to his natural self, he looked wildly up at his aunt, and clung to her in such an outburst of feeling, that Elizabeth had thought it best to slip out of the room. It was tea-time, but still she waited outside for a half-hour or longer, when she gently knocked, and after a minute or two, Miss Leaf came out. There seemed nothing wrong, at least not much—not more than Elizabeth had noticed many and many a time after talks between Ascott and his aunts.

"I'll take in the tea myself," she said; "for I want you to start at once for Kensington, to fetch Miss Hilary. Don't frighten her—mind that, Elizabeth. Say I am much as usual myself; but that Mr. Leaf is not quite well, and I think she might do him good. Remember the exact words."

Elizabeth did, and would have delivered them accurately, if Mr. Ascott had not been present, and addressed her in that authoritative manner. Now, she resolutely held her tongue.

Mr. Ascott might in his time have been accustomed to eringing, frightened, or impertinent servants, but this was a phase of the species with which he was totally unfamiliar. The girl was neither sullen nor rude, yet evidently quite independent; afraid neither of her mistress, nor of himself. He was sharp enough to see that whatever he wanted to get out of Elizabeth must be got in another way.

"Come, my wench, you'd better tell; it'll be none the worse for you, and it shan't harm the young fellow, though I daresay he has paid you well for holding your tongue."

"About what, sir?"

"Oh! you know what happened when you told him I had called, eh? Servants get to know all about their master's affairs."

"Mr. Leaf isn't my master, and his affairs are nothing to me; I don't pry into 'em," replied Elizabeth. "If you want to know anything, sir, hadn't you better ask himself? He's at home to-night. I left him and my missus going to their tea."

"Left them at home, and at tea?"

"Yes, Miss Hilary."

It was an inexpressible relief. For the discovery must have come. Ascott must have known or guessed that Mr. Ascott had found him out; he must have confessed all to his Aunt, or Johanna would never have done two things which her sister knew she strongly disliked—sending Elizabeth wandering through London at night, and fetching Hilary home before the time. Yet they had been left sitting quietly at their tea!

Perhaps, after all, the blow had not been so dreadful. Johanna saw comfort through it all. Vague hopes arose in Hilary also; visions of the poor sinner sitting "clothed and in his right mind," contrite and humbled; comforted by them all with the inexpressible tenderness with which we yearn over one who "was dead and is alive again, was lost, and is found;" helped by them all in the way that women—some women especially, and these were of them—seem formed to help the erring and unfortunate; for, erring as he was, he had also been unfortunate.

Many an excuse for him suggested itself. How foolish of them, ignorant women that they were, to suppose that seventeen years of the most careful bringing up could, with his temperament, stand against the countless dangers of London life,—of any life, where a young man is left to himself in a great town, with his temptations so many, and his power of resistance so small.

And this might not, could not be a deliberate act. It must have been committed under a sudden impulse, to be repented of for the rest of his days. Nay, in the strange way in which our sins and mistakes are made not only the whips to scourge us, but the sicknesses out of which we often come,—suffering and weak indeed, but yet relieved, and fresh and sound,—who could tell but that this grave fault, this actual guilt, the climax of so many lesser errors, might not work out in the end Ascott's complete reformation?

So in the strange way in which, after a great shock, we begin to revive a little, to hope against hope, to see a slender ray breaking through the darkness, Hilary composed herself, at least so far as to enable her to bid Elizabeth go down stairs, and she would be ready directly.

"I think it is the best thing I can do,—to go home at once," said she.

"Certainly, my dear," replied Mr. Ascott, rather flattered by her involuntary appeal, and by an inward consciousness of his own exceeding generosity. "And pray don't disturb yourselves. Tell your sister from me—your sister Selina, I mean—that I overlook everything, on condition that you keep him out of my sight, that young blackguard!"

"Don't, don't!" cried Hilary, piteously.

"Well, I won't, though it's his right name,—a

fellow who could— Look you, Miss Hilary, when his father sent to me to beg ten pounds to bury his mother with, I did bury her, and him also, a month after, very respectably too, though he had no claim upon me, except that he came from Stowbury. And I stood godfather to the child, and I've done my duty by him. But, mark my words, what's bred in the bone will come in the flesh. He was born in a prison, and he'll die in a prison."

"God forbid!" said Hilary, solemnly. And again she felt the strong conviction, that whatever his father had been, or his mother, of whom they had heard nothing till she was dead, Ascott could not have lived all these years of his childhood and early boyhood with his three aunts at Stowbury without gaining at least some good, which might counteract the hereditary evil; as such evil can be counteracted, even as hereditary disease can be gradually removed by wholesome and careful rearing in a new generation.

"Well, I'll not say any more," continued Peter Ascott; "only, the sooner the young fellow takes himself off the better. He'll only plague you all. Now, can you send out for a cab for me?"

Hilary mechanically rang the bell, and gave the order.

"I'll take you to town with me if you like. It'll save you the expense of the omnibus. I suppose you always travel by omnibus?"

Hilary answered something, she hardly knew what, except that it was a declining of all these benevolent attentions. At last she got Mr. Ascott outside the street-door, and, returning, put her hand to her head with a moan.

"Oh, Miss Hilary, don't look like that!"

"Elizabeth, do you know what has happened?"

"No."

"Then I don't want you to know. And you must never try to find it out; for it is a secret that ought to be kept strictly within the family. Are you to be trusted?"

"Yes, Miss Hilary."

"Now, get me my bonnet, and let us make haste and go home."

They walked down the gas-lit Kensington High Street, Hilary taking her servant's arm; for she felt strangely weak. As she sat in the dark corner of the omnibus, she tried to look things in the face, and form some definite plan; but the noisy rumble at once dulled and confused her faculties. She felt capable of no consecutive thought, but found herself stupidly watching the two lines of faces, wondering, absently, what sort of people they were; what were their lives and histories; and whether they all had, like herself, their own personal burthen of woe. Which was,

alas! the one fact that never need be doubted in this world.

It was nigh upon eleven o'clock when Hilary knocked at the door of No. 15.

Miss Leaf opened it; but for the first time in her life she had no welcome for her child.

"Is it Ascott? I thought it was Ascott," she cried, peering eagerly up and down the street.

"He is gone out, then? When did he go?" asked Hilary, feeling her heart turn stone-cold.

"Just after Selina came in. She—she vexed him. But he cannot be long? Is not that man he?"

And just as she was, without shawl or bonnet, Johanna stepped out into the cold damp night, and strained her eyes into the darkness; but in vain.

"I'll walk round the Crescent once, and maybe I shall find him. Only go in, Johanna."

And Hilary was away again into the dark, walking rapidly, less with the hope of finding Ascott than to get time to calm herself, so as to meet, and help her sisters to meet, this worst depth of their calamity. For something warned her that this last desperation of a weak nature is more to be dreaded than any overt obstinacy of a strong one. She had a conviction that Ascott never would come home.

After a while, they gave up waiting and watching at the front-door, and shut themselves up in the parlour. The first explanation past, even Selina ceased talking; and they sat together, the three women, doing nothing, attempting to do nothing, only listening; thinking every sound was a step on the pavement or a knock at the door. Alas! what would they not have given for the fiercest knock, the most impatient, angry footstep, if only it had been their boy's?

About one o'clock, Selina had to be put to bed in strong hysterics. She had lashed her nephew with her bitter tongue till he had rushed out of the house, declaring that none of them should ever see his face again. Now she reproached herself as being the cause of all, and fell into an agony of remorse, which engrossed her sisters' whole care; until, her violent emotion having worn itself out, she went to sleep, the only one who did sleep in that miserable family.

For Elizabeth also, having been sent to bed hours before, was found by Miss Hilary sitting on the kitchen stairs, about four in the morning. Her mistress made no attempt at reproach, but brought her into the parlour to share the silent watch, never broken except to make up the fire or light a fresh candle; till candles burnt up, and shutters were opened, and upon their great calamity stared the broad unwelcome day.

PAGES FROM MY NOTE-BOOK.

BY ARCHBISHOP WHATELY.

I.—DURATION OF LIFE.

MANY attempts have been made—all of which appear to me total failures—to make out the ratio of man's whole life to the portion required for reaching *maturity*, to be the same as with other animals. As far as I can make out, the time for full growth, in the other mammals, is *one-seventh* of the natural term of existence; and in man, *ONE-FOURTH* at the *very utmost*. To take eighty as about man's natural term (when acute diseases and accidents do not intervene) is rather the outside; and the full growth of the bones is seldom complete before twenty; often not till later.

A horse that has not been *worked when young* (which nineteen-twentieths or more are), and is complete at five, is not older at thirty-five than a man at eighty. A dog, which is complete at or before two years, will live (if allowed) to thirteen or fourteen. And I believe the like ratio will hold good with most of the mammals, when fairly used, viz., one-seventh of the life is taken up in reaching maturity. Man, therefore, ought, by the same rule, to reach his regular term at *one hundred and forty years*—double of the Psalmist's allowance. As for the physical cause of the long duration of life in the early ages of the world, I think the only plausible theory is that which attributes it to the use of the tree of life by our first parents, before they were expelled from Paradise, which was likely to have imparted to the constitution of their descendants a strength which was *slowly and gradually* worn out in many generations.

With reference to the *final cause*—the purpose to be answered—great longevity was manifestly of great importance, with a view to the invention of the arts of life before writing was in use, that each man might have the benefit of his own very long experience.

II.—HYPOCRISY.

ROCHEFOUCAULT'S remark, that "Hypocrisy is the *homage* which vice pays to virtue," has become almost proverbial, and is cited with full approbation by writers of repute. I long assented to it without much reflection; but it will not hold good in the ordinary and obvious sense of the words; i.e., if by "*homage*" you understand a sincere acknowledgment that virtue is intrinsically superior to vice. There is only an acknowledgment that most men *like* it better, and *trust* it more. Now, a crafty knave will often feign not only *honesty*, but *ignorance* and *silliness*, in order to

throw men off their guard. He does not like to be thought knowing and clever, in most cases. And a skilful general will often disguise the *strength* of some post, in order to tempt the enemy to attack it, and draw them into an ambush. You may call this, if you will, the homage which intelligence and skill, and knowledge and strength pay to ignorance and weakness.

The true homage paid by vice to virtue is the genuine disgust and abhorrence which a bad man expresses and feels for all people's *faults*, *except* his own, and sometimes just such as he is himself guilty of. Selfish people, for instance, and sharp dealers in money matters, will often comment very freely, and very justly and sincerely, on those faults in their neighbours.

III.—THE CHURCH OF ROME A PARTY.

THE Church of Rome is of the character of a party, and ours is not; because that is *indefinite*, and ours is definite. Our Church lays down, whether rightly or wrongly, what its members are expected to assent to, and binds them no further; but a member of the Church of Rome has, in fact, subscribed to an *Et cetera*. He must comply with whatever the Church *may hereafter* decree. That Church accordingly laid down a new dogma a few years ago, and may another next year. Now, this *indefiniteness* is just the distinguishing mark of a *party*. The Church of Rome (as is the case of other *parties*) is of the character of an ordinary partnership, in which a man is *fully* answerable for *all* the acts, and all the debts of the body.

Our Church, on the contrary, and all associations similarly constituted, is like those partnerships founded on the system of "*limited liability*," in which no one is liable for more than what he stakes, and every one knows beforehand what that is.

When a man joins, for instance, a political party, though we are bound in charity to suppose that he approves of their *general principles*; he cannot foresee what *particular measures* he may be called upon to support or to oppose, on pain of being called a deserter. And so it is with all other *parties*, properly so called.

There is, however, an important distinction between the Church of Rome, on the one hand, and most other religious parties on the other. *She* requires you to *profess* your membership, your complete surrender of your private judgment, and your implicit submission to her decrees: while most other religious parties will generally

be found requiring the *direct contrary*; requiring you to disown all *party*, and to *profess* an unbiassed exercise of your own judgment. This is, in fact, putting upon you *two* yokes, instead of one.

You are not only to think and speak and act as others dictate, but to declare (and—if you can—believe) that this is your *own* free and unbiassed decision. But very frequently a man succeeds in convincing himself that he really *is* independent of party; and thus he submits the more patiently to this double yoke.

This disavowal of party in those who are really partisans, renders the approaches of party-spirit the more insidious. In conferring with one who makes this disavowal, especially if it is done with perfect sincerity, there is great danger of being yourself drawn in by little and little; and like a ship drawn in by a whirlpool at sea (as I have elsewhere observed), not to perceive your danger till escape is next to impossible. And if you feel fully confident that you are in no danger of party, this very confidence places you in the greatest danger.

One person to whom (among others) I had shown this article, replied to me by urging, as a ground of safety, the very *self-confidence* for which I had been endeavouring to substitute *self-distrust*,—setting forth, with solemn earnestness, the most vehement and uncalled-for protestations of sincere conviction and entire independence of party;—as if it had not been my very object to point out that this is one of the requisitions of party; that you are required to protest, and if possible to believe, that every opinion dictated to you is your own perfectly independent judgment! Of so little use is it to pour water on a thoroughly-kindled mass!

This also is to be observed, that in any conference between a partisan and an independent thinker, the former is the more likely to gain ground upon the other when other things are equal. If he brings you over to his opinion upon any point, it is likely that he will have gained that point PERMANENTLY; but if, on the other hand, you convince HIM on any point, you will find him next day just where he was before,—you will have been writing on the sea-sand what will be washed out by the next tide.

IV.—ANOMALIES IN LANGUAGE.

THERE are in our language sundry anomalies, some of them of recent introduction, and some of long standing.

(1.) In colloquial language it is common to hear persons say, "I won't do so-and-so more than I can help;" meaning, "more than I can *not* help."

(2.) There is an impropriety which one may

meet with, not only in conversation, but even in books, of using "don't" instead of "does n't." "I don't think so-and-so," i.e., "I do not think so," is good English. But we should not say, "he don't think so," but "he *does n't* think so," i.e., he does not think so.

(3.) "*Mutual*" is often used improperly instead of "*common*." Two persons may afford mutual assistance, i.e., assistance to each other; but we ought not to speak of their having a mutual friend, i.e., a friend common to both of them.

(4.) "*Own*" is often improperly used in the sense of "*for one's-self*." A person is often said to make his own clothes, to damage his own character, etc.; meaning, to do these things *for himself*. Properly, to make his own clothes is to distinguish it from his making another person's clothes; to damage his own character, from damaging another's, etc.

(5.) The American use of the word "*realize*" is very much creeping in. In proper English, to *realize* a large fortune, or a comfortable situation, means to *acquire* it. In the Yankee, it signifies to think a great deal about it. In their country, many a slave, probably, realizes the happiness of freedom, i.e., forms for himself a vivid picture of it; but in the language of Old England, it would be confined to those who have obtained their freedom. This anomaly has been vindicated on the plea, that we have no *one* word answering to the American sense of "*realize*;" but circumlocution is better than ambiguity.

(6.) An anomaly of very ancient standing is the use of the word "*either*" in the sense of "*each*." "A man may carry a watch on either side," would properly denote that he may wear it on the right side, *or else* on the left; not that he may carry two watches, one on *each* side, i.e., one on the right side, and one on the left. Yet this latter is the sense in which the word is used in our Bible version, and elsewhere.

(7.) "*By no means*" is continually used in the sense of "not at all." Thus it is very proper to say, "I can by no means effect this," i.e., there are no means by which I can effect it. But it is an anomaly to say, "this article is by no means costly;" for you could not say, "there are not any means by which it would be costly." "The sermon was by no means a long one," should have been, "the sermon was far from being a long one."

(8.) The use of "*as though*," in the sense of "*as if*," is an anomaly of very old standing. It is regular to say, "I form my decision in this case, as though I had consulted no one," i.e., as I should have done, even though I had not consulted any one. It is irregular to say, "you treat me *as though* you thought me culpable;" which would imply, "as you would do even though you thought

me culpable." It should be, "*as if you thought me culpable,*" i.e., as you would do if you thought me culpable."

(9.) "*Avocation*" means properly interruption, calling off from what we are about; but is often improperly used in the sense of *occupation*.

(10.) We often hear of such a one's "two eldest" children, instead of his *eldest two*; or singing the "*four first*" verses of such or such a Psalm. I never could find but one first verse in a Psalm.

(11.) It is an anomaly to talk of "ever so many," "ever so much," instead of "never so many," etc. This is a modern corruption which does not occur in our Bible version. In the account of Dinah in the book of Genesis, the Prince says, "Ask of me never so much dowry, and I will give it," i.e., "ask me so much, as there never was so much asked before;" but "ever so much" is quite an anomaly. If the word be used, the phrase should be "ever as much," not "ever so much."

(12.) We often hear the expression, "*would to God so-and-so were the case.*" In our Bible version we read, "Would God my lord were with the prophet that is in Samaria;" that is to say, "O that God would grant." The anomaly seems to have arisen from the French "*plût au Dieu,*" i.e., may it be pleasing to God.

(13.) There is an anomalous use of the plural for the singular, which is more common among women (even the best educated) than among men: "If any one thinks so-and-so, *they* are very much mistaken." A man will generally say, "*he* is mistaken;" but women, it would seem, do not like to use the masculine pronoun, and therefore employ the plural "*they,*" which is of the common gender.

V.—OF HOT WATER.

It has been said that "An Englishman is never happy but when he is miserable; a Scotchman never at home but when he is abroad; and an Irishman never at peace but when he is fighting."

Certain it is that there are some persons (both Irish and others) who delight to live in hot water;—who seem to enjoy themselves and thrive in the midst of perpetual contests. And if a man is always in hot water, there is some presumption that he is either one of these, or else so injudicious in his measures as to provoke hostility. But a presumption does not imply full proof, nor even a strong probability. It only throws the burden of proof on to the opposite side. *He* may be called on to show how it can be that, without being of a pugnacious disposition, he may yet be often in hot water. And this, I think, may be shown.

(1.) A man in public life who belongs to no party, and openly avows his disapprobation of parties, will be likely to incur the inveterate hos-

tility of all party men; who are a large portion of mankind.

It is remarked by Thucydides, in writing of the civil contests in Greece, that those who steered a middle course were destroyed by both parties, in resentment at their not joining them, or from grudging them an escape. This is one way in which a peaceably disposed man may incur hostility.

(2.) If he attempts to make peace between those who are contending, he is likely to verify the Scotch proverb, that "the ridder gets aye the worst stroke in the fray." If he decides completely in the favour of one of the parties, he will, of course, have the other against him; and if he perceives that each party is somewhat to blame, though somewhat less so than their opponents represent, he will be likely to have both of them upon him. For those who are engaged in a contest are apt to see no evil on their own side, and no good on their opponent's.

(3.) If he is an enemy to jobs and abuses of all kinds, he will incur the hostility of all those (and they are not a few) who from these derive some advantage. And he will probably be disliked, not only by those whom he has immediately to deal with, but also by others who may suspect that their turn will come next: even as pickpockets, when not actually detected, hate the sight of a policeman; and as rats have a universal antipathy to a ferret.

(4.) A large portion of mankind have something of sham about them; something of disguise or pretension, and profession of one motive while another, the real one, is suppressed. All such persons feel an instinctive aversion and dread towards any one whom they believe to see through them. They remind one of a sort of fairies of Scandinavian mythology, who had the appearance of beautiful damsels, and endeavoured to allure an incautious stranger, but, in reality, were hollow like masks, and were therefore most cautious not to let any one get behind them, and thus detect their emptiness.

(5.) Any one who is so far ahead of his age as to foresee future dangers, and difficulties, and needs, that are overlooked by most of his neighbours, will be almost sure to be vehemently denounced by them as a dangerous innovator, for proposing precautionary steps. And if anything does take place which he had predicted and forewarned them of, they will perhaps be even the more displeased with him on account of the superior foresight which he has displayed, which they feel as a kind of reproach to themselves.

From any of these causes, and much more from all of them combined, it may happen that a peaceable man will often be in hot water.

THE HUMAN EYE: ITS PHENOMENA AND ILLUSIONS.

If the human eye is wonderful in its structure and in its visual powers, it is not less wonderful when we study the ordinary and abnormal phenomena which it presents to us.

In the organ of hearing, the sensation is produced by vibrations of the air striking upon the drum of the ear, which communicates them by a beautiful mechanism to the auditory nerves. In the other senses, the sensation is produced by pressure, or by the contact of certain material bodies with the nerves of the organ; but when the material body is heat, as in the case of touch, or light, as in the case of vision, it is still an undecided question, whether the nervous membrane is excited by material particles issuing, like those of odoriferous bodies, from the source of light and heat, or by the vibrations of a medium called *ether*, which exists throughout space, and penetrates all transparent bodies; but whichever of these theories be true, light is produced by the pressure or impulse of the solid particles, or of the material undulation upon the retina.

This is finely shown by pressing the eyeball in either corner of the eye. If the pressure is made in a dark room, we shall see a brilliant spot of light on the side of the eye opposite to the place where the pressure is made. If this experiment is made in day-light, the luminous spot will be surrounded with a broad black ring, and this ring with another ring of light. If we compress with the point of the finger a caoutchouc ball filled with water or even air, we shall see that it is compressed immediately under the finger, but extended or dilated for a certain space round, and then round that space again compressed, the two pressures producing light, and the dilatations or extensions producing darkness. Different observers have seen rings of colour produced by pressure which are particularly beautiful when the pressure is made on the front of the eye. Sir Isaac Newton describes the effect of pressure between the eyeball and the nose "as a circle of colours like those on the feather of a peacock's tail," "the colours vanishing in a second if the eye and the finger remain quiet, but reappearing if the finger be moved with a quavering motion."

The light thus produced by pressure is exhibited on various occasions. A blow on the eye or the head propagated to the retina makes a flash of light shoot from the eyeball. In the act of sneezing, gleams of light are emitted from each eye, and on blowing the nose, two patches of light ap-

pear in front of the eye. Even when we ~~earn~~ ^{turn} the eyeballs quickly, the retina is pressed at the places where the muscles are inserted, two semicircles, and sometimes even whole circles of light, are seen towards the nose.

In certain states of the body, particularly affections of the stomach, the pressure of blood-vessels upon the retina generates, even in total darkness, a faint *blue* light floating before the eyes, disappearing and reappearing, becoming *green*, *yellow*, and even sometimes *red*. On some occasions the whole retina is affected, and the patient at midnight will be surrounded with light which does not illuminate the objects around him. When we consider the variety of forms which in perfect health the imagination can conjure up when looking into a fire, we may readily conceive how the masses of coloured light which float or remain *stationary* before the eye, may be moulded into those fantastic or natural shapes which haunt the couch of the invalid, even when the mind retains its energy and is conscious of the illusion! A sailor who had strengthened a thin sail by brushing a part of it with tar, saw upon it, when hoisted up, a gallows and a man under it without a head. He pointed it out to his shipmates as indicating "that something would happen." The picture was so strongly delineated that he could not bear the sight of it, and as soon as the sail was taken down in a calm day, he covered the figure with a piece of canvas. His anticipation was verified. He was himself executed for piracy and murder.

When we look at a luminous object, it remains visible and of the same colour for nearly the eighth part of a second after the eye is shut. This effect is well seen in the circle of red light produced by whirling round a burning stick in the dark; and in railway travelling it is finely displayed in the visibility of objects eclipsed by a hedge, or a paling with broad vertical bars separated by narrow openings. The light from the objects which passes through one narrow opening continues to impress the retina till the light from the next opening renews it, so that the hedge and the paling are actually so transparent as to allow us to see objects behind them, which if in a state of rest would be absolutely invisible.

This duration of impressions on the retina is the principle upon which the late Dr. Paris constructed his pretty little toy called the *Thaumatrope*, or Wonder-turner. A *cube*, for example, is drawn on

one side of a circular disk of cardboard, and a bird on the other. By twirling the disk with two strings fixed to its circumference, the bird will be seen in the cage, the picture of the cage remaining impressed upon the retina till the picture of the bird comes round, and is seen at the same time. Portions of letters or of sentences may be placed on each side of the card, and united, by twirling the card, into whole letters or sentences. It is upon the same principle that Professor Plateau has constructed his *Phenakistoscope*, or Magic Disk, by the rotation of which the pictures of animals are made to appear in motion, and the pictures of machinery to be actually working.

When we look long at any ordinarily luminous object, and turn the eye away from it upon a white ground, we shall for a short time see a distinct picture of it, of a different colour from the object itself. This picture is called an ocular spectrum. If the object is white upon a dark ground, the spectrum will be dark. If it is dark upon a white ground, it will be luminous or white. If it is red, the spectrum will be green, or *vice versa*. If blue it will be yellow, the spectrum having always the colour which that of the object wants to make white light. Hence these colours are called *complementary*.

If the light of the object is white and very strong, such as that of the sun, the spectra are not black, but of various colours. If we look at the sun near the horizon, the ocular spectrum will, when the eye is open, be a *brownish red*, with a *sky-blue* border, and when the eye is shut, a *green*, with a *red* border. The colour of the spectrum will change till the impression is gradually worn off, but even then it may be revived by a gentle pressure on the eyeball.

In some eyes these ocular spectra are more easily produced than in others. The celebrated Boyle knew one gentleman who "had injured his eyes by looking too fixedly upon the sun through a telescope without a coloured glass." His eyes were so affected by this excess of light, that for nine or ten years after the accident, he "saw a globe of light the size of the sun whenever he turned to a window or any white object." When Locke heard of this curious case, he requested Sir Isaac Newton's opinion on the subject, and was surprised to learn that he had himself seen the same phenomenon. After looking at the sun in a looking-glass, and studying the rings of colours surrounding the sun's image on the retina, his eye was so impressed, that "whenever he looked upon the clouds, or a book, or a bright object, he saw upon it a round, bright spot of light like the sun." The effect of this experiment, repeated three times, was such that he durst neither read nor write, but was obliged to shut himself up in a dark room for three days, till

he recovered the use of his eyes. For some months, however, he saw the picture of the sun whenever he thought upon it, even when he was in the dark, and many years afterwards he was of opinion that "he could still make the phantom return by the power of his fancy."

Another very remarkable condition of the eye is, what has been called *hemiopia*, or *half-vision*, under the influence of which we lose sight of half of every object at which we look, such as the half of a man whom we meet, or half of a name upon a sign-board. The half which disappears is sometimes on the left hand, and sometimes on the right. This half-blindness, as we may call it, is always temporary, and arises from the paralysis of a corresponding part of the retina in each eye. It is often produced by violent exercise, or from the eyes being much fatigued with reading, or work of any kind. Sometimes the paralysis is partial, running in lines, and obliterating letters or parts of lines in the book which we are reading. This condition of the eyes is generally found in persons in perfect health, and frequently continues for a very short time; but when the hemiopia is perfect, that is, when it shows half of an object, it may produce effects approaching to the supernatural. At certain distances, one of two or more persons will necessarily disappear, and reappear by a slight change of position either in the observer or the person observed. When only one person is in view, he may disappear altogether, under circumstances which would be inexplicable to the observer.

The appearance and disappearance of figures seen in the dark, or in very faint lights, furnishes us with an explanation of various apparitions which have been referred to the supernatural. The ghost never shows himself in the broad light of day, when he may be traced to his origin, either as an illusion of the brain, or as a carnal imposition upon the timid and the credulous. If the former, you could neither double him by squinting, nor multiply him by a multiplying-glass, nor displace him by refracting or reflecting the light by which he shines. If the latter, you may double him, or multiply him, or displace him, by the infallible ordeal of an optical inquisition. In neither case can the priest exorcise him. In the one you must appeal to the lancet or some salutary mixture; in the other, to the police and the magistrate. It is in the twilight, or under the pale radiance of the moon or stars, or under the almost utter darkness of midnight, that these spiritual burglars hold their orgies, and revel without challenge or detection. In the light which falls upon objects thus faintly illuminated, various remarkable effects are produced. We have seen that objects seen obliquely, even in the light of day, vanish and re-

appear; but it is equally true that objects faintly illuminated disappear and reappear even when the eye is fully directed to them, and is most anxious to scrutinize them. The darker portions of a figure will disappear when the rest of it is visible, and under the ever-varying lights and shadows of the night, objects moveable and immoveable will suffer changes of form which a timid or credulous observer will rank with the supernatural.

There is another property of the eye which, under certain circumstances, may perplex the observer. If in using one eye it has a fixed position, or is obliged to look through an aperture at any distant object eclipsed by a nearer one, *the invisible body will appear by looking away from it*; or if it is visible near the edge of the eclipsing body, when we look away from it, *it will disappear by looking at it*.

One of the most remarkable conditions of the eye is that under which *Spectral Illusions* are seen in the light of day, and even within the social circle. This class of illusions was first distinctly described by M. Nicolai, a bookseller in Berlin. In 1791, when agitated by some misfortunes, Nicolai saw before him the figure of a deceased friend, which accompanied him into another apartment, alternately vanishing and reappearing. After his health had been somewhat restored, this figure never appeared again, but others took its place, and underwent the most extraordinary transformations. The figures were sometimes persons known to him, or sometimes strangers, sometimes persons alive, but more frequently persons deceased. They were generally persons of both sexes, who, like people at a fair, passed to and fro as if they had no mutual connexion. On some occasions he saw persons on horseback, dogs and birds, all of their natural size and colour. The human spectres occasionally addressed one another audibly, and he sometimes heard their conversation in society intermixed with that of the company. These visions became at last so frequent as to disturb him during the night, and he found it necessary to apply leeches to his head. During this operation the room swarmed with human forms of every variety, crowding fast upon one another. They continued in this state for five hours, when they became paler and moved more slowly. Their colour was now white, though their form was perfectly distinct. Instead of moving off and vanishing as before, they dissolved immediately into air, whole pieces of some of them continuing for a length of time, and finally disappearing. At the end of nine hours from the application of the leeches not a vestige of them remained, and Nicolai was never again disturbed by these amusing visitors.

Our countryman, Sir Robert Liston, was subject during the last ten years of his life to almost daily

visitations from these spectral forms. Dr. Abercrombie, who received a description of them from Sir Robert, when upwards of eighty years of age, has given a particular account of this interesting case. The spectres seen by Sir Robert were generally human figures, sometimes the size of life, and sometimes in miniature, but always having "the clearness and minuteness of the finest painting." The head and upper parts of the body were distinctly defined, while the lower parts were often "lost in a kind of cloud." The figures appeared in various dresses, such as that of the age of Louis XIV., the costumes of ancient Rome, and that of the modern Turks and Greeks; but the most remarkable dress was that in which an elderly woman appeared, namely, "an old-fashioned Scottish tartan plaid, drawn up and brought forward over the head, and then crossed below the chin, as the plaid was worn by aged women in Sir Robert's younger days." "This spectre had a peculiarly arch and playful expression, and a dazzling brilliancy of eye, and seemed just ready to speak to him." Sir Robert's "own face was occasionally presented to him, gradually undergoing the change from youth to manhood, and from manhood to old age." Various fashions of wigs and head-dresses, and particularly the flowing full-bottomed wig of a former age, crowned his male and female visitors. Any addition to his usual quantity of wine, which was small, increased the number and vivacity of these spectres.

One of the most remarkable and best observed cases of spectral illusions, is that of a lady of our acquaintance, who is still living, having been subject to them for more than thirty years. From her previous knowledge of the subject, this lady studied her own case as one of spectral illusions, and she was never inclined to misinterpret her preceptions by any superstitious fears, or to exaggerate them by any love of the marvellous. On several occasions this lady saw the spectres of deceased relatives in the dresses which they had formerly worn; and when of these, a female relative had seated herself in an easy-chair at the fireside, the lady dissolved the spectre by sitting down in its lap. When sitting by the window with her husband, "a carriage and four appeared to her to be driving up the avenue to the house. As it approached, she felt inclined to go up stairs to prepare for receiving company, but as if spell-bound, she was unable to move or speak. The carriage approached, and when it arrived within a few yards of the window, she saw the figures of the postilions and the persons inside take the ghastly appearance of skeletons and other hideous figures. On another occasion, she saw her husband's brother, who was then alive and well in London, seat himself in a chair opposite to her, but dressed in grave-

clothes, and with a ghostly countenance, as if scarcely alive. After a fatiguing drive during the day, the lady was preparing to go to bed about eleven o'clock, P.M., and was seated before a dressing-glass arranging her hair. When her fingers were in active motion among the papillotes, she was suddenly startled by seeing in the mirror the figure of a near relative, who was then in Scotland and in perfect health. The apparition appeared over her left shoulder, and its eyes met hers in the glass. It was enveloped in grave-clothes closely pinned, as is usual with corpses, round the head and under the chin, and though the eyes were open, the features were solemn and rigid. After a few minutes she turned round to look for the reality over her shoulder, but it was not to be seen, and had also disappeared over her shoulder.

One of the most remarkable illusions to which we are exposed, arises from the use of two eyes in combining the pictures of objects formed on their retina. We do not refer to the marvellous phenomena of relief produced by uniting in the stereoscope, or by the convergency of the optic axis, the two dissimilar plane pictures which are formed by each eye. The illusion thus produced is only the reproduction of what we actually see, and can in no case alarm the timid or the credulous. The illusion which we are about to explain takes place within our own apartments, and is most likely to be seen by the student at his desk,—the lady with her novel,—the invalid in his couch, or the jovial frequenter of St. Stephen's, who may be accustomed to the vision of two speakers. If his apartments are painted with a uniform tint, or decorated with paper-hangings, with patterns small and irregularly disposed, the observer will not have the opportunity of studying, or be exposed to the risk of being startled at the illusion to which we refer. It is to an apartment where the paper-hangings consist of geometrical patterns, or of figures regularly placed at equal distances, that we must now conduct the reader.

Let us suppose that the paper of the room consists of flowers placed at the distance of twelve inches, which we can unite by squinting, or converging the optic axis to a point between ourselves and the wall. By a greater effort we can unite two flowers twenty-four inches distant, and by a greater effort still we can unite two flowers thirty-six inches distant. If we unite the flowers twelve inches distant, when standing *three feet* from the wall, all the flowers on the wall will be united, each flower consisting of two superimposed, and appearing at the point to which the eyes converge. The whole papered wall, therefore, with all its flowers, in place of being seen, as in ordinary vision, at the distance of *three feet*, will now appear suspended in the air, at the distance of six inches from the observer.

The eye will at first experience a disagreeable sensation, but it will soon disappear, and the suspended picture will be seen with as little strain as if we were looking at the wall itself. The surface of the picture is slightly curved towards the eye, with a silvery aspect, and is more beautiful than the real paper. It will move with the slightest motion of the head, and if we retire from the real wall, the suspended wall of flowers will follow us, moving farther and farther from the real wall; and also, but very slightly, farther and farther from ourselves. If we unite the flowers twenty-four or thirty-six inches distant, by a greater strain of the eye, the suspended wall will stand nearer us, but the other phenomena will be the same as before.

In examining this picture, some curious phenomena present themselves. Some of the flowers appear slightly in relief, the stalk, or some of the leaves retiring from, or rising above the plane of the picture, owing to slight inequalities in the combined flowers. In some cases a portion of one of the pieces of paper, and sometimes a whole stripe, or even two, from the roof to the floor, will retire from the general plane of the picture, forming a recess, or rise above it forming a projection, thus displaying on a large scale an error in the cutting of the paper, which it would have required a narrow inspection to discover. Illusions similar to those described, may be seen by uniting the figures on carpets, but the operation is more difficult, owing to the obliquity with which we must view the figures, unless they are suspended vertically. They may be seen also in all those painted decorations on which a series of similar patterns form a uniform surface.

The phenomena above described have been actually seen by persons who, at the time, were unacquainted with their causes. A gentleman who had taken so much wine as to see the figures on a papered wall double, got to a distance from it, at which it appeared suspended in the air. A more interesting case was communicated to us by one of our most distinguished physicians (Professor Christison), to whom it was at first a natural source of alarm. "Some years ago," he says, "when I resided in a house where several rooms are papered with rather formally recurring patterns, and one, in particular, with stars only; I used occasionally to be much plagued with the wall suddenly standing out upon me, and moving, as you describe, with the movements of the head. I was sensible that the cause was an error as to the point of union of the visual axes of the two eyes; but I remember it sometimes cost me a considerable effort to rectify the error; and I found that the best way was to increase still more the deviation, in the first instance. As this accident occurred most frequently while I was recovering from a severe attack of

fever, I thought my near-sighted eyes were threatened with some new mischief; and this opinion was justified in finding that, after removal to my present house—where, however, the papers have no very formal pattern—no such occurrence has ever taken place. The reason is now easily understood from your researches."

From these results some useful lessons may be learned. The ghosts of paper-hangings need not greatly alarm us. Although we can exorcise them by simply shutting one of our eyes, we would advise the patient to send for his physician. When they appear after dinner, the observer should take the pledge of total abstinence. In the decoration of our apartments, and in dresses male and female, small recurring patterns should be avoided, and particularly smallsquares like those in plaid fabrics. The observer can hardly avoid uniting these squares, or analogous figures in female dresses, thus causing part of the dress either to bulge out or sink into hollows, a result which while it gives pain to the eyes of the observer, does not improve the person who is observed.

A very remarkable condition of the eye is that under which it is blind to certain colours. This *colour-blindness*, as it has been called, seems to be a modern affection of the eye unknown to the ancients. The earliest case of it was described by a Dr. Turberville of Salisbury, who found it in a maid servant, who could only see *black* and *white*, being blind to all proper colour. In consequence of Professor Dugald Stewart, Dr. Dalton, and Mr. Troughton, being blind to certain colours, the subject has recently excited so much interest that the late Dr. George Wilson has written a whole volume on the subject. This defect is of three kinds: 1, an inability to perceive any colour but *black* and *white*; 2, an inability to distinguish *browns*, *greys*, and neutral colours; and 3, an inability to distinguish between *red*, *blue*, and *yellow*, and between *green*, *purple*, *orange*, and *brown*. The first of these varieties is very rare; three or four cases only are known, and these have been very imperfectly described. In the second of these varieties, the mere shades of the more compound colours are alone mistaken, such as *browns*, *greys*, and neutral tints. The most common difficulty is to distinguish *pink* from *pale blue*, owing to the insensibility of the eye to red light. In the third variety, the primary colours of *red*, *blue*, and *yellow* are confounded with the secondary and tertiary colours, such as *green*, *purple*, *orange*, and *brown*.

This imperfection of vision is, in many cases, hereditary. There are several examples in which almost all the members of a family have been afflicted with it. Dr. Wilson informs us that, with few exceptions, each colour-blind person

whom he examined had near relatives as colour-blind as himself. Five had each a brother colour-blind. One had five brothers equally defective. Another had his father, brother, sister and nephew in the same predicament. The Countess of D.'s brother, son, and two nephews are colour-blind, and a Mr. P. has or had five near relatives equally so.

From a great number of observations, Dr. Wilson is of opinion that one person in every fifty mistakes *red* for *green*, *brown* for *green*, *purple* for *blue*, and occasionally *red* for *black*; and including all kinds of colour-blindness, he thinks that one in twenty is colour-blind.

It is obvious that this imperfection of sight disqualifies the person for all professions that require a knowledge of colours. Colour-blind sailors or railway servants, who daily peril life and property in the case of red or green signals, are dangerous functionaries; and we have no doubt that Dr. Wilson is right in his suspicions that fatal shipwrecks and collisions at sea have arisen from the mistaken colour of a harbour-lamp, or a lighthouse beacon. Serious as such risks are, there are others of a higher order which may arise from this defect of vision; in the preparation of medicines; in the manufacture, adulteration, and preparation of food; in the operations of war, and in criminal trials. A colour-blind compounder of coloured ingredients; a colour-blind manufacturer of food and even of beverages; a colour-blind officer or sentinel, and a colour-blind witness, would all be dangerous characters in their respective spheres.

A very curious and often alarming affection of the eyes has received the name of *Musca Volitantes*, or *floating flies*. The spots, thus named from their resemblance to flies, are seen only under particular lights, unless when they are of a considerable size. They exist, to a certain extent, in the eyes of all persons, whether young or old, and may be best seen by looking through a pin-hole in a piece of brass or lead, or through a lens of very short focus. The field of light will be seen covered with what have been called twisted semi-transparent tubes or fibres, and various minute globules, sometimes separate, occasionally attached to the tubes, and often apparently within them. These different bodies have their axes or centres luminous, and on each side of the axis of the tubes are two black lines parallel to which are coloured fringes produced by the inflection or diffraction of light. These bodies may be made to move by a toss of the head, and change their place even when the eye is fixed. Some of the tubes or fibres are twisted as if knots had been tied upon them, and these knots are the true *Musca Volitantes*. These muscæ, and the objects accompanying them, are the remains of vessels whose

functions in the eye have been already performed. They exist principally in the cells of the vitreous humour, those which are most distant from the retina, having a wider range in their apparent motions, while those in cells close to that membrane seem almost fixed, and have, from this cause, been an unreasonable source of alarm as the har-binger of cataract or amaurosis. These muscæ, even when large and numerous, are quite harmless. They sometimes, however, interfere with distinct vision in observations with the telescope and microscope.

A series of very interesting illusions relates to the vision of forms, such as plane surfaces and lines stretching out from the eye, or standing vertically before it. In estimating the inclination of declivities, Bouguer found that the difference between the *real* and the *apparent* inclination varied from 0° to 25° , or 30° at a maximum. A horizontal plane appears to rise above the horizon 4° or 5° . The difference between the two increases with the inclination of the real plane, and at a particular inclination, not exactly determined, the difference is about 25° or 30° ; a difference exists between the two when the inclination is 90° , or where the plane is vertical, like the wall of a house. In this case the wall appears to hang over as if falling toward the observer. When the plane dips below the horizon, the apparent plane is still above the real one; that is, the real is *steeper than the apparent plane*. When the downward inclination of the plane is between 20° and 25° , the *real and apparent plane coincide*, and beyond this inclination the *apparent is steeper than the real plane*.

Bouguer has found also that the *form* of a plane changes with the height from which we view it. It has the appearance of a curved surface. The first part of the curve, where it springs from the feet of the observer, is inclined to the horizon about 4° or 5° . Beyond this the curvature increases, but quickly passes into a straight line. As these observations are true of surface, they must be true also of their sections, or of straight lines, and hence we may see the reason of the remarkable facts in architecture, lately placed beyond a doubt, that the lines of the architrave and basement of the Parthenon and Thesæum are curved upwards, and why every column has an inclination towards the centre of the temple. They may ex-

plain also other two remarkable facts, "that no two columns of the Parthenon correspond exactly," and that "the axis of no column is exactly through its centre." The beauty and apparent symmetry of architectural forms must therefore depend on a certain class of optical illusions, which have not yet been sufficiently studied, either by the architect or the man of science.

The last classes of ocular illusions, to which our space will allow us to refer, are what have been called the *Inversion of Perspective*, and the *Conversion of Relief*. If we look obliquely through a telescope or opera-glass at a sign-board, for example, one with the word BAKER upon it, the letter B being nearest the eye, the letters which are most distant will appear largest, thus BAKER and the sign-board if it is an accurate rectangle

 will appear . The same illusion may be seen, though less distinctly, without a telescope. This tendency of the eye to invert the perspective of rectangle, prevents or diminishes that appearance of convergency on the plane face of a lofty square tower, when we are standing not very far from its base. A photograph of the tower taken from the same spot would exhibit a painful convergency upwards which is not seen by the eye.

The *Conversion of Relief* is finely shown by looking at the hollow device upon a seal with the inverting eye-piece of a telescope. The hollow device rises into relief, like the wax impression which is taken from it. In like manner, every intaglio or hollow surface rises into a cameo, and every cameo sinks into an intaglio: the same effect may be produced by the eye alone, when it makes itself believe that the light which illuminates the raised or the depressed surface comes from the opposite side. From causes which have not yet been explained, the hollow footsteps of persons or animals, or the ruts of wheels upon a sandy beach, are occasionally seen to rise into relief, to sink again into hollows, and to rise again, without any apparent change, either in the position of the observer, or in the light which falls upon the footsteps. The phenomena is most easily seen when the sun is setting on one hand, and the sea with luminous breakers is on the other.

DAVID BREWSTER.

MY TREASURE.

I.

I HAVE a treasure. What is it, say,
O lady fair, O lady fair?
Is it a mirror to shine all day,
Or pearls to braid my brown, brown hair?

II.

A diamond buckle to clasp my shoon;
A satin robe—like the glistening crest
Of the lake that ripples under the moon—
Zoned with rubies beneath my breast?

III.

Is it a castle, with broad fair lands ;
 A magic purse of caged red gold,
 Whose swelling meshes within my hands
 Exhaustless store of riches hold ?

IV.

Is it some wondrous beauty-charm,
 To steep my lips in brilliant dyes,
 To mantle my neck in tresses warm,
 And tint my cheek and light my eyes ?

V.

Is it a crown and a throne of state,
 And a wand to wave o'er subjects leal,
 With mailed guards at my palace-gate,
 And a royal will to say and seal ?

VI.

I tell thee, no : it is none of these,
 O lady fair, O lady fair !
 But a little babe upon my knees
 To toss and pull my brown, brown hair.

At Home in the Scriptures.

A SERIES OF FAMILY READINGS FOR THE SUNDAY EVENINGS OF AUGUST.

FIRST EVENING.

THE NEW CREATURE.

"Make the tree good, and his fruit good."—MATT. xii. 33.

"MAKE the tree good:" a very necessary and useful work, but can it be done? Given a corrupt tree, bearing bad fruit, is there any method known and practicable whereby the double ailment may be effectually cured? Can a tree be converted? Can a tree be born when it is old? It may.

You stand in the garden and gaze on a full-grown fruit tree. Its brawny roots strike deeply into the soil; its gnarled branches radiate upward and all around. Its fruit, peeping out plentifully from beneath the veil of leaves, is swelling, colouring, sweetening, and ripening in the sunlight. You are in presence of a mystery. The tree was evil. As it sprang from the seed it was corrupt, and would have been barren or borne only bitter fruit all its days, if it had been let alone. But its owner and watcher did not let it alone. He cut its strong young stem sheer through in the middle, throwing its branching leafy head into the fire, and leaving its bleeding stump in the ground. Into that stump, at the wound, he inserted another stem taken from a good tree. The new head took band and grew. Up sprang the good tree on the old root: or to express otherwise the same operation, the old root which was evil, sending up its life-juices through the new engrafted stem, lived thereon a new, a changed life. Now, that old tree, as through its holy head it bears mellow fruit in harvest, may accommodate the words of Scripture, and say: "I was cut off, and died; nevertheless I live; yet not I, but the good tree liveth in me; and the life which I now live in the ground, I live through union of the good branch which loved me, and gave itself to me." It is the same tree that grew from seed long ago on the spot,—grew wild and worthless. But this evil tree put off itself, and put on another—one that was good. Now, while the original tree puts forth its energy after its kind, that energy is received and hallowed by the better nature that receives it, and expended in producing precious fruit. Many evil trees grow from seed in the same garden: from one good tree branches were taken to convert them all. By the goodness of one many have been made good.

That mystery of Nature corresponds closely, in many of its features, to the great mystery of grace. All men grow up morally corrupt. A man's nature cannot be changed unless he is born again: but can a man be born when he is old? He may. Man, made at first in God's image, fell by sin. The posterity of the fallen are fallen too. As trees springing from seed grow up evil, so men grow up sinful. By seedlings was the earth replenished, and not one of them was good. Many varieties

appeared in different countries and different ages; but they were only varieties of evil.

It did not seem good to God our Maker to root out all the evil, and cast them away. This creature was of a grade too high for being flung away as useless when he fell. He was made the son of God: another kind of creature the author of his being did not desire. To engraft a new, holy, spiritual nature on the stock of the old nature that had become corrupt by sin,—this was the purpose of God; for this the Gospel was planned and proclaimed.

God spared man after he had become corrupt. Our Father the husbandman did not cast out the trees from his ground because they were evil. He was satisfied with the constitution of his creature. Man remained man even when all his faculties were tainted by sin. On this basis redemption proceeds. It is not the creation of a being constitutionally different from man. It is rather a deliverance and a restoration. All the plants that shall bloom for ever in God's upper paradise are originally seedlings from the first corrupt tree. They have put on a new spiritual character, but constitutionally and in their roots they remain the same.

The glory of God was concerned in this. The wile of the Tempter did not subvert the plan of the Omniscient. It is the triumph of divine wisdom and love, that men who suffered and sinned on earth shall inhabit a holy heaven, the inhabitants as pure as their dwelling. Had humanity when damaged been thrown away, and others sought as sons and servants of the Lord Almighty, it might have seemed as if the Adversary had gained his object. Rather than cast mankind away, God became man, and dwelt among us. A holy seed, in our own nature, undertook our cause. When he is united to his people, they are just with God.

There will not be one of the human race in heaven who was not once a corrupt, sinful creature in the body here; and yet though Satan should show himself among the sons of God in their home on high, he would not be able to upbraid their Redeemer with admitting any unclean thing into his dwelling-place. A Christian, whether he is still sojourning here, or already admitted into rest, is the fallen son of a fallen sire. His person, his faculties, his physical and intellectual nature are the same that they were when he was under wrath; yet by being in Christ, he is now a new creature. The tree has been made good, and in due time good fruit will appear.

The engrafting which took place when the

Gentiles, branches of a wild olive, were cut from their parent stem, and inserted for life and fruitfulness into a good olive-tree, was a process "contrary to nature." The method of making the evil branch good by admitting it into the righteous root, was practised, in point of fact, in a spiritual sense, when the heathen were brought into the privileges of God's house, and the communion of his people; but this process is the reverse of what takes place in nature when a fruit-tree is engrafted, and in grace when a man is born again. But in the tree of the garden, the planting of man, and in the tree of righteousness, the planting of the Lord, it is the upper part, stretching toward heaven, that is made new, while the lower part, rooted in the earth, is left as it was. The analogy points to conversion as a process in which man, sinful by nature, remains constitutionally the self-same man, and yet, by union to Christ, becomes, spiritually and Godward, wholly a new creature. We should err if we assumed that this single comparison adequately represents conversion in all its circumstances and characteristics; but if we are careful not to drive it too far, it sets one important aspect of the great question before the mind in an interesting and instructive light.

To show that neither this nor any other analogy taken from nature can present a complete view of a spiritual fact, we may notice in the case now under review one great generic defect; it points to the upper side where God works, and scarcely contains any reference to the under side, where man himself is active in his own salvation. Our Father is the husbandman; and, as truly represented in the process of engrafting, the plan and the power are all his own. But it is equally true, as taught elsewhere in Scripture, that man is admitted a fellow-worker with God, and must himself willingly and actively put off the old, and on the new.

Some practical lessons, taught in Scripture, and abundantly exemplified in Christian experience, may be profitably and conveniently suspended on this conception of an evil tree made good, which the Master himself introduced into his discourse.

1. Although a tree has been made good by engrafting, and has consequently borne good fruit, the young trees that spring from the seed of that fruit when it is sown, take after the evil root of the parent, and not after the renovated tree. The trees that grow from the seed of one that has been

made good, are not good, but evil. Every one is evil, and bears evil, unless and until it put off itself and put on another. Such is our condition: such the law under which we lie. The child of a Christian is not by his birth a child of God. Children take after what their parents were originally, not after what they became by grace. Children, although your parents are saints, on earth or in heaven, except ye be born again, ye cannot enter their home, or join their company.

2. It is not necessary that the tree should be fully grown ere it be made good. A wild tree may indeed be engrafted after it is old, but it is better, in every respect, if the change is effected while it is young. This is the law in the spiritual department too. The aged are not excluded from hope, but the best time is the earliest time. Even in infancy, ere the plant has had an opportunity of manifesting the evil nature which it owns, it may, by the sovereign work of the Spirit, in answer to a parent's prayer, be made a new creature. While we adore the long-suffering mercy of God, that will not shut the door while the sands of life are running, let us "covet earnestly the best gifts;" and the best gift for us and our children is to be won to the Lord in newness of life, before we have become practically acquainted with the ways of wickedness. If the tree is permitted to grow up and to grow old, with the intention of making it new then, there is danger lest through storms or fire or war, it may be suddenly destroyed. And even though it were protected from all these risks, it is strange that any one should deliberately desire that the soil and sun and air should be enjoyed by that tree, and wasted in bearing bitter fruit all the days of its strength, and only made a good tree in its old age, when it scarcely has sap sufficient in its veins to bear any fruit at all. See, reader, in this plain parable, how foolish, how false, how blasphemous, is the desire that throbs cowardly and covertly in many young hearts, to waste the broad sunny surface of life in sin, and throw a narrow stripe of its withered, rugged edge at last as an offering to God. If you have no desire to be good and do good throughout the life on earth that lies before you, how can you desire to be good and do good in the eternity that lies beyond? Be not deceived. He who is weary of sin, wants to be quit of it now, and instantly to enjoy a new life. He who says he wants to be holy, but would rather put off the date of the change, lies to himself and to the world and to God.

SECOND EVENING.

THE BLESSEDNESS OF DEPARTED SAINTS.

"And I heard a voice from heaven saying unto me, Write, Blessed are the dead which die in the Lord from henceforth: Yea, saith the Spirit, that they may rest from their labours; and their works do follow them."—REV. xiv. 13.

The night is cloudy, but it is not dark. The moon is receiving the sunlight on her own disc, and pouring down, at second hand, through intervening vapours, as much of the precious gift as

suffices to show the traveller his path on the surface of the earth. Some of those clouds that career across the sky are thick and black, while others are more or less bright, according to the degree of

their density. Here and there the shaggy covering of the sky is rent, for a few moments, right through, and an irregular ragged spot of blue appears. In that spot you descry a glittering spark. It is a star lying in the deep of heaven, seen through a rending in the cloudy veil.

Like such a sky in such a night is the Book of the Revelation of John. In the main, it is an allegory. A drapery of cloud is intentionally drawn across the heaven from horizon to horizon; and yet the pilgrim underneath is not left to grope his way darkling. Light from the Sun of righteousness shines through. In some parts the veil is thickly woven; but in others the covering itself is bright by reason of the Light that shines within. Here and there the drapery is rent or drawn aside, and through these openings heavenly things are directly exposed to view. Here and there, even in this deeply figurative book, the Spirit, plainly and without a parable, shows the things of Christ. All the brighter and sweeter do these naked spots appear, by reason of the obscurity which prevails around. Seven such interstices occur near the commencement, where, in the form of epistles to the Asiatic churches, the Lord makes known his will for reproof and encouragement to all generations. Such an opening we find also in the seventh chapter, and through it see that the saved multitude who surround the throne of God have "come out of great tribulation, and have washed their robes, and made them white in the blood of the Lamb." Such a glimpse of the glorious gospel, too, we obtain in the verse which stands at the head of this paper, and will constitute its theme.

Here, great skill in the interpretation of symbols is not absolutely necessary. In this verse the Spirit speaketh expressly, and not in parables, on a subject that is of paramount interest to every human being. The theme is the departure of saved sinners from time to eternity, and the blessedness that awaits them there.

The words, in their original reference, point to a time of severe persecution. "The patience of the saints," mentioned in ver. 12, was for the time the most necessary grace, the most difficult duty. With a view to this necessity these words were written at first. They are supplied by the ministry of the Comforter. They carry consolation in time of trouble to the disciples of Jesus. We hear sometimes of a dead language; that is, a language once spoken by living men, but no longer employed or understood by any people in the social intercourse of life. But the language of the Scriptures, though old, is not dead. In this sense the Word of God "liveth and abideth for ever." It is spoken to and by all generations. It is not a fossil: it is the bread on which men live to-day.

The voice from heaven proceeds probably from a saint in rest, who already enjoyed the blessedness of which he spoke. The lost rich man in the parable was not permitted to tell his living brothers of his misery for their warning; but here a saved man is permitted, after his departure, to inform those whom he left behind of the blessedness which he now enjoys. Nor does the consolation depend for its weight on the speaker's own authority; the divine administrator of the Covenant

adopts the testimony of the witness, confirming its truth, and farther unfolding its meaning. "Yea, saith the Spirit"—certifying the accuracy of the report regarding the believing dead, and explaining the constituents of their blessedness—"that they may rest from their labours, and their works do follow them."

The subject here is the blessedness, not of the living, but of the dead. We must beware of supposing that Christians enjoy no happiness until they die. Such a conception, more or less muffled and disguised, circulates in society. If not articulated as a doctrine, it is at least entertained as an impression in some classes, that earnest Christians have made their election between two incompatible things, and renounced all prospect of happiness on earth, in order that they may secure it in heaven. No misrepresentation of the faith more effectually serves the Adversary's purpose than this. Nothing more successfully keeps the young from Christ than the falsehood that he imposes a present life of gloom as the condition of obtaining a future life of joy. There is a blessedness for God's people on this side of the grave. Blessed are the poor in spirit, the meek, the pure, the peace-makers; we have the Master's word for that. And the same truth is distinctly echoed from the experience of his servant—"we joy in tribulation." They are totally mistaken who suppose that the disciples of Christ deliberately abandon a path which they love, and adopt a life of sadness, in mere mercenary farsightedness, that they may thereby secure a longer term of happiness in the world to come. All that a Christian abandons for Christ are things that, if retained, would make him here not happy, but miserable. If he loves them now, and only dreads their reward hereafter, he will not, in point of fact, abandon them. The course that a believer follows from love to the Lord he would follow for its own sake even in this present life. It gives him peace while he lives, as well as safety when he dies. He who is sure of heaven hereafter, loves holiness now; and he who loves holiness now, has no desire to postpone the practice of it till the day of his death.

Blessed, therefore, are the living who are in the Lord as well as the dead; but it is the blessedness of the dead in Christ that this prophecy proclaims. One thing is enough at a time; and the one thing of which this verse treats is very great. Apart from faith, eternity is dark, and therefore dreadful to man. Revelation given by God and accepted by his creatures, plants a sun in that otherwise unknown expanse; and although we cannot, from our present stand-point, look directly on his glory, reflected rays of hope already gild with gladness the course of life over which we tread, as sunlight beautifies the world in summer dawn, before the sun himself is seen. Hope is happiness; and hope may brightly burn in a believer's breast long before he enters heaven.

But the link that binds blessedness to man, either while he lives or when he dies, is simple trust in the Divine Redeemer. They whom John pronounces blessed are "in the Lord." The phraseology is very remarkable. It is frequently employed in Scripture; but nowhere logically defined. No definition could make plain its meaning

to those who are without; and those who are within understand it without a commentary.

Whatever its specific import may be, it is obviously a new and acquired attainment. It is not part and parcel of our natural birthright. "If any man be in Christ, he is a new creature." "Your life is hid with Christ in God."

Believers are by faith in the Lord as a refuge from the judgment which their own sins deserve. As Noah, when he knew that the flood was coming, entered the ark, and remained in it safe, sinners, through an enlightened conviction of guilt and danger, take refuge in the Saviour. From the tempest to that opened window these scared doves fly. When their righteousnesses not only are filthy rags in God's sight, but also seem such in their own, the penitents in disgust fling the foul garments off, and, according to the language of Scripture, "put on Christ." The Lord becomes their righteousness. They have gotten white clothing before they are called to stand round the throne. "There is now no condemnation to them that are in Christ Jesus." They are "accepted in the Beloved;" and the consciousness of this acceptance keeps their spirits cheerful in the varied trials of life.

Believers are "in the Lord" for life and growth and fruitfulness, as a branch is in the vine. But

these are all figurative expressions; and some persons with tendencies and habits of mind deemed philosophical, discard them as in their own nature indefinite and incapable of verification. I confess the terms are figurative, but such must all terms be that deal with spirit and its exercises. There was as little of philosophy as of religion in the resolution of the reasoner who determined to believe nothing that he did not see. Spiritual being and a spiritual state are, in the nature of the case, impalpable to sense. If we do not speak about them in borrowed language, we cannot speak about them at all. A soul may be pure or impure, may live or die, as really as a body. I may be in Christ living, or out of him dead, as truly as this green branch lives in the vine, and that withered branch has been severed. The best way of learning what spiritual union to Christ means, is to be spiritually united to Christ. "Taste and see that the Lord is good." While the prodigal was keeping swine, a ragged famished exile, he would have made great blunders if he had attempted to explain to his master or his neighbours the affection of his Father's heart, or the precise emotions of a rebellious son at the moment of his reconciliation; but when he lay on his father's beating breast, then, and then for the first time fully, he knew both himself and his father.

THIRD EVENING.

THE DOOR OF MERCY KEPT OPEN, UNTIL IT IS SHUT BY DEATH.

"Blessed are the dead which die in the Lord."—REV. xiv. 13.

THE article of death is the turning-point. It is the last step of this life that determines the whole course of the next. Those who are in the Lord when they depart, are with the Lord for ever. Two aged men pass from this world on the same day, and enter together the mansions of the Father's house. Meeting in the general assembly of the just made perfect, they compare notes of their experience on earth. One, it appears, had been secretly renewed at a period earlier than memory could reach, and had walked with God from the first dawning of his mind till the hour of his departure at fourscore. The other had lived in pleasure and rejected Christ, until he was on the brink of the grave, and had at last been melted by the power of redeeming love a little before he was called away. While these two saved sinners both alike ascribe all to the merciful love of their Saviour, each counts his own case the greater exercise of mercy—the greater boon to the receiving man, and the greater glory to the giving God. He who was won in early childhood, and moulded from the first into conformity with the Divine will, thinks his own debt deepest, because the Lord in sovereign goodness not only gave him the eternal life, but also spared him the miseries of a rebellious earthly life, and the agonies of a conversion in a hardened old age. He who had been "born when he was old," thinks himself the greatest debtor to redeeming love, because a long-suffering God spared him

during a rebellion of nearly fourscore years, and made him a new creature at the last, blotting out the cloud of sins that had accumulated in a lifetime of ungodliness.

Let us leave the two to prosecute their happy strife, and turn our attention to some important aspects of the doctrine that it shall be with us in eternity not as we begin, but as we conclude this present life. Questions of great interest spring up and present themselves for solution, regarding its intrinsic reasonableness and its moral tendency. Does the doctrine accord with reason and Revelation? and will it undermine or establish practical righteousness in the conduct of those who receive it?

As to its intrinsic truth, in addition to the clear intimations of Scripture, it may suffice to suggest an analogy in nature. A projectile thrown into space maintains to the end of its course the direction in which it was moving at the moment when it escaped from the propelling force. Whether the propulsion may have been effected by the human hand or gunpowder, or any other species of force; whether the earlier portion of its course, while it was receiving the impulse and kept under control, may have been a zig-zag, or a straight line, or the segment of a circle, the body thrown out, except in as far as it is still affected by resisting media, maintains the course communicated to it at the last moment of the impulse.

The stone thrown from a sling moves in a straight line from the point of its escape, with no reference to the circular movement by which the impulse was communicated, precisely in the same way as it would have done had the impetus been given in a straight line like the flight of an arrow from a bow. There is a sublime unity of conception in the works and government of God. The moral and material approach near each other and run parallel; but, with our present powers and instruments, only a few of these relations are discoverable, and even these few are but dimly seen. As the tree falls, so it lies. The attitude and condition of a soul, when it is projected into eternity, remain as they were when that soul let go its hold of time. This is the doctrine of Scripture; and the analogy of nature, as far as we can observe it, accords.

But it is possible that some who confess its truth may fear its tendency. Does it not encourage the wicked to delay their reformation till their dying day? No. It has in its own nature no such tendency: the imputation is absolutely groundless. It is true that a corrupt heart and a confused understanding, working in concert, misrepresent the doctrine and pervert it to practical ungodliness. But if everything that the wicked abuse were removed from the Scriptures, the gospel itself would be shorn of all its glory. Even the unspeakable gift of God, the foundation on which the hope of the saints is built, becomes a stone of stumbling and a rock of offence to the impenitent who blindly dash themselves against it. Neither Christ, nor any portion of his truth has been held back, lest impious men should pervert the blessing to their own destruction. The encouragement which tender, broken hearts require is freely supplied in the Scripture, although he who gives it knows that some will turn it to bad account.

The indispensable necessity of the doctrine may be conveniently demonstrated by showing what mischievous consequences would ensue if it were withdrawn. If the short and simple statement that those who die in the Lord are blessed were kept back, and something that might be considered safer introduced in its stead, it may be demonstrated that every possible substitute would utterly subvert the gospel. If to be in the Lord at death were not deemed sufficient, a converted life of longer duration must be required. How long? A certain proportion of the whole life, or a specified number of years? The specification of any period, whether absolute or proportional, would obviously be contrary to the whole analogy of faith; and, even if it were not, the introduction of it would limit the mercy of God, and crush the hope of man. Under this system, the most enlightened would always be the most hopeless.

As it is, if a doubt should cross a Christian's mind whether the change through which he passed in youth were a true conversion, he need not spend time in attempting precisely to determine the value of a long-past experience. If he should enter upon such an investigation under the conviction that his hope for eternity depended upon an affirmative solution, he would be led through mazes of perplexing doubts to an issue of dark despair. But with the gospel as it is revealed in

his hand, he may avoid the decision of the past, and throw all his energy into the present. Now is the accepted time; now is the day of salvation. Although it be true that up to this moment he has been deceived and deceiving, at this moment Christ invites him to believe and live. Although he has hitherto been a prodigal, he may come now as if he had never come before. He is welcome. The Father's heart and home are open to receive him. He renounces all confidence in the past; and counting himself only a sinner, he cries, "God be merciful to me." He brings nothing to Christ: he receives all from Christ. He is nothing: his Redeemer is all. He obtains peace, not on the ground that he was a converted man so many years ago, but on the ground that at this moment God offers and he accepts free pardon and reconciliation and eternal life through his Son, Jesus Christ.

Blessed be God, those who die in the Lord are safe, although an hour before they were lying under condemnation and living in sin! Anything short of this would subvert the gospel. If the intervention of any specified proportion of life or period of time between conversion and departure were necessary to future blessedness, it would not be true that the blood of Jesus Christ cleanseth us from all sin; the dying malefactor could not have received, and the dying Saviour could not have given, that amazing promise, "To-day shalt thou be with me." Let us receive in simplicity all the word of God, and trust the Omniscient for the tendency of truth.

I know well that a deceitful heart too frequently prompts a man to postpone the decisive change, on the ground that it may be safely accomplished at life's latest hour. I know that this is one of the most effective wiles of the devil. I would fain save my reader from the fatal fall;—but I shall not go about to secure this object by limiting the grace of God. Truth will stand longest, and achieve the greatest good. Although I were called to address the most daring profligate, I would, on this point, tell all our Father's tenderness. I would utter in his ear the bold word, "Blessed are the dead who die in the Lord," whatever their life may have been. On this doctrine hypocrites may stumble; but by its opposite, sincere inquirers would be crushed.

The mean, greedy craftiness that endeavours to make the most of this world through the pleasures of sin, and yet to secure the next world by a well-timed turn of repentance at the close, completely misapprehends the Gospel, root and branch. In this cunning, carnal plan there is not the faintest glimmer of what sinners need, and the Saviour brings. The salvation that true men seek, and the true God gives, is deliverance from sin. The evil is in the man, and if he desires to escape from it he desires to escape now. In this respect the soul's disease is like the body's: in the sick man's estimation the sooner he is cured the better. He who desires to defer the cure of his soul till his dying day, that he may longer enjoy his disease, is not sick of sin: and the physician came to heal the sick. Those who think that a walk with Christ in this world is so great an evil, that they will put it off as long as they can, know neither them-

selves nor him. No change of doctrine would take this innate enmity away.

The article of death is the boundary line. The "place of repentance" runs up to it, but does not go beyond it. The way to the mercy-seat stands

open for sinners as long as they live; but if they depart unconverted, purchased priestly prayers cannot send a pardon after the penitent into the world of spirits.

FOURTH EVENING.

THE BLESSEDNESS BEGINS AT DEATH.

"Blessed are the dead which die in the Lord from henceforth."—REV. xiv. 13.

THE dead in Christ are blessed when they die. The charter of their happiness is dated at the moment of departure. In the text it is expressly said to begin "from henceforth;" or more literally "from Now."

Blessings manifold are scattered by a Father's hand upon the path of a Christian through the present world. The blossoms of hope open sweetly here; but the fruit of enjoyment ripens fully beyond the boundary in a better clime. "Godliness is profitable unto all things, having the promise of the life that now is, and also of that which is to come." A Christian would not exchange lots with the children of this world, when their cup is at the fullest, even for the period of this present life. But, at the best, the life of faith on earth is neither perfect purity, nor perfect peace. Sunshine and shadow irregularly alternate here: it is not till they reach the prepared mansions of the Father's house that sin and sorrow wholly cease. "There shall be no night there."

To a heart that loathes sin and longs for holiness, it is a gladsome promise that no defiling thing shall be permitted to enter heaven. This hope brightens life over all its breadth, and converts even the gloomy grave into a gate in the wall between time and eternity, through which the ransomed enter their rest.

We do not know much about the intermediate state of immortal man, between death and the resurrection. A full knowledge of that state could not be communicated to us, because we lack the experience necessary to enable us to comprehend the intimation. As one born deaf is not only ignorant of sound, but incapable of learning what it is; so, one who has never been a disembodied spirit not only does not know, but cannot be taught what a disembodied spirit is. The fact of that condition is revealed: but the circumstances of that condition are uncommunicated and incommunicable to us. One grand cardinal feature is, however, clearly declared, and may be sufficiently if not perfectly understood, that to those who are in Christ ere they depart, the separate state is a state of blessedness; for the blessedness of the dead begins "from Now"—immediately after they die. As if for the purpose of excluding mystical notions about a state of sleep, and Romish notions about a state of painful purgation, the word expressly declares that the believing dead are blessed from the moment of departure, without imperfection and without delay.

Death is not an interruption of immortal life.

As the projectile that begins and for a short stage prosecutes its movement within the cannon's close dark womb, continues its movement free in space after it has left the cannon's lip; so this spirit which God has breathed into man holds on its free fleet way in eternity after it has been flung forth from the body on the utmost verge of time. Immortal life begun can suffer no eclipse.

A few years ago the "Hungarian," a mail-steamer from Liverpool to Portland, was lost near the American coast, with all on board. Not one escaped to tell the cause of the disaster. Soon afterwards the ship's clock was cast ashore, with the hands pointing to eleven; and thus the date of many deaths was precisely known. The shock, whether by an explosion from within or contact with a rock without—the shock which threw all the ship's contents abroad upon the ocean, made the clock stand still. The same blow doubtless made many busy hearts cease suddenly their beating. But the immortal spirits, several hundreds in number, shot by that impulse into eternity, like showers of falling stars into a wintry sky, lived on without interruption in the surrounding infinite. The index of this life that throbs within me, when it is gathered on the shore of eternity in the resurrection day, will not be found standing where it pointed on the day of death. "Let us make man in our own image," said the Father of our spirits in the Council where humanity was planned. That creature of God, made last, made best, was wound up at first to go for ever. The shock that broke up the soul's material encasement did not arrest the life-movement of the soul.

From henceforth—from the instant of dissolution—the life flows uninterruptedly on, like a river when it emerges from beneath an Alpine glacier; but its sins and sorrows cease. Blessedness unmingled, unending then begins. Evil is left behind at the boundary, and the spirit, unencumbered, undefiled, thenceforth walks with God in perfect peace.

The change is very sudden, and very great. The thought of it may well give us frequent pause as we glide swiftly along life's current. The last hours of a Christian on this side may be occupied in bearing the pain of disease, in soothing weeping friends, in counselling younger survivors, or even in finally closing his secular accounts; from the midst of these occupations the life leaps into a region which knows neither suffering nor sin. While the pendulum of the clock in the chamber

of death is making one throb to the left, that forgiven sinner lies suffering; ere the pendulum has made its next throb to the right, that perfected saint is free.

And that decisive moment, charged with the issues of eternity, lies before every one of us. How far forward on life's line it lies, we do not know. But while it cannot be very far away, it may be very near. We are all moving forward to the edge of life. That movement never ceases, night or day. The heart of the living is, at every pulsation, "beating the dead march to the grave." The farther edge of time is the nearer edge of eternity. There is no neutral borderland. The two regions lie along each other, as the land and the sea. To step off the one is to step into the other. It is neither a wise nor a comfortable method merely to turn in another direction, and refuse to think of a disagreeable theme. The thought of death is most dreadful to those who refuse to think of death. The sound of death's footsteps behind the fugitive is far more terrible than the sight of his face to those who in faith confront the coming messenger.

Thus, present happiness as well as future safety depends on faith. There is no way of being in the Lord when we die, except by closing with the Saviour while we live. When I have accepted Christ for pardon and reconciliation, my safe passage through the valley of the shadow of death is secure; and that safety in the distance, like the sun rising above the horizon, gilds with gladness all the space between itself and me. Both Noah and his godless neighbours must meet the coming flood; but it was one thing for him to plunge into the waters, sealed within his impenetrable

ark, and all another thing for them to be thrown naked upon the devouring deep.

The line that an immortal life is moving on when it leaps the boundary, determines its destiny for ever. Now and here our future condition is fixed. Conversely, the future life, acting on our desires and expectations, exerts a decisive influence in shaping the course of the present. Those persons make a great blunder, who, under the name of Secularists, propose, as their distinguishing characteristic, to attend to the present life, and ignore the next. Their philosophy is grievously at fault as well as their religion, when they propound the maxim that our business is with the duties of the condition in which we are, and not with speculations regarding the condition in which we may possibly be. You cannot let the next world alone; it will not let you alone. From within the veil it stretches out its line and grasps us. We are so constituted that we cannot shake off that grasp. You might as well say, we shall live on the fruits of the earth, and have no relations with the air of heaven, as say we shall confine our view to time, and have nothing to do with eternity. In point of fact, as all history declares, false views of a future life exercise a preponderating influence on the present conduct of the majority of mankind. You cannot discharge from the human mind all conceptions and expectations about a future life, and so leave it empty. You might as well propose to make a universal vacuum round the globe by means of an air-pump. Conceptions of the future, practically powerful on the present, there must and will be in the minds of men; the only question open is, whether they shall be true or false.

FIFTH EVENING.

THEY SHALL RUN AND NOT BE WEARY.

"Yea, saith the Spirit, that they may rest from their labours; and their works do follow them."—REV. xiv. 13.

Two constituent elements of the blessedness which the saved enjoy from the moment of their departure, are expressed with remarkable precision in the text: "That they may rest from their labours, and their works do follow them."

These two results are, in the original, more distinct from each other, and more sharply contrasted, than the reader can discover from the English translation. The two things correctly indicated by "labours" and "works" are closely connected, but separable in their nature, and actually separated in fact. In all human effort these two things are, in greater or less measure, combined,—the exhaustion of the worker by his exertion, and the resulting effect of his work. On the one side is the suffering of the operator, on the other the product of his toil. The text intimates that, in the experience of the saved, the first will cease at death, and the second will continue after it. The disciples of the Lord, when they are called from this world, will be wholly emancipated from

labour; but they will be permitted still to work. The burden of working will be removed; but the enjoyment of working will remain permanently. The servants will be released from toil; yet not condemned to idleness.

1. *They shall rest from their labours.*—In so far forth as work implies pain and weariness, it shall cease. Life in the body is full of painful labour, and life in the Lord is not exempt from it. Sharing in the labours that generally fall to the lot of man, Christians are exposed also to others which are peculiar to themselves. There are two kinds of toil which a Christian must undergo in the world: as a soldier he fights, and as a servant he toils. Both kinds make the worker weary; and the weariness of the worker makes his rest sweet.

Although at many periods in the history of Christianity believers have been obliged to meet the fires of persecution from without, a part of the conflict always, and in our days by much the larger part, is waged against internal foes. "The

kingdom of heaven," said Jesus to his followers, "the kingdom of heaven is within you;" and where the kingdom is, there also are the enemies that seek to subvert it. The warfare on which the soldier of Jesus Christ is sent, is to "crucify the flesh, with its affections and lusts." True, "the God of peace" shall bruise Satan under our feet shortly; but weary, weary will be these feeble feet ere they have pressed the life out of the Old Serpent's last fold. If we do not, through unfaithfulness to the Captain of our salvation, make an ignoble peace with the foe, the battle will rage from the morning of youth to the evening of age. No labourers are more weary than soldiers at the close of a battle day; no labourers long more eagerly for rest.

A traveller in Burmah fell asleep upon the lamp, hot ground. He was awakened by pricking pains over all the surface of his body. On getting up he discovered that a swarm of small grey leeches had fastened on his flesh, and were busy sucking his blood. His first impulse was to tear them off with his hand. A native servant observing his purpose, interposed with earnest entreaties that he should not touch them. He knew that if the creatures were violently torn off, a portion of their bodies would remain, and produce disease by their corruption. Forthwith the servant gathered a quantity of a pungent herb, steeped it in water, and in the water bathed his master. The leeches all dropped off harmless. The man went through the bath scathless, but it paralysed and destroyed his tormentors.

Life is like the wilderness, and death like the Jordan flowing between it and the promised land. Throughout the journey, and down to the margin of the boundary stream, loathsome creatures coil round your limbs, suck your blood, and live upon your life. These parasites are not only on you, but in you; not only in you, but part of yourselves. The apostle Paul, as the result of his self-examination, exclaimed, "I find a law in my members warring;" as if he had said, I find living serpents defiling and devouring me. Alas! even that able and ardent disciple could not tear the disturbers out by a direct and summary process. He was comforted, however, by knowing how and when they would all be cast off and left behind. When he should reach the verge of this life's wilderness journey, and be called to plunge into the waters of separation between it and rest, he would pass through unharmed, and everything that hurts or destroys would be discharged in that pungent flood.

"Then sang Moses and the children of Israel" a song of triumph to God their Saviour. When? On the Red Sea's farther shore, after Israel had passed safely over, and left the pursuing, persecuting hosts of Egypt sinking as lead in the mighty waters. It is expressly intimated in this book that the saved in rest shall "sing the song of Moses and of the Lamb." All the danger and the toil of war are left behind when they depart from this life, as the enemies of Israel were swallowed up in the sea.

But the servant who labours in his Master's work is liable to weariness as well as the soldier who fights in the battles of his king. It is a law

of the new creation that all who hope in Christ work for the world. To men in the body work is burdensome, even the work of faith and love. As long as the spirit is right, a Christian will not become wearied of the work which his Master may appoint; but he will be wearied in it, more or less, until he leave this body behind in the dust.

You are forgiven and accepted. You owe all to Christ. You look forth from your position of safety, and behold a world lying in wickedness. You pity the sinful, as the Lord pitied you. Having been saved, you desire, as if by an instinct, to be a saviour. You begin. You grasp a falling brother by the best band, a brother's love, and draw him to yourself that you may draw him to the Saviour. For a time you seem to have gained your brother. But after a while, at some unguarded moment, and through some unguarded opening, seven devils enter and dwell again in the partially reformed heart, and the last state of the man seems worse than the first. You are weary; but you must still work. Now is the time for toil: the rest remaineth.

Two young men were disporting on the ice of a Scottish lake. One, approaching incautiously a treacherous spot, fell through. His companion came quickly to the rescue. Himself sometimes in the water and sometimes on the ice, he many times grasped the drowning man, and drew him considerably above the surface; but each time the weight of the wet and paralysed body prevailed; each time it sank again, until at last the worker's strength was exhausted, and the victim perished. Had you been there when for the last time that strong willing worker drew with all his might to save a sinking brother, and then lay down exhausted, leaving that brother to sink, you would have seen a workman wearied by his work. His hands were wearied with the greatness of his effort, and his heart was weary because the effort had failed. Such is the work to which Christians are called in the world, and such often, though not always, are the disappointments which they meet. At death the weariness of the worker will wholly cease; but,—

2. *The working will go on without interruption.*—Labour refers to the toil endured, work to the effect actually accomplished. Work, considered not as a wearisome burden, but as a joyful activity, goes over with the emancipated saints, as if to keep them company in the better land. Such is the precise import of the terms in the original. As the body is left behind at the border, while the soul pursues its course and enters the world of spirits alone, so the painful labour with which a Christian's work is accompanied here is laid aside when he dies, while glad lightsome activity goes over with him and abides for ever. Fatigue, like the body that bears it, is left in the grave; work, like the spirit, is immortal. Those who die in the Lord will, after death, be like the angels in their freedom from encumbering corporeal relations; they will also be like the angels in the painless unwearying energy of their service. "He maketh his ministers a flame of fire." "They shall mount up with wings as eagles; they shall run and not be weary; and they shall walk and not faint."

W. ARNOT.

A PEEP AT THE NETHERLANDS AND HOLLAND.

BY THE EDITOR.

On the evening of a lovely day in May, not a hundred years ago, three friends started from London *via* Harwich for Antwerp, to take a peep at the Netherlands and Holland. About a hundred years ago, two persons, better known in the world of to-day, travelled by the same route; one being on his way to Utrecht, the other keeping him company as far as Harwich. The intending traveller was James Boswell; the friend who accompanied him to bid him farewell, was Samuel Johnson: the former, a far less man than he ever suspected himself of being; and the latter, a far greater man than his biographer, who enables others so well to understand him, could possibly comprehend. It was lucky for the small planet from Auchinleck that, in the mysterious movements of the heavens, he happened to rise above the horizon in company with that "great rolling sun," in whose reflected light he shone, until he began to think himself a luminary. What an amusing account Boswell gives of their trip to Harwich in the stage-coach, with the young Dutchman and gentlewoman! He tells us how Johnson read *Pomponius Mela*, and rebuked him for giving a shilling instead of sixpence to the guard; and how he shocked the passengers by defending the Inquisition against the violent attacks of the lady upon that famous Church institute; and how he defended torture in criminal cases in Holland, to the horror of the Dutchman; and then how, after supper, he descended upon the glories of eating, laying down the maxim, "thar he who does not mind his stomach, will hardly mind anything else," which leads "Bozzy" to give a long dissertation upon the gastronomy of the great moralist. But what was more true and real to his convictions than all those opinions defended for the sake of argument, and much more worthy of the man than his eating propensities, was the fact that when in the church at Harwich, he sent Boswell to his knees, saying, "Now that you are going to leave your native country, recommend yourself to the protection of your Creator and Redeemer." "As the vessel put to sea," adds his biographer, "I kept my eyes fixed upon him for a considerable time, while he remained rolling his majestic frame in his usual manner; and at last I perceived him walk back to the town, and he disappeared!"

These illustrious travellers occupied two days in journeying from London to Harwich. How long Boswell lay in the packet, pitching and tossing in the North Sea, before he reached Helvoetsluys, he does not inform us. Our journey and voyage from London to Antwerp *via* Harwich, did not occupy more than sixteen hours; and I fancy we agreed fully as well as the moralist and his friend would have done.

We embarked at night, and when we came on deck at early morn, it was clear, but rather cold. The steamer was running along the Belgian coast, some miles off. It was refreshing to leave the hot cabin, full of indescribable smells, contributed by new paint, preparations for breakfast, and innumerable ingredients, found nowhere else save in a

steamer's cabin. Besides, the society was not interesting; most of the passengers were stretched in silence upon a double tier of couches, popularly termed berths, and by some benevolent persons, "beds," but presenting a miserable display of confused blankets covering sufferers, who were most of them wondering what infatuation tempted them to leave home for such pleasure, and others were making earnest inquiries of the steward when they might reach the Scheldt, and get into smooth water, for "the sea is stirring in its bed," as it always does in the Channel. But if one could at all enjoy the sea, there was something most exhilarating in it on such a morning. The vessel was under full steam, with foresail and jib set. The waves were not fierce, but came toppling along in a gladsome mood, not impelled by any strong wind, but as if by their own free accord. Seaward, a few sails were visible. Landward, a long low line of sandhills stretched north and south, broken here and there by a steeple or windmill. No change took place in the view until Flushing was reached, at the entrance of the Scheldt. Flushing, in its days of smuggling celebrity, furnished beautiful lugger prizes for the revenue cruisers on the west and north of Scotland, and an inexhaustible supply of gin and contraband for the inhabitants of the same district, from the laird to the cottar, including every grade and every profession. Now, it is known to our countrymen chiefly as furnishing respectable pilots. The sail up the Scheldt was one along a broad, quiet, insipid river, with low, quiet, insipid banks; yet it afforded singular pleasure to the passengers, who came creeping up from the cabin, no longer horrified at the mention of breakfast.

The high steeple of Antwerp soon attracts attention and every turn brings it nearer. Then comes the pier, along which the vessel with steam roaring from her funnel-head, slowly advances. Then follow the *Douaniers* with wide blue trousers, small caps and large scoops, the examination of luggage, the recommendation of sundry hotels on landing, by crowds of polite informants, the struggles to keep hold of your bag, until at last you are safely landed in the "Hotel St. Antoine" or "Park," with the prospect of an excellent *table-d'hôte* in half-an-hour. The said *table-d'hôte* is surrounded by countrymen and countrywomen. Here is a respectable pair, with two daughters and a son, who have just landed, and begun a tour never to be forgotten in their sweet home in Yorkshire. They are modest and retiring, "tasting of Flora and the country green." There are two impudent, forward, London bagmen, who insist upon being familiar with every one,—avoid them as you would fever. Removed by a few yards are two aristocratic young men who never speak, but stare with dead, lack-lustre eyes on all around them,—take no notice of them, for they wish you to do so. On the opposite side are frank, unsophisticated people, who seem to like every one, and fancy every one likes them, as they deserve to be. They are ready to tell you all their plans and family

history, and insist on speaking bad French, learned from a book of conversation conned every five minutes. The father twits Susan for not being more fluent, after all he has spent on her education, though she was taught to read only, not to speak French. The waiter speaks English, and smiles while he replies in French. Add to these, Germans, with long hair, large heads, and spectacles; Belgians, round and soft-faced; Frenchmen, with sharp, dark features, moustache and peaked beard, and a couple or two on their marriage tour, who see none else in the room but themselves, and you have a fair idea of the group that meets your eye around the *table-d'hôte*.

Let us take a turn into the town, and go right down past the tobacconist's at the corner, across the square, through that narrow street, and now you are before the Cathedral of Antwerp. I make no attempts to describe the cathedral as seen from without; but yet the inside of this venerable pile, as well as of the other churches in Antwerp, present many sights which give one as vivid an impression of the genius of Popery as can be received from anything seen in Spain or Italy. The fact is, that Belgium, which lies within a ten hours' sail from England, is as far removed from her Protestantism as if worlds lay between. It was not so always. Protestantism was strong and flourishing in her once rich and prosperous cities; and in no part of the world were there truer martyrs to the truth, or more bloody persecutions perpetrated to extinguish it. And Rome did so extinguish the truth, that one might now be months in Bruges or Ghent before he heard of a Protestant. We are not aware of the existence of a public place of Protestant worship in either, nor of one in Antwerp even, except the English chapel. So much for persecution! What nonsense to talk of the blood of the martyrs being always the seed of the church! True, persecution will not extinguish the Church in the world, or hinder the dawn of the brighter day in the end; but in the meantime it may extinguish the gospel for ages in particular countries, as it has certainly done in Spain, Italy, Belgium, and France, and would have done in Britain but for the courage of our people.

The month of May is the month which, in Popish countries, is devoted almost exclusively to the worship of the Virgin. Hence, by the way, the reason why, in Protestant Scotland even, Popish superstition has so stamped itself upon the vulgar mind that marriages are considered unlucky in this month. Well, every church has a magnificent altar erected in its midst to Mary. A figure of her, large as life, holding the Child in her arms, with halos round their heads, and seated on a throne, forms, of course, the centre group; a canopy, which generally reaches to the roof of the church, covers her. Round this altar, and on each side of the steps that conduct to it, are ranged huge vases of artificial flowers; candles and tinsel glitter there in every available spot. It is a huge mass of tawdry idolatry, made to captivate the vulgar taste; for in truth, as one must see abroad, the intelligent and educated classes utterly scorn Popery. They are very far indeed from embracing Protestantism, or true religion of any kind; and they wish so far to adhere to the only church

they know, as to have baptism for their children, in order to please their wives, and to receive absolution at death for themselves; but Popery as a system of truth they utterly reject.

It is this Mariolatry, which forms so essential a point in the faith and worship of Romanism, which is its most shocking element; and the more one studies the outward worship and inward faith, not of subtle metaphysical priests, but of the mass of the people, the more will he be convinced that Mary is as really and truly worshipped as Jesus, and apparently with more love and reverence.*

Enter the Dominican church, and you will see a characteristic specimen of the teaching afforded by Popery. Here is a "Calvary,"—a mass of coarse rock-work, piled thirty or forty feet high against the side of the church, with stucco figures as large as life representing the scene of the crucifixion,—while on each side of the path leading up to it, and scattered over the enclosed space, are figures of prophets and apostles. Immediately under the Calvary, in a sort of rude cave, there is a representation of the Saviour lying in the tomb. This is seen through a small window, at which, as usual in such places in Roman Catholic countries, old and young are begging. On the opposite side of the passage, the wall is laticed with large iron bars, like a prison gate. Inside of this are seen forms, also as large as life, of men and women in purgatory, surrounded by red flames curling over their heads. Each countenance expresses the greatest pain. The hands of the agonized suppliants are clasped in earnest prayer, and some are protruded through the prison bars. Those whose feelings are excited by such pictures of woe, and who believe, as an essential article of their faith, that in such torment their dearest friends may then be, have an opportunity given them in every church of dropping their money into a small box attached to some pillar, over which, and just where the money is to be dropped, may be seen a small coarse painting of horrified faces in the midst of flames, to remind the donor of the connexion between pay and pain, or pence *versus* purgatory.

To us Protestants, such sights as those Calvaries and coarse representations of awful scenes in the Redeemer's life, excite feelings of pain only, and a sense of profanity. But it is obviously not so with those for whose benefit they are intended, and who gaze at them with deep and reverential interest.

* How is it possible to avoid this conclusion, when the Virgin is spoken of in the following language by one of the most subtle-minded teachers of the Romish Church? What would the Apostles think of it! "Mary gave birth to the Creator, and what recompense shall be made to her? What shall be done to her who had this relationship to the Most High? What shall be the fit accompaniment of one whom the Almighty has deigned to make, not His servant, not His friend, not His intimate, but His superior? . . . Nothing is too high for her to whom God owes His life. . . . Let the fulness of the Godhead so flow into her, that she may be a figure of the incommunicable sanctity, and beauty, and glory of God himself. . . . Let her receive the diadem upon her head as the Queen of Heaven, the Mother of all living, the Health of the weak, the Refuge of sinners, the Comforter of the afflicted. . . . Let angels, and prophets, and apostles, and martyrs, and all saints kiss the hem of her garment, and rejoice under the shadow of her throne!"—J. H. Newman's Sermon, *On the Fitness of the Glory of Mary*.

This, however, is no evidence whatever of their utility as a means even of keeping alive religious impressions, but an evidence rather of the low state of the religion of those who can be impressed by such means. We have seen immense multitudes in the secluded valleys of the Tyrol witnessing, during a long summer's day, a drama of many acts, the subject of which was the life of Christ, with all its leading incidents from his birth down to the crucifixion, performed on a stage in the open air by peasants, and exhibiting all the excitement of feeling seen at a camp-meeting in the backwoods of America. Such a spectacle would to us be horrible;—to them it was the holiest spectacle of the year. Now we admit the strong temptation there was to the Catholic Church, during the middle ages, to instruct the more ignorant people by means of such artistic representations of the historical facts of Scripture. Without schools, without books or printing, without education of any kind, and in the absence of all the culture which the apostles found among the Greeks, Romans, or Jews,—how very natural it was, how apparently wise and necessary it seemed, to teach such children by means of pictures. Had we lived then, we should probably have done the same. What we blame the Catholic Church for is her refusing the gift, when it was given her at the period of the Reformation, of lifting the people out of this state of ignorance, by means of a preached gospel and a read Bible; so that, thus becoming men, childish things would be put away. But the Council of Trent, in its blind infatuation, stereotyped all the sins and follies which had been accumulating for ages, and pronounced a curse upon all who would not accept of them; thus compelling men either to reject the bread which the Church, as it then was, offered, or to accept of it with all its poisonous adulterations. I do not wish, however, to get into a discussion upon Popery. I begin sometimes to suspect that we are talking too much against the lie, shocking though it be, instead of living more in the truth; and that the spirit of faction, and of mere party, may insensibly occupy the place of hearty love of Christ, and of our brethren in his Spirit. For how different a thing it is to hate the error in a man, and to hate the man in the error! How wide apart the wish to make him one with Christ, and to make him one with ourselves!

But let us enter this old-fashioned-looking gate at Ghent. We are in the midst almost of a small village, separated from the city by a high wall and circling canal. Here is a large irregular square, with houses ranged along its sides; irregular streets crossing it; a large church in an open space in the centre of it, and an hospital close by. And such silence! Listen! A gentle ripple from the wave of the populace outside is alone heard echoing through those mysterious little streets. The inhabitants, if there are any here, seem dead. No; there goes one, two, a third, creeping like shadows to or from the hospital,—all dressed alike with black gowns and white caps. Nuns, every one of them! We are in the famous old convent of the Béguines, which has existed here, just as you see it, for centuries; and we can hardly fancy a better institution for respectable old ladies, who have no

definite calling in the big and busy world, "barring," of course, its *credenda*, and looking only at its *agenda*. Look at that nun, for instance; she is neither young nor beautiful. Such nuns, by the way, we never discovered in any nunnery ever visited by us, and we have entered many; and our belief is, that they only exist in novel nunneries. That old Béguine, coming towards us, is a fair specimen of her class; round, dumpy, comfortable, half-nurse, half-housekeeper, with a large knowledge of cookery. Depend upon it, she is very happy, and very useful. When her parents died long ago, she was probably left with a nephew to keep his house. The nephew and she did not get on well. She was "too particular" for young Hopeful, too strict a churchwoman for his fancy. Her fast days and poor dinners came intolerably often for his carnal appetite. But no one could match her with gruels and possets in times of sickness; and no one could deny that a kinder old soul never existed than Aunt Rachel. Now, when the nephew married, what better could Aunt Rachel do than go to the convent close by? Of course we would insist upon it, that she should be allowed to leave when she pleased; and this liberty is granted to the Béguine. But there is much to induce her to remain. She has got a very neat, comfortable dwelling in the row. Before it is a small plot of flower-garden. A high wall separates house and garden from those of all her neighbours, and from the convent square. But opposite each house there is a door in this wall, and on the door is inscribed, not Aunt Rachel's name—for that has been left in the parish register, and in the memory only of the world—but the name of a patron saint, it may be St. Agnes or St. Bridget, and by some such worthy only is Aunt Rachel known. And there she lives alone; the chapel close by for daily worship—the old bald-headed priest ever accessible for a quiet chat and confession—her neighbour saints always near for mutual edification, sympathy, and, no doubt, a little occasional confidential conventual gossip at tea-time, or after vespers; and, better than all, the hospital of sufferers, where the good old woman, with a band of sisters like-bodied and like-minded, is found cooking, reading, crossing, ministering, and waddling about day and night. I can name several of my lady acquaintances who would make inimitable nuns, and be very happy and very useful, who are now wasting their time in boarding-houses, or making calls to the disturbance of the studious. There, for instance, are— But, on second thoughts, I think it safer to withhold names. At the same time I cannot but express my sober conviction that the period has long ago arrived when the question regarding Deaconesses, or the organization of Christian women for the work of ministering to the poor, the sick, and the ignorant, especially in our large towns, must be more patiently and earnestly considered by all our churches, especially by Presbyterian churches, than it has been. When this is done, we may have much to learn from the Béguines.

Would we could linger in the Netherlands among those old streets and houses of Bruges and Ghent! Why, that old gateway, which once led to the palace of the Count of Flanders, is itself worth coming to see. Within the once proud walls to

which it led, Charles v. was born. In the church hard by can yet be seen the basin in which he was baptized. Here, too, was born John of Gaunt (of Gand, or Ghent), who is now chiefly remembered in history as an acquaintance of Falstaff's more than of Justice Shallow's. Then there are old houses, made memorable by the Van Artevelde of history and of poetry; and, besides all those living persons of the past, there are delightful pictures, that seem, in their permanence, no longer indeed shadows, but substances—such as the well-known pictures of Van Eyck in Ghent; and those, to me still higher in art and thought, of the Hemmlings in the old hospital of St. John, in Bruges, with that mighty one of the Descent from the Cross in Antwerp. But why attempt to describe pictures? as well almost describe a scent or a sound. Perception is in either case, by such means, impossible. I have a better hope from the panorama of a great landscape. Let us try.

We are standing on the top of the great square tower of the High Kirk of Rotterdam. The day is bright and breezy. We have ascended the endless screw-stair and wooden ladders, and passed far above the solitary home of the town clock, where day and night it swings its huge pendulum, and with many a whirr and click solemnly and conscientiously divides time, which is dividing all things, and which also, during the last fifteen minutes, has almost divided our own breath from the body, in this ambitious striving to overlook the world. But, now that we are up, the view is worth all the trouble. So every one at least protests.

Below is the city of Rotterdam. Like all continental cities, it burns wood only, and is therefore free from smoke. You can count every red tile in the house-tops far down, or the stones in the streets lower still, with the innumerable ants, or black dots like men and women, who are crossing to and fro accompanied by their shadows. There is nothing in the town itself very attractive to the eye,—a mass of brick and tile houses, with green trees, and a few steeples here and there to break the sea of red. But there are some other features of the view eminently characteristic. See those canals!—everywhere taking the place of the streets in other cities, the streets here being on each side of the canals. Notice that sweeping river to the south, losing itself far off in the plain. It is not what it once was, and feels the contrast so acutely that, as if ashamed of itself, it has changed its name. Here it is called the Maas. For who would believe that a thing, now so flat and stale, so humble and quiet, as it glides in its old age to “the unfathomable gulf where all is still,” should be that imperial river—or even an elder branch of—the once lordly Rhine, which in its youth thundered from the Alps, roaring in foam and rainbow mist over Schaffhausen, and in its strength and glory gathered to its lofty sides the pomp and chivalry, the poetry and song, the learning and literature of Deutschland; and—if teetotallers will permit the additional reminiscence of its history—wreathed its brows with the noble vines of the princely Johannisberg? Alas! no one knows what they may come to even in this world.

But if this allusion to alcoholic wines gives pain

to any worthy hater of such dangerous fermentations, let him just turn his face from the Rhine and its vinous associations, and look to the north, and there he will see a country which might form the very paradise of water-drinkers, if they were disposed to overlook the quality of the liquid in the largesse of its quantity. Take a sweep of the horizon along half a circle from west to east—all is as flat as the ocean; a green plain, with nothing whatever to relieve it except lines of white that indicate the ditches which divide the fields, and the windmills which drain them; with here and there a group of trees round a village, and the church spire that rises above it. Such is the scenery of Holland. The Atlantic, if dead calm and covered with grass, would be equally picturesque.

The smallness of Holland is realized from the top of this tower. To the south is seen a patch of red with steeples, which notes the venerable old town of Dort, and which, coming from Antwerp, is passed in sailing to Rotterdam from Mordyk on the Maas. Its synod and articles are well known to all students of divinity; and the discussion carried on there in the seventeenth century, between Arminians and Calvinists, is continued still, and promises in some form or other to divide men's opinions till synods and articles are no more. That town is not far from the southern border of the kingdom. Look now along the line of railway which shoots to the north-west straight as an arrow;—that steeple a few miles off marks Delft, once the world's capital of crockery. A few miles farther on in the same direction are the steeples of the Hague. Let the eye follow the horizon until it describes a semicircle sweeping inwards to the right hand, ending due east of Delft, and the steeples of Leyden, Haarlem, Amsterdam, and Utrecht can be seen in succession; and these are the chief cities of this pumped yet watery land. That village on the river to the west, and close to us, is Schiedam; from whence for generations gin flowed, and smugglers sailed, to tipsify and cheat our ancestors.

And now bidding farewell to the upper regions of the atmosphere, and the windy pinnacles of St. Lawrence, we may descend—no easy matter—to the earth. Let us look into the church in passing, for it is like every other in Holland. It is very large, and without any ornaments whatever. The pulpit is attached to one of the pillars, and the congregation are all boxed in within the nave, leaving the aisles free, and a large portion of each end of the fabric. With the exception of the organ, all is as simple and unadorned as the most rigid Presbyterian could desire; for the Dutch, like almost all the Churches of the Reformation, are Presbyterian in their forms of worship and church discipline. All the seats are furnished with Bibles of a uniform size—but such a size! They are the only things in Holland which fully came up to my preconceived ideas of Dutch size and capacity. Pocket Bibles in public seem unknown. Those we saw everywhere in the pews seemed to have reposed there since the days of Hugo Grotius. To carry them, sacks, instead of pockets, would be necessary.

Now that we are again in the town, we may take a short stroll before the railway starts for the Hague. As we do so, we cannot fail being struck

by some features common to all Dutch cities. One, of course, is the cleanliness and order everywhere visible. The streets, with their small red brick pavement, are scrubbed like an indoor floor; and the fronts of the houses are all subjected to a constant watering from syringe pumps, like those used by our gardeners. The vessels in the canals are equally clean. They are ranged, as if by a theodolite, in straight lines; and what is wanting in elegance or variety of form,—for they are all the same in rotundity of build, looking so like drawing lessons,—is made up in perfect cleanliness. Every bit of brass is beautifully scoured and polished. The sailors are constantly washing the oars or scrubbing the decks. At the stern may be seen small windows two feet square or so, with their white curtains tied up with ribbon, and probably a few small pots of flowers; and there live the whole family of the worthy master of the *Vrouw Catherina*. Most people are annoyed by the cleanliness of the Dutch. Scotchmen are always so. They never, at least, praise it, but either express a mere sense of wonder at such a fuss being made about it, deplore the precious time wasted in securing it, or detract from the supposed virtue, giving “no thanks,” because of the abundance of water close at hand; I heard a Scotchman say, when treading carefully over a scrubbed street, “Did any one ever see the like of this? I do believe that the heaviest punishment which you could inflict upon these towns would be to shake off the dust from your shoes and leave it with them!” This was pure envy. We must admit that Scotland and Ireland contain the filthiest villages in the world. “But that is the climate.” No; look at Holland. Pray, my dear countryman, do not excuse such habits; but whenever you can, lecture your village neighbours on the blessings of water and the beauty of soap, and tell them about the cleanly Dutch.

Now we must take a peep into the land of the Dutch, or the Ditch, for either term is appropriate. The *Spurweg*, or railroad, wheels you in a single day from Rotterdam, through Delft, Hague, Leyden, Haarlem, to Amsterdam. The grand characteristic of all these towns is “silence which may be heard.” No doubt there are exceptions to this rule. In the most silent town the sound of human footsteps occasionally breaks upon the ear, and the whisper of human voices disturbs the air; while in some parts of the Hague, and in most parts of Amsterdam, there are decided noises and evident bustle, such as one hears and sees in a quiet London street on Sunday morning; but, generally speaking, the repose is profound. A carriage startles you. When the tread of a horse is heard, every head is turned to see what it imports. The question is constantly forced upon the mind, *What can all the people be about? How do they live? Where are the manufactories, the mines, the anything to produce food and clothing? But the echo answers “Where!”* The windmills wheel in the silent air as if their wings were oiled. The barges glide along the calm and sunny canals, and the people appear to be well fed and clothed. The whole nation looks, in fact, like an old, respectable sea-captain, who had made his money years ago by trading far away, and who now sat upon his chest

of dollars, smoking his pipe and gazing with a stolid face of quiet satisfaction upon all the world, as if saying, “My money is made, and my day is over; I am contented; and please don’t trouble me with anything new. It’s all right!”

Methinks I hear some well-informed accurate statist correcting me with a frown, and saying, “What! do you not know that the Dutch are the most industrious people in the world? Common sense, as well as more accurate information, might have told you that no nation could exist in such repose as you picture. Have you never seen their immense dykes, their drained lakes, their warehouses filled with the products of their flourishing colonies? Have you never heard of Java, Surinam, or Guiana? Have you never read that most charming book, Motley’s *History of the Dutch Republic?*”

There is no necessity, astute friend, for any such catechism. My one reply is this, that I do not pretend to tell anything about the country except what meets the eye of a railway traveller.

The paradise of a Dutchman is *Brök*. This is a village of about 700 inhabitants, an hour’s journey or so north of Amsterdam. Cross the ferry in a small steamer, proceed for half-an-hour along the great Helder canal in a *Trekschuit*,—a mode of conveyance, by the way, delightfully national in its order and peace,—then hire a carriage, for which you must pay what is asked or want it, and proceed leisurely along the banks of the canal for three or four miles, until you reach *Brök*. The peep one gets from the road across the country gives a perfect idea of Holland, which looks like the flat bottom of a boundless sea, drained or draining off; the cattle in the fields, the scattered villages with their steeples, and tall trees here and there, with storks studying in earnest meditation on the margin of long ditches, all assure you that, in the meantime, the land has got the best of it. Yet it is impossible not to have damp, uneasy feelings, lest by some unnoticed power of evil,—an unstopped leakage, dry rot in a sluice-gate, or some mistake or other to which all things mundane are subject,—a dyke should burst, and the whole Zuyder Zee pour itself like a deluge over the country, leaving you and your carriage out of sight of land.

Brök is well worth a peep. The only thing I had ever heard about it in history was the high state of its cleanliness, which had gone so far that the tails of the cows were suspended by cords lest they should be soiled by contact with the ground, and afterwards be used to switch the pure and dappled sides of their possessors at any moment when the said possessors were suddenly thrown off their guard by the bite of some unmannerly insect.

I can certify to the reality of this caudal arrangement. It seemed, however, to be more cleanly than comfortable. The most ordinary sympathy with suffering caused an irritation in one’s skin, as he saw the tail suddenly checked by the string, just when about to descend upon and sweep away a huge fly busy breakfasting about the back-bone or shoulder-blade.

A model village preserved in a glass case could not be more free from dust, life, or human interest than this *Brök*. A small lake with innumerable small canals so interlace the cottages and streets, that it looks as if built upon a series of islands con-

nected by bridges. The streets are all paved to the water's edge with small bricks. Each tree is bricked round to the trunk. Bricks keep down earth, grass, and damp, and are so thoroughly scoured and spotless that it is impossible to walk without an uneasy feeling of leaving a stain from some adhering dust of mother earth. The inhabitants (if there are any) seem to have resigned the town to sight-seekers. I am quite serious when I assure the reader, that three travellers, at eleven o'clock in a fine summer forenoon, watched from a spot near the centre of the village, and did not for at least ten minutes see a living thing except a cat stealing slowly towards a bird, which seemed to share the general repose. You ask, very naturally, What were the inhabitants about? I put the same question at the time in a half-whisper, but there was no one to answer. All experienced, I think, a sort of superstitious awe from the unbroken quiet, so that the striking of the clock made us start. We visited the churchyard (naturally), and found everything arranged with the same regard to order. There are no graves; but rows of small black wooden pegs driven into the ground, rising six inches above the grass, with a number on each, a little larger than those used for marking flowers, indicate the place where the late burghers of this Sleepy Hollow finally repose. I have never seen so prosaic and statistical a graveyard. Contrast with this the unfenced spot in a Highland glen, its green grass mingling with the bracken and heather, and its well-marked mound, beside which the sheep and her lamb recline, except when roused by the weeping mourner! To live in Brœk, and be known after death only as a number in its churchyard, would seem to be the perfection of order and the genius of contentment. To be mentioned by widow and children like an old account, a small sum, an item less from the total of the whole—as “our poor 46,” or “our dear departed 154!” What an “*in memoriam*!” The intensity of the prose becomes pleasing to the fancy. I am not sure how far it would be inadvisable to send a colony of Irish peasantry and pigs to improve Brœk!

On our way back to Amsterdam we made a detour of some miles to visit Peter the Great's house at Saardam. The veritable wooden cottage is still there, being cased now in a large building to preserve it from further decay. It consists of two small rooms, a but-and-a-ben, as they say in Scotland, all of wood. Here Peter the Great had for some time lived in order to learn shipbuilding at the docks, not only by seeing how the work was done, but chiefly by doing the work himself. There are several tablets hung on the walls of this humble shed, telling of visits paid by crowned heads, such as one by the Emperor Alexander of Russia—“Alexander I. Benedictus Imperator hunc lapidem ipse posuit, 1822.” Another by the present Emperor of Russia, “Petro Magno—Alexander, 1839.”

It is not much more than a century and a half since this wooden hut was occupied by the Czar Peter. And how strange to connect the state of Russia about that period with what it is now; how like, yet how unlike! Then Peter was creating a navy;—how formidable has it since become. Peter was then at war with Turkey, had taken

Azoff, and was planning how he should build ships to command the Black Sea, and seeking through the clergy to raise money for the purpose. That system of aggression upon Turkey and the East, begun so long ago, has only lately reached its climax, and received its first check in the taking of Sebastopol, and the destruction of the powerful Russian fleet beneath the waves of the Black Sea. Then Peter had founded St. Petersburg in an unknown and barren swamp; now it is the impregnable capital of a great empire. Then Russia was successfully invaded to within a hundred leagues of Moscow by the Napoleon of his day, Charles of Sweden, who afterwards, with the aid of Turkey, nearly destroyed Peter; now Sweden has been driven from her old possessions by Russia, and fears almost to breathe in her august presence. Russia was then emerging like a wild barbarian from her unknown forests and untravelled icy plains, and was hardly recognised among the European powers; now she is taking such a part in the affairs of the world as will mould the features of our future history. As the wooden hut of Saardam is to the present imperial palace in St. Petersburg, so is the Russia of Peter to the Russia of Alexander.

But while Russia has been advancing wonderfully since those days, Amsterdam and the Dutch have, strange to say, remained, like Peter's wooden palace, very much the same. The Dutch merchants at that time lived in such comfort and splendour, that the Czar Peter got a model house made that cost him about £1500 of our money, and is now in the museum at the Hague, to serve as a pattern to his nobles for their domestic architecture. It is a very beautiful model indeed, and exhibits the interior in all its details, down to the most trifling ornaments—the pattern of the rugs on the floors, of the curtains on the beds, and the paper on the walls, with every tiny bit of china ornament in the sitting-room, cooking-pan in the kitchen, or plaything in the nursery. And well might the Czar envy the home of the rich Hollander. No one can visit one of the old aristocratic merchant families in Amsterdam without perceiving the immense advance made by the Dutch two centuries ago beyond any other mercantile community in the world, except the Italians. Take as a specimen the mansion of the V——L——s, in the Heeren Geracht. Notice the large marble flags that pave its handsome lobbies and line their walls—the stately rooms—the large mirrors—the soft thick carpets—the tasteful grouping of old handsome furniture, and beautiful side-tables with rare and costly china, and exquisite filagree work in silver from Japan; and the perfume of choice flowers which makes every apartment odorous. But, above all, gaze upon those pictures that cover the walls of the drawing-room and library. How fresh! They seem as if they had just come from the hands of the painter. Exquisite flowers, with pearly drops of water, by Van Huysum; Roman scenes by Uft; landscapes by Both and Ruysdael; sea-pieces by Backhuysen; old women by Gerard Dow; village scenes and huge noses by Ostade; with other master-pieces by Van de Velde, Weenix, Berghem, and especially a magnificent Wouvermans, and Metz. These

have not been picked up suddenly at some sale, nor are they of doubtful authorship; but, the best of them, upwards of twenty, were painted for the family, and have never been out of the house since framed in those plain black frames, and hung up on their walls by the hands of the famous artists themselves! Here, too, are two grand full-length portraits of their ancestors, Burgomaster S—— and his wife, painted by Rembrandt.

Some of the streets of Amsterdam, or rather the ranges of houses which border the grand canals, are very handsome; others, like the Jonkerstraat, are narrow and crowded. The Jew's quarter, like every other Jew's quarter, from Tiberias to Tobolsk, is filthy, and redolent of old clothes and roguery. The Stadhuis is fine. I was much pleased with the stucco ornaments over the door of the Hall of Bankruptcy, which represents rats ducking into empty purses, and rioting in empty boxes. A printed notice, intended for the porter who shows the building, is very characteristic of Dutch formality:—"Le concierge est chargé de l'empêcher avec politesse, mais sérieusement."

I was not fortunate enough to hear the organ in Haarlem, the only thing in the town much worth a visit. The cathedral was devoid of special interest, save what was afforded me by an old dusty, cobwebbed model, hung up in an archway, of one of those grand, picturesque old Dutch ships, with immense lanterns and high poops, that somehow always suggest to me pleasant dreams of the Spanish main, the bucaners, and rich prizes. The beadle also pointed out two marks in the wall, which, from the solemn air he assumed in bidding us notice them, I at once guessed to be records of some martyrdom. But the upper mark, eight feet from the floor, recorded the height of a giant called Kejanas, and the lower, three feet high, that of a dwarf who bore the name of Simon Paap! These seem to have exhausted the ecclesiastical curiosities of Haarlem. Unfortunately we missed, by a few days, the bloom of flowers and "Dutch roots" famous in the neighbourhood. From what we saw, that sea of colour must be very beautiful when shining in its full tide of glory.

Every one knows that the Haarlem Sea has been at last drained. A noble work! I forget how many thousand acres have been pumped dry, or how many millions of tons of water have been weekly pouring out of this enormous tub for years. But the waters have finally left the earth, and the whole land is divided into *polders*, and becoming a green plain—pasturing cattle, amusing storks, supporting villages, and receiving the admiration of the industrious natives, who work and smoke their pipes in peace and safety on their fields, fifteen feet below high-water mark.

The Hague, or Gravenhagen, is unquestionably the most pleasing town in Holland. The park, with its massy noble trees, gives it a picturesqueness and beauty not found elsewhere. These trees are the mountain ranges of Holland. Except a few steeples, there is nothing higher.

There was the annual *kermis* or great fair the week I was there. It would be unprofitable to my readers to describe at length those Dutch saturnalia. With few exceptions, they were like every other exhibition of the same class; innumerable booths,

many of them got up with wonderful taste and beauty, merchandise of all sorts, theatres, shows, horsemanship, giants and dwarfs, gambling, drinking, tons of toys, tubs of pickles, crowds of men, women, and children, dissipation of all sorts night and day. The Dutch are proverbially *douce*, sober, and formal; they have few amusements or excitements on week-days; their Sabbaths are, outwardly, almost as well kept as in Scotland. But when such a holiday as a *kermis* comes round, it seems to be understood among the working classes, and even domestic servants, that a general indulgence is proclaimed for every vice. This is just what one would expect. It is so with many in Scotland on our New-Year's days, and some of our fairs. Men *will* have amusement and excitement, as certain as the ocean will have its spring-tides, and the world its summer flowers and summer songs. How shall this inborn appetite be fed? Shall it be treated as a crime, and handed over to Satan; or shall it be made to minister to man's happiness according to God's will? Shall it be pent up until it gathers strength to burst all the barriers of law and decency, and rush in annual floods of wild and unbridled passion; or shall society recognise its necessity, perceive how full of goodness and benevolence it is, and adopt such wise plans as will run it off in gentle rills, week by week, or even day by day, to freshen and irrigate the earth, and make our fields more green and beautiful? Those who can adjust the demand for excitement to the other and higher demands for man's nature and life, will confer an inestimable boon on society. All classes require their amusements to be reformed, not reduced; spread over, not concentrated; directed, not annihilated; and taken out of the kingdom of Satan and brought into the well-ordered and beautifully-balanced kingdom of Christ on earth. A danger from all extremes is to be found in their opposites. When the swing is highest on one side, look out for broken heads and falls on the other. One cause of the tendency to pervert the Sabbath from a holy day to a holiday, is the incessant toil, barren of hours of rest, and of all amusement and gentle excitement, during the week. The bouts of hard drinking indicate many previous days of parched thirst.

Let us leave the crowd of the fair and go to Scheveling, on the sea-coast, about half-an-hour's drive from the Hague, and the only bathing quarters of the capital.

We drove along a road straight as an arrow, with trees on each side, and at the end of which was a village intensely red, nestled beneath a ridge of sandhills, which sheltered it from the ocean. We ascended these *dunes*, and reached a café on the sea-side, which sprung out of the sand like an Egyptian tomb, and almost as empty of living inhabitants. The day was cold, and the whole prospect intensely dreary and comfortless;—fine sand drifting like snow before the cutting sea-blast,—the sea brown, gurlly, and sulky-looking,—rows of Dutch fishing-boats arranged along the beach, their rotund sterns turned towards Great Britain,—the café containing only piles of chairs and benches, which prophesied of crowds yet to come,—we saw but one waiter, and nothing more cheering than Schiedam. Such was Scheveling.

There is much in the Hague to interest one. There are many pleasing and undefined memories from the past, of "our ambassador at the Hague;" "letters from the Hague;" "ministers who took refuge at the Hague;" and though it was difficult, perhaps, to recall much about any one ambassador, letter, or minister, in particular, yet you felt pleased in knowing that if the Hague could speak, and those old houses tell their story, it would be worth listening to. It had the interest of an old man who had seen strange things in his day, but was not communicative. Then there was for the present a royal family that I knew nothing about; and Paul Potter's Bull, with other pictures which the whole world know something about, and which were all worthy of those great artists, who had indeed eyes to see, hearts to feel, and hands to execute; and there were many other things which were associated with historical names and events that can never die, such as the house, the prison, and place of murder of the great De Witt; the house and place of execution of the greater Barneveldt. Alas! may we not pause and mark how often in the history of this fallen race of ours these two things go together—great men and murdered men! Truly hath Coleridge said,—

"It sounds like stories from the land of spirits,
If any man obtain that which he merits,
Or any merit that which he obtains."

It must be so until *the kingdom comes*! The clay world is not capable of understanding genius, unless it makes itself "useful," by working in clay, to supply the world with bowls and basins; the selfish world cannot believe in the unselfishness of the truly great; the proud yet little world cannot brook superiority; the hating world cannot admire love; and so in all ages hath it been. The world "loves its own," and hates those who are not of it. It is so with the clerical world and the lay world; with the world, whether seen in Presbyteries or Parliaments, in Synagogues or Senates. The huge shams and humbugs hate the honest men and true; and there are none so fierce and unscrupulous as those who think that they are doing God a service, while serving their own passions.

I liked right well to see in the Museum of the Hague the arms, clothes, etc., of such men as De Ruyter and Van Tromp—the Lord St. Vincents and "mighty Nelsons" of Holland. The nation, like the family, is God's blessed and wise ordinance, and its independence should be defended with its last drop of blood! And therefore one of the greatest gifts God gives a nation is that of great heroes, men who will "hazard their lives unto death" for their country, who will "wax valiant in fight," and "put to flight the armies of the aliens." Noble fellows were De Ruyter and Van Tromp! Even England was afraid of them.

I should like to end my "peep" in the old hall of the University of Leyden—to close my eyes gazing on the portraits on its walls—fall asleep, and awake anywhere except in a late debate of the General Assembly of the good Church of Scotland.

The portraits are of the great professors who, as members chiefly (I believe) of the theological faculty, have made Leyden illustrious since it became a university. Of course I requested my

guide to withdraw, that, all alone, I might get a whiff from the past amidst the deep repose of that ghost-like old hall. There were profound scholars there, like Scaliger; men of science, like Boerhaave; and divines, like Arminius; and also, no doubt, the usual percentage of those whose names have gone amissing, except to antiquaries, among the dust of books and churchyards. Some easy men were there, with double chins and single wit, who transmitted faithfully to the next generation what they got from the past, all wrapped up in a white napkin, never opened by themselves, and who were awfully solemn in their rebukes of any student who profanely suggested an examination of the contents, lest they should have become mouldy by time and damp; and logical-looking men were there, with knit brows and sharp noses, who had the faculty of proving to a demonstration points which no one either believed or could contradict; and weak, though proud-looking men were there, who made sonorousness pass for sense, orthodoxy for religion, and "dignified silence" the defence of their ignorance, and the graceful escape from their perplexities. There seemed to be God-loving men also among them, with giant brows and childlike eyes. Arminius was there—how good and mild he looked!—with some of his followers, and Calvinists side by side. How these sects fought while on earth! and most zealously in that land of ditches, sluggish canals, wheeling windmills, and dead flats. Great often was their mutual hate, too, in arguing about the love of God to some or to all. There were martyrs in Holland to the five points, and the Synod of Dort was well-nigh as dogmatic and exclusive as the Council of Trent. These good men are now in heaven. Looking at their portraits I was inclined to ask: "I wonder, fathers and brethren, if you even now understand the mysteries about which you divided families and churches? Are the decrees or foreknowledge yet comprehended by you in relation to man's responsibility and free will?" Come, let us breathe the air! The figures begin to move on the walls, and we may have the dispute renewed, each ready to begin where he left off, finding that no one since their day has thrown any additional light upon it.

What a charming thing it is to voyage by a trekschuit along the canals. What perfect repose; what placid enjoyment; what rest in motion; what an epitome of Holland; and what a contrast to England or America! The sunny canal, the quietly trotting horse, the regular and orderly succession of Dutch gardens, Dutch villas, and Dutch comfort, the sense of having nothing whatever to do, or railroads could not be so despised,—a glory from the past, when men were not rushing like mad bulls over the earth, as Carlyle would say, "from the inane to the inane again," but could quietly browse and chew their cud,—all this made the sail to Delft singularly pleasing. Delft itself has now no manufacture of "Delftware," as far as I know; but crockery is not at best interesting to me. Then came Rotterdam at night, the steamer in the morning, the ocean at mid-day and next night; London again, with Blackwall and the weary custom-house; then farewells to my travelling companions, the best ever man had; then home.

HOW WONDROUS ARE THY WORKS, O GOD!

A HYMN.

How wondrous are thy works, O God,
In radiant freedom shower'd abroad!
Thy wondrous works still fresh and fair,
O God, let every tongue declare!

The mighty mountains, rocky-breasted,
With various grandeur leafy-vested,
By the deep central fire up-reared,
O Lord, at thy command appeared.

The deep roar of the voiceful ocean,
The changeful billows' sleepless motion,
Even there thy sounding foot hath trod,
There goes thy march, thou mighty God!

Where the rich-tress'd birchen-bower
Shakes fragrance round in sunny hour,
Where the rock-rooted pine-trees nod,
Thy breath is there, thou mighty God!

Thou lookest, and from thy glance springs
Quick virtue through the heart of things,
And at thy touch the soulless mould
Bursts into stars of living gold.

Thy clouds o'er canopy my way ;
Thy waters roll ; thy breezes play ;
Thou hast engirt me with fair show
Of beauty, Lord, where'er I go.

The uncounted spheres that wheel above me,
The boundless thoughts that inly move me,
All are but pulses shot from thee,
That art, and wert, and art to be.

How wondrous are thy works, O Lord !
Thy lively radiance freely pour'd
On this old world still fresh and fair,
O God, let every tongue declare !

JOHN S. BLACKIE.

GEFFRARD, PRESIDENT OF HAYTI.

BY J. M. LUDLOW.

THERE was a time when Hayti and her independence were, for many persons in these islands, a subject of the deepest and dearest interest. During the struggle for West Indian emancipation,—at a time when the mere capacity of the black man for freedom was by a large party openly and strenuously denied,—the fact of an island of self-emancipated slaves holding its rank, however subordinate, as one of the independent states of the world, entering into and maintaining diplomatic relations with other powers, being represented by brown or black ministers at royal courts, was one which, at least, could not be gainsaid. In the eagerness to make the most of so valuable a fact, much was overlooked, and not a little exaggerated. Above all, undue efforts were made to fix public attention on the one great name of Haytian history, that of Toussaint L'Ouverture, and so to lead away men's minds from the pettiness of Hayti's present to the heroism of her past. Hence it not unnaturally happened, that when English abolitionism had fulfilled its end in emancipating our own colonies, and the heats of enthusiasm in its cause gradually cooled down, and men began to realize the fact that the Haytian was, after all, but the child or grandchild of a slave, and had retained much of the indolence and the brutality, the sensual passions and the ferocity of his ancestors ; that, instead of being a pattern of good government, Haytian administration was very nearly a pattern of all disorder ; that old sources of commercial wealth were drying up or had ceased to flow, whilst new ones had not shown themselves ; that, in short, the free black of Hayti, left to himself since the treachery and the cruelty, almost unparalleled in history, of the First Consul's generals, caused him to see a foe in every white man, had sunk to a condition not much above that of his kinsmen on their native continent,—a revulsion in public feeling took place, which the sway of Souloque carried to its height. It is certain that the rule of

that "large, good-natured negro," with "mild" eyes and "placid" countenance, as he is described by Dr. Beard as late as 1853, forms the most grotesquely-horrible incident in the history of the civilized world during this century. Mr. Underhill's recent work on the West Indies affords, so far as I am aware, the only source of information yet accessible in our language as to this period, the full details of which, and of the revolution which put an end to it, are, however, only to be found in the picturesque pages of M. d'Alaux. Suffice it to say, that to the ignorant and superstitious negro, whom the chances of revolution floated into power as a harmless mediocrity, the coloured class (of whom Mr. Underhill says that there is among them "much refinement of manner, a good deal of shrewdness and intelligence") became objects of unreasoning dread and abhorrence. The massacre by the ruler of his own cabinet ministers, and of the chief inhabitants of his capital (April 1848), followed by the slaughter of the mixed bloods or *yellows*, both men and women, in the city and in the country, till the government offices had actually to be closed for want of clerks ; the inauguration by the ruler of the "Vaudoux" worship, or that of the god who knows all things, sees all things, can do all things, and consents to show himself to his worshippers under the shape of a small green snake ; horrible cruelties perpetrated, often on the mere denunciation of a sorcerer ; burnings of unfortunates collected together in a road-side pit, slow starvings, rottings away of prisoners by the mere water-drip of damp cells,—such are some of the recollections of the nightmare reign of "Papa" Souloque, *alias* Faustin I., high-priest of the Vaudoux worship. "Life," says Mr. Underhill, "had no protection. The grants of his legislature for public works he coolly applied to his own uses. No one dared to come within sight of his palace without uncovering his head, and no woman's virtue was safe from his passion. Education he

utterly abhorred, and suspected intelligence wherever he came into contact with it. Under pretence of raising moneys for the public revenue, he seized one-fifth of the coffee brought to the coast for shipment; obliged importers to pay a portion of the customs' duties in corn, which he hoarded; and forced on all servants of the State his worthless assignats for salary. He kept in his palace a clerk constantly employed in signing this paper money, which was issued without any guarantee, and was not convertible into coin." To crown all, let it be remembered that Hayti under Soulouque presented the historical caricature of France under the third Napoleon. Elected President of the Haytian Republic in 1847, Soulouque preceded the President of the French Republic in causing himself to be proclaimed Emperor in 1849. Hence it has been a standing sneer at the present ruler of France, on the part of his opponents, that he has only "imitated Soulouque."

A breath, however, sufficed to blow down this monstrous Haytian empire. Fabre Geffrard, born in 1806, was the son of a general who had shown himself humane under the cruel Dessalines, and had been, with Pétion, one of the chief promoters of the Haytian constitution of 1806. Left early an orphan, young Geffrard entered the army at fifteen, and only after twenty-two years' service obtained his captain's commission. He took part, unwisely, as events proved, in the revolution of 1843, which overturned the able but indolent Boyer, and distinguished himself at the head of a small body of troops against the Government forces,—deceiving them as to his numbers, by the rapidity of his movements, and as to his resources, by supplying provisions to his famished enemies at a time when he himself was short of rations. When the revolution, which had originated with the most impatient of the reformers among the "yellows," led in turn to a rising of that portion of the blacks who represented absolute barbarism, and whose axiom was, that "every negro who could read was to be reckoned a yellow," and exterminated accordingly, Geffrard marched against and defeated the black leader Acau; but, true to that humanity which seems the very basis of his character, we find him in turn defending the middle classes from the blacks, and the insurgent blacks when taken prisoners, from the national guard. He became Lieut.-General during these movements; but General Riché, who became President in 1846, and who bore him a grudge for having formerly made him a prisoner, sent him before a court-martial, which in Haytian understanding *then* meant sending him to death. Through the adroitness, however, of Riché's minister of war, who knew Geffrard's value, the General was acquitted. The

president of the court-martial was Soulouque, who seems to have imbibed on this occasion a strange friendship for the man whose life he had been the means of preserving, and who thus spared him in an otherwise unaccountable manner during his subsequent rule, and even forced on him a title of Duke, which Geffrard did not care to assume. This was the more remarkable, as the course of events was of a nature to create the utmost jealousy of Geffrard in Soulouque's mind. In two disastrous wars which he undertook in 1849, and in 1855-56, against his neighbours of the Dominican Republic, Geffrard alone won credit. In the former, he was wounded at the head of the division; in both, by his courage, his activity, his cheerfulness, and, above all, by his anxious care for the welfare of his soldiers, he exhibited the most striking contrast to Soulouque's imbecile generalship, and brutal indifference to the safety of others. In the latter war, in particular, Geffrard succeeded on the retreat in bringing in the rear-guard in perfect safety, without the loss of a single piece of artillery or ammunition-waggon, whilst the Emperor was only thinking of saving his own burly person by a speedy flight. Already, at this period, he was repeatedly urged to allow a revolution to take place in his favour, but declined all solicitations. Still, even in spite of the mocking comparisons which were instituted between the potentate and his general, Soulouque might possibly yet have spared him, as a servant of undeviating faithfulness, but for—a brace of comets.

When the comet of 1843 appeared, a resemblance was caught by the popular fancy between its tail and a long plume conspicuously worn by Geffrard, when galloping at the head of his division, and it was called "Geffrard's plume." But a new comet appeared in 1858, this time with two tails. "Geffrard has two plumes," was the popular saying which at once flew about, and which served, in the minds of a superstitious people, to give the impression of some extraordinary piece of luck about to befall the General. Soulouque was greatly disturbed; he consulted a favourite sorcerer whom he had for a while discarded; he attempted a further trial of Geffrard's luck, by bidding him open his clenched fist within which he held a gold piece; when, lo! the imperial clutch was forced to yield to the stronger muscles of the General. At last, the comet not disappearing, Soulouque determined to have Geffrard arrested. Some pretext, however, seemed necessary; spies were placed to watch all his movements.

Geffrard, however, was warned of his danger, and he knew that nothing was to be hoped from Soulouque's ferocity when once aroused. Just then the emissaries of a conspiracy formed in the valley of the Artibonite, beyond the mountain-

chain which forms the backbone of the island, were in Port-au-Prince, the capital, in search of a leader. They addressed themselves to Geffrard. The cup of Soulouque's tyranny was full; Geffrard listened to their solicitations; but he was barely able, by the aid of a friend, to escape in a boat, on the night when he was to have been arrested. He had neither funds nor army. But so thoroughly ripe were the people for revolution, that on his landing at Gonaïves, six men coming by sea, met by three on land, were sufficient to carry the place without the shedding of a drop of blood. The north of the island soon rose as one man. It is said, however, that the west and south might not have risen had not Soulouque led his army against the revolutionists. In the two or three weeks of warfare which ensued, three men are said to have been killed, and about ten wounded. But the troops of Soulouque's army mostly melted away into that of his opponent's, the pickets and sentries in particular almost invariably suffering themselves, with somewhat of coy reluctance, to be enticed away. When Soulouque entered his capital (10th Jan. 1859) with scarcely a fragment of his forces, he was overwhelmed with ironical congratulations by the populace. He bethought himself of his old resource—an extensive massacre, with the promise of plunder to the murderers. Already, from the moment of Geffrard's escape, he had had the prisons filled with all whom he might suspect, Geffrard's wife and daughters in the number. The massacre was to begin with the prisons, and to be extended as far as might be deemed expedient amongst the "yellow" class. The day (15th January) was fixed, the blood-money paid to the intended assassins. But before the day came, Geffrard was at the gates. It was the assassins themselves who opened them to him. Not a blow was struck in defence of the falling Emperor. Geffrard entered the city, we are told, without running any other risk than that of being deafened by acclamations. The massacre of the prisoners was fixed for 4 P.M.; at 4 A.M., Soulouque was himself a prisoner. He was allowed to take refuge at the French consulate, and from thence to pass over on an English vessel to Jamaica (19th January) with a few of his most hated officers, Geffrard saving them from the rage of the people. (The ex-empress, I believe, now maintains herself as a washerwoman.) The Republic was once more proclaimed, and Fabre Geffrard became the President.

Four years have not elapsed since the last revolution, but a marvellous change has been already effected. Indeed, a French writer in the *Annuaire des Deux Mondes* goes so far as to say that more useful measures were enacted within the first year of Geffrard's rule, than had ever been adopted be-

fore, although, owing to the opposition or ignorance of those with whom he had to deal, the President had not done one-tenth part of what he could and would have done. Soulouque had kept nearly the whole male population under arms, compelling his soldiers to cultivate his estates without so much as feeding them. The great bulk of the army was now disbanded; of the troops retained, the pay was doubled or trebled, and a crack corps of sharpshooters formed, on the model of the French "Chasseurs d'Afrique." Improved arms were bought, so as gradually to get rid of the old flint-locks which Soulouque had remained obstinately wedded to, apparently on the ground that his favourite hero Hannibal had never used percussion-caps! Soulouque's so-called navy, composed of rotten old ships bought at ten times their value, was disposed of, a couple of war steamers being ordered to be built, one in England, one in France. The wretched salaries of the civil functionaries, which rendered peculation all but a necessity, were more than doubled; but severe measures were taken against official extortion, peculation upon receipts, and frauds upon contracts, all of which had risen to an enormous height. The issue of paper-money was at once limited; measures were taken to call in the enormous masses of treasury bonds already afloat, masses so great that the merchants, who were allowed to pay them in at par, in discharge of customs' duties, found yet a profit in selling them at 60 and 70 per cent. discount; whilst the new Government contrived to meet punctually all its own engagements. The liberal tariff of 1846 was restored; an onerous tax of one-fifth (after the manner of tithe) on the coffee crop was replaced by an export duty. In order to restore the former high character of San Domingo coffee, all coffees were made subject to inspection before shipment. An agricultural bank, to which the Government supplied the first capital, was established at Port-au-Prince, with six branches in other towns, to make advances to agriculturists for the purchase of machinery, improved agricultural implements, plantations, etc., at an interest which may seem to us high (10 per cent.), but which is said to be only one-fifth, or even a smaller proportion, of that which would previously have been paid; the applications for advances being, of course, subjected to due verification. The rich forests of the State, hitherto cruelly plundered and wasted, were placed under a careful system of management. Steps were taken for the repair of roads, water-works, public buildings; the first attempts made to enforce cleanliness in the streets of towns; a quay was built at Port-au-Prince. Eleven boys were sent at the expense of the State to be educated in France; the college

already existing in Port-au-Prince was re-organized, two new ones were established, professors sent for from Europe; a naval school was opened, and even a school of law; primary schools were decreed to be established in every *commune*. Yet, in spite of all these calls upon the public revenue, by sole dint of economizing expenditure, there was an excess of receipts in the exchequer by the end of the very first year.

What is the result? Life and property are secure; cultivation (which, indeed, had reached its very lowest point) is extending, trade reviving; the people are contented, and, to use the expression of a Haytian merchant, feel that they have a personal interest in the continuance of Geffrard's rule. The great curse of Hayti since the expulsion of the whites has been the rivalry between blacks and "yellows." Instead of sacrificing, or even subordinating one colour to another, the President, himself a coloured man (of the class technically called "*griffes*," the last remove but one from the pure negro)—bearing no doubt in mind that, although in later struggles the "yellow" has mostly been the champion of civilisation, the black of barbarism, yet the one ruler under whom Hayti really held her own as a civilized country, Toussaint l'Ouverture, was a full negro,—has done all in his power to conciliate the blacks, by retaining as many of them as possible in office and around him, to the serious danger of his life, as they frequently plot against him. Instead of jealously excluding foreigners, he is glad to see them in the country, and has particularly encouraged the settlement of coloured men from the United States. Instead of checking education, he does everything in his power to promote it, and expresses the hope that his people may become so enlightened as to render despotism in future impossible. Instead of patronizing heathenism, he has endeavoured on the one hand, by a concordat with the Pope, to purge the Roman Catholic Church of the island (Romanism being legally the religion of the State) of the rabble of priestly scoundrels or impostors who hitherto usurped the functions of its ministry; and on the other hand, the provision of the Constitution, which declares that all religions shall be tolerated, has been faithfully carried out, Protestant missionaries and their converts enjoying full liberty and protection. He declares himself glad to encourage all who preach virtue and morality, and fond of controversy as a means of eliciting the truth. Indeed, a Protestant lady has been appointed by the Government to direct the public school of the important town of Carmel; and though the opposition of several members of the local board led at one time to her resignation, the President refused to accept it. Instead of fearing

or being jealous of the intelligence of others, he has surrounded himself with the ablest men in the country; and his private secretary, M. Rouman, in particular, is described as entering freely into his chief's conversation "with much vivacity, and an eye beaming with intelligence."

But the wisdom of Fabre Geffrard is not only that of the head, but of the heart. Not long after his accession to power, he observed that a particular sentry was unusually often on duty before his palace, and so remained far beyond the time when he should have been relieved. He told the man he felt certain that he had some evil design against him. The sentry confessed that he had been bribed by an officer of the staff, for 8000 Haytian dollars, to assassinate the President. Geffrard bade him go to the officer, telling him that his pistols were not good, and insisting on having a written promise of the reward. This having been done, whilst the President was surrounded by his staff, he had the man arrested with the written promise of the plotter upon him. On the latter he imposed, for sole punishment, the payment of the 8000 dollars' reward to the sentry, retaining him on his staff; the soldier he promoted.

Now let it be observed that such clemency is not the careless act of a man with whom everything has gone well. On the contrary, Geffrard's heart has been wrung by the keenest woes that can try a man, all in direct connexion with the exercise of his power. His only son, a youth of eighteen, died of exhaustion and fatigue brought on by his exertions in that blessed and well-nigh bloodless revolution which carried his father to the Presidency. His eldest daughter died in childbirth from anxiety for her father. His youngest daughter became the victim of one of the most dastardly murders recorded in history, which will presently be referred to. Yet nothing of all this has availed to sour or freeze the man's long-suffering generosity. A general officer in attendance upon him had resolved to murder him, and Geffrard knew of it. Taking with him the would-be assassin, he went to the cemetery, at the gate of which he left two "guides" who had accompanied him, and proceeded to his son's grave. Having reached it, he turned to his companion, and said: "I know you carry pistols to shoot me on the first opportunity. Do it here. Let me fall on the grave of my son. Do you hesitate?" he proceeded, after a moment; "take my pistols, if your own fail you." The spirit of the assassin was disarmed; he was forgiven, and retained his rank.

There remains to be told the most dreadful of all Geffrard's trials. It has been said that, to conciliate the blacks, he has kept as many of them as possible in office, and near his person. One of

these, a "General Guerrier Prophète," who had taken part in the revolution, was Secretary of the Interior, and had received various other appointments; but before a twelvemonth was out Prophète had become the soul of a formidable plot, having for object to recover supremacy for the blacks, by assassinating the President, and the female members of his family, and by such further massacring of "yellows" as might be expedient. Emissaries were sent throughout the towns of the North and the capital, officials bribed, secret meetings held, and a rendezvous fixed. No fewer than sixteen aides-de-camp of the President were in the plot. But not one battalion of the army, not one commune in the country, could be made to waver in its allegiance. The President, moreover, was fully apprised of all that was taking place, and, early on the 3d September, he sent for Prophète, and gave him his choice between exile or imprisonment. He chose the former, embarking the same day. But so far from renouncing their murderous designs against the President, the conspirators sought to compass them by means of a still more hateful crime. He was in the habit of spending part of his evenings at his mother's house, which was also the residence of his daughter Cora, just married to M. Blanfort, walking thither unattended. A cabinet council, summoned to deliberate on the arrest of the conspirators next day, lasted beyond the usual hour. A wretch, named Sanon, a huge blunderbuss loaded with slugs in his hand, and three accomplices by his side, crept under the gallery of the ladies' house, towards the dining-room on the ground-floor, where Cora Blanfort sat reading at a table. Raising a bar of the Venetian blind, he fired with fatal effect. Eleven slugs were extracted from the waistcoat, besides those found in the body of the victim.

But the crime remained fruitless. Geffrard was not suffered to leave the palace, and the assassins had to disperse. So popular was Geffrard already, that from all sides the national guards met unsummoned, and several regiments marched on Port-au-Prince. Martial law was proclaimed, and thirty-two persons, of whom seven only were civilians, all the rest connected with the army, including four aides-de-camp of the President, were arrested, and tried before a military tribunal. We are told that "every care was taken to secure to the accused a fair and open trial," that "a numerous bar" appeared to defend them; that exceptions to the jurisdiction of the court, to the form of procedure, to the evidence submitted, were patiently heard and calmly considered; in short, in a city where a few years before justice had practically ceased to exist, and frightful murders had been perpetrated at the mere caprice of the ruler, the

authors of a perfectly unprovoked murder committed upon the new ruler's own daughter, were only convicted after a nine days' trial, seventeen of the conspirators being sentenced to death, three to three years' imprisonment, the remaining twelve acquitted. It is not necessary to share Mr. Underhill's admiration for the turgid rhetoric of the Haytian advocates, but their boldness gives, as he truly says, a very favourable impression of the impartiality of the Government. It is to be observed, moreover, that whilst both the army and the people appear to have been clamorous for condemnation, it was only after long discussions and urgent representations from his ministers that the President consented to sign the warrants of execution. One, indeed, of the seventeen prisoners who had been found guilty on the capital charge was reprieved; to avert the chance of further leniency on the President's part, the others were shot within an hour. Over the graves of the ruler's three children lies now one large flat stone, without ornament, whilst on a small headstone is written,—"Cora Blanfort, born Geffrard, assassinated September 3, 1859." Soulouque, on the other hand, on receiving news of Madame Blanfort's murder, went immediately in full dress to the Roman Catholic chapel of Kingston, to order a thanksgiving mass for so blessed an event; and we are told that the priest had great trouble in making him understand that the occasion was an unmeet one for his devout rejoicing. I am sorry to say that the present year has seen another formidable conspiracy, which has led to fresh executions, after long protracted trials.

President Geffrard is described by the English missionary (1860) as a grey-haired man of fifty-four years of age, rather short but slim in figure, of very pleasing countenance, and simple and gentlemanly appearance, dressed without ornament of any kind. "His one wish," says Mr. Underhill, "is to teach his people the benefits of regular government, . . . at once lenient and just, legal and constitutional. He desires to heal the strifes of the past, to allay prejudices, and to reign as the wise and enlightened ruler of a free and enlightened people." Far from over-estimating what he has done hitherto, Geffrard freely admits that he is often obliged to abstain from useful measures, on account of the people. But he has an honest confidence in their capacity for improvement; believes that, as a nation of slaves who have conquered their freedom, they have done about as well as could have been expected in half a century, and hopes with five years of constitutional government to show what can be made of them. And Mr. Underhill accordingly himself expresses the opinion that, "if the two opposing forces in Haytian society can be forced into one homogeneous national life, there is every probability

of the Haytian nation becoming a bright example of African culture."

Why must it be said that the success of an experiment so momentous for the future of one whole continent and nearly half another is threatened from without as well as from within? by European ambition as well as by native lawlessness? It is from Spain that the chief danger seems at the present moment to threaten the renascent prosperity of Hayti. The island was of old divided between France and Spain; and although under Toussaint l'Ouverture the Spanish portion was incorporated with the French, the treaties of 1814-15 restored her portion to Spain. But on the fall of the Spanish power in America, the Spanish portion (1822) declared itself independent, and almost immediately afterwards became absorbed in the Haytian Republic, to which it remained united till 1844, when, under General Pedro Santana, one of the great landowners of the country, it resumed its independence as the "Dominican Republic." Vain efforts were made by the Haytians to re-annex the lost territory; but whilst successful in defending their independence, the Dominicans were divided among themselves, and many of their chiefs were anxious to annex their country to the dominions of some foreign power. At last, at a time when, through a five years' truce with President Geffrard, the little republic seemed to have obtained at least a chance of existence, General Santana—who, after various internal changes, had been carried again to power—after using his recovered authority in a most tyrannical and flagitious way, and setting almost every European power against him by outrages to their subjects, or insults to their representatives, proclaimed once more the rule of Spain (March 1861). Troops were immediately sent from Cuba, and two months later a royal decree from Aranjuez declared the territory of the late Dominican Republic to be reincorporated with the Spanish monarchy. It appears certain that a large portion of the population was taken by surprise, and is adverse to the rule of the mother-country; President Geffrard, in a manifesto addressed to all the powers,

has protested against the establishment of a foreign power in the island; no one doubts that, but for the American secession, the United States would not have allowed, nor would Spain have even dared to effect, the annexation in question. But considerable forces are understood already to occupy the territory, and the Mexican intervention will afford Spain an easy pretext for pouring in more. Meanwhile the leading journal of England has almost hounded her on to the conquest of Hayti, declaring that "she can do no harm to the world by supplanting any government" she can find in Hayti, as long as she does not restore the curse of slavery. Yet Mr. Underhill, visiting Cuba after Hayti and Jamaica, and observing the slaves of the labouring class working at Havana on the wharves or in the docks, declares that he "could hardly believe that the stolid, round-headed, brutish-looking animals which were mechanically performing the tasks allotted to them, were of the same race as the sharp, quick-witted and manly people he had left in the islands where freedom is enjoyed."

But Spain, we are told, has maintained freedom in the Dominican territory, and would, no doubt, maintain it in Hayti. Listen again to what Mr. Underhill says of the manner in which Spain understands freedom in Cuba:—

"During the last few years large numbers of Chinamen have been introduced into Cuba as emigrants. *Though promised the advantages of freedom they are really slaves*, and oppression has so madened them that a large number is always in prison for insubordination. Many more have committed suicide. . . . Several gangs that I saw working in the streets bore in their faces an expression of the most hopeless despair. It was heart-rending to witness the silent anguish and heartless agony which every feature and every motion of the frame proclaimed."

So much for Spanish freedom. God grant that Hayti may long be saved from it! God grant that England may never allow it to be inaugurated in that country, in place of the beneficent rule of Fabre Geffrard the mulatto!

VISTAS IN THE RUSSIAN CHURCH.

PART SECOND.

THE BEGINNING OF THE RUSSIAN CHURCH IN TRUTH
AND PURITY.

Few who are in search of true religion will attach very much weight to the official ideas there-upon of kings or emperors of this world ; and, in truth, when Vladimir the Great seemed so instantaneously to convert the whole of his subjects, he was really doing little more than arranging and methodizing the materials already in existence among them.

The Russian country had been a field of missionary labour to the Church of Constantinople from the times of the gifted Prelate Photius, at least ; and an ancestor of Vladimir's own had been privileged to see much light. " If the Christian religion were not true, your grandmother Olga, the wisest of women, would never have adopted it," said Vladimir's counsellors to him at one of his deliberations on choosing a national faith. Now this Olga was a queen, and such office must contain much that is similar to the circumstances of the rich man, of whom it is written that he is to find it exceedingly difficult to enter into the kingdom of heaven ; the illustrating parable, indeed, might almost be taken to say, impossible ; but then there is added immediately after, that what is impossible to man is possible to God ; and certainly it does not seem that Olga's leading into the way of truth, so rich in after results, was altogether of her own finding out.

At all events, it was not the gratification or splendour of being raised in early years from a lowly peasant condition to be queen-consort of King Igor over the then recently consolidated empire of Russia, which opened her eyes to a kingdom greater still. Nor was it her first great misfortune, when, after twenty years of uninterrupted domestic happiness, her royal husband was killed on a military expedition, and she, left alone, with her infant son, and a revolted people, and all the destinies of Russia in her hand, had the struggle of life to begin. It was, indeed, neither in the wars which followed, nor the victories which supervened, that the still, small voice was heard ; but afterwards when the responsibilities thrown on her in educating her son, and ruling his people, began to press on her mind, a sense of her own deficiencies began to dawn upon her, and a desire to hear the gospel of God took possession of her soul.

Under this impression it was, that she journeyed (A.D. 957) to Constantinople, then the great eastern centre of the revealed religion, to be instructed in the Christian faith ; and it seems to have been im-

parted to her in a more pure and evangelical form than the general history and subsequent progress of the Eastern Church could well have led us to expect. These saving circumstances, too, are founded on most unexceptionable testimony, being given by the Russian monk Nestor, only ninety years after the period of Olga ; himself, Nestor, a humble yet enthusiastic admirer of an entirely different version of Christianity, yet an undeviating exponent of whatever he believed to be historical facts ; and these were related to him for times earlier than his own by a very old man, Yan, who finished his days in the Petcherski convent of Kiev, shortly after Nestor had entered there in his seventeenth year.

Except for his faithful adherence to old Yan's narration, it had scarcely been possible for Nestor, amongst all his contrary surroundings and beliefs, to have described the story of Olga's conversion without a reference to relics, pictures, crosses, and miracles. Not one of these, however, do we find there, but in their place, " that Olga had from early years desired to know the truth, and she succeeded in finding at last this precious pearl which is Christ. Solomon said, ' the love of truth refreshes the soul,' and likewise, ' those who seek me shall find me.' God himself has also said, ' Whosoever comes to me shall not knock in vain ! ' "

When, too, after her baptism in a foreign country, some most excusable feminine fears assailed the Russian widowed Queen, as she was setting out to return to her own land, " where her people were all Pagans, and her son the same," the Patriarch strengthened her with these words alone :—" Daughter, full of faith, thou hast been baptized in the name of Christ, and Christ has called thee to him. Christ then shall save thee as in the early ages he saved Enoch, and Noah in the ark, and as he saved Abraham from Abimelech, and Moses from Pharaoh, and David from Saul, and Daniel in the lions' den, so shall he save thee from the evil spirit and all his snares."

Returned at length to Kiev, Nestor relates that " Olga continued to live with her son, whose conversion she ardently desired. But he, full of contempt for baptism, would listen to nothing. In truth, when one speaks of the Lord to those who are not enlightened, one is met with mockeries. The Christian faith is a stupidity to the incredulous ; they do not understand it, and walk in darkness ; they do not see the majesty of God, and have their hearts so hardened, that they do

not hear with their ears, or understand with their eyes. But Solomon has said, those who conduct themselves thus are fools; I have called them, and they have not heard; I have spoken to them, and they have not listened; they have despised my counsels, and have not accepted my reasons; they are the enemies of wisdom, for they despise the word of God; they refuse my advice, and tread under foot the proofs I wished to give them of the truth."

"Olga often said to her son, Sviatoslav, 'O my son! I have learned to know God, and am happy therein; if you would only, like me, become desirous of seeking after the truth, you would not be long in having equal joy!' But Sviatoslav would

not apprehend anything, and answered, 'How can I embrace a foreign religion? my people would laugh at me.' 'If you would only be baptized,' replied Olga, 'your people would soon do the same;' but Sviatoslav resisted all the counsels of his mother, and continued to live like a Pagan."

Then there follows a homily from the priestly scribe on the sin of disobedience to parents; but presently, taking up the pen of the historian again, he concludes with: "Notwithstanding all this, Olga loved her son not less than before, and said in his presence, 'Let the will of God be done! When he shall be pleased to show grace to my family and country of Russia, he will touch the hearts of all and inspire them with his holy fear,

The Cathedral of St. Sophia in Novgorod.*

even as he had mercy on me!' After which Olga set herself night and day to pray for the conversion of her son and his countrymen, and she continued to watch over the education of Sviatoslav until he came to man's estate."

INTRODUCTION OF STATE AND OTHER CRAFTS.

Not on earth, or in an earthly sense, had poor

* "The temple of St. Sophia in Novgorod, erected by Vladimir, son of Yaroslav, who died (A.D. 1052) while only a youth, and was buried there, together with his mother: this church has not suffered materially either from wars or time, but has been preserved in all its grandeur, as a jewel above price to our country."—Blackmore's *Mouravieff*.

Olga either peace or rest, for her son in manhood seemed only to deviate further and further from belief in Christ; and when even up to the last, after a short partial amending, he *would* break away both from her and his own children, whom she was bringing up and educating for him, to go upon a not very just war in a distant part of the empire, she could only say, "My son, you see how ill I am, and how short a time I have to live; at least, bury me first, and then go and do whatever shall seem good in thine eyes." She was indeed very ill; and, dying within three days of that time, her committal to the earth, which took place in the exact manner she had herself previously arranged, became a final recommendation

from the mother to her obstinate son, touching the purity and blessedness of faith in Christ.

Many, however, were the onlookers, amongst whom, though in silence, improving effects followed; for the Russian people is without doubt endued naturally with a large amount of religious sentiment, and is internally desirous of spiritual welfare, yet restraining the open profession of their opinions, sometimes even for ages, rather than war against law and the constituted authorities of the land. Year after year, therefore, in reality though not ostensibly, the new doctrines in Russia continued to spread, much aided as they were too by the first Slavonic translations of parts of Scripture prepared by the two learned Greeks, Cyril and Methodius; until, in the third reign after Olga, or that of her grandson Vladimir, there was felt to be a decided national change in progress; and that astute ruler not only saw it, but determined to put himself at its head.

With extraordinary knowledge then of human nature did he feel the pulse of the time, and direct the eyes of his people to watch and wait for his proceedings. Though previously filled with fiery zeal in honour of the false gods of his forefathers, and living in many iniquities, he now (A.D. 986) received in state, with his people as listeners, embassies from neighbouring nations, Mahometan, Bulgars, Khozarian Jews, Roman Catholic Germans, and Constantinopolitan Greeks, each of whom employed all their eloquence in setting forth the merits of their own particular faith.

Vladimir heard everything, but gave out very little, except some pointed objections to two of the forms of religion, which had the effect of concentrating the attention of his people on the Roman and Greek Catholic churches, as the two most worthy of their study; and then he sent out expeditions of inquiry to gather information concerning both those rival institutions in their own respective countries. At each return of one of these expeditions, the Boyards and ancients of the metropolis were called together to hear the result, and by their comments involuntarily to teach Vladimir in which direction the whole national feeling was likely to go. In this manner public expectation was kept continually on the stretch; and men were becoming day by day more and more markedly anxious for an authoritative decision by their ruler; but he dealt still in enigmas alone.

His own mind, however, being in reality now fully made up for the Greek form of worship, he led his army next year against the Greek city of Kerson; after a long siege took it, demanded and received one of the Imperial princesses of Constantinople in marriage, was baptized by priests from that Imperial abode; and then returning to

his expectant people of Kiev, at once relieved them of all uncertainty, by first destroying the old idols of the city, and immediately thereafter publishing his order of the day. "Whoever does not come down to the bank of the river to-morrow morning, be he rich or poor, old or young, shall be considered a rebel, and treated as such."

Down accordingly came all the people, in a state of mesmeric dependence on the will of one man, and plunged at his word into the waters of baptism, while foreign priests read appropriate prayers in the open air.

The character of Vladimir no doubt improved after this great act, from his necessary connexion with some of the forms of a church; while the comparatively small number of previously self-convinced, and really converted Christians, were no longer obliged to keep their faith in hiding, when the whole country was now professing it in name. But such men looked vainly to the new edicts for the soul-satisfying principles on which they had been fed. The ways of God are past finding out, and Vladimir's early licentious life is no proof that he may not in the end have been admitted into the number of the elect. "Verily," says in past times a learned Russian divine, "Christ died for all; and there is no one so great a sinner whom His grace alone is not able to save." But to human eyes, in such a case as that of Vladimir's, a passage made straight from the depths of sin to the triumphs of holiness, wants a certain intervening passage through the purifying waters of faith and repentance. And when we further read that on Vladimir's return from Kerson he brought with him the relics of St. Clement and his disciple Pliva, precious vases, incense pots, and holy pictures, beside the relation of a divine miracle performed on himself,—it is only too plain that the beginning of the State establishment of the Church in Russia introduced features alike unwarranted by the New Testament, and alien to the earliest confessions of Christianity in the land.

ESTABLISHMENT AND PROTECTION DOMINANT.

In the succeeding reign, the then Grand-Prince Yaroslav did much to light again the lamp of truth; for, not content with the old Cyrillian version, he caused a new translation of the Scriptures into Russian to be prepared, and did much to promote its study amongst his people; but, unable to break himself free from the example of deviation which his father Vladimir had set, his latter days seem to have been more devoted to the State and formalistic Church than to pure religion; and he is described as one who loved priests astonishingly, and had a liking for monks, and seeing them multiply over the country, that was

extraordinary above everything. Under such encouragement, too, these officials did multiply, and poor Nestor's own experiences in that reign are chiefly concerned with the joy which the rulers felt on learning that a monastery required to be enlarged on account of the increased numbers of its community; and are filled with edifying praises of the good men who excavated caverns for themselves in solitary places, and lived there for the rest of their lives "in the practice of all the virtues;" and with the discoveries of sacred relics of departed saints by a few faithful men digging secretly at remarkable times in places known to very few.

Reign followed reign, and the Church became in each of them more strongly established by civil law, and more intimately dependent on the State. For some time indeed it kept up considerable independence in the management of its own internal affairs; and its conduct during the long period of Tahtar domination, and the subsequent wars of disputed succession, was above all praise.

But the State would appear to be at any time a jealous master, and no more to be depended on or trusted in than the princes of whom it is generally composed; precisely therefore as the nation rose out of its ancient troubles in mediæval and modern times, so was the past loyalty of the church-establishment forgotten, and every effort made by ruler after ruler to bind it hand and foot, and convert it into a mere instrument of government service. Heir to the eventualities of its own times, and profiting by one of the most characteristic differences between the Greek and Roman Catholic Churches, the Russian Church, which had been long ruled over ecclesiastically by a Metropolitan, attained in A.D. 1587 to the patriarchal rank; becoming thereby equal with the Church of Constantinople from which it had derived its earliest existence: and among the ten patriarchs who successively filled the chair of all Russia up to the year A.D. 1710, were many examples of all that could be desired in Christian teachers, priests devoted to their duty in its every aspect, eloquent preachers, and, above all, "men of prayer."

Yet this notwithstanding, did Peter the Great abolish the Patriarchate, introduce into its place a Government committee of his own appointing and superintendence, and contrive to transfer almost all the powers of the Church, with much of its property, into his own hands. His successors followed in the same line; the State Church was by their means more firmly established by political law as the Church for all the nation, but its ministers became mere puppets in the hands of lay, and worse, Government officers. Now in the better features of the earlier and more independent Russian State-churchmen described above, we see but the

simple and happy consequence of their being men of Russian birth, and fair representatives on the whole of the great Russian nation, amongst whom the importance of religion will ever culminate. But with the other officers of the Government of that country it has long been far different: for, with the reigning family recruited largely generation after generation from the families of the numerous little German potentates, German ideas were introduced into the machinery of Russian government; and Germans innumerable being imported into every branch of the Executive to carry out these ideas, strengthened the hands of the Emperor to enact anything he pleased against the wishes or liberties of his own people; and, with a different ethnological constitution, the civil officials of the country, as a body, became less religiously inclined than the nation at large; whose spiritual pastors have since been successively reduced under such *régime* to a state of penury, and of almost passive obedience to police regulations, which is painful in the extreme to behold.

Thus, Established Churches are to be seen everywhere over the land; they are fenced in by law from interference by other faiths; are eminently protected in fact from every competition, and revel in *appearance* of splendour and wealth; but the clergy, while they are most hard worked,—called to it everywhere by teeming crowds of orthodox worshippers, and compelled to it by Government officers, though too often merely to subserve the financial purposes of a Chancellor of the Exchequer, or cheapen the defence of the Empire,—are starved to a degree which must degrade. All the higher dignities of the Church are monopolized by the "black clergy," who do not marry, and live in monasteries; but the more numerous class, the "white" or parochial clergy, who must marry in order to be ordained, and can never rise beyond that degree, receive a salary from Government amounting to about £1 a year. With such an income in view, what education can be expected in the aspirants to its fruition? and with such an income in enjoyment, in what class of life can parish priest and wife and family be brought up, with whom can they associate, and what degree of respect are they likely to command in public?

How fatal, then, even to the protected form of faith, an association with the State; for that dries up the sources of private charity, and while to an independent preacher of faith in Christ, no salary at all is needed, because contributions over and above his needs are pretty sure to flow in unceasingly; yet to one who is looked on as a paid servant of Government, paid and made to do its every behest, not to show his own convictions, little is ever tendered. Nor is the position of the "black clergy" much better, and with many of them not

at all better than their white brethren ; for the Government allowance now given in lieu of their former ample possessions, by no means suffices even for bread and water. Only in 1831 a number of monasteries reduced to absolute extremity, applied to the Emperor, petitioning for relief.

"Whereupon the Emperor, who was already aware of the urgency of their need, conferred with the high police, and gave orders to the Secretary of State to prepare an edict to the following effect :—

"That in order that the monks and nuns may have more sufficient means of subsistence, all the inmates of monasteries and convents under the legal age of profession (viz. 40) should return to the parishes and dwellings to which they originally belonged, and betake themselves again to their former callings."

OPINIONS ON DISSENT.

After viewing this final result of an alliance between the Church and State of Russia, we may well inquire what proportion of the people is satisfied with that establishment, as representing the church of their affections and hopes, here and hereafter ; that people being, too, and having always been, through every historical period, anxious for religious perfection, and true to spiritual guidance ; in fact then, what of Dissent in Russia ?

At once we must confess this to be a question of almost infinite difficulty for any stranger to solve, even though he should have succeeded in penetrating much of the mystery connected with the established church ; and though, indeed, when we do get at private indigenous opinions on that, they may be found not unfrequently leading in the way of dissent. But in any case, the subject must be approached with the respect due to its nature, and the attention demanded by its difficulty, for many stereotyped descriptions are afloat of the dissenters from, as well as the members of, the Russian Church ; most of them catching eagerly at some individual peccant case, as a representation of the whole body ; and withal so generally written by professed and interested opponents of the party in question, that we certainly cannot gather therefrom the light in which peculiar doctrines are looked on by their own authors ; i.e., the men who, in the pursuit of those truths, or formation of those creeds, have often sacrificed much of their temporal prospects, but have considered themselves abundantly repaid if they had benefited their souls, or arrived at a nearer knowledge of God.

Any first question on Dissent then is pretty sure to be unsatisfactorily answered in general Russian society ; for the mere idea of the existence of such a thing scandalizes the minds of many, who cannot separate between Church and State, religion and

an established church, or seeking after their own salvation, and want of loyalty as obedient subjects of the Emperor of Russia. These persons, therefore—honest, well-to-do, and sometimes learned men—are pretty sure to answer that they do not know anything at all about Dissent, or that it does not exist, or that they never thought about it before ; or perhaps assure you with oblique flattery, "that there are no men or women of education among the Dissenters, who are in general found only among the poor and ignorant classes of the population." We have even had it sententiously and positively affirmed to us, "that the works of Dissenters, kept secret hitherto, have lately begun to appear in print, and it is from them that other persons, who are not only educated but have common sense, may conclude that Dissent is a consequence of ignorance ; and that more cannot be said against them, than that the Dissenters are afraid of the appearance of their own works."

On the other hand, however, we have been even more credibly informed, that there have been hitherto so many severe laws and penalties against Dissenters of every denomination, that they were obliged to keep themselves as quiet and concealed as possible : and though Catherine II. claimed the glory of allowing freedom of exercise to every form of religion, Dissenters from her own included, the governments which followed could never completely distinguish between a departure from the national church and political treason, looking on all sectarians as "dangerous in their actions, and offenders against the wellbeing of the community," until, indeed, the present Emperor, Alexander II., who has ordered such cases to be treated with all possible forbearance and humanity. "This," added our informant *naïvely*, "is undoubtedly the best measure ;" and under its influence several writers on Dissent have appeared, as MM. Stchepof, Lomonsky, Novitzky, and especially M. Melnikoff, whose work was published in St. Petersburg during the present year.

Perhaps, indeed, it is the best measure, when, in spite of restrictions and even persecutions, and though still but imperfectly known to the government and their own countrymen, the Dissenters of Russia, divided amongst some thirty-five different sects, are found to number not less than ten millions of souls, and to include amongst them some of the most respectable and virtuous populations in the empire.

Throughout the Establishment too, as we were told before we left the country, there is a deal of questioning going on, and an inquiring amongst its communicants into the foundation of the faith which is within them on one hand, and on the other, that which the civil law calls upon them undeviatingly to serve ; or, into the authority given by Holy

Writ for the practices they have long been following; questionings, met by examination and reasoning which may lead to a more sudden and extensive change in the externals of the Russian Church than is generally expected.

And here it is interesting to observe the teachable, loyal, grateful character of the poor and unsophisticated Russian peasant, ever pervading his mind and faculties; though in this case, not a little interfering for a time with his onward career. For, having once received the Christian faith from the Church of Constantinople, he still bears to that institution something much akin to an infant's gratitude to a good parent; and pays almost implicit obedience to its rules and mandates. Not therefore because he sees good reason now, but because he has always been taught to bear them a filial reverence, he allows the seven œcumenical councils, wherein the Constantinopolitan Church assisted, and in which she agreed, to direct the externals of his faith, and to be almost as unquestionable as the Scriptures themselves. "How can he, the poor Russian," he thinks in humility, "who was in a state of uncultivated heathen savagedom at the time of his teaching, presume to think differently from the learned councils of the great and ancient nation which condescended to teach him, and through whom he first received the book of books?"

Some, therefore, of the Russian sects, as the "Starovertsi," especially in past and mediæval times, thought their duty towards higher authority called them to separate from the Establishment on account of its not being attentive enough to the rites, rules, and ceremonies recommended by their first earthly instructors and inestimable benefactors,—an error, however, which every year's additional instruction and education to the people, and even increased age to the world, must be, and visibly is, correcting in the most legitimate and unexceptionable manner. Later dissents, therefore, as the "Dukhoborts" and "Molokanes," have been characterized by more evangelical ideas: by them, the Councils have been examined, and have been found to be of no authority by the side of the Word of God; and, as one of the first consequences thence derivable, the long-established use of *Ikons* in the Russian Church has now come prominently to the surface of discussion.

IKONS AND ARCHITECTURE.

Of Russian "Ikons," or so-called "holy pictures," travellers have published very degrading accounts; from Dr. Clarke, who at the end of the last century purchased for a few roubles, from a Russian officer, "his god," viz., a picture of a saint; to a clergyman-tourist of last year, who, seeing from the steamer-deck a village on fire on

the southern shore of the Gulf of Finland, was reminded of a story told him by an equal foreigner with himself to the effect, that the peasants on such occasions do nothing themselves towards extinguishing the conflagration, but expect their saints to do that for them, on their holy pictures being merely turned from a distance to look at the scene of catastrophe.

The latter erroneous account is simple enough of explanation. We have ourselves seen a Russian village on fire in the interior, and beheld the peasants merely looking on in passive anguish, but with much good physical reason on their side; for when once a Russian village, where every house is built of wood, is fairly on fire, and in the hot, dry summer-time of that region, hardly anything human can prevent the whole line of habitations going to destruction: the log-walls are so massive, they cannot be knocked down before the fire catches them; and when it does, the fierce redness of the flames, and the blackness of the whirlwinds of smoke that rise writhing and roaring into the sky, are some of the most fearful sights we have ever witnessed. When matters have come to that stage, we do believe there is nothing for a few poor villagers to do, but merely to look on and wait for the end, which soon supervenes. On the first alarm, however, that they had had of the commencing fire, the peasants, before rushing away from the danger into the fields hard by, had collected and carried with them there all their most valued and portable treasures: their sacred pictures first, their fur cloaks and boots for the future winter next; and then they stood passively by their few rescued goods, not expecting miracles to be performed in their behalf, but merely waiting until the raging element should burn itself out, and the site of their unfortunate homes should have again become possible to human labour.

But the former statement, that a Russian looks on one of those pictures as "a god," is something far more serious; and is certainly not what even their Establishment teaches them; for thus says Platon:—

"The pictures,—wherein is never any attempt to represent the unseen and incomprehensible God, whom we never can represent, but his Son our Saviour in the fashion of a man which he took on himself, or his favourites,—are made and placed in our churches, not for deification, but to commemorate the acts of God, and of his chosen servants. The obeisance which we make before the pictures, we do not render to the pictures themselves, that is, to the boards, colours, ornaments, or skill of the artist, but we render this to the persons whom they represent; and to the pictures, only an affectionate salutation. Thus, for example, I bow before the picture of my Saviour, but the devotion of my

spirit, my faith, supplications, and hope, and the very obeisance which I pay, are all rendered to my Saviour alone, who is in heaven, and everywhere present, and the picture is only a kind of sensible incitement of my devotion. Moreover, it is necessary to be known, that the obeisance performed before the picture of our Saviour, and that before the picture of any of the saints, though to appearance the same, yet in reality are very different indeed. For the worship which I perform before the picture of the Saviour, consists in the deepest humility of soul before him as Lord and Creator of all; but that which I perform before the pictures of the saints, is a reverence which I render to them out of a loving heart as His favourites, and as of the same nature, and of the same church, and members of the same body with myself.*

This may be regarded as the official theory on the subject, and our own observation of the actual practice independently assured us, that the so-called sacred pictures of Russians, fulfil sufficiently innocently much of the same part to them, which the equally so-called sacred architecture of churches serves in our own country. In England, for instance, a church is dedicated by name to a particular saint, and a florid style of building adopted, which many conscientious persons affirm to have, if not a certain air or atmosphere of religious feeling about it, at the least to them a useful practical effect in assisting their thoughts into a religious train. But a Russian, agreeably with his locomotive habits, and his frequent private prayer, must have something more portable, and more within the means of a humble man, than the fabric of a public church; and he finds that a picture, which he can carry about with him on his journeys, or erect in his own cottage, has for him the same sort of effect; for, when it is immediately before him, he can more easily disentangle his soul from the cares of the world, and form his thoughts in prayer.

Yet none know better than Russians themselves the dangerous ground they are treading when making use of these artificial aids to devotion; wherefore

one of their own ministers has written, "But notwithstanding all that has been said, this lawful and holy reverencing of pictures may be turned into the most abominable sin of idolatry. This is the case when any one hopes in, or attaches all his respect to, the holy pictures, and trusts in their material substance; when, for instance, any one finds greater sanctity in one picture than another, or places in them any hope of salvation. They too are chargeable with this guilt, who bring their own particular picture into the church along with them, and only worship before it; or who respect those pictures more which are adorned than the unadorned, the old more than the new; or decline praying at all when they have not a picture before them. All these, and such like, are great transgressors, and prove a deep disgrace to the real profession of the Christian faith." Words these, which, *mutatis mutandis*, will apply equally well to the too great love of ornamental church architecture among ourselves.

But more general still will probably be our countrymen's approval of the one grand antidote which the same divine finally introduces for the avoidance of all these errors; viz., "to remember, first, that the worship of God can never be sincere, unless it proceeds from a contrite and unfeigned spirit. For all external rites of worship are only marks testifying our internal piety and sincerity towards God, without which they signify nothing; and therefore the gospel requires *that the worshippers of God should worship him in spirit* (not externally only), *and in truth* (or not in hypocrisy); second, we must hold to the Divine word alone, and rest assured that it alone contains the true rules by which we ought to please God. And therefore Christ said concerning the Holy Scriptures, *that in them is contained eternal life.*"

Principles these, which either have been, or are being worked out by some of the more recently arisen dissentient communities in Russia, with a fulness and sincerity, which show marvellous community of thought and feeling between this distant population in the East, and the more advanced Protestant communions of Europe in the West.

C. PIAZZI SMYTH.

* Pinkerton's *Greek Church*.

HER MAJESTY, NANNERL THE WASHERWOMAN.

IN a little village on the banks of the Neckar, in South Germany, lived Hans Ritter, master tailor, with his wife Elsé. He was not wealthy, but free from oppressive care; he worked from early morning till late at night, lived frugally, sent his children to school, and had always a dollar at Christmas to buy some toys, and to erect a Christmas-tree for the little ones. On Sundays he put on his Confirmation coat, the identical coat in which he had been confirmed, and his beaver hat. Elsé wore the cap with the yellow trimming, the handkerchief with the blue border, and carried her gilt hymn-book. But who in all the village looked so devout and happy as Nannerl, their oldest daughter? She was about fourteen years old, and very tall for her age. She wore always a white gown on Sunday, and her blue neckerchief, a gift from old grandmamma, looked quite new, although it was nearly as old as herself. But what could look old or grow shabby, that was worn by her, and folded up by her, and locked up by her? Look at her walking slowly and cheerfully to church with the younger children, who cling to her fondly, and if you do not bless her in your heart, I am afraid you forgot your prayers this morning.

Nannerl was a good girl—fond of nice dress and of a village dance, it is true, but I do not wish to deny it. The youths in the village liked her much; Conrad Holgel, old Heinrich the carpenter's son, more than any one. Conrad was a very handsome and kind-hearted youth; he sung very well, and as to steadiness and diligence, none could excel him.

Conrad fell in love with Nannerl, and Nannerl fell in love with Conrad, I don't know when and how, for I know it only from Nannerl herself, and this is her account: "Conrad often came to my father in the evening after work was over, and we all walked out together into the wood, and on Sunday afternoons to the gardens. He had such an honest face, and was so cheerful and merry, and had such fine songs, that nobody could help liking him. I was very happy when Conrad was with us, and from my childhood never imagined that I could live without him; and after my confirmation, one evening I went into our little fruit-garden to get some gooseberries for grandmamma, who was very old, and lived with us—I went out, it was on a Thursday evening, and there Conrad was behind me. I said, Good evening, Conrad. He said nothing. So I did not mind him, but went to the gooseberries. But he came after me, and told me that he was to be made master car-

penter next week, and go into a new house next term. I said, I am very glad. He asked me, Are you really? I answered, Yes indeed. Upon this he fell on my neck and kissed me, and said, Nannerl, you must come and be my little wife in the new house. So Conrad went and spoke to my father, and he said, When I married Elsé I was a poor man, and had nothing but my trade. You are an honest Christian and workman, and if Nannerl loves you, I give you my blessing. This was on Thursday night, a fortnight before grandmamma died."

And so Nannerl married Conrad, and they lived together happily for some years. They had sufficient to support themselves, although some trouble and care occasionally to get money for wood and winter clothes; but they got through, and had health, good summer weather, fine walks in the fields, beautiful flowers, mountains, and glens, ice-skating in winter, *gratis*; and this is frequently one of the differences between poor and rich people—the poor are not proud, and enjoy their *gratis* things—health, water, walks, etc.

Quiet little village!—quiet peaceful family! No change; no event! Conrad's mother dies, and Nannerl goes next spring to look at the flowers on her grave. Nannerl has a son, and all the Ritters and Holgels are at the christening; and Nannerl, in the white dress, is as beautiful as ever. There is great happiness in the little room, in the centre of which is a very large fine cake, so suggestive that every one has some remark to make, and something to praise. Quietly they live on; no event; no change, till one day the cry is heard:

War! war! Napoleon! Poor Conrad becomes a soldier. Nannerl's tears flow fast. Little Carl, dear tiny baby, plays with papa's czako, and is delighted with it. "Was blasen die Trompeten, Husaren heraus?"

There is old Hans, with a serious face, giving advice to his son-in-law; there is Elsé trying to comfort her daughter, but weeping herself; there is Conrad's sister in a corner, packing his little knapsack silently; there is Nannerl beseeching him to stay. But the drum, the drum, it calleth so loud!

Thou art right, Conrad, and a true-hearted German. Not "pour la gloire" goest thou out to fight. No, much-to-be-respected master carpenter, it never entered thy head; but as thou thyself sayest, "This land is a German land, and the king's; this is God's right, and so we will show to all who want to take it from us."

Conrad returned in two years, but not as he

went.' He had lost a leg, had received several wounds, and was so enfeebled that he could not resume his work. He found his Nannerl looking pale, and not in the white gown, but in black. Hans and Else are both dead.

"Conrad," says Nannerl, "I have suffered so much since you were away. I dreamt almost every

night you were dead. Then my father became ill and died, and, a month after, mother Else followed him. Conrad, they spoke of you, and prayed for you. Mother died so calmly! I was putting her pillows right. She looked so pale, and her eyes so dim! She put up her hands to her forehead—she had such pain there!—and said, 'Not so tight;

they are putting on a golden crown, as our Pastor said they would; but not so tight!' She said also the 'Our Father' twice, and asked for you."

Nannerl had been always dear and kind, yet Conrad thought *her* never so kind and dear as now. So calm, and cheerful, and busy, she did everything for everybody; no one could help loving and honouring her. But Nannerl with the

children was the loveliest sight—how she taught them hymns, and told them stories, when the girls were knitting and the boys working! Nannerl, what change has come over you? Never in low spirits as before; no murmuring and fretting; but so loving, calm, and active. Nannerl had begun to think of the crown, of which mother Else had spoken. She had begun to think of love—her love

to Conrad, and where she would meet him in case he died. On the God's-acre grow lovely flowers : from the thought of death spring life-giving longings. Then the old hymns and gospel verses of her childhood awoke in Nannerl's heart. The Lord Jesus, who had stood so close to her all her life, stood now before her. She saw him, and fell down and cried, "Master!"

Conrad had got a small pension from government, and, as he could not continue his trade in the village, he went to the nearest town, where his boys were received in a government school, till they were of age to learn some business. Nannerl became a laundress, and earned as much as, with Conrad's pension, sufficed for their support. Early in the morning Nannerl began her work. At first, Conrad looked pained to see her undergoing such exertion. "When I saw you in the garden, Nannerl—"

"On the Thursday evening, wasn't it?"

"You little thought—I little thought—"

But his voice failed him. Nannerl smiled and said, "The less we think, the better; the blessed God thinks it all for us." And so she comforted and cheered him. They were happy in their gratis joys, good conscience, and children's prattle. Conrad was not able to walk much, but now and then they walked together. Nannerl was his support and stay.

"Nannerl," said he, one evening, "you are an angel. How can you be so happy with such hard work?"

"Don't speak in this way. Look how healthy our children are, and what a fine bold hand Carl writes—he is already at the letter M; and little Nannette is going to knit something for your birthday, but I should not tell you; and you are with me, and God is so kind to us."

"Nannerl, God be kind to you and my children. Teach them your faith."

"Our faith, say, Conrad. Are not you also a

Christian? You should think oftener of Him who came to save us, and of the heaven he brought us."

But the drum, the drum, it sounds so loud! Neither Nannerl's cries, nor the children's voices can be heard, for the drum, the drum, it sounds so loud!

Not unto the battle-field, but the grave.

Conrad is dying. He never loved Nannerl so much as on his deathbed. He had never thought so often of Him who had brought new life and peace to his wife's heart. "Nannerl," he said, "I have been thinking of the crown of thorns. That crown brought Else a golden crown, and I also will be crowned. God bless you and our children, teach them our faith!"

Conrad is dead: Nannerl weeps, but she can rejoice. "God bless you and our children." She heard these words continually; when she awoke at night, when she arose in the morning, when the Sunday bells rung, when she watched at their bedsides. And God did bless her and her children. She was so punctual, diligent, and skilful in her work, that she never lacked employment. Her sweet disposition and kindness gained her many friends, and not a few were drawn to her by a deeper sympathy, and recognised in her a fellow-pilgrim on the thorny path to the crown of glory. Her boys grew up in the fear and love of God; filling the evening of her life with peace and serenity.

When I think of her, the grace and dignity of her manner, her sweetness and gentleness to her children, the words of wisdom and love that came from her lips, her industry and unclouded cheerfulness,—Nannerl, I think you wear the crown already. Nannerl, I think you are one of the greatest, noblest human beings I ever saw. Nannerl, God dwells in your heart, God delights in you.

I say, Her Majesty, Nannerl the washerwoman. Of such queens consists heaven.

A. S.

GETTING ON.

EVERYBODY is Going On. We are all getting through our little span of daylight. We are spending the time that is allotted to us, at the rate of three hundred and sixty-five days a year. We are all going on through life, somehow: not very cheerfully, if one may judge by the care-worn, anxious faces of most middle-aged people you pass on the street. But some people are not merely Going On: they are also Getting On; which is a very different thing. All are growing older: a man here and there is also growing bigger. I mean bigger in a moral sense. As you and I, my reader, look round on those early companions who started with us in the race of life, we can discern that great changes have passed upon many of them. Some who started as cart-horses, of a very shaggy and uncombed appearance, have gradually assumed the aspect of thorough-bred, or at least of well-bred animals. Some who set out as horses sixteen hands high, have shrunk to the size of Shetland ponies. Certain who started as calves, have not attained maturity with advancing years: and instead of turning into consolidated oxen, they have only

grown into enormous calves. But without going into such matters, I am sure you know that among your old companions there are those who are shooting ahead of the rest, or who have already shot ahead of them. These are those who are pointed at as Rising Men. They are decidedly Getting On. I do not mean that they are becoming famous, or that they are becoming great men. They have not had much chance of *that*. Their lot has circumscribed their ambition. Their hearts do not beat high for praise: but have known various perplexities as to the more substantial question of the earning of bread and butter. But they are quietly and surely progressing. They have now advanced a good deal beyond what they were five or ten years since. Every profession has its rising men. The Church, the Law, Medicine, Commerce, Literature, have their men who are Getting On: year by year Getting On. A great many men find their level rather early in life: and remain for many years much the same in standing. They are not growing richer, as they grow older. They are not coming to be better known: They are not gaining a greater

place and estimation in their walk of life. Many a little shopkeeper at fifty-five is in worldly wealth much as he was at thirty-five. He has managed to rub on, sometimes with a hard struggle: it has been just enough to make the day provide for the day's wants: and there has been no accumulation of money. Many a domestic servant, after many years of toil, is not a whit better off than when she was a hopeful girl. If she has been provident and self-denying, she may have a few pounds in the Savings'-bank. Many a labouring man in the country has been able each week to make the hard-earned shillings provide food and clothing for his children and their mother: but he has laid up no store: he has not advanced: he lives in the same little cottage: and his poor sticks of furniture are all the worse for their wear: and his carefully-kept Sunday suit is not so trim now as it used to be when he courted his hard-featured wife in her fresh girlhood, and was esteemed as a rustic beau. Many a faithful clergyman at sixty is a poorer man than he was at thirty; or in any case not richer. It has cost many an anxious thought, through these years, to make the ends meet: and that hard task will cost its anxious thoughts to the end. You who wish to have an efficient clergy, who will do their work heartily and well, agitate against that wicked and idiotic notion, that a clergyman is likely to do his work best if he be crushed down by the pressure of poverty: if his wife be worn into her grave by sorry schemings to make the little means go their farthest; and if his poor little children have to run about without shoes and stockings. There are certain opinions which I should not think of meeting by argument: but rather by the severest application of the cat of nine tails. And one of these is the opinion of the old fool who said that "a pair church would be a pure church."

But returning from this digression, let me repeat, that however hard it may be to explain how some men get on while others do not, there can be no question as to the fact that some men do get on while others do not. People get on in many ways: as you will understand, if you look back a few years; and compare what some of your friends were a few years since with what they are now. There is A, whom you remember in his early days at college, an ungainly cub with a shock head of red hair and a tremendous Scotch accent. That man has taken on polish: he has got on: he has seen the world: he is an accomplished gentleman. There is B, ten years since a poor curate; now risen to the charge of an important parish. There is C: he has married a rich wife: he has a fine house: he has several horses, various dogs, and many pigs: he has made so great a rise in life, that you would say that sometimes when he comes down stairs in the morning, he must think that he is the wrong

man. There is D: some years ago he tried in vain for a certain very small appointment: the other day he was offered one of the most valuable in the same profession, and declined it. There is E: he tried to write for the magazines. His early articles were ignominiously rejected. The other day he got a thousand pounds for one edition of a few of the rejected articles. You know how, in running the race of life, some one individual shows his head a little in front: gradually increases his lead; and finally distances all competition. Once upon a time, there was a staff of newspaper reporters attached to a certain London journal. One of them, not apparently cleverer than the rest, drew bit by bit ahead, till he reached the woollack. And when he presided in the great assembly whose speeches he was wont to report, he must unquestionably have felt that he had Got On. Indeed, I have heard that homely phrase applied to him by an old Scotch lady who knew him in his youth; and so who could never speak of his success in life save in modified terms. "Our minister," said the old lady to me, "had two sons. One went to India. As for John, he went to London: and he got on very well." No doubt John had got on: for he was at that time Chief Justice of England. If you look at *The Reliques of Father Prout*, you will find a large picture, containing portraits of the contributors to a well-known London magazine, thirty years ago. There is a portrait of a comparatively unnoted man, with a glass stuck in his eye. He was an outsider then: and had given little sign of what he was to be to-day. The portrait is of Mr. Thackeray. You may have heard the name before. This very day, I was told about a man who forty years since opened a little shop, stocked chiefly with coarse towels. So my informant averred. If so, the demand for coarse towels in a certain great town must have been enormous: or the individual in question must have been most fortunate in drawing general attention to his coarse towels: for he drew ahead of other dealers in towels, and became one of the greatest merchant-princes of England. But without taking extreme cases, you know that within more modest limits, there are people who are steadily Getting On. While one man lives for thirty years in the same house, and maintains the same general appearance; his next neighbour ascends the scale of fashion: gets time after time a better house, till he attains a grand country mansion: and from the total absence of any save the conveyance common to mankind, attains to the phaeton, the brougham, and the family chariot. One preacher does his duty steadily and respectably, year after year: and no one thinks anything particular about him. Another tears like a rocket to the highest elevation of the preacher's precarious popularity. His church-doors are mobbed: his

fame overspreads the land : his portrait is in the shop-windows : his sermons sell by scores of thousands.

How is it that men Get On ? How is it that in every walk of life, there are those who draw ahead of their competitors ? It is a very simple and primary notion, not likely to be entertained unless by youthful and unsophisticated minds in remote rural districts, that the most deserving men Get On the best. To gain any advantage or eminence, indeed, which is not bestowed by high-handed patronage, a man must have a certain amount of merit. The horse that wins the Derby must unquestionably be able to gallop at a very great pace. Of course, if the Derby prize were given by patronage, it might occasionally fall to a horse with only three legs. And there are places in the Church and the Law which are filled up by unchecked patronage ; and in which a perfectly analogous state of matters may be discerned. It would be insulting some men to suggest that they were placed where they are because they were the best men eligible ; or even because they were fit to be placed there at all. You may have known instances in which a man was put in a certain place, because he was the worst man, or one of the worst men, that could be found. But even in cases where the eminence is not arbitrarily given : where it is understood to be earned by the man himself, and not allotted to him by some other man : it is a simple and unsophisticated notion, that the best man gets the best place. The winner of the Derby must be able to gallop very fast : but nine times out of ten, he is by no means the best horse that starts. A bad place at starting : an unlucky push from a rival in mid career : the awkward straining of a muscle : a little nervousness or want of judgment in the jockey who rides him : and the best horse is beaten by a very inferior one, more lucky or better handled. I am obliged to say, as the result of all my observation of the way in which human beings Get On, that human beings get on mainly by Chance, or Luck. I use the words in their ordinary meaning. I mean that human beings Get On or fail to Get On, in a fashion that looks fortuitous. There must be merit, in walks where men have to make their own way : but that a man may get on, he must be seconded by Good-Luck, or at least not crossed by Ill-Luck. We must speak of things, you know, as they appear to our ignorance. I know there is a higher hand : and I humbly recognise that. I know that "Promotion cometh neither from the East, nor from the West, nor from the South : but God is the Judge : he putteth down one, and setteth up another." We all feel that. I believe that these words of the Psalmist give us the entire

philosophy of Getting On. It is a matter of God's sovereignty : and God's sovereignty, as it affects human beings, we speak of as their Good or Ill Luck. Of course, there is no chance in the matter : everything is tightly arranged and governed : and doubtless, if we could see aright, we should see that there are wise and good reasons for all : but as we do not know the reasons, and as we cannot foresee the arrangement, we fall back on a word which expresses our ignorance ; and which states the fact of the apparent arbitrariness of the government of Providence. Nothing can be more certain than the fact, that there are men who are lucky ; and other men who are unlucky. The unlucky, perhaps, need it all : and the lucky can stand it all : but there is the fact. And we know that there are blessed compensations, not known to onlookers, which may make the thorn in the flesh or the crook in the lot a true blessing : which cause men thankfully to say that it was good for them that they were afflicted and disappointed ; good for them that they did not Get On. The wise man Jabez, you remember, knew that God might "bless indeed," while to other eyes He did not seem to bless at all. And so his prayer was, not that he might absolutely Get On : but that he might Get On or fail to do so as God saw best. "Oh that thou wouldst bless me *indeed* !" And so, speaking in ordinary language, let me say that I hold with the Psalmist. It is God's sovereignty. *Fiat Voluntas Tua* ! The thing that makes men Get On in this world, is mainly their luck ; and in a very subordinate degree, their merit or desert.

Life is a lottery. No doubt, there is no real chance in life : but then there is no real chance in any lottery. I do not hesitate to say that what we deserve has very little to do with our Getting On. And all human scheming and labour have very little to do with the actual result in Getting On. And for this reason, I find a great defect in all that I have seen written as to the arts of self-advancement ; whether these arts be honest and commendable, or otherwise. It is easy to point out a number of honourable means which tend to help a man on ; and a number of contemptible tricks and dodges which tend towards worldly wealth and influence. But the practical use of all these directions is nullified by the fact, that some fortuitous accident may come across all the hard work and self-denial of the worthy man, or all the dirty trickery of the diplomatic cheat ; and make all perfectly futile. Honest industry and perseverance ; also resolute selfishness, meanness, toadyism, and roguery : tend to various forms of worldly success. But you can draw no assurance from these general principles, as to what either may do for yourself. Out of a hundred men, the

Insurance tables will tell you very nearly how many will live for five or ten years to come : but not the slightest assurance can be conveyed by these tables to any individual man of the hundred as to his expectations of life. I have a practical lesson to draw from all this, by and by : but here let it be repeated, that, as a general rule, it is not the most deserving who Get On, but the most lucky. My reader, if you have met success in life yourself, you know this well. The man who has succeeded knows this far better than the man who has failed. The writer states his principle the more confidently, because he knows he has himself got on infinitely better than he deserves. He looks back on the ruck with which he started : and he sees that he has drawn ahead of some who deserved at least as well : who deserved far better. The writer says earnestly that it is not the most deserving who get on the best ; not because he thinks he has got less than he deserves, but because he knows he has got an immense deal more. For these things he knows Whom to thank ; and he desires to be thankful.

Chance, then (which means God's Providence), advances people in many ways. A man publishes a book. It meets great success. There is no particular reason. Other books as good, and some books a great deal better, prove entire failures. A man goes to the bar : and shortly a stream of briefs begins to set in towards his chambers. Men of equal ability, and eager to excel in their profession, wait wearily on year after year. A man goes into the Church : he is put in conspicuous places, where his light is not hid under a bushel : he gets large preferments, no one can exactly say why. He fills respectably the place where he is put : but doubtless there are many who would fill it just as well. You will find a man chance upon a general reputation for great learning, of which he never gave the slightest proof. Somehow it became the fashion to speak of him as the possessor of unexplored mines of information. Then you know how a man then and there becomes a privileged person, you cannot say how. A privileged person means a man who is permitted to say and do the silliest and most insolent things : and to evince the most babyish pettedness of temper,—things for which anybody else would be kicked, or esteemed as an idiot : but when the privileged man does all this, every one sets himself to smooth the creature down if he be petted, and to applaud his silly jokes if he be jocular. I do not know any more signal instance of the arbitrary allotment of things in this world, than this. It has been truly said that one man may steal a horse, while another must not look over the gate. To a certain extent, it is a matter of natural constitution. You remember how the dog was accustomed, without rebuke, to jump upon his

master's knee ; while the donkey was chastised severely on endeavouring to do the same thing. You will find a man who is always being stroked down and flattered by the members of some public body, to which he never rendered any particular service. One can understand why the great Duke of Wellington, even when he had grown a great obstruction to army business and reform, should be deferred to by the nation for which he had done so much : but you may have known people treated with the like deference, who had never done anything through life but diligently aim at securing the greatest advantage of the greatest number ; which (it is well known) is Number One. Then there are men who Get On, even to places of very great dignity, because somehow they have got into the track, and are pushed on with very little motive force of their own. It would be invidious to mention striking instances of this : but it would be very easy. Other men Get On, by being appointed, with little competition, to some position which at the time is not worth much ; but which grows important and valuable. And a worthier way of Getting On, is when a man, by his doings and character, makes a position important, which in other hands would not be so.

The Chance (as already explained) which rules events in this life, never appears more decidedly than in making the diligent efforts of some men successful, and of other men futile. We can see the arts which men use, thinking to advance themselves : and no doubt these arts often tend directly to that end : but then Chance comes in to say whether these arts shall signally fail or splendidly succeed. I have known a laborious student get up many pages of Greek for an examination : all his pages most thoroughly, save two or three which were hastily read over. And upon the examination-day, sure enough he was taken upon the pages he did not know well ; while his competitor was taken on his pet page, which he knew by heart. And there were scores of pages which that competitor had never looked at : but he trusted his Luck, and it did not fail him.

It may be assumed as certain, that all men would like to Get On. If you see a number of cabs upon a stand, you may be quite sure that any one of them would take a fare if it could get it. And a man, in all ordinary cases, by entering any profession, becomes as a cab upon the stand waiting for a fare. If he stand idle in the market-place all day, it may be taken for granted that it is because no man has hired him. And though we may have quite outgrown our early ambitions : though we may never have had much ambition : though we may be quite contented with our present position and circumstances ; still, we should all like to Get

On. We do not talk of ambition, in the case of commonplace folk like ourselves : and though the "love of fame" has been called the "universal passion," I believe that it is practically confined to a very little fraction of mankind. We call it ambition when Mr. Disraeli goes in for leader of the House of Commons ; or when Napoleon twists his way to a throne. We do not call it ambition when a clergyman would like a larger congregation to preach to, or another hundred or two a year of income. And naming this matter, let me interject the wish, which will be intelligible to various readers, May the Lord Justice-Clerk live a thousand years ! But we do not speak of ambition in such cases : it is only that people would like to Get On a little. We like to think that we are Getting On : that we live in a better house than we used to do : that our little library is gradually growing : that our worldly means are improving : that we are a little wiser and better than we used to be. But though we may take for granted, that all men would like to Get On, we may be assured that there are many who would not take much trouble to do so. Their wishes are moderate : they have learned to be content. They will not fret themselves into a fever : they will not push. And much less will they sneak, or cheat, or wriggle. If success comes, they are pleased : but they are not vexed though it do not come. They look with interest, and with some amusement, at the diplomatic schemes of their friends, who enter themselves in the race of ambition. They see that pertinacious pushing will make a man Get On, unless he be very unlucky or very incapable. But they do not think it worth while pertinaciously to push. They see that judicious puffing, on your own part and that of your friends, is a helpful thing : but they shrink from puffing themselves, or from hearing their friends puff them. Puffing is a great power : as Mr. Barnum and others know. It is a great thing, to have friends to back you and puff you. One man publishes a book. He does not know a soul who ever printed a line. There is not a human being to say a good word of his book for friendship's sake. Another author has a host of literary friends : and when his book comes out, they raise a *sough* of applause through the press. And all this is very natural ; and is not unfair. Only the unlucky man who has got no friends will probably grumble. Yet all this will not always succeed. I have known two books come out together. One was written by a man who had no writing friends ; the other by a man who had many. The former was reviewed widely and favourably : the other was very little noticed by the reviewers. But you cannot always force things upon the reading public. The unreviewed book sold splendidly : the other hardly sold at all. The unreviewed book enriched its

author : the other slightly impoverished its author. All this, of course, was Luck again.

I have already stated what appears to me the great defect in all treatises on the arts of self-advancement and self-help. There appears to me a fallacy at the foundation of all their instructions. They all say, in one form or other, "Do so and so, and you will Get On." Some of these treatises recommend fair and worthy means ; as industry, self-denial, perseverance, honesty, and the like. Others of them recommend unworthy means ; as selfishness, unscrupulousness, impudence, toadyism, sneakiness, and the like. But they fail to allow for Chance or Providence. They fail to bring out the utter uncertainty which attends all arts for Getting On. No mortal can say how a man is to Get On. A poor Scotch lad, walking the London streets, fell into a cellar and broke his leg. *That* made his fortune. The wealthy owner of the cellar took him up, and pushed him on : and he rose to be Lord Mayor of London and an eminent member of Parliament. A certain man (and a good man too) became a Bishop through accidentally attracting the notice of a disreputable peeress who was in high favour with a disreputable monarch, who once reigned (let us say) in the centre of Africa. The likeliest arts, whether honest or dishonest, may fail utterly. And the lesson, I think, is this : Do your duty quietly and honestly : Don't push, don't puff : Don't set your heart upon any worldly end ; it is not worth while : if success comes, well ; if it does not come, you do not mind much. "Seekest thou great things for thyself ? seek them not !". There never were words written more worthy of being remembered and acted on by all men. There is no use in being ambitious. Being ambitious just means setting your whole heart on Getting On : and in this world people seldom get the thing on which they set their heart. And no matter how you may labour to attain your end, you cannot make sure of attaining it. You may probably see it carried away by some easy-going man who cared very little for it, and took very little trouble to get it. Read Mr. Smiles' excellent book on *Self-Help*. It will do you good to read it. It will spur you to do your best, to see what other men have done. But remember, you are in God's hands. The issue is with him. It no more follows that if you work like George Stephenson or Lord Eldon, that you will get on as they did ; than that if you eat the same thing for breakfast as the man who gets the great prize in a lottery, you will get the prize like him. Still, Mr. Smiles will do you good. Unless luck sets very greatly against you, you may, by honestly doing your best, Get On fairly. Your chance of Getting On to the highest point of success is just about the same as your chance of being smashed altogether.

It is not great. And remember, my friend, that it is not worldly success that is the best thing we can get in this world. There is something far better. And perhaps it may be by forbidding that you should Get On, that God may discipline you into that. I should feel very great interest in reading the lives of a number of men who honestly did their best, and failed; yet who were not soured by failure; men who, like St. Paul, bore the painful weight through life, and bore it kindly and humbly: getting great good and blessing out of it all. Let us always keep it in our remembrance, that there is something far better than any amount of worldly success, which may come of worldly failure.

Still, remembering all this, it is interesting to look at the various arts and devices by which men have Got On. Judicious puffing is a great thing. But it must be very judicious. Some people irritate one by their constant stories as to their own great doings. I have known people who had really done considerable things; yet who did not get the credit they deserved, just because they were given to vapouring of what they had done. It is much better to have friends and relatives to puff you: to record what a splendid fellow you are, and what wonderful events have befallen you. Even here, if you became known as one of a set who puff each other, your laudations will do harm instead of good. It is a grand thing to have relations and friends who have the power to actually confer material success. Who would not wish to be Dows, that so he might be "taken care of?" You have known men at the Bar, to whom some powerful relative gave a tremendous lift at starting in their profession. Of course this would in some cases only make their failure more apparent, unless they were really equal to the work to which they were set. There is a cry against Nepotism. It will not be shared in by the *Nepotes*. It must be a fine thing to be one of them. Unhappily, they must always be a very small minority: and thus the cry against them will be the voice of a great majority. I cannot but observe that the names of men who hold canonries at cathedrals, and other valuable preferments in the Church, are frequently the same as the name of the Bishop of the diocese. I do not complain of that. It is the plain intention of Providence that the children should suffer for their fathers' sins, and gain by their fathers' rise. It is utterly impossible to start all human beings for the race of life, on equal terms. It is utterly impossible to bring all men up to a rope stretched across the course, and make all start fair. If a man be a drunken blackguard, or a heartless fool, his children *must* suffer for it: *must* start at a disadvantage. No human power can prevent that. And on the other hand, if a man be industrious and able, and rise to great eminence, his children gain by all this. Robert Stephenson had a splendid start, because old George his father got on so nobly. Lord Stanley entered political life at an immense advantage, because he was Lord Derby's son. And if any reader of this page had some valuable office to give away; and had a son, brother, or nephew, who deserved it as well as anybody else, and who he could easily think deserved it a great deal better than anybody else; I

have little doubt that the reader would give that valuable office to the son, brother, or nephew. I have known, indeed, magnanimous men who acted otherwise: who in exercising abundant patronage suffered no nepotism: it was a positive disadvantage to be related to these men: they would not give their relatives ordinary justice. The fact of your being connected with them made it tolerably sure that you would never get anything they had to give. All honour to such men! Yet they surpass average humanity so far, that I do not severely blame those who act on lower motives. I do not find much fault with a certain Bishop who taught me theology in my youth, because I see that he has made his son a canon in his cathedral. I notice, without indignation, that the individual who holds the easy and lucrative office of Associate in certain Courts of Law, bears the same name with the Chief-Justice. You have heard how Lord Ellenborough was once out riding on horseback, when word was brought him of the death of a man who held a sinecure office with a revenue of some thousands a year. Lord Ellenborough had the right of appointment to that office. He instantly resolved to appoint his son. But the thought struck him, that he might die before reaching home: he might fall from his horse, or the like. And so the eminent Judge took from his pocket a piece of paper and a pencil: and then and there wrote upon his saddle a formal appointment of his son to that wealthy place. And as it was a place which notoriously was to be given, not to a man who should deserve it, but merely to a man who might be lucky enough to get it, I do not know that Lord Ellenborough deserved to be greatly blamed. In any case, his son, as he quarterly pocketed the large payment for doing nothing, would doubtless hold the blame of mankind as of very little account.

But whether you Get On by having friends who cry you up, or by having friends who can materially advance you, of course it is your luck to have such friends. We all know that it is "the accident of an accident" that makes a man succeed to a peerage or an estate. And though trumpeting be a great fact and power, still your luck comes in to say whether the trumpet shall in your case be successful. One man, by judicious puffing, gets a great name: another, equally deserving, and apparently in exactly the same circumstances, fails to get it. No doubt the dog who gets an ill name, even if he deserves the ill name, deserves it no more than various other sad dogs who pass scot free. Over all events, all means and ends in this world, there rules God's inscrutable sovereignty. And to our view, that direction appears quite arbitrary. "One shall be taken, and the other left." "Jacob have I loved, and Esau have I hated." "Hath not the potter power over the clay, of the same lump to make one vessel unto honour, and another unto dishonour?"

A way in which small men sometimes Get On, is by finding ways to be helpful to bigger men. Those bigger men have occasional opportunities of helping those who have been helpful to them. If you yourself, or some near relation of yours, yield effectual support to a candidate at a keenly contested county election, you may possibly be repaid

by influence in your favour brought to bear upon the Government of the day. From a bishopric down to a headship, I have known such means serve valuable ends. It is a great thing to have any link, however humble, and however remote, that connects you with a Secretary of State, or any member of the Administration. Political tergiversation is a great thing. Judicious ratting, at a critical period, will generally secure some one considerable reward. In a conservative institution to stand almost alone in professing very liberal opinions; or in a liberal institution to stand almost alone in professing conservative opinions: will probably cause you to Get On. The leaders of parties are likely to reward those who among the faithless are faithful to them; and who hold by them under difficulties. Still, luck comes in here. While some will attain great rewards by professing opinions very inconsistent with their position, others by doing the same things merely bring themselves into universal ridicule and contempt. It is a powerful thing, to have abundant impudence: to be quite ready to ask for whatever you want. Worthier men wait till their merits are found out: you don't. You may possibly get what you ask: and then you may snap your fingers in the face of the worthier man. By a skilful dodge, A got something which ought to have come to B. Still, A can drive in dignity past B, covering him with mud from his chariot-wheels. There was a man in the last century who was made a bishop by George III., for having published a poem on the death of George II. That poem declared that George II. was removed by Providence to heaven, because he was too good for this world. You know what kind of man George II. was: you know whether even Bishop Porteus could possibly have thought he was speaking the truth in publishing that most despicable piece of toadyism. Yet Bishop Porteus was really a good man, and died in the odour of sanctity. He was merely a little yielding. Honesty would have stood in the way of his Getting On; and so honesty had to make way for the time. Many people know that a certain Bishop was to have been made Archbishop of Canterbury: but that he threw away his chance by an act of injudicious honesty. On one occasion, he opposed the Court, under very strong conscientious convictions of duty. If he had just sat still, and refrained from bearing testimony to what he held for truth, he would have Got On much farther than he ever did. I am very sure the good man never regretted that he had acted honestly!

Judicious obscurity is often a reason for advancing a man. You know nothing to his prejudice. Eminent men have always some enemies: there are those who will secretly hate them just because they are eminent: and no one can say how or when the most insignificant enemy may have an opportunity to put a spoke in the wheel, and upset the coach in which an eminent man is advancing to what would have crowned his life. While nothing can be more certain than that if you heard nothing at all about a man, you know no harm of him. There are many people who will oppose a man seeking for any end, just because they know him. They don't care about a total stranger gaining the thing desired: but they cannot

bear that any one they know should reach it. They cannot make up their mind to *that*. You remember a curious fact brought out by Cardinal Wiseman in his *Lives of the Last Four Popes*. There are certain European kings who have the right to veto a Pope. Though the choice of the conclave fall on him, these kings can step in and say, No. They are called to give no reason. They merely say, Whoever is to be Pope, it shall not be that man. And the Cardinal shows us, that as surely as any man seems likely to be elected Pope who has ever been Papal Ambassador at the court of any of those kings, so surely does the king at whose court he was veto him! In short, the king is a man: and he cannot bear that any one he knows should be raised to the mystical dignity of the Papacy. But the monarch has no objection to the election of a man whom he knows nothing about. And as the more eminent cardinals are sure to have become known, more or less intimately, to all the kings who have the right to veto, the man elected Pope is generally a very obscure and insignificant Cardinal. Then there is a pleasant feeling of superiority and patronage in advancing a small man, a man smaller than yourself. You may have known men who were a good deal consulted as to the filling up of vacant offices in their own profession, who made it their rule strongly to recommend men whose talent was that of decent mediocrity, and never to mention men of really shining ability. And if you suggest to them the names of two or three persons of very high qualifications, as suitable to fill the vacant place, you will find the most vigorous methods instantly employed to make sure that whoever may be successful, it shall not be one of these. "Oh, he would never do!"

It is worth remembering, as further proof how little you can count on any means certainly conducing to the end of Getting On, that the most opposite courses of conduct have led men to great success. To be the toady of a great man is a familiar art of self-advancement: there once was a person who by doing extremely dirty work for a notorious peer, attained a considerable place in the government of this country. But it is a question of luck, after all. Sometimes it has been the making of a man, to insult a Duke, or to bully a Chief-Justice. It made him a popular favourite: it enlisted general sympathy on his side: it gained him credit for nerve and courage. But public feeling, and the feeling of the dispensers of patronage in all walks of life, oscillates so much, that at different times, the most contradictory qualities may commend a man for preferment. You may have known a man who was much favoured by those in power, though he was an extremely outspoken, injudicious, and almost reckless person. It is only at rare intervals that such a man finds favour: a grave, steady, and reliable man, who will never say or do anything outrageous, is for the most part preferred. And now and then you may find a highly cultivated congregation, wearied by having had for its minister for many years a remarkably correct and judicious though tiresome preacher, making choice for his successor of a brilliant and startling orator, very deficient in taste and sense. A man's

luck, in all these cases, will appear, if it bring him into notice just at the time when his special characteristics are held in most estimation. If for some specific purpose, you desire to have a horse which has only three legs, it is plain that if two horses present themselves for your choice, one with three legs and the other with four, you will select and prefer the animal with three. It will be the best, so far as concerns you. And its good luck will appear in this: that it has come to your notice just when your liking happened to be a somewhat peculiar one. In like manner, you may find people say, In filling up this place at the present time, we don't want a clever man, or a well-informed man, or an accomplished and presentable man: we want a meek man, a humble man, a man who will take snubbing freely, a rough man, a man like ourselves. And I have known many cases, in which, of several competitors, one was selected just for the possession of qualities which testified his inferiority to the others. But then, in this case, that which was absolutely the worst, was the best for the particular case. The people wanted a horse with three legs: and when such an animal presented itself, they very naturally preferred him to the other horses which had four legs. The horses with four legs naturally complained of the choice; and thought themselves badly used when the screw was taken in preference. They were wrong. There are places for which a rough man is better than a smooth one: a dirty man than a clean one: in the judgment (that is) of the people who have the filling up of the place. I certainly think their judgment is wrong. But it is their judgment; and of course they act upon it.

As regards the attainment of very great and unusual wealth, by business or the like, it is very plain how much there is of luck. A certain degree of business talent is of course necessary, in the man who rises in a few years from nothing to enormous wealth: but it is Providence that says who shall draw the great prize: for other men with just as much ability and industry entirely fail. Talent and industry in business may make sure, unless in very extraordinary circumstances, of decent success: but Providence fixes who shall make four hundred thousand a year. The race is not to the swift, nor the battle to the strong, nor riches to men of understanding: that is, their riches are not necessarily in proportion to their understanding. Trickery and cheating, not crossed by ill-luck, may gain great wealth. I shall not name several instances which will occur to every one. But I suppose, my friend, that you and I would cut off our right hand before we should Get On in worldly wealth by such means as these. You must make up your mind, however, that you will not be envious when you see the fine house, and the horses and carriages, of some successful trickster. All this indeed might have been had: but *you* would not have it at the price. That worldly success is a great deal too dear, which is to be gained only by sullyng your integrity! And I gladly believe that I know many men, whom no material bribe would tempt to what is mean or dishonest.

There is something curious in the feeling which many people cherish towards an acquaintance who

becomes a successful man. Getting On gives some people mortal offence. To them, success is an unpardonable crime. They absolutely hate the man that Gets On. Timon, you remember, lost the affection of those who knew him when he was ruined: but depend upon it, there are those who would have hated Timon much worse had he suddenly met some great piece of good fortune. I have already said that these envious and malicious people can better bear the success of a man whom they do not know. They cannot stand it, when an old school-companion shoots ahead. They cannot stand it, when a man in their own profession attains to eminence. They diligently thwart such an one's plans; and then chuckle over their failure; saying, with looks of deadly malice, "Ah, this will do him a great deal of good!"

But now, my reader, I am about to stop. Let me briefly sum up my philosophy of Getting On. It is this: A wise man in this world will not set his heart on Getting On; and will not push very much to Get On. He will do his best: and humbly take, with thankfulness, what the Hand above sends him. It is not worth while to push. The whole machinery that tends to earthly success, is so capricious and uncertain in its action, that no man can count upon it, and no wise man will. A chance word, a look, the turning of a straw, may make your success or mar it. A man meets you on the street; and says, Who is the person for such a place, great or small: You suddenly think of somebody; and say, He is your man: and the thing is settled. A hundred poor fellows are disappointed. You did not know about them; or their names did not occur to you. You put your hand into a hat, and drew out a name. You stuck a hook into your memory, and this name came out. And *that* has made the man's fortune. And the upshot of the whole matter is, that such an infinitude of little fortuitous circumstances may either further or prevent our Getting On: the whole game is so complicated: that the right and happy course is humbly to do your duty and leave the issue with God. Let me say it again: "Seekest thou great things for thyself? Seek them not!" It is not worth while. All your seeking will not make you sure of getting them: the only things you will make sure of will be fever and toil and suspense. We shall not push, or scheme, or dodge, for worldly success. We shall succeed exactly as well; and we shall save ourselves much that is wearisome and degrading. Let us trust in God, my friend; and do right: and we shall Get On as much as He thinks good for us. And it is not the greatest thing to Get On. I mean, to Get On in matters that begin and end upon this world. There is a progress in which we are sure of success, if we earnestly aim at it; which is the best Getting On of all. Let us "grow in grace." Let us try, by God's aid, to grow better, kinder, humbler, more patient, more earnest to do good to all. If the germ of the better life be implanted in us by the Blessed Spirit, and tended by Him day by day: if we trust our Saviour and love our God: then our whole existence, here and hereafter, will be a glorious progress from good to better. We shall always be Getting On!

A. K. H. D.

MISTRESS AND MAID.

A HOUSEHOLD STORY.

{ BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

CHAPTER XIX.

"Missing"—"Lost"—"To"—all the initials of the alphabet—we read these sort of advertisements in the newspapers; and unless there happens to be in them something intensely pathetic,

III—33

comical, or horrible, we think very little about them. Only those who have undergone all that such an advertisement implies, can understand its depth of misery: the sudden missing of the person out of the home-circle, whether going away in anger, or driven away by terror or disgrace; the

hour after hour and day after day of agonized suspense; the self-reproach, real or imaginary, lest anything might have been said or done that was not said or done—anything prevented that was not prevented; the gnawing remorse for some cruel, or careless, or bitter word, that could so easily have been avoided.

Alas! if people could only be made to feel that every word, every action, carries with it the weight of an eternity; that the merest chance may make something said or done quite unpremeditatedly, in vexation, sullenness, or spite, the *last* action, the *last* word; which may grow into an awful remembrance, rising up between them and the irredeemable past, and blackening the future for years.

Selina was quite sure her unhappy nephew had committed suicide, and that she had been the cause of it. This conviction she impressed incessantly on her two sisters, as they waited upon her, or sat talking by her bedside during that long Saturday, when there was nothing else to be done.

That was the misery of it. There was nothing to be done. They had not the slightest clue to Ascott's haunts or associates. With the last lingering of honest shame, or honest respect for his aunts, he had kept all these things to himself. To search for him in wide London was altogether impossible.

Two courses suggested themselves to Hilary—one, to go and consult Miss Balquidder; the other—which came into her mind from some similar case she had heard of—to set on foot inquiries at all police-stations. But the first idea was soon rejected: only at the last extremity could she make patent the family misery, the family disgrace. To the second, similar and even stronger reasons applied. There was something about the cool, matter-of-fact, business-like act of setting a detective officer to hunt out their nephew, from which these poor women recoiled. Besides, impressed as he was—he had told his Aunt Johanna so—with the relentlessness of Mr. Ascott, might not the chance of his discovering that he was hunted, drive him to desperation?

Hardly to suicide. Hilary steadfastly disbelieved in that. When Selina painted horrible pictures of his throwing himself off Waterloo Bridge; or being found hanging to a tree in one of the parks; or locking himself in a hotel bed-chamber, and blowing out his brains, her younger sister only laughed—laughed as much as she could—if only to keep Johanna quiet.

Yet she herself had few fears. For she knew that Ascott was, in a sense, too cowardly to kill himself. He so disliked physical pain; physical unpleasantness of all kinds. She felt sure he would stop short, even with the razor or the pistol

in his hand, rather than do a thing so very disagreeable.

Nevertheless, in spite of herself, while she and her sisters sat together, hour after hour, in a stillness almost like that when there is a death in the house, these morbid terrors took a double size. Hilary ceased to treat them as ridiculous impossibilities, but began to argue them out rationally. The mere act of doing so made her recoil; for it seemed an acknowledgment that she was fighting not with chimeras, but realities.

"It is twenty-four hours since he went," she reasoned. "If he had done anything desperate he would have done it at once, and we should have heard of it long before now; ill news always travels fast. Besides, his name was marked on all his clothes in full. I did it myself. And his coat-pockets were always stuffed with letters; he used to cram them in as soon as he got them, you know."

And at this small remembrance of one of his "ways," even though it was an unkind way, and had caused them many a pain, from the want of confidence it showed, his poor fond aunts turned aside to hide their starting tears. The very phrase "he used to" seemed such an unconscious admission that his life with them was over and done: that he never would either please them or vex them any more.

Yet they took care that during the whole day, everything should be done as if he were expected minute by minute: that Elizabeth should lay the fourth knife and fork at dinner, the fourth cup and saucer at tea. Elizabeth, who throughout had faithfully kept her pledge; who went about silently and unobtrusively, and by every means in her power put aside the curiosity of Mrs. Jones as to what could be the reason that her lodgers had sat up all night, and what on earth had become of young Mr. Leaf.

After tea, Johanna, quite worn out, consented to go to bed; and then Hilary, left to her own responsibility, set herself to consider how long this dreadful quietness was to last, whether nothing could be done. She could endure whatever was inevitable, but it was against her nature as well as her conscience, to sit down tamely to endure anything whatsoever, till it did become inevitable.

In the first place, she determined on that which a certain sense of honour, as well as the fear of vexing him should he come home, had hitherto prevented,—the examining of Ascott's room, drawers, clothes, and papers. It was a very dreary business—almost like doing the like to a person who was dead, only without the sad sanctity that belongs to the dead, whose very errors are forgotten and forgiven, who can neither suffer nor make others suffer any more.

Many things she found, and more she guessed at,—things which stabbed her to the heart, things that she never told, not even to Johanna; but she found no clue whatever to Ascott's whereabouts, intentions, or connexions. One thing, however, struck her—that most of his clothes, and all his somewhat extensive stock of jewellery, were gone; everything, in short, that could be convertible into money. It was evident that his flight, sudden as it was, had been premeditated as at least a possibility.

This so far was satisfactory. It took away the one haunting fear, of his committing suicide; and made it likely that he was still lingering about, hiding from justice and Mr. Ascott, or perhaps waiting for an opportunity to escape from England, from the fear that his godfather, even if not prosecuting him, had the power and doubtless the will completely to crush his future, wherever he was known.

Where could he go? His aunt tried to think over every word he had ever let fall about America, Australia, or any other place to which the hopeless outlaws of this country fly; but she could recollect nothing to enable her to form any conclusion. One thing only she was sure of—that if once he went away, his own words would come true; they would never see his face again. The last tie, the last constraint that bound him to home and a steady, righteous life would be broken: he would go all adrift, be tossed hither and thither on every wave of circumstance—what he called circumstance—till Heaven only knew what a total wreck he might speedily become, or in what forlorn and far-off seas his ruined life might go down. He, Ascott Leaf, the last of the name and family.

"It cannot be; it shall not be," cried Hilary. A sharp, bitter cry of resistance to the death; and her heart seemed to go out to the wretched boy, and her hands to clutch at him, as if he were drowning, and she were the only one to save him. How could she do it?

If she could only get at him, by word or letter! But that seemed impossible, until, turning over scheme after scheme, she suddenly thought of the one which so many people had tried in similar circumstances, and which she remembered they had talked over and laughed over, they and Ascott, one Sunday evening not so very long ago. This was—a *Times* advertisement.

The difficulty how to word it, so as to catch his attention, and yet escape publicity, was very great, especially as his initials were so common. Hundreds of "A. L.'s" might be wandering away from home, to whom all that she dared say to call Ascott back would equally apply. At last a bright thought struck her.

"A leaf" (with a small *l*) "will be quite safe wherever found. Come. Saturday. 15."

As she wrote it—this wretched *double entendre*—she was seized with that sudden sense of the ludicrous which sometimes intrudes in such a ghastly fashion in the very midst of great misery. She burst into uncontrollable laughter, fit after fit; so violent, that Elizabeth, who came in by chance, was terrified out of her wits; and kneeling beside her mistress, implored her to be quiet. At last the paroxysm ended in complete exhaustion. The tension of the last twenty-four hours had given way; and Hilary knew her strength was gone. Yet the advertisement ought to be taken to the *Times* office that very night, in order to be inserted without fail on Monday morning.

The *e* was but one person whom she could trust—Elizabeth.

She looked at the girl, who was kneeling beside the sofa, rubbing her feet, and sometimes casting a glance round, in the quiet way of one well used to nursing, who can find out how the sufferer is without "fussing" with questions. She noticed, probably because she had seen little of her of late, a curious change in Elizabeth. It must have been gradual, but yet its result had never been so apparent before. Her brusqueness had softened down, and there had come into her and shone out of her, spite of all her natural uncomeliness of person, that beautiful, intangible something, common alike to peasant and queen, as clear to see and as sad to miss in both—womanliness. Added thereto was the gentle composure of mien which almost invariably accompanied it, which instinctively makes you feel that in great things or small, whatever the woman has to do, she will do it in the womanliest, wisest, and best way.

So thought Miss Hilary, as she lay watching her servant, and then explained to her the errand upon which she wished to send her.

Not much explanation, for she merely gave her the advertisement to read, and told her what she wished done with it. And Elizabeth, on her part, asked no questions; but simply listened and obeyed.

After she was gone, Hilary lay on the sofa, passive and motionless. Her strength and activity seemed to have collapsed at once into that heavy quietness which comes when one has endured to the utmost limit of endurance, when one feels as if to speak a word or to lift a finger would be as much as life was worth.

"Oh, if I could only go to sleep!" was all she thought.

By and by, sleep did come; and she was taken far away out of these miseries. By the strange peculiarity of dreams, that we so seldom dream about any grief that oppresses us at the time, but

generally of something quite different, she thought she was in some known unknown land, lovely and beautiful, with blue hills rising in the distance, and blue seas creeping and curling on to the shore. On this shore she was walking with Robert Lyon, just as he used to be, with his true face and honest voice. He did not talk to her much; but she felt him there, and knew they had but "one heart between them." A heart which had never once swerved, either from the other; a heart, whole and sound, into which the least unfaith had never come, that had never known, or recognised even as a possibility, the one first doubt, the ominous

"Little rift within the lute
That by and by will make the music mute,
And ever widening slowly silence all."

Is it ever so in this world? Does God ever bring the faithful man to the faithful woman, and make them love one another with a righteous, holy, persistent tenderness, which dare look in His face, nor be ashamed; which sees in this life only the beginning of the life to come; and in the closest, most passionate human love, something to be held with a loose hand, something frail as glass and brittle as straw, unless it is perfected and sanctified by the love divine?

Hilary at least believed so. And when at Elizabeth's knock she woke with a start, and saw—not the sweet sea-shore and Robert Lyon, but the dull parlour, and the last flicker of the fire, she thanked God that her dream was not all a dream; that sharp as her misery was, it did not touch this—the love of her heart: she believed in Robert Lyon still.

And so she rose and spoke quite cheerfully, asking Elizabeth how she had managed, and whether the advertisement would be sure to be in on Monday morning.

"Yes, Miss Hilary; it is sure to be all right."

And then the girl hung about the room in an uneasy way, as if she had something to tell, which was the fact.

Elizabeth had had an adventure. It was a new thing in her monotonous life; it brightened her eyes, and flushed her cheeks, and made her old nervousness of manner return. More especially as she was somewhat perplexed, being divided in her mind between the wish she had to tell her mistress everything, and the fear to trouble her, at this troublous time, with any small matter that merely concerned herself.

The matter was this. When she had given in her advertisement at the *Times* office, and was standing behind the counter waiting for her change and receipt, there stood beside her a young man, also waiting. She had hardly noticed him, till on his talking to the clerk about some misprint in his

advertisement, apparently one of the great column of "Want Places," her ear was caught by the unmistakable Stowbury accent.

It was the first time she had heard it since she left home, and to Elizabeth's tenacious nature home in absence had gained an additional charm, had grown to be the one place in the world about which her affections clung. In these dreary wilds of London, to hear a Stowbury tongue, to catch sight of a Stowbury person, or even one who might know Stowbury, made her heart leap up with a bound of joy. She turned suddenly, and looked intently at the young man, or rather the lad, for he seemed a mere lad, small, slight, and whiskerless.

"Well, Miss, I hope you'll know me again next time," said the young fellow. At which remark Elizabeth saw that he was neither so young nor so simple as she had at first thought. She drew back, very much ashamed, and colouring deeply.

Now, if Elizabeth ever looked anything like comely, it was when she blushed; for she had the delicate skin peculiar to the young women of her district; and when the blood rushed through it, no cheek of lady fair ever assumed a brighter rose. That, or the natural vanity of man in being noticed by woman, caught the youth's attention.

"Come now, Miss, don't be shy or offended. Perhaps I'm going your way? Would you like company home?"

"No, thank you," said Elizabeth with great dignity.

"Well, won't you even tell a fellow your name? Mine's Tom Cliffe, and I live—"

"Cliffe! Are you little Tommy Cliffe, and do you come from Stowbury?"

And all Elizabeth's heart was in her eyes.

As has been said, she was of a specially tenacious nature. She liked few people, but those she did like she held very fast. Almost the only strong interest of her life, except Miss Hilary, had been the little boy whom she had snatched from under the horse's heels; and though he was rather a scapegrace, and cared little for her, and his mother was a decidedly objectionable woman, she had clung to them both firmly till she lost sight of them.

Now, it was not to be expected that she should recognise in this London stranger the little lad whose life she had saved—a lad, too, from her beloved Stowbury—without a certain amount of emotion, at which the individual in question broadly stared.

"Bless your heart, I am Tommy Cliffe from Stowbury, sure enough. Who are you?"

"Elizabeth Hand."

Whereupon ensued a most friendly greeting. Tom declared he should have known her any-

where, and had never forgotten her—never! How far that was true or not, he certainly looked as if it were; and two great tears of pleasure dimmed Elizabeth's kind eyes.

"You've grown a man now, Tommy," said she, looking at him with a sort of half-maternal pride, and noticing his remarkably handsome and intelligent face,—so intelligent that it would have attracted notice, though it was set upon broad, stooping shoulders, and a small, slight body. "Let me see; how old are you?"

"I'm nineteen, I think."

"And I'm two-and-twenty. How aged we are growing!" said Elizabeth with a smile.

Then she asked after Mrs. Cliffe, but got only the brief answer, "Mother's dead," given in a tone as if no more inquiries would be welcome. His two sisters, also, had died of typhus in one week, and Tom had been "on his own hook," as he expressed it, for the last three years.

He was extremely frank and confidential; told how he had begun life as a printer's "devil," afterwards become a compositor, and his health failing, had left the trade, and gone as servant to a literary gentleman.

"An uncommon clever fellow is master; keeps his carriage, and has dukes to dinner, all out of his books. Maybe you've heard of them, Elizabeth?" and he named a few, in a patronizing way; at which Elizabeth smiled, for she knew them well. But she nevertheless regarded with a certain awe the servant of so great a man, and "little Tommy Cliffe" took a new importance in her eyes.

Also, as he walked with her along the street to find an omnibus, she could not help perceiving what a sharp little fellow he had grown into; how, like many another printer's boy, he had caught the influence of the atmosphere of letters, and was educated, self-educated of course, to a degree far beyond his position. When she looked at him, and listened to him, Elizabeth involuntarily thought of Benjamin Franklin, and of many more who had raised themselves from the ink-pot and the compositor's desk to fame and eminence, and she fancied that such might be the lot of "little Tommy Cliffe." Why not? If so, how excessively proud she should be!

For the moment, she had forgotten her errand; forgotten even Miss Hilary. It was not till Tom Cliffe asked her where she lived, that she suddenly recollected her mistress might not like, under present circumstances, that their abode or anything concerning them should be known to a Stowbury person.

It was a struggle. She would have liked to see the lad again; have liked to talk over with him Stowbury things and Stowbury people; but she felt she ought not, and she would not.

"Tell me where you live, Tom, and that will do just as well; at least till I speak to my mistress. I never had a visitor before, and my mistress might not like it."

"No followers allowed, eh?"

Elizabeth laughed. The idea of little Tommy Cliffe as her "follower" seemed so very funny.

So she bade him good-bye; having, thanks to his gay frankness, been made acquainted with all about him, but leaving him in perfect ignorance concerning herself and her mistress. She only smiled when he declared contemptuously, and with rather a romantic emphasis, that he would hunt her out, though it were half over London.

This was all her adventure. When she came to tell it, it seemed very little to tell, and Miss Hilary listened to it rather indifferently, trying hard to remember who Tommy Cliffe was, and to take an interest in him because he came from Stowbury. But Stowbury days were so far off now—with such a gulf of pain between.

Suddenly the same fear occurred to her that had occurred to Elizabeth.

"The lad did not see the advertisement, I hope? You did not tell him about us?"

"I told him nothing," said Elizabeth, speaking softly, and looking down. "I did not even mention anybody's name."

"That was right: thank you."

But oh, the bitterness of knowing, and feeling sure Elizabeth knew too, the thing for which she thanked her; and that not to mention Ascott's name was the greatest kindness the faithful servant could show towards the family.

CHAPTER XX.

ASCOTT LEAF never came home.

Day after day appeared the advertisement, sometimes slightly altered, as hope or fear suggested; but no word, no letter, no answer of any kind reached the anxious women.

By and by, moved by their distress, or perhaps feeling that the scapegrace would be safer got rid of if found and despatched abroad in some decent manner, Mr. Ascott himself took measures for privately continuing the search. Every outward-bound ship was examined; every hospital visited; every case of suicide investigated; but in vain. The unhappy young man had disappeared, suddenly and completely, as many another has disappeared, out of the home circle, and been never heard of more.

It is difficult to understand how a family can possibly bear such a sorrow, did we not know that many have had to bear it, and have borne it, with all its load of agonizing suspense, slowly dying hope—

"The hope that keeps alive despair,"—

settling down into a permanent grief, compared to which the grief for loss by death is light and endurable.

The Leaf family went through all this. Was it better or worse for them that their anguish had to be secret? that there were no friends to pity, inquire, or console? that Johanna had to sit hour by hour and day by day in the solitary parlour, Selina having soon gone back to her old ways of "gadding about," and her marriage preparations; and that, hardest of all, Hilary had on the Monday morning to return to Kensington, and work, work, work, as if nothing were amiss?

But it was natural that all this should tell upon her; and one day Miss Balquidder said, after a long covert observation of her face, "My dear, you look ill. Is there anything troubling you? My young people always tell me their troubles, bodily or mental. I doctor both."

"I am sure of it," said Hilary, with a sad smile, but entered into no explanation; and Miss Balquidder had the wise kindness to inquire no further. Nevertheless, on some errand or other she came to Kensington nearly every evening, and took Hilary back with her to sleep at No. 15.

"Your sister Selina must wish to have you with her as much as possible till she is married," she said, as a reason for doing this.

And Hilary acquiesced, but silently, as we often do acquiesce in what ought to be a truth, but which we know to be the saddest, most painful falsehood.

For Selina, it became plain to see, was one of the family no more. After her first burst of self-reproachful grief she took Mr. Ascott's view of her nephew's loss—that it was a good riddance; went on calmly with her bridal preparations, and seemed only afraid lest anything should interfere to prevent her marriage.

But the danger was apparently tided over. No news of Ascott came. Even the daily inquiries for him by his creditors had ceased. His aunt Selina was beginning to breathe freely, when, the morning before the wedding-day, as they were all sitting in the midst of white finery, but as sadly and silently as if it were a funeral, a person was suddenly shown in "on business."

It was a detective officer, sent to find out from Ascott Leaf's aunts whether a certain description of him, in a printed handbill, was correct. For his principal creditor, exasperated, had determined on thus advertising him in the public papers as having "absconded."

Had a thunderbolt fallen in the little parlour, the three aunts could not have been more utterly overwhelmed. They made no "scene,"—a certain sense of pride kept these poor gentlewomen from betraying their misery to a strange man; though he was a very civil man, and having delivered himself

of his errand, like an automaton, sat looking into his hat, and taking no notice of aught around him. He was accustomed to this sort of thing.

Hilary was the first to recover herself. She glanced round at her sisters, but they had not a word to say. In any crisis of family difficulty they always left her to take the helm.

Rapidly she ran over in her mind all the consequences that would arise from this new trouble,—the public disgrace; Mr. Ascott's anger and annoyance, not that she cared much for this, except so far as it would affect Selina; lastly, the death-blow it was to any possible hope of reclaiming the poor prodigal. Who she did not believe was dead, but still fondly trusted he would return one day from his wanderings and his swine's husks, to have the fatted calf killed for him and glad tears shed over him. But after being advertised as "absconded," Ascott never would, never could, come home any more.

Taking as cool and business-like a tone as she could, she returned the paper to the detective.

"This is a summary proceeding. Is there no way of avoiding it?"

"One, miss," replied the man, very respectfully.

"If the family would pay the debt."

"Do you know how much it is?"

"Eighty pounds."

"Ah!"

That hopeless sigh of Johanna's was sufficient answer, though no one spoke.

But in desperate cases some women acquire a desperate courage, or rather it is less courage than faith—the faith which is said to "remove mountains," the belief that to the very last there must be something to be done, and, if it can be done, they will have strength to do it. True, the mountain may not be removed, but the mere act of faith, or courage, sometimes teaches how to climb over it.

"Very well. Take this paper back to your employer. He must be aware that his only chance of payment is by suppressing it. If he will do that, in two days he shall hear from us, and we will make arrangements about paying the debt."

Hilary said this, to her sisters' utter astonishment; so utter that they let her say it, and let the detective go away with a civil "Good morning," before they could interfere or contradict by a word.

"Paying the debt! Hilary, what have you promised! It is an impossibility."

"Like the Frenchman's answer to his mistress,—'Madame, if it had been possible it would have been done already; if it is impossible, it shall be done.' It shall, I say."

"I wonder you can jest about our misfortunes," said Selina, in her most querulous voice.

"I'm not jesting. But where is the use of sit-

ting down to moan! I mean what I say. The thing *must* be done."

Her eyes glittered—her small red lips were set tightly together.

"If it is not done, sisters—if his public disgrace is not prevented, don't you see the result? Not as regards your marriage, Selina—the man must be a coward who would refuse to marry a woman he cared for, even though her nearest kinsman had been hanged at the Old Bailey—but Ascott himself. The boy is not a bad boy, though he has done wickedly; but there is a difference between a wicked act and a wicked nature. I mean to save him if I can."

"How?"

"By saving his good name; by paying the debt."

"And where on earth shall you get the money?"

"I will go to Miss Balquidder and—"

"Borrow it?"

"No; never! I would as soon think of stealing it."

Then controlling herself, Hilary explained that she meant to ask Miss Balquidder to arrange for her with the creditor to pay the eighty pounds by certain weekly or monthly instalments, to be deducted from her salary at Kensington.

"It is not a very great favour to ask of her: merely that she should say, 'This young woman is employed by me: I believe her to be honest, respectable, and so forth: also, that when she makes a promise to pay, she will to the best of her power perform it.' A character which is at present rather a novelty in the Leaf family."

"Hilary!"

"I am growing bitter, Johanna; I know I am. Why should we suffer so much! Why should we be always dragged down—down—in this way? Why should we never have had any one to cherish and take care of us, like other women? Why—"

Miss Leaf laid her finger on her child's lips—

"Because it is the will of God."

Hilary flung herself on her dear old sister's neck, and burst into tears.

Selina, too, cried a little, and said that she should like to help in paying the debt, if Mr. Ascott had no objection. And then she turned back to her white splendours, and became absorbed in the annoyance of there being far too much clematis and far too little orange-blossom in the bridal bonnet—which it was now too late to change. A little, also, she vexed herself about the risk of confiding in Miss Balquidder, lest by any chance the story might get round to Russell Square; and was urgent that at least nothing should be said or done until after to-morrow. She was determined to be married, and dreaded any slip between the cup and the lip.

But Hilary was resolute. "I said that in two days the matter should be arranged, and so it must be, or the man will think we too break our promises."

"You can assure him to the contrary," said Selina with dignity. "In fact, why can't you arrange with him without going at all to Miss Balquidder?"

Again the fierce, bitter expression returned to Hilary's face.

"You forget, Miss Balquidder's honest name is his only guarantee against the dishonesty of ours."

"Hilary, you disgrace us—disgrace me—speaking in such a way. Are we not gentlewomen?"

"I don't know, Selina. I don't seem to know or to feel anything, except that I would live on bread and water, in order to live peaceably and honestly. Oh, will it ever, ever be!"

She walked up and down the parlour, disarranging the white draperies which lay about, feeling unutterable contempt for them and for her sister. Angry and miserable, with every nerve quivering, she was at war with the whole world.

This feeling lasted even when, after some discussion, she gained her point, and was on her way to call on Miss Balquidder. She went round and round the Square many times, trying to fix in her mind word for word what she meant to say; revealing no more of the family history than was absolutely necessary, and stating her business in the briefest, hardest, most matter-of-fact way—putting it as a transaction between employer and employed, in which there was no more favour asked or bestowed than could possibly be avoided. And, as the sharp east wind blew across her at every corner, minute by minute she felt herself growing more fierce, and hard, and cold.

"This will never do. I shall be wicked by and by. I must go in and get it over."

Perhaps it was as well. Well for her, morally as physically, that there should have been that sudden change from the blighting weather outside to the warm, well-lighted room, where the good rich woman sat at her early and solitary tea.

Very solitary it looked—the little table in the centre of that large, handsome parlour, with the one cup and saucer, the one easy-chair. And as Hilary entered, she noticed, amidst all this comfort and luxury, the still, grave, almost sad expression which solitary people always get to wear.

But the next minute Miss Balquidder had turned round, and risen, smiling.

"Miss Leaf, how very kind of you to come and see me! Just the day before the wedding, too, when you must be so busy. Sit down, and tell me all about it. But first, my dear, how wet your boots are! Let me take them off at once."

Which she did, sending for her own big slippers,

and putting them on the tiny feet with her own hands.

Hilary submitted—in truth, she was too much surprised to resist.

Miss Balquidder had, like most folk, her opinions or “crotchets”—as they might be—and one of them was, to keep her business and friendly relations entirely distinct and apart. Whenever she went to Kensington or her other establishments, she was always emphatically “the mistress”—a kindly, and even motherly mistress, certainly—but still authoritative, decided. Moreover, it was her invariable rule to treat all her *employees* alike—“making no step-bairns” among them. Thus, for some time it had happened that Hilary had been, and felt herself to be, just Miss Leaf, the book-keeper, doing her duty to Miss Balquidder, her employer, and neither expecting nor attaining any closer relation.

But in her own house, or it might be from the sudden apparition of that young face at her lonely fireside, Miss Balquidder appeared quite different.

A small thing touches a heart that is sore with trouble. When the good woman rose up—after patting the little feet, and approving loudly of the woollen stockings—she saw that Hilary’s whole face was quivering with the effort to keep back her tears.

There are some women of whom one feels by instinct that they were, as Miss Balquidder had once jokingly said of herself, specially meant to be mothers. And though, in its strange providence, Heaven often denies the maternity, it cannot and does not mean to shut up the well-spring of that maternal passion—truly a passion to such women as these, almost as strong as the passion of love—but lets the stream, which might otherwise have blessed one child or one family, flow out wide and far, blessing wherever it goes.

In a tone that somehow touched every fibre of Hilary’s heart, Miss Balquidder said, placing her on a low chair beside her own,—

“My dear, you are in trouble. I saw it a week or two ago, but did not like to speak. Couldn’t you say it out, and let me help you? You need not be afraid. I never tell anything, and everybody tells everything to me.”

That was true. Added to this said motherliness of hers, Miss Balquidder possessed that faculty, which some people have in a remarkable degree, and some—very good people too—are totally deficient in, of attracting confidence. The secrets she had been trusted with, the romances she had been mixed up in, the Quixotic acts she had been called upon to perform during her long life, would have made a novel—or several novels—such as no novelist could dare to write, for the public would condemn them as impossible and unnatural. But all

this experience—though happily it could never be put into a book—had given to the woman herself a view of human nature at once so large, lenient, and just, that she was the best person possible to hear the strange and pitiful story of young Ascott Leaf.

How it came out, Hilary hardly knew; she seemed to have told very little, and yet Miss Balquidder guessed it all. It did not appear to surprise or shock her. She neither began to question nor preach; she only laid her hand, her large, motherly, protecting hand, on the bowed head, saying,—

“How much you must have suffered, my poor bairn!”

The soft Scotch tone and word—the grave, quiet Scotch manner, implying more than it even expressed—was it wonderful if underlying as well as outside influences made Hilary completely give way?

Robert Lyon had had a mother, who died when he was seventeen, but of whom he kept the tenderest remembrance, often saying that of all the ladies he had met with in the world, there was none equal to her—the strong, tender, womanly, peasant woman—refined in mind and word and ways—though to the last day of her life she spoke broad Scotch, and did the work of her cottage with her own hands. It seems as if that mother—towards whom Hilary’s fancy had clung, lovingly as a woman ought to cling, above all others, to the mother of the man she loves—were speaking to her now, comforting her and helping her—comfort and help that it would have been sweeter to receive from her than from any woman living.

A mere fancy; but in her state of long uncontrolled excitement, it took such possession of her that Hilary fell on her knees, and hid her face in Miss Balquidder’s lap, sobbing aloud.

The other was a little surprised; it was not her Scotch way to yield to emotion before folk; but she was a wise woman, she asked no questions, merely held the quivering hands and smoothed the throbbing head, till composure returned. Some people have a magical, mesmeric power of soothing and controlling: it was hers. When she took the poor face between her hands, and looked straight into the eyes, with, “There, you are better now,” Hilary returned the gaze as steadily, nay, smilingly, and rose.

“Now, may I tell you my business?”

“Certainly, my dear. When one’s friends are in trouble, the last thing one ought to do is to sit down beside them and moan. Did you come to ask my advice, or had you any definite plan of your own?”

“I had.” And Hilary told it.

“A very good plan, and very generous in you to

think of it. But I see two strong objections: first, whether it can be carried out; secondly, whether it ought."

Hilary shrank sensitively.

"Not on my account, my dear, but your own. I often see people making martyrs of themselves for some worthless character on whom the sacrifice is utterly wasted. I object to this, as I would object to throwing myself or my friend into a blazing house, unless I were morally certain there was a life to be saved. Is there in this case?"

"I think there is! I trust in Heaven there is!" said Hilary, earnestly.

There was both pleasure and pity expressed in Miss Balquidder's countenance, as she replied:—"Be it so: that is a matter on which no one can judge except yourself. But on the other matter you ask my advice, and I must give it. To maintain two ladies, and pay a debt of eighty pounds out of one hundred a year is simply impossible."

"With Johanna's income and mine it will be a hundred and twenty pounds and some odd shillings a year."

"You accurate girl! But even with this it cannot be done, unless you were to live in a manner so restricted in the commonest comforts, that at your sister's age she would be sure to suffer. You must look on the question from all sides, my dear. You must be just to others, as well as to that young man, who seems never to— But I will leave him unjudged."

They were both silent for a minute; and then Miss Balquidder said:—"I feel certain there is but one rational way of accomplishing the thing, if you are bent upon doing it, if your own judgment and conscience tell you it ought to be done. Is it so?"

"Yes," said Hilary, firmly.

The old Scotswoman took her hand with a warm pressure. "Very well. I don't blame you. I might have done the same myself. Now to my plan. Miss Leaf, have you known me long enough to confer on me the benediction—one of the few that we rich folk possess,—'It is more blessed to give than to receive!'"

"I don't quite understand."

"Then allow me to explain. I happen to know this creditor of your nephew's. He being a tailor and an outfitter, we have had dealings together in former times, and I know him to be a hard man, an unprincipled man, such an one as no young woman should have to do with, even in business relations. To be in his power, as you would be for some years, if your scheme of gradual payment were carried out, is the last thing I should desire for you. Let me suggest another way. Take me for your creditor instead of him. Pay him at once, and I will write you a cheque for the amount."

The thing was put so delicately, in such an ordinary manner, as if it were a mere business arrangement, that at first Hilary hardly perceived all it implied. When she did; when she found that it was in plain terms a gift or loan of eighty pounds, offered by a person almost a stranger, she was at first quite bewildered. Then (ah! let us not blame her if she carried to a morbid excess that noble independence which is the foundation of all true dignity in man or woman) she shrank back into herself, overcome with annoyance and shame. At last she forced herself to say, though the words came out rather coldly,—

"You are very good, and I am exceedingly obliged to you; but I never borrowed money in my life. It is quite impossible."

"Very well: I can understand your feelings. I beg your pardon," replied Miss Balquidder, also somewhat coldly.

They sat silent and awkward, and then the elder lady took out a pencil, and began to make calculations in her memorandum-book.

"I am reckoning what is the largest sum per month that you could reasonably be expected to spare, and how you may make the most of what remains. Are you aware that London lodgings are very expensive? I am thinking that if you were to exchange out of the Kensington shop into another I have at Richmond, I could offer you the first floor above it for much less rent than you pay Mrs. Jones; and you could have your sister living with you."

"Ah! that would make us both so much happier! How good you are!"

"You will see, I only wish to help you to help yourself; not to put you under any obligation. Though I cannot see anything so very terrible in your being slightly indebted to an old woman, who has neither chick nor child, and is at perfect liberty to do what she likes with her own."

There was a pathos in the tone which smote Hilary into quick contrition.

"Forgive me! But I have such a horror of borrowing money—you must know why, after what I have told you of our family. You must surely understand!"

"I do, fully; but there are limits even to independence. A person who, for his own pleasure, is ready to take money from anybody and everybody, without the slightest prospect or intention of returning it, is quite different from a friend who in a case of emergency, accepts help from another friend, being ready and willing to take every means of repayment, as I knew you were, and meant you to be. I meant, as you suggested, to stop out of your salary so much per month, till I had my eighty pounds safe back again."

"But suppose you never had it back? I am

young and strong ; still I might fall ill—I might die, and you never be repaid."

"Yes, I should," said Miss Balquidder, with a serious smile. "You forget, my dear bairn,—'*Inasmuch as ye have done it to one of these little ones, ye have done it unto ME.*' 'He that giveth to the poor lendeth to the LORD.' I have lent Him a good deal at different times, and He has always paid me back with usury."

There was something at once solemn and a little sad in the way the old lady spoke. Hilary forgot her own side of the subject ; her pride, her humiliation.

"But do you not think, Miss Balquidder, that one ought to work on, struggle on, to the last extremity, before one accepts an obligation, most of all a money obligation?"

"I do, as a general principle. Yet money is not the greatest thing in this world, that a pecuniary debt should be the worst to bear. And sometimes one of the kindest acts you can do to a fellow-creature—one that touches and softens his heart ; nay, perhaps wins it to you for life, is to accept a favour from him."

Hilary made no reply.

"I speak a little from experience. I have not had a very happy life myself ; at least most people would say so if they knew it ; but the Lord has made it up to me by giving me the means of bring-

ing happiness, in money as well as other ways, to other people. Most of us have our favourite luxuries ; this is mine. I like to do people good ; I like also—though maybe that is a mean weakness—to feel that I do it. If all whom I have been made instrumental in helping had said to me, as you have done, 'I will not be helped, I will not be made happy,' it would have been rather hard for me."

And a smile, half humorous, half sad, came over the hard-featured face, spiritualizing its whole expression.

Hilary wavered. She compared her own life, happy still, and hopeful, for all its cares, with that of this lonely woman, whose only blessing was her riches, except the generous heart which sanctified them, and made them such. Humbled, nay, ashamed, she took and kissed the kindly hand which had succoured so many, yet which, in the inscrutable mystery of Providence, had been left to go down to the grave alone ; missing all that is personal, dear, and precious to a woman's heart, and getting instead only what Hilary now gave her—the half-sweet, half-bitter payment of gratitude.

"Well, my bairn, what is to be done?"

"I will do whatever you think right," murmured Hilary.

AT NIGHT IN AN OBSERVATORY.

THE chief improvements in the telescope are due to the labours of men busily engaged in trades and professions, which might, at first sight, seem incompatible with scientific pursuits. All readers are familiar with the case of Sir William Herschel, who was not deterred by the many engagements of his musical profession from devoting himself to the grinding of specula. But this is only one of many similar cases. The greatest improvement in the telescope, since the date of its invention, is due to a Spitalfields silk weaver, John Dollond. His family were exiled from France by the revocation of the Edict of Nantes, and found a home in the suburbs of London. The devotion of the Spitalfields weavers to mathematics, is one of the most curious as well as the most gratifying passages in the history of science ; and John Dollond shone as one of the most distinguished of the number. He did not scruple to break a lance with the illustrious Euler ; and for his improvements in the telescope, he received the highest honour of the Royal Society,—viz., the award of the Copley medal. He was the founder of the fortunes of his family,

though it was his son Peter who amassed the wealth that flowed from the achromatic arrangement. Peter, like his father, plied the shuttle in his youth, but he soon abandoned it for the more promising field of optics. Ramsden, who gained so much celebrity for his skill in dividing astronomical instruments, was a Yorkshire clothier. It would be easy to mention the names of many others, who, while they did not abandon the trade or profession in which they were trained, yet found time to improve the telescope, and advance the cause of astronomy. It is pleasant to record such cases, in which the daily toil of life has been lightened and dignified by science. It is satisfactory, too, to note, that science in those cases was wooed without any pecuniary loss. Their love of science seemed to make them only more prosperous in business. It is frequently very different when the mechanic acquires a taste for light literature. Instead of strengthening his arm, like science, for daily toil, it too often enervates him, by fostering a disrelish for the stern duties of life. It is an encouraging fact, viewed in connexion with the ele-

vation of the labouring classes, that in our large cities, especially in London, there is a steady demand amongst this class for the higher class mathematical works. The men that haunt old book-stalls in rusty coats or moleskin jackets, are not always bent, as we are apt to suppose, on the purchase of the ephemeral literature of former days; they are often pondering over the purchase of some work in mathematics which formerly was in repute, but which now, from changes in educational methods, may be purchased for a trifle. Many a mechanic is working hard at fluxions in

his garret, ignorant of the improved notation of modern days. He finds his great reward in the delight which the exercise of his intellectual faculties affords, and, with no thought of scientific celebrity, he revels in the profundities of the higher calculus. Such pure and disinterested love of science is one of the most hopeful features of the labour question. It proves that the highest intellectual labour is perfectly compatible with daily toil. The decay of mechanics' institutes is usually quoted as a proof that the intellectual elevation of the labouring classes is hopeless. But

it admits of doubt whether the result is not due more to an under, than an over-estimate of the mechanic's capabilities. The mechanic who could relish fluxions, would not long find advantage in attending the showy and superficial lectures usually given at such institutions. A system better calculated to develop his capabilities, would most probably meet with more success.

We shall not, however, delay longer by signalizing the names of those who have contributed most to the improvement of astronomical instruments, but at once introduce the reader to the observatory itself. All observatories have a great family like-

ness; but, to be more special, we shall suppose that the observatory in question is the one erected, about twenty years ago, in Glasgow, in connexion with the University, and over which Professor Nichol presided with so much distinction. The handsome building, on the summit of the hill above Partick, owes its erection and completeness very much to the munificence of the merchants of Glasgow, who came forward with liberal donations. If you wish to see it in full operation, you must visit it by night. The transit-room is the principal one; and when you are ushered into it, you find that it is a large sombre apartment, its walls painted, black

and many bright instruments faintly gleaming in the light of dimly-shaded lamps. The room requires to be as dark as possible, and the lamps are used merely for illuminating the interior of the telescope and the face of the clock. As your eye gets accustomed to the gloom, you probably find the observer stretched on his back upon a couch, which is movable, so as to bring his eye close to the telescope. He is situated between two huge stone pillars that serve as supports for the transit-circle, which is the grand instrument of the regular observatory. You may form a pretty fair conception of the instrument, if you suppose a pair of carriage-wheels, with their connecting-axle laid across the tops of the pillars, the axle resting upon two metal supports on which it turns. The telescope is then to be conceived as fixed across the middle of the axle, so that it is hung precisely like a cannon on its carriage. It can only move on its axis up and down; it can turn neither to the right nor the left. On examining the rim of the wheel, you will find an inlaid narrow band of gold all round, and on this are engraved very minute lines, with intervals of two seconds. When the telescope is elevated to a particular star, the circle, of course, turns round, being fixed to the axis; and the observer, when he has placed the star exactly on a spider's line in the centre of the field of view, leaves the eye-glass of the telescope, and views, with a powerful compound microscope, the divided limb. He marks what particular division comes under a spider's line stretched in the field of view of the fixed microscope, and this gives him the required altitude of the star. The measuring apparatus is so perfect, that the position can be read off to the fraction of a second. The transit-circle is one of the most perfect productions of art, both in regard to its optical and measuring powers. It was executed at Munich, the metropolis of art. Most of the finest instruments of European and American observatories have been sent forth from the workshops of this city. It is, however, satisfactory to note, that the tide seems to be once more turning in favour of our own country, for the recently-executed transit-circle at Greenwich is entirely of home manufacture, and its performance is quite unmatched.

When reference is made to the delicate measurements of the astronomer, it is satisfactory to have a clear conception of what the minute divisions mean. Now, what is meant when it is said, that such an instrument reads to the fraction of a second? How far distant from one another must the slender lines be which include a second of space? Some notion of this extreme closeness may be formed, when we state, that about six thousand lines would be crowded into the space of an inch on the limb of a circle six feet in diameter, and yet the astrono-

mer has to deal with even minute fractions of the intervals between these lines. The distances of the fixed stars depend on the measurement of quantities so minute. It was not till within these few years that we could with certainty determine the distance of any of the stars, just because we had not till then the means of dealing with quantities so minute as a second; but so remarkable is our advance in this respect, that one star—viz., Capella—has a parallax (on which the distance depends) of only one-twenty-fifth of a second, or, on the circle in question, the one-twenty-fifth of the six-thousandth of an inch; and yet astronomers speak of its distance as certainly determined. And what renders the thing all the more wonderful is, that these small quantities must be extricated from errors far greater. No instrument, as well as no observer, is supposed to be faultless. The axis of the telescope may not be perfectly level. It may not be precisely east and west. The telescope may be set wrong on the axis. The observer may have some obliquity; and the atmosphere may turn the ray of light out of its straight course;—and each of these sources of error will occasion an amount of deviation far greater than the quantity to be ascertained. Yet the astronomer, by his formulae, hunts out truth so ingeniously amidst a maze of error, that he at last inevitably runs it down. He has a ton of sand and gravel from which to extract a single shining grain of gold; and he sets to work so systematically, that minute as it is, it cannot slip through his fingers.

We have endeavoured to give a conception of a second on the rim of a brass circle; but it is also satisfactory to have some notion of what a second is on the circle of the heavens. And, as in the one case we took an inch as our unit, we shall now take the apparent breadth of the moon, the most familiar of the heavenly bodies. Suppose a string stretched from one border of the moon to the opposite one, how many stars could be strung upon it, in order that they would be a second apart from each other, the diameter of the moon being about half a degree? No fewer than two thousand would be required, each star being regarded as a mere point of light. Of course this string of individual stars would appear to the eye as a perfectly continuous line of light. Yet the astronomer Struve, with the great equatorial of Dorpat, could not only individualize each star, but though one hundred more were strung on between any two of the stars, he could still measure the intervals between these interpolated stars; or, in other words, he could, with his micrometer, measure, with certainty, a space in the heavens so minute as the one-hundredth part of a second.

We have considered the measurement of space; but that of time is still more difficult. On enter-

ing the transit-room, you will observe, on looking up, that there is a narrow slit in the roof running from north to south; and your view of the heavens is confined to the narrow strip of blue which is seen through this slit. Now, the astronomer, at his transit-circle, ignores all the rest of the heavens. He has fixed his telescope so that it can point only to this small portion of the sky. He draws an imaginary circle, called a meridian, and he will study the deportment of the stars only at the moment of crossing this line. He stations himself at this ideal barrier, and before allowing any stellar traveller to pass, he questions him minutely to determine his identity—the two essential points being, the time of day when he passes, and his distance north or south from the equator. He questions him on these points, because, if any discrepancy occurs on the occasion of any future transit, it is sure to bring out the secrets of his history. But how is the time-questioning effected? Put your eye to the telescope, and the process will at once be revealed to you. You are surprised, when you look in, to see a blaze of light, instead of darkness, as you expected. The light proceeds from a lamp, and its design is, to show you clearly a slender kind of grating spread over the field of view. This consists of seven spiders' threads, stretched up and down at equal distances, and one crossing in the middle. The perpendicular line in the middle corresponds to the imaginary meridian line. You soon discover a star coming in at one side of the field of view, and, to your surprise, marching rapidly across the lines to the other side. The rapidity invariably startles when first observed; and it affords the most sensible proof of the motion of the earth. No doubt, you can persuade yourself of this motion by watching the heavens during any starry night, and observing how the stars that were in the east at one hour, are in the west at another. But this is a matter of inference. It is not a direct, sensible proof. You do not see the stars moving, as you do the trees and houses when you travel along in a carriage. But in the transit instrument, so sensible is the motion, that it is a most nervous business to note the precise moment when the star passes across the various wires; but it is needful to do this, in order to determine more accurately the moment when it passes the central line. This applies, however, only to the most rapid stars; for, as you approach the pole, the motion becomes slower and slower, till it is imperceptible. The observer must be within hearing of the clock, and as he silently counts the seconds, he must note down when the star passes each line; and as the star may take but a very few seconds to travel from one line to another, he has no sooner noted the

one transit, than he has to note another. This would be all comparatively easy, if the star passed each line precisely at the beat of each second; but this rarely occurs, and, consequently, the observer has to make a hurried estimate of the fraction of a second; and the requirements of science are such, that he must be able to appreciate the tenth of a second. Listen to the beat of a clock, and if you attempt to divide the interval between two beats into ten smaller intervals, you will have some idea of the difficulty of transit observation.

One of the most recent and important improvements in astronomical observation is designed to obviate this difficulty; and we owe it to America, which is now beginning to make valuable contributions to science as well as literature. The principle of the contrivance in question, consists in the substitution of the sense of touch for the sense of hearing. It is found, that sight and touch will act in much closer concert, than sight and hearing. Instead, then, of watching the clock with the ear, and the star with the eye, the observer, when he notes the transit with the eye, presses a key with his finger, which makes a record of the observation. The finger, it is found, acts in instantaneous concert with the eye. The key acts upon a pen, which makes a mark on a sheet of paper moved by machinery. The beauty of the contrivance lies much in the application of electricity, which is now made to do duty in every possible way, from the ringing of a bell in the servants' hall, to the exploding of a mine under a fortress. The pen is connected with the clock by an electric bond, in such a manner that, though the observer be absolutely deaf, he can, on examining the sheet of paper after the observation, tell, to the hundredth part of a second, the instant when the star passed the wire. The sheet of paper need not be close to the observer. It may be at Paris, or St. Petersburg, or wherever there is electric communication; and the moment the observer presses the key in this country, the record may be made hundreds of miles distant.

It is possible, with all this precision, that the observer may err. He is only making a report of a picture painted on his retina, and we can have no absolute assurance that his report of that picture is perfectly accurate. Indeed, it is found that this is a most important source of error. It is found that each observer has his own individual obliquity of judgment; and this must be determined before absolute reliance can be placed on his observations. But might we not dispense with the observer altogether? Could we not, when we order a telescope, also order an eye to look through the telescope? Having the eye to examine after the observation, we would not be dependent on

the errors of judgment at the moment of observation. It would be a great ease to the astronomer himself, as there is no task so comfortable as that of observing in a transit-room. The scientific martyr has to shiver the live-long night on his couch. A cascade of bitterly cold air, often far below the freezing point, is constantly pouring down upon his head, and, unfortunately, the most precious nights for observation are the most bitterly cold. If a sea-coal fire were permitted, it would be some consolation; but such a thing cannot be dreamt of. Even the heat of the observer's body, cold as it is, endangers the delicate adjustments of the instrument, when there is too close a proximity; and anything like a blazing fire would be quite destructive of nice observation. An artificial eye would, then, be an acquisition of no ordinary value. This idea, although it savours of the wild conception of Frankenstein, is already partially realized. The artificial eye consists of a surface sensitive to light, placed where the eye of the observer is now placed, and the image of the celestial object is drawn at any moment on this surface, instead of on the retina of the observer. The difference is, that the impression on the artificial eye is permanent, and we can examine it at our leisure, whereas the impression on the living eye is transitory, and we have to depend on a hurried, and perhaps erroneous report. An apparatus is erected at Kew Observatory on this principle, for the observation of the sun's disc. To gain this object, it is so arranged by clock-work, that an artificial retina is presented, at a certain moment, and, after receiving the photographic image, withdrawn. This plan has had only partial success; but we can readily conceive it to be so developed, as to work a revolution in astronomy.

After examining the transit-room, the visitor will be ushered into the dome, where the equatorial instrument is fixed on a pillar. The dome, of sheet-iron, is a very conspicuous object for miles around. It serves no other purpose than that of a convenient shelter for the telescope. The equatorial, unlike the transit instrument, is made to turn in every direction. In the transit-room, the observer must wait till the star comes round to the slit in the roof. In the dome, he turns the telescope to the object at once. The dome has also a slit like the transit-room; but, in order to accommodate the wider range of its inmate, it is made to turn round on its base, so that the slit may be always opposite the mouth of the telescope. An equatorial is a telescope so mounted that it keeps the object in view, and does not allow it to flit by as in the transit instrument. If, in travelling on a railway, you look at some near object through a telescope, you will, in order to keep the object in view, re-

quire to be constantly changing the direction of the telescope. This is precisely the case with the equatorial, only it is the motion of the earth, not the railway carriage, that requires to be compensated. The motion is produced by clock-work attached to the axis of the telescope.

We have now taken a very rapid glance at the principal instruments of an observatory; but before leaving the scene, we must bestow a little attention on the astronomer himself. What should be the most marked moral feature of his character? A distinguished Christian poet fixes on devotion:

"An undevout astronomer is mad."

But poetical sentiment does not always coincide with stern fact. We fear that astronomers, as a class, are not marked very strongly by devotion. There is much grandeur in the following conception of Longfellow's:—

"And over all is the sky, the clear and crystalline
heaven,
Like the protecting hand of God inverted above
them."

One would think that, as it is the business of their lives to look up to this inverted hand of God, they would be habitually impressed with His glorious presence. But an object of grandeur depends, for its effect, altogether on the point of view from which we contemplate it. A stone mason might have spent a good part of his life in helping to build St. Paul's, and yet, though constantly on the building, with square and plumb-line in hand, he would not occupy so favourable a position for appreciating its proportions, and the sublime ideas which it embodies, as the man who might know nothing about hewing and polishing, but who contemplated it at a distance. The sailor on the mast-head of a ship-of-war, at the mouth of the Alma, was in a better position for forming a right judgment of the battle-field and the glory of the victory, than the man who was in the thick of the fight. In like manner, the mere unprofessional man may be in a much better position for drawing from astronomy its divine teachings, than the man who spends his days and nights in the details of the science. The latter may be so absorbed with these details, that he may never think of withdrawing to a proper distance to contemplate the grandeur of the temple on which he is engaged. It is only the man who can, from the height of Calvary, project the glorious fabric on the background of eternity, that can exclaim with deep, heartfelt devotion:—"The heavens declare thy glory, and the firmament sheweth thy handiwork. Day unto day uttereth speech, and night unto night night sheweth knowledge. There is no speech nor language where their voice is not heard."

W. LEITCH.

COLONEL RICHARD BAIRD SMITH, C.B.

BY THE REV. THOMAS SMITH, M.A.

SOMEWHAT more than a quarter of a century ago, in the class-room of Mr. Sang, then as now an eminent teacher of mathematics in Edinburgh, there used to meet two students who rejoiced in the highly respectable name of *Smith*. It must be admitted that there was nothing very remarkable in this; or, if there were, it was that *only* two bearers of that name should have been found in a class of thirty or forty students. Half a dozen years later, one of these *Smiths*, landing in India, was, after the manner of Eastern hospitality, received as a guest by the Rev. Dr. Charles, and was urged to prolong his visit until the room which he occupied should be required for the reception of a namesake, who was expected to arrive shortly after in Bengal. The two *Smiths* who thus met in Edinburgh, and who thus met again in Calcutta, were those whose names are brought together in the title of this paper. During a long sojourn in India they seldom met, as the one was confined to Calcutta, and the other was seldom there; but they retained a kindly interest in each other. And now that the one has been cut down in the midst of a noble career, the other believes that the readers of *Good Words* will not be displeased with a brief sketch of some of the prominent points of that career.

Richard Baird Smith, the son of a highly esteemed medical practitioner at Laswade, in the county of Mid-Lothian, was born on the last day of the year 1818. When we first met him, he was prosecuting mathematical studies in order to prepare himself for entering the East India Company's Military College at Addiscombe. There he entered shortly after, and, at the close of his curriculum, he held the highest place in his year, and was appointed to the Madras Engineers. By special favour he was allowed, before proceeding to India, to continue his studies for a short time at Edinburgh, and spent the winter of 1837-38 in attending classes there. In 1838, he joined his appointment at Madras, and in the following year he was transferred to the Bengal Presidency. It was on his arrival there, in August or September 1839, that our acquaintance with him was renewed. For some time he lived in the Fort, and was employed in superintending the boring of an Artesian well. Although that work was stopped by an accident, and never resumed, yet it was not without value in a geological point of view, and Lieutenant Smith was the man to turn it to good account, as casting some light on the formation of the great Gangetic plain of Lower Bengal. If we recollect aright, the boring was carried to a depth of about 600 feet; and the superintendent exercised the most scrupulous care in ascertaining and registering the successive deposits through which it passed. Even this had the effect of making him known to many in India, who were interested in scientific matters, as a most accurate observer, and of raising in them the expectation that he would attain distinction in a corps which has always had in its ranks a large number of scientific men,—an expectation which was not disappointed. At this time, too, he took part with

Dr. O'Shaughnessy in blowing up the wreck of a vessel that had been stranded on a shallow in the Hoogly. This was a matter of great practical importance, as the result of delay or failure might have been the formation of a sandbank, which would have obstructed the navigation of the river. It seems strange to us now, when electric telegraphs and time-guns are everywhere, to think of the excitement that this produced in Calcutta, in consequence of the application of galvanism to the igniting of the charge of gunpowder. So important was it deemed at that time, that Lieutenant Smith wrote a pamphlet, in which he detailed the operations.

We do not exactly remember where Lieutenant Smith went on his leaving Calcutta. Probably he may have been for a time at some station, engaged in the usual duties of an "Executive Officer," repairing roads, building bridges, whitewashing jails, inspecting rafters with which white-ants had been taking unjustifiable liberties, and "making himself generally useful." But from the first he vigorously prosecuted the study of geology, and other branches of natural science. The Calcutta newspapers and the scientific periodicals of the day, contained many communications from his pen, which showed how zealously he carried on scientific researches, and how thoroughly Baconian a mind he brought to bear upon them. In particular, we remember that he devoted his attention to the subject of earthquakes. Wherever there was a rumour that a vibration had been felt, he spared no pains in investigating all the particulars respecting the precise time of its occurrence, the duration, extent, and direction of the movement. His zeal in collecting and chronicling the most minute details respecting these occurrences, led to his being familiarly designated amongst his friends by the epithet of "Earthquake Smith." It may be noticed in passing that the bestowal of this *soubriquet* was in accordance with a practice which is very common in India, for distinguishing from each other the various members of the great Smith clan, and which is almost necessary in a country where prefixes or "handles" to names are generally dispensed with, and where men are designated by their surnames alone. Thus there was "Tiger Smith," a puissant hunter, "Hindustani Smith," a distinguished linguist, "Handsome Smith," who was supposed to think himself entitled to that appellation; and some others whose designations were less complimentary.

We believe it was in 1841 that Lieutenant Smith was first attached to the Canal Department, with which he remained connected till near the close of his career, and in connexion with which, we believe we may safely say, he established for himself the reputation of the first hydraulic engineer in the world, had an important part in the management of the most extensive and most difficult work of the kind that has ever been executed, and studied with intense interest the

great Indian problem of "developing the resources of the country."

When the first Sikh war broke out in 1845, the Engineer officers of the Canal Department were directed to join the army, and Smith was appointed aide-de-camp to his distinguished namesake Sir Henry. That gallant and generous soldier was not chary in acknowledging that it was mainly through the skill of his aide-de-camp, in surveying the ground, and ascertaining the numbers and position of the enemy, that he was enabled to gain the brilliant and most important victory of

Alliwal. We have heard from an eye-witness that the General's reception of him at the close of the fight savoured more of French enthusiasm than of English reserve. He was also present at the battle of Sohraon, and was mentioned with distinction in the despatch relating to that action.

After this experience of the tented field, Lieutenant Smith returned to his duties as superintendent of the Eastern Jumna Canal, to which he had been appointed in 1843, on the promotion of Colonel Cautley to the Director-Generalship of the Canal Department. When the first Sikh war was

ended, Lord Hardinge predicted that a shot would not be fired in India for seven years; but he had scarcely reached England when the second Sikh war blazed forth, and the British supremacy in the East was for a while in danger. Smith was again called to buckle on his sword, and did valuable service on various critical occasions. He had the superintendence of the passage of the force of Sir Colin Campbell and Sir Joseph Thackwell across the Chenab, and having stood in the river for many hours, his health, which was never very robust, suffered materially. He was present at

the disastrous battle of Chillianwalla, and at the "crowning mercy" of Guzerat, and was honourably mentioned in the despatches of Lord Gough. Indeed, that large-hearted old chieftain often spoke of him in terms of unqualified eulogy, as did all under whom and all with whom he ever served, and all over whom he ever had command.

Shortly after the cessation of hostilities, Captain Smith came on furlough to England, and was sent by the Court of Directors to study the system of water-works in Italy. After making himself thoroughly acquainted with every canal in

that country, and every bridge, and sluice, and lock, and with the whole system of irrigation-law and water-revenue, he presented to the Court a most ample report, which was published by their command, and which is now before us. The first volume consists mainly of a narrative of his travels and operations, and is one of the most delightful volumes of Italian travel that we have ever read. The second volume consists of professional and technical details, and is, of course, of little interest to the general reader; but it is invaluable to the hydraulic engineer and the landed proprietor. It is a fine instance of the combination of the minutest technical discussion with the large views of the economist and the philanthropist. The amount of labour that he must have gone through during this period, not only in examining all the works of irrigation in Piedmont, Lombardy, and Northern Italy generally, but in studying and analysing innumerable books on the subject, must have been enormous. But it was a work of love. He gloried in his profession, and apprehended the importance of irrigation to the wellbeing of India. On his return from Italy, he was sent by the Court of Directors to study in the same efficient manner the canals of North America, and presented a report upon them, which we have no doubt was equally thorough with his Italian report; but it has not been given to the public.

While he was in this country, after his return from America, he was appointed by the Court of Directors to the office of Superintendent of Canals in the North-western Provinces, which was about to become vacant by the retirement from the service of Sir Proby Cautley. He therefore proceeded to India, paid a visit in passing to Madras, and studied the important water-works in that Presidency. Being now at the head of the important department in the service to which he had been so long attached, he was able to bring into action the immense amount of knowledge which he had acquired, and the great powers of administration which he had by nature and by diligent cultivation. Brought up in the school of his predecessor, and holding him in the highest esteem, appointed to succeed him at his own special desire, he was free from the temptation to introduce innovations into the scheme of work and administration which Sir Proby had matured. At the same time, he was not the man to hold back from the Government which he served, or from the people for whose wellbeing that Government and their servants were responsible, the advantage to be derived from his laboriously acquired knowledge, and his well-digested observation and experience. Under his administration, therefore, the canal system was brought gradually to perfection, the plans originated by his predecessor being heartily adopted and vigorously carried out, and reforms and improvements judiciously and energetically introduced.

As it is probable that the great majority of our readers are ignorant of the vast importance of the canal system of India, it can scarcely be deemed a digression if we devote a paragraph to an exposition of it, in the course of a sketch of the career of one whose name will ever be associated with the development and perfection of the system. A

great part of the "Upper Provinces" of India depends for its existence as a habitable portion of the world upon an artificial supply of water. From the earliest historic times, and probably much longer, this has been mainly afforded by means of deep wells, from which the water is drawn by men or bullocks. Both the Hindus and the Mahometans deemed the digging of such wells a most meritorious act of piety; and multitudes of them were dug in atonement for crimes committed or duties neglected. But in many places, from the peculiarities of the geological structure of the country, the supply from these wells was very uncertain, and everywhere the water obtained from them, being drawn from a great depth, was very expensive. The failure of water produced famine, the dearth of it at all times restricted cultivation, and greatly limited the population which the country could support. The Mahometans endeavoured, with a considerable amount of success, to remedy the evil by the construction of canals of irrigation. But amid the distractions which were of constant occurrence during their occupancy of the country, and during the gradual process of its passing into our hands, these canals had been neglected, and had altogether ceased to answer the ends for which they were originally formed. Now, for the last thirty or forty years, the North-west Provinces have been under the administration of a succession of singularly earnest and energetic men, who have laboured with incredible zeal for the improvement of the country, and the elevation of the character and condition of the people. With men of this stamp, the only use of difficulties is to be overcome; of obstacles, to be surmounted. In this spirit, notwithstanding great difficulties, engineering and financial, most of the old Mahometan canals were restored, and made far more efficient than they had been originally; many new ones were formed; and a vast extent of country was supplied with the means of irrigation from the never-failing rivers of India. In the surveying of the country for these canals, and in the designing and executing of many most difficult and most important works connected with their construction, Smith, while still a subordinate officer, had a most important part to act, and acted it to perfection. If it be true that he is a benefactor of mankind who makes two blades of grass grow where only one grew before, the name of Baird Smith ought to be held in ever-during and most grateful remembrance for the part that his skill and energy had in the conversion of a comparative desert into a fertile region, the great diminution of the perils of famine, and the vast increase of the comforts, and elevation of the moral position, of a great population.

This work of irrigation had been thus vigorously prosecuted for many years. Wherever it had been carried, it had succeeded so as to satisfy the most sanguine expectations, and—a very fair test of success—had yielded a large return to the Government for the pecuniary outlay. For a long time an idea had been fondly cherished by some sanguine minds, of a greater achievement of this kind than had ever yet been attempted in India or anywhere else, that of a great canal nearly a thousand miles long, between the Ganges and

the Jumna. The great famine of 1837-38 gave a fresh impulse to the zeal of those men who desired this gigantic work to be undertaken. This famine was the most severe that had ever been known. It extended over a vast region, and swept away a vast population. It might probably have been prevented, or, at all events, greatly mitigated, if there had existed more abundant means of irrigation. And it was certain that without these other famines would follow, probable that another might be as bad as this one, possible that another might be more extensive—more severe it could not be—than this. Could the country then be irrigated? Undoubtedly the Ganges contained a sufficiency of water at a higher level than the country to be irrigated: therefore the thing was possible. But the difficulties were immense,—the engineering difficulties we mean. Well, then, they must be overcome. But the financial difficulties were more formidable still. Yet even these must be grappled with. Not only must every level be taken with religious accuracy, and the means of cutting through this elevation, and going round that other, determined, the means of raising this embankment and that aqueduct, and these hundreds of bridges, ascertained, but estimates must be made of the price of every brick, of the cost of digging every spadeful of earth, and of burning every hod of lime. The present produce of every acre of ground must be ascertained, and an estimate made of the probable increase of the rates that the proprietors and cultivators will be able and willing to pay for the boon, and the percentage that this will yield upon the outlay, after defraying the expense of management and repairs. All these results must be such as to satisfy boards of engineers who know nothing of finance, and boards of financiers who know nothing of engineering; and then, if they pass this ordeal, they must be handed up to councils, which may probably contain men who know nothing of the one, and little or nothing of the other, but who, under a timid sense of responsibility, are disposed to distrust the conclusions of practical men, and to find either, on the one hand, that the difficulties are too great and the returns too small to warrant the embarking of an immense sum of money in the undertaking, or else, on the other, that the result anticipated is far too good to be true, and that the whole scheme is the dream of some wild enthusiasts—an airy bubble, whose necessary destiny is simply to burst.

Through all these departments of the great Indian "Circumlocution-office," the Ganges Canal had to fight its slow way, and it was not until 1848 that the work was begun in earnest. Sir Proby Cautley, the Director-General of this great work, and Superintendent of Canals in the North-west Provinces, retired from the service in 1854, having made it his special request that Captain Baird Smith should be his successor; and to this important and responsible office he was accordingly appointed, with the local rank of Colonel, in order that he might take the command of such officers in the department as were of higher regimental rank than himself. The duties and responsibilities of this office were most extensive and various. Its holder is at once an engineer, charged with the

whole superintendence and direction of the works; a revenue officer, responsible for the settlement and collection of the rates charged upon the proprietors and villagers who benefit by the water; and a magistrate, to take cognisance of, and summarily to punish, offences against the Canal laws and regulations. In this appointment, Colonel Smith had many men over him, many more under him, and was brought into contact with multitudes in various relations; and we are safe in asserting that never did a man discharge difficult and complicated duties with more unexcepted approbation. A friend, who knows as much of Indian officials as any man living, said to us a few days ago, that Baird Smith was the only man he ever knew who was *universally* popular. And no wonder. He was popular among his superiors, because they knew that he was a man whom they could thoroughly trust, a man who had both the power and the will to do his duty thoroughly; among his subordinates, because he regarded them as men embarked with himself in a great enterprise, in whose success all were equally interested; among the people, because he knew their feelings, sympathized with them in their difficulties, with the strong hand and the determined will of the official, and the manly, generous heart of the philanthropist.

Thus did Colonel Smith labour at Rurki until 1857, when the Mutiny disturbed all arrangements, and brought paleness into every cheek and anxiety into every heart. As soon as the outbreak took place at Meerut, Smith sent on a thousand of his sappers, and had there not been infatuation in the minds, or paralysis in the faculties of those highest in authority there, this timely reinforcement might have enabled them to weather the terrible storm. As it was, when their commander was killed, and no one seemed disposed to make use of their services, about one-half of them went on to Delhi and joined the rebels, while the other half remained faithful and returned to Rurki. The vigorous measures which Colonel Smith adopted there were effectual in preserving comparative peace in the district.

But he was destined to bear a prominent and an honourable share in the war of retribution. Our readers are all acquainted with the general history of the siege of Delhi, one of the most difficult as a military operation, and one of the most important, in consequence of the issues at stake upon it, in modern warfare. They may perhaps remember that in the course of the long siege, Major Laughton, the chief engineer, was recalled to the Punjab, and Colonel Smith was appointed to succeed him. He joined the besieging army on the 13th of July, and entered with characteristic ardour on the task of rendering himself thoroughly acquainted with the fortifications and defences, and that of making vigorous preparations for the assault. Although he received a painful wound from a splinter of a shell, yet he bore up, and made out a plan of attack, which was adopted by General Wilson, and acted upon. His wound prevented his carrying out personally his own share of the great achievement; but the part which should have been his was ably discharged by Lieutenant Taylor. One of the clerical historians of the siege seems to be anxious to under-estimate the

service rendered by Colonel Smith, as if the acknowledgment of it would detract from the credit of Lieutenant Taylor. We are very sure that there is no occasion for this. Had Taylor occupied the position which Smith occupied, it is almost certain that he would have discharged the duties of it to admiration; and what he had to do, he did as well as it could have been done. Had this not been so, the plan, however good in itself, would have miscarried. But none the less was the plan Colonel Smith's; and this, we are sure, no man would be more ready to acknowledge than Captain Taylor. Colonel Smith's services at Delhi were warmly acknowledged in Sir Archdale Wilson's despatches. They were rewarded by his being made a Companion of the Order of the Bath, a Brevet Lieutenant-Colonel (his previous rank being only local), and Aide-de-Camp to the Queen.

Although his wound was not very severe, yet it affected his general health, which was never particularly good. As soon, therefore, as the siege was over, he was ordered to Mussourie to recruit. His constitution, however, had received a shock from which it never altogether recovered. Shortly after this he was appointed to the lucrative and honourable office of Master of the Calcutta Mint. It may seem strange that such an appointment should have been the reward of meritorious services in departments so different from the coining of money as Hydraulic and Military Engineering. But it may be remembered that it was by an appointment to the corresponding office in London that England expressed her appreciation of the genius of Sir Isaac Newton, and, in our own days, of Sir John Herschel. We believe that the Calcutta Mint had been brought to a state of such perfect efficiency by Colonel Forbes, that little remained for his successors but routine duties; and in the faithful discharge of these duties Colonel Smith would probably have remained for many years, but for the occurrence of the dreadful famine of last year. When that dire event occurred, the public voice demanded that Colonel Smith should be deputed as a special commissioner to inquire into the causes and the extent of the distress, and to direct the measures to be devised for its alleviation. This voice of the public was in full accordance with the views of the Government, and Colonel Smith was deputed on a duty at once one of the most honourable and the most difficult that it ever fell to the lot of a British officer to discharge. Tens of thousands, whose lives were preserved by his instrumentality, will ever bear in grateful remembrance the almost unparalleled exertions which he made, and the absorbing zeal with which he devised measures for the relief of suffering and the preservation of life. As the name of Wellesley is inseparably connected with the abolition of human sacrifices, and that of Bentinck with the abolition of Suttee, and that of Colonel Walker with the suppression of female infanticide, so will that of Baird Smith be perpetuated as a household word amongst successive generations in the North-west Provinces, as the preserver of life and the heaven-sent messenger of mercy. His own Reports, printed by order of the House of Commons, are among the most interesting documents that we ever read; but they show only the clearness of head, the

largeness of view, and the wondrous extent of administrative talent which he brought to bear upon the execution of his task, and not the warmth of heart and genuineness of Christian sympathy which he displayed in his intercourse with the suffering and the wretched. It was a noble work to which he was called, and nobly did he perform it.

It might almost with certainty have been predicted that this work would be his last. He had never fully recovered from the effects of his Delhi wound; while the enormous fatigues which he had to endure, and the soul-harrowing scenes which were constantly before his eyes, were sufficient to have killed the strongest man. He bore up as long as he had work to do, but as soon as it was over he returned to Calcutta with the sure sentence of death upon him. He was immediately ordered "home," but only reached Madras, where he ended his earthly course, and heard the Saviour, in whose merits he humbly trusted, say unto him with his voice of love, "Well done! good and faithful servant!" To his friends and his country his death is a heavy loss, to his father and his family, and especially to his widow and children, inestimable and irreparable. But yet calm judgment tells us that it was all right. His career hitherto had been progressive; on earth it could have been so no longer. It culminated in the Famine-Relief Commission. Earth had no reward adequate to his services in that employment, nor any service worthy to further occupy the man who had once been so employed. Many a noble heart has ceased to beat, and many a noble mind to plan for India's good, since first we landed on its shores. With many of these we were more intimately connected; but scarcely any do we regard it as a greater privilege to have known than Richard Baird Smith.

We have purposely refrained from saying anything of the private life of the subject of our brief sketch. We trust that a full biography of him will be given to the world. We think we could name a friend and brother-officer of his, of whom the world might claim this as a debt. For the young officers of our army we know nothing that would be a better study than his life, nobody that would be a better model for the formation of their personal and professional character. His life will exhibit noble faculties cultivated to the utmost, and nobly consecrated, under the influence of Christian principle, to the discharge of duty and the good of man. On his tomb at Madras we know not whether any epitaph has been inscribed. There could be none more appropriate than that fine description of a Christian gentleman, written long ages ago, but applicable in all ages and in all lands: "When the ear heard me, then it blessed me; and when the eye saw me, it gave witness to me; because I delivered the poor that cried, and the fatherless, and him that had none to help him. The blessing of him that was ready to perish came upon me: and I caused the widow's heart to sing for joy. I put on righteousness, and it clothed me: my judgment was as a robe and a diadem. I was eyes to the blind, and feet was I to the lame. I was a father to the poor; and the cause which I knew not I searched out. And I brake the jaws of the wicked, and plucked the spoil out of his teeth."

A TRUE GHOST STORY.

(DEDICATED TO THE SPIRITUALISTS.)

BY THE EDITOR.

A WELL-known Scotch artist, whose delineations of character delight his many friends, and who is almost as remarkable in his anecdotes as in his pictures, commences one of his stories by narrating how an old Scotch game-keeper once remarked to him in a slow solemn voice, "Do you know, Sir, that I myself have actilly knawn men, ay, and respectable men too, who—did—not—believe—in ghaists?" And he describes how the old keeper, on being questioned as to his own belief in ghosts, replied, with face averted, half in pity, half in sorrow for the questioner, but with, if possible, deeper solemnity, "I howp I do!"

I am not sure if the game-keeper stands alone in his belief; and I question whether, if the great majority of the "upper ten thousand" were asked regarding their faith as to apparitions, they would not agree with the lower ten thousand who are assumed to be the only honest believers in occasional visits from the inhabitants of the mysterious ghost-land. Very possibly in broad daylight, when driving in the park—or shopping—or visiting the Exhibition—or, even when the candles are lighted, and when seated round the dinner-table—or in the midst of the buzz and flutter of an evening party, the realities of the palpable and prosaic world may act as such opiates to the ideal faculty, and so close the eyes and stop the ears of the inner eye which can alone discern the spirit-world, that all faith in its existence may be denied or ridiculed. But take any one of those persons singly, especially the most thoughtful and gifted; let him or her remain in the large drawing-room when it is emptied of its guests, with the lights extinguished, except one or two sufficiently bright to project "shadows on the wall," but not to illumine the darker recesses of the room—when the fire burns low, and the cinders fall, and begin to crumble audibly among the ashes—when the midnight winds are creeping round the house, sighing at the windows, or breaking out into angry gusts which boom over the chimney-head, and shake the huge trees on the lawn, forcing one to think of ships fighting with storms on misty coasts, or drenched wretches creeping over splashing moors,—and then let the thoughts gradually slide into sad stories of human suffering, mingled with anecdotes, about presentiments, dreams, odd coincidences, unaccountable appearances, and the like; and ever and anon let some strange sounds

of wind and rain and chafing foliage be heard, with creaks in old timber, no one knows where,—I ask with confidence whether in such circumstances, at two in the morning, the sceptic will not profess more faith in ghosts than he or she would at two in the afternoon?

The fact cannot be denied by any one moderately acquainted with human opinions, that there is an almost universal belief in ghosts. Or if that is a too broad and vulgar way of expressing the belief, let us rather say, a universal feeling verging on belief, if not reaching it, that there are certainly "more things in heaven and earth" than our daylight philosophy accepts of or can account for; that there are revelations from a world unseen by the carnal eye, unheard by the carnal ear, which come to the seeing and hearing faculties of the spirit in certain states of mind and body which are alone susceptible of this intercourse; that these revelations assume divers forms, it may be of strange sights and sounds, vivid dreams, sudden and overpowering impressions, apparitions, ghosts, spirit-knockings, call them what you please—which compel the belief that the ghost-world with which we are unquestionably surrounded, impinges occasionally on the familiar, or on what we call the actual, just as strange and rare birds from another far off clime are sometimes driven by storms on our coasts.

This is a subject to which I have paid some attention. Without, as far as I can discover, any prejudice to warp my judgment, or any want of such a careful and cautious induction as a detective might bestow in tracing out the facts of a crime, and weighing the evidence in the nicest balance, I have collected several unquestionable *facts*, in which I have no hesitation whatever in publicly acknowledging my belief. I am also firmly persuaded that their truth rests upon incomparably more satisfactory proofs than those stories of spirit-rappings which are so firmly believed in by so many. I have listened patiently to the details of most remarkable phenomena connected with spirit-rapping and table-turning, related to me by ladies and gentlemen "moving in the best circles of society," and by evangelical clergymen whose word no one would think of doubting, and whose judgment no one, I presume, would once dare to call in question. A clergyman, for example, whose literary abilities, sound sense, piety, broadminded-

ness, and truthfulness are sufficiently guaranteed by the fact of his being a frequent contributor to the pages of a leading "Religious" newspaper, while assuming that any doubt as to the reality of spirit-rapping apparitions, witches, etc., indicated an infidel tendency, affirmed his belief that the devil was the real person who pulled all those strings. I took the bold step of questioning this, which I fear has shaken his faith in my Christianity; and I confessed to him frankly that I had such an opinion of Satan's intellect, and of the immense amount of work he evidently had to do in France, Italy, and America, not to speak of our own country, as made me doubt how far he had himself the time, or could spare even the weakest and most imbecile of his spirits to amuse respectable, well-to-do, idle ladies, to furnish arguments in favour of a ghost-world to sceptics, to paralyse weak curates, or even to afford the best and most popular clergy illustrations for their sermons.

I also took the liberty of directing his attention to the following verse in the Prophecies of Isaiah, and which seemed new to him:—"When they shall say unto you, Seek with them that have familiar spirits, and with wizards that peep and that mutter: should not a people seek unto their God? for the living to the dead?" (That is, as I understand it, should the living in reference to their affairs consult the dead?) "To the law and to the testimony: if they speak not according to this word, it is because there is no light in them." Strange to say, this passage made my clerical friend only hold more firmly to the alleged facts and his devil-theory regarding them; for he maintained that many men whom he knew to be a little more than sceptical regarding "the law and the testimony" of Scripture, and who "staggered through unbelief" in the miracles there recorded, nevertheless sought information "from the dead," and had perfect faith in the truth of the revelations so obtained, thus proving the devil to be the real deceiver.

Granting for the present the truth of the alleged facts of spirit-rapping and of table-turning; yet after hearing them, and comparing them with some of the mysteries I have myself collected, chiefly in the Highlands, connected with second sight and ghostly apparitions, and with other similar phenomena noticed by me in some of the remoter valleys of the Harz and Black Forest, I cannot possibly admit the one without admitting the other. Both seem to me to rest on such evidence as must compel them to stand or fall together.

I have no wish whatever to bring any reader of *Good Words*, who has "made up his mind" on those mysterious topics, to my way of thinking.

I shall acknowledge it as a sign of progress in free thought if I am permitted to hold my own views without being condemned as a person devoid of all judgment or common sense. My excellent publishers are also willing to run all risks by permitting me to make the pages of this periodical a vehicle for disseminating more worthy views of the mysteries of our spirit-life.

But one fact is better than a thousand mere arguments in discussing such a question, and I shall therefore devote the rest of this paper to a narrative, which the reader may rest assured is *strictly true*, and then I shall leave him to judge for himself as to how far such mysterious phenomena as it records can be accounted for.

A friend of mine, a medical man, was on a fishing expedition with an old college acquaintance, an army surgeon, whom he had not met for many years, from his having been in India with his regiment. M'Donald, the army surgeon, was a thorough Highlander, and slightly tinged with what is called the superstition of his countrymen, and at the time I speak of was liable to rather depressed spirits from an unsound liver. His native air was, however, rapidly renewing his youth; and when he and his old friend paced along the banks of the fishing stream in a lonely part of Argyleshire, and sent their lines like airy gossamers over the pools, and touched the water over a salmon's nose, so temptingly that the best principled and wisest fish could not resist the bite, M'Donald had apparently regained all his buoyancy of spirit. They had been fishing together for about a week with great success, when M'Donald proposed to pay a visit to a family he was acquainted with, which would separate him from his friend for some days. But whenever he spoke of their intended separation, he sank down into his old gloomy state, at one time declaring that he felt as if they were never to meet again. My friend tried to rally him, but in vain. They parted at the trouting stream, M'Donald's route being across a mountain pass, with which, however, he had been well acquainted in his youth, though the road was lonely and wild in the extreme. The Doctor returned early in the evening to his resting-place, which was a shepherd's house lying on the very outskirts of the "settlements," and beside a foaming mountain stream. The shepherd's only attendants at the time were two herd lads, and three dogs. Attached to the hut, and communicating with it by a short passage, was rather a comfortable room which "the Laird" had fitted up to serve as a sort of lodge for himself in the midst of his shooting-ground, and which he had put for a fortnight at the disposal of my friend.

Shortly after sunset on the day I mention, the

wind began to rise suddenly to a gale, the rain descended in torrents, and the night became extremely dark. The shepherd seemed uneasy, and several times went to the door to inspect the weather. At last he roused the fears of the Doctor for M'Donald's safety, by expressing the *hope* that by this time he was "owre that awfu' black moss, and across the red burn." Every traveller in the Highlands knows how rapidly these mountain streams rise, and how confusing the moor becomes in a dark night. "The black moss and red burn" were words that were never after forgot by the Doctor, from the strange feelings they produced when first heard that night: for there came into his mind terrible thoughts and forebodings about poor M'Donald, and reproaches for never having considered his possible danger in attempting such a journey alone. In vain the shepherd assured him that he must have reached a place of safety before the darkness and the storm came on. A presentiment which he could not cast off made him so miserable that he could hardly refrain from tears. But nothing could be done to relieve the anxiety now become so painful.

The Doctor at last retired to bed about midnight. For a long time he could not sleep. The raging of the stream below the small window, and the *thuds* of the storm, made him feverish and restless. But at last he fell into a sound and dreamless sleep. Out of this, however, he was suddenly roused by a peculiar noise in his room, not very loud, but utterly indescribable. He heard tap, tap, tap, at the window; and he knew, from the relation which the wall of the room bore to the rock, that the glass could not be touched by human hand. After listening for a moment, and forcing himself to smile at his nervousness, he turned round, and began again to seek repose. But now a noise began, too distinct and loud to make sleep possible. Starting and sitting up in bed, he heard repeated in rapid succession, as if some one was spitting in anger, and close to his bed,—"*Fit! fit! fit!*" and then a prolonged "*whir-r-r*" from another part of the room, while every chair began to move, and the table to jerk. The Doctor remained in breathless silence, with every faculty intensely acute. He frankly confessed that he heard his heart beating, for the sound was so unearthly, so horrible, and something seemed to come so near him, that he began seriously to consider whether or not he had some attack of fever which affected his brain,—for remember he had not tasted a drop of the shepherd's small store of whisky! He felt his own pulse, composed his spirits, and compelled himself to exercise calm judgment. Straining his eyes to discover anything, he plainly saw at last a white object moving, but without sound, before him. He knew that the door was shut

and the window also. An overpowering conviction then seized him, which he could not resist, that his friend M'Donald was dead! By an effort he seized a lucifer-box on a chair beside him, and struck a light. No white object could be seen. The room appeared to be as when he went to bed. The door was shut. He looked at his watch, and particularly marked that the hour was twenty-two minutes past three. But the match was hardly extinguished when, louder than ever, the same unearthly cry of "*Fit! fit! fit!*" was heard, followed by the same horrible *whir-r-r*, which made his teeth chatter with terrible rapidity. Then the movement of the table and every chair in the room was resumed with increased violence, while the tapping on the window was heard above the storm. There was no bell in the room, but the Doctor, on hearing all this frightful confusion of sounds again repeated, and beholding the white object moving towards him in terrible silence, began to thump the wooden partition and to shout at the top of his voice for the shepherd, and having done so, he dived his head under the blankets.

The shepherd soon made his appearance, in his nightshirt, with a small oil-lamp, or "*crusey*," over his head, anxiously inquiring as he entered the room,—

"What is't, Doctor? What's wrang? Pity me, are ye ill?"

"Very!" cried the Doctor. But before he could give any explanations a loud *whir-r-r* was heard, with the old cry of "*Fit!*" close to the shepherd, while two chairs fell at his feet! The shepherd sprang back, with a half scream of terror; the lamp was dashed to the ground, and the door violently shut.

"Come back!" shouted the Doctor. "Come back, Duncan, instantly, I command you!"

The shepherd opened the door very partially, and said, in terrified accents,—

"Gude be aboot us, that was awfu'! What is't?"

"Heaven knows, Duncan," ejaculated the Doctor with agitated voice, "but do pick up the lamp, and I shall strike a light."

Duncan did so in no small fear; but as he made his way to the bed in the darkness, to get a match from the Doctor, something caught his foot; he fell; and then, amidst the same noises and tumults of chairs, which immediately filled the apartment, the "*Fit! fit! fit!*" was prolonged with more vehemence than ever! The Doctor sprang up, and made his way out of the room, but was several times tripped, by some unknown power, so that he had the greatest difficulty in reaching the door without a fall. He was followed by Duncan, and both rushed out

of the room, shutting the door after them. A new light having been obtained, they both returned with extreme caution, and, it must be added, fear, in the hope of finding some cause or other for all those terrifying signs. Would it surprise our readers to hear that they searched the room in vain?—that, after minutely examining under the table, chairs, bed, everywhere, and with the door shut, not a trace could be found of anything? Would they believe that they heard during the day how poor McDonald had staggered, half dead from fatigue, into his friend's house, and falling into a fit, had died at *twenty-two minutes past three* that morning? We do not ask any one to accept of all this as true. But we pledge our honour to the following facts:—

The Doctor, after the day's fishing was over, had packed his rod so as to take it into his bedroom; but he had left a minnow attached to the hook. A white cat who was left in the room swallowed the minnow, and was hooked. The unfortunate gourmand had vehemently protested against this intrusion into her upper lip by the violent "Fit! fit! fit!" with which she tried to spit the hook out; the reel added the mysterious whirr-r-r; and the disengaged line, getting entangled in the legs of the chairs and table, as the hooked cat attempted to fly from her tormentor, set the furniture in motion, and tripped up both the shepherd and the Doctor; while an ivy-branch kept tapping at the window! Will any one doubt the existence of ghosts and a spirit-world after this?

I have only to add that the Doctor's skill

was employed during the night in cutting the hook out of the cat's lip, while his poor patient, yet most impatient, was held by the shepherd in a bag, the head alone of puss, with hook and minnow, being visible. McDonald made his appearance in a day or two, rejoicing once more to see his friend, and greatly enjoying the ghost story. As the Doctor finished the history of his night's horrors, he could not help laying down a proposition very dogmatically to his half-superstitious friends, and as some amends for his own terror. "Depend upon it," said he, "if we could thoroughly examine into all the stories of ghosts and apparitions, spirit-rapping, *et hoc genus omne*, they would turn out to be every bit as true as my own visit from the world of spirits; that is—*great humbug and nonsense.*"

We leave this heterodox sentiment with confidence in the hands of the illustrious dead, who spend so much time in disturbing furniture without even the apology of a hook and minnow. We have no doubt that Milton, Dante, Shakespeare, or probably Newton or Bacon, if properly invited, will cheerfully come as guests to any tea-party of true believers in London or Boston, to contradict in the most authoritative manner the Doctor's profane scepticism. We shall be glad to hear the views of those distinguished men, who, it is alleged, though dead yet speak; and we shall be proud to add them to our staff, and to number them among the contributors to *Good Words*. We despair of the cat. She has been silent ever since her great *début* into spirit-land. Her lips though healed are sealed.

SEA-WEEDS.

THE depths of the ocean
Afford us a home,
We ride to the shore
On the billows' white foam;
We float on the wave,
And we dance in the spray;
We come with the tide,
With its ebb glide away;
We grow, and we cling
To the desolate rock;
Nor loosen our hold
For the billows' wild shock:

Like friends in affliction,
The closer we stay,
Though breakers are round us,
And tempests hold away.

We flourish most bright
'Neath the deep rolling wave,
Adorning with beauty
Each seaman's lone grave.
Oh, mourners of earth!
Who would deck with sweet flowers
The graves of your loved ones,
Who rest in our bowers—

Remember, above them,
We flourish as fair,
Though hand of affection
Ne'er planted us there ;

Remember, among us
As calmly they sleep,
Down, down, 'neath the waves
Of the fathomless deep,

As tranquil, as safe,
'Neath the ocean's wild foam,
As in flower-planted grave,
Near their own native home,

Most safely among us
Their dust shall remain,
Till the last trumpet's sound
Shall awake them again.

At Home in the Scriptures.

A SERIES OF FAMILY READINGS FOR THE SUNDAY EVENINGS OF SEPTEMBER.

FIRST EVENING.

THE GOSPEL ADDRESSES ITSELF TO THE UNDERSTANDING.

"This is the covenant that I will make with the house of Israel, after those days, saith the Lord; I will put my laws into their mind, and write them in their hearts."—HEB. viii. 10.

I THINK we are often led into practical error regarding the successive dispensations of God by the careless use of current and long-established phraseology. In the popular mind "the covenants" stand over against each other in a contrast too sharp and absolute. In their essential characteristic they are not opposite but identical. It is true that the circumstances in which the more recent differ from the more ancient are of very great moment; still, they constitute only diversities of operation under one divine administration, and on one all-pervading plan.

The divine purpose, from first to last, is one, and it is prosecuted by differing but not discordant means at successive stages of its development. The roots are different from the stem, and the stem is different from the blossoms, and all are different from the fruit; yet the new covenant, by which the fruit is ripened, is by no means contrary to the old covenant, by which the roots were spread and fastened in the ground. The omniscient Maker sees the end from the beginning, and diversifies his methods at successive stages, according to the varying exigencies of the case.

Two great changes, besides others subordinate, have already occurred in God's moral administration of the world. The first is the change consequent upon the fall of man; the second is the change consequent upon the birth of Christ. Both of these two grand cardinal events rendered necessary corresponding changes in the covenants by which the intercourse between heaven and earth was ruled; but even these events did not make the later covenant the opposite of the earlier. The terms of intercourse between God and man remain in their deepest principle the same.

According to the covenant made with man in innocence, the Creator required perfect obedience, and promised perfect life. The new covenant, which was made after sin had entered and death by sin, was framed on precisely the same principle. The terms on both sides passed without alteration into the new dispensation; and in both cases too the contracting parties were God and man. In the first case the representative of humanity in the transaction is man made in innocence; in the second case, the representative of humanity is Immanuel, God with us. Mercy to the fallen did not take the form of abandoning the old covenant, and constructing another upon opposite principles; it took the form of renewing the covenant on its former terms, with a Divine and infallible representative on the human side. "The first man is of the earth, earthy; the second man is the Lord from heaven." The original conditions are continued, but he who undertakes them in the new

covenant for his people cannot fail. The work was "finished" ere the worker left the field.

Again, when the Mosaic institutes gave way to the Gospel at the birth of Christ, the principle of the divine administration was not changed, far less reversed. Then the ripened seed-cup burst, and the seed, set free, was scattered in every land; but the seed was sown "in the beginning," and had been through all preceding dispensations gradually advancing towards maturity. The Gospel is wrapped up in the Pentateuch in a form suited to the childhood of the Church. It differed from the Gospel of the New Testament as the history of Egypt in hieroglyphic tablets differs from the same history translated into alphabetic writing, and so made intelligible to all. In both the same meaning lies; but while in the ancient pictorial signs it lay hid, in the modern articulate record it becomes visible. Through the blood of bulls and of goats faith in ancient Israel looked to the same atonement in which we trust for taking away sin. The Old Testament is a kind of pictorial bible, in which the Gospel is taught by symbols; it is substantially the same Gospel which is more expressly enunciated in the New Testament.

To show that the change which took place at the birth of Christ was a regular development of the divine plan, previously foreseen and foreshown, the apostle Paul quotes the announcement of it from the prophecy of Jeremiah (xxxi. 31-33). When the work of redemption was completed in the death and resurrection of the Redeemer, corresponding changes became necessary in the methods of announcing and dispensing mercy from God to men. It is the same pardon, on the same terms, that was offered to the sinful and accepted by the believing from the time of the first fall; but it rests now on accomplished fact, whereas formerly it rested on faithful promise. The divine promise is not less sure in itself than the fact, but it is to our view less palpable. Abraham saw Christ's day and was glad; we through faith look to the same Jesus, and rejoice too in his salvation. Before the Incarnation, and after it, believers look to the same redemption, but they look through different media, and in different directions. In many points of unspeakable moment, the covenant under the Spirit's ministry, since Christ rose from the dead, is a new covenant, although in the essential condition of bestowing pardon on the guilty, it remains before the Omniscient through all ages the same.

Let us look to the last and best form of the everlasting covenant, in as far as its features are represented in Jeremiah's prophecy, and applied in the preaching of Paul. "This is the covenant: I will

put my laws into their mind, and write them in their hearts." In this new and more glorious ministry, which began to run with the ascension of the Lord and the mission of the Holy Spirit on the day of Pentecost, two processes logically distinguishable, if not actually separated in time and place, seem to be recognised: one refers to the Intellect, and the other to the Affections.

"I will put my laws into their mind." The terms are emphatic and comprehensive. They indicate not only the written commandment, but the inherent character of God. Having created man in his own image at first, he gave such a revelation as was fitted to restore that image when it had been blotted out by sin. As man was formed on the pattern of his Maker's moral nature, the gospel is constituted a mould, by which, when he is melted and poured into it, the damaged creature may be restored to the likeness which he had lost. The holiness of the divine nature, in as far as it is applicable to created beings, was transferred to the covenant for the regeneration of lost men. These principles, inserted in the gospel, are God's laws. It is not merely a partial or superficial commandment, Thou shalt do this, and thou shalt refrain from that. "The law of the Lord is perfect, converting the soul" (Ps. xix.) It exhibits, to the utmost extent of our capacity of comprehension, what he is, and what he desires his intelligent creature, his adopted child, to be. "Be ye holy, for I am holy:" "be ye imitators of God, as dear children."

This law is not known to the heathen at all. In Athens, the eye of Greece, the most intelligent of them all engraved on their altars the confession of their ignorance. The first messengers of the gospel, when they went abroad on their glorious mission, found the most enlightened community of the age at their wit's end, and, in the bitterness of despair, worshipping "the unknown God." At this day, the nations which have never received or have rejected the light from heaven, are sitting in similar darkness. A hard heart is everywhere and always found in combination with a blinded understanding. The two act and react on each other, becoming, alternately and reciprocally, cause and effect. Men do not like to retain the knowledge of God in their thoughts; and God in judgment gives them over to a reprobate mind.

But although in actual experience the mind and heart commit their sin and suffer its punishment in concert, it is important to point out, as is done in the text, the distinction between them. The character of God's dealing with Abraham and Israel, for example, was not specifically to put the divine laws into the people's mind. The leading feature of that administration is expressed in Deut. i. 31: "The Lord thy God bare thee, as a man doth bear his son, in all the way that ye went, until ye came to this place." A father carrying his infant son in his arms, or leading him by the hand, is the picture chosen to indicate the manner of the ancient dispensation. The reason is not the faculty to which the Old Testament institutes chiefly appeal. The distinctive feature of the Christian economy is, that it exacts a "reasonable service" (Rom. xii. 12): the preceding dispensation resembled rather the

gentle authority of a father. The children were led in the right way, without being told the reason of its rightness. They were trained by authority into habits of obedience, at a time when they were not capable of understanding the grounds of the law and the purpose of the Lawgiver.

In this respect the form which the Covenant assumed after the coming of Christ, exhibits a well-marked difference. It addresses itself specifically to the understanding. Besides proclaiming what ought to be done, it explains the reason for doing it. No longer does the Lord lead his people in a way that they know not; for he shows them clearly the way in which he expects them willingly to go, and demonstrates that it will lead them into a city of habitation.

Those who most cultivate and value the human intellect should, even in this lower light, count the gospel precious. It is unquestionably, in point of fact, the greatest quickener of mind that has ever visited our world. Even the refracted light of a sun which the majority have not yet directly seen, has made the western nations much wiser than their oriental instructors. Human intellect lies in a great measure dormant in regions to which the Scriptures have not penetrated.

Conversely, those who set themselves in opposition to the gospel, find it necessary to swaddle the intellect of men in bands which suit the dimensions of little children. Wherever the ruling powers, temporal or spiritual, make it their business to retain a people in subjection to a hierarchy of superstition, there they contrive practically to keep the education of the community at a low level. The assertion of the text, that the Christian system makes known the divine laws to the minds of men, is proved by the notorious fact, that an antichristian system hides these laws, and leaves the human understanding unenlightened and undeveloped.

It is intimated in the Scriptures, that if we seek first the kingdom of God and his righteousness, other things needful but subordinate will be added. Those who obtain heavenly wisdom, obtain earthly wisdom too, as possession of the sun-light secures for this earth the use of the moon's feeble but useful rays. In countries and districts where the pure gospel and Romish superstition interlace each other, the passing traveller may perceive at a glance that the countrymen who can hold intelligent debate on the doctrinal discourses of Paul, understand the construction of agricultural instruments and the rotation of crops, better than those who do their religion by substitute, and let their mind lie waste.

We live in the last times. How long the present dispensation shall run we do not know; but we know it will not be again superseded by another. Our Father has led our race up through infancy and childhood to "the stature of a perfect man." He has made known his laws as far as in our present state we are capable of comprehending them. In the gospel he exercises to the utmost the capacity which he has conferred on man. It is a high privilege to be invited not only to partake of his mercy, but, as it were, to share in his councils. He has revealed to us the method of redemption through Christ crucified, and appealed to our judgment whether it is not the best that we

could receive, or he could bestow. Under the covenant, as it is now established, he treats us as a father treats his full-grown son. No longer forming his plans in solitude, and simply issuing commandments to his child, that parent, glad that his son is now capable of understanding his reasons, fully spreads them out before him, and while he retains all his authority, carries the judgment of his child along with his own. Thus God deals with men under the gospel. Our privilege is high, but our responsibility is correspondingly great. If the

divine law is addressed to our understanding, our understanding should be exerted and occupied to the utmost with divine law. Let us apply our mind, without prejudice and selfish bias, to the study of the Scriptures. Verily, that was a reasonable demand which the ancient prophet made: "Hear, O earth, for the Lord hath spoken." Beware, lest the very Bible which is our boast, should rise up in the judgment against us, as a pearl that has been cast before swine, and trampled under their feet.

SECOND EVENING.

THE GOSPEL CAPTIVATES THE HEART.

"And write them in their hearts."—HEB. viii. 10.

BUT we shall be able still better to comprehend what is meant by putting God's laws into men's minds, when we compare it with the other kindred but distinct process,—“I will write them in their hearts.” Indeed, the first of these without the second, would not be a blessing. To know the divine law in the intellect, and yet not love it with the heart, is the most wretched condition in which a creature can be. It is better, at least it is a smaller measure of evil, not to know God, than to know and hate him. Knowledge of good, accompanied by the love of evil, is precisely the condition of spirits apostate. God's laws were, by their fall, blotted from their hearts, and yet left clearly legible on their minds. They know not only what the divine law for moral beings is, but they know that “it is holy and just and good.” To know it and own it good, and yet hate and loathe it in the heart, constitutes, at least in part, the punishment of fallen angels.

By a turn of expression in the original, an idea is conveyed which is not fully rendered in the English version. To show what it is, nothing more is necessary than to give an exactly literal translation of the terms: “Having given my laws into their minds, I shall also write them in their hearts.” It is the union of the two that is precious. Merely to flash into a human mind the knowledge of a holy law, without also renewing that mind into the love of the truth which it knows, would be to torment and not to bless. Christ is not divided. The gospel comes as a whole, with both its sides equally developed. Under this ministry of the Spirit, it is true, a gleam of light alone is sometimes thrown into the mind, while the heart, loving the darkness, resists the unwelcome intruder. Even in this case, however, the knowledge conveyed into the understanding contains a promise to pour love also into the heart. The dividers of the truth do not stop in the middle, and leave the work half done. The patient has his own perverseness to blame, if he leaps away after the wound has been inflicted, and before the cure has been applied.

Such was the case of Felix. Into his mind, sure enough, came God's laws regarding “righteousness, temperance, and judgment to come.” From the fervid lips of Paul these laws flashed like sunbeams into the intellect of the Roman. His conscience, kindled by these sparks, began to burn within his breast. But before the preacher had

time to apply the healing balm of divine forgiveness, the convicted transgressor had driven the preacher away. Poor Felix! the knowledge of the divine laws was against his will injected into his mind; but the love of them was not written in his heart. Knowledge made him miserable, but did not make him good. The sun-glass held up for a moment by the Hebrew prisoner's skilful hand concentrated the light from heaven upon his conscience so that he saw it full of lusts; the light that revealed, would have kindled a fire to consume them, if the unhappy man had permitted the operator to hold the glass a little longer, steadily over the spot.

The wretchedness which knowledge apart from love is fitted to produce, goes far to shut the mind against the entrance of knowledge. By a secret instinctive presentiment, a man suspects that it is better to be ignorant of God's laws, than to know them and refuse obedience. Hence those who determine to resist, shut their eyes, and willingly remain in darkness. It is a foregone conclusion against yielding the heart that keeps the understanding sealed. Hence in the Gospel of John, which abounds in abstract logical generalizations, we learn that “if any man will (i.e., is willing to) do his will, he shall know of the doctrine whether it be of God” (vii. 17). Conversely, if any man is predeterminately unwilling to fall in with the divine laws, then and thereby he is prevented from knowing what these laws are. Light admitted into the understanding, contributes to win the affections; and the affections won, open wide the doors for the admission of more light. Thus you may see, he who knows God's law, loves it, and he who loves it, knows it; each of these propositions contains a part of the truth; neither contains it all.

Perhaps examples of a law written in the heart, while it is not comprehended by the mind, would, if they could be found, help us to conceive of the two principles as they operate together in converted men. Instincts, whether in human infants or irrational creatures, are certain of our Maker's laws written in the heart without being communicated to the understanding. The creature falls in with its Creator's purpose: its practice perfectly accords with the law under which it has been placed: obedience is its delight. It is the law of God that a new-born infant shall seek its mother's breast in

order to quench both its hunger and its thirst; it is also the law of God that bees shall suck nourishment from the flowers while they are open, for sustenance in winter when that source of supply shall be shut. The creatures obey respectively the laws which have been enacted for their guidance. Their obedience is complete and uniform. But in these cases there has been no exhibition of the law with its reasons to an understanding mind. Mind is here ignored altogether, and the law is engraved at once upon the heart. The process leaps over the province of intellect, and fastens upon the affections beyond. The consequence is a blind, but steadfast, sure obedience.

When saved men are made perfect in their Redeemer's presence, I suppose the will of their Lord will be as completely written in their hearts. They will yield as fully, as uniformly, as sweetly to the law of holiness as inferior creatures yield to the instincts that are implanted in their being. On one side, the two cases are coincident, but on the other side the difference between them is inexpressibly great. The law which saints in rest from the heart obey, they also with their intellects fully comprehend. To know and to love the will of God; to be free from mistake as to its meaning, and from defect in conformity to its demand; to know the law you love, and love the law you know, is the best condition in which human beings can be. The hope of this high promotion may well encourage Christians to persevere in the struggle against an evil heart and an evil world. What a blessed state it will be—and the Captain of our salvation will not faint nor be weary until he has installed all his people in its privileges for ever—to have no longer any dimness or doubt in knowing my Redeemer's will, and no longer any backwardness in obeying it. Perfect Light and perfect Love; the promise of grace, the attainment in glory.

The condition of Israel before the coming of Christ supplies also an illustration, correct as far as it goes, of the law written in the heart without being displayed to the understanding. The "Israelite indeed," under the old dispensation, was renewed in spirit so that the law of the Lord was the delight of his heart, while nothing more than a dim and partial knowledge of it had penetrated his mind. In some measure, although not so completely as in the instincts of inferior creatures, his Redeemer passed over his understanding, and took him at once by the heart, to lead him in the way of life. It is the distinguishing peculiarity of the new covenant that the fire of love that glows in the heart has been kindled by a light that illuminates the understanding as it passes through. Having communicated a knowledge of righteousness to the mind, it also infuses a love of righteousness into the affections. One class of creatures, great but fallen, know the divine law, but hate it: another class, unfallen, but from the beginning low, conform perfectly to the divine law without understanding why they do it: another class, fallen once, but raised and redeemed, both know the right and love the holy. It is the union of clear light in the understanding with perfect purity of heart, that distinguishes the scheme of redemption in its last completest form, and in its final practical triumph.

When a man, in some measure aware of his backsliding, waywardness, and rebellion, observes how perfectly the unintelligent creation obeys its Creator's law, he bitterly laments his own lawlessness, and envies the happy loyalty of inferior beings. Earth, air, and sea, obey the laws which have been imposed upon them. Organic nature is obedient, from the lowest type of vegetation up through all the grades of animal life until you come to man. The study of nature we know will not convert a sinner; but the deficiency lies in the untowardness of the scholar, as much as in the dimness of the book. If the learner were apt and willing, he might be both put to shame and turned round to righteousness by the sight of flowers and insects. How perseveringly, constantly, and cheerfully do all these creatures perform the functions for which they are fitted, and exert to the utmost all their powers! They neither waste their talents in idleness, nor injure their faculties by running counter to the law of their being. "Go to the ant, thou sluggard," and not to the ant only: every sinless creature of God is an articulate reproof to man. Those servants who have received only one talent have laid it out faithfully in the master's work: but those who have received ten have either hid their gifts in the earth, or used them in rebellion against the sovereign Giver.

But while we may gather from the survey a needful reproof, we may also turn the reproof into a cheering promise. The complete obedience of creatures, which never having been elevated could not be broken by a fall, may become a polished mirror where faith will see reflected the far more glorious obedience of a higher intelligence, when the wounds of its fall will have been completely healed. As a sinful creature, with an evil heart of unbelief, departing from the living God, I have cause to envy, as it were, the instinct of irrational creatures, which always guides them in the direction of their Maker's will; but when I am forgiven and renewed, when I am justified and sanctified, when I am free from condemnation, and completely conformed to my Redeemer's will, when in me the work of redemption is finished, I shall have no desire to change places with any being, of any order or any character among the creatures of God. Far above the obedience of instinct, as heaven is above the earth, the redeemed of the Lord, when they come to Zion, shall serve their Saviour with intelligent minds as well as loving hearts. They will gladly do his will, and also know the reason why. They will chose the right and holy as uniformly as water flows down, and smoke rises up, and yet, their own minds will be exercised in coincidence with God's mind in every part of every action. The moral nature will move as evenly and sweetly in accordance with the law of righteousness, as the elements in accordance with the laws of matter; and along with this obedience which is like that of the earth, there will be an intelligence which will elevate it to the heavens.

At present a true Christian knows in part his Lord's will, and is racked from day to day by finding a law in his members warring against the law of his mind. Afflicted by the conflict of two adverse powers in his own person, he breaks out into the paradoxical yet true complaint: "We know

that the law is spiritual; but I am carnal, sold under sin. For that which I do I allow not: for what I would, that do I not; but what I hate, that do I" (Rom. vii. 14, 15). But when that Christian is made perfect, all those anomalies and contradictions shall be done away. Instead of the mind and will being in conflict, like ships striking and breaking each other by night in a storm, they will act in unison and act with power.

Brother beloved, that will be joyful, joyful, when we shall perfectly know God's holy will with our minds, and perfectly love it in our hearts. That

which disturbs the rest of a believer here, that which makes this world beneath his feet like a weltering sea, is the violent conflict between what his mind knows and what his heart loves of the law of God. Be of good cheer, ye who have accepted Christ as your Saviour. He will yet come walking upon these waters, and at his coming there will be a great calm. The partial illumination of the mind will be perfected, and the reluctance of the heart will cease. We shall obey the laws of God with all the intelligence of an angel, and all the steadiness of the tide.

THIRD EVENING.

THE TWIN DANGERS—UNBELIEF AND SUPERSTITION.

"Beware lest any man spoil you through philosophy and vain deceit, after the tradition of men, after the rudiments of the world, and not after Christ: for in him dwelleth all the fulness of the Godhead bodily. And ye are complete in him."—COL. ii. 8-10.

HERE, as in many other places of the Scripture, "the bane and antidote are both before you" within a very small compass. At the spot where life's great thoroughfare splits into two diverging branches, a friend of the pilgrims has planted a finger-post; and there the silent witness stands to-day, holding aloft with out-stretched arms the double signal of Death and Life, in letters so large that he who runs may read them. With a wise adaptation to our wants and our weakness, the Scriptures generally deliver their warnings in pairs. Like fences facing each other on opposite sides of the right path, to keep the flock from straying, the Terrors and the Promises of the Lord are everywhere found not very far asunder.

The multitude who approach on life's common highway are all thirsty, and all seeking water: those who go to the left hand are like the children who, in time of famine, were sent to the pits for water, and returned with empty vessels because the pits were dry (Jer. xiv.); and those who go to the right, are like Israel in the wilderness when they clustered round the Rock in Horeb, and drank from the cool gushing stream. Faithfully and affectionately the Apostle proclaims to the approaching crowd his double intimation: this way, the pilgrims perish on the brink of wells without water that enticed to destroy; that way, they meet the river which makes glad the city of our God.

We shall first listen to his warning. "Beware lest any man spoil you through philosophy and vain deceit, after the tradition of men, after the rudiments of the world, and not after Christ."

The English word *spoil* has two distinct meanings: the one is to damage an article, and the other is to rob a man. The use of the word to denote an injury must be comparatively modern. I find no certain trace of it in that sense in the English Bible. When we read in the gospel, for example, that one cannot enter a strong man's house and spoil his goods while their owner is at liberty, the aim of the spoiler is not to break the furniture, but to carry the treasure off. The process of spoiling may be accomplished either by secret stratagem or by open force. In the one case it is called theft, in the other robbery.

The apostle's warning points to spoilers as thieves

and robbers, seeking by wiles or by power to take our treasure away. Under the broad daylight of revelation, there is no difficulty in perceiving what is the precious thing which we should watch and defend. The soul itself is at stake here, and its salvation through Christ. The miners in Australia, before they start from the interior for the seaboard with their gold, apply to the Government for an armed escort; nor will they begin their perilous journey until they obtain it, for they set a high value on the treasure which they bear. Would that Christ's subjects knew as well the worth of their treasure, and the danger to which it is exposed in life's journey; so they would more earnestly plead for protection from the king. What is a man profited if he gain the whole world and lose his soul? Forewarned, forearmed. Let us learn who the adversaries are, and what instruments they employ to ruin us. Thus shall we be prepared for a successful defence.

The methods of the adversary are unveiled in these remarkable terms, "Through philosophy and vain deceit." How these two operate is explained immediately; but in the first place we must ascertain what these two are. We must not suppose, however, that all dangers are enumerated in one text. The method of the Scriptures is to deal in detail with particular cases, and the cases combined constitute together a complete code of law. The snares are legion, and only two are specifically mentioned here. The enemies who most frequently and successfully "war against the soul," are fleshly lusts in various forms; but it is not against these enemies, powerful though they be, that this apostolic warning is directed. At present we are invited to consider erroneous doctrines rather than vicious lives, as the sources of spiritual danger. I believe that practical wickedness is the breach by which the evil one most frequently enters and captivates the soul; but it is not the only wile of the devil. The apostle cares for the thousands who are destroyed by domineering passions; but he does not neglect the tens who become entangled in erroneous speculation, and so miss the way of life.

We must not allow ourselves to be led away by an imposing name. Neither in ancient nor in modern times has philosophy been always and uni-

formly a deep, grave, sublime thing. It has at intervals appeared as a vulgar, shallow, mischievous pretender. In some specimens it is found to be nothing else than "sounding brass." Nor is it exclusive in its haunts and habitats. It is found in high places and in low; it is entertained by the polished classes and the vulgar. In as far as philosophy is a true search for knowledge among the works and laws of God, it is the servant and not the rival of religion. Every enlightened Christian hails true learning as an auxiliary to the kingdom of Christ; but obviously the philosophy which Paul speaks of as the adversary of faith, is a philosophy falsely so called. We cannot afford to despise the great swelling words of a self-sufficient and unbelieving speculation, for they may become the snare in which precious souls are lost. Philosophic scepticism has its ready-made phrases which, being smooth and well worn, glide easily from mouth to mouth, and from generation to generation. There is a sort of acknowledged currency which goes unchallenged among the citizens of this secular commonwealth. We shall show our readers one or two of these pennies which sceptics take and give as good for the soul, that they may judge for themselves. Here is one: "A benevolent God would not make creatures, and then damn them." It is smooth and round. It passes easily from hand to hand. Is it good? As to material, is it pure gold? and as to authority, has it the image and superscription of the king? One or two questions may suffice to pierce this bladder, and then we may leave it to collapse. Does moral evil exist in the world? Who is the evil-doer? Should a just God make no distinction in his treatment of sin and holiness? How do you account for the obvious fact that sin brings suffering on the sinner in this life? If sin bring suffering on the sinner in this life, are you sure that it will not do so in the life to come? How shall God give his children a happy home, if the evil shall inhabit it as well as the good?

Another proposition, more refined and more fashionable, is that "God will not punish men for an erroneous belief, if it be sincere." This philosophy issues from the schools, and is echoed from the factories. Its exterior is plausible, but its heart is hollow. It assumes that in things spiritual and eternal, an erring course will lead you to the desired haven, as well as the true course, provided always that you honestly think your falsehood is a truth. Testimony on the subject, apart from the Scriptures, we have none; and analogy, the only other source whence evidence may be obtained, goes sheer against the doctrine. A shipmaster is steering homewards. He has been many days at sea without sight of land. He has calculated his course according to the best of his ability; but from the use of inaccurate instruments, or blunders in his figures, he has cast up his course several points wide of the truth. He steers accordingly, sincerely believing that his course is right. Will the sincerity of his belief in error prevent his ship from being broken when it strikes the rocks? No: because the rocky coast is a real substantial object. And, we suspect, if unbelieving speculators acknowledged the reality of a spiritual world, as an object external to our-

selves, they could not possibly suppose that a man can reach the rest that remaineth by a false course, as safely as by a true.

The "vain deceit" may be considered either as a characteristic of false philosophy, or a separate snare. If it refer to a different danger, it must point in the direction of superstition. In that case the two correspond to the double warning elsewhere given by the Lord, to "beware of the leaven of the Pharisees, and of the Sadducees." The leaven of the Sadducees was a speculative denial of the main doctrines of religion; the leaven of the Pharisees was a superstitious confidence in religious formalities, not prescribed by God, but invented by men. Although the scepticism that believes nothing, and the superstition that receives without question all the dogmas of Rome, are in an important sense naturally opposite and antagonistic, they are also nearly akin and closely allied. The two fortresses frown fiercely against each other in their lofty battlements; but shrewd observers suspect that there exists a secret subterranean communication between them, and that influences not unfriendly pass and repass unseen. One fact often proves what a thousand theories cannot explain; and some facts have been permitted to emerge in our day upon a prominent stage, which serve to advertise all concerned that there is more natural affinity between philosophic unbelief and Popish superstition, than any one could gather from a superficial review. It is well known that the movement towards Rome which originated in Oxford a good many years ago, has, after producing a great deal of commotion, spent its force; and that the literary scepticism which at this day so much shakes and alarms the English Church is but the reactionary wave. In this aspect it is an equally instructive and still more striking fact, that at an early stage of the movement towards forms, two brothers, both eminent and learned men, were simultaneously driven from their old foundations; and that in seeking to escape from the deluge, one became a priest of Rome, and another a prophet of infidelity.

Whether these are two distinct snares, or two characteristics of one danger, we are expressly informed that the philosophy and hollow cheat, which Paul contemplates with dread, came "according to the tradition of men, and according to the rudiments of the world." Tradition is a principle of power; when it is employed to propagate and perpetuate error, its effects are unspeakably disastrous. The place of tradition in Rome is well known. There, people on principle intrust their souls to what is said by somebody to have been handed down from somebody else, far up in the dark ages. But tradition has too much power beyond the pale of the Papacy. Human authority has too much sway in the concerns of a soul. "All ye are brethren;" let us therefore modestly distrust ourselves, and ask counsel of the wisest within our reach; but "one is your master, even Christ;" let us therefore never be the servants of men.

"The rudiments of the world" are its footprints,—the track which it makes and leaves. The declaration that "we all like sheep have gone astray," is not only in substance true, it is also

minutely exact. The thoughtless multitude follow the first footprints that they find, and refuse to take the trouble of judging for themselves.

The Church, in a rude and dark age, instead of guiding her course, like mariners, by the lights that shine in heaven, followed the path which she found beaten by previous travellers on the earth. Ah! the footprints of the world are not safe landmarks on the way to heaven. Nor is this species of weakness confined to the inhabitants of unenlightened countries,—or the slaves of a superstitious system. We meet it every day at home, in communities and families where political liberty and gospel light are enjoyed in the fullest measure. In the education of children, in the management of the house, in the choice of company, and the expenditure of means, even Christians seem to regulate

their course by the fashion of the world more than by the law of their Lord.

While he condemns the habit of following the world's footsteps, the Apostle is careful to suggest for our guidance another track, a track distinctly marked on earth and leading sure to heaven. His complaint bears that people go according to the footprints of the world, "and not after Christ." This blessed name leapt ever readily to Paul's lips. He is not contented with a reference to the moral law as the rule of righteousness, and to the Scriptures in general as a sufficient guide in all the circumstances of life: he goes directly to the centre, and directs Christians to follow Christ. This is the secret of a holy life, and a safe departure. He is the best Christian who most closely follows Christ.

FOURTH EVENING.

THE REFUGE.—A REDEEMER AT ONCE HUMAN AND DIVINE.

"For in him dwelleth all the fulness of the Godhead bodily; and ye are complete in him."—COL. ii. 9, 10.

WHEN we have learned from Paul's lips what will not save and satisfy, we proceed to learn also from the same source what will. We shall not chase those shifting shadows of human opinion and worldly fashion any more. We consent to abandon these wells without water; but to whom shall we go? To thee, Lord Jesus, "for thou hast the words of eternal life." "In him dwelleth all the fulness of the Godhead bodily; and ye are complete in him."

Over against all the vain shows of a godless world are set the Incarnation and the Regeneration as the means of satisfying human souls here, and saving them for ever. The chain consists of two links only, an upper and a lower,—the chain on which eternal life for man depends. The upper link is the incarnation of the Son of God: the under link is the regeneration of individual men. "In him dwelleth all the fulness of the Godhead bodily." Behold the salvation provided by God, and permitted to hang down from heaven till it touch the earth. "Ye are in him;" behold the cleaving of a saved soul to Christ by a living faith.

It is peculiarly interesting to observe that Paul, after setting aside all the wisdom of man as utterly unfit to satisfy an immortal spirit, immediately, and with inimitable simplicity, proposes the Incarnation in their stead. Ah! be assured there is philosophy here as well as faith. This man, apart altogether from inspiration, could dip more deeply by reason into the nature of things than those professionals at Athens, who called him a babbler. Profound intellectual insight, as well as spiritual discernment, is displayed in the bold, direct substitution of Christ's person, as both God and man, for the vain philosophies which he had discarded. He is not contented with introducing a true opinion in room of the false; he is not contented even with introducing a divinely-inspired doctrine of religion, in room of human speculations: in place of all opinions, false or true, secular or sacred, he introduces a fact. The question is, What will sustain a human soul when it is fainting, and what will satisfy it when it is empty? This inspired teacher gives to feeble, failing humanity, not a

thought, but a brother. To a person in utter amazement and need, he brings a person in whom dwells all power, and from whom flows all compassion. The Alpha and Omega of Revelation is this: that God became man, and dwelt among us. The histories, the prophecies, the doctrines of the Bible, reveal Christ. They do not save us; they lead us to our Saviour. Our Saviour is a person. He is man, that we may get near his heart; and God, that he may deliver us from all evil.

"The fulness of the Godhead" is needed to satisfy our desires. Nothing more can be given, and nothing less will suffice. The creature that was made in God's image, cannot be satisfied with any portion less than God. When a human soul is spoiled and left empty, you cannot fill it by finite things. Give it a whole world, and its hunger gnaws as painfully as before. It will continue empty and miserable, until you restore to it the portion which it lost by sin. But "the fulness of the Godhead" lies far beyond the reach of the fallen. We might as well hope to raise our bodies from the earth, and fly through space to some brighter world, as to rise in spirit by our own efforts to communion with God in holiness. What we could not do, God did, and did by the gift of his Son. The fulness of the Godhead dwelt and dwells in the man Christ Jesus. Thus do we get access to the fountain of all good. God is love: but how shall we approach and satisfy our thirst from that upper spring? Jesus is our Mediator. Through him the divine love reaches our hearts: through him we have access to the Father.

The evidences of revealed religion in all their branches are useful and necessary. None of the demonstrations which have been developed in the course of the Christian era could be wanted. Each has its place and its function. But the person and character of the Redeemer stands alone, greater than all. The true evidence of Christianity is Christ. Here is a person whom not only believers love, but infidels of all ages revere and admire. This person, who is truth embodied, distinctly declares that he existed before he was born in

Bethlehem; that he is the Son of God with power, that he raised the dead by his word; and yet for us men, and for our salvation was crucified on Calvary; that he rose from the grave and ascended into heaven; that he intercedes now at the throne of God for his people, and will return at last in the clouds of heaven to take them home. All this Christ has himself declared. You cannot reject this, and yet fall back on the supposition generally admitted by the enemies of Christianity, that Christ was a great and good man. If these things are not true, then he who declared them was consciously all his days, in life and death an arch deceiver. It is impossible, unless the light of reason has been violently extinguished, to look to the Christ of the Gospel, and count him a dark false deceiver. I say it is impossible; and that impossibility throws you over at a bound into the glorious assurance that all his word is true. Here is the shortest and surest course of instruction in the Christian evidences: Go to the Christ of the New Testament, the Christ of Matthew and Mark, and Luke and John, of Peter and Paul; keep him company a while, and gravely study his character. Follow his steps, and listen to his instructions. See him while he mightily works, and meekly endures: hear his reproof of sin, and his compassion for the sin-doer; join the congregation who listen to his sermon, and stand beside him while he spends the night on the mountain-top in prayer; go in with him to Pilate's judgment-seat, and stand on Calvary near the Cross; go and form acquaintance with Christ in his ministry among men, and say whether he is the worst of men or the best, for one or other of these two he must be—say before your conscience and God—say on the brink of time and the threshold of eternity, is he false and bad, or is he pure and true? Pure and true like heaven, like God you must pronounce him to be; the very laws of your being compel the confession. And where does this confession place you? In a moment, and by one sure step, it lifts you from the deep miry pit of manifold unbelief, sets your feet upon a rock, and fills your mouth with praise. It is fixed that Christ is true: you accept him as he is: you take him at his word. He is God with us: he has gone to prepare a place for us, and he will come again, for he has said so. The fulness of the Godhead dwells in him, and it dwells in him that I may reach it. When my heart simply recognises Christ as the Son of God, and yet my brother, the recognition makes me a new creature.

When we know him as God with us, we accept him as our Redeemer. Through faith his people are in him, and so partake of his salvation.

In our text it is expressly said, ye are complete; that is, full, in him. It is not easy to satisfy a man. It is both solemnizing and gladsome to observe how wide is the chasm which divides our nature from the most fully developed of the lower animals. Give them enough of convenient food, and they lie down content. When an ox has gathered his fill on the meadow, and lain down to chew the cud, you could not make him happier though you had all in earth and heaven at your disposal. You would only disturb his peace by adding to his portion. But ah, how different is a creature made up like the ox of flesh and blood,

when God has breathed into the body an immortal soul. Here, in a moment, is a capacity which heaven and earth could not fill. It was a true instinct in the apostle Philip that prompted him to say to Jesus, "Lord, show us the Father, and it sufficeth us." There, that simple Galilean was right. He expressed a truth which all the learning of the schools cannot discover. Perhaps, at that stage of his instruction, the disciple did not understand all that his own words contained. To us under the ministry of the Spirit their meaning shines more clearly through. In a human spirit there remains an aching emptiness although it has gotten a whole world as its portion. This incapability of having enough, as a characteristic of humanity, is a sublime and awe-inspiring thing. It may, in some of its manifestations, become pitiable or ludicrous; the rich miser's complaint of poverty provokes scorn or laughter, but this is only a beautiful human countenance twisted into a caricature; the human countenance in symmetry and life is not a contemptible but a glorious sight. The impossibility of satisfying me, though you should give me a whole world, greatly comforts me. It lifts me high above all other creatures that are visible. It brings me up nearer to God than other beings that I know. I am glad to learn that I am incapable of being satisfied with created things; for I desire to be kept open and empty until God be mine, and then the craving of my spirit shall cease.

In our Brother, bone of our bone and flesh of our flesh, dwells the fulness of the Godhead. When I am through faith spiritually inserted into him, as the branch bodily is in the vine, the fulness of the Godhead flows into me, until my whole being is filled with God.

While we conceive of the saved state in heaven as a state for other and essentially different beings, it has for us no attractions. Illimitable space, and blue ether, and invisible spirits, and silent thoughts, with none in our nature near,—these things will not win us. To be thrown into that great empty concave, with no green tree, and no rolling river, and no human faces in it, is not a gladsome anticipation. A friend, a brother, more tenderly and perfectly human than any whom we have ever known, and yet at the same time God over all,—this is the heaven wherewith the ministry of the Spirit charms human hearts. The increasing knowledge of the heavenly state will be like the results of microscope and telescope combined. A whole world of close, minute, hitherto undiscovered human sympathy, will be found in Immanuel; and at the same time, his divine perfections will open up in a limitless expanse. The infinite God comes closer to me in true human love than any brother. He who is my brother has all power in heaven and in earth. It is on this person, in conscious sympathy with all his people every moment, as the head with the members; it is on this person, entered already as our forerunner into the Holiest for us, that the anchor of a believing hope now surely fastens. Fastened there, every toss that a tempted but trusting soul suffers on this sea of time, fixes its hold more firmly. Christ is the heaven of Christians.

W. ARNOT.

WAR AND ITS GAINS.

BY THE EDITOR.

"THE horrors of war" is a theme on which it is easy to descant, and one which it is impossible adequately to realize or to exaggerate. No event can more thoroughly absorb and terribly excite every faculty in man than a great battle; nor can any spectacle be more frightful or depressing than a vast battle-field when the combat is ended. We do not wonder, therefore, that Christian men, or those possessed of even the most ordinary philanthropy, should unite together and make every effort in their power for the purpose of imbuing society with a wholesome aversion to war. There are times, also, when it may be peculiarly necessary to quicken a nation's sense of the awful responsibility which it incurs, if it proclaims war before every possible means of saving mankind from so great a sacrifice have been exhausted. At all times, indeed, it is necessary to put down that light and unbecoming spirit, with which a duty so very solemn as that of sacrificing our own lives or the lives of our fellow-men is accepted by ourselves or delegated to others. Amidst the alarm of the threatened invasion of '98, Coleridge thus uttered his vehement protest against such a spirit:—

"Secure from actual warfare, we have loved
To swell the war-whoop, passionate for war!
We send our mandates for the certain death
Of thousands and ten thousands! boys and girls,
And women that would groan to see a child
Pull off an insect's leg, all read of war:
The best amusement for our morning's meal!
The poor wretch, who has learnt his prayers
From curses, who knows scarcely words enough
To ask a blessing from his heavenly Father,
Becomes a fluent phrase-man, absolute
And technical, in victories and defeat,
And all our dainty terms of fratricide;
Terms which we trundle smoothly on our tongues,
Like mere abstractions, empty sounds to which
We join no feeling, and attach no form!
As if the soldier died without a wound;
As if the fibres of this godlike frame
Were gored without a pang; as if the wretch
Who fell in battle doing bloody deeds,
Passed off to heaven translated and not killed,
As though he had no wife to pine for him,
No God to judge him!"

But while we do not underrate the moral and social evils among a people which a passion for war at once evidences and increases, we must not be driven to the opposite extreme of denouncing war as being itself a great crime. Such an opinion not only involves the condemnation of some of the noblest achievements of the greatest nations, but

the entire lives of their noblest men, while it makes God's providential government over the world a profounder mystery, and a mere inextricable riddle.

Let us offer a few observations upon the lawfulness of war and its gains, not, indeed, with the desire of stimulating any feelings of enmity between man and man, but of diminishing, in some degree, the weight of the burthen which oppresses many a good and loving heart in contemplating war with all its losses and accompanying horrors.

Now it is our firm conviction that war, in its fiercest form, may be opposed neither to the letter nor spirit of Christianity; while "peace at any price" is unprincipled selfishness, and opposed to both. A national war is lawful when it is resorted to as the only means left of defending the right by might; and then it is one of the noblest forms of self-sacrifice; for it is the sacrifice by the nation of its wealth and people, and by the soldier of a thousand blessings, and of life itself, rather than part with liberty, which is essential to a nation's existence, or with righteousness which is essential to the world's progress. On the other hand, the man, who rather than fight would purchase earthly blessings by the sacrifice of the right, manifests the spirit of an animalized and degraded slave, who prefers life to duty, and shrinks from the vindication, at all hazards, of truth and honour.

It is, of course, admitted that war, if inconsistent with the exercise of Christian love towards our "enemies," is indefensible, inasmuch as love is the very spirit of Christianity, and is that eternal bond which, in no case, and in no circumstances whatever, can be broken with impunity. It is, however, not only possible to fight until death, and to sacrifice the lives of our enemies, as well as our own, without hating the one more than the other, but the absence of all personal hate is one of the very characteristics of national warfare, as distinguished from personal animosity or family feuds. War, when lawful, ought to be, and may be, as free from any personal dislike of the enemy, as the condemnation or execution of a criminal is free from all private or personal hate to the criminal himself on the part of the judge or the executioner.

This is evidenced by many a fact that could be gathered from the annals of war. How often, for example, have commanders been obliged to forbid the too friendly and familiar intercourse in which the outposts of the contending armies indulged,

sometimes in the exchange of mere civilities, and at other times of soldiers' luxuries. What displays of finest generosity have been witnessed on the part of the strong towards the weak, even in the very "current of the heady fight;" as when the French cavalry officer in the charge was about to cut down the wounded Napier, until, suddenly perceiving his disabled arm, he lowered his weapon, saluted him, and passed on in the *mêlée*! And should the white flag of peace be raised above the smoke of the sternest fight, and the message fly from rank to rank that the war is over, in a moment foe will meet with foe, to embrace as friend with friend. Men who an hour before were ready to seek each other's death, would in the next moment clasp each other's hands with the warmth of a common brotherhood; and veterans, whose eyes would never quail before the storm of shot and shell, will not be ashamed to drop a tear of thanksgiving when hearing the trumpet-note of peace. We thus believe that there may be less of the spirit of personal dislike in the bloodiest battle ever fought between soldiers, than in many a "religious" combat between divines; and that a tract of a Peace Society may be written by a pen guided by a more bitter personal dislike than any sword ever wielded by the hero of a hundred fights.

We do not allege that the spirit which we have described is that which imbues every soldier; but we maintain that it is the genuine soldier's spirit, and essential to that chivalry which, in every age, has united the brave with the gentle—the true hero with the true "gentle-man." Unless a soldier could thus love his enemies whom he nevertheless kills, and that more truly than the judge can love the criminal whom he nevertheless hangs, it would be impossible for a Christian to enter the ranks of the army. And what could be said of the many illustrious champions of the Cross who have been as illustrious champions in many a bloody battle? They must have lived and died under a gross delusion, or been condemned by God for hating and murdering their fellow-men,—and this no man but a fanatic or a fool believes. We admit—what, alas! is too well known for us to be able to deny—that every war has given birth to dreadful deeds of cruelty and revenge; for every army, as armies are at present constituted, has some in its ranks recruited from the most ignorant and degraded of our population. But we believe, and it is more to our purpose, that in the vast majority of cases in which lawful war becomes lawless hate, it will be found that personal injury, as in India, or party passion, as in America, have actuated, or have been assumed to have actuated, those in whom the war has originated. It is thus, too, that the fiercest wars, and the most unjustifiable, have been civil wars, for these have been mixed up with personal and party questions. For the same reason, a riotous mob manifests hatred to volunteers or yeomanry raised from among themselves, who may be called out to quell the riot—a hatred which is not felt towards regular troops who are recognised as those who do their duty officially, without the possibility of having any *personal* feeling in the matter.

The lawfulness of the wars recorded in the Old Testament waged against idolaters, requires no

justification from us. These were but the carrying out of the sentence of execution justly passed by God upon great criminals, and with heavy personal sacrifices also on the part of the executioners. Hence those heroes of the olden time who fought so bravely for Israel are commemorated by the apostle as men of faith who "subdued kingdoms," "waxed valiant in fight, turning to flight the armies of the aliens." Nor do we believe that the hatred expressed in the Psalms and elsewhere was in the least degree of a personal kind, but a holy and solemn condemnation of the enemies of all righteousness. David himself, from his very temperament, apart from his principles, was naturally and habitually a generous-hearted, chivalrous man—as witness his conduct towards Saul. It is impossible to conceive such a man embodying feelings of private or personal hate and revenge in his devotions before his God. But he could, nevertheless, "give thanks unto the Lord, for he is good," and "to him which smote great kings," for "His mercy endureth for ever!"

The following is a beautiful illustration from the Old Testament of the true spirit which should actuate soldiers in war, and a grand protest against the spirit of revenge:—

"And the children of Israel carried away captive of their brethren two hundred thousand, women, sons, and daughters, and took also away much spoil from them, and brought the spoil to Samaria. But a prophet of the Lord was there, whose name was Oded: and he went out before the host that came to Samaria, and said unto them, Behold, because the Lord God of your fathers was wroth with Judah, he hath delivered them into your hand, and ye have slain them in a rage that reacheth up unto heaven. And now ye purpose to keep under the children of Judah and Jerusalem for bondmen and bondwomen unto you: but are there not with you, even with you, sins against the Lord your God? . . . So the armed men left the captives and the spoil before the princes and all the congregation. And the men which were expressed by name rose up, and took the captives, and with the spoil clothed all that were naked among them, and arrayed them, and shod them, and gave them to eat and to drink, and anointed them, and carried all the feeble of them upon asses, and brought them to Jericho, the city of palm trees, to their brethren: then they returned to Samaria."

But we may look at war from another point of view, and as affording a remarkable illustration of what seems to be a law affecting the progress of the race. For it would appear, in this portion, at least, of the kingdom of God, that no life can exist except through death. We see this exemplified in the history of the world. When new life was promised to Adam, it was preceded by the sentence of death. When life came to the world in the preservation of Noah, death also came in the destruction of its former inhabitants. The emancipation of Israel from bondage was the preservation of the world's life; but this was accomplished only after plagues had desolated Egypt, and Pharaoh and his host were overthrown in the Red Sea. The possession of Canaan, which became the centre of life to the world, was acquired through

war and the extinction of the abominable Canaanites. The establishment upon earth of the Christian Church, as the life of humanity, required the death of the old Jewish Church and nation; while the life of the whole body of the Church in heaven must be preceded by the death of all its members. The same principle holds true in the individual soul. We must die in order to live. The resurrection of the new man is possible only through the crucifixion and burial of the old man. Thus we see that the grand fact in the world's history of the death of Christ, in order that life should come to the world, is an embodiment of a great law in God's kingdom, and interprets, rather than is interpreted by, all the other workings of the same law.

Accordingly, no great benefit has ever come to the world, or to nations, without the death and desolation of famine, pestilence, persecution, or war. In looking back along the centuries of history, we can remember none! It may seem to us strange and mysterious that so it should be, but so it has been. In every case the light has come out of darkness—the happiness through suffering—the life through death. Mankind reach God's kingdom of good only through "much tribulation." The death may, indeed, belong to sin or its wages; but the life is of God, and his gift. Granting that every war is caused by evil somewhere, and that it is at once its effect and punishment, yet we believe that in the merciful as well as just providence of God, it becomes to a large extent its cure; and though, like every form of chastisement, it is not "for the present joyous but grievous," yet "afterwards it yields the peaceable fruits of righteousness." God thus makes man's wrath to praise him; and the awful power of evil which has not originated in him is yet so controlled and directed by him as to help on the good. "O the depth of the riches both of the wisdom and knowledge of God! How unsearchable are his judgments, and his ways past finding out!"

And if the life thus never comes without the death, so may we feel assured that the death is never in vain, or never fails to issue in life, or in some way or other to contribute to its existence or growth. Let us not then be crushed by the thought that losses in war have been losses only, without any corresponding gains, and nothing more than huge hecatombs offered up to the ambition or pride of monarchies or republics, or results of the diplomatic blunders and selfish policy of ignorant or wicked men. We have too much confidence in the justice and love of Christ's reign to believe this. Never would he permit the blood of many noble hearts to be shed, nor so many sacrifices to be made by Christian families, unless, through this same death, he was to give life more abundantly to the world. The losses from war have been tremendous in our own day in Europe, India, and America; but we may surely be permitted to believe, that the gain to human liberty, to religion, and to the spread of the gospel, will be proportionate. The funeral has been large. The civilized world has followed the biers of the warriors who fell, and millions have dropped tears into their graves; but the civilized world will enjoy the legacy which they have left behind.

The benefits that are to accrue to mankind from war may possibly, and for a time, be unseen, but our faith in God's government, and the experience gathered from the history of the world, assure us, that though a winter of bitter cold and wild storm-blast may intervene before the harvest, yet that a harvest *must* come, when what is now sown in tears in the bloody battle-field will, by us or by our posterity, be reaped with joy. The present death of thousands, though occasioned by the great sin of the world, is, nevertheless, a prelude to a resurrection to the world of future life, social, political, and religious.

The last ten years have witnessed several great and important wars; as in the Crimea, India, Italy, and America. It would be difficult and presumptuous in us to attempt to specify the particular evils which occasioned those wars; although we might hazard the conjecture that the ambition—ecclesiastical as well as civil—and despotism of Russia, which threatened to overturn the balance of power in Europe, had no small share in causing the Crimean campaign; that our own covetousness and rapacity in India, along with the chronic hatred of the heathen to a Christian government, had something to do with the rebellion in India; that the tyranny of Austria and of the Pope stirred up Italy, while slavery is confessedly the grand cause of the war raging at present in America.

Those great moments in history which were recently so very present to us, are already stealing away into the dimness of the past. Yet they must ever remain fresh in the memory of the present generation, who once read with "bated breath" the telegrams which told the progress of the death struggle. We like to pause and recal that Crimean time of anxiety and sorrow. We cannot forget those accounts which we read with such intense interest of that long struggle sustained by 400,000 men around the beleaguered fortress, and within a space hardly ten miles square;—artillery roaring night and day for months; shells in ceaseless showers hissing and rushing through the sky; trenches digging; attacking, and defending; batteries mounting and dismounting; nightly sorties, with firing, shouts, and death-struggles in the darkness; men perishing daily in hundreds from cold, disease, agonizing wounds, or the sudden crash of shot or shell. We remember the days of more than ordinary peril and more wide-spread calamity—days of hurricane, when navies were sunk, or of fierce onset against the fortress, when armies seemed to march forward for hours, amidst the hell of turmoil and carnage, into some unseen and unknown dread bourne from whence no soldier returned. Who can forget the crowds of sufferers who streamed from the shores of the Crimea to add to the horrors of the already overcrowded hospitals, or the graves which were ever digging round their walls? Or who can forget the messengers of woe which every day left the seat of war and visited Europe, knocking at the doors of ten thousand homes, telling children that they were orphans, wives that they were widows, parents that the pride of their heart was laid low, sisters that their brothers were killed, and a large circle of friends and neighbours that old familiar faces should be seen no more!

Now the Crimea has long been deserted, and left to the gentle influences of nature, and the peaceful occupations of man. The green grass grows in luxuriance over the heights so long trodden by embattled hosts; the harbour of Balaclava is silent as a mountain tarn; cattle browse along the line of the once busy railway; the bee hums among the wild flowers on the graves of our countrymen; the lark sings over the fields drenched by blood; the husbandman pauses to examine records of battle turned up by his plough; strangers, year after year, visit the memorable scene, and trace out the spots consecrated by patient suffering or heroic valour; and many an unlettered wanderer in vain attempts to decipher the inscriptions over our English dead,—inscriptions which will be read through tears by pilgrims from afar who visit their graves, and to whom the names on those humble tablets are records of the history of a life.

But what have we gained by that war? Our losses have been great;* have there been adequate returns of good? We think there have. One result has been that Russia, which, like a second Babylon, threatened to be a hammer to break the nations of the earth, has been broken—driven back from her advance towards Europe and the East, and compelled to accept a peace, with the loss of fortresses, fleets, armies, influence, and the glory of being invincible, which charmed nations to become her slaves; while she herself has been mercifully compelled to direct her energies to the development of her own rich and almost inexhaustible resources, and to the improvement of her people. Besides this, additional security has been obtained for the permanence of the British rule in India, which we think is now identical with the best interests of that great country.

But perhaps the greatest gain to humanity from the Crimean War has been the freedom thereby secured throughout the Turkish dominions, not only for Christians so called, but for Mahometans who may embrace the Christian faith. This is a great gain to humanity. For twelve hundred years has Islam reigned, and brooked no rival. For twelve hundred years it has been death to a Mahometan to believe in Christ as the only Saviour. For twelve hundred years Mahometanism, numbering at present its more than one hundred million souls, has been shut out from all the light and life of the Gospel. *Now*, Islam is practically destroyed! It has been permitted, in the calm and patient government of God, to do its best or its worst—to be, if it could, the life of an empire—the life of the race. Twelve centuries have been given it to make the experiment, with the fairest and holiest portion of the earth to make it in, and with unlimited power to back its efforts. The experiment has failed; failed utterly and deplorably. Maho-

metanism has given birth to no permanent literature, philosophy, science, or hardly even to works of art, except some noble buildings in India. It has triumphed cruelly, reigned despotically, indulged itself sensually, until it has become effete, degraded, sunk. But now a new era has come, and Christianity, ever fresh and ever young, steps in to save Turkey from being blotted out from the map of nations, and to conquer her as an enemy by making her a friend. The fact of the Prince of Wales having been the first Christian who was ever admitted into the Mosque of Hebron, is itself a proof of the change which has come over Turkey since the war. The wedge has got in its edge, and those Mahometan fanatics who think that it must end in destroying Islam, are not mistaken.

Not less vivid are our recollections of the last Indian war, nor less bright our hopes of its good results. We remember, but as yesterday, how the tidings of a mutinous regiment here and there were at first received without any alarm, but how, when the whole army was infected, our confidence at home well nigh yielded to despair. The unparalleled drama passes before our eyes in tragic scenes, repeated across the wide plains of India: the sudden treachery of the Sepoys, the massacre of their officers, the hurried flights of terrified residents and their families, the marvellous escapes of some, and the cruel destruction of others. Cawnpore, Delhi, Lucknow!—when shall these scenes or names be forgotten? Our losses were great indeed during that dreadful time. Many a family lost its fairest, bravest, and best. Tens of thousands perished in battle, by massacre, or by disease, and hatred to the British rule was intensified in many a native breast. But what have been our gains? The Government of Great Britain has been established stronger than ever over the whole peninsula of India with its 170 millions of inhabitants! *That* is a gain to humanity which cannot be too highly estimated, provided always that Christian Britain realizes the grandeur of her duties towards her Eastern dominions. And this, by God's help, she *has* been doing of late more than ever, and will, we believe and hope, continue to do more and more. The interests of the people of India can never now be what they have often been—objects of indifference to the people of England. The end of the mutiny marked the beginning of a new era in Indian history, which promises to be one of such just government, political freedom, commercial enterprise, enlightened education, and wise missionary effort, as will a thousand-fold recompense us for all the sacrifices of the war by which such results have been secured.

Nor, in reckoning up those results, can we overlook one which is apt to escape our notice; and that is the influence which the courage of our countrymen in India must exercise upon future generations. It appears to us that the hand of God was never seen more clearly revealed in history than in those men whom he raised up to preserve our rule in India; in the power, wisdom, and bravery with which he endowed them; and in the deliverances which he vouchsafed to them. And should the day ever come when a degenerate people are disposed from enervating sloth to succumb be-

* It has been computed, by the best authority, after careful examination of details, that the Crimean War, directly or indirectly, caused the loss of upwards of 800,000 to Russia, 120,000 to Turkey, 85,000 to France, 60,000 to Austria—by disease, in her army of observation—and 26,000 to Great Britain. It is not generally known how small our loss has been, in comparison with that of other nations, who are not in the habit of revealing, but of concealing their calamities.

fore difficulties, from selfish fear to fly from danger, or in despair to give up their national power and privileges,—then may the story of the march of Havelock to Cawnpore, or the defence and relief of Lucknow, with the memories of the indomitable few who everywhere battled against the fearful odds, stir up the last drop of blood in their hearts, and nerve them to act worthily of such an ancestry, and to quit themselves like men! No war is in vain which thus strengthens the self-reliance, the self-respect, and the independence of a great nation, consecrated by God for high and holy purposes on earth.

It is premature, perhaps, for us to calculate the gains to mankind from the Italian campaign, or from the civil conflict now raging so fiercely in America. But as regards Italy, the creation of a free nation

out of small states, crushed by civil and ecclesiastical tyranny, and the check given to the Papal power, are results already visible, and more than sufficient to repay the losses of Solferino or Magenta. As to America, there seems to be but one opinion, that whatever be the issue of the war on the union of the North and South, the institution of slavery, which occasioned that war, is doomed to perish as its certain result. The fearful losses in this most fierce and bloody conflict will thus in some degree measure the magnitude of the evil which was its proximate cause, and of the good which will be its ultimate effect.

“The Lord reigneth; let the people tremble:
The Lord reigneth; let the earth rejoice.”

THE CHILDHOOD OF JESUS.

THE childhood of Him, who is the Perfect Man, must needs be the ideal of all childhood. But who can imagine or describe it? Our minds feel irresistibly attracted to that wonderful flower, whilst still in its mysterious bud—but the reverence with which we regard every child—“God’s problem, waiting man’s solution,” is increased a hundredfold, when we think of that holy child Jesus, the Immanuel, who is from above, the Son of the Most High. A divine history requires a divine historian; and therefore while we turn with aversion from the clumsy and foolish stories in which apocryphal Gospels represent the child Jesus performing miracles and uttering wonderful mysteries,—narratives in which we recognise neither the character of human childhood or the glory of Divinity, we welcome with delight the account given us in the inspired Record; for though only a single incident, it throws sufficient light on the years which preceded it, and on the period which separates it from the three years of His ministry.

Jesus was twelve years old. According to Jewish custom, this was the age at which the sons of Israel were admitted to take personal part in the religious services: they were then called “Sons of the Law.” Hence it was, that for the first time Jesus was now permitted to accompany his parents on their yearly journey to Jerusalem at the feast of the Passover. The child Jesus may have often looked with intense interest on the pilgrims, as they met in the streets of Nazareth; and when he heard them speaking of Jerusalem and the temple, and the beautiful ordinances of the house of God, doubtless he looked forward with joyful—though not impatient—expectation to the time, when he also would see the city of his Father David, when his feet also would stand within the gates of Jerusalem, and he would keep the feast with the multitude with the voice of joy and of praise. Behold, then, a band of pilgrims from Nazareth to Jerusalem, and hear them singing the beautiful psalms, which describe so appropriately the feeling of the true Israelites towards the holy city:—“I was glad when they said unto me, Let us go into the house of the Lord. As the mountains are round about Jerusalem, so the Lord is round about his people from henceforth, even for ever.” The Lord’s

people spoke to each other of the great things which God had done for Israel in the time past; some perhaps were explaining to the young the meaning of the Paschal lamb, while others were conversing about the great promise to the Fathers, and encouraging each other to wait for the consolation of Israel. They knew not that He was among them, even the Angel of the Covenant, whom they desired.

They have reached the end of their pilgrimage. They are in Jerusalem, in the temple of God. What must Jesus have felt, when he beheld now what he had so often read in the Holy Scriptures, and heard from his mother Mary, and Joseph, when he saw the altar, and sacrifices, and priests, and all the symbols of divine appointment and mysterious import! We read of another child who ministered unto the Lord and heard his voice in the temple, but a greater is here than Samuel.

The days of the festival are over, and the pilgrims prepare for their journey homeward. Jesus remained in Jerusalem, and it is only after a day’s journey that his parents miss him. It may be asked, how was it possible for them to lose sight of him? They may have thought that some of their relatives and friends had taken care of him; the wisdom, meekness, and obedience of the child, may have made them less anxious about his safety; they could trust him, for there was no foolishness and self-will bound up in the heart of that child. But the circumstance has a deeper meaning and truth. While Mary is bound to Joseph and her family circle, Jesus follows the attraction of a higher world, of a sphere in which he was always and perfectly at home. But who can describe the anxiety of Mary, when she did not find Jesus among their friends, and when her search for three days remained fruitless? Precious as a child is to its mother, no child ever was like him, and no mother’s affection could have been like Mary’s. Intrusted to her care, sent to her by God, that she should watch over and care for him, who was not merely her child, but the Redeemer of Israel, the King on David’s throne—how could she ever lose sight of him even for a moment? Was it not her chief, her only duty, to be his protector and guardian, to be near him constantly, and shield and

bless him with her love and tenderness? What anxious thoughts and forebodings, what agonizing self-reproaches must have passed through her mind! Was this the sword which Simeon had prophesied would pierce through her soul?

Where did they seek him? Where we should seek a child who for the first time has come from a small and quiet provincial town to the metropolis. Jerusalem, at the time of the feast, we are told, accommodated about two millions of people,* from all parts of the country. The child would be attracted by their costumes, physiognomies, different dialects, and be likely in some crowded market-place. The buildings of the great city were thought another probable attraction. But nowhere can they find him. At last, though without sanguine expectation, they turn to the temple. The services are over, the imposing ceremonial at an end. Why should he still linger about its precincts? But it was there, in one of the chambers which were built round the temple, that they found him, sitting in the midst of the doctors, both hearing them and asking them questions! As a child he listened to them with docility; out of the depth of his pure God-loving soul he asked them questions which astonished them; for they revealed the wonderful insight which he possessed, and the penetration peculiar to the spiritual and heavenly-minded. When he had reached his mature manhood it was his custom to ask questions, which were sharp and pointed, and pierced through the mass of prejudices and sinful sophisms to the very kernel of the matter. Have we not every reason to think that in this respect also the child was father to the man, and that his questions went home to the consciences of the teachers, while those among them who loved the light, beheld in Jesus a child like Joseph, Samuel, or David, gifted from his most tender years with divine wisdom and grace? Jesus himself regarded the doctors with veneration, as men who had devoted themselves to the service of God and study of the Word—and in many respects he derived information and instruction from them. Yet even then he must have felt, that in their expositions of Scripture they did not understand the power of God.

Mary and Joseph are amazed when they find Jesus among the scribes, the centre evidently of that grave and learned circle. Mary, in the fullness of her heart, while Joseph remains silent, cannot restrain herself, and asks: "Son, why hast thou thus dealt with us? behold, thy father and I have sought thee sorrowing." As if she said: Thou hast never given me a moment's pain or uneasiness; never has one act of disobedience for a moment clouded my peace, or disturbed my joy in thee; I had never to find fault or to correct. Even now I can scarcely think of it. But why hast thou acted in so strange and unaccountable a manner? We have been full of grief and anxiety on thy account for three days!

But if Mary was astonished, the holy child was still more astonished. How was it possible for them to be in uncertainty or doubt about him? "How is it that ye have sought me?" Is not this

temple, where God is served, and where his word is studied and explained, the place where the child of God has his true home, his most precious joy? Where else could he be? Here time is not felt; the whole world is forgotten. In his astonishment a new thought is presented to his mind—an idea which as yet had lain dormant within him, now awoke and came clearly to his consciousness,—even this, that he was different from others, even from his good mother Mary—and while she spoke of Joseph as "thy father," Jesus asks, "Know ye not that I must be in the things of my Father?" As afterwards he never used the expression "our Father," when speaking to his disciples, but knowing that he was the only-begotten Son of God, always said either "my Father" or "your Father," so now he feels, though not in full or perfect development, that he is from above, and above all, the Son of God, who loves the Father with an undivided heart, and lives by and with the Father. Must I not be—is it not a necessity of my nature—is it not an essential element of my life—is not the very joy and delight of my soul in the things of my Father? True, the direct reference is to the temple, my Father's house, where my Father is worshipped, where his name is hallowed, where his truth is taught. But the meaning of the expression is the same, as when afterwards Jesus calls himself the Son of Man, who is in *heaven*, whose affections and thoughts, whose citizenship and treasure, whose strength and wisdom is in heavenly places—in the secret place of the Most High.

Mary and Joseph understood not the saying which he spake unto them: they understood it not fully and clearly, yet the words had made a deep and lasting impression, especially on Mary, who kept them in her heart. True, from the very beginning the angel had revealed unto Mary the great mystery of godliness, and with humble faith she had accepted the message. True, in the adoration of the wise men from the East and of the shepherds, in the majestic prophecy of Simeon, as well as the joy of aged Anna, who with renewed youth, as if on eagle's wings, brought the glad tidings to all the faithful of Jerusalem—she had abundant confirmation of the Divine word. But the child Jesus was in all things so like any other child—except sin,—his development was so normal and gradual, that the thought of his Divinity was put into the background. Moreover, Mary's maternal affection would rather dwell on the human aspect; she wished to look upon that wonderful child as *her* child—she wished to keep him as her own. The sword, which was to pierce through her soul—what wonder, she kept away from it as long as possible? When Jesus said, "Must I not be about *my* Father's business?" she doubtless vaguely felt, what afterwards was more fully revealed to her at the marriage feast of Cana, and still more clearly when Jesus, on being told that his mother and brethren stood without, desiring to speak with him, answered, "Who is my mother? and who are my brethren? And he stretched forth his hand toward his disciples, and said, Behold my mother and my brethren!" And finally, when Jesus on the cross saw his mother, and the disciple standing by whom he loved, he saith unto his mother, "Woman, behold thy son!

* We know that it will accommodate yet a far greater number in the golden days spoken of by the prophets.

Then saith he to the disciple, Behold thy mother !” In these words Jesus dissolved the peculiar bond which had subsisted between him and her whom all generations call blessed ; here she realized fully that she had to lose him as her son ; and though afterward she found her loss abundantly compensated by gaining him as her ever-near Consolation and Saviour, yet at the time the sword, which to a mother’s heart was the most agonizing, pierced her soul. But the commencement of the solving of the tie was in the temple at Jerusalem.

It was a merciful and all-wise Providence, which partially obscured the brightness of the revelation which had been vouchsafed to Mary. Jesus was to be like unto us in all things ; he was to grow and develop, mentally and morally, as well as physically, according to the laws of our nature. It behoved him, the Perfect Man, to be also a true child. But if Mary had possessed a distinct and clearly defined consciousness that Jesus was different from all other human beings, it is obvious that this would have been a disturbing element in her relation to him, in the position in which, according to the Divine plan, the Saviour had to be placed, in the quiet, and if we may so say, natural development of the Divine child. In order that Jesus should be a true child, and have a true mother, and grow in stature and wisdom, and in the favour of God and man, it was necessary that Mary should only gradually and dimly see his heavenly glory,—she pondered in her heart, she kept as a mysterious treasure, the indications of his real glory and majesty.

Wonderful child—so different from all other children who were ever born into this world ! For even they whose childhood has been calm and pure, who have been blessed with an early knowledge of God and his love, have not merely to confess with David, “Behold, I was shapen in iniquity, and in sin did my mother conceive me,” but have likewise to pray, with the same man of God, “Remember not the sins of my youth !” Samuel was dedicated to the Lord from his infancy ; yet of him also it is said, that he did not yet know the Lord, neither was the word of the Lord yet revealed to him. But Jesus, born without sin, had a perfectly pure and spotless childhood, and when he came to the house of God he required no Eli to direct him to the Father ; no revelation was necessary ; being pure in heart he saw God. Yet was he a true child. Whatever is lovely and attractive in the weakness and dependence, in the guilelessness and trustfulness, in the unconsciousness and simplicity of childhood, he possessed in perfection. When we see him among the doctors, asking them questions and answering, his attitude is that of a child ; and the question, which he addresses to Mary and Joseph, though it contains in the germ the declaration of his Divinity and heavenly-mindedness, is child-like, in his astonishment at the difference subsisting between him, who could not separate himself from the house of God and the children of men, whose souls still cleave to the dust. But still more wonderful and beautiful is the fact, that after his conversation with the doctors, who marvelled at his understanding and answers, and after the bright and sudden light, which revealed to him his heavenly

character and peculiar relation to the Father, quietly and meekly—free from all feverish excitement of ambition, free from the disturbing recollection of the admiration of teachers and rabbis—he returns to Nazareth, and was subject unto his parents ; so perfectly pure was his love to God—so unselfish and unmixed his obedience to the Father, and his delight in his ways.

That home in Nazareth, where Jesus increased in wisdom as well as stature, had been prepared by Infinite Love for the future Teacher of Israel and Saviour of the world. As the first Adam saw the light of life in Paradise, Jesus commenced his life on earth in a garden planted by the Lord, among beautiful trees of righteousness.

Mary was a true daughter of Abraham. For if Abraham is an eminent type of the character, power, and victory of faith, in that he believed and hoped against hope, clinging with child-like trust and humility to the word of the Most High, it is in vain we seek for a more glorious manifestation of Abraham’s faith, than is presented to us in the reply which Mary gave to the angelic message : “Behold the handmaid of the Lord, be it unto me according to thy word.” She is a true daughter of David. She possessed the royal spirit of adoration and joyous praise ; and when we hear her hymn, “My soul doth magnify the Lord, and my spirit hath rejoiced in God my Saviour,” is it not as if all the grand and beautiful chords of David’s harp were blended together in still sublimer harmony, as if all the Psalms were concentrated in one majestic and glorious Psalm of Psalms ? Mary, a true daughter of Abraham and of David, is the type of the poor in spirit, the meek and lowly, who are rich and strong in God. In Joseph, Scripture teaches us to see the just man delighting himself in the law of God, a man perfect and upright, one that feared God and eschewed evil, an Israelite indeed, in whom there is no guile. May we not say that Joseph represented the Old Testament in its legal, Mary in its prophetic aspects ? Doubtless the Word of God was diligently studied in that household. Our blessed Saviour showed in his subsequent life the most intimate acquaintance with the Scriptures, there being scarcely a book of the Old Testament to which he does not more or less directly refer. Of him it can be said, in a higher sense than was true of Timothy, that from a child he knew the Scriptures.

And beside the education given him by Joseph and Mary, the instruction of the Divine Word, the influence and teaching of the Sabbath services, the ordinances of the law, Jesus with the eye of love and heavenly purity read in the book of nature, and looked on men and things around him. He considered the lilies of the field and the fowls of the air ; he watched the clouds of heaven and the red sky of the evening ; he saw the sower going forth to sow, and the shepherd leading his flock ; he beheld the bridegroom in his joy, and the widow in her sorrow ; he knew the playful mirth of children, and the dealings of men with their fellows ; he saw nature and life, and in all things emblems of spiritual realities and heavenly truths ; it became to him a treasure of golden wisdom ; it was to him nourishment and

help on his way to the great work, which was before him. Thus he increased in favour with God, who beheld with infinite delight the gradual development of the Son of his love; he found favour also with man,—more beautiful than Joseph, than David and Daniel; none beheld him without admiration and joy.

It may appear strange, that of the short period of time, which, according to the counsel of God, the Word was to dwell among men, thirty years were spent in obscurity in Nazareth, in the house of Joseph the carpenter. But even as it had pleased God to leave Moses forty years at Pharaoh's

court, and forty years in the land of Midian, and thus to teach and prepare him for his great work, in a way which human wisdom would not have chosen, so it seemed good to the heavenly Father, that, far from the glare of the world and the influence of Pharisees and Scribes, in a poor but godly and blessed house, under the influence of true Israelites, the study of the Word and of the Book of Creation and Life—Jesus should live and think and walk before and with him, until the day when he went forth among Israel—the promised Prophet and Redeemer of his people.

ADOLPH SAPHIR.

THE TRIAL SERMON.—By M. C.

CHAPTER I.

THE clock on the chimney-piece had just struck eight, when one of the wealthy merchants of our money-making city, having finished a successful day's work in his counting-house, and lingered for an hour or two over his luxuriously arranged dinner-table, rose with a well-pleased expression, and retired to his favourite retreat, a tastefully and very handsomely furnished library, for an hour's rest and solitary enjoyment, leaving his wife and daughters in possession of the more gaily decorated drawing-room.

As he seated himself in a wide and amply-cushioned easy-chair beside the bright fire, and drew towards him his carved oak reading-stand, on which lay several uncut periodicals, and an ivory paper-knife, he glanced complacently round the darkly-curtained, softly-lighted room. His eye took in with great satisfaction the well-filled bookshelves, the heavy oak-cornice, the few choice carved busts whose presence he permitted, and the great bronze timepiece which never erred by so much as a second. His thoughts were something as follows:—

"Well, it really is a comfort to have such a room to come to after the work I have done to-day. Now if I had only a little more time to devote to literature, I certainly should have been a great student. As it is, even, I am afraid I'm too fond of these books, and of spending my time in study here. (Query—Was it the comfort of the room or the hard study that was so congenial to Mr. Huntly's taste?) What a first-rate position I should have had as a literary man! I almost wish I had let the business go to the winds; such talents as mine were never meant for a counting-house; but I'll make Fred and George scholars at any rate. Come in."

The last two words were uttered aloud, and being addressed to some one outside the door, who had given intimation of his presence there by two slight knocks, were followed by the entrance of a footman, who, having handed a letter to Mr. Huntly on a small silver tray, immediately retired.

Mr. Huntly carelessly opened the envelope and glanced over the paper. It was a short note, but its contents had the effect of somewhat ruffling his brow, and drawing from him as he read several impatient ejaculations.

When he had finished it, he slowly and deliberately folded it up, and placed it again in the envelope, and, still holding it in his hand, he rose, and

going to the drawing-room, handed it to his wife, saying, "Really this is provoking! After all the expense I have had with these boys, to have Dr. Blunt always complaining of them—idle little rascals! and to be plagued at this moment, too, when I had just settled myself for a little quiet study. It's too bad. I wonder why my boys have all such a dislike to books and study. The girls do well enough, though, to be sure, they never were very good at their books; but I have to set my mind on these two being scholars. Though I doubt it is not in them," he added with a sigh.

By the time this speech was concluded, Mrs. Huntly had read the letter, and looking up to her husband with a countenance which betrayed even greater anger than his, she said quietly, "Well, Walter! and whose fault is it that the boys' lessons aren't prepared?"

"Whose fault is it? I suppose it's their own?"

"By no means, my dear, if I rightly understand what you pay Mr. Graeme so highly for."

"Oh! Graeme can't make them learn if they won't do it. The truth is, as I said before, it isn't in them. I believe they're desperately stupid. Mr. Graeme is an excellent tutor; not a boy at all, but a person quite fitted to teach them entirely. At least I was told he was, and so far as I can judge he bears it out."

"Oh, well! if you choose to put it that way, I can't help it; but it's rather a hard thing to hear a father abusing his own children; and such children as they are too." And as she spoke Mrs. Huntly put on a highly-injured expression.

Her husband looked vexed, but only said, "There are a good many hard things in this world, my dear. At any rate I had better get Mr. Graeme and show him this. I will go to the library, and send for him and the boys; I suppose he is with them now, and they can go over the lessons before me."

"And see," added Mrs. Huntly sharply, "that he doesn't leave till they can say it perfectly."

"Well, I'll try; but you know we don't pay him by the amount of work he does, but for the time he gives. He has been longer than two hours to-night already."

"Nonsense!" was the concise answer to this last remark.

Mr. Huntly just heard it as he left the room. Then the door closed, and the ladies were at liberty to go on with whatever employment or improving

conversation had been interrupted by the father's presence.

Mrs. Huntly threw herself back on the sofa, and returned to the perusal of the novel which she had been obliged to lay down while her husband was speaking.

Miss Jemima, the beauty of the family, looked up for a moment from the cushion she had been embroidering for the last two or three years, and remarked, "that she never thought Mr. Graeme would do for the boys. Those plain-looking men never had any influence."

Miss Bella, who, in virtue of having once learned to decline "Penna," considered herself something of a judge in matters of scholarship and education, answered with a smile of calm superiority, "Indeed, Jemmy, you know nothing about it. He certainly has not two ideas in his whole head, and

I don't think he knows much about Latin, at least he can't converse about it, for I tried him the other night; but he has more influence over the boys than anybody else. They wouldn't learn for anybody, but now they sometimes try to learn a little for him."

Miss Hetty, the youngest of the three, whose almost constant occupation was petting and fondling a little brown spaniel, and who had apparently been too much engaged carrying on an imaginary dialogue with it to notice what was going on, burst into a laugh at this speech, and shaking back from rather a pretty face a profusion of fair curls, cried, "Now, Jem and Bella, I'm wiser than both of you put together for once. Jemmy thinks he's too ugly to teach, and Bella thinks he's too stupid. Now, I think—I'm sure I know the reason he can't—he's—what will you guess is my reason?—he's—he's—in love."

"Mr. Graeme in love, you silly child!" Nevertheless both sisters looked rather conscious. Miss Jemima recollected that the day they had asked him to dine with them (a never-to-be-forgotten piece of condescension), he certainly had looked at her rather more than was proper for a young man in his position; and Miss Bella was quite sure he had been much struck with some remarks she had made about the boys' education. He certainly was plain, she thought, but plain men were sometimes very clever, and he was a gentleman; so that, taking the fact into consideration that she never had had very many admirers, she was rather pleased at the idea of having one more, though "of course," as she said to herself, "it was very forward in him to think of such a thing."

This being the case, she was not quite prepared for the next remark of the lively sharp-witted Miss Hetty. "You needn't blush or look prim, either of you, for it is none of us he's in love with. If he ever admired one of this family, it was me. You are both ten years too old for him; but he has got over it. I let him see at once that such a thing was quite out of the question; so he gave it up, and now he has been rewarded for his self-denial by finding a person who will suit him exactly."

"How you do run on speaking nonsense, child!" interrupted Miss Bella, in an irritated tone. "One would suppose from your way of talking that he had proposed to you, been refused, and had afterwards made you his confidante."

"I have a much more certain proof than anything he could have told me. I met them walking together yesterday, and he was talking so earnestly to her, that he hadn't the grace even to see me."

"That's all your proof, is it?" cried both her sisters at once. "Just as likely it was his sister."

"It wasn't his sister."

"How do you know?"

"In the first place he has only one grown-up sister, and I have seen her—a little square black thing like himself—and this person was tall, I think, and fair and thin. Then, from experience, I know that young men are not generally so attentive to their sisters as he was to this person; and, in the third place, he parted from her at the door of a lodging quite out of the direction where he lives."

"Well, if it is true, it shows how extremely silly he is to get engaged to any one, or even to fall in love with any one just now. But it's always the way with these poor men. They will marry though they have not a sixpence," said Miss Bella.

Hetty paid no attention to this remark, but went

on laughing. "Oh, girls, I wish you had seen her! She was such a figure—dressed like nobody one ever meets anywhere—such an old black silk gown and a black-and-white plaid shawl; and—crinoline decidedly defective—and—a straw-bonnet with the least bit of some dark ribbon on it."

"His servant, or an old aunt in decayed circumstances, no doubt," suggested Miss Jemima.

"Don't be tiresome, Jem; she wasn't his servant. I'm not so stupid as some people think me. She was a lady. I'm quite certain about that; and she was not old; she did not look half your age."

"Hetty! you are extremely impertinent. You forget that I am your eldest sister."

"I don't, indeed. I just remember it particularly well at this moment."

To this Jemima gave no answer except a sulky frown; and Miss Bella, apparently tired of the subject, took her seat at the piano, and began to sing in a loud soprano voice one of her numerous Italian songs. In this accomplishment she stood unrivalled among the sisters; consequently, she always betook herself to the piano when she felt, and particularly wished them to feel, that she was much superior to either of them.

Mrs. Huntly, who never found fault with her daughters till the occasion for it was over, as her word never had the slightest effect on their conduct, thought it time now to interfere; so, laying down her book, she called out, "What do you mean, girls, by all this noise and quarrelling? I'm perfectly worn out with hearing it. Hetty, you are really very rude to your sister. Bella, you should have begun your music long ago; the evening is almost over."

Bella, as I have said, was by this time singing energetically, and Hetty had returned to her amusement of stroking and fondling her dog; so that Mrs. Huntly's reprimand was now useless, except as a satisfaction to her own conscience and her temper.

While this conversation was going on in the drawing-room, Mr. Huntly had returned to the library, rung the bell, and ordered the servant to ask Mr. Graeme and the young gentlemen to speak to him in the library.

"Mr. Graeme is just going out, sir. He was at the door when I came up stairs."

"Go quickly, then, and tell him to come here. I must see him to-night." And the servant left the room to deliver his message.

While Mr. Huntly waited for their appearance, he felt rather nervous at the idea of finding fault with the tutor, who had been highly recommended to him, and was, so far as he knew,—which was a little but not much more than his daughter,—a very thorough scholar, and a very careful teacher. Besides, as we are aware, he had some misgivings about his boys' capabilities for learning, though he scarcely liked to acknowledge this even to himself. So he did as people who feel nervous generally do, he first stirred the fire repeatedly, and then walked up and down the room impatiently.

The sounds of shouting and romping which reached his ear from the boys' schoolroom, did not, in the light in which he at present regarded them, serve to compose his spirit, and it

was with a considerably ruffled manner that he met the tutor, who, obeying the peremptory summons he had received, now entered the room, followed by his two young pupils.

Certainly the contrast in appearance between these two, the master and the tutor, as they stood together, was very great. Mr. Huntly was a tall well-proportioned man, somewhere above fifty, with a handsome, rather florid face, and hair, though grey, still in exceedingly good preservation. In dress he was always unexceptionable.

Kenneth Graeme was not handsome, far from it. He was not tall, and though he looked thin and worn, his figure was somewhat square in proportion. His face, however, was decidedly striking, though also decidedly plain. It was difficult exactly to see where lay its attraction, but it was somewhere. The forehead certainly was good—broad, white, and straight, and the dark, deeply-set grey eyes turned on you with a very earnest sincere kindness of expression. All the other features were clumsily cut; the colour was sallow; the effect of the whole, as I have said, at first sight, plain. Poor fellow! there were times when he felt painfully conscious himself of its defects. They were not such times, however, as this. Oftener it was when he was praised than blamed. Though only twenty-six, hard study and much wearing anxiety had already streaked his dark hair with grey in many places, and deeply lined his cheek. Still it was a pleasant manly face. It expressed great kindness of nature; and in it, too, there was unmistakable talent. I liked that face and figure when first I saw them. With all their want of grace and outward beauty, there was a charm about them. I liked them always. I like them still.

Mr. Graeme's dress was extremely shabby; just barely keeping within the bounds of respectability. It told of a hard struggle with poverty; yet it was undeniably respectable; it was the dress of a gentleman.

Master George and Master Fred, two stout pleasant-looking boys, with round rosy faces, certainly betokening little of the scholar, and a restless spirit of fun glancing out from their bright eyes, stood beside him, looking up at their father's angry face with some terror.

They had been warned beforehand by Dr. Blunt, their Latin professor, that he intended to let their idleness be known; and from this unwonted summons, and a glance at the note in their father's hand, they gathered that a storm was about to burst on them.

Mr. Huntly began the proceedings by putting this note into Kenneth Graeme's hand, and as soon as he had finished reading it, saying sternly, "You will understand from that the purpose for which I have sent for you to-night."

"I do, sir, and I most exceedingly regret it. I have done my very utmost to prevent it; but I see I have failed."

"What is the meaning of it? Are the boys always thoroughly prepared by you at night?"

"In general I think they are; but there are times, as to-night, when I come at seven, the time you appointed, and find the boys have gone out. This evening they did not come in till eight had struck. I remained till half-past nine, and I think

they know the lesson for to-morrow now, though I cannot be sure. I cannot often remain half-an-hour after my time. To-night I was exceedingly desirous to be home soon."

Mr. Huntly turned immediately to the boys, and struck them dumb with terror by a threat of future punishment. Then he said, "I suppose, Mr. Graeme, you have no objections to wait a few minutes longer, that they may read the lesson to me? I feel unsatisfied about it."

Any refusal would undoubtedly, as Mr. Graeme well knew, have been at the risk of losing a situation worth about twenty pounds a year; and small as the sum was, he was too hardly pressed by poverty, he had too many to provide for besides himself, to let it go. Still it was very difficult. He had work to do which would already keep him up nearly the whole night; his presence was very necessary in his own home, where one very dear to him lay dangerously ill; and he had already been delayed more than an hour beyond his time.

After a moment's hesitation, however, he determined, thinking that the boys could scarcely fail to know the lesson, to wait and go over it with them again, as Mr. Huntly had requested; so, calling them in an encouraging voice to his side, he opened the books and began his examination.

Mr. Huntly, as I have said, did not know much about Latin or Greek, but on the present occasion he thought it more edifying for both teacher and scholars that he should look as if he did; so, seating himself again in his easy-chair, he put on his spectacles, took one of the books in his hand, and fixed his eye sternly on the little group.

More and more stern he became as the lesson proceeded. It certainly was anything but a creditable performance. Hurriedly learnt, it had been immediately forgotten, and the boys were either too sleepy, too stupid, or too frightened, to understand it now.

It was in vain that the tutor explained, repeated, and questioned. No answers could he get, or only such as provoked the father even more than the silence. It soon became evident that the task was hopeless, at least for that night; and at last Master Fred, wearied and stupefied by trying to understand what, with all his powers of mind fully awake, he could scarcely overtake, fairly gave himself up to despair, and burst into a loud fit of crying.

This was more than Mr. Huntly's patience could stand. To find his boys below average in ability was bad enough, without finding them also so destitute of manliness as to cry over a hard lesson; so, starting up from his seat, and pushing aside the tutor, who was trying to quiet and encourage the child, he seized Fred by the shoulder, and giving him a hearty shake, exclaimed, "You little whining dunce, you'll never be good for anything. It's just an utter waste of money paying for schools, or tutors, or anything else for you; go to your beds, both of you, and don't dare to appear before me again till you can say your lesson. I will hear you myself to-morrow, at ten, and if either of you makes a single mistake he'll get a thorough flogging." He followed them to the door, which he closed after them, and then returning to his seat, said coldly, "Do you call that preparing the boys for school, Mr. Graeme?"

"I do not, sir; but I have already explained how it happened to-night."

"Why did you not inform me that the boys were in the habit of staying out after seven?"

"Mrs. Huntly requested me not. She said that you could not be disturbed about them, and that all complaints of them were to be brought to her. I have mentioned it several times to her, but the practice has not been discontinued."

Mr. Huntly looked considerably annoyed, but said nothing more for a moment. Then he began hesitatingly, "By the by, Mr. Graeme, when does your engagement with me terminate?"

"The end of next month; but, of course, if you are dissatisfied I shall give it up at once."

"Dissatisfied! I don't know that I am dissatisfied with you; but you see yourself it's doing no good. I'm afraid these boys cannot learn."

Kenneth Graeme felt that he could not justify himself by pleading the incapacity of the boys, so he only said, "I hope, sir, they will learn in time. As to myself, do not allow any engagement with me to stand in the way of your making any other arrangement."

"Of course; I'll not get any person better. I am sorry, Mr. Graeme, to have kept you so late. Good evening."

Kenneth, exceedingly glad at last to be free, left the library, and, startled by the sound of the clock striking eleven, was hurrying to the door, when Fred and George, who had been watching their opportunity, ran down stairs to him, and, with the tears running over their round rosy cheeks, begged that he would come in for a quarter of an hour in the morning, to help them with the formidable lesson.

Kenneth's habitual kindness and indulgence to these two, whom he rather liked in spite of their idleness and stupidity, had made him do this for them once or twice before, so they had no hesitation in asking him to do it this time; but they were not prepared for the answer he gave them.

His face was pale and his manner agitated as he said, "Come again to-morrow morning! Boys, the thing is utterly impossible and out of the question. Don't ask it. I cannot come again till to-morrow night, and even that is difficult enough. You can easily learn the lesson if you set yourselves to it."

"Oh, Mr. Graeme, we cannot learn it without you. I don't understand a word of it," said George.

"We shall both be whipped, I'm sure," sobbed Fred.

"You won't be whipped if you do your best, boys; but I must go."

Fred still held him, and, looking up in his face, pleaded again, "Papa doesn't know when we are doing our best. Unless we do it perfectly he thinks we are not trying. Do come just this once, and we'll never go out again at night."

Kenneth sighed wearily. "Poor fellows," he said, "you don't know how difficult it is for me to come. I have more to do than I can possibly do; but still," he added, looking down at the tearful face beside him, "I should not like you to be whipped. I'll try to come, then, just for a minute, at eight to-morrow. Be sure you are ready for me."

"That's good," whispered George, while Fred gave a subdued shout of delight, and the troublesome little pair rushed up stairs, fearful of being seen by their father; and in ten minutes more both were in bed and sleeping soundly, forgetful of all the tortures of Greek and Latin.

Kenneth looked after them as they disappeared, and then opened the hall-door and went out, saying to himself, "It isn't fair. I should not have yielded to them. It is not doing justly either to myself or my family to give up my time that way; but I couldn't refuse them, poor fellows."

CHAPTER II.

It was a cold wet night, and a sharp east wind blew directly in his face, as Kenneth, leaving the handsome square of houses where his employer lived, walked rapidly in the direction of his own dwelling.

Passing all the better houses of the city, after a walk of more than half an hour, he reached a narrow dull street, with high houses on each side. Evidently, from their appearance, they were let in flats, and were occupied by a class of people who were not rich. A few shops mingled with the dwelling-houses, gave a still greater air of plebeianism to the whole. As he turned into it, it was not certainly inviting. Nobody would have lived in it except from necessity. The hour was so late that no one was abroad, except the night-watchman of the district, going on his monotonous round. There was no sound, except at one part of the street, where, the shutters of a room being unclosed, a bright light flashed from the inside and fell slanting across the dark street. From the window, which was partially opened to give air to the close and crowded room, the tones of a lively tune, played on a cracked and jingling piano, reached his ear, mingled with the regular tread of somewhat heavy and vigorous dancing. Yes, even in these poor houses there were days of merriment and times of feasting. Through that doorway, a few hours before, a happy bride had been led forth by her husband, and the event was deemed worthy to be celebrated by a ball. They had forgotten their poverty, forgotten that a great gulf lay between them and the city aristocracy, and for a time all care and anxiety were cast aside. It is true, and well for us, that into each life, however sad, "some drops must fall" of gladness to mingle with the showers of sorrow. That very family had had sorrow enough, and had known well enough what it was to endure poverty and sickness during the past year; but to-night—would any of them have changed places with the wealthy prosperous family of Walter Huntly?

But as Kenneth Graeme passed this house the music fell sadly enough on his ear, and a bitter exclamation rose to his lips at the thought of how few such days he had seen—days of home-happiness, I mean, not days of gaiety; for that he cared but very little.

But with the Graemes life was too much of a hard struggle for life just now to allow much happiness. Poverty with them was not merely in name. It was the actual staring, grim, health-destroying, brain-racking want of food and clothing,—almost

of shelter; and this to people who, till within the last two or three years, had looked upon plenty as a necessity.

The history of the family was the sad but too often told story. Kenneth's father had lived and brought up his family in the midst of every luxury, and died—a bankrupt.

When the sharp blow fell, Kenneth had nearly completed his studies in preparation for the Church, which had all his life been the profession on which he had set his heart. From his very childhood it had been the dream of his life. All his studies, even all his amusements, had had a reference to it; and as he grew to manhood, his longing desire for it, and the influence it had over his whole character, seemed to grow only stronger and more decided.

Well knowing this, the first thought of the family was, "Would they struggle on for two years longer, and allow Kenneth to finish his college course?" His mother would have done much, but this was impossible. Had she even wished it, he would not have accepted the sacrifice. As it was, the idea was at once thrown aside. Kenneth felt that on him, as the eldest son, lay the duty of providing for his mother, his sisters, and his young brother, and earnestly he tried to fulfil that duty.

With some slight assistance he succeeded in obtaining a situation in a merchant's office, and at the age of twenty took his place as the head and sole support of his family.

How uncongenial to all the tastes he had formed was his employment; yet no complaint was ever heard from him. To his mother and sisters he was always cheerful, always pleasant, always kind. Alone in his room, he spent hours of the night in study—hours in forming plans, only to be laid aside at once as impracticable, for finishing his course of theological study.

But years passed away, and he was no nearer to his purpose; all his hopes were fast fading, and already he had learnt to look back almost without regret on the bright dream of his youth from which he had been so roughly awakened. One day, he was, without warning, summoned to the presence of a rich relative, who seemed till then almost to have forgotten his existence, but who now, urged by some sudden whim, announced to the young man his intention of sending him back to college, and supporting his family while he was engaged in his studies.

Kenneth's desires, though subdued, had not been driven out, and in his gladness at the prospect again so unexpectedly laid open before him, he could make no objections. Even the pecuniary obligation he did not feel to be a strong enough reason for declining, and so, everything being settled, he found himself, after an interval of four years, again treading the familiar old college court—taking his seat on the well-remembered bench in the Divinity Hall, and looking round for the faces of those who had been fellow-students with him when last he sat there.

How far before him they had all reached in the battle of life! There was no face he could recognise; no voice that stirred old memories. Those who sat by him now he remembered as young boys—boys whom he used to look on as children—who used to come to him for assistance in their

Latin difficulties, and for whom he had cleared up the mysteries of many a mathematical problem. But now they were his equals. It was with them he had to run the race; and it was with them that he must seek companionship.

"What a worker Kenneth Graeme is!" was the frequent exclamation of his fellow-students. That was agreed to on all sides. He literally never was idle; every moment that could be spared from his studies was devoted to his work of teaching, that he might, if possible, lessen the expenses of his rich relative; who, being rather an eccentric gentleman, and holding the idle habits of the rising generation as a grievous mistake in society, laid no check on Kenneth's labours, but rather encouraged him to work beyond his strength, by making the allowance to the family quite insufficient to meet their daily wants.

But this did not dishearten the young man. He could work, and he did work manfully; he could want, and he did want with most stoic indifference. Evidently there was some strong secret spell urging him on. What that spell was—love for his profession—gratitude to his patron—or love for his mother, and the desire to place her in a position better suited to her habits and her birth—was not known. But whatever it was, it most thoroughly did its work of spurring him on to unceasing exertion.

Opinions were divided in the lecture-rooms about his abilities. Like those of every other lad, when once he enters the college walls, his were freely speculated on,—perhaps more than most, from his peculiar circumstances, his careworn, almost aged look, and because he was a decided favourite.

Some thought him remarkably talented; many thought him slow but sure—certain to get on; and a few very brilliant, showy lads, pronounced him rather below average.

In reality he was talented—decidedly so. Whether he had strength of will to make the best use of these talents remains to be seen. He himself felt painfully wanting in it sometimes; but that is not always a proof of its absence.

Eighteen months after this change of circumstances the gentleman who had given the Graemes such welcome assistance died suddenly, and again the family was left without almost any support except Kenneth.

Poor fellow! when he thought of his responsibility, he was hopeless enough. It was so hard to give up his studies a second time—and now when he had so nearly finished his course; and yet he felt that his strength was beginning to give way under the pressure now laid on it. Sometimes even the burden of thinking seemed more than he could bear. At this time he taught for eight hours every day; besides this, he had his college work, his college attendance, and his domestic duties, which were not light. How much time was left for rest either to body or mind may be imagined. To do more was impossible. Could they live for a few months longer on what he made in this way?

His eldest sister, Bessie, when he told her his difficulties, quietly answered, "I think we can, Kenneth. We would bear anything rather than that you should leave college again."

So they bravely determined, and so with much pinching and much struggle they had lived for four months; and now Kenneth, at last, had very nearly reached the end for which he had been labouring.

In another week he should, as the custom among the young clerical students in Scotland has long been, pass his last examinations, preach his trial sermon before the presbytery, and receive license as a preacher in the Church of his fathers.

How long and anxiously he had looked forward to this time! How deeply conscious he felt of his earnest desire to do good in the profession he had chosen!

Still he knew that many years might pass before any living was offered to him, before he was permitted to begin his high and honourable work, and the thought of how long he must wait, and how hard it would press on those he loved if he were unsuccessful, weighed heavily on his mind.

One evening, at this time, he had come in from his usual round of teaching, his head throbbing, and his whole body worn out with the double excitement of his day's work, and his preparation for his near approaching examination. He sat down, and began the composition of his trial sermon, about which he was morbidly anxious.

Fatigued as he was, and feverish from long-continued overwork and sleepless nights; depressed by the thought of how little he could depend on his future success, it was not wonderful that he was unable to write. Throwing down his pen, he had risen, and was walking restlessly up and down his room, when the door was gently opened, and a little fair-haired, delicate-looking girl, the youngest and the darling of the house, came in, holding in her hand a letter.

"Here, Kenneth, Bessie gave me this to give to you; and she said, might I stay beside you? and I would make no noise, for mamma has a headache, and she wants to be left alone, and Bessie is bathing her head, and Grace is hearing Willy's lessons."

Then, waiting for no answer, the child shut the door, and slipping softly into the room, curled herself up on a rug before the fire, with an old German story-book and a dictionary in her hand.

The sight of his little sister seemed to drive away some of Kenneth's depressing thoughts, for he took the letter from her with a smile, saying, cheerfully—

"Oh, Lena! how can you tell such stories, Bessie never told you to go away. You know it wouldn't have disturbed anybody for you to have read your German beside the parlour fire. But I'm glad to see you for all that, my dear child."

Lena looked up for a minute, and the bright smile faded from the little sensitive face as she said—

"It wasn't wrong, was it, Kenneth, in me to say that? I wanted so much to come beside you, and Bessie did say it would disturb mamma if I asked any questions about what I was reading."

"Not very wrong, my darling. Only, Lena dear, don't even in fun say anything that is not quite true."

The child's eyes filled with tears, and she came up to her brother's chair, "I didn't mean it for untrue, Kenneth. Please forgive me."

He stooped down, the dark masses of his hair mingling with the child's fair curls, and kissed her. Then he looked earnestly into her face, and said—

"Don't vex yourself, dearest. It wasn't untrue in one way; you certainly didn't mean to deceive me. Indeed, Lena, I don't see anything wrong that you have done, except that you are rather too fond of your tiresome old brother. You should go and play with Willy, and not sit reading these old German books so much. Sit down now beside the fire till I read my letter, and warm these little hands. Where have you been to get them so cold?"

"In the garret, looking for this book. I like the books there far better than those down stairs; they are so very old some of them. Do you ever go up there to get books to read, Kenneth?"

"No, Lena dear, I have no time."

"Oh, but they're not all children's books," said the child simply. "There are all kinds of books, with stories out of the Bible, and books with sermons in them. I like them better than the Sunday books I have in the parlour. There's one I like best of all. Oh, so old it is! all torn and falling to pieces; but it has such beautiful things in it—things I never thought of before."

"And what is the name of this old favourite, may I ask, you little antiquary?"

"The name is all torn away, and some leaves at the beginning of it; but it has 'sermons' written at the top of every page."

"Well, darling, some day you'll show me your wonderful book, won't you?"

"Yes, Kenneth; but you won't take it from me?" said the child seriously.

"No, no, Lena, possession is nine points of the law," answered Kenneth, laughing.

"What did you say, Kenneth? I don't know what it means," said Lena, looking doubtfully up into his face.

"It isn't necessary you should, dear child. I didn't expect you would understand it; but what I meant to say was, that unless it is a book that will hurt you, nobody will take it from you," and Kenneth took up the letter Lena had brought him, and began to read it, while she, laying her book open on her lap, and dreamily gazing into the fire, sat wondering and considering what could be the meaning of the "nine points" her brother had spoken of. Apparently she could not satisfy herself, as, after a few minutes, she rose with the same doubtful expression on her face, and quietly slipped from the room.

Kenneth Graeme's letter seemed to afford him considerable satisfaction. It was from a young man to whose brothers he had acted as tutor for the last two years, and with whom he had lately been rather intimate. It was as follows:—

"DEAR KENNETH,—You are to be licensed next week, I understand. I have just been made aware that a small property to which I fell heir some two or three years ago, brings with it the honour and glory of being patron of rather a good Scotch living, and that the clergyman to whom it belonged, an old man, has died rather suddenly. I fancy, if the people like you, which of course they will do if they have any sense (and if they haven't, they had better take the advice of somebody who has), there would be no harm in my keeping the presentation

open till you have come safely through all these trials of which you are in prospect, and have obtained the addition of "Reverend" to your name. If you think this plan right, let me know; if you think it wrong to cut so far before the point, signify that opinion also; and when you get settled in the manse, don't be long in looking out for a wife; no parish can get on without one.—In haste, yours affectionately,

FRANK GORDON.

"P.S.—This may shock you by its tone; but, in reality, I have thought of it a good deal, and I never felt more satisfied that I was making the best use of any little responsibility with which I am unfortunately burdened.

F. G."

"Kind-hearted fellow!" was Kenneth's mental commentary on this letter, or rather on the writer of it. Then holding it open in his hand, he began to think—first, was it all perfectly fair and honourable this keeping the parish vacant till he was licensed? It would only be for a week, and then, though it would be sooner than most young clergymen have the entire charge of a large parish, still he was much older than most are at the time of being licensed. And he felt so completely that if he undertook the responsible position, all his strength and all his energies would be willingly given to its duties, that he could not doubt the path had been laid open for him. He would be doing wrong not to accept his friend's kind offer.

This settled, he gave himself up for a few minutes to pleasant anticipations of the future comfort and happiness that lay before him. How all his difficulties appeared to be clearing away! How grateful he felt! How unexpectedly this good-fortune had come! He had not had the slightest idea that his friend had any patronage in his power, nor that, if he had, he would make choice of himself. What pleasant news to give his mother and his sisters! How rejoiced his darling Lena would be at the thought of leaving the close street, and again seeing the hills and waters that she used to delight so much in! She had grieved him lately by her pale languid look and listless ways, but she would be bright and strong now. He loved that little child very dearly. In the midst of his incessant work he had found time to teach her almost everything she knew, and she knew far beyond her years. He delighted in the sweet, delicate face, and, unlike as they outwardly were, there was a very close mental likeness and sympathy in all things between these two.

Then his thoughts travelled away to another—one dearer to him than all these—one who for years had been the resting-place of all his thoughts, the light in which he had viewed his

every act. For her he had worked all through the long, weary days, and when he lay down to sleep, in his dreams she was still with him. This was the thought that now lighted up the pale face of the student, and filled with such a soft tenderness the dark grey eye. The roughly cut features were not plain now; they were spiritualized and refined by the intense manly love that was shining through them, as in imagination he stood beside her and told her of his success.

At last he rose, saying half aloud, "I must go and tell them—my mother and Bessie—and I must go and tell HER."

Lena had by this time returned to the room, and to her position on the rug, and, as soon as she saw him rise, she came up to him, holding an old and tattered volume in her hand, which she handed to him, saying—

"Here, Kenneth, this is the book; you see it is very old; but it's very nice to read, only some of the words are difficult. I never saw them before."

Kenneth took the book from her hand, laughing at her eager desire that he should share her delight in its contents.

"My poor child," he said, turning over the leaves, "no wonder than you could not read it, it is dated 1730, more than a hundred years, Lena, since the sermons in this book were preached."

"But, Kenneth, only try it. You don't know what curious things are in it. You know people may have preached well then, though the words were difficult."

"Yes, yes, Lena; I'll try it; but shouldn't you like to hear me preaching better? Come away with me. I've got something to tell mamma, and perhaps I'll tell it to you too."

This satisfied the child, and the pleasant news that Kenneth had to tell soon drove all remembrance of the old book from her mind. Before she saw it again, Kenneth had read it. It was long till she thought of it again.

That very night, when hope was brightest, the shadow fell over the house; sickness came, and death seemed very near. The mother of the family, she on whom all its trials before had fallen heaviest, and who through all had still kept a smile for them, —who had been, as only the mother of a house can be, their guide and director in all things, at once the centre of all their affection, and the bond that united them so closely to each other—was suddenly struck down with a painful and dangerous illness. For days Kenneth and his sisters watched by her, each hour as it passed lessening their slight hopes that the life so precious to them all would be spared.

(To be continued.)

THE VEILED BRIDE.

VEIL'D the future comes, refusing
To be seen, like Isaac's bride,
Whom the lonely man met musing
In the fields at eventide.

Round him, o'er the darkening waste,
Deeper shades of evening fall,
And behind him in the Past,
Mother Sarah's funeral.

Mother Sarah being dead,
There comes his veiled Destiny !
Veil'd Rebekah he must wed
Whatsoe'er her features be.

On he walks in silent prayer,
Bids the veil'd Rebekah hail !
Doubting not she will prove fair,
When at length she drops the veil.

When the veil is dropt aside,
Dropt in Mother Sarah's tent,
Oh ! she is right fair, this bride
Whom his loving God has sent.

So thou walking 'twixt the two,
'Twixt the past with pleasures dead,
And the Future veil'd from view,
The veil'd Future *thou* must wed.

Walk like Isaac, praying God ;
Walk by Faith and not by Sight ;

And, though darker grows the road,
Doubt not all will yet come right.

Things behind forgetting ; hail
Every future from above,
Doubt not, when it drops the veil,
'Twill be such as thou canst love.

Till, at death-eve, when the past
Rings dear Mother Earth's own knells,
Bridal Heaven unveils at last,
With a peal of Marriage Bells.

WILLIAM ROBERTSON.

THE COTTON FAMINE.

THE heavy-distress which is falling upon Lancashire, and those portions of Yorkshire, Derbyshire, and Cheshire, which come within the cotton manufacturing district, is now the talk of the world. Few right-thinking men can prevent its black shadow flitting across their minds, and haunting them like the wailing of sick children, or a corpse in the next room. Their sympathy with such distress refuses to be hemmed in by poor-law barriers, because they see in it nothing of professional mendicancy, or the pauperism of a degraded population. They know that a heavy blow has fallen on a self-reliant, almost defiant body of men, who from childhood have been used to comfort and independence. They know that a class who would starve rather than beg are now standing sulkily at silent street corners, or lounging idly in stagnant market-places, stripped of all their little savings, and reduced almost to the level of workhouse parasites. They know that this misery is endured without murmuring, for the sake of a great principle. A blockade is respected which could be broken through like a cobweb, and a great moral example is set to all powerful nations. If the dreaded winter now close upon us should show half the endurance on the part of the poor which is hoped for, and half the liberality on the part of the rich which is sought for, the force of this great moral example will be increased a hundred-fold. The cloud, as usual, will have a silver lining, and starving Lancashire will be as impressive in its misery as it has ever been in the days of its greatest prosperity.

The statistics of cotton-working—an industry which in its sudden growth and importance is one of the world's wonders—have often been collected with pride and eagerness ; but now the task of gathering such facts and figures is laborious and depressing. This is no time, nor subject for so-called graphic writing ; for highly-coloured pictures of that distress which may be seen in the gloomy stony-hearted streets, or of that less obtrusive

want which hides itself away in the dull red-brick houses. This is no time for engaging suffering families in conversation with the sole view of recording their words, and enlivening a cold but well-meaning report with snatches of dramatic dialogue. All those who have hovered on the borders of the distress—and no mere literary eavesdroppers can do more—must have felt that only one duty was required of them ; to aid the distress funds in every way by gathering and sifting facts, and setting them before the public as simply as possible.

The population of the cotton-working district may be taken roundly as 3,000,000, and this includes about 380,000 operatives. Of this latter number at least 200,000, or more than one-half, are at present entirely out of work, or doing work that will not support them. An operative can live on three days' work ; he has had to do so before now when the markets were glutted, as they were in 1847, but he can hardly exist on a shilling a week. The average earnings of each worker in a family are from 9s. to 10s. 6d. a week in good times. His rent of 3s. or 4s. a week for his little stone-floored house is, of course, seldom paid in such times as these ; it accumulates as a debt against him, or it is given to him by the kindness of masters who happen to be his landlords. Much is given in this way which makes no show in the accounts of the various funds. One holder of house property at Blackburn, nominally worth £20,000, is now receiving scarcely any income from his rents ; and many more such cases may be found throughout the district. One large millowner has lent his workmen about £3000, to enable them to tide over the evil hour, and out of this more than £1000 will certainly never be returned ; others prefer to keep their work-people entirely during the pressure of the distress, rather than see them hanging hopelessly about town-halls and soup-kitchens. Many are working their mills at a loss to give employment to their work-people. While it is

important that every local and general fund should be well supported by those who are able to give, such facts as these cannot be too generally known when the conduct of the masters is called in question. Self-interest alone, without any higher motive, will impel employers to keep their operatives together, and this can be done much better by individuals than through the agency of a committee.

The funds at present raised by subscription, may be roughly stated at £150,000, and of this amount Manchester contributes £28,000, Liverpool £30,000, the Lord Mayor's fund £50,000, and the Landowners of Lancashire, under the head of the Bridgewater House Fund, £40,000. Landed property in the cotton-working district, according to a reliable estimate, has increased five-and-twenty per cent. in value during the last ten years.

The towns that have already made application to the different funds for relief are shown in the following table, which gives some interesting details about their condition and prospects:—

Town or District.	Population.	No. of Mills.	Factory and other Operatives.

Mr. J. W. Maclure, the energetic Secretary of the Manchester Relief Committee, to whom I am indebted for much valuable information, writes to say that £50,000 have been already raised and spent in Manchester, Blackburn, Preston, Wigan, Stockport, and four or five other towns, independently of all that has been done by private charity.

The weekly loss of wages in the district is now at least £100,000, and this loss will probably be increased during the winter to £150,000 a week.

At the lowest estimate, the sum required weekly to support the unemployed operatives at the rate of two shillings a week per head, will before Christmas exceed the ordinary poor-rates by £30,000. One Manchester gentleman, who has considerable means of judging, estimates that when the distress reaches its height, it will cost £100,000 a week to keep the unemployed from starvation.

Mr. Farnall, the Government Poor-Law Commissioner, now reports, after an elaborate analysis of the accounts of twenty-four unions, whose population is usually employed to a great extent in the manufacture of cotton, that 140,165 persons are now in receipt of parochial relief, although in the corresponding week of last year the numbers were only 42,054. This shows an increase of 98,111 persons receiving parish relief, all of whom are able-bodied workmen, workwomen, and their children.

The rates to meet this distress will probably be from three to five shillings in the pound, and this, from the poverty of many of the ratepayers, will increase the burden on those who can pay to seven or eight shillings. The operation of Mr. Villiers's Relief Act will do little to mitigate the severity of the pressure of the rates upon the class immediately above that of the operatives, inasmuch as no one parish can claim assistance from the other parishes of the union until three shillings in the pound has been spent on the poor, nor can the borrowing powers be exercised until an amount equivalent to three shillings in the pound on the assessment of the whole union has been collected, in addition to the borough and other rates; and, lastly, the county cannot be called upon to contribute to the relief of any particular union, until five shillings in the pound has been actually spent upon the poor of the union. A very high authority estimates that in many cases it will be necessary to levy six shillings in the pound before three shillings can be collected; and the same authority admits that these clauses so far neutralize the action of Mr. Villiers's Bill, that most probably the borrowing power will rarely, and the County Rate-in-Aid clause never be put in force. It may appear that three shillings, or even six shillings in the pound, is not a large sum to be spent upon the poor; but the real question is the proportion that the future rates will bear to those of former years. In some cases the average rates have only been about eightpence in the pound, and the call will therefore be four or five times as much as the usual rates. This, when the insolvent ratepayers are deducted, will leave a rate eight or ten times larger than the ordinary demand to be paid by those who remain solvent.

A deputation from Birmingham, appointed for

the purpose of collecting information regarding the extent of the distress, and the claim of the operatives for aid from that town, have reported fully and ably on these and other points, and they earnestly urge the inhabitants not to act as if they doubted the charity of the north, but to do all in their power to soften the sting of a great and undeserved calamity.

Speaking of Stockport amongst other places, they say,—"In a population of 57,000, a diminution of £7500 has already taken place in the amount of weekly wages. Two-thirds of the deposits in the Savings' Bank, representing probably the whole of the savings of the cotton operatives, have been withdrawn. The small shopkeepers are unable to give credit any longer. One man stated that he had £100 worth of debts which he never expected to recover. The pawnbrokers are full, and have ceased to lend. The inhabitants of the district have already themselves subscribed and distributed £4000 in addition to the contributions from a distance, which is equivalent to more than £20,000 from a town of the size of Birmingham. Yet the real troubles have scarcely commenced."

The operatives of Lancashire are sometimes better, but never worse than fellow-labourers of the same standing in other parts of the country. Their savings are small and soon exhausted, as they are accustomed to rely upon a steady demand for their labour. The children in the cotton-working district have a well-known value in good times—a power of earning money, which they exercise to the fullest extent. They are sturdy, self-confident, and a little self-indulgent, but few people can blame them for the last failing. Now that adversity has fallen upon them, their rugged, untameable spirit sustains them in their troubles, and prevents them sinking into abject alms-seekers. Professional beggars, especially in Manchester, have not been slow to seek an expected harvest in the name of Lancashire distress, but the real operatives make no flaunting display of their want. Crime has decreased throughout the district, though drunkenness has slightly increased; the latter probably owing to a falling off in physical strength on the part of the drinkers, and the well-meaning but mistaken hospitality of companions who are working on full or short time. Every cotton town I have passed through shows the same melancholy picture of enforced idleness. The atmosphere has an unwonted clearness; the roaring of engines is missed; there is more clanking of clogs on the stony pathways in the afternoons, and the most honest, hard-working men and women who loll in doorways, or squat in groups by the roadside, have that skulking look which always marks a want of occupation.

Amidst all this misery and stagnation one ques-

tion constantly arises—When will relief come? How long will this material of our great staple manufacture be wanting? When may we hope that this terrible dearth, which for the first time in the world's history has attached the ominous word "famine" to a want which is only in its consequences a want of food, may cease, and England once more reckon Lancashire among the most industrious, peaceable, and orderly of its manufacturing counties? The question is one of vital importance, not only to Lancashire, but to all England, and not only to the present but to future time. Every economist will tell you of the terrible mischief of lowering for any length of time the standard of comfort and decency in a large section of the population. It is this standard alone which determines the numbers of the people, and the condition in which they live. If the steady mechanics of these parts, whose rooms before these "hard times" were always clean and neat, and not without tokens of their owners living in some degree above that state in which life is absorbed in a struggle for mere food,—if these people had been content to sink into filth and misery, such as may be seen in many quarters of all great cities, there was nothing to prevent them but their own prudence, stimulated and supported by that self-respect and taste for comfort and decency, which was the average spirit of their class. Weaken this spirit, or obliterate it for a time, and it is impossible to say how much of it may be found remaining when the better day comes. Misery loses its repulsiveness like other things by familiarity. It has a constant tendency to perpetrate itself in new generations, who necessarily imbibe their ideas and habits from the scene in which they are reared. There can be little doubt that the proverbial misery of weavers originated in the enormous influx of French refugees during the great religious persecutions in the south of France; and a sudden increase in the supply of labour which sank the weaver's wages so low, and steeped them so completely in wretchedness, that they have never yet recovered from their original misfortune. Even the great inventions in machinery, though inestimable blessings to all classes, have not always been unattended with this unfortunate drawback, as we see with the stockingers of Leicester. The depression which a sudden loss of wages brings to an industrious people who are unable to turn to other employments, is, indeed, always more or less attended with this effect; and it is, therefore, a matter of incalculable importance that the Lancashire people should, as far as possible, be encouraged to keep up their spirit. This can, of course, only be hoped for on the assumption that they may look soon to resume their daily life of independent industry.

What are the chances of supplies? It is sign-

lar how little sound information can be obtained on this point. In the United States very accurate and extensive agricultural statistics have always been collected and published, both of the Northern and Southern States. There the amount of land sown, and extent of the crops of cotton, corn, and maize in each year have always been familiar to persons interested in such matters. In no other cotton-growing country, however, does such a system prevail. In India, that vast continent of political and social darkness, nothing is known. We can but suppose that rumours of the high prices prevailing last autumn may have reached some of the native cotton growers, and that some may have been induced to sow a greater breadth than usual. Whatever may be said of the apathy of Indian cultivators, there can be no doubt that the ordinary instincts of self-interest are no more wanting in them than in other people. The 6,000,000 of bales rashly vouched for by Lord Shaftesbury as already existing in India, and waiting for speculative purchasers, are clearly visionary. The enormous rise in the price of cotton in Bombay, reported by recent mails, would assuredly have brought them ere this from their lurking places in spite of mountains and bad roads. In countries nearer to the United States, and more susceptible to the influence of news from thence, it is more reasonable at present to look for a large increase; and it is really wonderful how vast an extent of territory exists in which cotton *may* be grown. The cotton zone may be roughly said to comprise one-third of the habitable globe. From Virginia to Paraguay, there is no spot on the two great American continents where cotton cannot be grown. The entire continent of Africa, including Madagascar, is cotton land. The south of Spain, Italy, Greece, Turkey in Europe, Asia Minor, Arabia, Persia, Turkestan, India, Thibet, China, the Indian Archipelago, and the whole continent of Australia north of Sydney and Swan River, are equally suited to the cultivation of this plant. If we take a map and mark the places where it is generally grown for export, we shall find that they form but a few insignificant spots upon this vast belt of cotton-growing country. There is scarcely one of these places having access to seaports, where a planter who had been sharp enough to grow cotton, or if he was already a cotton grower, to extend the area of his operations this year, would not at present prices be enabled to obtain a splendid profit. Happily the cotton crop does not require very long preparation. It is not like hops or vines, necessary to plant and wait for several seasons ere the plant will produce its fruit. Except in Algeria, where, we believe, it is customary to look to the second year for the best results of a planting, the cotton bush is almost everywhere cultivated as an annual. This, at all events, is the

custom with the American growers, hitherto the most successful cultivators of cotton in the world. It is, indeed, usual with them to prepare their land in November, when they plough and harrow down, and subsequently throw the soil into ridges to experience the beneficial effects of the winter frosts; but the actual sowing does not commence till March or April, and when there is any frost lingering about is even deferred as late as May.

A very interesting experiment lately ventured on by the United States Government, of which I have just obtained information, shows how quickly cotton may be produced if the season is not allowed to pass wholly by. It will be in the recollection of most readers that, in the autumn of last year, an expedition was fitted out by the Federal Government, for a descent upon the coasts and islands of South Carolina. As regards the islands, no resistance whatever was offered. The planters fled to the mainland, having destroyed what property they could, and taken with them their cattle, furniture, agricultural implements, and the best of their slaves. When Commodore Dupont took possession of the islands he found that a number of slaves, composed in great part of old people, women, and young children, and amounting altogether to 10,000 persons, had been left behind. Crops of cotton just fit for picking being left standing in the fields, the Government determined to set to work such of their number as had been used to field labour—in all about 3800 persons—to gather in the cotton, as free labourers working for trifling wages. They thus successfully gathered more than 110,000 pounds of fine sea-island cotton, some of which has been sold for about 3s. sterling per pound. These sea islands, as is well known, give the name to this peculiarly beautiful variety of American cotton. It always bears a high price, although, from its being more difficult to cultivate and less productive per acre, it is not generally considered peculiarly profitable, and the demand for it is of course not extensive. It being impossible to neglect these 10,000 negroes, who had shown themselves remarkably docile and patient under the direction of their new employers, some philanthropists in Boston and Philadelphia urged upon the Government the necessity for setting them again to work; but this time not in picking only, but in cultivating a new crop. No step, however, was taken. It was not until March of this year that the philanthropists succeeded, and not till the beginning of April that they actually went to work upon the ground. Everything was most unpromising for the experiment. It was already late in the season, and no preparations had been made. They were wanting in implements, in ploughs, and in horses; few of the superintendents sent from the North had ever seen a cotton plant growing in the

field, and some of them had no practical knowledge of agriculture. They were strangers to the country, the people, the usages, the climate, and had nothing to depend on but their goodwill for the work, and the cheerful alacrity of the blacks. Lost time, however, was soon regained. 14,000 acres were brought under successful culture; and, more than a month ago, an intelligent gentleman, appointed to reside in the islands, and watch the progress of the cultivation, reported that the crops were "in an advanced and satisfactory state, needing little more than a few weeks of ordinary fair weather to insure a liberal harvest."

If results like these may be achieved under such conditions, by cultivators who started on their business for the first time only at the end of last March, it is clear that we may reasonably hope that a considerable increase in the cultivation will have taken place this year in most countries which have been accustomed to export any quantity at all. It cannot be said that as late as last March any rational man could have a doubt that a cotton crop, if in ordinary times remunerative, or even nearly remunerative, must this year be profitable in the highest degree. Theorists and unprofessional speculators may talk of the danger of the great cotton crop of America being suddenly let loose to flood the markets of the world, and rob the new competitor of his expected prize; but the self-interest of practical cultivators, to whom judging of market prospects is a daily habit, must have taught them better. Of what is going on in that sealed country we know little; but while cotton bonfires have been blazing wherever the Northern armies have penetrated, we may be sure that cotton growing has almost entirely ceased to be a part of the agricultural industry of the South. Compelled to be entirely self-supporting, her available labour, or so much as can be spared from military duties, must long ago have been turned entirely into other channels. To produce food and clothing and arms, evidently taxes all her energies. Her 10,000,000 of people, including her soldiers, have been clothed from head to foot in cotton; and this consumption, necessarily lavish where the article is so abundant, and the waste and destruction of war, must already have made considerable inroads into the 3,000,000 bales of 1861. In February last, or let us say in March, it was quite certain that no crop would be grown this year. It is impossible to doubt that the planters of Brazil and Guiana, and other parts of the great cotton-growing countries of South America, were fully aware of these facts; and they must be singularly unlike all other human beings if they have not to some extent endeavoured to profit by them; nor can there be any doubt that Egypt, Algeria, the West India Islands, not to speak of the new cotton districts in Africa and

Eastern Australia, will contribute considerably to relieve the markets.

It is consolatory to know that we cannot now be many weeks before we come to some solution of this problem. In the United States, if the season has been forward and favourable, the cotton picking will commence in July; but if backward, the first general picking will be delayed till August. Successive pickings take place—the wool is "ginned," that is, cleared of seed, packed in bales and sent to market at once; and it is with the planters a maxim, that by November the crop should be all baled and sent to market. These facts are, of course, applicable to similar climates; but in India the times of sowing and picking are altogether different. From that country we can look for no relief until the spring of next year. The sowing season in India commences generally in June, but is prolonged till July or August in some parts. The crop matures about the beginning of February in some cases; but as a rule the picking extends through March, and frequently into April. The speculators of Bombay, who, according to the late advices, had bid Surat—which sells in ordinary times for 3d. or 4d.—up to 1s. 2d. a pound, are assuredly keeping their eye upon this time. All things considered, it undoubtedly appears to be an advantage that the Indian crop is sown not in the spring but in autumn; for the Indian growers were probably not thoroughly aroused to the subject before the recent extraordinary rise in prices in their own markets.*

Readers who derive their information solely from writers who pen diatribes upon the "apathy" of mill-owners, and their neglect of Indian cotton, must be under the belief that it is an entirely new thing to seek in India for relief from pressure in the markets for American cotton. This, however, is altogether a mistake. India has always acted as a sort of reservoir for supplying us in times of partial dearth. Even in ordinary times it has been usual for us to draw one-fourth or one-fifth of the whole amount of our enormous consumption from that country. It is curious, indeed, to observe how regularly and surely this safety-valve has acted. It may be safely said that the mill-owners have always obtained from India just so much of that cheaper but inferior kind of cotton grown by the Hindoos as the British public were willing to clothe themselves with. Any one who has ever walked through one of the busy shopping streets in the poor neighbourhoods in the suburbs of London, must have observed at inferior linen-draper and hosiers' shops, lengths of cotton cloth manufactured from it; which are always distinguishable for their bad colour, and the black specks which abound

* See Table A on following page.

in them, and which are the chief features of bad quality. In ordinary times, not even the extraordinary cheapness of 3d. a pound has induced our millowners to use more than the average proportion we have mentioned; for they are well aware that they would have no sale for it beyond that. In 1852, for instance, we consumed 1,789,100 bales of American cotton, at an average price of 5½d.; while of Indian cotton, which was sold during the same period at an average of 3½d., we used only 221,500 bales. The simple truth is, that if American cotton can be obtained at a reasonable rate, our comparatively well-clothed and comfortable classes will not wear Indian. But let the American cotton crop even partially fail, and the facts are altogether changed. In 1856, for instance, when the average price of the latter rose to 6d., the imports of East Indian rose to 463,000. More striking still, in the following year, uplands having reached an average of 7½d., East Indian rose to 5½d.; but notwithstanding this rise, we imported of the latter the enormous quantity of 680,000 bales, or within 60,000 bales of one-half of the entire quantity imported into Great Britain in that year! After this, who shall say that our manufacturers have neglected to avail themselves of Indian cotton?

I have for some years devoted earnest attention

to this subject, and I am compelled to say that I have long come to the conclusion that the Southern States of America have hitherto held the market, not in consequence of any "apathy" in millowners, shippers, or growers, or any failure in the ordinary laws of supply and demand, but for the simple reason that, on the whole, the balance of advantage in production has been in their favour. Of course, the activity of commercial enterprise, under the stimulus of the present extraordinary range of prices, may help us to discover some place having equal advantages, either in climate, soil, labour, existence of capital, or means of communication. Hitherto, however, it must be confessed, that no such place has been found,—I mean no place which could compete with the United States under ordinary circumstances; for, of course, their advantage may be not very great, though sufficient to secure to them almost the monopoly of the markets of the world; and, in this case, while the war lasts, we may be supplied even by countries which could not compete in ordinary times, at a scarcely perceptible increase in price. No other theory than this could, indeed, possibly account for the facts. Just as the East Indian indigo has beaten Brazilian and the indigo of every other country from all the markets of the world, so has American cotton sprung up and flourished until, within sixty years,

TABLE A.—The following Table, extracted from a broker's circular, dated August 29, 1862, sent to me by Messrs. George Fraser, Son, & Co., of Manchester, shows the importation, sales, stock, and prices of cotton in the Liverpool market:—

At Sea for Great Britain.		
	1861.	1862.
American,
East Indian,	288,750	411,750

it has spread itself into the markets of the globe. The cheapness of slave labour alleged by some, denied by others, cannot, whether true or false, be the cause; for slavery exists in Brazil, once a great source of our supply, and yet Brazilian cotton is in ordinary times now scarcely known in our markets. No special affection for Southern planters can be supposed to have captivated the hearts of Liverpool or Manchester. The Liverpool broker cares not whence you bring it; he will take the staple in hand, examine it, pull it out, and tell you its price per bale to a fraction. It may be even said that our trade with America is conducted at a disadvantage, which tends to discourage us from seeking our cotton there. The disadvantage is the difficulty of paying for our imports with British goods. With a tariff always restricted, even before the recent changes, and designed to encourage the native manufactures of the very articles which form the staple of our exports, our merchants have never been able to sell in the United States goods to the amount of more than one-half of our purchases. In 1860, the last year before the war, the raw cotton alone purchased by us of the United States was worth more than £30,000,000 sterling, the corn and tobacco another £7,000,000, while the whole amount of our purchases of that country, reached a total little short of £45,000,000. Against this, we sent them goods of the declared value, in round numbers, of £23,000,000. The balance is, of course, somewhat less than it appears, the exports being estimated before carriage, the imports after carriage, when, of course, they have become more valuable by all the cost of transport. The balance, however, after all allowance, must be considerable, and must be settled by shipments to other countries against which bills are drawn, a circuitous mode of payment, which is always burdensome to the country standing most in need of the other's products. The barriers set up by the Americans against the admission of our manufactures, operate, in fact, as obstacles to our purchases, yet these obstacles appear to have had little effect.

No greater mistake can be made than to suppose that American cotton has been unduly favoured, either by prejudice of manufacturers against other kinds, or by apathy of governments. I am convinced that a dispassionate inquirer would come to the conclusion that the late East Indian Government honestly laboured to destroy the Southern planters' monopoly. I have before me now a solid volume of reports and documents connected with the proceedings of the East India Company, in regard to the culture and manufacture of cotton wool in India, printed by order of the East India Company, as long back as December 1836, which abounds in valuable information on the subject, and which is not superseded by

the volume published under the directions of the Supreme Government in Calcutta in the present year. Seventy-four years have elapsed since the Company resolved to give every possible encouragement to the growth and improvement of the plant in that country. They were, it must be remembered, subjected to no pressure from our manufacturers at that period, when our cotton manufactures were comparatively insignificant. Yet the Government exported to India screws for making bales, and distributed seeds throughout the peninsula. It seemed natural that India should supply us with cotton. It was cheaper there than anywhere else. It had been cultivated in Hindostan from the time of Alexander the Great, and probably from still more remote ages, and the quantity already grown there each year was believed to be greater than the production of the remainder of the entire globe. From that time, the East India Company never lost sight of their project. They again and again offered bounties on production of better qualities, gathered reports from all the collectors, and had information and practical instructions printed and distributed wholesale. They have even granted drawbacks both of internal and port duties, to encourage the export. In 1813 and 1814, they brought, at Government expense, a number of American planters to the country, with New Orleans saw-gins. It has indeed been suggested that these men, who all reported unfavourably on the attempt to grow improved qualities for profitable sale, were actuated by a determination to discountenance the project. It requires, however, but little knowledge of human nature to decide that this is improbable. English shipwrights and even English cannon-founders work well enough for the Czar. In all human beings there is a natural desire that the work they are engaged in shall succeed, and secure them the reward of their zeal, which is in the average sufficient to defeat the instincts of such far-seeing patriotism as is here insinuated. Besides, in 1813-14, New Orleans planters must have been endowed with something like prophetic spirit if they foresaw the future importance of cotton-growing to the United States, or the present vital necessity of the supply to Great Britain; for at that time, instead of 3,000,000, the Americans produced only about 200,000 or 300,000 bales; and England, instead of consuming, as at present, two millions and a half, consumed only about 200,000 or 300,000 bales, of which not one-fourth came from America. As late as 1840, the Company employed Captain Bungles to make a tour in the Southern States, and to procure information, seeds, agricultural and mechanical implements; and once more they imported skilled American planters. Soon after this they instituted

experimental culture on a very large scale in all the three Presidencies. Among the latest steps taken by them was the gratuitous distribution of two hundred American cotton saw-gins among the three Presidencies, and the offer of a prize of £500 for an improved cotton dressing-machine adapted to native use. Then we have the life-long efforts of private persons, like Mr. Shaw in Dharwar, enthusiastically devoted to the improvement of Indian cotton. Even our war with the United States, when American supplies were almost entirely cut off, only brought Indian cotton into increased use as a makeshift; the proportion used sinking again immediately on the termination of the war. It must be remembered, too, that not only India, but all our possessions, including the West Indies, South Africa, etc., have up to a very recent period been offered a standing premium to compete with American cotton in the differential duties in favour of our own possessions. Still American cotton has held the market, growing yearly with astonishing rapidity. Is it possible then to doubt, however we may wish it otherwise, that up to the present time no place has been found capable of producing cotton of equal quality at the ordinary prices of American,—for that is the question. Both in India and Brazil it is said that bad roads impede supplies; but there are large cotton districts in both countries near the sea, and other districts traversed by railways. As to India, the peculiar system of land tenure has been complained of; but this grievance, though a real one, has certainly not prevented the cultivation of indigo, opium, or even Assam tea, from reaching a condition of extraordinary prosperity. The late Dr. Royle, whose extensive knowledge of Indian fibres was no less notorious than his enthusiasm in favour of Indian products, confesses that the Indian climate is unfitted for the production of such qualities as we receive from America.

The attempts to improve the cultivation and

preparation of Indian cotton may produce some approach to improvement. The active search for new cotton fields; the experiments now in operation in Natal, in Queensland, Guinea, Algeria, and other places, may bring permanent changes; but the use of American cotton has extended itself under too many disadvantages for us to expect that it will be soon displaced. It is not improbable that, on the termination of the civil war, we may in a few seasons see it again resume something like its old position. The fact is humiliating; but it is pleasant to think that our great trial will not wholly have been lost. Cultivators throughout the globe will have had their minds directed to the subject; many will have acquired a practical knowledge of the cultivation which they had not before; all will have been taught to look to a rise in the price of American cotton as a signal to ridge up their land and prepare to sow cotton-seed. The cultivation is, fortunately, very simple—may be taken up, abandoned, and resumed, with great facility, and even with advantage to the soil in the change of crops. The Southern planter lays out the bulk of his cash in "niggers;" little capital being wanted for anything else. Give the world notice only in March that you are likely to want cotton, and any quantity can be grown against the fall of the year. Private enterprise is not quite so stupid as some people would have it. Before November comes, some relief may certainly be expected from irregular quarters; next spring will give us the great Indian crop, from which we have so often drawn relief in times of dearth; next autumn, even if the war continue, will assuredly bring us abundance; for certainly no doubt can any longer exist in the vast cotton districts of the globe, that the man who sows cotton this fall, or next spring, will have reason to congratulate himself when his bales are pressed and ready for the market.

JOHN HOLLINGSHEAD.

ENERGY.

BY PROFESSORS WILLIAM THOMSON AND P. G. TAIT.

THE non-scientific reader who may take up this article in the expectation of finding an exhortation to manly sports, or a life of continual activity, with corresponding censure of every form of sloth and sensual indulgence, will probably be inclined to throw it down when he finds that it is devoted to a question of physical science. But let him not judge too hastily. Rigorous and minute scientific investigation is repulsive to all but a few, and these specially trained, minds; but the principle on which we are about to offer a few remarks admits of being made, at all events in its elements, thoroughly popular. General theories, whether of Politics, International Law, or, as in the present case, of Natural Philosophy, are, indeed, by their very generality, capable of being clearly apprehended through the widest circle of intelligent readers, if properly presented; while special questions, such as Church-rates, and the Ballot, the Rights of Neutral Bottoms, or the Temperature of Space, require to be explained to each individual in a manner, and with precautions, suited to his individual bias or defect of apprehension.

Of late several attempts have been made, with various success, to impart to the great mass of the interested but unscientific public an idea of the ONE GREAT LAW of Physical Science, known as the *Conservation of Energy*, and it is on account of the defects, or rather errors, with which most of these attempts abound, that we have aimed primarily at preparing an article, which shall be at all events *accurate*, as far as human knowledge at present reaches. As to its intelligibility we cannot of course decide. But we take the precaution of inserting, in the form of notes, portions of the article which, though of very great importance, could only be made intelligible to the general reader by elaborate and tedious explanations.

Every one knows by experience what Force is. Our ideas are generally founded on the sensation of the effort required, say, to press or to move some mass of matter. In general, Force is defined as *that which produces, or tends to produce, motion*. Now, if no motion be produced, the force which may have been exerted is absolutely lost. Hence the inconvenience and error of the phrase, "*Conservation of Force*," which is very commonly applied to our present subject. Among the host of errors which are due to confounding Force with Energy, one of the most extraordinary was some time ago enunciated in a popular magazine in some such form as this, "*The sum-total of the Forces in the Universe is Zero*"—a statement meaningless if

it be applied to Force in its literal sense, and untrue if it refer to Energy. This is one example of the errors we have undertaken to combat; another refers more to the history than to results of the principle. We were certainly amazed to find in a recent number of another popular magazine, and in an article specially intended for popular information, that one great branch of our present subject, which we had been accustomed to associate with the great name of Davy, was in reality discovered so lately as twenty years ago by a German physician. Such catering for the instruction of the public requires careful looking after; and we therefore propose to place on a proper basis the history of the discovery, and to enumerate and illustrate some of the principal truths already acquired to the theory of the Conservation of Energy. To do this in a popular form we shall commence with an examination of some cases of every-day occurrence, and gradually introduce the scientific terms when we feel that we have clearly made out the ideas for which they stand. Once introduced, they will be used freely, not so much for brevity as for definiteness.

When an eight-day clock has been wound up, it is thereby enabled to go for a week in spite of friction and the resistance which the air at every instant offers to the pendulum. It has got what in scientific language we call a supply of *Energy*. In this case the energy simply consists in the fact of a mass of lead being suspended some four feet or so above the bottom of the clock-case. The mere fact of its being in that position gives it a power of "*doing work*" which it would not possess if lying on the ground. This is called *Potential Energy*. It will evidently be just so much the greater as the weight is greater, and as the height through which it can fall is greater. Its amount is, therefore, proportional to the product of the weight and the height it has to fall, because such a product is doubled, as the energy is, by doubling either factor. Thus a weight of one pound with an available descent of forty feet, has the same amount of potential energy as ten pounds at four feet, eight pounds at five feet, or forty pounds at one foot. And we may easily see that the work required to lift the weight to its present position will be the same in all these cases, if we take for example such an illustration as the lifting of coals from a pit. Twice as much work is done (even in the popular signification of the phrase, "*doing work*") when two tons are raised as when one only has been so; and to raise a ton through forty

fathoms requires twice as much work as to raise it through twenty. Hence it appears that work expended by an animal or machine in lifting a weight remains stored as potential energy in the relation between the earth and the lifted weight, and thus that energy so spent is not lost. But suppose the coals to be allowed to tumble down the pit again, what becomes of the energy? This question will give us an idea of the nature of the subject we are dealing with.

We have already adverted to the serious errors into which we are liable to fall from an incorrect use of the word *force*, but we may with advantage recur to the subject here. What becomes of the enormous force with which the earth continually attracts a mountain, or that with which the sun attracts the earth? Force is continually exercised in each of these cases, yet no progressive effect is produced on the mountain; and the changes which the velocity of the earth in its orbit undergoes, are, in the course of a year, as much in the way of loss as of gain. We do no work, however much we may fatigue ourselves, if we try to lift a ton from the ground. If we try to lift a hundred-weight, we can raise it a few feet, and have then done work, and the work is expressible as so many pounds raised so many feet, and can therefore be stated as so many *foot-pounds*, each foot-pound being the work required to raise a pound weight a foot high. The true statement which meets all such cases is, *Energy is never lost*. But we must now return to our first illustration, to see how energy may be modified or transformed, and then we shall begin to understand how it is that no modification or transformation ever causes loss of energy.

There are two ways of raising a weight to a height: by a continuous application of force, as by a windlass, or by an almost instantaneous impulse, such as a blow from a cricket-bat, or the action of gunpowder. A 64 lb. shot, fired vertically from a gun loaded with an ordinary service charge of powder, would, if unresisted by the air, rise to about 35,000 feet, and if seized and secured at the highest point of its course, would possess there, in virtue of its position, a potential energy of 2,240,000 foot-pounds. When it left the gun it had none of this, but it was moving at the rate of *fifteen hundred feet per second*. It had KINETIC or (as it has sometimes been called) actual energy. We prefer the first term, which indicates motion as the form in which the energy is displayed. Kinetic energy depends on motion; and observation shows that its amount in each case is calculable from the mass which moves and the velocity with which it moves. And this being understood, it is easy, by considering a very simple case, to find how it so depends. For, if a stone be thrown

up with a velocity of 32 feet per second, it will rise to a height of nearly 16 feet; if thrown with *double* velocity, or 64 feet per second, it will rise *four* times as high, or to about 63½ feet; if the velocity be *trebled*, it rises *nine* times as high, or to 143 feet, and so on. Hence, as we must measure the energy of a moving body by the height to which it will rise if its motion is directed vertically upwards, we find that we have to measure it by the *square* of the velocity. The recent tremendous performances of the 12-ton Armstrong gun form an admirable illustration of the same point, showing, as they do, that to penetrate a thick plate of iron mere *weight* of shot is comparatively unavailing—it must have great velocity; and, in fact, with double the velocity we get at once four times the penetrating or destructive power. By such facts as these, we are led to measure kinetic energy by the square of the velocity with which a body moves. And there is particular advantage in taking as the exact expression, *one-half of the product of the moving mass and the square of its velocity in feet per second*, because this makes the unit of measurement agree with that adopted for potential energy. We may then express the relation between the forms of energy, in the case of a projectile unresisted by the air, by saying, *the sum of the potential and kinetic energies does not vary* during its flight. As it rises it gains potential energy, but its motion is slower, and thus kinetic energy is lost;—as it descends it continually loses potential energy, but gains velocity, and, therefore, kinetic energy. But what happens when it reaches the ground and comes to rest? Here it would appear to lose both its potential and kinetic energies. The first, indeed, is all gone just as the mass reaches the ground. To a superficial observer, the second might seem to be expended in bruising and displacing the bodies on which it impinges. But there is something more profound than this, as we shall presently see.

Meanwhile, as popular examples of the two kinds of energy, we may give such illustrations as a coiled spring, say the hair-spring of a watch when the balance-wheel is at one end of its range, a drawn bow, a head of water, compressed air,—all forms of potential energy; and the corresponding kinetic form in each case—the motion of the balance-wheel of the watch, the motion of an arrow, a jet of water, an air-gun bullet, and so on. But we need not dwell longer on this, as such matters abound in every-day experience.

To recur to the more mysterious transformations of energy, let us consider, as an excellent example, the case of motion of water in a basin. By stirring the water, originally at rest, we can easily give it a considerable velocity of rotation, in virtue of which it will, of course, possess con-

siderable kinetic energy. Moreover, the level is disturbed; the water rises from the middle to the sides of the basin, and, in virtue of this, the centre of gravity of the whole is higher than when the water was at rest. It thus possesses potential energy also. If the stirring be discontinued, all visible motion ceases after a few minutes, and, the surface becoming level, the potential energy is lost. It seems as if the kinetic energy also is all lost in the ceasing of the visible motion. What remains in their place? Apparently the water has returned precisely to the state in which it was before the stirring commenced, and the work done in stirring has been thrown away. But this is not the case: the water is *warmer* than before the stirring, and warmer than during the time when it was moving. The energy which apparently disappeared really exists as *Heat*. We might multiply examples of this kind indefinitely, and in all we should be led to the inevitable question, *What becomes of energy apparently lost?* The answer is, *It ultimately becomes heat*. We say *ultimately*, because, as will afterwards be shown, energy apparently lost may take in succession various forms, all of which, however, finally become heat. Sensible heat is, in fact, *motion*, and is therefore a form of kinetic energy. This was surmised at least two centuries ago, for we find it stated with remarkable clearness in the writings of Locke and others. But it remained a conjecture, unsupported by scientific evidence, until the proof was furnished by Davy. The simple experiment of melting two pieces of ice by rubbing them together showed at once the impossibility of heat being a substance. But it is not to be imagined that for all this the pleasant fiction called *Caloric* was to be abandoned; and consequently, for upwards of forty years after Davy's proof of its non-existence, caloric was believed in, written about, and taught, all over the world.*

About the time of Davy's experiments, Rumford also was engaged on the subject, and by measuring the heat developed in boring a cannon, arrived at a very approximate answer to the question, "How much heat can be produced by the expenditure of so much work?" or, in other words, and with the modern phraseology, "*What is the Dynamical Equivalent of Heat?*"

The founder of the modern dynamical theory of heat, an extension immensely beyond anything previously surmised, is undoubtedly Joule. As early as 1840 we find him investigating the heat generated by electric currents, and in 1841 he published

researches which contain the germ of the vast developments of dynamical science as applied to chemical action. In 1843 he published the results of a well planned and executed series of experiments, by which he ascertained that a pound of water is raised one degree Fahrenheit in temperature by 772 foot-pounds of mechanical work done upon it. In other words, if a pound of water fall from a height of 772 feet, and the kinetic energy thus acquired in the form of ordinary motion be entirely transformed into the kinetic energy of heat, the water will be one degree hotter than before its fall. Of course it is not in this way that the experiments of Joule were made, but it gives perhaps as clear an idea of his result as any other. The actual method which he first employed was to force water through small tubes. In later researches he arrived at the same numerical result (within $\frac{1}{300}$ of difference), by stirring water by means of a paddle-wheel, driven by the descent of a weight. The number of foot-pounds of potential energy lost by the descending weight of course gave the value of the kinetic energy imparted to the water, and when the latter came to apparent rest, the heat produced was therefore the equivalent of either. These experiments, of course, required extreme precautions to prevent or to allow for loss of heat, etc.; but they agreed so well with each other in very varied experiments, that the definite transformation of work into heat was completely established, and the "dynamical equivalent of heat" determined with great accuracy. Various other methods of effecting the transformation of work into heat were also tried by Joule, and with a like result; such as using oil, or mercury, instead of water, in the paddle-wheel experiment; or, again, expending work in producing heat by friction of pieces of iron; or by turning a magneto-electric machine, and measuring the heat generated by the electric current so produced, etc.*

We can now see that when mechanical energy is commonly said to be lost, as by unavoidable friction in machinery, it is really only *changed* into a new form of energy—heat. Thus the savage who lights his fire by rubbing together pieces of dry wood, expends his muscular energy in pro-

* At the same time Joule published the full proof of the existence of relations of equivalence among the energies of chemical affinity, heat of combination or combustion, electrical currents from a galvanic battery or from a magneto-electric machine, engines worked by galvanism, and of all the varied and interchangeable manifestations of thermal action and mechanical energy which accompany them. These researches, and others (which soon followed) on the theory of animal heat and motion in relation to the heat of combustion of the food consumed, and the theory of the phenomena presented by shooting stars, which this naturalist based on true dynamical principles, have afforded to subsequent writers the chief groundwork for their speculations on the dynamical theory of heat.

* No one who knows the present state of science can ignore the fact that many of its most certain truths are still misunderstood, and their very opposites often taught, even by men who from their position or their notoriety are supposed by the public to be among the best informed.

ducing heat. By mere hammering, a skilful smith can heat a piece of iron to redness. In the old musket, the potential energy of the spring of the lock became, when the trigger was drawn, kinetic energy of the dog-head, and the latter was partly expended in generating the heat which ignited the steel sparks which inflamed the powder. Some of it may have been wasted in splitting the flint, and some in scratching the lid of the pan, some (as we shall see presently) certainly was wasted in producing the sound called the click of the lock.

Curiously enough, although similar coincidences are common, while Joule was pursuing and publishing his investigations, there appeared in Germany a paper by Mayer of Heilbronn. Its title is *Bemerkungen über die Kräfte der Unbelebten Natur*, and its date 1842. In this paper the results obtained by preceding naturalists are stated with precision—among them the fundamental one of Davy—new experiments are suggested, and a method for finding the dynamical equivalent of heat is propounded.* On the strength of this publication an attempt has been made to claim for Mayer the credit of being the first to establish in its generality the principle of the Conservation of Energy. It is true that "*La science n'a pas de patrie*," and it is highly creditable to British philosophers, that they have so liberally acted according to this maxim. But it is not to be imagined that on this account there should be no scientific patriotism, or that in our desire to do all justice to a foreigner, we should depreciate or suppress the claims of our own countrymen. And it especially startles us that the recent attempts to place Mayer in a position which he never claimed, and which had long before been taken by another, should have found support within the very walls wherein Davy propounded his transcendent discoveries.

Having thus considered the transformation of mechanical energy into heat, we must next deal with the converse process, or the production of mechanical energy from heat; a pro-

cess to which the steam-engine owes its vast powers. But here we have no such general theorem as in the former case. Mechanical energy can always be changed into heat, but to obtain mechanical energy from heat it is necessary that we should have bodies of different temperatures; so that if all the matter in the universe were at one temperature it would be impossible, however great were that temperature, to convert any heat into work. This is a most important fact, because, as we shall presently see, it leads to the conclusion not that the energy in the universe can ever vary in amount, but that it is gradually becoming uniformly diffused heat, from which it can never afterwards be changed. However, granting that bodies of different temperatures are still procurable, heat in passing from the warmer to the colder body may (in part at least) be transformed into some other form of energy; and in the case of the steam-engine, that form is the mechanical effect produced by the expansion of water into vapour by heat; so that if the whole of the heat expended could be obtained as "work," we should have 772 foot-pounds for every portion of applied heat which was capable of raising the temperature of a pound of water through one degree of Fahrenheit's scale. In the best steam-engines, even with every modern improvement, only about one-tenth is actually so recovered. All such cases come under the following general proposition:—*When an engine does work in virtue of heat supplied to it, it emits heat from some part necessarily cooler than that where the heat is taken in; but the quantity so emitted is less than the quantity taken in, by an amount equivalent to the work done.* This is universally true, not only for artificial contrivances, such as the steam-engine, Stirling's air-engine, thermo-electric engines, etc., but for every action of dead matter in which the bodies concerned, if altered by change of temperature, of volume, of form, or of electric, magnetic, or chemical condition, are finally restored to their primitive state.

But whence do we get the heat which gives motion to the steam-engine, or, in other words, what was its potential form before it became heat? Here we answer at once, just as a stone falling to the earth changes its potential energy for kinetic, and finally for heat; so coal and the oxygen of the air, by virtue of their chemical affinity, have potential energy when uncombined, which is changed into its equivalent in heat as the combination takes place. Chemical affinity, then, is a form of potential, heat of combination or combustion the equivalent form of kinetic, energy. The heat thus obtained may be by various means, as the steam-engine or the air-engine, converted into mechanical energy. Or the combination may take place, as Joule has shown in one of his finest discoveries,

* Mayer's method is founded on the supposition that diminution of the volume of a body implies an evolution or generation of heat; and it involves essentially a false analogy between the natural fall of a body to the earth, and the condensation produced in an elastic fluid by the application of external force. The hypothesis on which he thus grounds a definite numerical estimate of the relation between the agencies here involved, is that the heat evolved when an elastic fluid is compressed and kept cool, is simply the dynamical equivalent of the work employed in compressing it. The experimental investigations of subsequent naturalists have shown that this hypothesis is altogether false, for the generality of fluids, especially liquids, and is at best only *approximately* true for air; whereas Mayer's statements imply its indiscriminate application to all bodies in nature, whether gaseous, liquid, or solid, and show no reason for choosing air for the application of the supposed principle to calculation, but that at the time he wrote air was the only body for which the requisite numerical data were known with any approximation to accuracy.

without generating its full equivalent of heat, and may be directed to spend a large part of its energy in producing electric currents, and through them raising weights. This is the case when zinc combines with oxygen in a galvanic battery. The heat of combination may then appear in the warming of wires through which the current passes. Or it may not appear at all, except in very small proportions, and an equivalent of mechanical work done may be had instead; as Joule and Scoresby found when, by their skilled appliance of mechanical and magnetic means, they prevented the chemical action from generating more than one-fourth of its heat, and got the remainder of its energy in the form of weights raised.

A remarkable result of electric development of the energy of chemical combination is, that through it the heat-equivalent may be made to appear at any time however long after, or in any place however distant from, the combustion. Thus if the weights raised by an electro-magnetic engine driven by a galvanic battery are allowed to fall, sooner or later they will generate in striking the ground the complement of heat till then wanting from the heat of combination of the "chemicals" which had been used. Or if a well insulated electric conductor were laid where the old Atlantic cable lies useless (for no other reason than that its insulation was never free from faults), the zinc fire might burn coolly at Valencia, and develop nine-tenths of its heat, or an equivalent of energy in mechanical work, in Newfoundland, wasting the remainder almost solely in the generation of heat by electricity escaping through the 2000 miles of gutta-percha cover. In every electric telegraph a portion (it may be and generally is only a small portion) of the energy of combination of oxygen, with the zinc if a battery is used, or with the operator's food if the magneto-inductive system is followed, actually appears first at the remote end of the wire as visible motions. Ultimately, through resistances to these motions, or subsidence of the sounds produced by the impacts of the needles, after they have told their tale, it becomes heat and is dissipated through space.

Many observations render it probable that an animal doing mechanical work does not allow the chemical combinations which go on between its food, more or less assimilated, and the oxygen inhaled in its breath, or otherwise introduced into its system directly or indirectly from our atmosphere, to generate their full equivalent of heat in its body as when resting, but directs a portion of their energy to be spent immediately in the muscular effort of pressing against external force. If this were the case, it would follow that dynamically the animal-engine is more like the electro-magnetic machine driven by the electric current

from a galvanic battery, than a steam-engine or air-engine, which takes in all its energy in the form of heat from a fire. It seems even probable that it is actually through electric force that the energy of the food is placed at the disposal of that most inscrutable of finite, created, and subject agencies, a free will directing the motions of matter in a living animal. But whatever may be the true explanation of the means, it is, as regards the result, singularly noteworthy that the construction of the animal frame enables it to convert more of a given amount of potential energy into work than is procurable from the most perfect steam-engine.

The food of animals is, as we have just seen, by virtue of its chemical composition, and affinity (a true "attraction") for oxygen, a store of potential energy. Gunpowder or gun-cotton, by the arrangement of its constituents, is possessed of tremendous potential energy, which a single spark resolves into a kinetic form as heat, sound, and the kinetic energy of a cannon shot. For sound is a motion of air, air is matter, and thus sound is merely a form of kinetic energy. In a bayonet charge, then, the soldier's rations are the potential energy of war; in a cavalry charge, we have in addition that of the forage supplied to the horses; and when artillery or small arms are used, the potential energy of a mixture of nitre, sulphur, and charcoal is the tranquil antecedent of the terrible kinetic effects of noise and destruction.

But we now come to the grandest question of all, or at all events to a preliminary stage of it. Whence do we immediately derive all those stores of potential energy which we employ as fuel or as food? What produces the potential energy of a loaf or a beef-steak? What supplies the coal or the water-power, without which our factories must stop? The answer, going one stage back, is quite satisfactory. To the Sun we are indebted for water-power, coal, and animal and vegetable food. The sun's heat raises the water of seas and lakes as vapour in the air, to be precipitated as rain above its original level, and thus to form the store of potential energy known as a "head" of water. Kinetic energy, radiated from the sun, enables plants to separate carbon from oxygen, and so to become stores of potential energy which, as coal or vegetable food, may have been treasured for ages in the earth, or may be consumed annually as they are produced. And while the sheep and ox convert part of the potential energy of their grass or turnips into animal heat and energy, the rest, stored up as the potential energy of beef and mutton, becomes in its turn a source of human energy.

Now, to go yet a step back. Whence does the sun procure the energy which he thus so continually and so liberally distributes? To this question

several answers have been given, one of which may be disposed of at once, and another will be found merely to shift, not to resolve the difficulty. The first of these supposes the sun to be the site of a great combustion or production of kinetic from potential energy by chemical combination. But it has been shown that, even supposing the mass of the sun to be made up (in the most effective proportions) of the combination of known bodies which would give the greatest potential energy, the whole could scarcely be adequate to produce 5000 years' radiation at the present rate; whereas there is abundant geological proof that the present state of things, if not a higher rate of distribution of energy from the sun, must have lasted already many hundreds of thousands of years. The second supposes the sun to be a white-hot liquid mass, but does not account for its heat. A third allows that the sun, all round his surface, if not throughout his mass, is most probably composed of melted matter, of a temperature not very many times greater than can actually be produced in our laboratories, but accounts for the original production, and the present maintenance of that state in spite of losses through radiation, by what is called the meteoric theory. A fourth, which is probably the true explanation, agrees with the third as to the origin of the sun's heat, but supposes the loss by radiation at present not to be compensated by fresh influx of meteoric matter. According to this theory, matter, when created, was diffused irregularly through infinite space, but was endowed with the attractive force of gravitation, by virtue of which it gradually became agglomerated into masses of various sizes, and retaining various amounts of kinetic energy in the shape of actual motion, which still appear in the orbital and axial revolutions, not only of the bodies composing the solar system, but of those in stellar systems also. The temperature produced by collisions, etc., would not only be in general higher for the larger bodies, but they would, of course, take longer to cool; and hence, our earth, though probably in bygone ages a little sun, retains but a slight amount of its original heat, at least in its superficial strata, while the sun still shines with brilliance perhaps little impaired. Supplies of energy are, no doubt, yet received continually by the sun, on its casual meeting with masses traversing space, or the falling in of others revolving about it, just as, on an exceedingly small scale, the earth occasionally gets a slight increase of kinetic energy by the impact of a shooting star or aerolite. In this sense it is easily calculable that the direct fall of the earth to the sun would supply the latter with energy equivalent to ninety-five years' loss at the present rate. But it is not probable that the sun receives in this way more than a very small proportion of the heat which he emits

by radiation. He must therefore at present be in the condition of a heated body cooling. But being certainly liquid for a great depth all round his surface, if not throughout, the superficial parts must sink by becoming heavier as they contract through cooling. The currents thus produced, bringing fresh portions from below to the surface, and keeping all the liquid thoroughly stirred up, must distribute the loss of heat very equally throughout the whole liquid mass, and so prevent the surface from cooling quickly, as it certainly would do if the superficial stratum were solid. So vast is the capacity of such a mass for heat, when under the influence of the enormous pressure produced in the interior by mutual gravitation of the parts, that if the sun is liquid to his centre, he may emit, as it has been estimated, from seven to seven thousand years' heat at the present rate before his average temperature can go down by one degree Fahrenheit.

This view of the possible origin of energy at creation is excessively instructive. Created simply as difference of position of attracting masses, the potential energy of gravitation was the original form of all the energy in the universe; and as we have seen that all energy tends ultimately to become heat, which cannot be transformed without a new creative act into any other modification, we must conclude that when all the chemical and gravitation energies of the universe have taken their final kinetic form, the result will be an arrangement of matter possessing no realizable potential energy, but uniformly hot—an undistinguishable mixture of all that is now definite and separate—chaos and darkness as "*in the beginning.*" But before this consummation can be attained, in the matter of our solar system, there must be tremendous throes and convulsions, destroying every now existing form. As surely as the weights of a clock run down to their lowest position, from which they can never rise again, unless fresh energy is communicated to them from some source not yet exhausted, so surely must planet after planet creep in, age by age, towards the sun. When each comes within a few hundred thousand miles of his surface, if he is still incandescent, it must be melted and driven into vapour by radiant heat. Nor, if he has crusted over and become dark and cool externally, can the doomed planet escape its fiery end. If it does not become incandescent like a shooting-star by friction in its passage through his atmosphere, its first graze on his solid surface must produce a stupendous flash of light and heat. It may be at once, or it may be after two or three bounds, like a cannon-shot ricochetting on a surface of earth or water, the whole mass must be crushed, melted, and evaporated by a crash generating in a moment some

thousands of times as much heat as a coal of the same size could produce by burning.

Thus we have the sober scientific certainty that heavens and earth shall "wax old as doth a garment;" and that this slow progress must gradually, by natural agencies which we see going on under fixed laws, bring about circumstances in which "the elements shall melt with fervent heat." With such views forced upon us by the contemplation of dynamical energy and its laws of transformation in dead matter, dark indeed would be the prospects of the human race if unilluminated by that light which reveals "new heavens and a new earth."

We have not made in the foregoing pages any but the slightest allusions to the remaining known forms of energy, such as light, electric motion, etc. Nor have we examined into the nature and effects of the so-called vital force. All that we need at present say of them is, that, as far as experiment has yet taught us, nothing known with regard to them can modify the preceding conclusions. For, as we may show in a future paper, light, electric motion, and all other forms of energy, ultimately become heat, and, therefore, though the progress of energy through these various stages may modify the course of events, it cannot in the least affect their inevitable termination.

BOHEMIAN PROTESTANTS.

Who has not heard of the cruel martyrdom of John Huss and Jerome of Prague in the flames of Constance in 1415? Yet who knows that these martyrs spoke a language as different from German as Welsh is from English, or Gaelic from Lowland Scotch? Who has not heard of the Winter King, once the Elector-Palatine, the husband of the beautiful Elizabeth, daughter of James the First of England and Sixth of Scotland, of his disgraceful flight from his throne, of the miseries of his family, of his sons Rupert and Maurice, and of the final extinction of Protestantism in Bohemia by the mission of Jesuits and soldiers through the length and breadth of the land, and the reduction of the number of its inhabitants from four millions to eight hundred thousand? Yet who does not suppose that here persecution has had her perfect work, and that the candlestick of the once celebrated Utraquist Church was so quenched in blood, that its brightness faded away, and "left not a rack behind?" Who knows that when the German Emperor, Joseph II., the son of the great Maria Theresa, issued an edict of religious toleration in 1781, no less than one hundred thousand persons registered themselves as Protestants in the two districts of Bohemia and Moravia? Who knows, too, that last year, in the month of April, the disabilities still burthening the Protestants in the Austrian empire were removed, and a new and free constitution given to the Protestant churches, under which elections and other movements have been going on most vigorously? Who knows, lastly, that next year, 1863, is the thousandth anniversary of the introduction of Christianity into the kingdom of Great Moravia, of which both Bohemia and the neighbouring district of Moravia were provinces, by the two Græco-Slavonic brothers

of Thessalonica, Methodius and Cyrillus, and that the Protestants are nerving and preparing themselves for a first passage of arms with the peaceful weapons of pen and tongue, against their numerous, wealthy, and dominant Roman Catholic rivals?

See how the Lord has turned to his own good and wise purposes the necessities of statesmen and rulers! When the aid of Russia had rendered the Hapsburg dynasty safe, apparently, on the throne of Vienna, had crushed the Hungarian rebellion, and rendered the Austrian Government for the time master of the situation, the Jesuits and the agents of Popery had it all their own way, and were able to obtain the celebrated Concordat, which was intended to put a stop to the progress of Protestantism for ever. But suddenly a new actor, the French Emperor, Napoleon III., appeared upon the scene, and the mighty army, on which the Austrian Government had relied, broke, like a reed, at the battles of Magenta and Solferino, and there was nothing left for the Emperor to do but to call new statesmen to his councils, and grant both liberal institutions and religious freedom to the whole community. And now, though but little is being done in the world of politics in Austria, owing to the refusal of the Hungarians to send deputies to the Reichsrath, yet a great deal is being done in the religious world.

The old Utraquist Church of Bohemia was Episcopalian in will, though not in deed, for the Pope never would confirm the election of their Archbishop, Rokycana; but the more genuine Hussites and their legitimate descendants, the Bohemian Brethren, were always Presbyterian, both in will and deed. It is mainly from the remnants of the latter, that the present Bohemian

Protestants appear to spring. These are divided into two grand branches, the Lutherans, Evangelicals, or adherents of the Confession of Augsburg, and the Helvetians or Reformed. The great mass of German Protestants belong to the former, and they only number about 15,000 real Slavonic Bohemians in their ranks. The great body of Slavonic Protestants, both in Bohemia and Moravia, belongs to the Reformed, Helvetian or Zwinglian branch, which numbers almost 60,000 adherents in Bohemia alone. And though in Germany there is bitter strife and quarrelling between those two scions of the Reformation, yet, thanks be to God, in Bohemia there is nothing but peace, good-will, and friendly co-operation between them.

But many will no doubt be glad to know the outward difference between these Evangelical and Reformed Protestant Christians. Go into a Lutheran church, and, with the exception of the fact that there are no side altars, you might think that you were in a Roman Catholic church. The high altar is adorned with a crucifix and with massive candlesticks, which are always ornamented with white ribbons and lighted at the celebration of the Holy Communion. Go into a Reformed church in Bohemia, and you will see no ornament of any sort or kind save a cup or chalice sculptured in wood over the pulpit, indicating that it was for the restoration of the cup in the communion to the laity that the first occasion of disruption with the Church of Rome arose. You will also see a massive wooden altar or table standing in the body of the church and covered with a plain white cloth, at which the minister stands during prayers, and when he is not in the pulpit.

But let me give some little account of the new constitution, which is common to both the Lutheran and Reformed Churches. Every man twenty-five years old, who has paid his quota towards the expenses of the congregation, pastor, schoolmaster, repairs, and everything included, possesses a vote. These voters first elect a *Vybor* or committee, varying in number according to the size of the congregation. At the village of Leschitz the committee consisted of one hundred and two persons, who again chose twenty *Starzi* or elders, with whom lay the election of the *Fararz* or minister, the *Proni starzi* or curator, a kind of permanent chairman, and the *Pocetoedouc* or treasurer. The curator attends the synod of the district, when it takes place, as lay member, as well as the clergyman. The clergy choose the superintendent and district seniorate. The old Consistory at Vienna, which was presided over by a Roman Catholic, is abolished, and the Protestant churches are managed by an evangelical supreme ecclesiastical council,

chosen by the Emperor, of which no Roman Catholic may be a member. A third of each presbytery resigns every third year, but every individual member thus resigning is capable of re-election.

Mr. Kaspar, the Reformed clergyman of Leschitz, has received 449 Roman Catholics into his flock during his ministry there. As every convert has to be registered, there can be no doubt as to the numbers. In thirteen years the Helvetian congregation at Prague has increased from 800 to 1600. As regards the Lutherans, I can bring forward one fact which will speak volumes: the inhabitants of the little village of Spaloo have joined the Evangelical Church *en masse*, and that without any missionary exertions among them, but spontaneously and through their own self-formed convictions.

One word more and I have done. In attending the services and hearing the sermons of these Slavonic Protestants, I was much struck with the knowledge of Scripture which the preachers evidently presupposed on the part of the congregation. Everybody must have known their Bibles well to have listened to and drunk in with such breathless silence the word of life that was addressed to them. An agent of the great German Gustavus Adolphus Society, who made a tour in Austria on its behalf, remarks upon the entire freedom from Rationalism among the Slavonic Protestants;—nothing but Biblical doctrine is heard in their pulpits, and he who dared to propound anything else would soon be driven out of the village in which he had done so.

O that the Protestants of our favoured land would take an interest in the welfare and prospects of these long-suffering and much-tried brethren in the faith! It was from Britain—from Wycliffe's pulpit at Lutterworth, in Leicestershire—that the light came which was caught and set on high by Huss, and defended by his countrymen against five crusades, carried on by the whole might of Roman Catholic Europe; which was quenched for a time in blood at the fatal battle of the White Mountain in 1620, but which is now again on its candlestick, and promises by God's grace to be a mighty agent in the evangelization of Eastern Europe. Next year is the jubilee of both Protestants and Romanists in Bohemia and Moravia; next year the Slavonic pulpits will resound with appeals to the past history of Bohemia, and to the Scriptures, with which all its glories are connected. May our brethren there find sympathy and aid in that Britain which 450 years ago sent them light, for which she was not then prepared herself!

A. H. WRATISLAW.

MISTRESS AND MAID.

A HOUSEHOLD STORY.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

CHAPTER XXI.

It was not a cheerful morning on which to be married. A dense, yellow, London fog, the like of which the Misses Leaf had never yet seen, penetrated into every corner of the parlour at No. 15,

III—39

where they were breakfasting drearily by candle-light, all in their wedding attire. They had been up since six in the morning, and Elizabeth had dressed her three mistresses one after the other, taking exceeding pleasure in the performance. For she was still little more than a girl, to whom a

wedding was a wedding, and this was the first she had ever had to do with in her life.

True, it disappointed her in some things. She was a little surprised that last evening had passed off just like all other evenings. The interest and bustle of packing soon subsided—the packing consisting only of the travelling trunk, for the rest of the *trousseau* went straight to Russell Square, every means having been taken to ignore the very existence of No. 15; and then the three ladies had supper as usual, and went to bed at their customary hour, without any special demonstration of emotion or affection. To Elizabeth this was strange. She had not yet learnt the unspeakable bitterness of a parting where nobody has any grief to restrain.

On a wedding morning, of course, there is no time to be spared for sentiment. The principal business appeared to be—dressing. Mr. Ascott had insisted on doing his part in making his new connexions appear “respectable” at his marriage, and for Selina’s sake they had consented. Indeed, it was inevitable: they had no money whatever to clothe themselves withal. They must either have accepted Mr. Ascott’s gifts—in which, to do him justice, he was both thoughtful and liberal—or they must have stayed away from the wedding altogether, which they did not like to do “for the sake of the family.”

So, with a sense of doing their last duty by the sister, who would be, they felt, henceforward a sister no more, Miss Leaf attired herself in her violet silk and white China shawl, and Miss Hilary put on her silver-grey poplin, with a cardinal cape, as was then in fashion, trimmed with white swan’s-down. It was rather an elderly costume for a bridesmaid; but she was determined to dress warmly, and not risk, in muslins and laces, the health which to her now was money, life—nay, honour.

For Ascott’s creditor had been already paid: Miss Balquidder never let grass grow under her feet. When Hilary returned to her sisters that day, there was no longer any fear of public exposure; she had the receipted bill in her hand, and she was Miss Balquidder’s debtor to the extent of eighty pounds.

But it was no debt of disgrace or humiliation, nor did she feel it as such. She had learned the lesson which the large-hearted rich can always teach the poor, that, while there is sometimes, to some people, no more galling chain, there is to others—and these are the highest natures, too—no more firm and sacred bond than gratitude. But still the debt was there; and Hilary would never feel quite easy till it was paid—in money, at least. The generosity she never wished to repay. She would rather feel it wrapping her round, like an arm that was heavy only through its exceeding tenderness, to the end of her days.

Nevertheless, she had arranged that there was to be a regular monthly deduction from her salary; and how, by retrenchment, to make this monthly payment as large as she could, was a question which had occupied herself and Johanna for a good while after they retired to rest. For there was no time to be lost. Mrs. Jones must be given notice to; and there was another notice to be given, if the Richmond plan were carried out; another sad retrenchment, foreboding which, when Elizabeth brought up supper, Miss Hilary could hardly look the girl in the face, and, when she bade her good-night, had felt almost like a secret conspirator.

For she knew that, if the money to clear this debt was to be saved, they must part with Elizabeth.

No doubt the personal sacrifice would be considerable, for Hilary would have to do the work of their two rooms with her own hands, and give up a hundred little comforts in which Elizabeth, now become a most clever and efficient servant, had made herself necessary to them both. But the two ladies did not think of that at the moment; they only thought of the pain of parting with her. They thought of it sorely, even though she was but a servant, and there was a family parting close at hand. Alas! people must take what they earn. It was a melancholy fact that, of the two impending losses, the person they should miss most would be—not their sister, but Elizabeth.

Both regrets combined made them sit at the breakfast-table—the last meal they should ever take together as a family—sad and sorry, speaking about little else than the subject which presented itself as easiest and uppermost, namely, clothes.

Finally, they stood all completely arrayed, even to bonnets; Hilary looking wonderfully bewitching in hers, which was the very pattern of one that may still be seen in a youthful portrait of our gracious Queen—a large round brim, with a wreath of roses inside; while Miss Leaf’s was somewhat like it, only with little bunches of white ribbon, “for,” she said, “my time of roses has gone by.” But her sweet faded face had a peace that was not in the other two—not even in Hilary’s.

But the time arrived; the carriage drew up at the door. Then nature and sisterly feeling asserted themselves for a minute. Miss Selina “gave way,” not to any loud or indecorous extent, to nothing that could in the least harm her white satin, or crumple her laces and ribbons; but she did shed a tear or two—real honest tears—kissed her sisters affectionately, hoped they would be very happy at Richmond, and that they would often come to see her at Russell Square.

“You know,” said she, half apologetically, “it is a great deal better for one of us at least to be married and settled. Indeed I assure you, I have done it all for the good of my family.”

And for the time being she devoutly believed she had.

So it was all over. Elizabeth herself, from the aisle of St. Pancras Church, watched the beginning and ending of the show; a very fine show, with a number of handsomely dressed people, wedding guests, who seemed to stare about them a good deal, and take little interest in either bride and bridegroom. The only persons Elizabeth recognised were her mistresses,—Miss Leaf, who kept her veil down and never stirred; and Miss Hilary, who stood close behind the bride, listening with downcast eyes to the beautiful marriage service. It must have touched her, more than on her sister's account, for a tear gathered under each eyelash, silently rolled down the soft cheek and fell.

"Miss Hilary's an angel, and he'll be a lucky man that gets her," meditated her faithful "bower-maiden" of old; as, a little excited by the event of the morning, she stood by the mantel-piece, and contemplated a letter which had come after the ladies departed; one of these regular monthly Indian letters, after which, Elizabeth was sharp enough to notice, Miss Hilary's step always grew lighter and her eye brighter, for many days.

"It must be a nice thing to have somebody fond of one, and somebody to be fond of," meditated she. And "old-fashioned piece of goods" as she was—according to Mrs. Jones (who now, from the use she was in the Jones's *ménage*, patronized and confided in her extremely)—some little bit of womanly craving after the woman's one hope and crown of bliss crept into the poor maid-servant's heart. But it was not for the maid-servant's usual necessity—a "sweetheart"—somebody to "keep company with;" it was rather for somebody to love, and perhaps take care of a little. People love according to their natures; and Elizabeth's was a strong nature; its principal element being a capacity for passionate devotedness, almost unlimited in extent. Such women, who love most, are not always, indeed very rarely, loved best. And so it was perhaps as well that poor Elizabeth should make up her mind, as she did very composedly, that she herself should never be married; but after that glorious wedding of Miss Hilary's to Mr. Lyon, should settle down to take care of Miss Leaf all her days.

"And if I turn out only half as good and contented as my mistress, it can't be such a dreadful thing to be an old maid after all," stoically said Elizabeth Hand.

The words were scarcely out of her mouth, when her attention was caught by some one in the passage inquiring for her; yes, actually for her. She could hardly believe her eyes when she perceived it was her new-found old acquaintance Tom Cliffe.

He was dressed very well, out of livery; indeed, he looked so extremely like a gentleman, that Mrs. Jones's little girl took him for one, called him "Sir," and showed him into the parlour.

"All right. I thought this was the house. Uncommon sharp of me to hunt you out, wasn't it, Elizabeth?"

But Elizabeth was a little stiff, flurried, and perplexed. Her mistresses were out; she did not know whether she ought to ask Tom in, especially as it must be into the parlour; there was no other place to take him to.

However, Tom settled the matter with a conclusive, "Oh, gammon!"—sat himself down, and made himself quite comfortable. And Elizabeth was so glad to see him—glad to have another chance of talking about dear old Stowbury. It could not be wrong; she would not say a word about the family, not even tell him she lived with the Misses Leaf, if she could help it. And Tom did not seem in the least curious.

"Now, I call this quite a coincidence. I was stopping at St. Pancras Church to look at a wedding; some old city fogie who lives in Russell Square, and is making a great splash; and there I see you, Elizabeth, standing in the crowd, and looking so nice and spicy; as fresh as an apple and as brisk as a bee. I hummed and hawed and whistled, but I couldn't catch your eye; then I missed you, and was vexed above a bit, till I saw some one like you going in at this door, so I just knocked and asked; and here you are! 'Pon my life, I am very glad to see you."

"Thank you, Tom," said Elizabeth, pleased, even grateful for the trouble he had taken about her; she had so few friends; in truth, actually none.

They began to talk, and Tom Cliffe talked exceedingly well. He had added to his natural cleverness a degree of London sharpness, the result of much "knocking about" ever since childhood. Besides, his master, the literary gentleman, who had picked him out of the printing-office, had taken a deal of pains with him. Tom was, for his station, a very intelligent and superior young man. Not a boy, though he was still under twenty, but a young man: that precocity of development which often accompanies a delicate constitution, making him appear, as he was indeed in mind and character, fully six or seven years older than his real age.

He was a handsome fellow, too, though small; dark-haired, dark-eyed, with regular and yet sensitive and mobile features. Altogether Tom Cliffe was decidedly interesting, and Elizabeth took great pleasure in looking at him, and in thinking, with a certain half-motherly, half-romantic satisfaction, that but for her, and her carrying him home from under the horse's heels, he might, humanly speak-

ing, have been long ago buried in Stowbury church-yard.

"I have a 'church-yard cough' at times still," said he, when speaking of this little episode of early life. "I don't think I shall ever live to be a middle-aged man." And he shook his head, and looked melancholy and poetical; nay, even showed Elizabeth some poetry that he himself had written on the subject, which was clever enough in its way.

Elizabeth's interest grew. An ordinary baker or butcher-boy would not have attracted her in the least; but here was something in the shape of a hero, somebody who at once touched her sympathies and roused her admiration. For Tom was quite as well-informed as she was herself; more so, indeed. He was one of the many shrewd and clever working men who were then beginning to rise up and think for themselves, and educate themselves. He attended classes at mechanics' institutions, and young men's debating societies; where every topic of the day, religion, politics, political economy, was handled freely, as the young do handle these serious things. He threw himself, heart and soul, into the new movement, which, like all revolutions, had at first its great and fatal dangers, but yet resulted in much good; clearing the political sky, and bringing all sorts of hidden abuses under the sharp eyes of that great scourge of evil-doers—public opinion.

Yet Elizabeth, reared under the wing of the conservative Misses Leaf, was a little startled when Tom Cliffe, who apparently liked talking and being listened to, gave her a long dissertation on the true principles of the Charter, and how Frost, Williams, and Jones—names all but forgotten now—were very ill-used men, actual martyrs. She was more than startled,—shocked indeed,—until there came a reaction of the deepest pity,—when he confessed that he never went to church. He saw no use in going, he said; the parsons were all shams, paid largely to chatter about what they did not understand; the only real religion was that which a man thought out for himself, and acted out for himself. Which was true enough, though only a half truth; and innocent Elizabeth did not see the other half.

But she was touched and carried away by the earnestness and enthusiasm of the lad, wild, fierce iconoclast as he was, ready to cast down the whole fabric of Church and State; though without any personal hankering after lawless rights and low pleasures. His sole idol was, as he said, intellect, and that was his preservation.

Also, the fragile health which was betrayed in every flash of his eye, every flush of his sallow cheek, made Tom Cliffe, even in the two hours he stayed with her, come very close to Elizabeth's heart. It was such a warm heart, such a liberal

heart, thinking so little of itself or of its own value.

So here began to be told the old story, familiar in kitchens as parlours; but, from the higher bringing-up of the two parties concerned, conducted in this case more after the fashion of the latter than the former.

Elizabeth Hand was an exceptional person, and Tom had the sense to see that at once. He paid her no coarse attentions, did not attempt to make love to her; but he liked her, and he let her see that he did. True, she was not pretty, and she was older than he; but that to a boy of nineteen is rather flattering than otherwise. Also, for there is a law even under the blind mystery of likings and fallings in love—a certain weakness in him, that weakness which generally accompanies the poetical nature, clung to the quiet, solid, practical strength of hers. He liked to talk, and he listened to by those silent, admiring, gentle grey eyes; and he thought it very pleasant when, with a motherly prudence, she warned him to be careful over his cough, and gave him a flannel breastplate to protect his chest against the cold.

When he went away, Tom was so far in love, that, following the free and easy ways of his class, he attempted to give Elizabeth a kiss; but she drew back so hotly, that he begged her pardon, and slipped away rather confounded.

"That's an odd sort of young woman; there's something in her," said he to himself. "I'll get a kiss though, by and by."

Meanwhile Elizabeth, having forgotten all about her dinner, sat thinking, actually doing nothing but thinking, until within half an hour of the time when her mistresses might be expected back. They were to go direct to the hotel, breakfast, wait till the newly-married couple had departed, and then come home. They would be sure to be weary, and want their tea.

So Elizabeth made everything ready for them, steadily putting Tom Cliffe out of her mind. One thing she was glad of, that talking so much about his own affairs, he had forgotten to inquire concerning hers, and was still quite ignorant even of her mistresses' name. He therefore could tell no tales of the Leaf family at Stowbury. Still, she determined at once to inform Miss Hilary that he had been here, but that, if she wished it, he should never come again. And it spoke well for her resolve, that while resolving, she was startled to find how very sorry she should feel if Tom Cliffe never came again.

I know I am painting this young woman with a strangely tender conscience, a refinement of feeling and a general moral sensitiveness, which people say is seldom or never to be found in her rank of life. And why not? Because mistresses treat

servants as servants, and not as women; because in the sharp hard line they draw, at the outset, between themselves and their domestics, they give no chance for any womanliness to be developed. And therefore since human nature is weak, and without help from without, a long degraded class can never rise, sweethearts will still come crawling through back entries and down at area-doors; mistresses will still have to dismiss, helpless and fallen, or brazen in iniquity, many a wretched girl who once was innocent; or, if nothing actually vicious results, may have many a good respectable servant who left her to get married, return, complaining that her "young man," whom she knew so little about, has turned out a drunken scoundrel of a husband, who drives her back to her old comfortable "place" to beg for herself and her starving babies a morsel of bread.

When, with a vivid blush that she could not repress, Elizabeth told her mistress that Tom Cliffe had been to see her, the latter replied at first carelessly, for her mind was pre-occupied. Then, her attention caught by the aforesaid blush, Miss Hilary asked—

"How old is the lad?"

"Nineteen."

"That's a bad age, Elizabeth. Too old to be a pet, and rather too young for a husband."

"I never thought of such a thing," said Elizabeth warmly,—and honestly, at the time.

"Did he want to come and see you again?"

"He said so."

"Oh well, if he is a steady, respectable lad, there can be no objection. I should like to see him myself next time."

And then a sudden sharp recollection, that there would likely be no next time, in their service at least, made Miss Hilary feel quite a hypocrite.

"Elizabeth," said she, "we will speak about Tom Cliffe—is not that his name?—by and by. Now, as soon as tea is over, my sister wants to talk to you. When you are ready, will you come up-stairs?"

She spoke in an especially gentle tone, so that by no possibility could Elizabeth fancy they were displeased with her.

Now, knowing the circumstances of the family, Elizabeth's conscience had often smitten her that she must eat a great deal, that her wages, paid regularly month by month, must make a great hole in her mistress's income. She was, alack! a sad expense, and she tried to lighten her cost in every possible way. But it never struck her that they could do without her, or that any need would arise for their doing so. So she went into the parlour quite unsuspectingly, and found Miss Leaf lying on the sofa, and Miss Hilary reading aloud the letter

from India. But it was laid quietly aside, as she said—

"Johanna, Elizabeth is here."

Then Johanna, rousing herself to say what must be said, but putting it as gently and kindly as she could, told Elizabeth, what mistresses often think it below their dignity to tell to servants, the plain truth—namely, that circumstances obliged herself and Miss Hilary to retrench their expenses as much as they possibly could. That they were going to live in two little rooms at Richmond, where they would board with the inmates of the house.

"And so, and so—" Miss Leaf faltered. It was very hard to say it with those eager eyes fixed upon her.

Hilary took up the word,—

"And so, Elizabeth, much as it grieves us, we shall be obliged to part with you. We cannot any longer afford to keep a servant."

No answer.

"It is not even as it was once before, when we thought you might do better for yourself. We know, if it were possible, you would rather stay with us, and we would rather keep you. It is like parting with one of our own family." And Miss Hilary's voice too failed. "However, there is no help for it; we must part."

Elizabeth, recovered from her first bewildered grief, was on the point of bursting out into entreaties that she might do like many another faithful servant, live without wages, put up with any hardships, rather than be sent away. But something in Miss Hilary's manner told her it would be useless; worse than useless, painful; and she would do anything rather than give her mistress pain. When, utterly unable to control it, she gave vent to one loud sob, the expression of acute suffering on Miss Hilary's countenance was such that she determined to sob no more. She felt that for some reason or other, the thing was inevitable; that she must take up her burden, as her mistress had done, even though it were the last grief of all,—leaving that beloved mistress.

"That's right, Elizabeth," said Miss Hilary softly. "All these changes are very bitter to us also, but we bear them. There is nothing lasting in this world, except doing right, and being good and faithful and helpful to one another."

She sighed. Possibly, there had been sad tidings in the letter which she still held in her hand, clinging to it as we do to something which, however sorely it hurts us, we would not part with for the whole world. But there was no hopelessness or despair in her tone, and Elizabeth caught the influence of that true courageous heart.

"Perhaps, you may be able to take me back again soon, Ma'am," said she, looking towards Miss Leaf.

"And meantime I might get a place; Mrs. Jones has told me of several," and she stopped, afraid lest it might be found out how often Mrs. Jones had urged her to "better herself," and she had indignantly refused. "Or," (a bright idea occurred), "I wonder if Miss Selina, that is Mrs. Ascott, would take me in at Russell Square?"

Hilary looked hard at her.

"Would you really like that?"

"Yes, I should; for I should see and hear of you. Miss Hilary, if you please, I wish you would ask Mrs. Ascott to take me."

And Hilary, much surprised,—for she was well acquainted with Elizabeth's sentiments towards both Mr. Ascott and the late Miss Selina,—promised.

CHAPTER XXII.

AND NOW I leave Miss Hilary for a time; leave her in, if not happiness, great peace. Peace, which after these stormy months was an actual paradise of calm to both herself and Johanna.

Their grief for Ascott had softened down. Its very hopelessness gave it resignation. There was nothing more to be done; they had done all they could, both to find him out, and to save him from the public disgrace which might blight any hope of reformation. Now the result must be left in higher hands.

Only at times fits of restless trouble would come; times when a sudden knock at the door would make Johanna shake nervously for minutes afterwards; when Hilary walked about everywhere with her mind pre-occupied, and her eyes open to notice every chance passer-by; nay, she had sometimes secretly followed down a whole street, some figure, which in its light jaunty step and long, fashionably-cut hair, reminded her of Ascott.

Otherwise they were not unhappy, she and her dearest sister. Poor as they were, they were together, and their poverty had no sting. They knew exactly how much they would receive, monthly, and how much they ought to spend. Though obliged to calculate every penny, still their income and their expenses were alike certain; there was no anxiety about money matters, which of itself was an indescribable relief. Also there was that best blessing—peace at home. Never in all her days had Johanna known such an easy life; sitting quietly in her parlour while Hilary was engaged in the shop below: descending to dinner, where she took the head of the table, and the young people soon learnt to treat her with great respect and even affection; then waiting for the happy tea in their own room, and the walk afterwards, in Richmond Park or along the Thames banks towards Twickenham. Perhaps it was partly

from the contrast to that weary year in London, but never in any spring had the air seemed so balmy, or the trees so green. They brought back to Hilary's face the youthful bloom which she had begun to lose; and, in degree, her youthful brightness, which had also become slightly overclouded. Again she laughed and made her little domestic jokes, and regained her pretty way of putting things, so that everything always appeared to have a cheerful, and even a comical side.

Also—for while we are made as we are, with capacity for happiness, and especially the happiness of love, it is sure to be thus—she had a little private sunbeam in her own heart, which brightened outside things. After that sad letter from India which came on Selina's wedding-day, every succeeding one grew more cheerful, more demonstrative, nay, even affectionate; though still with that queer Scotch pride of his, that would ask for nothing till it could ask, and have everything, and give everything in return,—the letters were all addressed to Johanna.

"What an advantage it is to be an old woman," Miss Leaf would sometimes say mischievously, when she received them. But more often she said nothing: waiting in peace for events to develop themselves. She did not think much about herself, and had no mean jealousy over her child; she knew that a righteous and holy love only makes all natural affections more sacred and more dear.

And Hilary? She held her head higher and prouder; and the spring trees looked greener, and the river ran brighter in the sunshine. Ah, Heaven pity us all! it is a good thing to have love in one's life; it is a good thing, if only for a time, to be actually *happy*. Not merely contented, but *happy*!

And so I will leave her, this little woman; and nobody need mourn over her because she is working too hard, or pity her because she is obliged to work; has to wear common clothes, and live in narrow rooms, and pass on her poor weary feet the grand carriages of the Richmond gentry, who are not a bit more well-born, or well-educated, than she;—who never take the least notice of her, except sometimes to peer curiously at the desk where she sits in the shop-corner, and wonder who "that young person with the rather pretty curls" can be. No matter, she is happy.

How much happiness was there in the large house at Russell Square?

The Misses Leaf could not tell; their sister never gave them an opportunity of judging.

"My son's my son till he gets him a wife,

But my daughter's my daughter all her life."

And so, most frequently is "my sister." But not in this case. It could not be; they never expected it would.

When on her rare visits to town, Hilary called at Russell Square, she always found Mrs. Ascott handsomely dressed, dignified, and gracious. Not in the slightest degree uncivil or unsisterly, but gracious; perhaps a thought too gracious. Most condescendingly anxious that she should stay to luncheon, and eat and drink the best the house afforded, but never by any chance inviting her to stay to dinner. Consequently, as Mr. Ascott was always absent in the city until dinner, Hilary did not see him for months together, and her brother-in-law was, she declared, no more to her than any other man upon 'change, or the man in the moon, or the Great Mogul.

His wife spoke little about him. After a few faint, formal questions concerning Richmond affairs, somehow her conversation always recurred to her own: the dinners she had been at, those she was going to give; her carriages, clothes, jewellery, and so on. She was altogether a very great lady, and Hilary, as she avouched laughingly—it was, in this case, better to laugh than to grieve—felt an exceedingly small person beside her.

Nevertheless, Mrs. Ascott showed no unkindness—nay, among the various changes that matrimony had produced in her, her temper appeared rather to have improved than otherwise; there was now seldom any trace of that touchy sharpness which used to be called "poor Selina's way." And yet Hilary never quitted the house without saying to herself, with a sigh, the old phrase, "Poor Selina!"

Thus, in the inevitable consequences of things, her visits to Russell Square became fewer and fewer; she kept them up as a duty, not exacting any return, for she felt that was impossible, though still keeping up the ghostly shadow of sisterly intimacy. Nevertheless, she knew well it was but a shadow; that the only face that looked honest, glad welcome, or that she was honestly glad to see, in her brother-in-law's house, was the under-housemaid, Elizabeth Hand.

Contrary to all expectations, Mrs. Ascott had consented to take Elizabeth into her service. With many stipulations and warnings never to presume on past relations, never even to mention Stowbury, on pain of instant dismissal—still, she did take her, and Elizabeth stayed. At every one of Miss Hilary's visits, lying in wait in the bed-chamber, or on the staircase, or creeping up at the last minute to open the hall-door, was sure to appear the familiar face, beaming all over. Little conversation passed between them—Mrs. Ascott evidently disliked it; still Elizabeth looked well and happy, and when Miss Hilary told her so, she always silently smiled.

But this story must tell the whole truth which lay beneath that fond acquiescing smile.

Elizabeth was certainly in good health, being

well-fed, well-housed, and leading on the whole an easy life; happy too, when she looked at Miss Hilary. But her migration from Mrs. Jones' lodgings to this grand mansion had not been altogether the translation from Purgatory to Paradise that some would have supposed.

The author of this simple story having—unfortunately for it—never been in domestic service, especially in the great houses of London, does not pretend to describe the ins and outs of their "high life below stairs," to repeat kitchen conversations, to paint the humours of the servants' hall—the butler and house-keeper getting tipsy together, the cook courting the policeman, and the footman making love successively to every housemaid and lady's-maid. Some writers have depicted all this, whether faithfully or not, they know best; but the present writer declines to attempt anything of the kind. Her business is solely with the one domestic, the country-girl who came unexpectedly into this new world of London servant-life; a world essentially its own, and a life of which the upper classes are as ignorant as they are of what goes on in Madagascar or Tahiti.

This fact was the first which struck the unsophisticated Elizabeth. She, who had been brought up in a sort of feudal relationship to her dear mistresses, was astonished to find the domestics of Russell Square banded together into a community which, in spite of their personal bickerings and jealousies, ended in alliance offensive and defensive against the superior powers, whom they looked upon as their natural enemies. Invisible enemies, certainly; for "master" they hardly ever saw; and, excepting the lady's-maid, were mostly as ignorant of "missis." The housekeeper was the middle link between the two estates; the person with whom all business was transacted, and to whom all complaints had to be made. Beyond being sometimes talked over, generally in a quizzical, depreciatory, or condemnatory way, the heads of the establishment were no more to their domestics than the people who paid wages, and exacted in return certain duties, which most of them made as small as possible, and escaped whenever they could.

If this be an exaggerated picture of a state of things perhaps in degree inevitable—and yet it should not be, for it is the source of incalculable evil, this dividing of a house against itself,—if I have in any way said what is not true, I would that some intelligent "voice from the kitchen" would rise up and tell us what is true, and whether it be possible on either side to find means of amending what so sorely needs reformation.

Elizabeth sometimes wanted Tom Cliffe to do this—to "write a book," which he, eager young malcontent, was always threatening to do, upon the

evils of society, and especially the tyranny of the upper classes. Tom Cliffe was the only person to whom she imparted her troubles and perplexities: how different her life was from that she had been used to; how among her fellow-servants there was not one who did not seem to think and act in a manner totally opposed to everything she had learnt from Miss Hilary. How consequently she herself was teased, bullied, threatened, or at best "sent to Coventry," from morning till night.

"I'm quite alone, Tom; I am, indeed," said she, almost crying, the first Sunday night when she met him accidentally in going to church, and, in her dreary state of mind, was exceedingly glad to see him. He consoled her, and even went to church with her, half promising to do the same next Sunday, and calling her "a good little Christian, who almost inclined him to be a Christian too."

And so, with the vague feeling that she was doing him good, and keeping him out of harm,—that lad who had so much that was kindly and nice about him,—Elizabeth consented, not exactly to an appointment, but she told him what were her "Sundays out," and the church she usually attended, if he liked to take the chance of her being there.

Alack! she had so few pleasures; she so seldom got even a breath of outside-air; it was not thought necessary for servants. The only hour she was allowed out, was the church-going on alternate Sunday evenings. How pleasant it was to creep out then, and see Tom waiting for her under the opposite trees, dressed so smart and gentlemanlike, looking so handsome and so glad to see her,—her, the poor, countrified Elizabeth, who was quizzed incessantly by her fellow-servants on her oddness, plainness, and stupidity.

Tom did not seem to think her stupid, for he talked to her of all his doings and plannings, vague and wild as those of the young tailor in *Alton Locke*, yet with a romantic energy about them that strongly interested his companion; and he read her his poetry, and addressed a few lines to herself beginning—

"Dearest and best, my long familiar friend,"

which was rather a poetical exaggeration, since he had altogether forgotten her in the interval of their separation. But she never guessed this; and so they both clung to the early tie, making it out to be ten times stronger than it really was, as people do who are glad of any excuse for being fond of one another.

Tom really was getting fond of Elizabeth. She touched the higher half of his nature—the spiritual and imaginative half. That he had it, though only a working man, and she too, though only a do-

mestic servant, was most true: probably many more of their class have it than we are at all aware of. Therefore, these two being special individuals, were attracted by each other; she by him, because he was so clever, and he by her, because she was so good. For he had an ideal, poor Tom Cliffe! and though it had been smothered and laid to sleep by a not too regular life, it woke up again under the kind, sincere eyes of this plain, simple-minded, honest Elizabeth Hand.

He knew she was plain, and so old-fashioned in her dress, that Tom, who was particular about such things, did not always like walking with her: but she was so interesting and true; she sympathized with him so warmly; he found her so unfailingly and unvaryingly good to him through all the little humours and pettishnesses that almost always accompany a large brain, a nervous temperament, and delicate health. Her quietness soothed him, her strength of character supported him; he at once leaned on her, and ruled over her.

As to Elizabeth's feelings towards Tom, they will hardly bear analysing; probably hardly any strong emotion will, especially one that is not sudden but progressive. She admired him extremely, and yet she was half sorry for him. Some things in him she did not at all like, and tried heartily to amend. His nervous fancies, irritations, and vagaries she was exceedingly tender over: she looked up to him, and yet took care of him; this thought of him, and anxiety over him, became by degrees the habit of her life. People love in so many different ways; and perhaps that was the natural way in which a woman like Elizabeth would love, or creep into love without knowing it, which is either the safest or the saddest form which the passion can assume.

Thus things went on, till one dark, rainy Sunday night, walking round and round the inner circle of the square, Tom expressed his feelings. At first, in somewhat high-flown and poetical phrases, then melting into the one, eternally old and eternally new, "Do you love me?" followed by a long, long kiss, given under shelter of the umbrella, and in mortal fear of the approaching policeman; who, however, never saw them, or saw them only as "a pair of sweethearts,"—too common an occurrence on his beat to excite any attention.

But to Elizabeth the whole thing was new, wonderful; a bliss so far beyond anything that had ever befallen her simple life, and so utterly unexpected therein, that when she went to her bed that night, she cried like a child over the happiness of Tom's loving her, and her exceeding unworthiness of the same.

Then difficulties arose in her mind. "No followers allowed," was one of the strict laws of the

Russell Square dynasty. Like many another law of that and of much higher dynasties, it was only made to be broken; for stray sweethearts were continually climbing down area railings, or over garden walls, or hiding themselves behind kitchen doors. Nay, to such an extent was the system carried out, each servant being, from self-interest, a safe co-conspirator, that very often when Mr. and Mrs. Ascott went out to dinner, and the old housekeeper retired to bed, there were regular symposia held below-stairs—nice little supper-parties, where all the viands in the pantry and the wines in the cellar were freely used; where every domestic had his or her "young man" or "young woman," and the goings-on, though not actually discreditable, were of the most lively kind.

To be cognizant of these, and yet to feel that, as there was no actual wickedness going on, she was not justified in "blabbing," was a severe and perpetual trial to Elizabeth. To join them, or bring Tom among them as her "young man," was impossible.

"No, Tom," she said, when he begged hard to come in one evening—for it was raining fast, and he had a bad cough—"No, Tom, I can't let you. If other folk break the laws of the house, I won't—you must go. I can only meet you out-of-doors."

And yet to do this surreptitiously, just as if she were ashamed of him, or as if there were something wrong in their being fond of one another, jarred upon Elizabeth's honest nature. She did not want to make a show of him, especially to her fellow-servants: she had the true woman's instinct of liking to keep her treasures all to herself; but she had also her sex's natural yearning for sympathy in the great event of a woman's life. She would have liked to have somebody unto whom she could say, "Tom has asked me to marry him," and who would have answered cordially, "It's all right; he is a good fellow: you are sure to be happy."

Not that she doubted this; but it would have been an additional comfort to have a mother's blessing, or a sister's, or even a friend's, upon this strange and sweet emotion which had come into her life. So long as it was thus kept secret, there seemed a certain incompleteness and unsanctity about even their happy love.

Tom did not comprehend this at all. He only laughed at her for feeling so "nesh" (that means, tender, sensitive,—but the word is almost unexplainable to other than Stowbury ears) on the subject. He liked the romance and excitement of secret courtship—men often do; rarely women, unless there is something in them not quite right, not entirely womanly.

But Tom was very considerate, and though he

called it "silly," and took a little fit of crossness on the occasion, he allowed Elizabeth to write to her mother about him, and consented that on her next holiday she should go to Richmond, in order to speak to Miss Hilary on the same subject, and ask her also to write to Mrs. Hand, stating how good and clever Tom was, and how exceedingly happy was Tom's Elizabeth.

"And won't you come and fetch me, Tom?" asked she shyly. "I am sure Miss Hilary would not object, nor Miss Leaf neither."

Tom protested he did not care two straws whether they objected or not; he was a man of twenty, in a good trade,—he had lately gone back to the printing, and being a clever workman, earned capital wages. He had a right to choose whom he liked, and marry when he pleased. If Elizabeth didn't care for him, she might leave him alone.

"Oh, Tom!" was all she answered, with a strange gentleness, that no one could have believed would ever have come into the manner of South Sea Islander. And quitting the subject then, she afterwards persuaded him, and not for the first time, into consenting to what she thought right.

There is something rather touching in a servant's holiday. It comes so seldom. She must count on it for so long beforehand, and remember it for so long afterwards. This present writer owns to a strong sympathy with the holiday-makers on the grand gala-days of the English calendar. It is a pleasure to watch the innumerable groups of family folk, little children, and 'prentice lads,

—"Dressed in all their best,
To walk abroad with Sally."

And the various "Sallys" and their corresponding swains can hardly feel more regret than she when it happens to be wet weather in Easter week or at Whitsuntide.

Whit-Monday, the day when Tom escaped from the printing-office, and Elizabeth got leave of absence for six hours, was as glorious a June day as well could be. As the two young people perched themselves on the top of the Richmond omnibus, and drove through Kensington, Hammersmith, Turnham Green, and over Kew Bridge,—Tom pointing out all the places, and giving much curious information about them,—Elizabeth thought there never was a more beautiful country, or a more lovely summer day: she was, she truly said, "as happy as a Queen."

Nevertheless, when the omnibus stopped, she, with great self-denial, insisted on getting rid of Tom for a time. She thought Miss Hilary might not quite like Tom's knowing where she lived, or what her occupation was, lest he might gossip about it to Stowbury people; so she determined to pay her visit by herself, and appointed to meet

him at a certain hour on Richmond Bridge, over which bridge she watched him march sulkily, not without a natural pleasure that he should be so much vexed at losing her company for an hour or two. But she knew he would soon come to himself;—as he did, before he had been half-a-mile on the road to Hampton Court, meeting a young fellow he knew, and going with him over that grand old palace, which furnished them with a subject at their next debating society, where they both came out very strong on the question of hypocritical priests and obnoxious kings, with especial reference to Henry VIII. and Cardinal Wolsey.

Meanwhile Elizabeth went in search of the little shop—which nobody need expect to find at Richmond now—bearing the well-known name “Janet Balquidder.” Entering it, for there was no private door, she saw, in the far corner above the curtained desk, the pretty curls of her dear Miss Hilary.

Elizabeth had long known that her mistress “kept a shop,” and with the notions of gentility which are just as rife in her class as in any other, had mourned bitterly over this fact. But when she saw how fresh and well the young lady looked, how busily and cheerfully she seemed to work with her great books before her, and with what a composed grace and dignity she came forward when asked for, Elizabeth secretly confessed that not even keeping a shop had made or could make the smallest difference in Miss Hilary.

She herself was much more changed.

“Why, Elizabeth, I should hardly have known you !” was the involuntary exclamation of her late mistress.

She certainly did look very nice ; not smart—for her sober taste preferred quiet colours—but excessively neat and well-dressed. In her new gown of grey “coburg,” her one handsome shawl, which had been honoured several times by Miss Hilary’s wearing, her white straw bonnet and white ribbons, underneath which the smooth black hair and soft eyes showed to great advantage, she appeared—not “like a lady,” a servant can seldom do that, let her dress be ever so fine—but like a thoroughly respectable, intelligent, and pleasant-faced young woman.

And her blushes came and went so fast ; she was so nervous, and yet so beamingly happy, that Miss Hilary soon suspected there was more in this visit than at first appeared. Knowing that with Elizabeth’s great shyness the mystery would never come out in public, she took an opportunity of asking her to help her in the bedroom, and there, with the folding-doors safely shut, discovered the whole secret.

Miss Hilary was a good deal surprised at first. She had never thought of Elizabeth as likely to get married at all—and to Tom Cliffe.

“Why, isn’t he a mere boy ; ever so much younger than you are ?”

“Three years.”

“That is a pity ; a great pity ; women grow old so much faster than men.”

“I know that,” said Elizabeth somewhat sorrowfully.

“Besides, did you not tell me he was very handsome and clever ?”

“Yes ; and I’m neither the one nor the other. I have thought all that over too ; many a time ; indeed I have, Miss Hilary. But Tom likes me—or fancies he does. Do you think”—and the intense humility which true love always has, struck into Miss Hilary’s own conscious heart a conviction of how very true this poor girl’s love must be. “Do you think he is mistaken ? that his liking me—I mean in that sort of way—is quite impossible ?”

“No indeed, and I never said it ; never thought it,” was the earnest reply. “But consider ; three years younger than yourself ; handsomer and cleverer than you are—”

Miss Hilary stopped ; it seemed so cruel to say such things, and yet she felt bound to say them. She knew her former “bower-maiden” well enough to be convinced that if Elizabeth were not happy in marriage, she would be worse than unhappy—might grow actually bad.

“He loves you now ; you are sure of that ; but are you sure that he is a thoroughly stable and reliable character ? Do you believe he will love you always ?”

“I can’t tell. Perhaps ; if I deserved it,” said poor Elizabeth.

And, looking at the downcast eyes, at the thorough womanly sweetness and tenderness which suffused the whole face, Hilary’s doubts began to melt away. She thought, how sometimes men, captivated by inward rather than outward graces, have fallen in love with plain women, or women older than themselves, and actually kept to their attachment through life, with a fidelity rare as beautiful. Perhaps this young fellow, who seemed by all accounts superior to his class—having had the sense to choose that pearl in an oyster-shell, Elizabeth Hand—might also have the sense to appreciate her, and go on loving her to the end of his days. Anyhow, he loved her now, and she loved him ; and it was useless reasoning any more about it.

“Come, Elizabeth,” cried her mistress, cheerfully. “I have said all my say, and now I have only to give my good wishes. If Tom Cliffe deserves you, I am sure you deserve him, and I should like to tell him so.”

“Should you, Miss Hilary ?” and with a visible brightening up, Elizabeth betrayed Tom’s where-

abouts, and her little conspiracy to bring him here, and her hesitation lest it might be "intruding."

"Not at all. Tell him to come at once. I am not like my sister; we always allow 'followers.' I think a mistress stands in the relation of a parent, for the time being; and that cannot be a right or good love which is concealed from her, as if it were a thing to be ashamed of."

"I think so too. And I'm not a bit ashamed of Tom, nor he of me," said Elizabeth—so energetically, that Miss Hilary smiled.

"Very well; take him to have his tea in the kitchen, and then bring him up stairs, to speak to my sister and me."

At that interview, which of course was rather trying, Tom acquitted himself to everybody's satisfaction. He was manly, modest, self-possessed; did not say much—his usual talkativeness being restrained by the circumstances of the case, and the great impression made upon him by Miss Hilary, who, he afterwards admitted to Elizabeth, "was a real angel, and he should write a poem upon her." But the little he did say gave the ladies a very good impression of the intelligence and even refinement of Elizabeth's sweetheart. And though they were sorry to see him look so delicate, still there was a something better than handsomeness in his handsome face, which made them not altogether surprised at Elizabeth's being so fond of him.

As she watched the young couple down Richmond street, in the soft summer twilight,—Elizabeth taking Tom's arm, and Tom drawing up his stooping figure to its utmost extent, both a little ill-matched in height as they were in some other things, but walking with that air of perfect confidence and perfect contentedness in each other, which always betrays, to a quick eye, those who have agreed to walk through the world together,—Miss Hilary turned from the window, and—sighed.

CHAPTER XXIII.

FOLLOWING Miss Hilary's earnest advice that everything should be fair and open, Elizabeth, on the very next day after that happy Whit-Monday, mustered up her courage, asked permission to speak to her mistress, and told her she was going to be married to Tom Cliffe: not immediately, but in a year's time or so, if all went well.

Mrs. Ascott replied sharply that it was no affair of hers, and she could not be troubled about it. For her part, she thought if servants knew their own advantages, they would keep a good place when they had it, and never get married at all. And then, saying she had heard a good character of her from the housekeeper, she offered Eliza-

beth the place of upper housemaid, a young girl, a *protégée* of the housekeeper's, being substituted in hers.

"And when you have sixteen pounds a year, and somebody to do all your hard work for you, I daresay you'll think better of it, and not be so foolish as to go and get married."

But Elizabeth had her own private opinion on that matter. She was but a woman—poor thing! and two tiny rooms of her own, with Tom to care for and look after, seemed a far happier home than that great house, where she had not only her own work to do, but the responsibility of teaching and taking charge of that careless, stupid, pretty Esther, who had all the forwardness, untidiness, and unconscientiousness of a regular London maid-servant, and was a sore trial to the staid, steady Elizabeth.

Tom consoled her, in his careless but affectionate way; and another silent consolation was the "little bits of things," bought out of her additional wages, which she began to put by in her box; sticks and straws for the new sweet nest that was a-building: a metal tea-pot, two neat glass salt-cellars, and—awful extravagance!—two real second-hand silver spoons—Tom did so like having things nice about him. These purchases, picked up at stray times, were solid, substantial, and useful; domestic rather than personal; and all with a view to Tom rather than herself. She hid them with a magpie-like closeness, for Esther and she shared the same room; but sometimes when Esther was asleep she would peep at them with an anxious, lingering tenderness, as if they made more of an assured reality what even now seemed so very like a dream.

—Except indeed on those Sunday nights when Tom and she went to church together, and afterwards took a walk; but always parted at the corner of the square. She never brought him in to the house, nor spoke of him to her fellow-servants. How much they guessed of her engagement she neither knew nor cared.

Mrs. Ascott, too, had apparently quite forgotten it. She seemed to take as little interest in her servants' affairs as they in hers.

Nevertheless, ignorant as the lower regions were in general of what was passing in the upper, occasionally rumours began to reach the kitchen that "Master had been a-blowing up Missis, rather!" And once, after the solemn dinner, with three footmen to wait on two people, was over, Elizabeth, passing through the hall, caught the said domestics laughing together, and saying it was "as good as a play; cat and dog was nothing to it." After which "the rows up-stairs" became a favourite joke in the servants' hall.

But still Mr. Ascott went out daily after break-

fast, and came home to dinner; and Mrs. Ascott spent the morning in her private sitting-room, or "boudoir," as she called it; lunched, and drove out in her handsome carriage, with her footman behind; dressed elegantly for dinner, and presided at her own table, with an air of magnificent satisfaction in all things. She had perfectly accommodated herself to her new position; and if under her satins and laces beat a solitary, dissatisfied, or aching heart, it was nobody's business but her own. At least, she kept up the splendid sham with a most creditable persistency.

But all shams are dangerous things. Be the surface ever so smooth and green, it will crack sometimes, and a faint wreath of smoke betray the inward volcano. The like had happened, once or twice, as on the day when the men-servants were so intensely amused. Also Elizabeth, when putting in order her mistress's bedroom, which was about the hour Mr. Ascott left for the city, had several times seen Mrs. Ascott come in there suddenly, white and trembling. Once, so agitated was she, that Elizabeth had brought her a glass of water; and instead of being angry or treating her with the distant dignity which she had always kept up, her mistress had said, almost in the old Stowbury tone, "Thank you, Elizabeth."

However, Elizabeth had the wisdom to take no notice, but to slip from the room, and keep her own counsel.

At last one day the smouldering domestic earthquake broke out. There was "a precious good row," the footman suspected, at the breakfast table; and after breakfast, Master, without waiting for the usual attendance of that functionary, with his hat and gloves, and a Hansom cab, had flung himself out at the hall-door, slamming it after him with a noise that startled the whole house. Shortly afterwards, "Missis's" bell had rung violently, and she had been found lying on the floor of her bedroom in a dead faint, her maid, a foolish little Frenchwoman, screaming over her.

The frightened servants gathered round in a cluster, but nobody attempted to touch the poor lady, who lay rigid and helpless, hearing none of the comments that were freely made upon her, or the conjectures as to what Master had done or said, that produced this state of things. Mistress she was, and these four or five women, her servants, had lived in her house for months, but nobody loved her; nobody knew anything about her; nobody thought of doing aught for her, till a kitchen-maid, probably out of former experience in some domestic emergency, suggested, "Fetch Elizabeth."

The advice was eagerly caught at, everybody being so thankful to have the responsibility shifted

to some other body's shoulders; so in five minutes Elizabeth had the room cleared, and her mistress laid upon the bed, with nobody near, except herself and the French maid.

By and by, Mrs. Ascott opened her eyes.

"Who's that? What are you doing to me?"

"Nothing, ma'am. It's only me—Elizabeth."

At the familiar soothing voice, the poor woman—a poor wretched forlorn woman she looked, lying there, in spite of all her grandeur,—turned feebly round.

"Oh, Elizabeth, I'm so ill; take care of me."

And she fainted away once more.

It was some time before she came quite to herself, and then the first thing she said, was to bid Elizabeth bolt the door, and keep everybody out.

"The doctor, ma'am; if he comes?"

"I'll not see him. I don't want him. I know what it is. I—"

She pulled Elizabeth closer to her, whispered something in her ear, and then burst into a violent fit of hysterical weeping.

Amazed, shocked, Elizabeth at first did not know what to do; then she took her mistress's head on her shoulder, and quieted her by degrees almost as she would a child. The sobbing ceased, and Mrs. Ascott lay still a minute, till suddenly she clutched Elizabeth's arm.

"Mind you don't tell. *He* doesn't know, and he shall not; it would please him so. It does not please me. Sometimes I almost think I shall hate it, because it is his child."

She spoke with a fierceness that was hardly credible either in the dignified Mrs. Peter Ascott, or the languid Miss Selina. To think of Miss Selina's expecting a baby! The idea perfectly confounded poor Elizabeth.

"I don't know very much about such matters," said she deprecatingly, "but I'm sure, ma'am, you ought to keep yourself quiet, and I wouldn't hate the poor little baby, if I were you. It may be a very nice little thing, and turn out a great comfort to you."

Mrs. Ascott lifted her heavy eyes to the kindly, sympathetic, womanly face—thorough woman, for as Elizabeth went on, her heart warmed with the strong instinct which comes almost of itself.

"Think, to have a tiny little creature lying here beside you; something your very own, with its pretty face looking so innocent and sweet at you, and its pretty fingers touching you." Here Elizabeth's voice quite faltered over the picture she had drawn. "Oh, ma'am, I'm sure you would be so fond of it."

Human nature is strong. This cold, selfish woman, living her forty years without any strong emotion, marrying without love, and reaping, not in contrition but angry bitterness, the certain

punishment of such a marriage, even this woman was not proof against the glorious mystery of maternity, which should make every daughter of Eve feel the first sure hope of her first-born child to be a sort of Divine annunciation.

Mrs. Ascott lay, listening to Elizabeth. Gradually through her shut eyelids a few quiet tears began to flow.

"Do you mind me talking to you this way, ma'am?"

"No, no! Say what you like. I'm glad to have anybody to speak to. Oh, I am a very miserable woman!"

Strange that Selina Ascott should come to betray, and to Elizabeth Hand, of all people, that she was a "miserable woman." But circumstances bring about unforeseen confidences; and the confidence once given, is not easily recalled. Apparently the lady did not wish to recall it. In the solitude of her splendid house; in her total want of all female companionship—for she refused to have her sisters sent for—"he would only insult them, and I'll not have my family insulted,"—poor Selina clung to her old servant as the only comfort she had.

During the dreary months that followed, when, during the long, close summer days, the sick lady scarcely stirred from her bedroom, and, fretful, peevish, made the very most of what to women in general are such patiently borne and sacred sufferings, Elizabeth was her constant attendant. She humoured all her whims, endured all her ill-tempers, cheered her in her low spirits, and was, in fact, her mistress's sole companion and friend.

This position no one disputed with her. It is not every woman who has, as Miss Leaf used to say of Elizabeth, "a genius for nursing;" and very few patients make nursing a labour of love. The whole household were considerably relieved by her taking a responsibility for which she was so well fitted, and so little envied. Even Mr. Ascott, who, when his approaching honours could no longer be concealed from him, became for the nonce a most attentive husband, and succumbed dutifully to every fancy his wife entertained, openly expressed his satisfaction in Elizabeth, and gave her one or two bright golden guineas in earnest of his gratitude.

How far she herself appreciated her new and important position; whether her duties were done from duty, or pity, or that determined self-devotedness which some women are always ready to carry out towards any helpless thing that needs them, I cannot say, for she never told. Not even to Miss Hilary, who at last was permitted to come and pay a formal visit; nor to Tom Cliffe, whom she now saw very rarely, for her mistress, with characteristic selfishness, would hardly let her out of her sight for half an hour.

Tom at first was exceedingly savage at this: by degrees he got more reconciled, and met his sweetheart now and then for a few minutes at the area-gate, or wrote her long poetical letters, which he confided to some of her fellow-servants, who thereby got acquainted with their secret. But it mattered little, as Elizabeth had faithfully promised that, when her mistress's trial was over, and everything smooth and happy, she would marry Tom at once. So she took the jokes below stairs with great composure; feeling, indeed, too proud and content to perplex herself much about anything.

Nevertheless, her life was not easy, for Mrs. Ascott was very difficult to manage. She resisted angrily all the personal sacrifices entailed by impending motherhood, and its terrors and forebodings used to come over her—poor weak woman that she was!—in a way that required all Elizabeth's reasonings to counteract, and all her self-control to hide the presentiment of evil, not unnatural under the circumstances.

Yet sometimes poor Mrs. Ascott would take fits of pathetic happiness; when she busied herself eagerly over the preparations for the new-comer; would make Elizabeth take out, over and over again, the little clothes, and examine them with childish delight. Sometimes she would gossip for hours over the blessing that was sent to her so late in life—half-regretting that it had come so late; that she should be almost an old woman before her little son or daughter was grown up.

"Still, I may live to see it, you know: to have a pretty girl to take on my arm into a ball-room, or a big fellow to send to College: the Leafs always went to College in old times. He shall be Henry Leaf Ascott, that I am determined on; and if it's a girl, perhaps I may call her Johanna. My sister would like it; wouldn't she?"

For more and more, in the strange softening of her nature, did Selina go back to the old ties.

"I am not older than my mother was when Hilary was born. She died, but that was because of trouble. Women do not necessarily die in childbirth even at forty; and in twenty years more I shall only be sixty—not such a very old woman. Besides, mothers never are old; at least not to their children. Don't you think so, Elizabeth?"

And Elizabeth answered as she best could. She too, out of sympathy or instinct, was becoming wondrous wise.

But I am aware all this will be thought very uninteresting, except by women and mothers. Let me hasten on.

By degrees, as Mrs. Ascott's hour approached, a curious tranquillity and even gentleness came over her. Her fretful dislike of seeing any face about her but Elizabeth's became less. She even endured her husband's company for an hour of an evening;

and at last humbled her pride enough to beg him to invite her sisters to Russell Square from Saturday to Monday, the only time when Hilary could be spared.

"For we don't know what may happen," said she to him, rather seriously.

And though he answered, "Oh, nonsense!" and desired her to get such ridiculous fancies out of her head, still he consented, and himself wrote to Miss Leaf, giving the formal invitation.

The three sisters spent a happy time together, and Hilary made some highly appreciated family jokes about the handsome Christmas box that Selina was going to be so kind as to give them, and the small probability that she would have much enjoyment of the Christmas dinner to which Mr. Ascott, in the superabundance of his good feeling, had invited his sisters-in-law. The baby, blessed innocent! seemed to have softened down all things—as babies often do.

Altogether, it was with great cheerfulness, affectionateness, and hope that they took leave of Selina: she, with unwonted consideration, insisting that the carriage should convey them all the way to Richmond.

"And," she said, "perhaps some of these days my son, if he is a son, may have the pleasure of escorting his aunts home. I shall certainly call him 'Henry Leaf,' and bring him up to be in every way a credit to our family."

When the ladies were away, and Mrs. Ascott had retired to bed, it was still only nine o'clock, and a bright moonlight night. Elizabeth thought she could steal down stairs and try to get a breath of fresh air round the square. Her long confinement made her almost sick sometimes for a sight of the outer world, a sight of—let me tell the entire truth—her own faithful Tom.

She had not seen him now for fourteen days, and though his letters were very nice and exceedingly clever, still she craved for a look at his face, a grasp of his hand, perhaps even a kiss, long and close and tender, such as he would sometimes insist upon giving her, in spite of all policemen. His love for her, demonstrative as was his nature, had become to this still, quiet girl inexpressibly sweet, far sweeter than she knew.

It was a clear winter night, and the moon went climbing over the fleecy white clouds in a way that made beauty even in Russell Square. Elizabeth looked up at the sky, and thought how Tom would have enjoyed it, and wished he were beside her, and was so glad to think he would soon be beside her always, with all his humours and weaknesses, all his little crossnesses and complainings; she could put up with all, and be happy through all, if only she had him with her and loving her.

His love for her, though fitful and fanciful, was

yet so warm and real, that it had become a necessity of her life. As, he always told her—especially after he had had one of his little quarrels with her—hers was to him.

"Poor Tom, I wonder how he gets on without me! Well, it won't be for long."

And she wished she could have let him know she was out here, that they might have had a chat for just ten minutes.

Unconsciously she walked towards their usual trysting-place, a large overhanging plane-tree on the Keppel Street corner of the square.

Surely, surely, that could not be Tom! Quite impossible, for he was not alone. Two people, a young man and a young woman, stood at the tryst, absorbed in conversation: evidently sweethearts, for he had one arm round her, and he kissed her unresisted, several times.

Elizabeth gazed, fascinated, almost doubting the evidence of her own senses. For the young man's figure was so excessively like Tom's. At length with the sort of feeling that makes one go steadily up to a shadow by the roadside, some ugly spectre that we feel sure, if we stare it out, will prove to be a mere imagination, she walked deliberately up to and past these "sweethearts."

They did not see her; they were far too much occupied with one another: but she saw them, and saw at once that it was Tom, Tom's own self, and with him her fellow-servant, Esther.

People may write volumes on jealousy, and volumes will still remain to be written. It is, next to remorse for guilt, the sharpest, sorest, most maddening torment that human nature can endure.

We may sit and gaze from the boxes at our *Othellos* and *Biancas*; we may laugh at the silly heart-burnings between Cousin Kate and Cousin Lucy in the ball-room, or the squabbles of Mary and Sally in the kitchen over the gardener's lad; but there the thing remains. A man cannot make love to two women, a woman cannot coquet with two men, without causing in degree that horrible agony, cruel as death, which is at the root of half the tragedies, and the cause of half the crimes of this world.

The complaint comes in different forms; sometimes it is a case of slow poisoning, or of ordeal by red-hot irons, which, though not fatal, undermines the whole character, and burns ineffaceable scars into the soul. And people take it in various ways; some fiercely, stung by a sense of wounded self-love; others haughtily;—

"Pride's a safe robe, I'll wear it: but no rags."

Others, again, humble, self-distrustful natures, whose only pride came through love, have nothing left them except rags. In a moment, all their thin robes of happiness are torn off; they stand shiver-

ing, naked, and helpless, before the blasts of the bitter world.

This was Elizabeth's case. After the first instant of stunned bewilderment and despair, she took it all quite naturally, as if it were a thing which she ought all along to have known was sure to happen, and which was no more than she expected and deserved.

She passed the couple, still unobserved by them; and then walked round the other side of the Square, deliberately home.

I am not going to make a tragic heroine of this poor servant-girl. Perhaps, people may say, there is nothing tragic about the incident. Merely a plain, quiet, old-fashioned woman, who is so foolish as to like a handsome young swain, and to believe in him, and to be surprised when he deserts her for a pretty girl of eighteen. All quite after the way things go on in the world, especially in the servant-world; and the best she can do is to get over it, or take another sweetheart as quickly as possible. A very common story after all, and more of a farce than a tragedy.

But there are some farces, which, if you look underneath the surface, have a good many of the elements of tragedy.

I shall neither paint Elizabeth tearing her own hair, or Esther's; or going raging about the Square in moonlight, in an insane fit of jealousy. She was not given to "fits" under any circumstances, or about anything. All she felt went deep down into her heart, rooted itself, and either blossomed or cankered there.

On this night she, as I said, walked round the

Square to her home; then quietly went up stairs to her garret, locked the door, and sat down upon her bed.

She might have sat there for an hour or more, her bonnet and shawl still on, without stirring, without crying, altogether cold and hard like a stone, when she fancied she heard her mistress's bell ring, and mechanically rose up and went down stairs to listen. Nothing was wanted, so she returned to her garret and crept to bed, in the dark.

When soon afterwards Esther likewise came up to bed, Elizabeth pretended to be asleep. Only once, taking a stealthy glance at the pretty girl who stood combing her hair at the looking-glass, she was conscious of a sick sense of repulsion, a pain like a knife running through her, at sight of the red young lips which Tom had just been kissing, of the light figure which he had clasped, as he used to clasp her. But she never spoke, not one word.

Half-an-hour after she was roused by the nurse coming to her bed-side. Mrs. Ascott was very ill, and was calling for Elizabeth. Soon the whole establishment was in confusion, and in the sharp struggle between birth and death, Elizabeth had no time to think of anything but her mistress.

Contrary to every expectation, all ended speedily and happily; and before he went off to the City next day, the master of the house, who in the midst of his anxiety and felicity, had managed to secure a good night's sleep and a good breakfast, had the pleasure of sending off a special messenger to the *Times*' office with the notification, "The Lady of Peter Ascott, Esq., of a son and heir."

A SOCIAL RIDDLE.

A CAREFULLY nurtured, elegantly-dressed child is taken from the nursery by its own pressing request, to look upon the little, grimy, red-lipped boy engaged in sweeping the drawing-room chimney.

"Nurse," inquires the child, "why isn't that boy as clean as I am? Why does he sweep dirty chimneys?"

"My dear," replies the nurse, rather shocked and bewildered by the question, "we are not all born alike. Providence has ordained that some people shall attend upon some other people. Give him a penny, and let us go up-stairs."

The child becomes a bright-eyed, open-hearted youth. He sits in his father's library, looking out upon a spacious square, and learns a certain portion of the love of antiquity every day, under the able guidance of a private tutor, Mr. Horatius Flaccus, B.A. The boy's eye wanders restlessly from Euclid to the shouting dustmen who occasionally

pass the window, or to the cat's-meat man and pot-boy holding a conversation at the area railings. Each of these men is a problem to his young mind that he cannot solve with a pencil, a ruler, and a pair of compasses.

"Tutor," inquires the youth, "why do men become dustmen?"

"Why?" responds Mr. Flaccus, B.A.—"Well, ah—this question is connected with—ah—another branch of study, called political economy, supply and demand, wages and labour, and several other divisions of the same subject. We must not load the mind too much at one time. Go on with the geometry."

The boy passes through the hands of Mr. Flaccus, B.A., and is declared ready to have the university stamp placed upon his knowledge. He goes out into the great world, without a guide to direct his steps, without a voice near him to clear up his doubts and difficulties. He cannot understand

the tailor who comes to measure him for clothes, nor the footman who condescends to wait upon him at table. His mind wanders back beyond Mr. Flaccus, B.A., to his nurse and the little sweep, and he wonders if one class is really pre-ordained to attend upon another. He looks at large orchestras, and is astonished to find that men are willing to be stationed at kettle-drums and cymbals, to play upon trombones and serpents, instead of rushing to the first violins, or flutes, or clarionets. He observes men sitting upon coach-boxes in the pouring rain, and driving other men who are snugly reclining in broughams. He observes men standing upon door-steps in ridiculous beadles' liveries; men filling scavengers' carts with mud; postmen delivering letters at every hour of the day; policemen parading the dull streets at every hour of the night; and men engaged in painting sign-boards, instead of qualifying for the Royal Academy.

This youth may grow up into manhood—may

pass over the hill, and descend into the valley of old age and death, without becoming much wiser in his generation. He may have full faith in the teachings of his nurse, or he may be satisfied with the empty phrases uttered by Mr. Flaccus, B.A. The constant demands of his personal comfort will teach him to fear the extinction of the lowest class of labourers, without revealing to him the laws which regulate their supply and existence. Even if he learns the operation of wages and self-interest, and how a labourer will refuse to do that for a shilling, which he will gladly undertake for two, he will seldom rise to that full height of knowledge which will teach him the true dignity of universal work. He may never see the harmony of that life around him, in which every man—footman, shoe-black, and dustman—accepts his allotted place, and in which all the mean and repulsive details of labour are melted, purified, and united, coming out perfect and beautiful in the universal mass.

J. H.

ON THE CLIFFS.

GARIBALDI.

THE Lion is down, and how the Dogs will run ;
 Something above the level is their delight
 For insult ; Asses lift the hoof to smite ;
 The Birds of darkness hoot, " His day is done."

" Would he had kept his attitude sublime !"
 Cry some ; " With crossed arms held his heart
 at rest,
 And left us his grand likeness at its best ;
 High on a hill up which the world might climb !"

" Better for all had he been sooner shrined ;
 The old true heart, and very foolish head !
 A model Man—especially if dead—
 Perfect as some Greek statue—and as blind !"

Friends talk of failure ; and I know how he
 Will slowly lift his loving, cordial eyes
 And look them through, with mournful, strange
 surprise,
 Until they shrink and feel 'tis Italy

Has failed instead. The words they came to speak
 Will sink back awed by his majestic calm.
 His wounds are such as bleed immortal balm,
 And he is strong again ; the friends are weak.

It is not failure to be thus struck down
 By Brothers who obeyed their Foe's command,
 And in the darkness lopped the saving hand
 Put forth to reach their country her last crown.

He only sought to see her safely home ;
 The tragic trials end ; the sufferings cease,
 In wedded oneness and completing peace ;
 Then bow his grey old head and die in Rome.

It is no failure to be thus struck back—
 Caught in a Country's arms—claspt to her
 heart—
 She tends his wounds awhile, and then will start
 Afresh ! Some precious drops mark out her track.

No failure ! though the rocks may dash in foam
 This first strength of a nation's new life-stream,
 'Twill rise—a Bow of Promise—that shall gleam
 In glory over all the waves to come.

We miss a footstep, thinking " Here's a stair,"
 In some uncertain way we darkly tread ;
 But God's enduring skies are overhead,
 And spirits step their surest oft in air.

His ways are not as our ways ; the new birth,
 At cost of the old life, is often given.
 To-day God crowns the Martyrs in his heaven ;
 To-morrow whips their murderers on our earth.

You take back Garibaldi to his prison !
 Why, *this* may be the very road to Rome ;

They would have said, " She croucheth to her
 doom,"

If Italy, in some shape, had not risen !

I say 'twas God's voice bade him offer up
 Himself for Aspromonte's sacrifice ;
 So, to that height, his countrymen might rise :
 For them he freely drank his bitter cup.

It is a faith too many yet receive,—
 Since the false prophecy of old went forth—
 " The tribe of Judas yet shall rule the earth."
 But he is one that never would believe.

His vision is most clear where ours is dim.
 The mystic spirit of eternity
 That slumbers in us deep and dreamingly,
 Was ever quick and more awake in him.

And so he fixed his look across the night :
 His face, though bright as sunshine, often told
 How the soul's underworld in darkness rolled,
 And what he saw with sorrow's second sight :

But, like a lamp across some dismal heath,
 A light shone through his eyes no night could
 quench :
 The winds might make it flicker, rains might
 drench ;
 Nothing could dim it save the dark of death.

And if his work's unfinished in the flesh,
 Why, then his soul will join the noble dead
 And toil till it shall be accomplished,
 And Italy hath burst this Devil's mesh.

Easier to conquer kingdoms than to breed
 A man like Garibaldi, whose great name
 Doth fence his country with his glorious fame,
 Worth many armies in her battle-need.

His is the royal heart that never quails,
 But always conquers ; wounded, pale and low,
 He never was so dear as he is now ;
 They bind him, and more strongly he prevails.

Greater to-day than Emperor or King,
 There, where, for throne, they seat him in the dust,
 The express image of sublimest Trust,
 And consecrated by his suffering.

A sovereignty that overtops success !
 Nothing but heaven might crown his patriot-
 brow,
 And lo, a Crown of Thorns is on it now,
 With higher guerdon than our world's caress.

The vision of all his glory fills our eyes,
 And with one heart expectant nations throb
 Around him—with one mighty prayer they sob,
 And wait God's answer to this sacrifice.

GERALD MASSEY.

A RAMBLE OVER THE AMERICAN SIERRA NEVADA.

CALIFORNIA, or that part of it which lies between the head waters of its two great rivers, "The Sacramento" and "San Joaquin," and extending about 500 miles from north to south, is divided into three narrow bands or strips, running parallel to the coast, and of about equal width. First, there is the coastwise region, comprising sometimes two, three, and often four parallel tiers of mountains varying from 500 to 10,000 feet in height. Next, advancing inwards, there is a strip from 50 to 70 miles wide of almost dead plain, which is called "The Great Valley," along which, from north to south, run the two great rivers whose waters join about the middle of the valley, and pass off to the ocean.

The third long strip is the slope of the Sierra Nevada Chain, which bounds the Great Valley on the east, and contains in its foot-hills those stores of gold-bearing rocks from which the valleys and lowlands have received their deposits; the higher portions of this range are bare granite, the higher summits being covered with perpetual snow. With such a topographical arrangement, the scenery is varied and grand; mountain and plain, plain and mountain, make up the surface. Sometimes the mountains are bare, or nearly so, and, in the distance, wear a mottled appearance, where the sun, glancing down the sides, burnishes the points, and casts a sombre shade on the hollows; sometimes they are covered with a dense chaparral of an intense transparently green colour, showing summits that, beneath the sun-ray, look like huge piles of emerald; again, the distant peaks are seen to be covered with a dense growth of red pines, that stand like giant sentinels, giving to the landscape a peculiar look of spirit and majesty. Then, again, the mountains are seamed from their tops downwards by ravines or water-courses, often cut miles deep in the mountains, and becoming immense chasms, gorges, or caverns, out of which the earth has been swept by the winter torrents, and carried into the rich valley below.

Few countries are richer in scenery than California. There, in quiet beauty, sleeps the rich valley of Sonoma, or, as the Indians call it, "The Valley of the Moon;" and, in the background, towers, in rough grandeur, Mount Diabolo. Here, again, in a deep chasm or valley that foots the "Yo-Hamite Falls," a river is seen leaping from a mountain summit, nearly three thousand feet above you, like a stream from 'neath the footstool of Deity, a type of Heaven's mercy pouring from the sky; added to which, the loftiest pine-trees in the

world tower proudly towards heaven, catching the first golden sun-ray of the morning, and, like the stately minarets of Nature's glorious temple, filling the soul with awe and wonder at the very magnitude of the *all-pervading Life-principle*.

One word on the floral grandeur of California. February is the gay month for flowers; after that "the sun riseth with a burning heat; it withereth the grass, and the flower thereof falleth, and the grace of the fashion of it perisheth." In England a bunch of wild violets or a brook-side primrose is thought sufficient reward for a diligent search; but in California, the month of February will supply flowers, not shy, but rampant, as if nothing else had a right to be; flowers by the acre; flowers by the square mile; flowers as the bright, visible carpet of a mighty mountain barrier; you may gather them from clumps, a dozen varieties at a pull; you might fill the laps of one hundred children in a few minutes; you can reap them into mounds. And then their varied colours. Yellow, purple, orange, violet, pink, and pied, are spread around you; now in separate level masses; now two or three combined in a swelling knoll, and now intermixed in a gorgeous confusion. Just imagine looking across 500 acres of wild meadow, stretching to the base of hills nearly 2000 feet high, the whole expanse swarming with little straw-coloured wild sun-flowers, orange scholzia, squadrons of purple beauties, battalions of pink, and then the mountain, unbroken by tree or rock, glowing with the investiture of all these hues, softened and subdued by distance. The orange and purple flowers predominate in this gorgeous floral mountain robe; but on the lower slopes is a strange sprinkling of blue lupin, gathered here and there into stripes, and running here and there into sharp points, as though over the general basis of purple, orange, and yellow there had fallen a violet snow, which lay tenderly around the base, but in a few places on the side had been blown into drifts and points.

But leaving California, with all its attractions, we commenced our ascent of the Sierra Nevada mountains, the stern rocky barrier or snow-chain that separates the Golden State from the territory of Utah. Leaving Placerville, the last mountain city of California, the road for a few miles was good, and the air singularly pure and bracing. At intervals, varying from fifty yards to half a mile, streams of water, of crystal clearness and icy coldness, burst from the mountain-sides, making a pleasant music, and losing themselves in the moun-

tain-gorge, a fathomless depth, on our right. Our road was a continual ascent, and the effects of the mountain air and scenery strangely delightful.

There was a glorious sense of freedom and independence; the fresh mountain air odorous with the scent of pine-forests and wild-flowers, the craggy rocks overhung with the wild grape, the merry shouts of the Mexican vaqueros, mingled with the wild dashing of the river down the cañon on our right; the free exercise of every muscle; the consciousness of exemption from all the conventional habits of city life, were absolutely inspiring. Every faculty seemed invigorated to the highest pitch of perfection. Who would be a slave to conventionalism, when all Nature called upon him, with trumpet-tones, to be free? Who would not be alive to the true dignity of labour, enrol himself among the aristocracy of industry, earn his bread by the sweat of his brow, and breathe the fresh air of heaven without stint or limit?

As we gradually ascended the foot-hills, the road began to be exceedingly bad and difficult, the snows on the lower summits had begun to thaw, and in many places it seemed practically impossible for any wheeled vehicle to pass; but with a Californian it is an article of faith, that where a horse can go a waggon can follow. However, there were some exceptions to this rule, for the road was literally lined with broken-down stages, waggons, and carts. Wheels had taken rectangular cuts to the bottom, broken poles projected from the mud, and loads of dry goods and flour-barrels lay wallowing in the general wreck. Whole trains of pack-mules struggled frantically to make the transit from one dry spot to another, asses heavily laden were frequently buried up to the neck, and had to be hauled out by main force, and now and then an enterprising mule would emerge from the mud, and, by attempting to keep the edge of the road, lose his foothold, and go rolling to the bottom of the cañon, pack and all.

The first night overtook us at a place called "Dirty Mikes;" and the name was no libel, unless indeed truth be a libel. After a supper of pork and beans, fried potatoes, and coffee served up in very dirty plates and cups, we turned in on our blankets, and slept soundly till morning. To any traveller on that road who may like very dirty forks, filthy plates, and a landlord who probably washes his face only on the four quarter-days of the year, and, perhaps, by way of patriotism, on the 4th July, this house will prove a comfortable resting-place. Early on the next morning we again started. An almost continuous string of pilgrims to the Silver Shrine of the Nevadas stretched, "like a great snake dragging its slow length along," as far as the eye could reach. It was a striking and almost painful spectacle to see in full competition

with youth and strength, the most pitiable specimens of age and decay;—white-haired old men gasping for breath, as they dragged their palsied limbs after them in the exciting race of avarice; even sick men from their beds stark mad for silver. Evening was closing fast around us, and we had still four miles to traverse before we could find a night shelter; four miles of slush and snow, up hill nearly all the way, across rickety bridges, over roaring cataracts, slippery rocks, stumps of trees and brushwood, through acres of black oozy mire, and this with almost an Egyptian darkness. The rain now poured heavily, mingled with a cutting sleet; a doleful sound came moaning through the pines; our blankets were wet through, not a stitch upon our backs was dry. At length a light glimmered through the forest, at first faint and flickering, then a full blaze; then half a dozen brilliant lights, that proved to be camp-fires under the trees; and at length we stood before the great log-house in Strawberry Valley, the last resting-place on the western foot of the Sierra Nevadas.

Dark and stormy as it was, there were, nevertheless, crowds scattered around the house, and within was gathered one of the most extraordinary crowds that ever could happen together. Here were dilapidated gentlemen with slouched hats and big boots, jew-peddlars dripping wet, red-shirted miners, teamsters, Mexican vaqueros, packers, gamblers, traders, and merchants; some drinking at the bar, others warming themselves before a tremendous wood-fire that sent up a reeking steam from the conglomerated mass of wet and muddy clothes, to say nothing of the boots and socks that lay simmering near the embers. A few bare and foot-sore outcasts crouched down in the corners, trying to catch a nap, completed this wild scene. For the payment of one dollar, we were permitted to spread our blankets on the floor, and sleep till morning. We were now prepared, with a pair of horses and a sleigh, to attempt the ascent of the western slope, and morning broke only to reveal a heavy snow-storm and a most threatening appearance of the sky. Our journey on this day was only eight miles, but it was eight miles of continuous, precipitous climbing. Two miles from our starting-point we crossed a crazy bridge across a mountain torrent that ran one hundred feet beneath us—a perfect rush of dark wintery water—and here we had need of all our powers of endurance; it was a constant struggle through melted snow and mud, slipping, sliding, grasping, rolling, and climbing up again, and still up, till we verily seemed to be nearing the clouds. In many places the mule pack-trains had broken through the old snow, leaving deep holes, which, being partially covered with recent snow, proved to be regular man-traps, often

bringing us up all standing, the sudden wrenching of the feet in the smaller holes was an occurrence of every ten or twelve steps. All along the route we continued to meet pack-trains, and, as everybody had to give way to them, the tumbling out and plunging in the snow presented a very lively scene.

After nine hours' incessant toil we reached the summit; the sun was sinking red and fiery behind the dark pine-forest beneath us; masses of black cumulus clouds were closing out the day, and our horses were giving signs of weariness that could not be disregarded; it was not without feelings of pleasure, therefore, that we found a solitary bog-hut perched upon the summit. The view from this spot was strikingly beautiful. Away to westward lay the great valley of the Sacramento in California, more than one hundred miles distant; to the north rose endless snow-peaks, range upon range of snow mountains, here and there in their lower gorges and ravines showing a thick growth of dark purple pine-forests, miles in extent, but looking only as small patches in the boundless universe of white; but above all in beauty, like a rich blue gem set in a framework of frosted silver, lay the lovely Lake Bigler. Daybreak in the morning saw us again in motion, and, anxious to effect the descent of the eastern slope before the night frost had been dissipated by the sun, we started without our breakfast. The descent of this grade into Lake Valley is very perilous; the pathway is only wide enough to admit of a single vehicle; on the right, is a wall of perpendicular rock, and, towering far away into cloud-land, are the sloping fields of everlasting snow, and on our left was an almost perpendicular precipice more than 4000 feet deep, so that one false step would have been instant destruction.

The trail on the grade was slippery with sleet, and it was more by a series of runs, jumps, and slides, than by walking, that men and horses at length reached the bottom. Here then we were in Lake Valley, in the centre of which stood a good-sized wooden shanty or hut, in which a large party was assembled, taking their ease as they best could, in a place where there was not much to eat, and but little to drink, except poisonous whisky. Crossing the valley, which is here about two miles wide, we commenced the ascent of the second summit, and descending its eastern slope, struck the head of Hope Valley. Every yard of the trail was now honeycombed to the depth of two or three feet, but in the middle of the valley we came upon a log-hut. Upon entering, however, we found its domestic arrangements anything but promising. An old wooden bench was the only seat, a bunch of wolf-skins hung from the central beam, and yielded a remarkably strong

gamey odour, and the clay floor was unswept. A couple of rifles hung from two pegs, and a fearful array of bowie-knives gave evidence of being prepared for any adventure. The owner of this mansion was a Mormon, and the local agent of Brigham Young; his reputation was none of the best, for in the streams and ravines of the neighbourhood many whitening human bones suggested fearful suspicions. Battered and bruised as we were, and hungry into the bargain, it became a matter of vital importance to secure lodgings, and, if possible, food; upon broaching the subject, however, the gentleman's brow darkened, and we got a most unqualified denial; his style had certainly one great merit, it was exceedingly terse and forcible. Nothing now remained but to push on to the next station before entering the great valley of "the Carson," and seven miles added to the end of a day's journey such as ours had been was no joking matter. The snow was soft, and at least five feet deep; darkness was coming on, and a piercing wind and driving sleet made it most difficult to walk. Three miles on the road we entered a rift in the mountains called "Luther's Pass;" the entrance was narrow, and huge rocks beetled overhead. Once through the gorge the pass opened out into a stony amphitheatre, through which rolled the angry waters of the Carson. This spot is awfully wild,—the very temple of desolation; the vision is bounded by cold, grey rocks, piled up by the very demon of confusion, until, climbing over huge, bare rocks, the trail takes a sudden turn, and here the river, issuing from a narrow channel, plunges into a stony basin some hundred feet below.

"By the edge of this chasm is a slippery track,
The torrent beneath and the mist hanging o'er thee:
The cliffs of the mountain, huge, rugged, and black,
Are frowning like giants before thee:
Far down in the jaws of the gloomy abyss,
The waters are boiling and hissing—for ever will hiss."

About half a mile farther on we came to the rift through which we issued on the eastern side—

"A gate through the rocks as darksome and drear,
As if to the region of shadows it carried."

We emerged, however, into a beautiful valley, so sheltered that the snow had already begun to disappear, and, late at night, foot-sore and weary, we arrived at our night's resting-place. We had now entered the great valley of the Carson: on our right lay the forty-five mile desert, a dreary broken plain covered with white saline incrustations, and abounding with hot sulphur springs, some of which were in a violent ebullition, and by the thermometer indicated a temperature of 201° Fahr.; this valley led us directly to Carson City, the central city of the Sierra Nevada mining re-

gion. On our arrival, the only place of shelter to be obtained was a half-finished shanty. To say that it rained hard, stormed, and snowed, would be ridiculously tame in comparison with the real state of the case. The wind whistled through the cabin in a manner that scarcely left a hope of roof; sides standing till morning; through the crevices came little hurricanes of snow-drift, and our fragile tenement creaked and groaned as though its last hour was come. Two weeks passed with incessant snow and tempest; at length provisions began to run short, the fate of the provision-trains caused great apprehensions, nothing could be heard from them. A party of us started out to endeavour to open the trail, but we were driven back by the severity of the weather. The snow-drifts were in many places forty feet deep, the cattle were dying of starvation, and anxiety was depicted on every face. Flour was 100 dollars per sack of 100 lbs., or 4s. 2d. per lb.; barley was 3s. per lb.; hay, 2s. 6d.; horses were dying from want, and we began to calculate that we must soon use them for food. Still the storm continued; hope of success had wellnigh left us, when one morning a scout came running in with the joyful news that a mule train was approaching—cheer followed cheer as the train hove in sight. On it came, at first like a row of ants creeping down the mountain sides, then nearer and larger until the short quick hoof-clatter was distinctly audible. One by one the jaded animals reached the plaza; but, alas! for human hopes, barrels of rum, whisky, gin, brandy, bottled ale, Californian wine, crates of bar fixtures, boxes of cigars, but no bread: for the first time that day I heard Californian miners heap curses long, loud, and deep on whisky.

A rift in the mountains called the "Devil's Gate," led from Carson Valley to Gold Hill: the whole aspect of the country indicates that it must have been burned up in hot fires ages ago. Virginia City, the capital of the mining region, lies in the direct road to the Salt Lake City of the Mormons; its elevation is from eight to ten thousand feet above the sea, and it presents a scene of fearful demoralization: what with the blasted and barren appearance of the country, the wretched hovels, the horrible confusion of tongues, the roaring, raving drunkards drinking fiery liquids from morning to night, the gambling saloons filled with desperadoes of the vilest sort,—the place is fitly entered through the "Devil's Gate." The atmosphere of this region of the Sierra Nevada is most highly charged with electricity, so much so that if the hair be combed with an india-rubber comb, it will give out distinct electrical light, accompanied with the characteristic crackling sounds. An interesting phenomenon occurred on the 4th June 1860. The morning opened bright and fair, but

the heat was intense. About the hour of ten A.M. a slight shock of earthquake was felt, but not of sufficient severity to cause alarm. At twelve o'clock, with an almost cloudless sky, the thermometer on the sides of the Gold Hill rock registered 110°, and every one experienced an unusual difficulty in breathing; presently two small clouds were observed almost directly over head, one having a fleecy whiteness, and the other a black stormy appearance; they slowly approached each other from two opposite points, evidently under the influence of two directly opposite currents, but when within what appeared to be a few yards of one another, they commenced a circular movement, at the same time gradually nearing each other until they suddenly rushed together with a noise, or rather a succession of noises, so exactly resembling the discharges of heavy artillery, as to cause the whole population to rush into the open air in alarm and consternation.

The whole region of the Sierra Nevada is one of stern and romantic interest, and the fact that the wild and savage Indians of that district give evidence of the possession of strong poetic feelings, which often manifests itself in the most striking imagery, is an evidence of the soul-stirring character of its scenery. The scene of the following chaste and beautiful legend is laid in the Yoh-Hamite Valley, into which descends probably the highest waterfall in the world; it makes its leap at one bound from the summit of a mountain 1395 feet before it strikes a table-rock, from which it takes its second leap into the valley, 2900 feet from its highest point:—

THE LEGEND OF TOCH-AU-NU-LAH AND TIS-SA-ACK.

It was in the unremembered past that the children of the sun first dwelt in Yoh-Hamite; then all was happiness, for Tu-toch-ah Nu Lah sat on high on his rocky throne, and cared for his people whom he loved. Leaping over the upper plains, he herded the wild deer, that his people might choose the fattest for the feast. He roused the bear from his cabin in the mountains that he might hunt. From his lofty rock he prayed to the Great Spirit, and brought the soft rain upon the corn in the valley. The smoke of his pipe curled into the air, and the golden sun breathed warmly and ripened the crops, that the women might gather them in. When he laughed, the face of the golden river was rippled with smiles; when he sighed, the winds swept sadly through the stately pines. If he spoke, the sound was like the deep voice of the cataract; and when he smote the far-striding bear, his whoop of triumph rang from crag to gorge, echoed from mountain to valley.

His form was straight like the arrow, and elastic like the bow; his foot was swifter than the red-deer, and his eye was strong and bright like the rising sun. But one morning as he roamed, a bright vision came before him, and the soft colours of the west were in his lustrous eye. A maiden sat upon the southern granite dome, that raises its grey head among the highest peaks; she was not like the dark maidens of her tribe below, for the yellow hair rolled over her dazzling form, as golden waters over silver rocks.

Her brow beamed with the pale beauty of the moonlight, and her blue eyes were as the far-off hills before the sun goes down. Her little foot shone like the snow-tufts on the winter pines, and its arch was like the spring of a bow. Two cloud-like wings waved from her shoulders, and her voice was as the sweet sad tone of the night bird of the woods. Gently she whispered the name, "Tu-toch-Ah-Nu-Sah," and then gliding up the rocky dome, she vanished over its rugged top. Keen was the eye, quick was the ear, swift was the foot of the noble youth as he sped up the stony path in pursuit; but the soft down from her snowy wings was wafted into his eyes, and he saw her no more. Every morning now did he leap the rocky barriers, and wander over the mountains to meet the lovely "Tis-sa-Ack." Each day he laid sweet acorns and wild-flowers upon her dome. His ear caught her footstep, though it was light as the falling leaf; but never did he speak before her, and never did her sweet-toned voice fall upon his ear. Thus did he love the fair maiden, and so strong was his thought of her, that he forgot the crops of the Yoh-Hamite, and they, without rain, wanting his tender care, quickly drooped their heads and shrunk. The winds whistled mournfully through the wild corn; the wild bee stored no more honey in the hollow tree, for the flowers had lost their freshness, and the green leaves became brown. Tu-toch-Ah-Nu Sah saw nought of this, for his eyes were dazzled by the shining wings of the maiden.

But Tis-sa-Ack looked with sorrowing eyes over the valley, when, early in the morning, she stood upon the grey dome of the mountain; so, kneeling on the cold hard rock, she besought the Great Spirit to bring again the bright flowers, delicate grasses, green trees, and nodding acorns. Then, with an awful sound, the dome of granite opened beneath her feet, and the mountain was riven asunder, while the melting snows of the Nevada glided through the wonderful gorge. All then was changed; the birds dashed their little bodies into the pretty pools among the grasses, and fluttering out again sung for delight; the moisture crept slowly through the parched soil, the flowers sent up a fragrant incense of

thanks, the corn gracefully raised its drooping head, and the sap with velvet footfall ran up into the trees. But the maiden for whom the valley had suffered, and through whom it had again been clothed in beauty, had vanished as strangely as she had come, yet, that all might hold her memory in their hearts, she left the quiet lake, the winding river, and yonder half dome which still bears her name, "Tis-sa-Ack." Every evening it catches the last rosy rays that are reflected from the snowy peaks above. As she flew away, small downy feathers were wafted from her wings, and where they fell on the margin of the lake, you will see thousands of little white violets.

Such is the local Indian legend of the Yoh-Hamite—an inspiration of the visible creation, full of beautiful imagery; and amid the grandeur of mountain scenery it is impossible for man to feel other than a strange mysterious sympathy existing between the seen and the unseen—the Finite and the Infinite—for "the beauty of the material world is just bright and fair enough to stimulate that imaginative faculty, the creations of which could never be acclimated to earth. In front of Alpine altitudes, with their vast upheaved masses, commingled cloud, rock, glacier, cataract, there is excited not simply admiration and awe, but there is a feeling that these terrestrial marvels are samples only shown off upon this planet, in order to suggest to man the idea of scenes in some other world still more stupendous. If earth has its Alps, and its Andes, and its Himalayas, what shall be the spectacle of awe which a world unknown might open to our gaze?" All these mental emotions and sympathies springing out from a contemplation of the visible material creation, make man conscious of higher spiritual relationships; of closer connexion with the unseen and infinite: their tendency is upward towards that which is intellectual, not sensual; and towards that which is moral, not degrading. Some grand lessons do these grand old mountains teach. There is their stern, patient endurance; "they speak to us from the repose of self-centred character; the ocean speaks from the heavings of unappeasable passion." All the hard conditions of our human lot are typified by the great hills. "What a stern experience they undergo, yet, they do not babble, or roar, or moan, like the discontented, melancholy sea. The powers of the air bring all their batteries against them; lightnings blast and rive them; torrents plough them to the bone; sunshine scorches them; frosts gnaw away their substance, and roll it down into the valleys, but they utter no cry. After thunder and hail and whirlwind, their peaks look out from above the baffled clouds, and take the sunshine with no bravado, but as though it was

their mission 'to suffer and be strong.' Calm patience in trouble, persistent fortitude, these are the moral lessons that the mountains teach to man." "For the truth of Nature is part of the truth of God; to him who does not search it out, darkness; to him who does, infinity." It was a calm, clear evening in the month of November, that we camped down for the last time amid these mountains upon the banks of a small tributary of the river Truckee. The sky stretched out above us like a "star-spangled banner," and near to us a mountain torrent descended, leaping, rolling, and rejoicing, until it plunged into the channel of the river, and there was the sound of many waters. From this point the mountains presented a most interesting appearance, as morning, with its breath of incense and cheek of bloom, came bounding over the eastern ridges. Near the base of the mountains, and rising upwards, is seen a belt of oak and other familiar trees, the line very distinctly marked in consequence of the different tints of foliage. Rising above this bright cheerful green, is the dark purple of the mountain-pine, then at a higher elevation the brown and seared rusty mosses and ferns, and crowning all, the bright sheen of perpetual snow. Ascending to this upper belt to take our farewell view of the grand scenery of the Nevadas, we gazed far down upon the gloomy pine forests into whose dark embrace we were about to descend. To the north, gleaming bright and blue as the eye of an angel, lay the beautiful Lake Bigler; the sun shone out in all his glory—an unbroken silence reigned. Anxiously we waited for the morning breeze that rises regularly as day advances. Presently a sound, faint as the dying cadence of an evening hymn, broke upon our ears, and in a moment the dark forests were instinct with life. There is no sound in nature or in art that can compare with the deep-rolling voice of a pine-forest.

One may listen with rapture to the solemn music of the cathedral as the swelling intonations of the

organ have died away, and the holy strain has been seized by a single voice almost seraph-like in sweetness, and carried up to heaven; or to full bands of wind and stringed instruments sounding in harmonious unison.

One may have stood awe-struck as the live thunder of heaven's artillery leaped roaring and crashing from mountain peak and summit; or at the distant moan of the coming storm, as it crept over the sea with its dismal forebodings; or to the deep boom of the ocean, as it broke madly upon a sounding shore,—but not one or all of these sounds can awaken half the emotion within the soul, that does the melancholy wail, the ghostly sigh, or the unbroken thunder of a sea of mountain-pines! At first the silence is so deep and overpowering as to produce a sort of gasping for relief, but as the sounds increase in volume, the dark aisles of the forest and every glen peal forth the solemn war, and it bursts upon the ear in the full tide of its strength, and rejoicing in its power. 'Twas like the roll of ten thousand chariots, like the tread of countless armies, as they march in the triumph train of a mighty conqueror; 'twas Nature's mightiest anthem, her noblest hymn,—an anthem fit to usher in the dawn of the grandest day in this world's history.

Down the cañons and the gorges of the mountains it surged,—swept like a whirlwind over the surface of the beautiful lake,—rushed up the rugged sides of the lightning-scathed mountains, till from their savage battle-front they hurled back the deep bass of the forest hymn, and it fell upon the soul as the far-off voice of God speaking in sympathy with that in man that is deathless.

"So, by a sense attuned to God-meant strains,
I caught earth-music on its way to heaven.
On these grand mountains signs are writ—
God's autograph in cipher.
Others, by parchment right, may hold the soil
Of this champaign. I take my spirit-dues of all I see,
By right from heaven."

H. C. PAWLING.

THE BANDS OF LOVE.

Founded on a Lancashire superstition, that a person cannot die in the arms of any one who wishes strongly to retain the parting soul in life.

Oh, let my soul go free, mother!

Oh, let it rise above;

All cords are loosed from me, from me,

All, all except thy love.

But thy tears and prayers have bound me—

She said—within a net;

I can feel the meshes round me,

That I cannot break through yet;—

I can feel their tendrils creeping

All around and over me;

They are clasping, holding, keeping.

Oh, let my soul go free!

There is One at the door would take me,

He waits till I am free;

I loved one that did forsake me,

But One in heaven loved me.

When the Master calls, to greet him

I would not be the last;

I would go on the way to meet him,

If you did not hold me fast.

There is a wound in my breast, mother!

A wound both wide and deep;

By day it will not let me rest,

By night I cannot sleep.

And the last of all wert thou, mother !
That I had told of my woe ;
And I had not told it now, even now,
But to make you let me go.

Oh ! let my soul go free, mother !
I will come with the birds again ;
I will wake you at morn from the old plane-tree
With a song that knows not pain.

When you think what you cannot speak,
At evening, a kiss will steal,—
A kiss to dry the tears on your cheek,
A kiss that you will not feel.

And I know I can scarce be dearer
To your heart than I have been ;
Yet, perhaps, I may then be nearer
With nought to come between ;

With no shadow from the grieving
That walks on earth with love ;
Its footsteps never leaving,
For it knows they must part above.

Oh ! let my soul go sleep, mother ;
Why, why should love's excess
Still strive within its hold to keep
What it can no longer bless ?

It is but the vain, vain yearning
Of an eye that follows still,
On a step no more returning,
That it cannot shield from ill.

And such hath been thy love, mother,
Thy mother-love ; but *there*,
In my Father's house above—above,
There is bread enough and to spare.

We part from one another
In grief, but we meet in bliss ;
We part with the kiss and the tear, mother !
We meet with the smile and the kiss.

And the dark will grow to light,
But the light will not pass away.
We part, we part in the mirk midnight,
But we shall meet i' the day. . .

There is a sore strife for my breath,
But on it rest begins ;
Oh, love is strong— is strong as death,
But it is not *now* it wins !

And thine, and thine is my love, mother !
But I should not pray to thee ;
I would speak with One above, mother !
Oh, let my soul go free !

At Home in the Scriptures.

A SERIES OF FAMILY READINGS FOR THE SUNDAY EVENINGS OF OCTOBER.

FIRST EVENING.

CHRIST THE SPIRIT OF RELIGIOUS ORDINANCES GENERALLY.

"The Lord is that Spirit."—2 COR. iii. 17.

WHEN it is said that the Lord Jesus alone is "the spirit" of all religious ordinances, the announcement does not condemn as useless the body which in these ordinances has been prepared for him. Men are in the body,—men whom he loved and came to ransom: in order to reach them he must be in the body too. No man hath seen God at any time; but God became man and dwelt among us, that we might behold his glory, and obtain eternal life. Christ had a body like our own in all but sin. The period of his ministry on earth was brief. He manifested himself the Saviour before he became incarnate, and after he had ascended to heaven. On both sides of the cross were sinners suffering, and love from the face of Christ crucified beamed in gracious offer either way, reaching earth's utmost ends,—penetrating to Adam upward, and down to his latest child. In order that Christ, before and after his sojourn on earth, might manifest himself to men in the body, it behoved him to adopt a body too. Accordingly, before he was born in Bethlehem, and after he ascended from Olivet, he presented himself to faith clothed in certain revelations and institutes that touched human senses, and so made way into human souls.

He knows what we are, and what we need. He has compassion on the ignorant, and them that are out of the way. He not only filled the fountain of saving grace on high; he prepared suitable channels for conveying it to the needy. Divine truth revealed for the salvation of men, must have respect to its object as well as its author. It is necessary that in its essence it be like God; but it is also necessary that in its form it be like man. It is easy to object to particular details in the Bible, and say they seem far removed from the divine. They are; and that because it was necessary to bring them down to the human. Our knowledge comes to us, in the first instance, through the bodily senses, and how shall God, a spirit, be made known to us that we may become partakers of the Divine nature? The method adopted in the covenant of mercy, and manifested in the Scriptures throughout,—the method is, in order to bring us up to his nature, he bowed down to ours. In order that we might know and receive the Lord the Spirit, God has from the beginning prepared for that spirit a body, which brings saving truth within the reach of embodied men.

While God in his ordinances bows down to our low estate, there is ever manifest a tendency in

the Divine dispensations to advance from the lower to the higher. The more carnal ordinances came first; afterwards the more spiritual. The New Testament is an advance upon the Old; and yet a greater advancement awaits the Church. Things are prepared for them that love God, which eye hath not seen nor ear heard. But, in the meantime, it is only what the eye can see or the ear hear that can be made known to us. Revelation must assume some bodily shape ere it can be intelligible to men in the body.

Such, accordingly, were all the ordinances of the ancient Church, and such all the revelations that were made under the ancient dispensation. Christ, their spirit and life, was in them, but they were bodily things.

The bondage in Egypt, and the redemption thence by the blood of the lamb; the open way to Israel through the Red Sea, and the burying of their oppressors beneath its flood; the journey through the wilderness, and the rest that lay beyond; the manna from heaven, and the water from the rock; the deadly wound by a serpent's bite, and the healing by a look; all these had Christ in them, and all were employed to make Christ known to Israel in those days of old. The permanent institutes, as well as the passing events, were bodies prepared for conveying that one blessed Spirit. The unblemished lamb and its blood on the door-post; the one fair mitre on the high priest's brow, and the twelve precious stones on his breast,—that signifying Christ's holiness before God, and these Christ's imperishable love to his people; all the sacrifices and types that were written in the laws of Moses, and reverently observed throughout the generations of Israel, were *bodies* prepared for the purpose of bringing Christ near to men. All these were handles let down from heaven for perishing men to hold their Saviour by. Christ put these garments on in those ancient days that his people, bowed down by disease, might be enabled to touch him, and so live. Christ was within these bodies, their quickening spirit in those days of old. Believers, like Abraham, saw and felt him in those bodily manifestations long before he came in the flesh. Christ, the living spirit, dwelt in those ordinances, and through them earnest seekers found him all their salvation and all their desire. It was his delight so to reach *them* to give life; and their delight so to reach *him* to get life. The song, "My beloved is mine, and I am his," is very ancient.

But, though these bodies were designed and

fitted to contain and manifest Christ their Spirit, they were worthless wanting him. A body with the life is very good. While the spirit animates the body, the body clothes the spirit, and enables it to act on its object. But a body when the spirit has fled is useless, and worse. It is a carcase, and becomes corrupt. Itself is dead, and it kills others. Such are ordinances even of Divine appointment, when Christ the Spirit is not in them, or is not owned. It is no disparagement to God's wisdom in the construction of the human body, that it becomes a corrupt and corrupting lump when the soul has fled. The human body is a most wonderful work of God; but it is as the home of a living soul. When its soul has departed, it is of no more use: we are fain to bury it out of sight, God's work though it be. Such are the ordinances of religion, when Christ is not in them; their deadness and loathsomeness, when their life is lost, is no disparagement to the wisdom of God in their appointment. They were never meant to be, for their own sakes and in themselves, either beautiful or good. They are obedient and loyal: they let go all their glory when the King goes away.

There is a strong tendency in our nature to cling to the mere body of a religious ordinance and let its spirit go.

The disciples of Jesus, though men of true faith, were in the days of his flesh men of weak faith. They beheld the Saviour with the bodily eyes. Their life was real, but it was feeble. He knew that it would be profitable for them that he should go away. They felt it hard to let go their hold by sense, and begin to walk by faith. But they speedily grew stronger men, when Christ embodied was withdrawn, and Christ in spirit filled for them the word and ordinances. Peter did not deny his Lord any more. If left to themselves, they would have kept their Lord always in their eyesight, and so continued weaklings in the faith. They were weaned against their will.

The same tendency in a far more dangerous form appeared early in the Churches of Galatia, when they turned away from Christ, who is the spirit of ordinances, to the old ordinances destitute of Christ. They returned to the elements of the world, and sought salvation in circumcision. How vehemently Paul cried out to them, "O foolish Galatians, who hath bewitched you . . . having begun in the Spirit, are ye now made perfect by the flesh?" Look to the strain of the Epistle and you will see that their error lay in leaving Christ, and betaking themselves to circumcision; or at least in taking circumcision along with Christ, as if he alone were not able to save. He was able to estimate the consequences of the transition they had made. They were leaving the word and sacraments of the New Testament, in which Christ dwelt as the animating spirit; and going back to a dead letter which had now to them no animating spirit at all.

The tendency appears in its grossest form in modern Rome. They gravitate like lead, from Christ the spirit of ordinances, to Christless forms. The same thing do we, except in as far as the Holy Spirit quickens and elevates us. The sacrifice of the mass, as they call it, is a well-defined example of this tendency, running to its utmost length. Their wafer and their wine cup they say have become the body and blood of Christ,—the very body that hung on the cross, and the blood that flowed from its wounds. It is the most adventurous lie that ever human heart invented. But even although it were true, what gain would accrue from it? Although that wafer which the Papist swallows were the body and blood of Christ, which it is not, what better would he be of swallowing it? It is the Spirit which giveth life: the letter killeth. The Lord himself is the Spirit that dwells in the sacrament to be life to the receiver, and the Lord the Spirit is not there. He has gone away offended, and left the dead for the dead—dead idols for dead souls.

SECOND EVENING.

CHRIST THE SPIRIT SPECIALLY OF THE LORD'S SUPPER.

"The Lord is that Spirit."—2 Cor. iii. 17.

As the ordinances of the Old Testament were precious while they were a body to hold, and hold forth Christ their living spirit, but useless when they became a body and no more; such also are the word and sacraments of the New Testament dispensation. As sensible ordinances were appointed for communicating Christ to faith before the incarnation, so also after the Lord has ascended into heaven, ordinances remain in which he will dwell, and where his people will find him. The Scriptures of the New Testament, like those of the Old, are bodily things, suited to bodily senses. They are words and letters. If they have not a spirit in them they are dead; and the dead cannot give life. The Christ of God is the soul that animates their body, and if we do not find him in the Bible, we find nothing there. As a human body

with the life in it is the most beautiful object in nature; and a human body when the life has gone the most forbidding; so, I suppose, the Bible is to one class the most pleasant of all books, and to another the most tasteless, because to the one it is a dead letter, and to the other it is the body all glowing with Christ its life. The Jewish scribes of our Saviour's day spent much time in handling the Scriptures; but their schools had all the air of a dissecting room: the letter in their hands was a body dead. Ye search the Scriptures, said the Lord, for in them ye think ye have eternal life, and they are they which testify of me: and ye will not come to me that ye might have life. They stolidly manipulated the carcase, and rejected him who came to be its spirit and life. They embraced the dead; because the look of the living reproved them.

But the Sacrament of the Lord's Supper is in a peculiar manner the body whereof Christ is the inner living spirit. As men often missed the spirit of the ancient dispensation, so they may miss the spirit of the Lord's Supper in the new. If we do not by faith realize Christ in the Supper, it will be no more to us than a Jewish passover would be.

In the remarkable discourse reported in the 6th chapter of John's Gospel, Jesus taught clearly and fully that himself is the bread on which alone a soul can live. That discourse does not contain the institution of the Lord's Supper,—does not contain an allusion to the ordinance. It is an exposition by the Lord himself, while he stood among the disciples, of the central saving doctrine which the sacrament afterwards expressed and commemorated. It is not his body but himself that he represents as the bread of life. Although, in reference to the question put by the Jews, he spoke of his flesh and blood, he had said at the beginning, "I am that bread of life;" and he said at the close, "He that eateth me shall live by me."

In the light of this exposition observe the relation between our text and the ordinance of the Lord's Supper as instituted in the Scriptures. This is my body; this is my blood: take, eat; drink ye all of it: this do in remembrance of me. Behold the body; but to eat bread and drink wine will not save,—will not profit a soul. Where is the spirit of this material sign? "The Lord is that Spirit,"—the Spirit of one religious ordinance, and of all. The Supper is indeed a body, a sort of channel divinely appointed for containing and conveying Christ to faith, but it cannot by itself contribute an atom of influence to the procuring of pardon, or the purifying of the heart. The Lord is the Spirit, and if they who come to the body do not seek and find by faith that Spirit, the body will profit them nothing. Divine institute though it be.

This question is entirely independent of the right administration of the Sacrament. Suppose it to be administered by apostles, and in exact conformity to the Lord's will; still, it can impart nothing to the unworthy receiver. His evil heart of unbelief has, by the supposition, refused Christ, and there is no other to be the spirit of the ordinance. The bread and wine are but beggarly elements. As the lead of a water-pipe, although most perfectly fitted for conveying water, cannot in any measure contribute to allay the traveller's thirst; so, the Supper, although perfectly administered, can do nothing for a sinner who bars the door of his heart against the Saviour Christ.

The institution of the Sacrament was not intended to put sense in the place of faith. It was not intended that tasting of bread and wine should do instead of "Christ in you the hope of glory." This would have been to accommodate the ordinances of the New Testament to carnal minds; and in that form carnal minds do pervert them. But the Supper of the Lord is not therefore useless. We do not deny it a place, when we refuse to give it the place of the Saviour. The body, which is nothing when dead, is a great thing when living. Nor is it only that the soul inhabiting the living body is great: the body is great when a soul

inhabits it. So, it is not enough to say that though a Christless sacrament is nothing, Christ himself is great. That is true; but more than that is true. While the ordinance as a body is dead and worthless, if Christ be not apprehended in it by faith, the ordinance is most precious when the believing partaker seeks his Lord there. To eat bread and drink wine according to Christ's own command, at once to show forth his death, and to receive his life into the soul, is a help to faith, like manna to the hungry Hebrews in the desert, or the water that flowed from the smitten rock. When he makes himself known to a longing heart, that heart loves him, and loves the channel that he comes in. The words of the Bible are not thought of as dead letters; but felt to be living, because in them the believer gets Christ his life. The Lord's Supper, though it be a thing of sense, is felt to be a deep refreshment to the soul, because the soul's Saviour is found and tasted there.

Recal to mind the design of Christ's departure from the disciples, and the process of weaning through which they were put. They loved the Lord with a fond adoring love. When they were tossed on a tempestuous sea and ready to perish, the one want they felt was the absence of their Lord: "It was now dark, and Jesus had not come unto them." But while their love was grateful to his heart, he knew that sense in the disciples was growing too rank, and was choking the more feeble and more precious faith. Carried away in a flood of personal love that lay in the senses, Peter passionately opposed the dying of the Lord Jesus for the sins of men: "Far be this from thee, Lord." Satan got an advantage over Peter; but Peter's love to the person of Christ, as seen by his bodily eyes, was the cover under which the old serpent lurked in order to give his faith so deep a wound. Knowing what was in man, the Lord prepared to leave them as soon as his work was done: "It is expedient for you that I go away." Yea, verily. The faith of these Galileans would have been smothered outright under the ample folds of their love for the man Christ Jesus, their personal friend. When he departed, they continued as if glued to the ground, gazing up into heaven. The ministry of angels was needed, and employed to tear them from the spot, and turn their minds another way. The ministry of angels, though fitted to take them away from their needless look into the sky over Olivet, was not fitted positively to bring them to Christ. Their commission ceased, and a more glorious ministry was given for that end. The Holy Ghost came upon them. His mission was to glorify Christ. His office was not to take them to another saviour, but to lead them to the same Saviour through other channels. They were wrenched away from the personal human friendship with Jesus, as infants are torn from the breast. They were directed by the Spirit to Christ their Saviour; but although he was personally removed beyond the reach of their senses, they were not left altogether to internal meditation on the unseen. A body was prepared where Christ might be, and through which they might reach him, without being so glued to the body, as to miss the spirit. The Scriptures were given as a body, and the Lord became in them the animating Spirit.

The disciples lived on Christ more, when they received him by the Spirit's ministration from the Scriptures, than when a tumult of passionate love perturbed their hearts at his personal appearing. So, in the sacrament of the Supper, they found Christ, and in him they lived by faith, with less distraction of mind. As the result of the Lord's ascension and the Spirit's ministry, we learn (Acts ii. 46) that, in mutual love, and solemn sacramental communion, they did eat their meat with gladness and singleness of heart. This is my body,—this do in remembrance of me,—it is expedient for you that I go away. The Lord became the *Spirit* in the body of their ordinances: they lived on the same Redeemer, but now their life in him was more purely a life of faith. This body which he has left—whether word or sacrament—this body, when the Lord is its Spirit, is as fit to nourish our souls as his personal presence on earth would be. Indeed we may now give him praise for weaning his Church in the person of his apostles. He has done all things well. Let our gracious Lord be the Spirit of our sensible sacrament, and we shall enjoy more faith's feeding on him, than we would do if he should return to show us either the marks of his suffering, or the display of his present glory. By his bodily presence, we in the body would be flooded by tumults of sense, crying out, "Depart from me, for I am a sinful man, O Lord;" or falling at his feet as dead; but in these tumults flickering faith would be overlaid and quenched.

He gives us this sensible sign, that in it and through it we may receive him by faith as our Saviour, with less distraction than if his eyes as a flame of fire were opened and bent upon our company. Hear the promise, "Lo, I am with you alway, even unto the end of the world." Anybody that he chooses to employ, we should love; and, if there be less in these symbols themselves to carry us away, than there would have been in the transfigured presence of the Lord descending on our mount, all the more complete should be the inner worship of the soul, while we cleave to the *Lord the Spirit* in these symbols of his death.

Tell me the sweetest scene, of mingled moral and material beauty, that may be seen on earth? It is an infant satisfying itself abundantly from a loving mother's breast. Tell me now the saddest sight that eye hath seen or ear heard? It is that which they say has sometimes been seen in the wake of war or pestilence—an infant unconsciously sucking a mother dead. Ah! if that process continue long, the child will draw death from the corruption.

The letter of the word or ordinance is dead, if Christ be not known and recognised. The letter,

when the Spirit has departed, is not only dead, but deadly: "the letter killeth."

But the same letter—when the Lord becomes its Spirit—is life and gives life. "In him was light, and the light was the life of men."

The second clause of the verse intimates that "where the Spirit of the Lord is, there is liberty." There is not room for an exposition of it here; but it is right to notice it in a few sentences, that we may guard against partial and one-sided views of the Scripture.

I do not know any shorter or surer method of illustrating the liberty that prevails, wherever the Lord himself is owned in faith as the spirit of all his ordinances, than to point out the bondage which crushes the people wherever the spirit of the ordinance is lost, and its dead body resorted to as a charm. The converse of the clause is strictly true, and eminently suitable to the times,—"*Where the Spirit of the Lord is not, there is slavery.*" Human spirits are too high in nature and too capacious for worshipping another than God a Spirit. When men as individuals or as communities let Christ slip from the grasp of their own faith, and fasten on some corporeal thing, whether a superstitious ceremony or a fellow-man, farewell to liberty. It becomes on the one side an iron tyranny, and on the other the cringing of a slave. The Pharisee would lose peace of conscience if he should eat with unwashed hands. A modern bondsman, a sincere worshipper in his way, will think he has committed a sin against God which must be atoned for by heavy penance, if by some accident he has tasted a sort of food on one day of the week which he might lawfully eat on another day. There is no imaginable depth of degradation which the master of a soul will not impose, which a soul enslaved will not endure. Woe to human spirits when they let go Christ and submit to a fellow!

Take all the advantage that can be obtained, and it is very great, from the union and organization of Christians; take instruction and fellowship from a brother wherever you can obtain them pure and useful, but submit your soul to Christ alone. When in reading the Scriptures, in prayer secret or social, in the worship of the great assembly, or in the act of showing forth the Lord's death, you seek and get communion in spirit with a present Saviour, you enjoy a wondrous liberty. You walk at liberty before God, as a dear child consciously at peace through the blood of the cross; you walk at liberty in the world, knowing that one is at your right hand who is able to keep you from falling; you will walk at liberty even in the valley of the shadow of death, for the Shepherd of Israel is with you there, and will abide with you to the end.

THIRD EVENING.

CHRISTIANS A MIRROR IN WHICH CHRIST IS REFLECTED—AN EXPOSITION.

"But we all, with open face beholding as in a glass the glory of the Lord, are changed into the same image, from glory to glory, even as by the Spirit of the Lord."—2 Cor. iii. 18.

For all who are familiar with the Scriptures, this is a remarkable and memorable verse. The greater part of it is as plain as it is precious; and

yet a certain measure of obscurity or ambiguity hangs, like a cloud, persistently over the spot. Light indeed shines through,—a light practically

sufficient for the purpose of the pilgrim; but the outline of the object is, at certain parts, hidden as by a haze. In short, this is one of a class of texts in Scripture which yield readily the substance of their meaning to the simplest reader who knows the taste of the truth, and yet retain in their core a knot of matter "hard to be understood" even by competent and patient inquirers. The subject is in its own nature interesting and attractive: if we examine it reverently we shall be sure to obtain from it the spiritual edification which it freely supplies to the unlearned; and perhaps, in addition, be able to advance a step in the solution of its exegetical difficulty.

We shall endeavour, *first*, to elucidate what is obscure to the understanding; and, *second*, to enforce what is obvious upon the conscience. Our object, under the first head, is mainly, though not exclusively, exposition: our object under the second head is mainly, though not exclusively, practical application.

In the EXPOSITION, the chief difficulty lies in the clause, "Beholding as in a glass the glory of the Lord:" if we succeed in ascertaining the meaning of these terms, the rest will be found comparatively easy.

First of all, we advertise the reader of the English Bible, as a piece of information on a matter of fact, that the five words, "beholding as in a glass," represent only one in the original Greek. Nor is that single term in an extraordinary measure compound or complicate; it is a verb formed by the junction of a noun and a preposition, one of the simplest and commonest resources in the development of language. In the Greek verb there are three forms: the first active, as "I see;" the second reflective, as "I see myself;" the third passive, as "I am seen." In some of their parts, including that which is employed in the text, the two latter are in spelling, and, as far as we know, in sound identical. It is only by the context and the sense that we can determine whether a certain collocation of letters means I see myself, or I am seen. But this is not a difficulty peculiar to the Scriptures or the language in which they were written: it occurs more frequently in our own tongue, and seldom occasions any practical inconvenience. It is one of the imperfections of human speech.

In the case before us, the participle translated beholding as in a glass, may, as far as the written letters are concerned, mean either, I behold myself in a mirror, or, as a mirror seen or looked into by another, I receive his image on my bosom. We must determine, by the sense of the passage, whether of the two meanings the word is designed to express, even as in multiplied instances we easily and even unconsciously determine in our own tongue. Whether does the word mean, I see myself in a mirror, or, I, as a mirror, receive and exhibit the image of the person or object to which my surface is turned? For the latter of the two, all the sense of the passage, and all the circumstances of the context, seem unanimously to declare.

The apostle represents a Christian not as a person turned towards a mirror, but as a mirror turned toward Christ. If I stand before a mirror and look

into it, I see myself; but if I am a mirror, turned with open face to look unto Jesus, then the likeness of the Lord is seen upon me.

The recorded effect of the beholding serves to determine the nature or kind of the beholding. The grand moral principle—By their fruits ye shall know them—serves well also as a logical rule. The result or fruit of this act is expressly said to be, that "we are changed into the same image." The same persons who "beheld" were then and thereby "changed;" and they were changed into the image of the object whom they beheld or looked upon. Now, this change takes place, obviously, not on the person who looks upon the mirror, but on the mirror that looks upon the person. In this analogy the disciple of Christ is represented by the glass, and not by the person who stands before it. The person who stands before the glass is Christ in the glory of his redemption. And when a believer is turned to the Lord in faith and love, he receives upon his character, in lines more or less distinct, the image of his Saviour, and his neighbours forthwith take knowledge of him that he has been with Jesus.

If the mirror were covered with a veil, although it were turned towards a person's countenance, it would not be changed into that person's image. Accordingly, it is intimated that when we "with open face" behold, as a mirror does, the glory of the Lord, we receive the impression and are changed into its likeness.

"The glory of the Lord,"—the object to which the glass is turned, is seen, as we learn from chap. iv. 6, "in the face of Jesus Christ." This is the "glory that excellet." There, in the act of freely forgiving sin, the righteousness of God is more vividly displayed than it could have been by the punishment of sinners. Past all the shining worlds of space, and away from the flaming-fire services of unfallen creatures, to "the face of Jesus" do angels desire to look in order to see, as fully as their faculties will permit, "the glory of the Lord." On this glory, divine and infinite, a believer's faith is permitted to fasten, even in the body; for it is softened down to the limit of our power, by dwelling in the person of our Brother.

Nor is the object corporeal, although the terms in which it is described are necessarily borrowed from the affairs of time. "The Lord is that (or the) Spirit" (ver. 17). It is not Christ in the words and syllables of the Bible; it is not Christ in the transubstantiation of Rome; it is not Christ as an image made by human hands; it is not in any such "corporeal or carnal manner" that a believer's eye is turned to the Lamb of God, so as to receive upon itself his likeness. The Lord is the Spirit: "Lo, I am with you always, even to the end of the world." A Christian's communion, when he lies down, and when he awakes, is "with the Father, and with the Son Jesus Christ."

Interesting corroborations of the exposition which we have given, lie scattered over the context; compare with it, for example, the analogy which is introduced in the third verse. There the apostle represents true disciples as epistles of Christ, written by the Spirit, known and read of all men! The conception is, that people may read Christ from the life of Christians. Expressly the hearts

of the faithful are compared to tablets on which the character and doctrine of the Lord have been legibly written, not with ink, but by the Spirit. Now this analogy, and that of our text, are precisely parallel. It is most natural that they should both flow from the same mind, in the same argument. In the one case, the disciple is a receptive tablet on which Christ is, spiritually, written like a letter which all may read; in the other case, the disciple is a sensitive mirror in which, when it turns in that direction, Christ's image may be seen.

The two analogies, when that of the mirror is understood as we have represented it, are of one class, and constitute a pair, each exhibiting a special and distinct feature of the regeneration. The conception of a tablet on which Christ is engraved, indicates the sure, permanent character of the new life. Graven deep in souls by the Spirit's ministry, many waters will not wash the meaning out. Violence will not deface the legend, and time will not waste it. Known and read of all men, it may be, through life on earth; known and read of all men it will be, when they assemble round the judgment-seat. The cognate analogy of our text suggests another view of the same renewing: we do not produce, we only receive it; it is secret, instantaneous, and in outline complete; it depends wholly on looking unto Jesus; and it is marred by every admitted defilement. "The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh or whither it goeth; so is every one that is born of the Spirit." As a mirror in the light receives and exhibits the likeness of an object to which it is turned, so a simple, trustful, receptive soul, looking unto Jesus, receives his image upon itself, and displays his image to the world.

A parallel example from the Old Testament will serve still further both to elucidate and to confirm this view. Believers in ancient times were exhorted by the prophet Isaiah in these terms:—"Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee. For, behold, the darkness shall cover the earth, and gross darkness the people: but the Lord shall arise upon thee, and his glory shall be seen upon thee. And the Gentiles shall come to thy light, and kings to the brightness of thy rising" (lx. 1-3). There is no beauty in Israel although they are the chosen people of God; especially there is no light in them until they receive it from heaven. They might say, as Paul said long afterwards, "In me, that is, in my flesh, dwelleth no good thing." The people were prostrate. They lay in the dust. But their Saviour pitied them. He appeared as their light; but while they lay so low, the light from his countenance did not reach them. Here the invitation of Isaiah comes in,—*"Arise, shine."* The Sun of righteousness is in the heavens, but their faces were not shining yet. They must arise and look upon the light. Then and thereby they will be enlightened. Thus shall they become witnesses in the world. When Israel receives and displays the light of peace and holiness, the Gentiles will be attracted by its beauty, and will come to worship at Jerusalem.

It is the same principle that is more fully developed in the gospel, and reduced to practice in the conduct of Christians. When they commune with their Redeemer, and grow in spirit like him, strangers are attracted to the truth as it shines sweetly in a brother's conversation.

In this view the expression, "from glory to glory," occupies an appropriate place, and is charged with a definite and transparent meaning. Although John and Paul, in their style of thought and expression, present a contrast rather than a similarity, such is the unity of the fountain whence both apostles draw, that it is in the tender story of John that you find a close parallel to this conception in the complicated intellectual argument of Paul: "And of his fulness have all we received, and grace for grace" (John i. 16). As the mirror has no image of its own, but presents its empty surface to receive feature by feature the likeness of him who stands before it; so an empty but earnest soul, turning to the Lord, takes in from him, and obtains for itself, the various graces of the Spirit which have their home in Christ. The result in the renewed man, although in measure it is always dim, and sometimes also distorted—the result is, that the love, and truth, and faithfulness, and courage, and gentleness, which dwell in the Head as in their fountain, may be seen also in the member. Grace in the Christian stands opposite to grace in Christ, from whom it came; for we have nothing that we have not received; from glory native and divine in the Mediator, to glory human and limited, but beautiful in its measure in the believing man, the process of regeneration proceeds; until that blessed time when "we shall be like him, for we shall see him as he is."

It is added that this spiritual transfiguration in the new creature is effected "as by the Spirit of the Lord." The work is accomplished, not by a corporeal but by a spiritual presence of the Saviour, realized through faith; and ministerially it is accomplished by the agency of the Holy Ghost the Comforter, according to the Lord's own express testimony,—He shall glorify me, for he shall take of mine and shall show it unto you.

The exposition now submitted, accords perfectly too with the fact in the Old Testament history, which suggested the conception to the apostle's mind. Moses in the mount looked face to face on the glory of the Lord, and, as a mirror, received the impress so brightly upon himself, that even when he had descended to the plain, it was necessary to cover his face with a veil in the presence of the people. So the apostle intimates, that if we, without intervening obstructions, turn toward the glory of God, as it is now mildly displayed in Christ, we shall as mirrors receive his likeness; our hearts will take in such spiritual beautifying from the altogether lovely one we look upon, that even when we come down to the level of life and the company of our kind, it will be known and felt by our look, and tone, and temper, that we have been in converse and in union with the Well-Beloved of the Father, who is full of grace and truth.

FOURTH EVENING.

CHRISTIANS A MIRROR IN WHICH CHRIST IS REFLECTED—AN APPLICATION.

"But we all, with open face beholding as in a glass the glory of the Lord, are changed into the same image, from glory to glory, even as by the Spirit of the Lord."—2 Cor. iii. 18.

THE two terms, "we all," in the beginning of the text, when viewed in relation to the context, suggest a double contrast, and contain a direct personal appeal. "We" who enjoy the full light of the gospel under the ministry of the Spirit, have gotten from the Lord much, in comparison with Israel under the earlier dispensation. To us more has been given, and therefore from us more shall be required. It was far to look unto Jesus in Abraham's day, and distance dimmed the view: but before our eyes he has been evidently set forth crucified. We are permitted to come near; the veil is rent; the shadows have disappeared. He that is least in the kingdom of heaven since Christ came, is greater, in point of privilege conferred, than the prophets of the Old Testament: it remains to be seen whether we lay out our Lord's large gifts so as to bring in much glory to him, and much grace to ourselves.

A distinct additional unit in the inventory of our privileges is indicated, when it is said that we all behold the glory of the Lord. The term suggests the freedom of access into the holiest which every believer enjoys now through the blood of the covenant, in contrast with the exclusion of the multitude during the period of the Mosaic dispensation, while Moses alone, and the high-priest afterwards, was admitted within the veil. The way has been opened, and every worshipper has right of entrance to the mercy-seat; whereas in the ordinances of the ancient dispensation, a material curtain hid the Holiest from the people's view. We have one Mediator between God and men, who has passed into the heavens as the high-priest of his people; under him, in respect of the privilege of approach, all Christians are kings and priests. "We all behold;" it is not a privileged one that goes in to present our case and bring the answer out. No mortal man has any right to bid the humblest disciple stand back, or to undertake the case of another before the throne of God. We repudiate as anti-Christian all such priestly pretensions; and therein we do well. We all—not some favoured persons—we all behold the glory of the Lord now, when we have faith in Jesus. The Master beckons us forward, and who shall dare to keep us back? Come unto me; we recognise there the Master's voice; "Come unto me, all ye that labour and are heavy laden, and I will give you rest." He addresses all the weary without distinction, and invites every one to come to himself. He does not bid any sinner retain and fee a fellow-man to conduct his case. On the clear authority of the Scriptures we claim our right, and resist the intrusion of self-constituted mediators between the Saviour who seeks the lost, and the lost when they seek the Saviour. Faithfulness in the maintenance of this liberty is right and necessary; but we ought

to approach this subject also on the other side. The citizens of this free commonwealth are justly intolerant of those possessors who claim to the uttermost the rights of property, and fail to fulfil its obvious duties. What shall be said of those political Christians who sturdily claim the privilege of coming personally to the throne of grace, and yet seldom or never come? To these the Master himself has spoken, perhaps the severest word that ever fell from his lips: "I will spue thee out of my mouth" (Rev. iii. 16). Ah, it will avail us little in that day, that we have been fervid Protestants, if we have not been fervent in prayer: it will avail us little that we successfully resisted another man's claim to undertake our affairs with God, if we neglect to transact that necessary business ourselves. The simple intimation from the Sovereign Dispenser of mercy, that we are permitted personally to come near and ask, should be sufficient to crowd the court with suppliants. That the door is open is sufficient reason why we should go instantly in. If mercy's door had been shut ere we were born; or if an edict had been displayed above it, that the common herd of the sinful were not permitted to approach, there would have remained some semblance of excuse for neglecting the great salvation; but now that "we all" are invited, what shall any one answer at last if he do not come? The Lord Jesus takes it ill when the door that he has opened to save the perishing is not thronged with the fugitives from the flood: the Lord Jesus is glad when he sees the sinful hastening to escape lest the door be shut. It is when many come and seek, and find pardon, that he sees of the travail of his soul and is satisfied.

Several distinct lessons, all springing from the subject, claim our notice now.

1. Every man is like a mirror, and in some measure receives upon his heart the image of the object which he often or earnestly looks upon. A human soul is sensible and receptive; beware; it will receive and retain the likeness of that to which it is frequently opened and turned. When with open face, and unchecked desire we look upon an idol, the likeness of the idol is secretly stamped upon our souls, in colours that will not out by all our washings. We are changed into the same image from shame to shame, from vile feature in the idol to corresponding vile feature in the character of its worshipper. Dagon, the deity of the Philistines, was a fish-god,—an abominable object, partly man and partly fish. The idolaters took after their idol; a more besotted race do not appear in history. They could not discharge that stupid brutality from their nature. When Dagon lost his head and hands by a fall on the floor, they lifted the stump, propped it against the wall, and adored it still.

Idols are extant still ; although in this country we do not construct them of wood or stone. Covetousness, for example, is idolatry, and the covetous are idolaters. When a human soul turns toward the world, and doats on the world as its portion — its god, that soul silently, helplessly receives and displays the image of its idol. Other lusts, which cannot be so easily named and described, transfuse also their loathsome likeness so deeply into men's hearts, that it may be seen staring from their eyes. Covetousness is, in some respects, a cleaner word ; and because it is more easily handled in society, it is more frequently mentioned as a specimen of its class ; but if other objects are so vile that they cannot even be named among us, there is the stronger reason why an immortal soul should not open to them, and face them like a mirror, and so receive their likeness. It is a law of nature, imposed in righteous judgment by the Author of being, that moral intelligent creatures grow like the persons or the practices that they look upon with love. Ah ! how many mirrors are made loathsome by the vile images which they bear. Open your heart only to the pure in its conceptions, desires, and pursuits, so shall pureness dwell in your heart and shine in your life, like a lovely countenance that has pictured itself on a mirror's surface.

2. The glory of God, as it appears in the face of Jesus, is a gentle light ; it is divine, for all the fullness of the Godhead is there ; but it is human, for it dwells bodily in the man Christ Jesus. It is the light of that God who is a consuming fire ; and yet it is so soft that a human eye unveiled may safely look upon it. It is not a visible bodily glory. Such a display would not serve our Redeemer's gracious design. Glimpses of such a light, given in anticipation of his second coming, served only to make his dearest disciples fall at his feet as dead. In the present dispensation the cry, " Lo here, or lo there," leads the inquirer on a false scent. His appearance in the clouds of heaven is not a sight that will draw the eye of the wicked to itself. When he appears in glory, the wicked will not come to his bosom ; they will flee before his presence like smoke before the wind.

As Christ comes now in the reign of grace, his coming is like the morning. Nothing is more lovely than the dawn ; and there is no burning in its beams. The feeblest may look upon it with open face.

We may unfold our inmost soul to the glory of God, as it appears in the face of Jesus, as the ten-

derest flower spreads out its bosom to the light, bathing all its being in the flood. Fellow-sinner, what have you seen forbidding in the face of Jesus, that you wince whenever you look upon him, and for comfort quickly turn away ? There is a beautiful fable of the ancient mythology, to the effect that Apollo, who represents the sun, killed a huge poisonous serpent, by arrows surely aimed and shot from afar. It intimates that sunbeams darting straight from heaven, destroy many deadly things that crawl upon the ground, and so make the world a safer habitation. The parable is, in this respect, a stroke of truth, and it coincides with a feature of the eternal covenant. Light from the face of Jesus, when it is permitted to stream right into a human heart, destroys the noisome things that haunt it, as Apollo's arrows slew the snake. In this respect, and to this effect, the look unto Jesus makes a sinful heart shrink ; but, brother, do not therefore turn away. That light-beam burns not you, but your own enemies within you, according to that remarkable expression in the Psalms,—" Thou answeredst them, O Lord our God : thou wast a God that forgavest them, though thou tookest vengeance of their inventions" (Ps. xcix. 8).

3. When your heart has been conclusively turned to the Lord, and his likeness sensibly impressed upon your character, beware of those things that dim its beauty and distort its features. The reflection of a person, though his face be beautiful, in a mirror blotted with mud, may be, in effect, an unsightly or ludicrous caricature. Alas, in this way, Christians misrepresent Christ, to their neighbours and to the world ! Every blot allowed to remain on the mirror's surface, and every twist in its grain, distorts the countenance of the altogether lovely one, in as far as people look in that glass for his likeness. Thus is Christ wounded to-day in the house of his friends. Pride, fretfulness, dishonesty, falsehood, and similar sins in a Christian's life, exhibit to the world an unlovely, ungainly Christ. The duty of disciples is expressed in these terms : " Among whom ye shine as lights in the world, holding forth the word of life." This means not so much giving evidence, as being evidence. It is required of us not that we should explain to the world what light is, but that we should be lights in the world. Christians are like mirrors turned, with open unveiled surface towards Jesus, both to receive and exhibit his likeness. Christians, those who are strangers to our Redeemer look to us that they may learn his character : " What manner of persons ought we to be ?"

W. ARNOT.

ON THE BIOGRAPHY OF CERTAIN HYMNS.

WORDSWORTH'S Peter Bell was a pedlar, and there have been pedlars of a better character than Peter. But the real Peter—the personality of Peter, as our German neighbours would say—must have been highly respectable.

“A primrose by a river's brim,
A yellow primrose was to him,
And it was nothing more.”

These lines are an honourable scutcheon. They elevate him to the great body of respectable, well-to-do, steady people. Nine-tenths of our excellent acquaintance subscribe to them as the creed of plain common sense. Why make a fuss about a yellow flower? Why not be thankful that it has got a name to separate it from other yellow flowers? Are there not thousands of them out in the fields, and have been since we were born? And are they not all primroses, and is not that enough? Of course, it is a prosaic view of the world; but then, there are a great many worthy and good people to whom poetry is a bore, who are thankful to find the world already carefully labelled, who placidly accept everything about them as a fact, to whom a primrose is a primrose. There is a poem in the telegraph wire; yet thousands of messages are sent every day without an inkling of it. De Quincey could not think of the stars without feeling their mystery and awe; a sailor may class them with lighthouses as helps to navigation. A quarry was a mine of wonder and scientific truth to Hugh Miller; to the quarryman it is represented by a rock and a shilling a day. Millions of years ago sunbeams may have been turned into coal; Faraday can make a fairy tale out of the flame of a candle; but we may put coal on the fire without thinking of sunbeams, and our thoughts of a candle used seldom to rise above the vexation of snuffing it. And why should coal not be coal, and a primrose a primrose? Really, I do not know. It is perfectly proper that they should be what they are; and if any one persists in seeing more in them, perhaps it is perfectly proper that he should be voted a bore. And if any one is satisfied that a hymn is a hymn, and nothing more, this paper will probably bore him, and he is requested to pass over it without delay. The *Biography of a Peal of Bells* would be as intelligible to him as the *Biography of a Hymn*. And a very pretty biography it might make. Sitting in the village churchyard, while the children play with flowers upon the sodded grass, and the slow gossips saunter past the gate, and the evening sunshine breaks in through the golden shower of the laburnums and rests peacefully on the worn head-stones, the chiming of the bells

trembles through the air like speech of living voices. What histories of human life have they not witnessed up in that grey tower among the ivy! What fears and jealousies, what greed and passion and awful sins, handed down in whispers of dark tradition, have they not rung in and out at baptism and wedding and funeral! What mysteries are sealed under these tombs, but no mysteries to them! How they have chimed for every one that is buried round, and mixed with their thoughts, and wandered with them through other lands, and come to them in dreams; dying children have heard them call to heaven; they have lingered sweetly in the ears of happy brides; lonely fathers have wept with them for the dead; they have softened the prodigal's heart in a far country; they have rung like the voice of peace through the din of battle; they have startled the wicked thought and palsied the wicked hand, and there they peal still, out of the past into the present, over the dead and over the living. It is only a peal of bells, and we have heard them a thousand times, and nobody thinks of them; but yet all this, and a great deal more is in them. It is only hymns, common hymns, that are in penny books, that everybody knows, and yet they have biographies; they have a life pierced all through, like ours, with joy and sorrow; linked on, like ours, to other lives; they have their birth and story, eventful sometimes, sometimes calm and even; biographies that are written in the surest place—in the secrets of many hearts.

Perhaps every hymn has its history; but it would be cruel to suggest to any possible reader that every hymn should have its biography. Some hymns, like some people, have biographies; the rest, like the majority of the world, occupy just so much space and that is all. Some have been mere untimely births; some have died after a year or two of struggling infancy, and been buried in the British Museum or Stationers' Hall; a vast number are simply labelled hymns, and exist in hymn-books; of a few it may be said, they have lived. Some, no doubt, live on a precarious reputation, an accident of birth, the favour of a past generation, an incident in which they played an exaggerated part. Some would not bear a rigid scrutiny into their antecedents; some have won their place by barefaced impudence and plagiarism; many turn out shallow, and commonplace, and wearisome. But even here their lives will compare advantageously with other biographies, and there is not one of them guilty of having kept a diary. Most of them are democratic; their story, their power, belong to the people. The select

aristocracy of hymns is not fertile in memoirs. They are well dressed, well printed, well bound; they lie on the prettiest tables, and are welcome in cathedral closes: but they are unimportant; the pleasantest companions, friends even, but treated as such, as a charming addition and solace to life, and no more. It is in the penny hymn-books that the sense of power is felt. Probably the hymn is essentially democratic. It must seize the common thoughts of many, translate the feeling of some religious movement, meet the deep and often but half-conscious craving of the people. If it appeals to an intellectual audience by its thoughts, or images, or play of pious fancy, it strips itself of power. And it is in the penny hymn-book that the fact of a biography of hymns has been recently recognised. Some of these books may have been noticed to be printed with a painful irregularity; large, bold type, starting abruptly out from a crowd of small verses, sometimes a word, sometimes a line or a stanza. It is disagreeable reading, but it is only a rough way of stating a genuine truth. For every line in large type there is a story by which that line has connected itself with a human heart, with its burden, or sorrow, or longing, or sudden light, or eternal peace. It is a rough, ugly way of putting it, and probably, over-hasty; but it indicates where the truest biographical interest will be found; it suggests also the difficulty of procuring biographical details. For the hymn is its secret autobiographer, and only by some casual accident is a page of that writing brought to light.

Yet even detail is not wanting. There is a memoir, now unhappily out of print, devoted to one hymn, *My Mother dear, Jerusalem!*—a hymn that has been a great favourite by Scottish fire-sides, and wandered far and wide with Scottish emigrants. Others have not been so fortunate. But let any one stand in some old German church—for Germany is pre-eminently the land of Christian hymns—and listen to the hymn that is lifted up with such strong and hearty voices, and think how the same words have been sung by perhaps ten generations; how the people have heard them from childhood; how they have been met by them in every conceivable circumstance of life and in the brightest and darkest days of Christendom; what struggles of the soul they have roused, and witnessed, and shared; in what strange and often tragic scenes they have mingled; what they have been to successive mourners, to widows and orphans, and the sick and dying, and hypocrites and plotters, to all that shifting group of worshippers,—let any one do this, and the hymn seems already to have received its memoir. A Jew passing by a church with his sister, steps in while the people are singing; he cannot resist the hymn;

his sister rouses and scolds him in vain; it goes singing on in his heart, though she calls it an abomination of the Gentiles; and in the same church he is baptized. Luther writes a hymn, and soon after a poor clothworker walks through the streets of Magdeburg singing it: the mayor lays hands on him, and throws him into prison; but the hymn has done its work, and two hundred sturdy Magdeburgers march up against the mayor and demand their singer. It must have been a heroic song, for Luther, shut up among doubts and fears at Coburg, took it for the comfort of his own heroic soul, saying to his servant, "Come, and let us sing it against the devil." And the crowd that followed Luther's body through Halle on its way to Wittenberg, strove to raise the same heroic measure through their tears. One would like to know more of this noble paraphrase of the 130th Psalm; but the only other record seems to be this, that it was the last Protestant hymn sung in Strasbourg Cathedral, now wellnigh two hundred years ago. Another hymn has had a singular fate. It was a favourite of Luther's; entitled by him *A Song of the Law and of Faith, marvellous well furnished with Holy Scripture*; and the story goes that a beggar lad from Prussia sung it one day at Luther's door. Handing him a crown of St. George, his last piece of money, with the words, "Come here, my St. George, the Lord Christ is there," he asked him to sing it again. And when it was finished he asked him where he had learned it; and he said, In Prussia, where they used to sing it in church; and Luther's eyes filled with tears of joy that God had spread his word so far. Afterwards the people sung mass and priest out of the churches with it in many parts of Germany; and now, strange change of fortune, there are villages in Austria, where it is regularly sung at the close of the Romish worship, a last, and, in the circumstances whimsical relic of the once prevalent evangelical faith. Magdeburg is memorable in the story of hymns, for it was at the cruel sacking of it by Tilly that the school-children marched across the market-place singing, and so enraged him that he bid them all be slain; and from that day, say the chroniclers, the fortune departed from him, nor did he smile again. Other hymns were more fortunate; for we read of a certain rough captain who would not bate a crown of the thirty thousand he levied off a captured town, till at last the archdeacon summoned the people together, saying, "Come, my children, we have no more either audience or grace with men; let us plead with God;" and when they had entered the church, and sung a hymn, the fine was remitted to a thousand. The same hymn played as merciful a part in another town, which was to be burned for contumacy. When mercy had been asked in vain, the clergy-

man marched out with twelve boys to the general's tent, and sang there before him, when, to their amazement, he fell upon the pastor's neck and embraced him. He had discovered in him an old student friend, and spared the place; and still the afternoon service at Pegan is commenced with the memorable hymn that saved it. Of another, it is said that a famous robber having been changed himself, sang it among his men, so that many of them were changed also. Rough hearts, indeed, seem often the most susceptible. A major in command of thirty dragoons entered a quiet vicarage, and demanded within three hours more than the vicar could give in a year. To cheer her father, one of his daughters took her guitar, and sang to it one of Gerhardt's hymns. Presently the door softly opened; the officer stood at it, and motioned her to continue; and when the hymn was sung, thanked her for the lesson, ordered out the dragoons, and rode off. And another story of the same hymn I make no apology for quoting entire. "In a village near Warsaw there lived a pious peasant of German extraction, by name Dobry. Without his fault he had fallen into arrear with his rent, and the landlord determined to evict him; and it was winter. He went to him three times in vain. It was evening, and the next day he was to be turned out with all his family, when, as they sat there in sorrow, the church bell pealed for evening prayer; and Dobry kneeled down in their midst, and they sang—

'Commit thou all thy griefs
And ways into His hands.'

And as they came to the last verse—

'When Thou wouldst all our need supply
Who, who shall stay Thy hand?'—

there was a knock at the window. It was an old friend, a raven, that Dobry's grandfather had taken out of the nest and tamed, and then set at liberty. Dobry opened the window, the raven hopped in, and in his bill there was a ring set with precious stones. Dobry thought he would sell the ring; but he thought again that he would bring it to his minister; and he, who saw at once by the crest that it belonged to King Stanislaus, took it to him, and related the story. And the king sent for Dobry, and rewarded him, so that he was no more in need; and the next year built him a new house, and gave him cattle from his own stall; and over the house-door there is an iron tablet, whereon is carved a raven with a ring in his beak, and underneath, this verse—

'Thou everywhere hast sway,
And all things serve Thy might;
Thy every act pure blessing is,
Thy path unsullied light.'

Of another hymn, we read that a countess once sang it in a public-house. For, as she was tra-

velling in Austria, she stopped at a village inn, and found the parlour full of Austrian peasants. The law forbade Christian assemblies, but it allowed any drinking assembly, so they met, and had beer-jugs on the table, but in reality came to share the Lord's Supper. And having asked permission to join them, as also a servant of Christ, she raised the hymn. Yet the singularity of this incident is surpassed. A Christian nobleman put up on his journey at a little village inn, where there was one of those wild immoral dances that still disgrace some parts of the country. Having obtained permission to look on at the dance, he went up to the musicians, and asked if he would be allowed to have any tune he wished played for his money. And being told that he would, he asked them in one of the lulls of the dance to play a hymn, and sung it with them. Some ran away, but most stayed and he prayed with them, and this was the beginning of a singular awakening in the neighbourhood.

Hymns have sometimes been curiously used in stirring times, especially about the Reformation period. More than once the Romish preachers have been compelled to abandon the pulpit by the vigorous singing of one of Luther's. They have played their part in battle. At the famous battle of Leuthen, one of Heermann's hymns was raised by a regiment before going into the fight, and one after another took it up, until all the columns were singing it as they advanced. "Shall I silence them?" the general asked, as he rode up to stern, tobacco-loving, heroic King Fritz. "No; with such soldiers God will give me the victory;" and leaping down among the ranks and crying, "Now, children, in God's name," he led them into battle. When the battle was won, the field was strewn with dead and wounded, it was night, and the soldiers were weary. Then one began to sing a hymn of thanksgiving, the bands joined in, and presently it rose from the army in a full and mighty chorus that reached and greatly moved the king, who turned round exclaiming: "What a power there is in religion!" It was at the great battle of Leipzig that Gustavus Adolphus sang, with his army, Luther's *Carmen Heroicum*, and after it that kneeling on the field he thanked God for the victory in stanza of the same hymn. The *Te Deum* won the fight at Liegnitz; it was a "poor sinner's song" of Luther's that the peasant raised before the battle of Frankenhausen; and brave Earl Oldenburg triumphed at Drakenburg by the song of Simeon.

So curiously are the lives of these hymns interwoven with fiercest human struggles and profoundest human joys, with kings and politics, and famous battles that determined the fate of kingdoms, with poor peasants and lonely and nameless households, with crimes that leave the reddest stains in history,

and softening of rugged and wild hearts. And it is pleasant to take up a hymn that has connected itself with past events, and can be traced into many a house and heart by its comfortable thoughts. Herbert's Hymn on Sunday gains a certain mournful delicacy when we know that he sung it himself upon his deathbed ; that

"Like a sweet swan, he warbles as he dies,
His Maker's praise, and his own obsequies."

Gerhardt, himself, died repeating one of his own hymns, and even with the very words,

"Him no death has power to kill."

And there is a touching legend by which as King Christian of Denmark lay sick at Christmas time, an angel came to him in a dream, and told him he would live but eight days. And on New Year's Day his chaplain preached him a farewell sermon ; but when his courtiers would not sing death-songs over him, he cried : "Then will I sing myself, and you with me, and it shall be said the King of Denmark sung himself to the grave." And he lifted up his voice, clear and strong, and they sang the Song of Simeon ; but as they sung he fell asleep in Jesus.

There is now a common hymn in German village churches that strengthened Queen Elizabeth in her last moments. Luther's *Eine feste Burg* gains something by the pretty story of Melancthon ; how as he stood in Weimar with his banished friends Jonas and Creuzieger, a little maid sung it in the street, and he cried, "Sing on, my little girl, you don't know what famous people you comfort." We read our old favourite

"God moves in a mysterious way."

with a new interest and sympathy when we remember Cowper composed it during a solitary walk in the fields, and under presentiment of an attack of his cruel malady. Even the *Te Deum* wears a grander air when we think of it as so old that its origin is lost in one of the most curious of church legends : how that on the Easter night of the year 387, when Augustine was baptized by Ambrose, the two Church fathers stood before the altar, and the Spirit came upon them, and they sang it through in alternate strophes to the congregation, and the pious Monica cried out : "I had rather have thee Augustinus and Christian, than if thou wert Augustus and emperor !" That same *Te Deum* has accompanied many a martyr to the stake in Flanders, and Bavaria, and London ; Augustinian monks and stout-hearted laymen have sung it high above the flames ; it was our English Bishop Fisher's farewell as he stood beside the block. And once it was lifted up where no lesser hymn would have been fitting ; when Columbus discovered the first grey outline of the new world, and the crew threw themselves into each other's arms, weeping for joy.

But of all the stories that hymns can tell of

themselves, there are none more quaint and touching than those of Mende and Novalis. Mende was a night-watchman in Berlin before the poetry of night-watching was banished by police regulations, while the watchman's pious chant was still heard in the streets, and chorales were blown on long horns from the church spires. Mende was a living hymn-book, whose leaves were turned over by the night winds, and to many a sick room and troubled spirit Bible verses and stray stanzas would be borne in from the silent street. He had a verse for every house, and a hymn for every sorrow, and for five-and-twenty years the cheery voice of the old man rang through the dark, bringing more comfort and peace than all the ministers from their pulpits. "A glorious profession," he used to say ; "by day I sleep or walk, but all night long I am alone with my Lord." Now, Mende, passing one evening by a worthy shoemaker's, overheard eager discussion and heated denunciations of his beloved church, and began to fear that the honest Christian soul had fallen into the hands of some wandering demagogue. So, lifting up his voice, he chanted certain well-known lines of Gerhardt on the simplicity and unity of faith, and these, falling through the still air into the little parlour, so confounded the shoemaker's guest, that he was fain to make his escape, while his host, full of joy, bade him adieu in the words of Paul, *Other foundation can no man lay than that is laid, which is Jesus Christ*. Novalis, poet and philosopher, wrote some hymns of a wonderful and gracious beauty, intelligible to all, moreover, and singularly distinct from those speculations that ranked him chief of mystic thinkers. His father, a business-like, prosaic, working man, troubled himself little about either poet or philosopher, considered rhyming, indeed, purely mischievous ; but having a theory that boys would be boys, neither interfered with Novalis, nor, it is believed, read a line he ever wrote, unless it was in the ledger. Novalis died in his bright youth, and soon after, his father attended the Moravian Church on Sunday, as his custom was. The congregation sang words that he had never heard before, so thrilling, so full of Christian passion, so mournfully sweet, that he was deeply moved, and on leaving the church, asked a neighbour how they had come by so glorious a hymn, and if he knew the author's name ? "Why," he replied, starting back, "don't you know ? It was your own son." Curiously, too, have some hymns been born, the merest accident seemingly presiding at the birth. An air floats pleasantly down from an old church tower into the pastor's study, and the pastor writes to the melody the sweetest of all even-songs. A poet is brought into such straits that he must pawn his violoncello ; with better times the violoncello is redeemed, and, as his fingers stray over it,

his eyes full of happy tears, he sings what he calls with bare truth "a comfortable hymn,—for, that God in his own time will deliver every one that trusts in Him." During the plague, a clergyman follows 740 parishioners to the grave in nine weeks; his own house remains untouched, "as if an angel stood on the threshold, and waved off the pestilence with his bare sword;" and in that solemn loneliness he writes a farewell to the world, that has been faintly uttered by innumerable dying lips as their own. The very finest hymns of the sixteenth century sprung likewise from the plague: the poet watching for weary days the ceaseless funerals that wound past his door to the village *God's Acre*; and so absorbed was he in the thoughts it suggested, that he remained in his room from morning till evening, and left it only when the hymn was finished. One is written to comfort a sick friend; a few simple words at a death-bed are the origin of another; a third grows out of a mighty sore wrestling with the devil; a fourth springs from the watchword of a famous battle; the ancient hymn, *In the midst of life we are by death surrounded*, was begun while watching some masons building a dangerous bridge. Standing on the neck of Land's End, Charles Wesley's thoughts run into the memorable stanza commencing, *Lo, on a narrow neck of land*; the quarrymen at Portland suggest two striking lines; riding from Cork to Barrow he composes "a hymn of eighty-eight lines for the conversion of Irish Roman Catholics;" and when the rough tars struck into one of his services with *Nancy Dawson*, he sung at the next service to the same air a hymn beginning—

"Listed into the cause of sin,
Why should a good be evil?
Music, alas! too long has been
Prest to obey the devil."

Curiously, moreover, these hymns are linked with their author. King Robert of France wrote what Trench calls "the loveliest of all the hymns in the whole circle of Latin sacred poetry." The wife of the great Prussian Elector wrote the well-known resurrection hymn *Jesus my Redeemer Lives*. Ziegenbalg heard it before he died, and said it was as bright before his eyes as if the sun were shining in his face. One of the best of hymn-writers was an ancient Duke of Brunswick; one of the tenderest was a ribbon manufacturer at Mülheim. Thomas of Celano wrote only two hymns beside the *Dies iræ*; Bishop Ken left three; Nicolai wrote but the two finest—in structure and majesty and devoutness of thought—in his tongue. A single hymn has conferred immortality. Wearing but this one decoration, a man goes down to posterity and outlives the most famous of his time. The *Dies iræ* has been oftener translated than any book

except the Bible. The precentor of a country church is remembered in more hearts than the poet of a nation. The biography of a hymn will often reverse and confound the judgments of Letcoss. It is not the great poet but the obscure pastor who writes these "heavenly lays." In no country which possesses a hymnology have the great poets shared in its construction. Three of our greatest poets, Spenser, Milton, and Wordsworth, are essentially religious poets. You cannot read a page of their writings without being struck by the deep, pervading, religious feeling. Yet all the service Milton rendered that way (for the magnificent "Ode on the Nativity" is scarcely a hymn) was versifying, poorly enough, a few of the Psalms, while Wordsworth wrote some agreeable stanzas, which he called "The Labourer's Noon-day Hymn." It is not by its Schiller or Goethe that the great hymns of Germany have been sung, but by monks and country pastors, schoolmasters and humble men, whose names, if they were ever known, have long since been forgotten. And if we turn to the Bible, we find indeed the highest poetry in Job and the Prophets, the men who were poets and prophets by their calling; but we do not find in their writings a single lyric. It was David the warrior and king, Mary the young virgin-mother, Simeon the aged man, who waited in the temple; it was by them that those glorious hymns were written which have been sung these thousands of years, which will yet be chanted with holy joy in every land which the sun visits, from its rising till its setting.

What curious and subtle interweaving of these divine songs with the thoughts and plans and final purposes of countless beings! What a story of infinite love under a thousand varying phases, what adventure and chequered life in that one Twenty-third Psalm, a pilgrim, as a recent writer pictures it, "commissioned of God to travel up and down the earth singing a strange melody, which, when one hears he straightway forgetteth whatever sorrow he hath." What a history, to be partially revealed at the last day, and for ever unfolding in heaven, in some solitary word of Christ, like that sweetest of lullabies sung to the weary. *Come unto Me, and I will give you rest!* And every word that catches up the echoes of these that are divine, will have its tale to tell. And every true hymn from the legendary past, or struck out of some pause in the hurry of the present, with a great name, or no name, be it "common as the commonplace," even soiled in well-thumbed penny books, is writing its own life and yours as you sing it, or read it, or recall it in some low half-murmur to the melody it went by at your mother's knee.

WILLIAM FLEMING STEVENSON.

THE LAND OF CHOICE: A PARABLE.

A GENTLEMAN of high position in a large city was drawing near to the end of his earthly life. During his illness his friends had always complained that he was not as strong as usual. When he was just about breathing his last, the physician whispered to a lady at the bed-side: "His looks do not please me." The patient himself avoided the thought of his danger up to the last moment. At last, when he felt death approaching, he confessed to himself that his illness was serious. Then the thought flashed across his soul with lurid vividness, It is death, and he was startled. For a while he struggled with his horror, and sank into the deep unconsciousness of death, imagining that he was gliding into non-existence. His friends stood by amazed and stunned, and now only they ventured to speak of his departure.

Over the fresh mound in the church-yard the winds of night were moving. The dead body lay in the grave, but above it, visible only to spirits, was a human image; it was the shade of the departed, the soul formed of the most subtle ether-essence of creation, emancipated but newly from the last ties which bound it to the body. Into the spirit of the departed, consciousness had returned, and he imagined he had passed through a profound dream. At first he thought he had only dreamt about dying, but soon he recognised great and frightful changes. "Is it possible," he said, "there is another life after all? I never believed it. But all the better, as I made the best of the first world." His thoughts were interrupted by the appearance of a spirit, in whose countenance sublime solemnity blended with sorrow and love. "Thou hast left earth, O son of Adam," he said, "and God has transplanted thee into the spiritual world; whither wouldst thou be led?" For a moment the worldling felt disconcerted, but soon, with pretended calmness, he replied, "I am most pleasantly surprised by your polite address. Formerly I heard persons threaten people of my disposition with the punishments of hell, and I am glad now that I never gave way to their vulgar and clumsy superstitions. You ask me to choose the place of my abode. If I am allowed to choose, I would remain on earth. I should like to look after my estate; to see my old friends; but it would be cruelty to them after all to torment them at their parties; besides, it would not do at all. I am too generous to inflict an unwelcome presence, and therefore lead me into the better world."

The Genius replied: "The better world is large. In the Father's house are many mansions. You

must be more definite." "Well," was the somewhat hesitating reply, "bring me into the most cheerful and joyous heaven." But to this the Spirit answered: "The most joyous and glorious heaven is above, in the eternal city of God, in the new Jerusalem, where Jesus dwells, and the perfect just praise his name." "No," said the worldling, with the expression of decided aversion, "I never liked to hear about Jesus; and as for the sentimental mystics who can find pleasure in hymn-singing, they were always my detestation. No, Spirit; it would be frightful to spend an eternity with the saints. May I suggest the abode of artists?" "There above is the highest perfection, of which all art is but a symbol: they see God with a pure heart; they are filled with his love in the glory of Christ, in fellowship with the blessed, and the contemplation of his works." "I don't mean such artists," interrupted, somewhat impatiently, the departed; "I mean men of high rank and spiritual cultivation." The Genius said: "There above is true nobility—purity. All who lived as servants of God upon earth, are princes and kings in the new world. But the godless are regarded by us as the true mob, the base sediment of humanity. Nor do we regard as spiritual the people who gained the admiration of mortals by their proud and glittering words, but all who were poor in spirit, and obtained the Spirit of God through Christ, who was anointed with the Spirit for the humble. They lived not in the flesh, did not lose themselves in mere words; they found life in the deepest fountains of life. With Jesus you will find noble and spiritual men!" "How is it you do not understand me?" again asked the Christless soul. "I want educated men; men of culture, polish." The guide looked at him calmly and said: "Educated, cultivated, polished! We mean by this, men in whom the image of God is restored, who reflect his righteousness, love, and peace; who have been educated by him, and delivered from all selfishness and impurity." "I think you just want to annoy me; but I won't enter into your mysticism. To be quite plain, I want men of honour." But the solemn voice was lifted up: "What is honour? Honour is the splendour of the Lord. Whoever has received aught of his glory; whoever, in the brightness of God's truth sees the truth, in the brightness of God's love returns his love, in the brightness of his holiness hates sin, he is a man of honour. On earth we see the rays of God's glory scattered; here they are gathered together, and God's honour rests as a crown of glory upon all who ascribe glory to him and the Redeemer. In the New Jerusalem are the

men of honour; their countenances shine as the sun; they have love, truth, and joy."

The worldling began now to give vent to his indignation: "Narrow-minded clique! Priest-ridden mystics! Hierarchical despotism! Bring me to people of my stamp!" The Spirit again addressed him: "You are excommunicating yourself from every circle of blessedness. But if you want to see narrow-minded people, look down, and follow me to your own place."

Now the dead man noticed, that they were soaring through the space between earth and the stars. His own native city appeared to him as a dwarfish village, with a few miserable huts, and it seemed almost ludicrous that he should have spent his life in the merest trifles and externalities on such a petty platform. They were now passing a golden star, and he saw sublime, transfigured beings, fair children of men, full of life and majesty; and he heard music, which reminded him of the music of the great old masters, and yet was quite different, hymns full of quiet peace and intense love. But he recoiled from it, and as if driven by an inward force of repulsion, he sank into a deeper, darker region. "Whither are we going?" he asked his mysterious companion. "I am not guiding you; you are driven as a bird by his instinct to the land of your choice."

They had now come into a place of darkness, and the good Spirit was about to return. Two misshapen spirits saluted the new arrival, and calling him by a name significant of his former sins, claimed his acquaintance. "No," cried the stranger, "I never was such a character; these are libels; is there no protection here against such calumnies?" But the Genius explained: "The righteousness of the law on earth was founded on the morality of the honest, and their morality had its foundation in the godliness of the pious, whom you despised. The sources of morality and righteousness on earth are the hearts who have received the blessings from above, and become the salt of the earth. They cannot follow you into your night. You would hate and mock them as you used to do. Do not expect quietness and order in the region of selfishness unrestrained."

"Now you speak plain," blasphemed the godless soul; "you evangelical, ethereal, white, seraphic abomination, I have come to the regions of hell, but do you mean, that these vile criminals are my equals?" "They are your equals," was the answer. "The spirit, who claimed thee, was a coarse pleasure-seeker. You were a refined pleasure-seeker. Here we lay stress on the substantive not the adjective, the substance not the form. Here are all who sought, loved, and served self, and not God."

"What is the use of arguing with you that this is not the land of my choice? What am I to do in this darkness, this miserable wilderness? What parched ground! What a wretched climate! What a place for a man accustomed to parks and drawing-rooms and beautiful ladies!" But the good Spirit interrupted his wild exclamations, and said in a tone, in which sublime indignation was blended with the saddest meekness: "All beautiful places in the Father's house are occupied by good spirits. They praise the Lord. You do not choose their company. Therefore you have come to this uttermost darkness, where there is howling and gnashing of teeth. Do you ask, Why the goddess have not a better place? As the heart is, so the man; as the man, so his abode. Is your heart like a beautiful valley, where God's planting prospers, a valley of humility basking in the sunshine of his love? Your heart is dark and restless, so is your abode without light and full of tempest. Do you not see the reason of this? On earth blessing and curse dwell together, light and darkness; God's people and the wicked are in conflict. The sun shines on the just and the unjust; the influence of light and love pervades the whole. But here is the land of separation. Heaven is the earth freed from evil. And evil is absent, because the evil ones are banished. In hell is earth delivered from the good, it is the sediment of earth; the blessings which resulted from the existence of the heavenly-minded on earth, have departed with them. Even your small earth had its Siberias; you might have inferred thence larger realms of banishment. As a man of science, you knew of planets covered with dense cloud-masses and swept by fierce hurricanes; you might have inferred that God had prisons and dungeons for the despisers of his majesty—that prisons and punishments on earth were types of higher and more fearful relations. Men punish not from cruelty, but justice; but men are not more just than the Lord. According to the sentence of the majesty of God, go to your own place!"

The good Spirit soared aloft into the region of light. But the worldly man fell into deep darkness, and was surrounded by sounds, which were now like laughter, now like moaning, now like shrieks of despair and rebellion, now like a murmur of mockery and scorn. It was like the tumult of war, the confusion of angry crowds, the wild excitement of intoxicated voluptuaries—and yet like the silence of death.

When we hear and speak of eternal life, let us first see that we understand what life is. He that believeth in Jesus hath life, and he that believeth not, is dead while he liveth.

THE TRIAL SERMON.—By M. C.

CHAPTER III.

DURING the many days of his mother's illness, Kenneth never once thought of the work that was lying undone; the work which, if not done within this week, must cost him so dear!

At last, in the quiet evening, after a long day of hopeless suffering, they heard the words spoken that have so often thrilled with joy through sinking hearts, and brought back the brightness to households whose light seemed to be extinguished for ever,—“The worst is over; she will live.” Then, as, hour after hour, Kenneth sat holding his mother's hand, scarcely daring to move lest he should waken her from the sleep that was bringing her back to life and health, he remembered, for the first time since that night when he had laid down his pen to tell her of his pleasant news, that his time of preparation was almost over. Only two days were left to him; if he were not ready then, his hopes of future success were all gone;—he could not pass his examination; he could not receive license; and in addition to the loss of the only living that for years would in all probability be offered to him, his ill-paid work of teaching must support his family for another year. Besides all this, he knew well that a stigma most difficult to get over always rested on the name of any student who, from any cause except severe illness, failed to come forward at his appointed time; that this stigma was always coupled with that name, whenever it was mentioned for preferment. In short, he felt that to lose the year, or to come forward with his preparations imperfectly and hurriedly got over, would be almost certain ruin to all his hopes; and yet he saw that from the long delay which had occurred, the anxiety which still weighed him down about his mother, the nervous and worn-out state in which he was, amounting to positive illness; with the utter confusion and absence of quietness at present in the house, his task was almost, if not entirely, beyond his power.

His anxiety, which had been so entirely put aside for the last five or six days, was, when the truth burst upon him, almost more than he could bear. He could not, even for those days, give up his teaching. He had been only too neglectful of his pupils lately. No; he must go to each one, and give each his full time. His hours for study then were very few. Poor fellow! could it be wondered at that he even grudged the hours spent in watching his mother's long, long sleep? It was true he had, as all students have, several sermons already written; but I have mentioned his morbid

dissatisfaction with all his own work, and in his rather peculiar circumstances, his sermons, he felt, ought to be much better than those ordinarily delivered. He could not deliver any of these rude juvenile productions. It was quite impossible.

Then, sitting in the darkened room, he tried to think over his subject, but it was in vain. His thoughts immediately wandered to the pale sleeping form beside him, and the very anxiety he was in distracted his attention. How long she slept! How rapidly the striking of one hour seemed followed by another! How few would soon be left to him! At last the nervous irritation became so great, that almost unconsciously he said aloud,—“She would not have wished me to stay by her if she had known my difficulty.”

His sister, Bessie, from the chair beside the fire, where she had thrown herself to try to get a little sleep to fit her for the next day's duty, roused by the words so distinctly heard in the still room, stood instantly by his side.

“Wished what, Kenneth?” she said in a startled voice.

“I did not mean to disturb you, poor Bessie; but I cannot remain here longer. You know how important my work is just now for all of us; and how much time I have lost. Do you think you could take my place without wakening her?”

“I'll try, Kenneth,” said the wearied girl; and gently she tried to unloose the clasp of her mother's hand,—who at the touch started, moved uneasily, and whispered her boy's name, “Kenneth, Kenneth;” then the hand was gently folded over Bessie's, and the quiet sleep returned.

Poor Kenneth! he felt almost sorry, as he looked at Bessie's anxious face, pale as the one she was watching so tenderly, but it could not be helped; he was doing what he felt to be best for all of them. Then thinking how much more than ever his mother would need all the comforts he could give her, he sighed, and turning away, shut himself up in his room and began his task. But how hard he found it! His head throbbing, his pulse beating feverishly, and his whole body trembling; he could not think. He felt as if his brain were wandering: he remembered that horrible feeling once before in the height of the delirium of a fever. No wonder, he had not slept or tried to sleep for more than forty-eight hours, and, never very strong, he was now really ill from long-continued want of rest and agitation of mind.

When the morning broke, his task was scarcely begun, and yet he must leave it. His round of

teaching must begin. This was the morning of the day which finished by his being kept two hours later than usual at Mr. Huntly's house. He had snatched an hour or two at noon, and shutting himself up, he had written a part of his sermon.

His hand trembled as he wrote; and very haggard and worn he looked when he came into his mother's room, before he set out for his evening's work.

It has been necessary to tell all this to account

for Kenneth's exceeding desire to be home early on this special night. But he had been disappointed; for it will be remembered that when we parted from him it was long past eleven o'clock, and he had not yet reached his own home.

Knowing all these circumstances, it will not be wondered at that the sound of music and dancing which he heard as he entered the street was not congenial to his present state of mind; we may even forgive the impatience of his manner to

his sister, who, at the first sound of his footstep outside on the pavement, had started up, and holding the door open in her hand, eagerly asked him how he had been detained so very late.

Poor Bessie, she was a good sweet-tempered girl, and her brother was very fond of her; but there were times when, from a want of tact, she ruffled him sadly.

On an occasion like this Lena would have understood far better what would be pleasant to him. Anything she did for him would have been done quickly and silently; and seeing, as she would have done by a glance, that he wished for nothing so much as quiet, she would immediately have left the room.

But Bessie, on the contrary, overwhelmed him with questions which he could not answer; pressed him to take food which he felt would have choked him; and received all his somewhat impatient answers with imperturbable good temper; only following up each with some new question. To-night, poor thing, she felt so happy at the thought of her mother's convalescence, that she was even more talkative than usual, and she seemed quite to have forgotten that Kenneth had anything to do except to talk to her.

"What has kept you so late, Kenneth?" she began. "You must be thoroughly worn out."

"I am, indeed, Bessie, and I haven't a moment's time for rest either. I must work this whole night."

"You can't do that; you must go to bed."

A smile passed over Kenneth's face—not a pleasant smile, as he impatiently repeated her words, "Must go to bed, Bessie; you don't know what you are saying. It is simply impossible for me to go to bed to-night."

"You would have been better not to have remained so late out."

"You talk, Bessie, as if I had stayed out from choice."

"Oh, I don't mean that you were doing any wrong by staying out."

The unpleasant smile passed again over Kenneth's lip, as he coldly replied, "I should rather think not."

"But you might have told them you were busy," persisted Bessie.

"Told who I was busy? It isn't my way to tell anybody much about myself."

"I could not help you, could I, Kenneth? I am not tired. If I could do anything."

Kenneth was touched by this, and by the sight of the gentle, anxious face of his sister. "No, dear, you could do nothing. Poor Bessie, you are thoroughly worn out, I'm afraid. You are not required to sit up to-night, I hope?"

"No; at least only for an hour or two."

"Well, dear, good-night; we must hope for better times. I wish I could see you looking stronger." He hoped her next words would be "good-night" too.

"I cannot go, Kenneth, till you have had some food. I do not think you have almost tasted anything to-day."

"I couldn't, Bessie; don't bring it; it would be impossible."

She looked so vexed that he added, "Unless,

dear, you could bring me a strong cup of tea; but it would be troublesome to get that just now, wouldn't it?"

"Not in the least; I'll get it instantly;" and she left the room to prepare the tea, thinking, poor thing, in her innocence, that she was preparing some nourishment for her brother.

In a few minutes she returned with it; but still she would not leave him till she had seen him, much against his will, force some more solid food down his throat. Then she had a good many little preparations to make for his comfort—coals to heap on the fire, books and papers to arrange, etc., etc., all of which she went through with considerable noise and bustle.

At last, to his great relief, mingled with regret for feeling relieved, she came up and interrupted him in the middle of a somewhat elaborate sentence to say, "Good-night."

In two minutes more he had the satisfaction of hearing the door close behind her, and her foot-steps retreating in the direction of her mother's room.

Then he was alone, and his work began in earnest. All that night he wrote. In the morning, there was scarcely strength in his fingers to grasp the pen; but the sermon lay finished on his desk before him; and Bessie found him, when she entered the room early in the morning, still sitting in the position in which she had left him; only now his head lay resting on his folded arms on the desk, and he had fallen asleep with utter exhaustion.

Without waking him, she began to employ herself in putting the room in order, gathering up the papers, and the numerous books that lay scattered about.

An accidental touch of her hand awoke him. He started up, and on first seeing her a look of alarm crossed his face. Then he called out impatiently, almost angrily, "What have you done with all my books? You have confused everything. Oh, Bessie, can't you let things alone?"

Poor Bessie! she had wanted to make the room more comfortable for him, and a fear started to her eye, partly caused by the unkind tone of her brother, and partly by a shadowy, indistinct wonder, why all her efforts to make people comfortable often only resulted in making them angry.

Kenneth saw the tear, and it went to his heart. He had not meant to be unkind; but in his sudden annoyance at not seeing his books, which he particularly wished untouched this morning, he had spoken harshly.

"Bessie," he said, "forgive me, I am afraid I often speak to you unkindly. God knows I don't mean it. But I scarcely know what I am doing just now; I feel so ill,—so worn out. Oh, if I could only get one day of quietness!"

Bessie was far too good-tempered and unselfish to keep up any remembrance of the harsh words to herself. She forgot them all as she looked on the tired face of her brother. She only whispered, "Never mind, Kenneth, what you say to me. You have enough to think of and to harass you without that;" and as she turned sadly from him, and left the room to prepare the family breakfast, her thought was not of herself but of him. "Only twenty-eight! poor Kenneth! what hard work he

must have had! How very grey his hair has become lately!"

Bessie had too much charge—too much to do for other people just now to think of herself or her own feelings. It supplied her for the time with all the tact she needed.

Kenneth's trial sermon lay, as I have said, finished on the desk before him, and it needed only a little more time to complete his preparations; but as he went out, after a pretence of taking breakfast, and a hurried visit to his mother's room, to begin his day's work by keeping his appointment with Mr. Huntly's boys, he looked even more troubled and uneasy than he had been the day before.

His manner was nervous and agitated; his eye restless and sunken, and his whole appearance gave evidence of some deep anxiety weighing on his mind. Added to this there was an expression about the mouth that was not usually there—a hardness and an obstinacy very unlike his true character. When the little boys met him in the school-room they were almost frightened by his look, and exchanged looks of alarm as they thought of their unprepared lesson. They had just turned out of bed when the servant announced that Mr. Graeme had come.

They need not have been afraid. Whatever expression was in his face, Mr. Graeme was very patient, very gentle with them during the hour that followed. "Not the least cross whatever we said," as the boys confidentially agreed afterwards. It was a sore trial of temper—that hour—to both teacher and scholars; but Kenneth's skill and patience conquered at last, and the lesson was satisfactorily finished.

Fred and George were saved a severe beating by their tutor's kindness; and they were taught another lesson this morning besides the Latin verb—a precious heart-lesson, which, let us trust, they did not soon forget. Verily, Kenneth Graeme, you will have your reward.

How slowly the hours passed this day! How irksome to Kenneth was his daily round of duty! How he longed for a little rest from the ceaseless labour! Very pale and wearied he looked as he hurried along the brightly-lighted streets at the close of his busy day; yet there was a lightness in his step now that carried him quickly on.

Occasionally a gleam of happiness stole over his troubled face; but it was only for a moment; the restless, anxious look kept always returning, and became more and more fixed there as he drew near the end of his walk.

His way lay through some of the worst streets of the city, and Kenneth was too anxious to escape from the horrid sights and sounds that met him on every side, not to walk as rapidly as possible.

But there was something else than this that quickened his steps now, and made him grudge every moment he spent on the way. Where was he going? To his own home? No; to a home even smaller and poorer than that—the home of her whom he loved beyond all the world—her whom he thought of, watched over, and prayed for, as his future wife.

How short a time had he been able to snatch from all his duties to spend with her! How

quickly it always passed! yet what rest and hope and strength her presence gave him! She would be waiting for him now,—thinking of him,—longing for his coming. No wonder that he hurried on. And yet look at his face again; he is not happy! Even the thought of her cannot banish that expression of pain.

Once only on his way he stopped. Passing by an old book-stall, where he had spent many a stray five minutes in the too often vain search for some necessary addition to his scanty library, he remembered that he owed some trifling sum of money to the old man to whom the stall belonged, and unwilling to allow even so small a debt to stand, he went up to him, saying, "Here, Jacob, I think I owe you five shillings; there it is."

"Was't five shillings, are ye sure, maister? I thoct it had been threepence mair nor that?"

"Perhaps it was," said Kenneth, anxious to get on; "there's threepence more. It is right now isn't it?"

"I dinna ken for certain; it's no right gin it wis just the five shillings, and I'm no sure but what it was just the five shillings nate."

"Well, never mind, take the threepence, I have no time to wait."

"Na, na, maister," said the cautious old Scotchman; "I'll no tak but what's my ain; but gin ye'll wait a minute, I'm thinkin' I suld hae a bit note o't." And, so saying, the old man got down slowly from his seat, and deliberately putting on a pair of spectacles, disappeared in search of the important document.

This was more than Kenneth's patience could stand, and he was turning away hastily from the stall, when his attention was arrested by the appearance of a young, fair-haired boy, in very shabby clothes, who was standing eagerly turning over the leaves of a well-worn Greek Testament. Apparently the book satisfied him, for he laid it down with a bright smile, and putting his hand into his pocket drew out a few coppers which he counted anxiously, and then held in his hand till the old man returned.

"I've got sixpence, will that do?" he called out as soon as he appeared.

"For yon book in the furrin tongue? Na, yon's no gaun for less nor a shillin'."

Poor boy, his countenance fell as he heard the hopeless price that was expected. How long it had taken him to save even the small sum he possessed! Perhaps he had had dealings at the same stall before, and knew the uselessness of any attempt to bring down the sum named; at any rate he did not try; he did not speak at all, but as he laid down the book, and turned away, Kenneth noticed him quickly brush away a tear with his threadbare jacket sleeve.

"I should feel for you, poor fellow," thought Kenneth. "I wonder what he wanted with that Testament. I'm poor enough myself, God knows, and miserable enough; but if sixpence will make that poor child rich and happy, he shall have it;" and he laid his hand kindly on the boy's shoulder, as he passed him, saying, "Here, my boy, did you want that book? take it, if you like, and pay for it with that." Then hastily he threw the sixpence on the counter and hurried off, vexed even at the momentary delay.

Kenneth Graeme, you have brightened another young heart to-day, and that when your own heart was very heavy—when your own thoughts, and your own pressing cares for yourself and those dearest to you, were almost more than you could bear. In your time of trial, when you "would do good" but "evil is present" with you—when in the struggle to do right your spirit faints and is ready to sink, then may some guiding hand be sent to help you, even as you have lent a helping hand this day.

Kenneth Graeme and Joanna Douglas had been engaged for three years. Since the hour when Kenneth first told her his love in the simple words, "Will you wait for me, Joanna, my love, my friend?" how faithfully and lovingly true these two had been to each other!

Through all the troubles and anxieties of their lives, this love had flowed on clear and bright, like a silvery moonlighted stream through a landscape of shadowy hills; separate from all else, yet interwoven with the very being of each—hidden, it might be, at times, by the dark shadows surrounding it, but never lost—always flowing on, pure, deep, and quiet, and suddenly and surely gleaming out again—gladdening, and making the whole inner life beautiful with its soft, trembling light.

Eagerly, and often hopefully, they looked together into the future, trying to picture to themselves a time when, all difficulties cleared away, they should reach the end for which each was striving, each was working, each was living; for hard as Kenneth's work and life had been, and still was, it was equalled, if not surpassed, by Joanna's. It would have been far indeed beyond her strength, had it not been the supporting power of her deep, passionate love for him—more self-sacrificing than his, because of her woman's nature—more undivided, because she had neither father, mother, nor sister to share it with him.

"What a foolish engagement! it can never come to anything," so the world would have said, had it known of this one, or thought it worth a remark; but the world knew nothing of it—nobody knew anything of it except Kenneth's mother and sisters.

Joanna had been the only child of a poor professional man. At the age of seventeen she was an orphan, with no means of living except by work, and no relation whose assistance she felt a right to claim.

Since then she had lived alone, and worked constantly, patiently, and conscientiously, without envy of others, without repining at her own lot—a pure, honourable, independent, but at times a sad enough life for any woman. It had once been so to Joanna. Now the sadness was gone; she had something to live for.

On this evening she was sitting alone in her little parlour. She had returned, as her custom was, from the school where she was employed all day, to a small lodging where she lived, in a quiet, suburban street, away from any of the fashionable thoroughfares of the city.

She preferred the short time this gave her of uninterrupted solitude and freedom, to the more comfortable but also more dependent plan of living with her employer. These evening hours were

very precious to her, brightened as they often were by thoughts of *him*, sometimes even by his presence and companionship.

A very small and shabbily furnished room it was when first she took possession of it; but she had occupied it now for several years, and it was beginning already—from her taste in arranging the few unexpensive ornaments she possessed, the little bookcase, Kenneth's gift, at a time when actual poverty had not pressed on him so hardly—her old and well-used piano—and the white muslin curtains giving an air of lightness and freshness to the whole—to wear something of the pleasant home look, in which lies all the charm of a room, and of which none, however plain, need be destitute, if a lady is the occupant.

Let us for a moment look at Joanna as she sits there. She is evidently too intently occupied just now to observe us. From her appearance her age must be about twenty-four. A slender girl of middle height, with a slight stoop—that stoop which gives an effect of langour, not of heaviness. It is scarcely observed just now, for she is bending over a well-worn, old-fashioned desk, busily engaged in writing; but in a few minutes, at the sound of a step outside, she will rise from her seat, and then it will be well seen, telling too plainly of days and nights of far harder work than the poor girl has strength for. Still there is a certain grace about the figure in spite of this defect, and in spite of the very moderate display of all such fashionable disguises as rank under the comprehensive name of crinoline. On most people the old and well-worn black silk dress she wore, with its plain, untrimmed skirt hanging in soft loose folds about her, and the little frill of lace round her throat, fastened with a small mosaic brooch (her only ornament), would have been pronounced decidedly shabby and unbecoming. On her by some magic influence, I know not what unless it was the complete harmony of every feature, every expression, and every movement, this dress seemed more becoming, more in character with the style and position of the wearer than any she could have chosen. Her head was small and well formed, and the soft fair hair sloped gracefully back from her forehead, and was twisted up and fastened behind without any ornament.

The face, like Kenneth's, would at first sight have been called rather plain, for it was colourless and thin; and the features, though far from coarse, certainly irregular—some decidedly bad. Yet it was a sweet face, with its large dreamy eyes—its thoughtful, ever-changing expression—a face, if once seen, not easily forgotten—very easily loved. Wanting as it was in all beauty of form or colour, I have seen it look strikingly beautiful. It was not difficult to perceive, from the quiet strength of will that was written in every line of it, what was the attraction that drew Kenneth Graeme, with all his more brilliant talent, so closely to this young girl. She has always rather an anxious expression, but at this moment she looks even more than usually careworn. Kenneth's difficulties and troubles are lying heavily on her mind. She is exhausted, too, by her work. Since she came in at seven o'clock she has had no rest. Her evening hours are too precious to lose; she

is too eager about what she is at present occupied with to let them pass unemployed. It is nearly nine o'clock now, and for the last two hours she has been writing on rapidly, without stoppage or interruption. She has been engaged for months at this tale. It is now nearly finished; but it is almost her first attempt—she is as yet unknown as a writer—it is the production of the few hours only that she could spare from her regular hard day's work—she feels painfully how ignorant she is of much that would have made her task more easy—and, as it draws to a close, the high hopes with which she began it are fast dying away. She feels that there is scarcely a chance of its success.

And yet at times the thought would come—Perhaps she might succeed;—some one might like the tale;—she had put out all her strength, and much wearing thought on its creation;—every feeling it expressed she knew was real. If she did, what a reward for all the labour would be the joy of telling him!

Wearily the little white hand moved over the paper. Her cheek had become pale and thin, and the soft dreamy eyes sunken and dim with the excitement of the long-continued mental strain; but still she wrote on, unconscious of all the toil,—unconscious of everything, except the absorbing interest that carries her on in her work, and an occasional thrill of wondering joy and gratitude that even the slightest touch of such a power had been given to her. Very, very slight indeed she felt it to be, as compared with the gifts of others.

How valueless in itself, yet how precious to her, was that pile of manuscript! What would Kenneth think of it? By means of the little talent, was it not possible that she might make something that would help him—that would bring the time nearer, when, the lonely working over, they might begin at last to work together?

As she looked at it, a flush of innocent triumph brightened for a moment the anxious face, her pen was laid down, and resting her head on her hand, she gave herself up for a minute to the thought of that time and the quiet happy life that would lie before them.

Then she began to wonder whether he would come that night. He had half promised, but this was his last night for preparation, and she feared he could not have time. She knew how sorely pressed and agitated he had been during the past week, and how much more than ordinarily anxious he was about the next day. He had looked ill the last time she saw him. Then as he did not come, as it became too late to expect him, she grew uneasy about him. She remembered that he had promised to come and read his sermon to her, and he had not appeared. Could it be that he was not ready—that he was still struggling on at his work—surrounded by confusion and noise in the house, and that inward vexing confusion of mind that made thought an impossibility?

So Joanna was sitting in her room, her head shaded by the position of the lamp, bent down, listening for some signal of his coming, when Kenneth Graeme reached the end of his walk, and, with a rapid glance up at the little window that he knew was hers, passed from the street into the long dark close.

In a minute more she has heard the step on the outside, and the anxious expression is gone. She never mistakes that quick, nervous tread; and as she started up to meet him, a gleam of joy lighted up the quiet colourless face. She looked almost beautiful then, standing waiting for him, with that soft light in her eyes. Kenneth thought so at least, as, when they met, he bent for a moment over the slight drooping figure, and, as he felt his love and his relation to the lonely girl gave him right, once gravely and tenderly kissed her.

She glanced up anxiously at his troubled face, saying eagerly, "Kenneth, have you finished it? Is everything ready?"

"Yes, I am quite ready, love. But I was up very late last night," he added quickly. "Don't wonder that I look a little worn out; it's only my last week's anxiety."

He wished to get this said at once; he could not bear that Joanna should question him about the trouble he feared was in his face.

She saw at once that he wished no remark to be made upon it, and, trying to look cheerful, said, "Have you brought it? You said you would."

"Yes. I thought, perhaps, Joanna, you would like to hear it."

"I should, very much. Is that it? Give it me for a moment in my hand."

He slightly hesitated, then gave it to her. She took it from him, holding it lovingly and proudly. How secure she felt that she should admire it. How she longed to hear him read it!

He watched her for a minute, smiling somewhat sadly at her trusting innocent admiration; then he held out his hand to take it from her; but not observing the movement, she continued turning over the leaves of the little manuscript.

"Surely, Kenneth," she said, suddenly, "you have been dreadfully worn out when you wrote it. How your hand has shaken. Even I could scarcely read it. I cannot bear it, dearest. You are hurting yourself with this extreme anxiety. It is not necessary. How I wish it was over!"

Kenneth's face flushed deeply as he said, in an impatient tone, "Not more than I do, Joanna; but give me the sermon if you want to hear it read. I do not see really that the writing is more indistinct than usual."

Joanna looked up, surprised at the tone of his voice; and without speaking, at once handed the manuscript to him. He had never spoken to her in that tone, but she put aside the momentary vexation it had caused her, by the thought of how much he had to irritate and annoy him. It was no wonder that he spoke impatiently; and quietly pushing aside her desk, she drew the lamp close to Kenneth's side, and taking a little piece of work in her hand, she seated herself opposite to him and listened.

It was truly a striking sermon—high and pure in conception, and beautiful in language. Very soon the neglected work fell from Joanna's hand, as, bending eagerly forward, she gazed with an earnest, loving, wondering delight into the face of the reader.

And how well Kenneth read it. How deeply he seemed himself to feel; how clearly and fully to impart the meaning and importance of what he

said. How brightly the fire of intellect flashed from his eyes. Joanna had never seen him look like this before. How the dark rough face lighted up with expression, showing the deep feelings that were being stirred in him. Rapidly its changes came and went, now flushing to crimson and next moment fading to a deadly paleness, till, as the reading drew near the close, she was almost frightened by the intense depth of feeling it revealed.

CHAPTER IV.

At last the end came—the concluding sentence was read; with a hand trembling from excitement, Kenneth folded his manuscript, and, throwing himself back exhausted on his chair, silently, almost breathlessly, waited for Joanna to speak.

The contrast was strong between these two at that moment. She, with her quiet fair face flushed with happiness and pride, looking up reverentially and lovingly into his. How very pale and weary it was!

For a minute or two after he had finished she sat still, leaning forward on the table, her hands folded loosely together, speechless with delighted surprise, entranced with the powerful eloquence of his words; then, as if speaking half to herself, she said in a low tremulous voice, "It's very fine—very beautiful."

"You like it then, do you, Annie?" he said, wearily.

"Kenneth, you need not ask me that. There's only one thing I do not like about it. What work it must have cost you! It is far too good. No wonder that you are feeling ill. Writing a few more such sermons under the difficulties you had last week would kill you."

"You are right in that, Joanna," he answered bitterly. "It has cost me hard work."

Without noticing the change in his tone, she went on cheerfully, "It won't be necessary though to preach such sermons always; something simpler and plainer would even be better understood by the country people. But, oh, I am so glad that one will be fully understood and appreciated, I can scarcely grudge your labour."

His look of trouble and annoyance increased as he said, coldly, "I see you are determined to believe that I am unable to write another sermon as good. I did not expect you would have shown so much surprise at this one being passably well written."

Joanna started. "Kenneth," she said, gently, "you don't mean that?"

Poor girl, she was very much hurt by the unkind words. This was the second time to-night she had unconsciously vexed him. For him to speak harshly to her! She could not understand it; it was so unlike Kenneth.

As she glanced up again timidly to the face that till now had never looked on her but with tenderness and love, that in every sorrow had always brightened at her presence, she was struck at once by the extreme suffering written in every feature. It was not, she felt sure, either overwork or anxiety which had so altered its expression, so deeply lined the forehead, and given such a sunken yet restless look to the eyes. No, it could not be. She was convinced that some po-

sitive heavy trouble lay on his mind at this very moment; something he was concealing from her. She could be deceived no longer; the truth was forced on her mind more strongly the longer she looked at him. Suddenly starting up, forgetful of his harsh words to herself, remembering nothing but that *he* was suffering, desiring nothing but to help him, to lift at least a part of its weight from him to herself, she said earnestly, "Kenneth, what is it you are concealing from me? There is something. Tell me, dearest; surely I have a right to know. Oh, let there be no secret between us two."

Kenneth's brow darkened; but his voice was still cold and constrained, as he answered, "I do not understand you, Joanna? Why do you suppose I have anything to conceal from you? You seem bent to-night on saying things to irritate me. Everybody has little trifling annoyances that one never thinks of mentioning. If there were anything you could help me with, or that would do you any good to know, I would tell you at once; but there is nothing."

Poor Joanna! what was it that, while he spoke, made the slight colour fade from her cheek, and filled her eyes with such bitter tears? What was the dim shadow that she saw slowly rising up between them, separating them from each other's love, holding them back from their old heart companionship? What was the thought that was gathering like a cloud, hiding from her the sunshine of all her life? Was it that he was now so immeasurably above her, that he could not even stoop to teach her! Was the difference between them so great, that for her even to understand him was impossible? She knew how far he was her superior in intellect; but could his love for her indeed be growing cold—was it changing to mere protecting friendship and pity for her loneliness?

Poor lonely girl! There is a shadow coming between you, but this is not its form.

As Kenneth finished speaking he rose to go away, adding, "I had no idea how late it was. Good-night, Joanna."

Impatiently pushing the lamp aside, its light happened for a moment to fall full on Joanna's face; and as he caught its sorrowful expression, noticed how dark the circles under her eyes had become, and thought of how lonely, how separated she was from all love but his, and how little he had showed her of it just now, his voice changed, and, holding her hand tenderly in his, he said, "Annie, dearest, try not to think of what I have said to-night. Surely I cannot be quite myself, when I vex you; but I am sorely troubled, Joanna. You are right that between us there should be no secrets; there will, I trust, be no other, but this must remain with me."

"Could I do nothing to help you? Oh, Kenneth, I think if I knew it I could do something to make the trouble lighter, if trouble it be."

His answer came very tenderly, but still very firmly, "Joanna, no one could help me."

He took her hand again before he left her. As she looked up before they parted, their eyes met, and his fell before the earnest, truthful gaze of the woman he loved.

For a moment he hesitated. Must it be henceforward always so? Will he never again be able to meet without shrinking that pure, innocent face—to look fearlessly into the depths of those candid eyes?

Yes; so it must be now, for he has gone too far and risked too much to turn back.

But is there no possible way? Might he not tell her his secret, and still not turn back? He could—or in his present wild dream he thought he could—act a lie before all the world; he had made up his mind to that; but to her?

There is no safeguard for a man so strong as the love of a pure and true woman. Kenneth Graeme found it so this day; prepared to deceive all others, his whole nature recoiled from the thought of deceiving this young, simple girl.

Her hand was still clasped in his. He made her promise that his secret should be between them two for ever; then he told her.

It is over—the words are spoken—the confession made, and again Kenneth and Joanna stand facing one another.

He has told her of his temptation that night; of his struggle to resist it, of his utter failure; of the determination then formed to carry out his sinful plan—to rest his worldly success on a lie; to claim the honour and reputation which he had not toiled for—had not fairly gained, and to purchase worldly goods and worldly position by the sacrifice of honour, conscience, and all inward purity and truth. The sermon he had read, and which Joanna had listened to with such delight, was in all its thought and labour the work of another. Nothing but the words in which he gave it was his own. Could there be a meaner robbery, or a darker deceit than this?

All this story Joanna heard from the lips of the man whom already she had promised to love, obey, and honour, and whom, till now, she had most fully honoured—almost worshipped in her love; and bravely she bore it. Though it felt like a heavy weight, crushing and bruising her, he needed not to fear that she would shrink from him. No; far, far above the sorrow, and the shame, and the bitter disappointment, rose the strong, all-enduring woman's love. That was still unchanged. He had erred, most grievously erred, but it was over. To her he was the same, even nobler than before, for he had wandered to the very mouth of the dark cavern of sin; but there he had stopped. From entering in and following its deceitful windings he had recoiled. Else, surely he would not have told her.

So to Kenneth there was no change in her voice or manner when she first looked up and spoke. Only she was very pale, and her hand shook nervously. Perhaps there was a slight degree more of firmness than usual in the tone in which she said the simple words,—“Kenneth, it must be destroyed at once.”

Kenneth let go her hand quickly. “Joanna, what do you mean? What must be destroyed?”

Her voice trembled now. “Kenneth, don't let me have to ask you to do this. Oh, Kenneth, of yourself, of your own will, do it now.”

He was first startled, then touched by her beseeching earnestness, but only for a moment.

“Joanna, I will not destroy it—no, not even for you. You do not know what you are asking. Besides, it would make no difference. I know the sermon by heart. I can make use of it without any manuscript, and I will.” And as he said the words, his face was very hard and stern.

Bravely had Joanna borne all that had gone before—all her disappointed hopes—the thought of Kenneth's failure—of another year at least of weary waiting—of the small chance he now had of success in his profession, and, worse than all, of the weakness that had led him on so far in sin;—but for these last words she was not prepared. They sank like a cold dead weight on her heart, foretelling a struggle and a sorrow of which she had not dreamed. But once again she tried. Whatever might be his anger, she felt that she could not give up yet.

“Not for my sake, but for the sake of right! Oh, Kenneth, you will do it?”

“It is impossible; the consequences would be utter ruin. Besides,” he added, in a gentler tone, “you are looking on it too seriously, Annie, love; it is a common thing. I have only borrowed a few ideas, being myself pressed for time. I know I could do good were I in this position,—good far beyond any little ill which, were it not from being over-scrupulous, we would not have thought of at all. Now, Annie, don't fret about it any more.”

How unlike this was to the words she had been used to hear from him!

“I cannot understand you, Kenneth. It is not a light thing. Sin is sin, and deception is deception. However you disguise it, to preach that sermon will be preaching, acting a lie.”

“A lie!” he repeated angrily.

“Yes. And the man I love—my Kenneth, could not, will not do that. Oh, it would be horrible! I entreat you—give me the sermon, and promise not to use it.”

His face had darkened as she spoke. Impatiently he turned back and moved to the door. “Joanna, I wish this matter not spoken of again. You will agree with me, when you have thought of it longer, that I am right in adhering to my plan.”

His hand was on the lock; her last chance of saving him was gone. Before he entered that room again, the act would be beyond recall. Has she strength for what must come now? It would be easier, oh, much easier, to give up life itself, than what she gave up by her next words.

“Then, Kenneth, you are not my Kenneth; and we cannot see each other any more.”

Kenneth heard the words, but, in his anger and his feverish confusion of mind, their full import was not understood. He was startled by them for a moment, but it was rather the tone than the words themselves that arrested him, that made him turn at once and go back to his place by her side. It was not till he had caught hold of her hand again—how cold it was, the little hand he had so often pressed lovingly in his,—not till he had looked at the quiet face, as full of love as of despair, that the whole truth broke on his mind. Then he seemed to hear the words echoed again and again in his ear, “We cannot see each other any more,”—these words, and nothing beside.

* He could have borne Joanna's anger, her upbraiding, even her scorn of his meanness; but this, to be parted from her for ever, this he could not bear. His hand was on the manuscript; he took a step towards the fire; his love was about to conquer after all; but, alas! the demon whisper came again. She cannot be in earnest. It is ruin for yourself and for all that are dear to you if you fail to-morrow. She cannot love you as you love her, if her love does not stand this trial.

"Joanna, let there be no trifling between us. Once for all, Did you mean those words you said just now? You wish me to leave you. Will your love not stand this slight sacrifice of feeling?"

Sadly and wearily she looked up at his face.

"Kenneth, I cannot change my mind. You may not consider that a sin. I do. If you will not give it up, we must part—nay, we are parted—for ever."

The answer roused all the anger of his nature. He only heard the words. He did not see the passionate love that was breaking her heart as she said them. He exclaimed, bitterly, "Then, Joanna, you cannot love me as I have loved you. It was for your sake I did it. You are not worthy of my love. We had better part indeed." And, roughly letting her hand drop, he hurried from the little room down the long stone stair, through the dark passage, and out into the cold, black, stormy night.

Joanna was alone. She heard the door close; she heard the last faint echo of the retreating footsteps, and then she knew that the love, the hope, the joy of all her life was gone from her; gone, never to return.

How cold, how dark, how dreary the little room felt! She looked dreamily round it. There was the chair where he had sat when he had read it. What? Surely he read something when he sat there. Yes, she remembers it now; and as she remembers, a quiver passes through her frame.

There, in that corner, is the little worn desk, with the written pages of her work beside it. She need work at it no longer. Of what use is it now? There is nobody to care for it or for her. It was done all for him, and he is gone. She will lock it away with that heap of treasured letters. Some day, when years have passed, she will look at it. Perhaps it will remind her that she once was happy.

Hush! What a storm outside! The wind is driving and beating against the window. How it rattles over the roofs of the houses, and sends stones, and chimneys, and railings crashing on the pavement!

It is quieter now; but still the rain falls heavily and pitilessly. She cannot help listening to it.

"Are there many out in this wild night? Where is he? O God, protect him; bring him safe through this and every storm."

"Oh, was it necessary to do this; by my own deed to thrust from me my one love, my only friend, and he so loving, so true, so good; in all but this very good—so far above me."

Were he here again, would she be able to repeat the words? Not by her own strength, for it is all gone. Nothing remains now but the love and the misery. Perhaps if you came back now,

Kenneth, you would conquer. Bodily pain and weariness have mastered the strong will that would have hidden her grief; and now, with her head sunk on the table before her, the poor lonely girl is weeping bitter, hopeless tears; weeping, as if she would "weep her whole heart away."

So all through the night Joanna sat, motionless, except for a shiver that passed over her at times, and a start of nervous pain, as the striking of each hour fell sharply on her ear. Every stroke she counted; longing for the morning to come; something to break the horrid stillness; work—anything, would be better than this dull, lonely, heavy misery.

Seven o'clock struck sharply; at eight she must be in her place in her employer's school-room. No allowance was made there for grief and sleepless nights.

Slowly and wearily she rose. As she looked at her face, she was startled by the change that night had made. How wan and aged it had become!

Her hands trembled, as mechanically she fastened the little mosaic brooch in the place where she had so long worn it; it was Kenneth's first gift three years ago. She cannot part with it yet. Just this one day she will wear it; then she must put it away where she can never see it again. She tied on the white straw bonnet with its scanty black trimming, and wrapping the old checked plaid round her, she went down to begin her daily work; the work that must now continue for ever.

She had walked nearly the whole length of the street, when she became aware that some one was coming at a distance behind her. Another footstep besides her own echoed along the pavement. She listened, for the sound seemed to dissipate the oppressive loneliness that surrounded her.

Whoever it is, he is walking rapidly—will pass her soon—he—for it is the quick regular step of a man. All this she notices unconsciously, as one lying in a fever takes note of passing sights and sounds.

But suddenly she stops. Why? What is it that makes her heart beat so wildly; that almost takes away her breath as she listens? The sound has come very near her now. Surely she knows that step. Ay, she has listened and waited, and longed for its approach too often, to mistake it now. It is Kenneth Graeme's step she hears, his strong arm that in another moment is tenderly supporting her, and there is but one voice that could utter the whispered words that now fall on her ear, "Joanna, I have burnt the sermon. Oh, Annie, my love, my darling, can you give me back your love?"

In the gleam that passed over her worn face, he read the answer, "Kenneth, it has never been taken from you; no, not for a moment."

Kenneth's entrance into the ministry was hardly won, and long delayed, but it came at last. What better preparation for it could he have had than that one night's struggle with temptation—a struggle that made him very tender afterwards with many an erring human soul.

At last, Kenneth Graeme and Joanna Douglas began their work together; they are working still. They have worked long and well. Now they wait together for the time of rest.

OUT AMONG THE WILD-FLOWERS.

BY A POLICE CONSTABLE.

Ye flowers, that are our silent monitors
At every turn along the changing vale,
From spring-time till the waning of the year ;
Ye sweetly tinted pictures that illumine
The pleasant chapters of the varied book

Wherein the story of man's life is told ;
Ye comely playmates of love's tenderlings
When beauty leads them to the smiling fields
Where mirth grows great of heart : ye miniatures
That bring the absent home, and in their sight

Tone down the tribulations of to-day
By speaking of the yesterday of youth,
When all life's glories in the future shone,
And love ne'er looked behind ; ye emblems meek
Of all that's good and glorious in man,

The innocence of infancy, the bloom
And bravery of youth, the graciousness
Of man made just, and resolute, and wise
By light divine, the soul's full eloquence :
Oh ! look me in the face, like pleading friends,

That I may read sweet poetry once more,
And dream my sorrows down, while summer draws
My soul towards God in weeping gratitude!

Ye were of Eden in the prime of days,
When innocence and beauty owned the world;
When Adam walked with angels, and sweet Eve
Hushed her glad soul to make love's meaning out.
Through that calm wooing-time in clusters bright,
Ye graced each spot where woman pressed her foot
Upon the grateful earth, as if ye felt
The touch of heaven, and grew quick with soul.
Since then, all through the rolling centuries,
On rugged heaths, on plots of common land,
Far up bleak mountain-paths, and down the lanes
That lead to mill and market, church and school,
Ye come and go, like darlings in our dreams,
Telling us of the grace and bravery
Our parents owned before the tempter came.
How like a child I've yearned to be with you
Out in the wilds where smiling Nature pleads
With more than mother's fervid earnestness,
For me to come and feast with her a while,
To try my power of soul in song and prayer,
And gain a foretaste of far braver life
Than washing earth for gold. She is so good,
So sweetly gracious to the toiling poor,
That in her presence they forgive the rich
And covet wealth no more: they make resolve
That labour shall be honoured in the land,
Nor yet resign his tools; that poverty
Shall learn to frown defiance in the face
Of whining indolence, and exercise
His strength of arm and manliness of mind,
In such wise that all people shall applaud
His growth of dignity. Now, through my tears,
The blessed rain-drops after sorrow's frost,
I'll read those lessons childhood loved so well
And learned so quickly in the merry days
When thoughts were sportive as the squirrels were,
When brown abundance weighed the branches down.

Ye darlings, how my life is changed since then!
What bitter sufferings have come to pass
Through rebel waywardness; and how the weeds
Of sin and sloth have stifled my few flowers!
No more dear mother leads me by the hand
To sunny spots where bees make wealth amain;
No more she sings to me where laughing brooks
Shine bright as virtue's pathway through the world:
She never calls me home at twilight now,
To hold me in the soul-warmth of her love,
And wrap me in her beautiful belief,
And lift me heavenwards, the while her soul
Pleads hopefully, "Oh, Father! make the lad
In goodness resolute, in meekness great."
I feel her fingers 'mongst my hair no more;
Nor hear her chide my disobedience;
She's gone to rest, and I am grown a man:
But, Heaven help me! I forget the prayers
She taught me kneeling on our cottage hearth.

No more my sisters, coming home from school,
Try races with me up the winding lanes,
That are more beautiful to memory
Than any gardens that I gaze on now:
Their loving-kindness never reaches me;
I cannot catch the burden of their songs.
I never see them when the sun breaks out,
Nor feel them near me when the world goes hard.

In sudden flashes, as loud-laughing Mirth
Plays off the summer sunbeams from his toy
In manhood's wrinkled face, ye flowers reflect
Love's blooming May-time to my memory.
Ye still restore the maiden whom my pride
Crowned queen of beauty in those quiet haunts
That seemed the suburbs of life's capital.
What sweet replies her blushes made to me
The while in playful mood she plucked the flowers
That graced the banks where we made dalliance;
And when I gained her lips, partly by stealth,
Partly by force, that half enraged both hearts,
How pettishly she frayed the flowers to waste,
Making her lap, the while she chided me,

With ruined beauty eloquent as life;
How charmingly her colour went and came,
And what a power of sweetness wrapped her round;
She felt the precious secret was revealed:
And then the love-bird in her bosom raged,
And for a while her soul seemed looking out
To learn my true intent, and so she wept
Delighted with my earnestness of heart.
From then till now, and ever while in life
Her worth and beauty fill the world with flowers.

Now after all the converse of kind looks,
And noble thoughts, and generous desires
That I have held with Beauty, till her soul
Gave silent things the voice of harmony,
And made life leap, for pride, to glorious heights,
Wherefore must I go grieving through the land
For lack of power to make my feelings known?
Ye answer not, but flutter in the breeze,
As lovely fancies charm the damsel's mind
Whose bridal day draws nigh. Ye try by stealth
To pilfer kisses from each other's lips,
And then you hide your faces in the grass,
As petted children in their playfulness,
'Gainst mother's bosom hide their chubby cheeks;
Anon, you seem to hearken for low sounds,
As if some unseen spirit, hovering near,
Were blessing you with promises of showers;
Then, as you turn your faces to the sun,
I see my comely daughter's eyes once more,
She smiles—my heart runs over—how it rains!
My darling, lead me home ere night comes on!

Sweet preachers to the poor and meek of heart,
We owe you deeper thanks, and sweeter songs
Than all the love of genius can frame.
Nought but the earnest purpose of kind hearts,
That in lone places plant forget-me-nots,
Can understand your gentle services:
We bind you on our merry playmates' brows;
Enclose you in our letters to dear friends,
To modulate the harshness of our mood,
And give a tinge of nature to the theme:
We call you for the bosoms of the Fair
Who hold us captive with their worthiness:
Our sisters shower you on the hero's path,
And weave you into bridal coronals
When bells a-ringing make the vale rejoice:
We bring you from green fields in summer's prime
To place you in the coffins of our dead:
Affection plants you on the narrow mound
'Neath which her treasures lie, and never more
Can aught of earth heraching heart restrain
From tending you in tears, to her you preach
Of immortality—the prime belief of man.

Darlings, I weary for you when the war
Of dark-browed winter desolates the land
And cheapens labour's strength, when poverty,
Feeble and thinly clad, crawls on his way
Dreaming of bygone feasts, when widowed age,
Empty of heart, leans o'er her evening fire
Reading fantastic features, laughing grim,
Among the embers glowing in her grate,
Or watching anxiously the fitful freaks
Of stranger-sign that flutters 'twixt the bars,
And wondering who shall come, so few there are,
Except frail neighbour-folk, to lift the latch
And creak the hinges of her rain-branched door:
Still, while the soot-flake silently denotes
An early visit from some absent friend,
The poor frail solitary toils and trails
Through dismal scenes of bitter penury
Wherein the constant strife for daily bread
Stifes in human hearts all hopes save one,
The best and latest-born. Now through the gloom
Of want and suffering, the widow sees
Faith's shining Pharos at the harbour mouth,
And, as she nears the haven of repose,
The strength of resignation bears her on
Triumphant o'er the hardships late bewailed;
As children's glances reach their father's face,
Anticipate his goodness, smile expressed,
Accept his promises, and trust his love,

So does the widow's soul approach her God,
And gain a foretaste of the life to come.
Soon as these thoughts o'er weeping grief prevail,
The mirth and greenery of length'ning days
Burst out all beautiful; the brooks get loose,
And scour adown the vale with lusty din
That makes dead things rejoice; bright sunbeams flash
Through grey clouds dancing to the roaring glee
That March makes in the woodlands; then I learn
That Love does Frailty service, as of yore,
Along the byways of this troubled world;
While Patience, with calm looks and purpose clear,
Fosters those buds that spite the howling winds,
The swirling snow-drift, and the withering frost,
Smile where the rays of time-defying Faith
On green slopes fall aslant. Ye cheerful friends,
Let me delighted nurse the flattering thoughts,
Which tell me that the darlings of my heart,
Whom I have laboured for with all my strength,
And fondled till my gladness wept like woe,
Will plant you all around my resting-place
When my day's work is done. Let me hold fast
The sweet assurance that my sufferings
Are good for growth of soul, and give me strength
To labour like a brother for the weak
Of them who lift the tools when I lie down;
So shall their kindness keep my name alive,
Commend my work, and speak of me with pride,
As one who planted flowers in his days.

While human progress marks revolving years,
Continue yet your peaceful influence;
Bid men and maidens love the beautiful,
And emulate each other in those walks
Where loving thoughts flash out in noble deeds;
Uplift your loveliness, serenely sweet,
Above the undergrowth of trailing weeds
That thrives on land neglected.

Farewell! my darlings, night is setting in,
The vespers of the woodland birds are hushed,
The bats are sporting round the abbey walls,
And owlets hoot where lately stockdoves cooed:
Now homely Comfort trims her cottage hearth,
Prepares the evening feast, and trains her thoughts
To welcome Labour coming home to rest.
Farewell! awhile, I'll wander down the vale,
To where my true love waits solicitous,
Straining her heart until it aches again,
Contriving pleasures never found from home.
I'll tell her how you brought life's by-gones back,

How bright the waters were, how fresh the fields,
And what a glow of heaven lit the land.
In song and laughter, lusty as of yore,
I'll fling my gladness out, till those I love
Shall stare in mute surprise, as if sweet home
Were brightened by our tenderlings returned,
To tell us of the beautiful domains
Wherein they serve an ever-gracious Lord,
Who gives them leave to visit us in love,
And speak to our vexed spirits of repose.
When wearied beauty falls away to sleep,
I'll make mute record of the faded day,
Its labours and delights; and while I mourn
My having left undone much needful work
The Master bade me do; I'll praise his name,
And thank Him for the sorrows I have known,
Not less than for the joys, which took me forth
To journey in the wilderness where man
Fights for the better life, and works to win
The might of soul which ever magnifies
Our Father's goodness and our Brother's grace.
I'll pray that I may gain in his good time,
A longer and far brighter holiday
In fairer lands than these, 'mongst sweeter flowers.
Where those loved darlings of my manhood's morn,
Who faded as the early blossoms fade
In weeping April's lap, shall welcome me;
That these, for whom I am grown clamorous,
As if God stood far off and saw us not,
Shall follow me when their day's work is done.
There we shall hear the poor made perfect, praise
The mighty wisdom that conceived all good;
The wondrous justice that like vengeance smote;
The yearning mercy that subdued to save,
The love divine that suffered to redeem!
There we shall share the sweet society
Of patriarchs, and prophets, and wise kings
Who laboured to regenerate their race,
And let the promised Christ into men's souls.
There we shall hear the loved of later days,
The saints, and martyrs, patriots, and bards,
And women who went nobly through the world,
Sing loud hosannas to the Prince of peace,
Who could forego those realms of perfect life,
To bear the cross and wear the crown of thorns,
And yield to die a malefactor's death
Between two thieves on bloody Calvary;
And yet, with love too vast for human ken,
Bless them who mocked his awful agony!

W. S. F.

REMINISCENCES OF A VISIT TO BARBARY.

BY A PHYSICIAN.

FROM Gibraltar, a fair wind, in a few hours,
carries one from the civilisation and comforts of
"the Rock," into the barbarism and dirt of a true
Moorish city. The transition is perhaps in no part
of the world so rapid or so marked. A forenoon
may suffice to enable you to visit the two extremes
of civilisation: the highest, as seen in the rocky
English camp on the northern side of the Straits;
and the lowest in the cities and desolate fastnesses
of the wild and lawless sons of the desert on the
southern. Hence it is that few tours are more
relished by an Englishman.

On a splendid morning at day-break, just as the
sun began to display that glorious effulgence of
light and beauty which he only unfolds to the so-
journers in a southern clime, I started from Gib-
raltar in a large war steamer, along with one or two
companions, on an expedition to the Barbary coast.

Crossing the Straits obliquely amidst a multitude
of boats of every description,—from the pictur-

esque lateen to the unpoetical dodger, we entered
the Bay of Tangiers, and anchored abreast of the
landing-place. The square-built, flat-roofed houses,
white-washed to the highest polish, gives one an
idea of great cleanliness,—an impression soon to be
effaced, for

"Hut and palace show like filthily,
Their dingy denizens are reared in dirt."

This deceptive appearance, however, with the
gay and many-coloured consular flags flying at all
points, conveys to one a pleasing impression on
looking at the town from the water. We lost no
time in disembarking.

Once ashore, the first thing to be done was to
pass the ordeal of the custom-house, which was as
mild an imitation of that bugbear of travellers as I
ever had the honour to encounter. The building
had little of that magnificence of architecture which
we are in the habit of seeing so lavishly bestowed
on such structures. It consisted of a wooden shed

thrown up against the town wall, open on two sides, and having, as its only ornament, a venerable Moor, resplendent in turban and hayke of the purest white. He was squatted on a mat at the far end, smoking, with the apathetic countenance of the true oriental, a long pipe, whose immense bowl slowly emitted a white wreath of smoke at a distance of some yards from his person. Before this functionary we were marshalled with our baggage; but, to our surprise, no less than satisfaction, when we gave our keys—the flourish premonitory to a general opening—he graciously waved his hand in token of satisfaction, and permitted us to proceed. Several of the passengers, I suppose in return for the anticipated enjoyment of a few smuggled cigars, went up and saluted him. I was much struck then, as frequently afterwards, with the extreme dignity of deportment manifested by the higher class Moors. Their whole manner and appearance, with their mode of dress, bespeak self-respect, and seem to point to the remembrance of better days. We were next conducted through the gate into the town, passing the walls, on which a few old brass guns were mounted, many of them without carriages, and several touch-hole downwards, but made to show their mouths through the embrasures.

The only hotel in the town available, is a nice clean place—a perfect oasis of purity amidst a desert of dirt—kept by two old Scotch women, whose circumstances at one time, I understood, had been much better. Here we were all comfortably accommodated; and after undergoing the ordeal of examination as to who and what we were—for the discovery of which the worthy hostesses have a peculiar talent, carrying on their researches with a degree of scientific acumen worthy of greater results—we sallied out to inspect the town. Town, I suppose, it must be called, though it presented but few features by which even an analogy to what we are in the habit of terming a town could be established. Streets there were, no doubt; but such streets! Three persons abreast, in most cases, rendered them impassable to a fourth. They possessed almost no paving, unless a succession, at uncertain intervals, of large round stones—whose arrangements seemed to have been intrusted to such movements of ice and water as are supposed to have paved the Highland glens with boulders—could be called such. The houses were so low, that a walking-stick might be made to touch their summits. These dwellings have flat cement roofs, and doors in most cases not over four feet and a half high, out of which, on every side, to your astonishment, the most immense men, by some curiously complicated and but ill-understood mechanical movement, managed to extricate themselves. The Regent Street of this aristocratic city differed little from the smaller thoroughfares, except in being slightly broader, and, if possible, worse paved, and having larger mounds of filth on its surface. In the centre, however, stands an oblong space, called the market-place, where the most heterogeneous collection of human beings it is possible to picture are always to be found. Here also are the principal shops, which differ as essentially from these repositories in more civilized parts of the world as can be conceived. Imagine a small *hole* about six feet square, having its floor raised about four feet from the ground, communicating with the

street by a door, the under half of which is kept closed, while the upper serves as window and as means of exit. Hang round this, morocco leather slippers of the brightest hues, pouches of particular colours, shot-belts, cushions, and pieces of Moorish needlework in the most striking colours and greatest variety of patterns,—all mixed in the most scientific confusion; place in the centre of this space a man of large size, and the darkest olive complexion, seated, as we say, “tailor-ways,” and robed in turban and hayke, with white or blue slippers of brightest yellow, and rejoicing in a profusion of beard, which gave him a most sedate and venerable aspect; and, finally, coil a large pipe by his side, from which he ever and anon draws a long cloud, to be expelled in wreaths through the aperture which he faces,—and you have the picture of a Tangiers shop and its contents. But who can convey even an idea of the *omnium gatherum* appearance which the whole contents of these shops have, or the solemn gravity of the owner, who sits all day long in a broiling temperature, and in an atmosphere of smoke, contemplating the small and edifying prospect of filth which his door affords, or the no less sedate countenance of his opposite neighbour, with that air of philosophic meditation which you might have supposed Diogenes to have assumed when in the morning he took his station in his tub? I question whether, from their apathetic appearance, the stimulus of a pin-point entering their flesh (by the way, one of our severest European pains!) would produce in them a greater amount of excitement than would be necessary to request its removal? Nor does this coolness disappear when a purchaser approaches, for they hand you what you ask for without moving,—the contracted dimensions of their establishments enabling them, with the aid of a short stick, to reach the utmost limits of their grand saloon; and they smoke away till you examine it and ask the price, which they tell you with an air which too plainly intimates their total indifference to your patronage. As to bringing them down in their prices, that is too ridiculous to attempt, as they will slowly shake their heads, replace the articles, and smoke on. If you offer for nothing more, and move away, you generally get a grunt of recall to inspect the contents of a tin canister, which they produce with great care and submit to your approval, evidently impressed with the idea, that it is impossible for you to resist their charms. These much-prized articles consist of diminutive bottles of otto of roses, of pure Turkish manufacture; so pure, that it is said many thousand roses are necessary to produce *one drop*. These little bottles generally are so great a temptation, that they fetch their own price, which is no trifle.

In the market-place, a perfect world presents itself for study and amusement. First of all comes the diversity of men and costumes. Men (for few women are there seen) of every clime and complexion wade about in the mud on their several avocations.

“The Turk, the Greek, the Spaniard, and the Moor, Here mingled in their many-hued array.”

Jews, in their skull-caps, and long, brown close-

made gowns down to their heels, shuffling along with the most sheepish, sneaking gait conceivable, saying little, but always having the best of a bargain. Moors of every shade of complexion, from the coal-black of the interior to the warm, delicate brown of the coast, in every colour of costume. Haykes of the finest white, yellow, brown, blue, green, and striped, with a sprinkling of many other tints, according to the various social positions held by the owner, or the number of journeys he had made to Mecca. Yellow slippers and white turbans, having a red or green centre, complete the Moors' costume. Greeks in their no less picturesque wide red trousers, loose jackets, and red caps. Riff boatmen, with their wild free look, and their long plaited hair-tails like Chinamen. Arabs from the interior, in white kilt and deep cape, having their waists surrounded by a broad red scarf, and holding their long rifles ever ready in their hand. The Spaniard with his round hat, silver filagree buttons, and tight smart look; these, together with English and French, ever the same as at home, and acting amidst the wild mass as landmarks of civilisation, or ballast amidst the tossings of the passion-led rabble, made up the crowd. These persons were all ostensibly assembled for the transaction of the usually peaceful business of buying and selling, yet nearly all were heavily armed. Most had a pistol and knife in their sash, and a long rifle slung on their backs, bespeaking the lawless state of the country, and the want of well-administered laws. The roar of so many maniacal salesmen, all shaking their commodities in one another's faces, together with their warlike arms and wrathful demeanour, led me to suppose that a riot was afoot, out of which I thought it was as well for me to keep; but my guide told me it was a simple and loving process of barter. No less different from our manners were theirs when the market was over; for then every man mounted his barb, and careered away with that majestic appearance which seems so natural to the Arab, while he left his wife to trudge along with her child on her back, and the bundle of purchases in her hand. In no land is the "lord of the creation" so exalted in his own estimation as in Barbary.

In the evening I had an invitation to be present at two Jewish marriages, which it required little pressing to make me accept. Our whole party was invited; so in a body we visited the houses of both brides. We were led through one of the low doors I before spoke of into a square centre court, where an immense assemblage of Beni-Israel were congregated. As soon as it was known we were English, way was made for us to where the bride was sitting, which was in a small room leading off one side of the court. Here we found her surrounded by a crowd of handmaids, any one of whom might have sat for a Rachel. "Such a collection of transcendent beauty!" we all exclaimed together. And such, certainly, we had never before seen. Most of them were very young; for in this climate they are women almost from childhood, and old age sets in when maturity would be barely attained in our northern latitudes; and all surpassed in loveliness my utmost ideal of romance. Not the drooping noses, meaningless eyes, and awkward figures so

often seen among the wives and daughters of Israel in England; but the most exquisite aquiline features, enlivened with all the fire of a sunny clime, and outlines so symmetrical and flowing, that no pen can convey any impression of them. Their hair, too, of the darkest raven, falling in long tresses over their shoulders, together with the profusion of costly jewels with which they were adorned, gave them an appearance so celestial, that we were at no loss to understand the reason why the Jews are so scrupulous in keeping their daughters from the public gaze. The young married females were seated more immediately round the brides. In Barbary, it is the custom to shave the heads of the females as soon as they enter wedlock, and substitute a wig for their beautiful hair, which, it may be readily believed, is no improvement; but as they conceal this defect by a skillfully contrived head-dress, studded with enormous brilliants, they continue to present charms little inferior to their unmarried sisters. The brides themselves were lovely, and decked, as they were, in gold and silver embroidered robes, crowned with a diadem all set with jewels, they shone even amidst the surrounding galaxy. I could not but recall the allusions in the Old Testament to the Eastern bride, "adorned herself with jewels," and having "her clothing of wrought gold;" and more especially the description given in Ezekiel of the Church, under the figure of the bride, when God says: "I decked thee also with ornaments, and I put bracelets upon thy hands, and a chain on thy neck. And I put a jewel on thy forehead, and ear-rings in thine ears, and a beautiful crown upon thine head" (Ezek. xvii. 11, 12). The bride sits with her eyes fast closed and covered with a veil, thus to be admired for several days; and as she is not allowed to look about her on any pretence whatever, or to smile, or even appear cognizant of anything that is passing around, she was the only one of the party not to be envied. After a time she was led by the hand through the crowd, that all might see her, and a perfect buzz of admiration followed her triumphant progress. Previous to our arrival, a large wine-jar, out of which the bride and bridegroom had drunk, was broken to pieces in the centre of the court, in accordance with some old rite.

After remaining some time we came away, when one of the most absurd scenes occurred I ever remember to have witnessed. Sounds of strife had for some time been heard to proceed from one of the corners of the patio, where a Moorish servant of the Consul's and a Jew were engaged in a very animated discussion. No sooner had we emerged from the house than from words they came to blows, and before long a regular "set-to" commenced between the Jews and Moors, among whom little love is at any time lost. Fortunately none of the combatants were armed, and as neither side had evidently studied boxing, it was by no means so scientific an exhibition as would have pleased "the fancy." The war soon became general. The mode of warfare consisted, so far as I could see, in two principal manœuvres,—the Moors endeavouring to seize the Jews by their long beards, which, when effected, appeared to place them completely *hors de combat*, as they then gave up

all attempts at fighting, and roared at the highest pitch of their voice, calling on all the prophets for aid; while their Moorish assailants, with evident pleasure, hauled them about, singing bass to the high notes of the poor Jews. The tactics of the Jews, on the other hand, appeared to be to expose the Moors' well-oiled heads by uncoiling their turbans, which, if one might guess from the enraged exclamations when such a feat was accomplished, implied a most serious insult. As soon as a Moor was seen having an unfortunate Jew "goated," another of the tribe was sure to come up behind, and getting hold of the loose end of the Moslem's turban, begin to unroll it with the utmost assiduity. This proceeding seemed, in most cases, completely to paralyse the Mohammedan, as he stood stock still with spread-out hands, quivering limbs, and flashing eyeballs, roaring in one prolonged yell till the final *exposé*, when he turned with his head all shining in the moonlight to charge his triumphant antagonist. The whole scene was one of the most ludicrous it was possible to form an idea of.

Great as the rumour of war was, little injury, however, was done on either side; so that, after a period of vehement roaring, a truce was concluded by the Vice-Consul's interposition, and we proceeded quietly to our hotel.

I awoke early next morning after dreams in which dark-eyed maids and brilliant fairy-like scenes of old castles and lofty halls, together with cheating Jews, and fierce murderous Moors with ponderous heads and wide mouths, were strangely and unaccountably mingled; and as I lay listening to the disjointed sounds that betokened the city's awakening, I was startled by a loud and shrill voice near at hand, which rose high into the clear air, repeating some words which I could not follow. This I afterwards found to be the Muely Muezzim, calling from the minaret of the neighbouring mosque, "There is no God but God!—to prayer—lo! God is great." The cry was repeated, and then all was again still. As I was not included among the "faithful," I was satisfied with strolling over, after having dressed myself, to see the building from whose top the summons had been given. There are two large mosques in Tangiers; but there is nothing remarkable in the external appearance of either. High square towers were attached to each, adorned with many-coloured tiles, all reflecting the sun's rays in their various hues, and crowned with gaily painted minarets. No profane foot is permitted, as in Egypt, to enter these sanctuaries; and even the gaze of the curious, if directed too markedly to the entrance, is resented by the half-naked groups who always loiter about the doors. The Moors remove their shoes when passing them, as they imagine the precincts to be holy ground. The door was open as I repassed; but nothing was revealed to my stealthy glance but an empty court, which seemed to be an entrance-court to the main building.

By the time I returned from my morning walk, I found one of the leading Jews of the place, to whom I had brought a letter of introduction, waiting to invite me to breakfast. This I gladly accepted. My Jewish friend led me through many narrow lanes to his house, which entered by a low

portal from the street, and looked in no way different from its filthy neighbours; but when I got into the internal quadrangle, I found myself surrounded by the utmost cleanliness and elegance. Seated on chairs and mats around, were numerous relations of my host, all of whom got up on my entrance, and returned my salutation with much politeness; and all seemed desirous of showing me every attention. The females looked, if possible, better than when I saw them last evening; and to each and all, it would have been difficult to have found matches even among the far-famed beauties of Spain. The richness of their dress, though rather out of place at that time of day, added much to their romantic beauty. We soon adjourned to an inner room, where breakfast was prepared, which appeared to consist solely of rich sweetmeats, pastry deluged with syrup, and liqueurs of a green colour, and very sweet taste. I was seated by the host, who soon loaded my plate with all the delicacies, which, however, were not of a description to tempt one to eat at so early an hour of the day. Besides, my appetite was not much stimulated when I saw that I alone, of all the company, partook of the feast,—it being now, as of old, contrary to Jewish principle to eat with a Gentile. The host apologized for this when he saw I observed it; and, of course, I endeavoured to appear unconscious of the implied inferiority.

When sitting here in a room, whose furniture and general appearance was truly oriental, looking down the long range of speaking faces, surrounded by the eastern dresses of my entertainers, with the gestures and signs by which they endeavoured to atone for their want of English, together with the style of the whole affair, I could have imagined myself living in the distant past, or in places and times which now only exist in the pages of the traveller. I did not, however, remain long, as I easily saw that, though anxious to be civil, sundry glances were being directed by the younger members of the party, with watering eyes and lips, to the sweetmeats before them; and as their inability to attack them arose from my presence, I left, after having shaken hands all round, and hurried back to appeal to the hostess of our hotel for a more substantial breakfast than that I had left, and to arouse the envy of my companions by a recital of the scene which I had enjoyed without their participation.

After breakfast we set out to visit the castle of Tangiers, which stands on a rugged eminence on the north side of the bay, and to reach which we had to traverse the whole length of the town. The ascent was somewhat steep; but when attained, the superb view well repaid our labour, as it extended not only over the town, but far into the country, and also up the Straits, which rippled in the golden light as far as the eye could reach. We saw, too, clearly defined, the vineyard-crowned knolls on the Spanish shore winding away till abruptly ended by the bold stern rock of Gibraltar,—the Herculean pillar itself, like a mighty beacon, glittering in the sunlight, and standing out amidst the shining waves.

Seated on stone benches by the entrance to the castle, was one of the military musical bands of the Emperor, playing some martial strains. No

words can convey an impression of the ludicrous contrast presented by these wretched fellows and their regiment (which bivouacked close by) to the troops of our European states. They possessed no uniform; but each man, lank and lean from starvation, was clothed as he pleased, and armed himself as his necessities or his fancy led him. Haykes of many colours shone in their ranks; but the taste of every man seemed the rule of his accoutrements. Some had the long gun, some swords, and others pistols; but hardly in two instances were they alike in anything but filth and misery. Little better than rags covered the limbs of the majority, while a few exhibited all the splendour which colours and bullion could impart. In hardly any case was there a man upon whom a civilized soldier would draw his sword. And are these the representatives, one involuntarily asks, of that valiant and conquering horde, whose prowess and magnificence at one time was the terror of Europe; of bands whose indomitable courage and martial daring repulsed and held at bay the united chivalry of Christendom; and who, unaided, carried the crescent in proud triumph over the prostrate followers of the blood-red cross? Verily in no historical parallel can we find so great a fall!

When I gazed on their features, supremely handsome in their contour, but lit up with a savage fire, and at their tattered raiments, sunken eye, and squalid beards matted on their broad breasts, and then thought of those knights whose gleaming spears, gay pennons, and gorgeous panoply, were the admiration of the world, and who for years alone withstood the shock of united Europe, rolling back, scathed and broken, each mighty wave of heroes who went to conquer or die on their eastern shore; and who, too, amidst the mountains of the Peninsula, alone retained the germs of civilisation and knowledge in spite of the darkness and ignorance of a degenerate age; and when I also reflected, that among this people much of our science was born and reared, and with them refinements and elegancies, such as still eclipse the grandeur of our noon-day, were to be found,—I could scarce believe that these men before me were the descendants of that race whose history dwelt in my recollection. The Arab heroes of the middle ages have indeed passed away, and left hardly a trace behind. The place that once knew them bears now only faint footprints of their existence, and, as a broken and withered branch, their descendants have been drifted on a barren and desolate shore!

But to return. The music played by these performers was of a sad and wailing kind,—a lament, it seemed, for their past and brighter days. I could trace but little of an air in their several melodies; but all had the same mournful cadence. Six old men, with white locks and sober mien, played a sort of long clarinet, and four others occasionally, at long intervals, beat a few strokes on drums. The character of the music, the aged and sad look of the performers, and the teeming memories of the olden time, made me deeply melancholy; and I was glad to seek within the building something to remove the impression. On entering the main gate, I found

myself in a large square court, with others leading off it, all of which, in filth and abomination, resembled nothing but a huge ill-kept farm-yard. Mud, ankle-deep, paved every pass, and ruins of stonework blocked up much of the space. In galleries of a kind, the wretched guards were huddled together, all bearing, in their lacklustre eyes and listless mien, the stamp of want and wretchedness. Soldiering is here evidently not a game of pleasure.

We went through the different apartments, where there was little to attract attention, if I except some few specimens of that elegant Arabesque work, and delicate lace-like carvings, with which the Moors were wont to adorn their palaces. A little of that beautiful blending of colours—each of the brightest and most permanent hue, but so chastened and shaded into one another, as to present to the admiring eye the most exquisite elegance for which the Morisco-Spaniards were so celebrated—is to be traced in some of the chambers, but only faint rays of that effulgence which lights up, with its gorgeous, but, alas! departing beauty, the stately halls and corridors of the Alcazar and Alhambra. Dainty suites of rooms for the members of the Emperor's seraglio, halls of audience, and a garden of trees loaded with golden oranges, whose tempting ripeness gratified the parched mouth as no oranges can do in our icy clime, filled up the area of the royal stronghold.

A few old pieces of artillery, on outworks, form the defence that, worked by a handful of determined savages, withstood so long the assault of the French fleet in 1844,—a defence that proved the breasts of the poor Moors not to be entirely bereft of their ancient spirit of freedom and manhood.

In speaking to my guide—a Moor—of the number of wives which their religion permits them to marry, he gave me a very succinct account of their mode of wooing. The suitor never sees the lady before marriage, but conducts the whole affair with her parents. "See papa and mamma, and if agree, then go see miss; if he no like her, send her back and pay great deal," was his description of the proceedings. "How much is he compelled to pay in the event of his sending her back?" I inquired. "Oh! great deal; one, two, three hundred dollar," he replied; at least enough to prevent many changing their minds. The matrimonial felicity in such cases must be enviable!

The jail in connexion with the castle is a specimen of those horrors, the bare existence of which, in our age of civilisation, one almost looks upon as impossible. Having paid sixpence, as a gratuity to the captain of the royal guard, (!) I was allowed to approach a small square grating, over which a wooden door was suspended, which, on being removed, permitted a stench so horrid and powerful to escape, that we fell back almost overpowered. In a moment, a dozen pale, haggard faces, on which disease and death had written their presence in ghastly characters, presented themselves at the opening, imploring alms, as they depend entirely upon charity for their subsistence. We threw them a small contribution, which gave rise to so deadly a struggle for its possession, that we were sorry we had, however innocently, been the cause of it.

There, in *one* large court, having a piazza running round it, were confined hundreds of prisoners, of both sexes, in one common compartment, which, I was told, was seldom or never cleaned, and in which murder and death held such sway, that frequently in a morning several dead bodies were dragged forth by the guards. Chained to the walls around were some of the most daring criminals. The maddened shouts and piercing cries of despair and misery, with the hoarse murmurs of the imprisoned multitude, which struck the ear and sickened the heart, conveyed to one's mind no resemblance to anything in existence, but to that region "where there is weeping, and wailing, and gnashing of teeth."

Robbery and murder are the great crimes. During my short stay I saw seven brought in from the country at various times for these offences. As to punishments, decapitation is seldom had recourse to, although it would be mercy if it were more frequently substituted for imprisonment in this dungeon of horrors. The *bastinado*, which is one of the most refined tortures known to us, is the chastisement reserved for the most guilty. It is inflicted on the soles of the feet with a double piece of rope, and several executioners belabour the wretched culprit at once,—the force with which the blows are applied soon tiring them out. Shortly before my visit, one man, of whose guilt there could be no question, received first one thousand stripes

Tangiers.

twice repeated, and finally seven hundred, at which point they had to desist, he was so nearly dead; yet so stoical was he, that he neither could be got to confess, nor utter one groan. This I was informed of by the English Vice-Consul, whose humanity made him intercede on his behalf.

As we left the castle and descended the height, we passed an idiot by the roadside, to whom all the people did reverence. These "unfortunates" are here, as in many other countries, looked on as being peculiarly under the guardianship of God. It is a merciful superstition.

In the town, the wells alone exhibit any trace of architectural taste. Here, as in all warm, arid countries, these cooling reservoirs are peculiarly

appreciated, and around them you are always sure of meeting the most picturesque groups.

I should have mentioned before a curious coincidence in superstitious credulity, which holds almost universally over the world, and which, in Tangiers, meets your eye everywhere,—viz., a hand painted on the door-posts of the houses, as a protection against the "*ain ara*," or evil eye. In Italy the hand is doubled up, and only the forefinger and thumb extended; but here the whole fingers are stretched. It is curious that this protective emblem should be so widely recognised as it is. I have failed, as yet, to obtain a satisfactory explanation of it.

On passing again through the swaying mass in

the market-place, where the din and clamour were as deafening as yesterday, we came on a curious scene, which greatly interested us. In a corner, a little apart from the fierce rabble, was seated on the ground a large group of men, women, and children, listening to a story-teller from the desert. On a small space of ground allotted to him stood the reciter; and a more striking picture than he and his audience presented cannot be conceived. He was a grey-bearded ancient, with an eye of fire, clothed in a full white turban, and having his striped robe disposed in graceful folds around him. He held in his hand a small timbrel, on which he struck, at intervals, short and abrupt notes, when he wished to give additional emphasis to his story. Walking hurriedly up and down, he enunciated his tale, with peculiar clearness of diction, in the guttural accents of his Arab race. Sometimes standing on tip-toe, with up-turned face and burning eye, pointing, with uplifted finger, to the blue sky overhead, like some old seer appealing to his Great Inspirer, and elevating his voice to its utmost stretch, he vehemently poured forth some part which told of brave men and warlike daring; and anon crouching on the ground, and suppressing his accents to a whisper, which, though of the lowest, was distinctly audible above the tumultuous shouts of the market-place, he related, in tones of no less fervency, some passage of cunning or deadly revenge. Never did I see such speaking eloquence as that displayed in this man's gestures or burning accents, or more intelligent expression than that traceable in the countenances of his hearers. The men forgot their stoicism, and shed a tear; the women, unmindful of the strangers' presence, let the folds of their cloaks fall from their pale but lovely faces; and all, by their shouts and tears, showed their sympathy with the tale. Each, with parted lips and "dark eyes flashing fire," gazed intently on the speaker, their wild spirits chained and softened while the old man held them captive with his glittering eye and living eloquence. There they sat, unmindful of the surrounding tumult which swept around them, wholly wrapped up in the account of other scenes, which for a time rendered them oblivious of their present misery in the dream-like recollections of their people's paradise.

When he finished, his hearers drew a long breath, as if relieved from some trance under which they had been held, and fearfully glancing round, gathered up the folds of their long robes, and passed amidst the crowd with a sigh.

We were glad, with the others, to contribute our mite to the leathern purse of the story-teller, as we left the spot with feelings which sympathized with the scene. Some of the residents informed us, that these tales were identical with those romantic stories which must have delighted all readers of the *Arabian Nights*; and that listening to their recital forms one of the most favourite sources of amusement to the Arabs.

At dinner, we had some of the famous country dish, the "*cuscuscu*," which is made of the finest part of wheat. It is extremely pleasant to the taste, and, I have no doubt, highly nutritious. They use it in soup, in curry, and many other forms.

The same evening we wandered out in the moon-

light, when the streets were deserted and not a sound abroad, to trace the landscape from a neighbouring height. As we passed along, we were every now and then startled by a shrouded figure emerging from the deep shade, or turning quickly round a near corner, and stalking past us with long strides, never deigning to turn an eye upon us. Their spectral appearance and suspicious movements would have annoyed us, had not the red cap showed them to be soldiers, whose duty it was to patrol the streets. On our return through the town, these guards were coiled up in their sentry-boxes, which were large hogheads laid on their sides, with stones inserted under their lee-side, to prevent them from rolling down the streets. In such dog-kennels, on a little straw, lay the soldiers, with the barrels of their long rifles projecting in the moonlight. As our footsteps met their ear, a swarthy face was protruded, and a challenge passed between its owner and our Moorish guide. At night we heard, at short intervals, the long-drawn "All's well!" passing in quiet cadence up the moonlit street, sometimes swelling full as it was borne to the ear by the passing breeze, and anon declining into a far-off and melodious whisper,—the same sound of safety which, heard in whatever language, conveys so pleasant a feeling to the wakeful listener.

Next forenoon we obtained an escort (without which you dare not go into the country, in so lawless a state are its inhabitants), and made an excursion to the neighbourhood. We visited several gardens belonging to the consuls, in which oranges and lemons hung in tempting clusters from the trees, reminding one of the celebrated golden apple of discord, which, it is said, was obtained of yore in this very spot; for here tradition has placed the renowned garden of the Hesperides. In no place does one suffer more than here from that undefined feeling, which involuntarily springs up in the mind when brought to visit spots over which classic legend has shed a lustre, and then finds, alas! how little such spots differ from those of our everyday life. Some unromantic, bare tract of land, it may be, presents itself, when the imagination expects Elysian gardens; or a muddy pool, degraded to the dreadfully prosaic requirements of ordinary existence, is found where some lovely nymph has left her name, and around which the poets of old have thrown a halo of romantic story. The groves and streams are bereft of their presiding deities. The fox and wild bird alone are encountered in those sylvan glades, when you are prepared to behold a fantastic dance of Dryads, and the clear rivulets murmur on uncontrolled by the sway of the gentle Naiad. It certainly required no common credence to believe that this desolate and wild burning landscape, where the foot hardly treads on aught but sand, could be the favoured land in which that garden was situated, whose very name is yet the symbol of all that is luxurious, and where, of old, Juno stored her golden apples; to steal which from their ever-wakeful custodians, was accounted a feat not unworthy of the great Hercules. But so it is; and the dull reality banishes, in spite of us,

"The consecration and the poet's dream!"

The country is extensively but wretchedly

cultivated, though, I believe, it is capable of producing great abundance. The people are very wild, and, like their reputed forefather, their hand is against every man's. The French, from their recent attempts on the country, are their great personifications of evil; and I am told no Frenchman could, on any pretence, go beyond the gates. The English are great favourites, and the Arabs, in their own rough way, if they recognise them, often show them kindness. The scenery, towards the interior, is very mountainous,—peak soars above peak, and dark green valleys stretch away under their deep shadows. Long strings of camels with their burdens, and mounted or led by their turbaned conductors; and wild horsemen, mounted on their fleet and nimble barbs, were every now and then seen winding round a knoll, or displayed in lengthened lines in the valleys, adding much to the picturesqueness of the scene. Some of the country villages we passed were solitary and lone. When we were seen approaching, few of the inhabitants failed to retire within the doors of their flat-roofed huts.

The same afternoon, I left Tangiers with some regret, having engagements in Gibraltar which necessitated my return; and after leave-taking of my kind hostesses and companions—none of whom returned with me—I set sail, with a fresh and favouring breeze, in a Spanish lugger, about one o'clock. It blew hard, and the tide being favourable, we made good way on our passage. A more deceitful ferry cannot be crossed than this. I have known parties set out with every prospect of accomplishing their object in six hours, and be four days and four nights on the passage. But that was from Gibraltar to Tangiers, in which direction the tide is always contrary, and all depends on the permanency of the gale. I was, however, so far fortunate, as the breeze, instead of falling, increased, and we had several times to take in a reef, which, in these lateen sails, is no easy matter.

My fellow-passengers were not of the most choice description—they were chiefly Jews and Moors—and the cargo consisted of fruit and innumerable coops of fowls. The cabin was at my disposal; but it was so dirty and small, that I was glad to return on deck, and lie down on the hard boards below the shelter of a barrel. To my dismay, just as we got into Gibraltar harbour, the evening gun at half-past five fired, and we were prevented landing for the night. The prospect was not very pleasant, as it was bitterly cold, and my companions none of the most cleanly. However, there was no help for it, throwing niceness to the wind, I lay down behind a big Moor, and soon fell into that waking sleep, in which every ripple of the tide on

the sides of our craft sounded like thunder, and the hoarse whispers of our captain, who spent the night in making up his accounts, were heard like the croakings of some malicious sea-monster.

As the sun rose, all the cocks—and there were dozens—in our coops began to crow most lustily, and those whose freedom enabled them clapped their wings with joy. It is a curious—but probably an electric influence—which thus compels cocks to crow when they feel the sun. These birds all crew, and yet some of them were so uncomfortably situated that it defied me to understand what pleasure they could have had in the act. Some were standing on their heads, or rather necks, with their large red eyelids winking on the deck; others on their backs formed the pedestals of innumerable feet, the bodies belonging to which were again the points of support for another living layer. Placed in every imaginable posture and ungraceful attitude, cramped and crushed to the utmost limits of endurance, and many in the centre totally excluded from a ray of light, these gallant trumpeters sounded their peal of joy as if they exulted in the thought that the time of their liberation was drawing near. At times the first note, which was uttered with good emphasis, seemed as if it comprised the utmost exertion of which its author was capable,—the succeeding prolongation, on which the whole effect depended, being totally wanting, or dwindling down into an insignificant rattle. At other times a bravura was expelled in short, disjointed, but determined accents, as if the taste of the performer had led him to execute it in staccato, while every now and then some poor aspirant in the centre of the crowd, vainly endeavouring to balance himself on others during his *début*, produced a dreadful tumult in the community by the living props giving way, and his putting the whole mass in commotion by his fall, while his own chivalric effort prematurely died away in choking accents,—some violent neighbour having apparently made fierce attempts to garrotte him.

Never, I think, was melody produced under more disadvantageous circumstances. Their chattering endeavours, moreover, were not received with due encouragement by the crews of the ships around. At daylight our anchor had been raised to allow us to drift in with the tide; and as we passed through the shipping, innumerable red cowls from the bulwarks anathematized our concert in every language under the sun.

At eight o'clock the pratique boat inspected us, and I was glad to seek, in a hot bath, a solace for my bitten skin; but when, after some hours' rest, I rose quite refreshed, I looked back with undivided pleasure to my trip in Barbary.

WORDS OF LIFE FROM A ROMAN CATHOLIC PULPIT.

It is the object of this paper to bring before the reader the teaching of a Roman Catholic priest of the present time, whose writings exert a very wide influence in Germany and Switzerland. Very probably he would not allow us to infer from his words that he holds justification by faith, in our sense, and were we to enter into a theological discussion on the subject, we should soon find that we belong to different camps. But whether he allow us to do so or not, we regard him as one to whom flesh and blood hath not revealed it, but the Father which is in heaven, that Jesus is the Christ; and we willingly hear Christ speaking in him words of life and love.

HOW NEAR CHRIST IS.

I once visited a person in a wild, desolate, mountainous place, who had grown up in great ignorance, and led a very wicked life, and who was now dying. I tried to show her the state of her soul, that after death she had to expect the judgment of a holy God, and that there was no way of escape, unless some one was willing to suffer as a substitute for her. I asked whether she knew of any one who would consent to suffer in her stead. . . . And when I told her that the punishment was extremely great, and that her mother and sisters would have to think of their own sins, she appeared to be quite at a loss, and said, Then there is no way of escape.

I declared unto her the joyous heavenly message of Jesus Christ, that he had shed his precious blood on the cross, and that if she turned to him in repentance, faith, and love, his sufferings would atone for her sins, even as the dying thief turned to him, and found mercy. Then the poor anguished creature revived, and I saw how, through the dark-black clouds of her soul, there broke forth, like heaven-blue, hope and love to Christ. Yes, there is nothing more wondrous and great in heaven or earth, than the mercy and love of God, which came in Jesus Christ to a sinful world.

There is a large, ancient city in France—Toulouse—and they keep there an old chronicle which contains a record of memorable events. In this record we are told about a very wicked and godless youth, who went out one evening into an open field, and there, in the mad excess of his impiety, began to utter fearful imprecations and blasphemies. In his excitement he went so far as to lift his sword and brandish it in the air, and challenge the most High to show his existence and power by smiting him down.

And, behold, what happened? Slowly there descended from heaven a snow-white leaf, and alighted gently at the young man's feet. Astonished, he lifted it up, and saw written on it with golden letters, *Miserere mei* (the commencement of the great penitential psalm, Have mercy on me, according to thy loving-kindness). Amazement seized the young man at the clemency of God to send to such a sinner as himself a declaration of mercy. Repentance, hope, tears, and love broke forth out of his soul. He knelt down, thanked and praised God for his unfathomable compassion, returned home, was converted, and led a beautiful, godly life to his calm and blessed death.

This is no fairy tale, but an actual history

which has truly happened, and on a grand scale. The youth is the human race, with all its sins and godlessness; and the white leaf is the Son of God, whom the Father sent down from heaven; not with gold, but with his own blood, sin is blotted out and pardon announced.

[After describing the sufferings of Christ in Gethsemane and on the cross, he continues—]

Never forget that it is impossible for you to find salvation except in Jesus Christ. If there could be forgiveness of sin in any other way, it would have been cruelty in God to allow such suffering and shedding of blood. God in his infinite wisdom saw this as the only way, the way of infinite sorrow, from heaven down to earth, from Bethlehem to Jerusalem, and to the cross of Golgotha. His own Son went this way. Therefore it is a great misery to live and die a heathen, Jew, or Turk, and still worse to be a nominal Christian, without having obtained salvation by faith in Christ and union with him. For this reason the apostles left all, and willingly endured hardship, to declare the grace of Jesus to Jew and Gentile; and for this reason do missionaries of our own day go to distant countries, learn foreign languages, and often risk health and life, to preach the faith to the ignorant.

There were once two malefactors crucified with Christ. The one, who had sought Christ and hoped in him, entered Paradise that same day. The other was without faith, and only thought about saving his body, and he was lost. Do you ask whether Christ, who is now in heaven, is accessible? I will tell you how near he is. There lived once a wicked, sinful woman, and she came to herself, and felt heavily the burden of her past guilty life. And when she did not know where to look and turn, and how to get rid of her anxiety and trouble of soul, it struck her, whether she might not find help with that man who had helped so many sick people, and spoken with love to so many troubled hearts, and she knew that some of them had been very wicked and godless; and she thought, Surely he will remember the lovely saying he himself uttered, "There is greater joy in heaven over one sinner that repenteth, than over ninety and nine just persons," and he will act according to his own word, "Come unto me, all ye that labour and are heavy laden, and I will give you rest." So she thought, and took heart, and, as there is no greater trouble in the world than to feel the burden of sin, she regarded not the criticism of people, but overcame all pride and shame, and as she heard that Jesus was a guest in the

house of a rich gentleman, she went in straight and kneeled down at Jesus' feet and kissed them, and shed over them bitter tears. But Jesus looked at her and said, "Go in peace, thy sins are forgiven;" and she went away in peace, and had peace during her life, and in peace and blessedness she departed.

THE POWER OF THE HOLY SPIRIT.

What the sun effects with regard to the earth, the Spirit of God produces in the world of souls; and just what a cold dark winter's night is to a beautiful summer landscape, with its fresh verdure and lovely flowers, a soul without the Spirit is to a heart in which the Holy Ghost hath taken up his abode with his enlightening and vivifying influence. Notice this in the case of the disciples of Jesus. What strange people they were, and how one is astonished at the patience and long-suffering with which the Saviour bore them. Every moment they get some ambitious fancy of being great lords, and impatience seizes them, that the glorious kingdom should come quickly; now they ask what reward are we to receive for having given up our fishing trade? now they quarrel among themselves, who is the greatest, and what gradations of honour there were to be among them; now they allow their anger to blaze up, and desire fire to come down from heaven to burn up the unmannerly Samaritans; often they show extraordinary want of thought and understanding; at one time they get into a womanish state of fear, because they had forgotten to provide themselves with bread for the journey, another time they are in great trepidation and terror of sinking and faring like the prophet Jonah, *minus* the whale. When the Lord was taken captive, they all ran away, and Peter, who had almost broken the head of Malchus, if his sword had gone a little more to the left side, soon afterwards in a most cowardly manner professed himself, before a maid, that he had never known Jesus Christ. In short, it seemed as if the Lord's teaching and intercourse were to produce very little result. But when Pentecost came, and the Spirit of God descended upon the little congregation assembled in that upper room, what a glorious summer appeared in the souls of the disciples, changing them into apostles! Peter, formerly so timid, stood now before the people, and spake of the Lord Jesus Christ, and told the Jews that salvation could not be found in any other than in the very Saviour whom in their blindness they had crucified. And when afterwards the high priests and other gentlemen in Jerusalem caused the apostles to be imprisoned on account of their "disturbing the public peace and safety," and afterwards dismissed them with the sharp injunction, never to speak again of Christ, but like decent Hebrews to lead a quiet and peaceable life, Peter replied, "that they must obey God rather than man." Yes, these poor unlettered Jews stood before governors and princes, and spoke to their consciences, and whole provinces were converted through them from heathenism to Christianity, and at last they offered cheerfully their lives for Christ and his cause; they endured suffering and martyrdom, and rejoiced, and were indifferent to the world with its glory and honours.

See, this is the influence, the omnipotence and act of the Holy Ghost. And this power is as little defunct, as the power of the sun with every returning summer. We can see this on a mission station, and in other places, "For the Spirit bloweth where he listeth." This Spirit converted a woman who was a sinner in Judea into a penitent believer; this Spirit changed Monica's son, sunk in heresy and impurity, into a great church father, the holy Augustine. There are about forty or fifty saints, marked by the Church for every day; but there may be many thousands for each day, who died saints, though the world knew nothing about them, and their life has nowhere been noticed, yet not one of them became a saint except by the influence of the Holy Ghost.

Strange it is, that although all Christendom confesses that the Holy Ghost is God, and equal with the other two Divine Persons, yet you may ask in many a house, what they know about the Holy Ghost, and they will not be able to give any other answer than they have learned by rote off the paper: He is the third Person in the Trinity. It may therefore interest some of my readers, if I tell them something further about the Spirit. I was once in Carinthia, and saw a neighbourhood, which had suffered fearful devastation. Where a few months ago there had been good useful land and beautiful plantations, you could now see nothing but stones, uprooted trees, sand and mud. There had been an inundation. True, the heaven was blue and peaceful again, and the little brook was flowing past lazily, and looked most harmless; it seemed scarcely to know whither to turn, because all around it appeared to be just the place for such thin meandering little brooks. Another time I visited the scene of a conflagration, black beams, burned tiles, and I don't know what mass of half-burnt rubbish lay about; even the trees near the houses were singed, and the leaves looked an unearthly black-brown like dirty rags. A bare-footed woman stood against the bleak wall and cried. I could not see a spark of the fire, only here and there the smoke came thinly, and as if exhausted, out of the heaps of rubbish.

This is an illustration showing us the nature of sin. Many people think that because they have given up some sinful practices, that they have done away with sin. Sin burns and ruins the soul, and makes it black and bleak and corrupt, and this corruption remains, though the fiery passions have been cooled, and life progresses slowly and languidly through the sand of old age. The hurricane has passed, but the tree, rooted out of the earth, lies on the ground. Who and what can be of help here? There is no human remedy. As little as you can replace an eye that has been cut out, or a head that has been cut off, or change back into paper a manuscript that has been burned to ashes, so little is it possible for us to give to a dead soul, life, health, and beauty. If you go in this state to the Lord's Supper, it would not only be of no avail, but you would sin against the Saviour, and eat to your condemnation. When a man comes to know that this is his state, he must be filled with horror; he reminds one of those men in old times, of whom we read, that they were tied to dead bodies, so that day and night they had before them the ghastly

sight of corruption. Who can give help here? Answer: None can help here, save God the Holy Ghost. It is He, who works in the sinner that his eyes are opened, that he feels his sin, and longs after help. And then, when the sinner humbles himself and confesses his sin, looking with hope to the merits of Christ, and he hears the absolution pronounced, the Holy Ghost effects a miracle in the soul of the sinner, as he did once in baptism; he infuses life and beauty, and the lifeless corrupt man is converted into the image of God. The Christian pastors, and especially the missionaries, often witness this miracle. The minister notices often, with amazement, how men, who have been slaver to vice, youths and girls sunk low in sin and wild manners, quarrelsome and selfish people, are changed into contrite and docile child-like hearts, asking in sincerity with Saul, "Lord, what wilt thou have me to do?" Behold, this is the Holy Ghost, the finger of God touching the soul, and raising it out of corruption to life! It is of Him that you hear the Pentecostal Hymn: "Veni, Creator Spiritus!" etc.

It would lead me too far were I to attempt an exposition of this hymn. I must hasten to give some practical advice. I read once of a poor, lonely girl, who lived in a narrow lane of Paris. The girl possessed a rose in a little flower-pot; it was her only joy. But the houses in the lane were so high, that the whole year round no sunbeam entered her little chamber, and therefore she took her flower-pot into the open square, and placed it on the ground, and stood by, while it drank in the light and heat of the sun! Do thou likewise with thy poor soul. You may be living in the din of varied occupations, in the smoke and dust of daily cares, in the tumult of crowded busy life; though the light from above is always shining down, yet the soul is too troubled and disquieted to allow it to enter deeply. You require solitude, be it in your own chamber, or in the house of God, or in the quiet night, in the wood, or the secluded glen. Seek often to be alone, and then open thy soul in prayer, that the Spirit may shine in as the ray of the sun into the opening flower-bud. Thoughts, feelings, rebukes will come, which are not born of thy soul, but which descend from above, even as the flower receives its beautiful hues not from the earth, but the heavenly sunlight.

A WORD TO MINISTERS.

Daily you offer up the petition, "Thy kingdom come." Now, it would be great insincerity and most injurious untruthfulness, to pronounce such a prayer every day, and yet to move neither hand nor foot in this great cause. Let me give a few hints as to what we are to do in order to bring about the fulfilment of this desire. But to do this I must classify people, in order to give separate counsel to men of different position.

And who deserves the first place, when we speak of the coming of Christ's kingdom? (Ex te perditio, Israel!) Evidently the minister of the gospel. True, such a gentleman knows himself what is his duty, but as he never hears a sermon except his own, he won't object to find here something which may serve him as a mirror. Were I to leave him

out, the laymen might object to it as partial. And who knows, but some minister with a right aim and a modest heart may receive my word kindly, and, by the grace of God, it may lodge in his mind, and produce fruit? This would be extremely valuable, for what a pastor receives becomes a benefit to hundreds, to whom God has appointed him a light-bearer and shepherd. I shall try to avoid all offensive and prickly words, and all uncharitable thoughts.

When a servant is intrusted with the care of two horses, and he is careless, and allows them to drink when they are heated, or instead of giving them oats, sells the oats, or instead of attending to them, runs about for his pleasure, such a rogue is hunted away with ignominy, and it is quite right it should be so. And yet it is only about horses, which sooner or later must find their way to the tanner. But you, O pastor, have been intrusted with the care of God's children, the precious souls of men. What an awful charge it is to have a single soul to watch, and guide, and feed; and perhaps you have several hundreds, and every week some are added, and every week some leave and go to that other country, and may complain if they have been neglected or badly treated. Let me lay a few things before you, and urge them on your conscience and heart.

It is no trifle to have every Sunday a congregation before you, which comes to you waiting to be roused, fed, strengthened, and comforted by the word of God, according to their various and changing circumstances. The time of preaching is a precious seed-time, a sacred hour, in which one ought to give the very best thing one can possibly produce. Well, what is your way and practice in the pulpit? Have you a good memory and a sonorous voice, and are you able also to get on extempore, and do people say, especially when you preach as a visitor in some neighbouring congregation, He is a beautiful preacher? All this does not strike me or weigh much with me; and even though a few of the women-folk apply their pocket-handkerchiefs or aprons to their eyes, I don't care much about it. A few watery women's tears are easily brought out, and are often shed more as a pleasant way of filling up the time. The great, the first question is: Who preaches; is it you, or the Spirit of God in and through you; is your sermon your own word, or the word of the Lord? See, my brother, thou oughtest to ask and pray our Lord from day to day in thy own room, "Lord, what am I to preach? Give me the right spirit, and provide me with the right word." Press and urge this prayer with all importunity, and then, like a spiritual miner, dig long and earnestly in the holy word of God, and in your own soul, and out of the Scriptures and meditation bring out gold and precious stones, and then enter your pulpit as a man who hath authority, and leave your own self at home, and seek nothing else but God's honour and God's kingdom. And when thus you stand there in the name of your Divine Master, and the power of the Spirit is upon you, and love to God and love to human souls beam in your eyes, like two heavenly stars, and when the word of God streams, and flows out of your mouth strong as fire, strong as a hammer, that breaks the rock in pieces, and, sharper than a two-

edged sword, penetrates into the souls of your hearers—then people will not say, as they go out, "What a beautiful or eloquent sermon!" as they often said before, and just went home and remained unaltered; but fear comes upon the people, and an awe as if it had thundered, or as if there had been an earthquake; they go home in quietness and in serious thought. And many on their way home avoid conversation, and would much rather walk alone, and in many a house there is one, who is silent that day at dinner, and the others do not understand the reason. And when you preach thus in the Spirit, you yourself are moved in your soul, and feel that it is not you who are speaking, but that it is given you of the Father, and you would fain fall down and worship and weep before God—is it from joy or sorrow, fear or hope?

See, O pastor, or whatever your title may be, were you to preach thus every Sunday, the Spirit would begin to kindle gradually in your congregation and to break through, and the kingdom of God would be in it as when a woman taketh leaven, and hideth it in three measures of meal till the whole is leavened. Yes, it cannot be otherwise, it must kindle and burn, and if you do not live to see it on earth, you will see it on that day when you behold your risen parish-children at the right hand of the Great Shepherd, peace and joy in their countenances. True, it is not always possible to preach in this way, and it is not given thus to every one; the gospel may come also without thunder and sound of trumpet, as a still light, and quiet word, and yet have a deep and powerful effect. But it would be a grievous sin for a man to trust to his ready utterance, and enter a pulpit without earnest prayer and meditation, or to study florid and graceful phrases, and oratorical effectiveness, to please and amuse the sentimental, and to be praised on account of his rhetoric, instead of preaching the gospel to the poor. Let it not be so with you, or if it has been so, let it be so no longer.

LIVING TO GOD DAY BY DAY.

I once knew a student who had been very ill for a long time; he had no rest day or night, he suffered much pain, anguish of body and mind, and the doctors, in order to provide the evil with a name, said it was enlargement of the heart. The youth knew that he was dying, but he had a strong longing after one enjoyment, ere he left this world. For weeks and months he thought of it, and hoped and consoled himself with the idea of this one pleasure; and when his fellow-students came to see him he told them of it, and asked them whether they thought he might hope that he would obtain his wish before his death, and looked eagerly and inquiringly into their compassionate eyes, as they said to him gently and soothingly, "Yes, dear friend, you will surely get it."

But, alas! the poor student died, and never obtained the wish of his heart in this life. And do you know what it was that he desired so eagerly? Well, I'll tell you, and if you are a soft-hearted man you will almost cry, it was such an innocent wish. But wait, I'll let the poor invalid tell you

himself: "I am quite ready to die, if I could only have, what I have known many people have before their death—one day—one single day—without agonizing pain—to be able to think quietly for a little."

But he never got it, what appeared to him such a great and precious boon—a single day without pain. And you, my bearer, have it just now, and you had it yesterday and the day before, and day upon day has been given you, days of health and strength, that you may think quietly and meditate on eternity. Do you not see what a great gift is a day, a day of health and freedom?

Even if you do not abuse this day by filling it with sin, you may yet lose it most miserably. A Russian Empress caused, one severe winter, an extraordinary building to be reared on a great frozen river. She built a palace of ice; great pieces of ice were cut into squares, water was poured between them, and the frost cemented the whole. It was very beautiful; it shone like pure silver in the sunlight, and like polished crystal and precious stones of all colours. But when the thaw came it melted away and vanished. Thus your day's work may be cold waterwork, glittering and beautiful in the eyes of man, but without value and substance in the light of eternity.

What a day is before God, let me just show you.

Every Friday you hear the bells ring, to remind you that Jesus Christ suffered and died on that day, and during the Passion Week millions of men all over the world remember his death, and many of them with tears and repentance and good resolutions; and thousands and thousands in sorrow, in poverty, in sickness, in death, have looked to the Crucified One, and their souls have beheld his wounds, and found there peace and consolation; and innumerable souls have gained forgiveness of sin, and eternal salvation through the sufferings and death of Jesus; nay, all the souls who shall stand on that day at the right hand of the Saviour, would have been lost, had not Christ shed his blood for them. And yet it was only one single day, which remains so precious throughout eternity, and which brought such unspeakable blessedness and salvation. It is nearly 2000 years ago, but this day can never pass away. To-day it is still as powerful and living as it ever was, and when eternity has dawned on this world it shall still be a living day; it is an immortal, eternal day, bearing fruit constantly, even souls saved out of death to eternal life.

Would you like to make your to-day, and every to-day which God in his mercy gives you, a precious and incorruptible day, remember what the Church teaches, that everything done in the state of sin is dead and without value before God; good and pleasing to God is only that which is done in a state of grace and of love towards God. Without Christ you can neither be converted nor live in the state of grace. Christ alone can work in you what is good, and only in so far as he by his Spirit is in you, thinking and speaking, working and suffering, is your life pleasing to God. Therefore he saith, "Without me ye can do nothing." Your soul must be united with Jesus Christ, as the branch is grafted into the vine.

his to-day to God's honour, and in love to him. You will *think* to God's glory; when a sinful thought rises, you will turn away from it, and seek to remember God; you will pray even when you feel languid in your mind, and thus accustom your soul to discipline; you will learn to *forget* to the glory of God; you will bury in oblivion the injuries and trespasses which people have committed against you, and the acts of kindness and benevolence which you have shown to others. You will learn to *speak* to God's glory, when God's truth is lightly spoken of, when your neighbour is maligned or judged uncharitably, when evil men try to seduce the weak to unbelief, unkindness, or other sins, when you can bear witness to the innocence of him who is falsely accused or unjustly punished. You will learn to be *silent* to God's glory, keeping secret the faults of others, and the good you have done yourself, and not reviling when reviled. You will learn to *work* to God's honour. The holy Vincent de Paul said of a mason, in every stroke of his hammer he worshipped God. He was so penetrated with the Spirit of God, that it was Christ who lived and worked in him, and he performed his mason work with the greatest possible care and diligence, with the single aim of pleasing God and doing His will. You will also *cease from work* to God's glory, on Sundays and holy days, or when people propose to you poaching and smuggling, or when a man poorer than yourself is anxious to get the employment. You will learn to *suffer* to God's glory. In the toil of earning his daily bread the Christian does not murmur against God, for the spirit of Jesus, who bore meekly the heavy load of the cross, is in him. In poverty and destitution the Christian complains not with bitterness, because the spirit of Jesus, who had not where to lay his head, is in him. When sickness gnaws and pains burn the Christian despairs not. The strong hand of Him who suffered in Gethsemane upholds his soul. You will learn to *deny yourself* to the glory of God, to give up money, when it brings with it lawsuits and discord, to give up a good situation, when it brings with it sin and prevents you from keeping the Lord's day; and to get rid of some expensive old habit, when you see that it is a waste of money and time, and an offence to your neighbour. You will live, in short, as Christ would have lived in your place. In such a life your days will follow one another, as precious pearls are strung together to a royal ornament.

Every parish consists of two divisions. You are living at present in the one, and the time is coming when you shall inhabit the other. In the first place people require much room, in the other, man requires only room—for a man. The rent in the former is considerable, in the latter you get secure lodgings for a few shillings. In the one you hear much noise of carts and carriages and men, and you see much smoke; in the other is neither smoke nor chimney, but instead of the chimney there is a cross over every grave. Some rich people have besides also a gravestone, as you have often seen, but I am going to describe one which you may never have beheld.

Imagine then a gravestone, with four equal sides, each of which has an inscription. On the first I

read: "He has performed very few good works during his life, and these he did to get praise from men or to avoid their censure; to satisfy a momentary impulse, or for the sake of reward!" The second inscription runs thus: "He has committed a thousand sins in thought, in word, and deed; neglected often his duty, and given place to envy and selfishness; his sins are as the leaves in autumn, and as the dust of the road in summer." Go, now, and look at the third side: "When any person offended him, or he imagined that he was not treated properly, he got angry and hated his neighbour; he wished his enemy evil, and was displeased at his success; for days and weeks he cherished anger in his heart, and never wished his neighbour good morning, but rather spoke to his disadvantage, and gladly listened to bad reports concerning him; also when opportunity offered 'rendered evil for evil,' and only after a long time was he persuaded to change his behaviour." Now, we must see what is written on the fourth side: "He prayed every day, 'Forgive us our trespasses, as we forgive them that trespass against us.'"

What is a stuffed nightingale or a painted rose? What is your prayer and attendance at church, if you have not in your heart love and obedience? There is no melody, there is no fragrance. But if you hate your brother you have no love, and no obedience, for the Saviour says: "A new commandment give I unto you, that ye love one another;" and again, "If thou bring thy gift to the altar, and there rememberest that thy brother hath aught against thee, leave there thy gift before the altar, and go thy way, first be reconciled to thy brother, and then come and offer thy gift."

Wherever the Spirit of God enters, he brings with him the spirit of love and forgiveness. He moves men, not merely to forgive men their trespasses, but also to pray on their behalf, that God also may pardon them. Many signs are enumerated, by which people may know whether their conversion is genuine, but none can be more certain than the test given by the Saviour—that from the heart we forgive those who have done, are doing, or are about to do, aught against us.

HOW THE OLD ARE TO BECOME YOUNG.

I pity you, that you are getting old, and yet you would like to be young, and to live a long while. I know, however, of something—do not think I am joking, I am quite serious—something that I think you would like very much, viz., a prescription for becoming young again, and if you use it properly, you will find I have not been deceiving you. But is it in your body or your soul, that you would like to become young again? Don't be ashamed to say "in your body," if that is your feeling. Well, I have no remedy to accomplish that;—God has reserved it for a future time, and at the great resurrection, the grand Easter-feast, he will accomplish the wondrous work. But the renewal of the soul is another thing, and I have something to say about it. The soul has a mysterious nature, and it is unfathomable what may become of it, an angel or a devil, and an old soul may even become a child.

You believe the Son of God. He said once to his disciples, some of whom were rather advanced in years (Peter, I think, was already bald at the

time): "Unless ye be converted, and become as little children, ye cannot enter into the kingdom of God." And if this was an utter impossibility, it is clear the Saviour would not have mentioned it. If you think of the old people in your neighbourhood, you will find a great variety among them. Some remind one of old cats. I don't mean that they are dry and withered up, but I refer to their mind. They are obstinate and envious, and deeply interested in food and ready to grumble, whether you are silent or talkative, and all the day long they look discontented, and nothing pleases them. But you know some old men and women who are quite different. After speaking to them one feels as if one had tasted old sweet wine, and one would like to be with them every day, and almost falls in love with them. And though their face is full of lines, and looks so parched, it delights you to look at them. Their mouth has no teeth, but it is beautiful when words of piety and kindness flow from it; and though their cheeks are hollow, their eyes make up for it, they beam with love, humility, meekness, and happiness in God; and this beaming look is gentle and calm, like the quiet sheen of glow-worms in a still summer night. And withal, they are so patient, and bear so much without complaining, and yield so readily to other people, and have so few claims, and are so anxious to be of no trouble to any one; they think so little of themselves, and pray so much for other people, and follow so readily what one suggests, and are always so calm, that you think their old bodies are inhabited by the soul of a dear angel-like pious child. These people are of the class whose youth has been renewed.

Do you not agree with me, that such youthfulness is a very precious thing, for, in the first place, it renders old age pleasant, and people like such an aged companion, and like to keep him among them as long as possible. Secondly, there are no old people in heaven, and never shall be. For heaven is made to suit only children. Jesus says, "Suffer little children to come unto me, and forbid them not, for of such is the kingdom of heaven." But how can a soul become young and childlike, a fragrance to God and to angels? I will tell you something about it.

You have seen beautiful images of saints. When you look into one of those faces, do you not feel your heart moved, and forget your old annoyances and petty cares, and almost fancy you also should like being a saint? And even when the artist has not been very clever, and when very little money has been spent on it, it is the expression and memento of a God-devoted life. Now, what have the images of saints to do with my subject? Just wait a moment. Our Lord God, who can paint most beautifully, even as he is the source of all that is truly good and beautiful, has himself made some lovely images; and because you

cannot be always in a church, he has placed them in your house or that of your neighbour, that you may see them daily, and learn of them. These are little children. Look at them well, and mark them carefully; you must become their pupil. When you are gloomy and depressed with thought, and sit down with care boring into your heart like a woodpecker into an old tree, then just look at a child, how merrily it jumps about and sings, and leaves all care to father and mother! Could you not do likewise, and leave your care and trouble in the hands of your Father in heaven, and be content, and make a cheerful face? And when covetousness is attacking you, and whenever any one asks of you a favour, your soul growls and barks inwardly like an ill-natured dog, and you are thinking always longingly about money; look at the child, how willingly it gives, and how little it thinks about laying up, though it has got a long life before it, while you are not far from the grave, where money and possessions are of no avail. Or if you are tempted with thoughts of impurity, look at a child, look into its clear eye, and think of its innocence and its utter unconsciousness of the existence of such evil. Or if you are tempted with vanity and self-consciousness and pride, look again at a child; it is humble, and does not know of its humility; the very angels of God, who behold the Father's face, are round it, and it never knows of its value and preciousness and beauty. Or if you are passionate, and not willing to forgive your friend who has offended you, and after any one has done you wrong, your heart remains a dark blank, like a clouded sky in autumn—look at a child, it is not easily provoked, it soon forgives and smiles again in a few minutes, and loves again as before, just as the brook in the rocky mountain soon becomes again clear and silvery when it has been disturbed.

The child in thy house is the saint image, which God has placed there for thy contemplation and imitation; a living sermon telling you what you are to be and do.

But looking at a child is not enough to create within you the desire of becoming like a child, nor will it give you strength to accomplish this change. You must lay the foundation not in yourself, but in Another, who himself was once a child, and remained a child to his death, and remains so throughout eternity, the Son of God, Jesus Christ. Cleave to him, and seek in every possible way to learn from him in doctrine and life. Read his word diligently, and meditate on it day and night; go often to the Lord's Supper, but with earnest preparation as if it was the first or last time; and pray every day for a pure heart and a childlike soul, and throw thyself into God's arms, as if you had died already, and had no longer any share in the things of earth.

MISTRESS AND MAID.

A HOUSEHOLD STORY.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

CHAPTER XXIV.

A FORTNIGHT'S time rather increased than diminished the excitement incident on the event at Russell Square.

Never was there such a wonderful baby, and

III-43

never was there such a fuss made over it. Unprejudiced persons might have called it an ugly weakly little thing; indeed, at first there were such apprehensions of its dying, that it had been baptized in a great hurry, "Henry Leaf Ascott," according to the mother's desire, which in her critical posi-

tion nobody dared to thwart. Even at the end of fourteen days, the "son and heir" was still a puling, sickly, yellow-faced baby. But to the mother it was everything.

From the moment she heard its first cry, Mrs. Ascott's whole nature seemed to undergo a change. Her very eyes—those cold blue eyes of Miss Selina's, took a depth and tenderness whenever she turned to look at the little bundle that lay beside her. She never wearied of touching the tiny hands and feet, and wondering at them, and showing—to every one of the household who was favoured with a sight of it—"my baby," as if it had been a miracle of the universe. She was so unutterably happy and proud.

Elizabeth, too, seemed not a little proud of the baby. To her arms it had first been committed; she had stood by at its first washing and dressing, and had scarcely left it or her mistress since. Nurse, a very grand personage, had been a little jealous of her at first, but soon grew condescending, and made great use of her in the sick-room, alleging that such an exceedingly sensible young person, so quiet and steady, was almost as good as a middle-aged married woman. Indeed, she once asked Elizabeth if she was a widow, since she looked as if she had "seen trouble;" and was very much surprised to learn she was single and only twenty-three years old.

Nobody else took any notice of her. Even Miss Hilary was so engrossed by her excitement and delight over the baby, that she only observed, "Elizabeth, you look rather worn out; this has been a trying time for you." And Elizabeth had just answered "Yes,"—no more.

During the fortnight she had seen nothing of Tom. He had written her a short note or two, and the cook told her he had been to the kitchen-door several times asking for her, but being answered that she was with her mistress upstairs, had gone away.

"In the sulks, most like, though he didn't look it. He's a pleasant-spoken young man, and I'm sure I wish you luck with him," said Cookie, who, like all the other servants, was now exceedingly civil to Elizabeth.

Her star had risen; she was considered in the household a most fortunate woman. It was shortly understood that nurse—majestic nurse, had spoken so highly of her, that at the month's end the baby was to be given entirely into her charge, with, of course, an almost fabulous amount of wages.

"Unless," said Mrs. Ascott, when this proposition was made, suddenly recurring to a fact which seemed hitherto to have quite slipped from her mind, "unless you are still willing to get married, and think you would be happier married. In that case I won't hinder you. But it would

be such a comfort to me to keep you a little longer."

"Thank you, ma'am," answered Elizabeth softly, and busied herself with walking baby up and down the room, hushing it on her shoulder. If in the dim light tears fell on its puny face, God help her, poor Elizabeth!

Mrs. Ascott made such an excellent recovery, that in three weeks' time nobody was the least anxious about her, and Mr. Ascott arranged to start on a business journey to Edinburgh; promising, however, to be back in three days, for the Christmas dinner, which was to be a grand celebration. Miss Leaf and Miss Hilary were to appear thereat in their wedding-dresses; and Mrs. Ascott herself took the most vital interest in Johanna's having a new cap for the occasion. Nay, she insisted upon ordering it from her own milliner, and having it made of the most beautiful lace—the "sweetest" old lady's cap that could possibly be invented.

Evidently this wonderful baby had opened all hearts, and drawn every natural tie closer. Selina, lying on the sofa, in her graceful white wrapper, and her neat close cap, looked so young, so pretty, and, above all, so exceedingly gentle and motherly, that her sisters' hearts were full to overflowing. They acknowledged that happiness, like misery, was often brought about in a fashion totally unforeseen and incredible. Who would have thought, for instance, on that wretched night when Mr. Ascott came to Hilary at Kensington, or on that dreary heartless wedding-day, that they should ever have been sitting in Selina's room, so merry and comfortable, admiring the baby, and on the friendliest terms with baby's papa?

"Papa" is a magical word, and let married people have fallen ever so wide asunder, the thought, "my child's mother," "my baby's father," must in some degree bridge the gulf between them. When Peter Ascott was seen stooping, awkwardly enough, over his son's cradle, poking his dumpy fingers into each tiny cheek in a half-alarmed, half-investigating manner, as if he wondered how it had all come about, but, on the whole, was rather pleased than otherwise—the good angel of the household might have stood by and smiled, trusting that the ghastly skeleton therein might in time crumble away into harmless dust, under the sacred touch of infant fingers.

The husband and wife took a kindly, even affectionate leave of one another. Mrs. Ascott called him "Peter," and begged him to take care of himself, and wrap up well that cold night. And when he was gone, and her sisters also, she lay on her sofa with her eyes open, thinking. What sort of thoughts they were, whether repentant or hopeful, solemn or tender, whether they might have

passed away and been forgotten, or how far they might have influenced her life to come, none knew, and none ever did know.

When there came a knock to the door, and a message for Elizabeth, Mrs. Ascott suddenly overheard it and turned round.

"Who is wanting you? Tom Cliffe? Isn't that the young man you are to be married to? Go down to him at once. And stay, Elizabeth, as it's such a bitter night, take him for half-an-hour into the housekeeper's room. Send her upstairs, and tell her I wished it, though I don't allow 'followers.'"

"Thank you, ma'am," said Elizabeth once more, and obeyed. She must speak to Tom some time, it might as well be done to-night as not. Without pausing to think, she went down with dull heavy steps to the housekeeper's room.

Tom stood there alone. He looked so exactly his own old self; he came forward to meet her so completely in his old familiar way, that for the instant she thought she must be under some dreadful delusion; that the moonlight night in the square must have been all a dream;—Esther, still the silly little Esther, whom Tom had often heard of and laughed at; and Tom, her own Tom, who loved nobody but her.

"Elizabeth; what an age it is since I've had a sight of you!"

But though the manner was warm as ever—

"In his tone

A something smote her, as if Duty tried

To mock the voice of Love, how long since flown,"

and quiet as she stood, Elizabeth shivered in his arms.

"Why, what's the matter? Aren't you glad to see me? Give me another kiss, my girl, do!"

He took it: and she crept away from him and sat down.

"Tom, I've got something to say to you, and I'd better say it at once."

"To be sure. 'Tisn't any bad news from home, is it? Or"—looking uneasily at her—"I haven't vexed you, have I?"

"Vexed me," she repeated, thinking what a small foolish word it was to express what had happened, and what she had been suffering. "No, Tom, not vexed me exactly. But I want to ask you a question. Who was it that you stood talking with, under our tree in the square, between nine and ten o'clock, this night three weeks ago?"

Though there was no anger in the voice, it was so serious and deliberate that it made Tom start.

"Three weeks ago; how can I possibly tell?"

"Yes, you can: for it was a fine moonlight night, and you stood there a long time."

"Under the tree, talking to somebody? What nonsense! Perhaps it wasn't me at all."

"It was, for I saw you."

"The devil you did!" muttered Tom.

"Don't be angry, only tell me the plain truth. The young woman that was with you was our Esther here, wasn't she?"

For the moment Tom looked altogether confounded. Then he tried to recover himself, and said crossly, "Well, and if it was, where's the harm? Can't a man be civil to a pretty girl without being called over the coals in this way?"

Elizabeth made no answer, at least not immediately. At last she said, in a very gentle, subdued voice,—

"Tom, are you fond of Esther? You would not kiss her if you were not fond of her. Do you like her as—as you used to like me?"

And she looked right up into his eyes. Hers had no reproach in them, only a piteous entreaty, the last clinging to a hope which she knew to be false.

"Like Esther? of course I do. She's a nice sort of girl, and we're very good friends."

"Tom, a man can't be 'friends' in that sort of way, with a pretty girl of eighteen, when he is going to be married to somebody else. At least, in my mind, he ought not."

Tom laughed, in a confused manner. "I say, you're jealous, and you'd better get over it."

Was she jealous? was it all fancy, folly? Did Tom stand there, true as steel, without a feeling in his heart that she did not share, without a hope in which she was not united, holding her, and preferring her, with that individuality and unity of love, which true love ever gives and exacts, as it has a right to exact?

Not that poor Elizabeth reasoned in this way, but she felt the thing by instinct without reasoning.

"Tom," she said, "tell me outright, just as if I was somebody else, and had never belonged to you at all, do you love Esther Martin?"

Truthful people enforce truth. Tom might be fickle, but he was not deceitful; he could not look into Elizabeth's eyes and tell her a deliberate lie; somehow, he dared not.

"Well, then—since you will have it out of me—I think I do."

So Elizabeth's "ship went down." It might have been a very frail vessel, that nobody in their right senses would have trusted any treasure with, still she did; and it was all she had, and it went down to the bottom like a stone.

It is astonishing how soon the sea closes over this sort of wreck; and how quietly people take—when they must take, and there is no more disbelieving it—the truth which they would have given their lives to prove was an impossible lie.

For some minutes, Tom stood facing the fire, and

Elizabeth sat on her chair opposite, without speaking. Then she took off her brooch, the only love-token he had given her, and put it into his hand.

"What's this for?" asked he suddenly.

"You know. You'd better give it to Esther. It's Esther, not me, you must marry now."

And the thought of Esther, giddy, flirting, useless Esther, as Tom's wife, was almost more than she could bear. The sting of it put even into her crushed humility a certain honest self-assertion.

"I'm not going to blame you, Tom; but I think I'm as good as she. I'm not pretty, I know, nor lively, nor young, at least I'm old for my age: but I was worth something. You should not have served me so."

Tom said, the usual excuse, that he "couldn't help it." And suddenly turning round, he begged her to forgive him, and not forsake him.

She forsake Tom! Elizabeth almost smiled.

"I do forgive you; I'm not a bit angry with you. If I ever was, I have got over it."

"That's right. You're a dear soul. Do you think I don't like you, Elizabeth?"

"Oh yes," she said sadly, "I daresay you do, a little, in spite of Esther Martin. But that's not my way of liking, and I couldn't stand it."

"What couldn't you stand?"

"Your kissing me to-day, and another girl to-morrow: your telling me I was everything to you one week, and saying exactly the same thing to another girl the next. It would be hard enough to bear if we were only friends, but as sweethearts, as husband and wife, it would be impossible. No, Tom, I tell you the truth, I could not stand it."

She spoke strongly, unhesitatingly, and for an instant there flowed out of her soft eyes that wild, fierce spark, latent even in these quiet humble natures, which is dangerous to meddle with.

Tom did not attempt it. He felt all was over. Whether he had lost or gained; whether he was glad or sorry, he hardly knew.

"I'm not going to take this back, anyhow," he said, "fiddling" with the brooch; and then going up to her, he attempted, with trembling hands, to re-fasten it in her collar.

The familiar action, his contrite look, were too much. People who have once loved one another, though the love is dead (for love *can* die) are not able to bury it all at once, or if they do, its pale ghost will still come knocking at the door of their hearts, "Let me in, let me in."

Elizabeth ought, I know, in proper feminine dignity, to have bade Tom farewell without a glance or a touch. But she did not. When he had fastened her brooch, she looked up in his familiar face, a sorrowful, wistful, lingering look, and then clung about his neck:

"O Tom, Tom, I was so fond of you!"

And Tom mingled his tears with hers, and kissed her many times, and even felt his old affection returning, making him half oblivious of Esther; but mercifully—for love rebuilt upon lost faith is like a house founded upon sands—the door opened, and Esther herself came in.

Laughing, smirking, pretty Esther, who, thoughtless as she was, had yet the sense to draw back when she saw them.

"Come here, Esther," Elizabeth called imperatively; and she came.

"Esther, I've given up Tom; you may take him if he wants you. Make him a good wife, and I'll forgive you. If not?"

She could not say another word. She shut the door upon them, and crept up stairs, conscious only of one thought—if she only could get away from them, and never see either of their faces any more!

And in this fate was kind to her, though in that awful way in which fate—say rather Providence—often works; cutting, with one sharp blow, some knot that our poor, feeble, mortal fingers have been long labouring at in vain; or making that which seemed impossible to do, the most natural, easy, and only thing to be done.

How strangely often in human life "one woe doth tread upon the other's heel!" How continually, while one of those small private tragedies that I have spoken of is being enacted within, the actors are called upon to meet some other tragedy from without, so that external energy counteracts inward emotion, and holy sympathy with another's sufferings stifles all personal pain. That truth about sorrows coming "in battalions" may have a divine meaning in it,—may be one of those mysterious laws which guide the universe,—laws that we can only trace in fragments, and guess at the rest, believing in deep humility that one day we shall "know even as we are known."

Therefore I ask no pity for Elizabeth, because ere she had time to collect herself, and realize in her poor confused mind that she had indeed said goodbye to Tom, given him up and parted from him for ever, she was summoned to her mistress's room, there to hold a colloquy outside the door with the seriously perplexed nurse.

One of those sudden changes had come which sometimes, after all, seems safe, strike terror into a rejoicing household, and end by carrying away, remorseless, the young wife from her scarcely tasted bliss, the mother of many children from her close circle of happy duties and yearning loves.

Mrs. Ascott was ill. Either she had taken cold or been too much excited, or in the over-confidence of her recovery some slight neglect had occurred—some trifle which nobody thinks of till after—

wards, and which yet proves the fatal cause, the "little pin" that

"Bored through the castle wall"

of mortal hope, and King Death enters in all his awful state.

Nobody knew it or dreaded it; for though Mrs. Ascott was certainly ill, she was not at first very ill; and there being no telegraphs in those days, no one thought of sending for either her husband or her sisters. But that very hour, when Elizabeth went up to her mistress, and saw the flush on her cheek, and the restless expression of her eye, King Death had secretly crept in at the door of the mansion in Russell Square.

The patient was carefully removed back into her bed. She said little, except once, looking up uneasily,—

"I don't feel quite myself, Elizabeth."

And when her servant soothed her in the long familiar way, telling her she would be better in the morning, she smiled contentedly, and turned to go to sleep.

Nevertheless Elizabeth did not go to her bed, but sat behind the curtain, motionless, for an hour or more.

Towards the middle of the night, when her baby was brought to her, and the child instinctively refused its natural food, and began screaming violently, Mrs. Ascott's troubled look returned.

"What is the matter? What are you doing, Nurse? I won't be parted from my baby,—I won't, I say!"

And when, to soothe her, the little thing was again put into her arms, and again turned from her, a frightened expression came into the mother's face.

"Am I going to be ill?—is baby?"

She stopped; and as nurse determinedly carried it away, she attempted no resistance, only followed it across the room with eager eyes. It was the last glimmer of reason there. From that time her mind began to wander, and before morning she was slightly delirious.

Still nobody apprehended danger. Nobody really knew anything about the matter, except nurse, and she, with a selfish fear of being blamed for carelessness, resisted sending for the doctor till his usual hour of calling. In that large house, as in many other large houses, everybody's business was nobody's business, and a member of the family, even the mistress, might easily be sick or dying in some room therein, while all things else went on just as usual, and no one was any the wiser.

About noon, even Elizabeth's ignorance was roused up to the conviction that something was very wrong with Mrs. Ascott, and that nurse's skill could not counteract it. On her own responsi-

bility she sent, or rather she went to fetch the doctor. He came; and his fiat threw the whole household into consternation.

Now they knew that the poor lady whose happiness had touched the very stoniest hearts in the establishment, hovered upon the brink of the grave. Now all the women-servants, down to the little kitchen-maid with her dirty apron at her eyes, crept up stairs, one after the other, to the door of what had been such a silent, mysterious room, and listened, unhindered, to the ravings that issued thence. "Poor Missis," and the "poor little baby," were spoken of softly at the kitchen dinner-table, and confidentially sympathized over with inquiring tradespeople at the area gate. A sense of awe and suspense stole over the whole house, gathering thicker hour by hour of that dark December day.

When her mistress was first pronounced "in danger," Elizabeth, aware that there was no one to act but herself, had taken a brief opportunity to slip from the room and write two letters, one to her master in Edinburgh, and the other to Miss Hilary. The first she gave to the footman to post; the second she charged him to send by special messenger to Richmond. But he, being lazily inclined, or else thinking that as the order was only given by Elizabeth, it was of comparatively little moment, posted them both. So, vainly did the poor girl watch and wait; neither Miss Leaf nor Miss Hilary came.

By night Mrs. Ascott's delirium began to subside, but her strength was ebbing fast. Two physicians—three—stood by the unconscious woman, and pronounced that all hope was gone, if, indeed, the case had not been hopeless from the beginning.

"Where is her husband? Has she no relations, no mother or sisters?" asked the fashionable physician, Sir ———, touched by the sight of this poor lady dying alone, with only a nurse and a servant about her. "If she has, they ought to be sent for immediately."

Elizabeth ran down stairs, and rousing the old butler from his bed, prevailed on him to start immediately in the carriage, to bring back Miss Leaf and Miss Hilary. It would be midnight before he reached Richmond; still it must be done.

"I'll do it, my girl," said he, kindly; "and I'll tell them as gently as I can. Never fear."

When Elizabeth returned to her mistress's room, the doctors were all gone, and nurse, standing at the foot of Mrs. Ascott's bed, was watching her with the serious look which even a hireling or a stranger wears, in the presence of that sight which, however familiar, never grows less awful—a fellow-creature slowly passing from this life into the life unknown.

Elizabeth crept up to the other side. The change, indescribable yet unmistakable, which comes over a human face when the warrant for its dissolution has gone forth, struck her at once.

Never yet had Elizabeth seen death. Her father's she did not remember, and among her few friends and connexions none other had occurred. At twenty-three years of age, she was still ignorant of that solemn experience which every woman must go through some time, often many times, during her life. For it is to women that all look in their extreme hour. Very few men, even the tenderest-hearted, are able to watch by the last struggle and close the eyes of the dying.

For the moment, as she glanced round the darkened room, and then at the still figure on the bed, Elizabeth's courage failed. Strong love might have overcome this fear—the natural recoil of youth and life from coming into contact with death and mortality; but love was not exactly the bond between her and Mrs. Ascott. It was rather duty, pity, the tenderness that would have sprung up in her heart towards anybody she had watched and tended so long.

"If she should die, die in the night, before Miss Hilary comes!" thought the poor girl, and glanced once more round the shadowy room, where she was now left quite alone. For nurse, thinking with true worldly wisdom of the preservation of the "son and heir," which was decidedly the most important question now, had stolen away, and was busy in the next room, seeing various young women whom the doctors had sent, one of whom was to supply to the infant the place of the poor mother whom it would never know.

There was nobody left but herself to watch this dying mother, so Elizabeth took her lot upon her, smothered down her fears, and sat by the bedside, waiting for the least expression of returning reason in the sunken face, which was very quiet now.

Consciousness did return at last, as the doctors had said it would. Mrs. Ascott opened her eyes; they wandered from side to side, and then she said feebly,

"Elizabeth, where's my baby?"

What Elizabeth answered she never could remember; perhaps nothing, or her agitation betrayed her, for Mrs. Ascott said again,—

"Elizabeth, am I going to—leave my baby?"

Some people might have considered it best to reply with a lie—the frightened, cowardly lie that is so often told at death-beds to the soul passing direct to its God. But this girl could not and dared not.

Leaning over her mistress, she whispered, as softly as she could, choking down the tears that might have disturbed the peace which, mercifully, seemed to have come with dying,—

"Yes, you are going very soon—to God. He will watch over baby, and give him back to you again some day, quite safe."

"Will He?"

The tone was submissive, half-inquiring; like that of a child learning something it had never learned before—as Selina was now learning. Perhaps, even those three short weeks of motherhood had power so to raise her whole nature, that she had now gained the composure with which even the weakest soul can sometimes meet death, and had grown not unworthy of the dignity of a Christian's dying.

Suddenly she shivered. "I am afraid; I never thought of—this. Will nobody come and speak to me?"

Oh, how Elizabeth longed for Miss Hilary, for anybody, who would have known what to say to the dying woman; who perhaps, as her look and words implied, till this hour had never thought of dying. Once, it crossed the servant's mind to send for some clergyman; but she knew none, and was aware that Mrs. Ascott did not either. She had no superstitious feeling that any clergyman would do; just to give a sort of spiritual extreme unction to the departing soul. Her own religious faith was of such an intensely personal silent kind, that she did not believe in any good to be derived from a strange gentleman coming and praying by the bedside of a stranger, repeating set sayings with a set countenance, and going away again. And yet with that instinct which comes to almost every human soul, fast departing, Mrs. Ascott's white lips whispered, "Pray."

Elizabeth had no words, except those which Miss Leaf used to say night after night in the little parlour at Stowbury. She knelt down, and in a trembling voice repeated in her mistress's ear,—
"Our Father which art in heaven,"—to the end.

After it Mrs. Ascott lay very quiet. At length she said, "Please—bring—my—baby." It had been from the first, and was to the last, "my" baby.

The small face was laid close to hers that she might kiss it.

"He looks well; he does not miss me much yet, poor little fellow!" And the strong natural agony came upon her, conquering even the weakness of her last hour. "Oh, it's hard, hard! Will nobody teach my baby to remember me?"

And then lifting herself up on her elbow, she caught hold of nurse.

"Tell Mr. Ascott that Elizabeth is to take care of baby. Promise, Elizabeth. Johanna is old—Hilary may be married—you will take care of my baby?"

"I will—as long as I live," said Elizabeth Hand.

She took the child in her arms, and for almost another hour stood beside the bed thus, until nurse whispered, "Carry it away, its mother doesn't know it now."

But she did; for she feebly moved her fingers as if in search of something. Baby was still asleep, but Elizabeth contrived, by kneeling down close to the bed, to put the tiny hand under those cold fingers; they closed immediately upon it, and remained so till the last.

When Miss Leaf and Miss Hilary came in, Elizabeth was still kneeling there, trying softly to take the little hand away; for the baby had wakened, and began its piteous wail. But it did not disturb the mother now.

"Poor Selina" was no more. Nothing of her was left to her child except the name of a mother. It may have been better so.

CHAPTER XXV.

"IN MEMORY OF SELINA,

THE DELOVED WIFE OF PETER ASCOTT, ESQ.,
OF RUSSELL SQUARE, LONDON,
AND DAUGHTER OF

THE LATE HENRY LEAF, ESQ.,
OF THIS TOWN.

DIED DECEMBER 24, 1839,
AGED 41 YEARS."

SUCH was the inscription which now, for six months, had met the eyes of the inhabitants of Stowbury, on a large dazzlingly white marble monument, the first that was placed in the churchyard of the New Church.

What motive induced Mr. Ascott to inter his wife here; whether it was a natural wish to lay her, and some day lie beside her, in their native earth; or the less creditable desire of showing how rich he had become, and of joining his once humble name, even on a tombstone, with one of the oldest names in the annals of Stowbury—nobody could find out. Probably nobody cared.

The Misses Leaf were content that he should do as he pleased in the matter; he had shown strong but not exaggerated grief at his loss; if any remorse mingled therewith, Selina's sisters happily did not know it. Nobody ever did know the full history of things except Elizabeth, and she kept it to herself. So the family skeleton was buried quietly in Mrs. Ascott's grave.

Peter Ascott showed, in his coarse fashion, much sympathy and consideration for his wife's sisters. He had them staying in the house till a week after the funeral was over, and provided them with the deepest and handsomest mourning. He even, in a formal way, took counsel with them as to the carrying out of Mrs. Ascott's wishes, and the retaining of Elizabeth in charge of the son

and heir, which was accordingly settled. And then they went back to their old life at Richmond, and the widower returned to his solitary bachelor ways. He looked as usual; went to and from the City as usual; and his brief married life seemed to have passed away from him like a dream.

Not altogether a dream. Gradually he began to wake up to the consciousness of an occasional child's cry in the house; that large, silent, dreary house, where he was once more the sole, solitary master. Sometimes, when he came in from church of Sundays, he would mount another flight of stairs, walk into the nursery at the top of the house, and stare with distant curiosity at the little creature in Elizabeth's arms, pronounce it a "fine child, and did her great credit," and walk down again. He never seemed to consider it as *his* child, this poor old bachelor of so many years' standing; he had outgrown apparently all sense of the affections or the duties of a father. Whether they ever would come into him; whether, after babyhood was passed, he would begin to take an interest in the little creature who throve and blossomed into beauty,—which, as if watched by guardian angels, dead mothers' children seem often to do,—was a source of earnest speculation to Elizabeth.

In the meantime, he treated both her and the baby with extreme consideration, allowed her to do just as she liked, and gave her indefinite sums of money to expend upon the nursery.

When summer came, and the doctor ordered change of air, Mr. Ascott consented to her suggestion of taking a lodging for herself and baby near baby's aunts at Richmond; only desiring that the lodging should be as handsome as could be secured, and that, every other Sunday, she should bring up his son to spend the day at Russell Square.

And so, during the long summer months, the motherless child, in its deep mourning—which looks so pathetic on a very young baby—might be seen carried about in Elizabeth's arms everywhere. When, after the first six weeks, the wet nurse left—in fact, two or three wet-nurses successively were abolished—she took little Henry solely under her own charge. She had comparatively small experience, but she had common sense, and the strong motherly instinct which comes by nature to some women. Besides, her whole soul was wrapped up in this little child.

From the hour when, even with her mistress dying before her eyes, Elizabeth had felt a strange thrill of comfort in the new duty which had come into her blank life, she took to this duty as women only can whose life has become a blank. She received the child as a blessing sent direct from God; by unconscious hands—for Mrs. Ascott

knew nothing of what happened; something that would heal her wounded heart, and make her forget Tom.

And so it did. Women and mothers well know how engrossing is the care of an infant; how each minute of the day is filled up with something to be done or thought of; so that "fretting" about extraneous things becomes quite impossible. How gradually the fresh life growing up and expanding puts the worn-out or blighted life into the background, and all the hopes and fancies cling around the small, beautiful present, the ever-developing, ever-marvellous mystery of a young child's existence! Why it should be so, we can only guess; but that it is so, many a wretched wife, many a widowed mother, many a broken-hearted, forlorn aunt, has thankfully proved.

Elizabeth proved it likewise. She did not exactly lose all memory of her trouble, but it seemed lighter; it was swallowed up in this second passion of adopted motherhood. And so she sank, quietly and at once, into the condition of a middle-aged woman, whose life's story—and her sort of women have but one—was a mere episode, told and ended.

For Esther had left, and been married to Tom Cliffe, within a few weeks of Mrs. Ascott's funeral. Of course, the household knew everything; but nobody condoled with Elizabeth. There was a certain stand-off-ishness about her which made them hold their tongues. They treated her with much respect, as her new position demanded. She took this, as she took everything, with the grave quietness which was her fashion from her youth up; assumed her place as a confidential upper servant; dressed well, but soberly, like a woman of forty, and was called "Mrs." Hand.

The only trace her "disappointment" left upon her was a slightly bitter way of speaking about men in general, and a dislike to any chatter about love-affairs and matrimony. Her own story she was never known to refer to, in the most distant way, except once.

Miss Hilary—who, of course, had heard all, but delicately kept silence—one night, when little Henry was not well, remained in the lodgings on Richmond Hill, and slept in the nursery, Elizabeth making up for herself a bed on the floor close beside baby and cradle. In the dead of night the two women, mistress and maid, by some chance, said a few things to one another which never might have been said in the daylight, and which, by tacit consent, were never afterwards referred to by either, any more than if they had been spoken in a dream.

Elizabeth told briefly, though not without emotion, all that had happened between herself and Tom; and how he was married to Esther Martin.

And then both women went back, in a moralizing way, to the days when they had both been "young" at Stowbury; and how different life was from what they then thought and looked forward to,—Miss Hilary and her "bower-maiden."

"Yes!" answered the former with a sigh, "things are indeed not as people fancy when they are girls. We dream, and dream, and think we see very far into the future, which nobody sees but God. I often wonder how my life will end."

Elizabeth said, after a pause, "I always felt sure you would be married, Miss Hilary. There was one person—Is he alive still? Is he ever coming home?"

"I don't know."

"I am sure he was very fond of you. And he looked like a good man."

"He was the best man I ever knew."

This was all Miss Hilary said, and she said it softly and mournfully. She might never have said it at all; but it dropt from her unawares in the deep feeling of the moment, when her heart was tender over Elizabeth's own sad, simply-told story. Also, because of a sudden and great darkness which had come over her own.

Literally, she did not now know whether Robert Lyon were alive or dead. Two months ago his letters had suddenly ceased, without any explanation: his last being exactly the same as the others—as frank, as warmly affectionate, as cheerful and brave.

One solution to this was his possible coming home. But she did not, after careful reasoning on the subject, believe that likely. She knew exactly his business relations with his employers; that there was a fixed time for his return to England, which nothing except the very strongest necessity could alter. Even in the chance of his health breaking, so as to incapacitate him for work, he should, he always said, have to go to the hills, rather than take the voyage home prematurely. And in that case, he certainly would have informed his friends of his movements. There was nothing erratic, or careless, or eccentric about Robert Lyon; he was a practical, business-like Scotchman,—far too cautious and too regular in all his habits to be guilty of those accidental negligences by which wanderers abroad sometimes cause such cruel anxieties to friends at home.

For the same reason, the other terrible possibility—his death—was not likely to have happened without their hearing of it. Hilary felt sure, with the strong confidence of love, that he would have taken every means to leave her some last word—some farewell token—which would reach her after he was gone, and comfort her with the assurance of what, living, he had never plainly told. Sometimes, when a wild terror of his death seized her,

this settled conviction drove it back again. He must be living, or she would have heard.

There was another interpretation of the silence, which many would have considered the most probable of all—he might be married. Not deliberately, but suddenly; drawn into it by some of those impelling trains of circumstance which are the cause of so many marriages—especially with men; or, impelled by one of those violent passions which occasionally seize on an exceedingly good man, fascinating him against his conscience, reason, and will, until he wakes up to find himself fettered and ruined for life. Such things do happen—strangely, pitifully often. The like might have happened to Robert Lyon.

Hilary did not actually believe it; but still her common sense told her that it was possible. She was not an inexperienced girl now; she looked on the world with the eyes of a woman of thirty; and though, thank Heaven! the romance had never gone out of her—the faith, and trust, and tender love—still it had sobered down a little. She knew it was quite within the bounds of possibility that a young man, separated from her for seven years, thrown into all kinds of circumstances and among all sorts of people, should have changed very much in himself, and, consequently, towards her. That, without absolute faithlessness, he might suddenly have seen some other woman he liked better, and have married at once. Or, if he came back unmarried—she had taught herself to look this probability also steadily in the face—he might find the reality of her—Hilary Leaf—different from his remembrance of her; and so, without actual falsehood to the old true love, might not love her any more.

These fears made her resolutely oppose Johanna's wish to write to the house of business at Liverpool, and ask what had become of Mr. Lyon. It seemed like seeking after him,—trying to hold him by the slender chain which he had never attempted to make any stronger, and which, already, he might have broken, or desired to break.

She could not do it. Something forbade her; that something in the inmost depths of a woman's nature which makes her feel her own value, and exact that she shall be sought; that, if her love be worth having, it is worth seeking; that, however dear a man may be to her, she refuses to drop into his mouth like an over-ripe peach from a garden wall. In her sharpest agony of anxiety concerning him, Hilary felt that she could not, on her part, take any step that seemed to compel love—or even friendship—from Robert Lyon. It was not pride,—she could hardly be called a proud woman; it was an innate sense of the dignity of that love which, as a free gift, is precious as "much fine gold," yet becomes the merest dross—

utterly and insultingly poor—when paid as a debt of honour, or offered as a benevolent largesse.

And so, though oftentimes her heart felt breaking, Hilary laboured on; sat the long day patiently at her desk; interested herself in the young people over whom she ruled; became Miss Balquidder's right hand in all sorts of schemes which that good woman was for ever carrying out for the benefit of her fellow-creatures; and at leisure times occupied herself with Johanna, or with Elizabeth and the baby,—trying to think it was a very beautiful and happy world, with love still in it, and a God of love ruling over it,—only, only—

Women are very humble in their cruellest pride. Many a day she felt as if she could have crawled a hundred miles in the dust—like some Catholic pilgrim—just to get one sight of Robert Lyon.

Autumn came—lovely and lingering late. It was November, and yet the air felt mild as May, and the sunshine had that peculiar genial brightness which autumnal sunshine alone possesses;—even as, perhaps, late happiness has in it a holy calm and sweetness which no youthful ecstasy can ever boast.

The day happened to be Hilary's birthday. She had taken a holiday, which she, Johanna, Elizabeth, and the baby, had spent in Richmond Park, watching the rabbits darting about under the brown fern, and the deer grazing contentedly hard by. They had sat a long time under one of the oak-trees with which the Park abounds, listening for the sudden drop, drop of an occasional acorn among the fallen leaves; or making merry with the child, as a healthy, innocent, playful child always can make good women merry.

Still, Master Henry was not a remarkable specimen of infancy, and had never occupied more than his proper nepotal corner in Hilary's heart. She left him chiefly to Elizabeth, and to his aunt Johanna, in whom the grandmotherly character had blossomed out in full perfection. And when these two became engrossed in his infant majesty, Hilary sat a little apart, unconsciously folding her hands and fixing her eyes on vacancy; becoming fearfully alive to the sharp truth, that of all griefs a strong love unreturned or unfulfilled is the grief which most blights a woman's life. Say, rather, any human life; but it is worst to a woman, because she must necessarily endure passively. So enduring, it is very difficult to recognise the good hand of God therein. Why should He ordain longings, neither selfish nor unholly, which yet are never granted; tenderness which expends itself in vain; sacrifices which are wholly unneeded; and sufferings which seem quite thrown away? That is, if we dared allege of anything in the moral or

in the material world, where so much loveliness, so much love, appear continually wasted, that it is really "thrown away." We never know through what divine mysteries of compensation the Great Father of the universe may be carrying out His sublime plan; and those three words, "God is love," ought to contain, to every doubting soul, the solution of all things.

As Hilary rose from under the tree, there was a shadow on her sweet face, a listless weariness in her movements, which caught Johanna's attention. Johanna had been very good to her child. When, do what she would, Hilary could not keep down fits of occasional dulness or impatience, it was touching to see how this woman of over sixty years slipped from her due pedestal of honour and dignity, to be patient with her younger sister's unspoken bitterness and incommunicable care.

She now, seeing how restless Hilary was, rose when she rose, put her arm in hers, and accompanied her, speaking or silent, with quick steps or slow, as she chose, across the beautiful park, than which, perhaps, all England cannot furnish a scene more thoroughly sylvan, thoroughly English. They rested on that high ground near the gate of Pembroke Lodge, where the valley of the Thames lies spread out like a map, stretching miles and miles away in luxuriant greenery.

"How beautiful! I wonder what a foreigner would think of this view? Or any one who had been long abroad? How inexpressibly sweet and home-like it would seem to him!"

Hilary turned sharply away, and Johanna saw at once what her words had implied. She felt so sorry, so vexed with herself; but it was best to leave it alone. So they made their way homeward, speaking of something else; and then that happened which Johanna had been almost daily expecting would happen, though she dared not communicate her hopes to Hilary, lest they should prove fallacious.

The two figures, both in deep mourning, might have attracted any one's attention; they caught that of a gentleman, who was walking quickly and looking about him, as if in search of something. He passed them at a little distance, then repassed, then turned, holding out both his hands.

"Miss Leaf; I was sure it was you."

Only the voice; everything else about him was so changed that Hilary herself would certainly have passed him in the street, that brown, foreign-looking, middle-aged man, nor recognised him as Robert Lyon. But for all that it was himself; it was Robert Lyon.

Nobody screamed, nobody fainted. People seldom do that in real life, even when a friend turns up suddenly from the other end of the world. They only hold out a warm hand, and look silently

in one another's faces, and try to believe that all is real, as these did.

Robert Lyon shook hands with both ladies, one after the other, Hilary last, then placed himself between them.

"Miss Leaf, will you take my arm?"

The tone, the manner, were so exactly like himself, that in a moment all these intervening years seemed crushed into an atom of time. Hilary felt certain, morally and absolutely certain, that, in spite of all outward change, he was the same Robert Lyon who had bade them all good-bye that Sunday night in the parlour at Stowbury. The same, even in his love for herself, though he had simply drawn her little hand under his arm, and never spoken a single word.

Hilary Leaf, down, secretly, on your heart's lowest knees, and thank God! Repent of all your bitternesses, doubts, and pains; be joyful, be joyful! But, oh, remember to be so humble withal.

She was. As she walked silently along by Robert Lyon's side, she pulled down her veil to hide the sweetest, most contrite, most child-like tears. What did she deserve, more than her neighbours, that she should be so very, very happy? And when, a good distance across the park, she saw the dark, solitary figure of Elizabeth carrying baby, she quietly guided her companions into a different path, so as to avoid meeting, lest the sight of her happiness might in any way hurt poor Elizabeth.

"I only landed last night at Southampton," Mr. Lyon explained to Miss Leaf, after the fashion people have, at such meetings, of falling upon the most practical and uninteresting details. "I came by the Overland Mail. It was a sudden journey. I had scarcely more than a few hours' notice. The cause of it was some very unpleasant defalcations in our firm."

Under any other circumstances, Hilary might have smiled; maybe she did smile, and tease him many a time afterwards, because the first thing he could find to talk about, after seven years' absence, was "defalcations in our firm." But now she listened gravely, and by and by took her part in the unimportant conversation which always occurs after a meeting such as this.

"Were you going home, Miss Leaf? They told me at your house you were expected to dinner. May I come with you? for I have only a few hours to stay. To-night I must go on to Liverpool."

"But we shall be sure soon to see you again?"

"I hope so. And I trust, Miss Leaf, that I do not intrude to-day?"

He said this with his Scotch shyness, or pride, or whatever it was; so like his old self, that it

made somebody smile! But somebody loved it. Somebody lifted up to his face eyes of silent welcome; sweet, soft, brown eyes, where never, since he knew them, had he seen one cloud of anger darken, one shadow of unkindness rise.

"This is something to come home to," he said in a low voice, and not over lucidly. Ay, it was.

"I am by no means disinterested in the matter of dinner, Miss Leaf; for I have no doubt of finding good English roast beef and plum-pudding on your sister's birthday. Happy returns of the day, Miss Hilary!"

She was so touched by his remembering this, that, to hide it, she put on a spice of her old mischievousness, and asked him if he was aware how old she was?

"Yes: you are thirty; I have known you for fifteen years."

"It is a long time," said Johanna, thoughtfully.

Johanna would not have been human had she not been a little thoughtful and silent on the way home, and had she not many times, out of the corners of her eyes, sharply investigated Mr. Robert Lyon?

He was much altered; there was no doubt of that. Seven years of Indian life would change anybody; take the youthfulness out of anybody. It was so with Robert Lyon. When coming into the parlour, he removed his hat, many a white thread was visible in his hair, and besides the spare, dried-up look which is always noticeable in people who have lived long in hot climates, there was an "old" expression in his face, indicating many a worldly battle fought and won, but not without leaving scars behind.

Even Hilary, as she sat opposite to him at table, could not but feel that he was no longer a young man, either in appearance or reality.

We ourselves grow old, or older, without knowing it, but when we suddenly come upon the same fact in another, it startles us. Hilary had scarcely recognised how far she herself had left her girlish days behind, till she saw Robert Lyon.

"You think me very much changed?" said he, guessing, by his curiously swift intuition of old, what she was thinking of.

"Yes, a good deal changed," she answered truthfully; at which he was silent.

He could not read—perhaps no man's heart could—all the emotion that swelled in hers as she looked at him, the love of her youth, no longer young. How the ghostly likeness of the former face gleamed out under the hard, worn lines of the face that now was touching her with ineffable tenderness. Also, with solemn content came a sense of the entire indestructibility of that love which through all decay or alteration traces the ideal image still, clings to it, and cherishes it with a

tenacity that laughs to scorn the grim dread of "growing old."

In his premature, and not specially comely middle age, in his grey hairs, in the painful, anxious, half-melancholy expression which occasionally flitted across his features, as if life had gone hard with him, Robert Lyon was a thousand times dearer to her than when the world was all before them both, in the early days at Stowbury.

There is a great deal of sentimental nonsense talked about people having been "young together." Not necessarily is that a bond. Many a tie formed in youth dwindles away and breaks off naturally in maturer years. Characters alter, circumstances divide. No one will dare to allege that there may not be loves and friendships formed in middle life as dear, as close, as firm as any of those of youth; perhaps, with some temperaments, infinitely more so. But when the two go together, when the calm election of maturity confirms the early instinct, and the lives have run parallel, as it were, for many years, there can be no bond like that of those who say, as these two did, "We were young together."

He said so when, after dinner, he came and stood by the window where Hilary was sitting sewing. Johanna had just gone out of the room; whether intentionally or not this history cannot avouch. Let us give her the benefit of the doubt; she was a generous woman.

During the three hours that Mr. Lyon had been with her, Hilary's first agitation had subsided. That exceeding sense of rest which she had always felt beside him—the sure index of people who, besides loving, are meant to guide and help and bless one another—returned as strong as ever. That deep affection, which should underlie all love, revived and clung to him with a child-like confidence, strengthening at every word he said, every familiar look and way.

He was by no means so composed as she was, especially now when, coming up to her side and watching her hands moving for a minute or so, he asked her to tell him, a little more explicitly, of what had happened to her since they parted.

"Things are rather different from what I thought;" and he glanced with a troubled air round the neat but very humbly furnished parlour.

"And about the shop?"

"Johanna told you."

"Yes; but her letters have been so few, so short—not that I could expect more. Still—now, if you will trust me—tell me all."

Hilary turned to him, her friend for fifteen years. He was that, if he was nothing more. And he had been very true; he deserved to be trusted. She told him, in brief, the history of the last year or two, and then added:

"But after all, it is hardly worth the telling, because, you see, we are very comfortable now. Poor Ascott, we suppose, must be in Australia. I earn enough to keep Johanna and myself, and Miss Balquidder is a good friend to us. We have re-paid her, and owe nobody anything. Still, we have suffered a great deal. Two years ago; oh! it was a dreadful time."

She was hardly aware of it, but her candid tell-tale face betrayed more even than her words. It cut Robert Lyon to the heart.

"You suffered, and I never knew it."

"I never meant you to know."

"Why not?" He walked the room in great excitement. "I ought to have been told; it was cruel not to tell me. Suppose you had sunk under it; suppose you had died, or been driven to do what many a woman does for the sake of mere bread and a home—what your poor sister did—married. But I beg your pardon."

For Hilary had started up with her face all a-glow.

"No," she cried; "no poverty would have sunk me as low as that. I might have starved, but I should never have married."

Robert Lyon looked at her, evidently uncomprehending, then said humbly, though rather formally,—

"I beg your pardon once more. I had no right to allude to anything of the kind."

Hilary replied not. It seemed as if now, close together, they were farther apart than when the Indian seas rolled between them.

Mr. Lyon's brown cheek turned paler and paler; he pressed his lips hard together; they moved once or twice, but still he did not utter a word. At last, with a sort of desperate courage, and in a tone that Hilary had never heard from him in her life before, he said:—

"Yes, I believe I have a right, the right that every man has when his whole happiness depends upon it, to ask you one question. You know everything concerning me; you always have known; I meant that you should—I have taken the utmost care that you should. There is not a bit of my life that has not been as open to you as if—as if —. But I know nothing whatever concerning you."

"What do you wish to know?" she faltered.

"Seven years is a long time. Are you free? I mean, are you engaged to be married?"

"No."

"Thank God!"

He dropped his head down between his hands, and did not speak for a long time.

And then, with difficulty, for it was always hard to him to speak out, he told her, at least he somehow made her understand, how he had loved her. No light fancy of sentimental youth, captivated by every fresh face it sees, putting upon each one the colouring of its own imagination, and adorning not what is, but what itself creates: no sudden, selfish, sensuous passion, caring only to attain its object, irrespective of reason, right, or conscience; but the strong deep love of a just man, deliberately choosing one woman as the best woman out of all the world, and setting himself resolutely to win her. Battling for her sake with all hard fortune: keeping, for her sake, his heart pure from all the temptations of the world: never losing sight of her: watching over her so far as he could, consistently with the sense of honour (or masculine pride, which was it? but Hilary forgave it anyhow) which made him resolutely compel himself to silence: holding her perfectly free, while he held himself bound. Bound, by a faithfulness perfect as that of the knights of old, asking nothing, and yet giving all.

Such was his love; this brave, plain-spoken, single-hearted Scotsgirl. Would that there were more such men, and more such love, in the world!

Few women could have resisted it, certainly not Hilary, especially with a little secret of her own lying perdu at the bottom of her heart; that "sleeping angel" whence half her strength and courage had come; the noble, faithful, generous love of a good woman for a good man. But this secret Robert Lyon had evidently never guessed, or deemed himself wholly unworthy of such a possession.

He took her hand at last, and held it firmly.

"And now that you know all, do you think in time—I'll not hurry you—but in time, do you think I could make you love me?"

She looked up in his face with her honest eyes. Smiling as they were, there was pathos in them; the sadness left by those long years of hidden suffering, now for ever ended.

"I have loved you all my life," said Hilary.

THE MERCHANT OF THE FAR WEST.

(A FIRESIDE NARRATIVE FOR BOYS.)

BY THE EDITOR.

It was a magnificent autumnal evening. Our ship was covered with canvas towering to the very truck; her studding-sails spreading outwards like the wings of an immense sea-bird, and herself "staggering," as the sailors say, under a fresh quarter-wind, with as much as she could carry, neither less nor more. The horizon was clear—a rare thing at sea—and gave promise of a glorious sunset. We were in the middle of the Atlantic, and not a sail in sight; so that we seemed to be the living centre of the whole visible world,—of the ocean which swept around us, and the blue dome of the cloudless sky that descended over us, resting its huge rim upon the circumference of the plain of waters. The passengers had finished dinner, and were pacing the deck; or, broken up into little parties, were singing, telling stories, reading, or gazing over the bulwarks upon the ruddy rays of light becoming more intense in the western clouds that gathered round the setting sun. Such delightful evenings on shipboard always spread a happiness throughout the whole vessel. Sickness and moroseness are both banished; and those who ordinarily "dwell apart," become frank, affable, and communicative.

It was so with one of the passengers, whose appearance and manners had arrested my attention ever since we had left harbour. He was a man of ordinary stature, and of a light wiry make. There was something peculiarly striking in his countenance, yet one could hardly tell what that something was. The features were all small and well formed; the complexion dark and swarthy; the hair lank and jet black; the eyes—yes, therein lay the mysterious something.

For four days I never heard that man open his lips. He sat during meals at the corner of the table near the door of the saloon, nearly opposite to me, and separated always by a considerable gap from his next neighbour. He seldom raised his head while eating; never partook of more than one dish, and of that very sparingly, eating very rapidly, and never drank anything stronger than water; so that his meal, begun always late, and taken in silence, was over in a few minutes, and his seat again empty. When on deck he paced up and down from morning till night, speaking to no one, and apparently absorbed in his own thoughts. His step was as peculiar to himself as were his other manners; short and rapid, and noiseless, like a wild beast speeding onwards towards its prey, he seemed to glide along the deck. But no one could look at that face without feeling there was something behind it "out of the common." That eye! How quickly it glanced round, and seemed to fasten on everything and everybody; now changing to calm sadness, brooding in deep thought; or suddenly—one knows not why—becoming fixed with a sharp piercing glance of fire, beneath the contracted eyebrows, as if it gazed upon a spirit; while

the nostrils were distended, the lips compressed, and the features lighted up with deep emotion.

A total stranger myself to all the passengers, I could not make the inquiries which I felt prompted by curiosity to make, about this unknown person. But one day after dinner—on that beautiful autumnal evening I have described—two passengers beside me, while conversing about the great emigration then taking place from the United States to the shores of the Pacific, happened to forget the name of some dangerous pass. "What is the name?" exclaimed a Yankee, stamping his foot with irritation, and knitting his brow. "Jonada del Muerto between Chihuahua and Santa Fe," said the unknown one, without lifting his eyes or speaking another word; then rising from his seat, he proceeded to the deck as if he had uttered something in a dream.

"Queer chap, that!" remarked one of the speakers, as he gazed after him; "I knew *he* knew it, if man did."

"Who is he?" I inquired.

"Well, I expect," said the Yankee, "that he does some business in the far west. I heard a St. Louis man—that tall, red-haired fellow at the other table—say, that his life would be one of the *loudest* in any language, if it were in print."

This description, peculiar though it was, made me desire a closer acquaintance with the stranger; and, accordingly, I was soon on the quarter-deck beside him, and after a few distant and cautious approaches, based upon the state of the weather, the appearance of the ship, and prospects of the voyage, etc., I managed to come so near him as to ask, alluding to his remark in the cabin, whether he had travelled far in the west? His answer, expressed in quiet and courteous language, prompted other questions; and these led to replies and counter-questions, until hour followed hour, and the gorgeous sunset was hardly noticed, and the rush of the waves was unheard, and the heave and pitch of the vessel unperceived, and the whole scene around me became as a dream.

My companion was one of those characters to which an island like ours can no more afford room than a crib in the zoological gardens can afford scope to the camel or antelope for the display of their endurance or swiftness. His life, in its several features, may be very briefly stated. He was a German, well born, and connected with at least one noble family in Scotland. He had early left Europe to "push his fortune" in America. Partly from a love of adventure, and partly from the hope of opening up a new line of trade, he had, soon after landing, travelled across the continent, and penetrated north to the Columbia River, and south to Mexico and California. He ended by purchasing some mules, loading them with merchandise suited for sale or barter; and taking a few intrepid spirits with him to share the dangers and profits of his enterprise, he commenced a regular

business, which had increased upon his hands, until at last—after fourteen years of great success and singular endurance—he was eminently “the merchant of the wilderness.”

His plan of operations was this:—He had thirty waggons, each waggon having attached to it ten to twelve mules, guided by two men, dead shots, armed with rifles. Their caravan, therefore, consisted of about 350 mules and 60 men.

“Now, suppose these waggons loaded with merchandise, purchased chiefly in Manchester, and worth many thousand pounds,” I asked the merchant, “what was the journey which they pursue?”

“Why, I’ll tell you,” was his reply. “It’s rather a long one. Starting from New York or Philadelphia, I go right across to Ohio—sail down the river to the Mississippi—up the Mississippi to St. Louis—from St. Louis up the Missouri to Fort Independence, four miles inland; and there we all meet and begin our real journey *in earnest* to the west.”

“Pray, how far must you travel before beginning what you call your *real* journey?”

“Oh! not far—only across the United States, and down one river and up another—let me see—perhaps about two thousand miles.” A pretty long introductory start, thought I.

“But whither,” I asked, “after your start from Fort Independence?”

“Twenty miles,” he replied, “bring us across the Indian lines, and then we are clear of the settlements. Our course lies almost due west by south, for about a thousand miles across the prairie, until we strike the river Mora, ninety-five miles east from Santa Fe. Passing a spur of the Rocky Mountains, called Taos, I divide my company; sending thirty of my best men with the half of the goods along the Rocky Mountains, and as far as the Columbia, to trade with Indians and trappers for their furs. This journey occupies about six months. I proceed myself with the second division due south for about twenty-one hundred miles more to Durango and Zacatecas.”

“And how long does this journey take?”

“I leave Fort Independence in the month of April, and reach Santa Fe in about three months; and in six months more I am back to Santa Fe from the south on my way home. For fourteen years I have been altogether only about three years in the settlements. I have constant travelling each year at the rate of about six hundred miles a month.”

Such was the route of the merchant of the wilderness. Perhaps some of my young readers may endeavour to trace it on a map? It is something like a journey!

Space would fail me to recount a tenth of his strange adventures and hair-breadth escapes. The mere physical strength required for such a journey is immense. He and his men, during the twenty-four hours, had never more than two and a half hours of sleep; and were obliged to supply themselves with food by hunting the buffalo, or killing any game they chanced to meet. They cooked on fires made from the dry dung gathered from the grassy prairie, and lived for months without bread or vegetables. It is seldom that such visitations can be provided against. Two or three years before I met the merchant, he had been placed

in circumstances which demanded all his courage and decision of character. They occurred somewhere near the Rocky Mountains, and during one of those sudden and heavy falls of snow which he has once or twice encountered in his journey, and which lasted for *five weeks* at a time. The cold at this time was extreme. After toiling some days through the snow to reach a river, the whole company got so benumbed and downhearted, that a halt was called by one of his men, who had, on more than one occasion, exhibited a tendency to rebellion. They all refused to go farther, though the river was within marching distance before sunset, if they put forth all their energies to gain it. The plan of the mutineers was probably to desert the waggons, and go off with the mules. I forget now the details of the story. But I well remember the description he gave of his feelings, when he found himself hundreds of miles from any settlement, in the presence of sixty determined men with loaded rifles, and on the verge of mutiny. He knew that not a moment was to be lost. So, going up to the ringleader, he commanded him to mount and proceed. On his refusal, the merchant drew a pistol and shot him dead! He then went to the next, and gave the same command. The mesmeric power of fearless determination and authority was felt, and the whole band proceeded. He took the first opportunity of explaining all his reasons to them; and while they admitted, after their danger and sufferings were over, that he was right, and had saved their lives, he insisted upon giving himself up to justice when he reached the States. Being freed from blame, he then petitioned Congress for a law to regulate such authority as his in the wilderness.

“Were you not afraid of your life?” I asked.

“With sixty rifles against me,” he replied, “my life was easily taken. Either of us must succeed. If they did so, we must all have perished; if I did so, we were safe: I was like the captain of a mutinous crew at sea.” What firmness, courage, and self-reliance from a sense of right!

One of the most singular escapes he had was during his last journey home. From some unknown cause, probably the flooding of distant rivers—the prairies often become like a shoreless sea, full of scattered green islands, which mark the more elevated knolls. One morning, he and his band found themselves on such an island.

“We had just reached,” he said, “Prairie Fork, —two hundred and fifty miles from the nearest settlement at Fort Independence. The creeks were full. To proceed with our mules, for even a few miles, was impossible. Most of my men would have been drowned. Fortunately, they had a large quantity of buffalo meat, and from the space of ground which was dry, and the probability of the water somewhat abating, food could be obtained for the mules. But the settlements *must* be reached to get assistance, or all might perish. I resolved to make the attempt on foot. Taking a small quantity of buffalo meat with me, I started alone, committing myself to the care of God,—for it was a terrible journey, such as I never had to encounter before, and never can again. I once rode with three mules eight hun-

dred and twenty miles in eight days, yet that was nothing to this journey! The water had risen forty feet in some places. After almost every mile of dry ground or shallow water, where I could wade, I was obliged to swim some creek or deep gully. One night I swam six large creeks. The cold was also great; yet, by God's help, I travelled the two hundred and fifty miles in twelve days. I could not have slept more than two hours in the twenty-four, and then it was a sort of feverish dose in my wet clothes, on a prairie knoll. For the last four days I had not a particle of food, and was compelled to eat, or rather to gnaw, my leather *moccasins* and braces. My clothes were almost all torn from my back. To add to my sufferings, I strained my ankle, and for the last hundred and ten miles—wet, naked, famished—I dragged myself along with great agony. I at last reached the end of my journey, dreadfully swollen; and for six weeks I was confined to bed. Assistance was sent my men by a large escort with light canoes. With the loss of many of my mules, they at last arrived, but took five weeks to perform the journey. Thank God, I saved them! But it was worse than even the *Jonada del Muerto*." I was told that this adventure had attracted great notice in the United States at the time, though I never met any account of it. I believe it was strictly true.

Another "peril in the wilderness" is from the Indians. The Blackfeet and *Raphoes* are the deadliest enemies to the white man: no distance will weary them. The merchant arranged his camp every night in preparation for an attack. The waggons were drawn up in a double van; the mules and men in the centre; while a watch was placed outside. If the alarm was given, his men with loaded rifles ranged themselves under the protection of the waggons, and thus their position was almost impregnable. Often, however, in a desperate attack, they came to hand-and-hand struggle; but though occasionally some one of his men were killed, they came off always conquerors in the end. A ludicrous incident occurred in one of these engagements. One of his men had been scalped by the Indians some years before, and survived, as very few have ever done the terrible operation. He procured a wig when at the settlements, and again was in a *scrimmage* with the savage foe; and again the knife was ready to encircle the head whose hair was seized by the Indian, when, lo! the whole scalp came away of its own accord, and the bald head lay shining on the grass! The Indian looked horror-struck. Expecting to meet a foe, he was persuaded that he had met a magician, and dropping both the wig and his tomahawk, he fled with a yell from the field of battle, leaving the enemy in possession of his precious life, and of his precious peruke, with the tomahawk to the bargain, as a trophy!

Some of the Indian tribes are all cavalry regiments. The *Cumanchoes* are a splendid race, numbering many thousands. They are all beautiful riders, women as well as men, and their hair being permitted to grow until it reaches far down their back, waves gracefully in the wind as they charge at full gallop. Their ease on horseback, the singular rapidity and agility of their move-

ments, can only be equalled by the most practised riders. This moment they sit erect, in the next they are invisible. While charging, they stoop down, and draw the bow on the right side of the horse's neck, but, suddenly stopping, the horse is wheeled round, and nothing is visible but a part of the foot of the rider; his whole body is now hanging down on the other side of the horse, and his existence is discerned only by the arrow that comes whizzing from the unseen foe. The practised rifleman often shoots through the horse's neck to hit the *Cumanchoe's* head, which he knows to be on the other side. So chivalrous are these Arabs of the western desert, that they often give warning of their intended attack, that there may be a fair stand-up fight. I may add, that they are all teetotallers, a virtue which, in the absence of charity in the Indian, may yet by some be thought capable of covering a multitude of sins in themselves, though the warriors deem it essential as a means of inflicting severer chastisement on others.

But the Blackfeet! These are the black snakes in the grass. The poor trappers have singular escapes from them. Unless I had perfect confidence in my informant, the facts which he related, and which others have since confirmed, of what some men are capable of enduring while effecting their escape from these wolf-like pursuers, seem altogether incredible.

"Well," said the merchant, "it is wonderful! Such a fellow as Kidcarstens, for instance—"

"Who was he?" I asked.

"Oh! a famous half-bred, who all his life was among those wilds. Kidcarstens was once roused up by four warriors of the Blackfeet, who had vowed to kill him, as he had scalped one of the tribe in battle. They came on him as he was trapping on the North Fork, more than two hundred miles from Taos. I know the spot well. He had nothing for it but to throw away his precious rifle and traps, and run for his life. He did so, and Jack *could* run, I assure you; he was all small bone, with muscle like whip-cord. He never stopped, ate, or slept, till he reached Taos; and then he was only a few miles ahead of his foe. He stopped to drink in crossing the streams; that was all he had during the terrible race!"

"A race of two hundred miles! impossible!" I exclaimed.

"Longer, sir,—longer, I believe; I have taken three days to the same journey on horseback, at the rate, I calculate, of more than seventy miles a day. No man who knows the Blackfeet and Kidcarstens would doubt it. They beat most runners; but Jack beats all!" "Talking of escapes from Indians," he continued, while he burst into a hearty laugh—a rare thing for my singularly grave friend, who seemed often to have caught the statue-like composure of the Redskin—"the best I ever knew was old *Peg-leg Smith*. We called him Peg-leg because he had a wooden leg. He trapped along the Rocky Mountains, and sold to me, or to the Hudson Bays, at the mouth of the Columbia. Peg had a white horse—his only companion for many a long day. His weapons were a long bowie-knife, and a rifle that never missed; but powder and shot were more precious to him than gold or diamonds. He knew the haunts of the Indians, and their habits so well,

that he managed generally to keep out of the way of unfriendly tribes. But once on a time either Peg was out of his way, or some roving Blackfeet were out of theirs, and so they spied him, and he fortunately spied them. Well, I need not tell you that the white horse was soon put to his paces, to gain the nearest but yet distant settlement of friendly Indians. Away went Peg, and after him went the Blackfeet, with a yell that might have made any man but an old trapper give up in despair. Miles were soon passed, until the savages were a good way behind, and sometimes out of sight; but he knew well that, once on his trail, they would run along it, without a halt, like bloodhounds, ay, weeks after he had passed; for these fellows can follow up the trail of a deer even six weeks after he has gone over the ground, and can detect his track however frequently crossed by others; and, in the end, run him down! Poor Peg's horse left a surer impression behind than the deer! The enemy was coming on. Once dark, he thought he would cheat them, and arrive among his friends before daybreak. But the old horse was becoming wearied. The sun had yet a good yard or two to descend. On he went, however, for some miles farther, always keeping a good look-out towards his rear, till, on reaching a height, he saw two of his enemies far off, but other two very close upon him, in full cry; so that it was evident they must very soon come up with him, more especially as he had entered on a mountain path. What was to be done? A few minutes more and they must be on him! He first unslung his rifle. He must risk one shot at all events, though but one more remained in his pouch. He made another preparation, which I shall tell you of immediately. Halting on a rising knoll, he dismounted, made his obedient horse stand like a statue, and calmly waited the approach of the two Indians, who must suddenly appear round a sharp turn, towards which he pointed his unerring rifle. Suddenly one of the enemy rushed on the path with a cry of surprise, and, in a moment, lay dead. The other appeared in a second after, when Peg-leg, having unstrapped his wooden leg, flourished it over his head; then presenting the stump to the foe, he flung the wooden leg at the Indian's head! But the savage, seeing his companion dead at his feet, and seeing, too, as he fancied, a *real* leg coming towards him, he stood for a moment panic-struck by this exhibition of witchcraft, and, springing out of sight, was seen no more! Peg reached the settlement in safety, with his leg under his arm. The other Indians, he afterwards learned, had been warned by their companion to retire with all speed from the great wizard. Poor Peg-leg! The last time I saw him was at Jack Nolans', the tavern-keeper at Fort Independence. He had come in to sell his skins, and spend his money on drink, as he did every three or four years, for he had no other way of spending it. Banks are few, and securities uncertain, among the *Raphoes* and *Blackfeet*! Peg drank more than he could pay for, and Nolans seized the old horse for the debt, and told its master to die when and where he pleased, but he would get neither liquor nor horse till he paid for both. Alas! there was no trapping at Fort Independence. Peg could as well have paid your national debt. The horse was ac-

cordingly locked up in an outhouse, the door being fastened with a huge padlock, the key of which hung as an ornament near Mr. Nolans' bed. Early in the morning, Peg rose, stepped a few paces back from the padlock, covered the lock with his rifle, blew it open, limped in, and in a trice was mounted on the old horse. Mr. Nolans, alarmed by the shot, had come out in his night-dress to see what was the matter, but only got a peep of Peg, with his leg projecting like a bowsprit between him and the sky, on the top of a prairie knoll, waving his hand as he and his old horse retired once more to live, and I suppose to die, among the Rocky Mountains!

"What a life!" said I.

"Ah! my friend, you have never tried it! Once begun, it has a charm which acts like spirits to a confirmed drunkard; you may suffer from it, but habit prevents you from giving it up. I begin to fear I myself could never live in the settlements. As for such a man as Peg-leg Smith doing so, you might as well try and get an eagle to strut along the streets of New York."

The last time I saw the merchant was in Liverpool; and after a long chat, he wished to give me, as a parting gift—will the reader guess what?—a scalp of an Indian whom he had slain in battle! I begged he might not take the trouble of searching for the relic. But a chord had been touched by the very mention of the scalp, and he fell into a reverie staring at the fire, while he slowly smoked his cigar. At last the puffs of smoke got quicker and quicker—the stern expression came to the eye—till, stamping with one foot on the floor, and clenching his hands, he said with intense energy, "I shall yet do for him!" "For whom?" I inquired. "That scoundrel *Raphoe* Indian who shot my brother!" In the rich and populous "settlement" of Liverpool he was dreaming of the far west, and arranging, in his own mind, for his next attack upon the *Raphoes*, to revenge the death of a brother whom they had killed!

The last accounts I received of A. S., the merchant of the wilderness, were lately from an old friend who now resides in Mexico. On asking him whether he had ever heard of such a person, he replied: "His name has been well known in Mexico and the Far West for nearly thirty years as a very remarkable, honest, enterprising, and daring man. But I have lost sight of him for years. He returned, I believe, to Germany, after having made money in California, but could not resist the attractions of the wilderness, and so he went back again to the Far West. The last thing I heard about him was an incident very characteristic of the man. A diligence in which he was travelling near Mexico was attacked by a strong party of banditti, and robbed. The only one of the passengers who showed fight was a little, athletic, black-eyed man, who sat on his luggage with a loaded revolver in each hand, gazing with a stern look on the banditti. 'I know,' he said, 'you cowardly scoundrels, that you can kill me and rob me, but not before two of you, at least, are first shot by me, for I never missed. So keep off!' They did keep off; and the merchant of the wilderness thus saved his life and property. I have not heard of him since." Such a strange life of energy and courage is worth knowing about.

AUTUMN.

HAPPY Tourist, freed from London,
The planet's murmur in the *Times*—
Seated here with task-work undone,
I must list the city chimes

A fortnight longer. As I gaze
On Pentland's back, where noon-day piles his
Mists and vapours; old St. Giles's
Coronet in sultry haze;

A hoary ridge of ancient town
Smoke-wreathed, picturesque and still,
Cirque of crag, and templed hill,
And Arthur's lion couching down

In watch, as if the news of Flodden
Stirred him yet—my fancy flies
To level wastes and moors untrodden,
Purpling 'neath the low-hung skies.

I see the burdened orchards, mute and mellow,
I see the sheaves ; and girt by reaper trains,
And blurred by breath of horses, through a yellow
September moonlight roll the swaggering wanes.

While in this delicious weather
The apple ripens, row o'er row,
I see the bunches of the heather
Purpling ledges. To and fro
In the wind the restless swallows
Turn and twitter. On the crag
The ash with all her scarlet berries
Dances o'er a burn that hurries
Foamily from jag to jag :
Now it babbles over shallows
Where great scales of sunlight flicker ;
Narrowed 'gainst the bank it quicker
Runs in many a rippled ridge ;
Anon in sullen pools and hollows
It slumbers ; and beyond the bridge,
On which a troop of savage children clamber,
The sudden ray comes out,
And scuds a startled trout
O'er burnished pebbles and through chasms amber.

To-day one half remembers
With a sigh,
In the yellow-mooned Septembers
Long gone by,
Many a solitary stroll
With an overflowing soul :
When the moonbeam, falling white
On the wheat fields, was delight ;
When the whisper of the river
Was a thing to list for ever ;

When the call of lonely bird
Deeper than all music stirred ;
When the restless spirit shook
O'er some prophesying book,
In whose pages dwelt the hum
Of a life that was to come ;
When I, in a young man's fashion,
Longed for some excess of passion—
Melancholy, glory, pleasure
Heaped up to a lover's measure,
Some unshaped experience
To o'er-leap the spirit's fence ;
When I dreamed that youth would be
Blossomed like an apple-tree,—
That fancy, in extremest age,
Would bloom within the spirit's sage,
Like the wall-flower on a ruin,
The brighter from the wreck it grew in.
So I dreamed. Aye one remembers
With a sigh those dear Septembers ;
And I start, as well I may :
I have wasted half-a-day.
The west is red above the sun,
The reverie is over, and the task-work is undone.

O mellow, mellow, orchard bough !
O yellow, yellow, wheaten plain !
Soon will reaper wipe his brow,
Gleaner glean her latest grain ;
October, like a gipsy bold,
Pick the berries in the lane ;
And dark November, woodman old,
Trudge through wind and rain.

ALEXANDER SMITH.

AT THE LAND'S END.

JUST a quarter of an hour ago, an aged man, the most intelligent and pleasant of ostlers, zealous in Methodism, and skilled in the characteristics of horses, said to the present writer, "Stand on that rock." And as he said the words, he pointed to a little flat expanse of granite, three or four feet square. The present writer obeyed. And then the aged and intelligent man added, emphatically and solemnly, "Now, sir, you are standing on THE LAND'S END."

When I used continually to read the life of that great and good man, Dr. Arnold (to whom, and to whose biographer, many thousands of human beings owe some of the most healthful influence that ever went to ameliorate their heart and life), I remember thinking, a good many times, that one subject in a list of subjects for English verses to be prescribed

to the boys of the sixth class, was a most suggestive one. It was, as the intelligent reader has anticipated, *The Land's End*.

One had a vague idea, that a great many fine things were to be said upon that subject. But if I ever thought what they were, I am sorry to say that they have quite vanished from remembrance now. At present, I can only look and feel, in a very confused fashion. For this is the Land's End. Here I am, on the extreme verge of England : this paper is laid on a rough granite rock, in a little recess which keeps off the wind. All this little headland is granite, shattered and splintered as if by lightning. The granite is in many places covered with lichens : and here and there a bright sprig of heather looks out from a little nook in which it has been able to root itself. The sea is roaring

eighty feet below. . . . Eighty feet make all the elevation : of course the mere height is very poor when compared with that of many bits of the Scotch coast. The descent to the sea is perpendicular : the sea below is not deep just at this point. Out, a mile and a half, from shore, you might see the Longships Rocks : detached islets rising in a line, very sharply out of the sea ; and running up almost into spires. On one of them is a lighthouse. Three men live in it. A few years ago, a young man who had been absent from his family for twelve years, came back to visit his old home hard by. His father was one of the keepers of the lighthouse ; and as it was his turn to take charge of the lights that month, he could not come ashore to see his son till a few days should pass. The morning after the son's arrival, it was too stormy to go out to the lighthouse to visit his father : and he came to this spot, to have as near a view as might be of the place where his father was. He fell over the rocks, and was killed. It is a touching story : if you cannot see why, I need not attempt to show you.

Off on the right, at three miles' distance, is a black-looking promontory, called Cape Cornwall. When you visit the place, my reader, the old man will tell you it is the only cape in England. There are heads : there are points : there is a ness : but there is no other cape. You would think that Cape Cornwall reaches into the sea farther than the Land's End itself : but your eye deceives you. It falls short of its more famous neighbour by several hundred yards. Looking down from this recess, you may see a number of rocks, greater and less, rising out of the sea : each with a ring of white foam at its base. Far out, you may just trace the outline of Scilly : for the day is not very clear.

When you come to this spot, my friend, you will have all the sights shown you by that most intelligent old man already mentioned : that is, of course, if he and you are spared to meet. You will see, very near the End, the deep marks of a horse's hoofs in the turf, within two feet of the verge. A stupid and blustering idiot once made a bet that he would ride on horseback to the Land's End : meaning to the very extremity of the little rocky headland. He forced his horse down the steep and rugged descent from the heathery plateau above, and upon the neck of turf-covered rock that joins the headland to the shore. But when the horse reached this slippery neck, he testified how much more sense he had than the blustering idiot who rode him, by refusing to go any farther. The blustering idiot goaded him with whip and spur : and slipping upon the short turf, the poor creature fell ; and clung by his forefeet in the marks you see before making the awful plunge below. The fall was not into water, but upon sharp rocks ; and

the poor horse miserably perished. I lamented the horse's fate : and I could not but conclude that had his master been smashed instead of himself, the nobler creature of the two would have been saved ; and the loss to mankind would have been inappreciably small. It is fifty-five years since the horse's hoofs clung to that last hope : but the deep marks have been diligently kept clear, and they remain as when the horse was wickedly killed : serving as a monument of his sad fate, and of what a brainless fool his master was. After standing on the rocky table which is emphatically styled the *HEND*, you will clamber down a rough path ; and lie down at all your length on a very overhanging crag. Here your head will project much over the sea ; and the intelligent old man will keep a tight hold of your feet. And now, looking away to the right, you will discern the reason why you were brought to this precarious position. You will see that the rocky neck joining the End to the shore, is penetrated clear through by a lofty Gothic arch, through which the waves fret in foam. You will be told of another lesser arch, which you cannot see. These have been worn in the lapse of ages : and some day, if the world stands, the superincumbent rock will fall, and the Land's End will become a little rocky islet. You can see many traces in the rocks near, of the like having happened before. Doubtless the Cornwall coast once reached at least as far seaward as those Longships Rocks. And coming up from this spot, you will reach the neck once more : and here the old man (skilful ostler and zealous Methodist), if he thinks you a fit person so to distinguish ; if he sees you are a man or a woman who can sympathize with him and understand him ; will point with reverence to a square block of granite that looks through the turf : and tell you that a good man whose memory *he* holds very dear, and whose memory can be indifferent to no human being who reverences simple-hearted devotion to the best good of his fellow-creatures, has been before you here. "John Wesley stood on that stone, and made verses of poetry," said the old man to me : and I am glad to say that he then went on, with much simple solemnity, to repeat the verses from end to end. I doubt not you know them. They are the verses in which the good man tells us how, standing physically "between two seas : " standing on this narrow neck with the Atlantic chafing on either hand beneath ; he remembered that he, and every human being with him, stands morally and spiritually between two oceans more solemn than that ; and prayed humbly that the pilgrimage might end well for all. The writer is a churchman : churchman both by head and by heart : but when he heard again the simple lines (which he confesses struck him as extremely poor when tried by merely æsthetic rules), he could not but stand reverentially on the stone

where Wesley's feet had stood ; and think of the old man, with his white hair, his kindly face, his warm heart, and his beautifully starched bands ; and heartily ask, in a fashion very familiar to us all, for more of Wesley's single-minded spirit.

And now I have sent the old man away, thanking him very much for the intelligent and interesting way in which he told his story : and I wait here by myself. I have written these lines which you have read, since he departed. At a spot like this, a party of visitors along with you is fatal to your feeling the genius of the place : and after the most intelligent guide has told you all he can tell, it is a relief to get rid of him. I want to feel that I am here. And first, I am aware that I am not disappointed. I went many miles round to-day to see the Logan Rock. The Logan Rock is an imposition. It is a delusion and a snare. You are told it is a mass of granite weighing eighty tons : and that it is so balanced by nature on a pivot of stone, that a touch from the hand can make it rock back and forward. To rock back and forward is apparently an idea conveyed in Cornish speech by the verb *to log* : and the Rock, though its name be spelled as above, is called the *Loggin Rock*, to describe its nature. You drive or walk ten miles from Penzance, by fearfully steep roads the last miles, till you come to a very dirty little village at the top of a hill. I have seldom seen more squalid cottages. I wish I knew the name of the proprietor of the estate on which they are built. A man, who has been lounging about on the road to the village, approaches as you stop at the door of the neat little inn ; and the driver of the vehicle which has borne you from Penzance introduces him as your guide. You follow him along a well-defined path, through fields of ripening grain, for about half-a-mile. Then you come upon a rocky height, from which you discern the sea below you on two sides, within two hundred yards. You can indistinctly trace the outline of the walls of an ancient fortress upon that rocky height. Then you scramble down upon a little isthmus, as at the Land's End : the isthmus spreads into a little headland, made of huge blocks of granite. On either hand below you can see a beach of silvery white sand. As you are scrambling down the descent to the isthmus, you observe a man leisurely walking up the opposite ascent : and you become aware of the extent to which the division of labour is carried in that little Cornish village. One man is your guide to the Rock : his business is to conduct you along a path you could not possibly miss, even without a guide. A second man waits your arrival at the Rock : his business is to give it a push with his shoulder, and set it *loggin*. The Rock is a large mass, which may possibly weigh eighty tons : it certainly does not look as if it did. It lies on the

landward slope of the headland which you reach by the isthmus. And when the man puts his shoulder to it, and gives it a push, you may, if you shut one eye, and look very sharply with the other, see the rock move a distance of perhaps one inch : possibly two. Let me strongly advise the reader to spare himself the trouble of going to see that sight.

But sitting on a rock at the Land's End, you will not feel disappointed. The interest here is not the factitious one of seeing a large stone moved an inch or two. It is the interest of looking at a wild piece of rocky coast, round whose name there clusters a crowd of associations. How familiar the name is : how often, when a child, you pointed this place out on the map : how many times you have wondered what it would be like ; and wondered if you would ever see it ! A quarter of a mile out to sea, just below, there is a black-looking rock : on that rock at this minute there are sitting twelve cormorants. Now and then one of them skims off over the sea. The day has become overcast : there is not a soul near. You cannot help having an eerie kind of feeling. You think it wonderful to find yourself here.

Sitting here, I think of a passage in the works of the most pleasing of English essayists, whom the writer is so happy as to call his friend. You will find the passage in *Friends in Council*. In it, mention is made of an old lady, who firmly believed that three pounds given by her were equal to about five pound ten given by anybody else. Her money had cost so much thought and so much rigid saving to get it together. Sixpence by sixpence had been got together through patient self-denial : each separate shilling had formed the matter of long consideration. And the old lady felt it hard that the result of all this should be hardly and unsympathetically expressed by such words as three pounds. Of course the philosophic reader knows that it was merely that the poor old lady felt an interest in what was her own, which she could not feel in what belonged to anybody else. Had she been a person of greater enlightenment, she would have read in all her own little anxieties and schemings, the reflection of what was passing in the minds of those around her : and she would have concluded not that three pounds of her own were equal to six pounds of a neighbour's ; but rather that three pounds, no matter to whom belonging, made a serious and important thing. But the poor old lady's feeling was natural. I am not able, at the present moment, quite to repress a feeling entirely like it. It seems to me a far stranger thing that I should be here, than it would be that any one of a great many people I know should be here. They are venturesome folk. They go about a great deal. Nothing strikes them as very remarkable. When Mr.

Smith said in my hearing, that something or other happened when he was going into Jerusalem, I could not but look at Mr. Smith with great respect. But Mr. Jones, who has been everywhere himself, was quite free from any such feeling. You would hear or read quite coolly, my friend, that A or B had been at the Land's End. It is no great matter. But come yourself to this very spot where I am sitting : look round on this scene on which I have cast my eyes since I wrote the last sentence : and if you be a homely person who have never been beyond the limits of Britain, and who lead a quiet life from day to day somewhere in a quiet rural parish in Scotland, you will feel it curious to find yourself here. And if you be a sensible person, you will not think it a fine thing to pretend that you do not feel it so.

You remember what Sydney Smith said of Scotland. He said, no doubt, many things on that subject : but the thing to which I refer is the statement that Scotland is "the knuckle-end of England." There is a certain degree of truth in the statement. After you have spent a little while in Surrey, or Sussex, or Wiltshire, in a very richly wooded part of either county : if you get into an express train on the North-Western Railway on the morning of a summer day, and travel on by daylight through Staffordshire and Lancashire, through Cumberland and Lanarkshire, till you arrive at Glasgow, you will be aware that Sydney Smith's metaphor corresponds with your own feeling. You will be aware that as you travel towards the North, the trees are gradually growing smaller, the fields less rich, the whole landscape barer and bleaker : you will remember that nightingales do not sing north of Leeds, and you will think of other little traces of something like a physical decadence. But the impression made upon you will vary according to the line of country you pass through. I could take you to tracts in Scotland where the trees and hedges and fields are as rich, and the air as soft and pleasant, as anywhere in Britain : and where you add to the charms of the sweet English landscape, the long summer twilights which England wants. The true knuckle-end of England is here. And you will feel that, if you come to this place through the rich plains traversed by the Great Western Railway ; or (better still) by that railway which comes by Salisbury, Sherborne, and Honiton to Exeter, through a country where at every turn you feel you are looking on a landscape which is your very ideal of beautiful England : and where churches and churchyards abound, so incomparably lovely in architecture and situation, that on a pleasant summer day one could hardly wish for better than to sit down on an ancient tombstone, and look for an hour at the fair piece of grey Gothic, at the green

ivy, and the great elms. And the churches come so frequently, that one cannot but think of the happy life of duty and leisure which may well be led by the unambitious country parson there. His population is probably so small that he is free from that constant sense of pressure under which the clergy in many places are now compelled to live. He may write his sermon without being worried by the thought of a dozen things waiting to be attended to ; and he may sit down under a large tree in the churchyard and meditate, without knowing that meditation is a luxury in which he has not time to indulge. But come on towards the West, and you will find the gradual approach to the knuckle-end. The juiciness and richness of the leg of mutton, pass slowly into tendon, skin, and bone. In Devonshire, you have Scotch irregularity of outline in the landscape ; but there is English luxuriance in the hedges and wild-flowers ; and more than English softness in the air. You enter Cornwall, over Brunel's wonderful but remarkably ugly suspension bridge at Saltash ; and you very soon feel that you have reached a tract entirely different from the ideal English country. The land is remarkably diversified in surface : steep, ups and downs everywhere : and now and then, as you fly along in the railway train, you pass over a deep narrow gorge, spanned by the flimsiest wooden bridge that ever formed part of a line of railway. Sometimes these gorges are of vast depths. They occur perpetually : and they are always crossed by the like unsubstantial structures. For many miles after entering Cornwall, the country is very richly wooded. You may see all kinds of forest trees growing luxuriantly ; and many orchards, thickly crowded with apple-trees. But after you have passed Truro, there is a total change. The engine pants and struggles, as it hardly draws the train up inclines of extraordinary steepness : and you begin to see all round you heather and granite : great bare stretches of country with tin mines here and there, and rare woods of stunted pine. The railway brings you to Penzance, a pretty little town ten miles from the Land's End, which has the advantage of a climate of wonderful mildness. Granite is the stone here : almost every building is formed of it. The town is situated at one side of a considerable bay. Across the bay, three miles off, is St. Michael's Mount, rising out of the sea. St. Michael's Mount, it will be remembered, was in former days the residence of the Giant Cormoran, whose destruction formed the first recorded exploit of Jack the Giant-Killer. You leave Penzance and journey westward : probably in a phaeton drawn by a black horse. There is a rich country for the first two or three miles : then you enter a district very bleak and desolate. The

cottages are rude and squalid : the churches, all of granite, are rare and large ; and look as if they were accustomed to be battered by heavy storms. You pass through the last village, which is about a mile from the sea : and then you go along a lane, through a great field whose surface is made of granite, heather, and yellow furze as short as heather. You see the sea before you, stretching far away : but the ground over which you are going swells so much, that it hides the rocky shore. Passing through that final large field, you might expect to come upon a sandy beach at last. At length you stand before a little cottage, an inscription on which tells you that it claims to be THE LAND'S END HOTEL : and here you will find the intelligent ostler, who guides you down a rough slope, not very steep, of granite, furze, and heather, till, after two hundred yards, you come upon the blunt promontory, whose extremity is by pre-eminence the End. The End does not reach into the sea so much as a hundred yards beyond the regular coast line. And the End is not the boldest portion of that rocky coast. Its height, as has been said, is about eighty feet perpendicular ; while the rocks on either hand must be in many places at least a hundred and fifty. And now, looking back on the way you have come, you feel how gradually the scene around you grew barer, as you came on. It was like a bad man growing old. Trees and hedges were left behind : corn-fields and cottages with little gardens : for the beautiful churches of Somersetshire, you have only that rude and stern erection which you passed a little since : and now you have come to this, that you have no more than granite, and furze, and desolate sea. It is a most interesting spot to come to visit for a little while : but it would be a terrible thing to be condemned to live here for the remainder of your life. I cannot but think here of the unloved and unhonoured later days of some hoary reprobate : who, in a moral sense, has had his Somersetshire, then his Cornwall, and last his Land's End. And even though a man be not a reprobate, I believe that all life, apart from the presence of religion, is a going down hill. It is leaving behind, from year to year, the trees and flowers : leaving the soft green fields and the rich hedgerows : till you come at length to wastes of furze and heather ; and end at last in stern rocks and pathless sea.

It was of this that the writer thought longest, sitting at the lonely Land's End ; and this was something, let me confess, that never once occurred to me when reading Arnold's life, and musing on his theme for English verses. Another thing which will probably occur to the reader, when he shall visit the same place, will be, what a solitary and small being he himself will be there. The

writer's home, at this moment, is seven hundred and forty miles away. Probably it is a good deal less, if you could go in a direct line ; but such is the tale of the miles which he has traversed to reach this spot. And you will know, my friend, how misty and how far away your daily life and your home will seem, when you sit down by yourself in any lonely place, with all your belongings hundreds of miles distant. Going away alone, you truly leave great part of yourself behind. Your mere individuality is a very small thing in size. Great men, such as kings and nobles, have occasionally had this truth disagreeably impressed upon them. A man with a magnificent estate must feel as though those green glades and magnificent trees were a portion of himself, and as if you must see all these things, and add them to himself, before you can understand how big an object he really is. But small men feel that too. They feel as though, to reckon what they are, you must add to the little object that sense reveals to you, the path they have come through life ; the labour they have come through : the griefs and joys they have felt : the atmosphere and the surroundings amid which they live at home. I thought of this, one afternoon last winter. The ground was covered with snow : it had grown almost dark : going down a steep street, in which were a good many passers-by, I beheld the dim form of a poor fellow who has but one arm. There he was, a little figure, walking along as fast as he could, going home. You would have said, a more thoroughly insignificant atom of humanity could hardly be. But I knew all about that man's humble home : and I knew how much depended on him there. Not many weeks before, his poor, careworn wife had died : and at that minute, he was going home to his children, four little things, the eldest but seven years old, to whom he now had to be all. Anything befaling that insignificant man, would be to those four children an infinitely more important event than the separation of the Northern and Southern States of America. If we knew more about our humblest fellow-creatures, my reader : if we knew what they have borne and done, and what they have yet to bear and do : if round the unnoticed little personality there were even the dim suggestion of its cares and belongings : we should feel more sympathy for every man ;—we should regard no mortal as insignificant. I sometimes find people who talk of the great majority of their fellow-creatures as CADS : people who, in another country, would doubtless stand up vigorously for slavery. Let me say, that when I call to mind what I have known of those whom some heartless fools would call so ;—when I think of their sufferings, their cares, their patience, their resignation,

their sacrifices for one another ;—my feeling towards the fools to whom I have alluded, passes from contempt, and turns to indignation. Would that we had all some of the truly Christian spirit of the heathen poet, who told us how much of sympathy with everything human he felt as incumbent upon him, forasmuch as he himself was a man !

But now, my friend, I must go. I shall never see the Land's End any more. But I have had it

all to myself for these two hours ; and it has become a possession for ever. Yesterday, it was a vague name : now, it is a clear picture, and it will always be so. It is not in the least like what I had expected. No person nor place you ever saw, is the least like what you expected. But now, I seem to have known it for a long time. And it is like parting from a friend to bid it good-bye. But the black horse has rested, and has been fed : and I have far to go to-day.

Good-bye !

A. K. H. B.

A DIALOGUE.

"AND what news have you got to-day, neighbour?" "Why, the Prince is going to be wed To the Princess-Royal of Denmark." "Ay, so I hear it is said ; And she'll be a grand young lady, there's no doubt at all ; but you see I never set eyes on the Prince in my life, and he knows nought about me."

"And what other news have you got, neighbour?" "Oh, terrible news ! Abroad, The great Garibaldi's taken and wounded." "Was he some lord, Or king ? But I know so little of those countries over the sea ; They seem to be always fighting ; it's a pity they cannot agree."

"Why, then, if you come to fighting, the Yankees are at it still, As hard as ever they were at the first." "Well, they must, then, if they will. I suppose they're a sort of cousins of ours ; but then they're so very far Removed, that it doesn't much matter to us how long they go on with the war."

"Now there you are out for once, neighbour ; for it's neither more nor less Than their keeping up of this war so long that's causing our great distress : They've given up growing their cotton, and sending us any to spin ; And that's the way things keep going wrong, you see, when once they begin."

"You're not a reader, like me, neighbour, or you wouldn't soon forget The things that they tell in the papers : my word, but they're sharply set In Lancashire now ! and it's my belief, if things don't soon work through, They'll be taking to dying off pretty fast, if there's nothing else left them to do."

"Why now, how would *you* like it, neighbour ? I think you would look rather blank, If you hadn't a shilling left in the house, nor a guinea left in the Bank ; If first you'd to part with your silver watch, and then with your handsome clock, And then with your quilt and blankets and bed, till at last you came to the stock."

"Until when you looked about your room there was nothing to see at all, But just a table, perhaps, and a chair, and the floor, and the roof and the wall ; And how would you like to pawn your best black coat that you've worn so long, Or your wife to have to go out to sell her good Sunday cloak for a song ?"

"I shouldn't like it at all, neighbour ; and as to my wife, why, she Would take on maybe if all were known, a great deal worse than me."

"And then, you see, when there's nothing to do, there's always so little to eat, And only think of the children, neighbour, how they must be missing their meat !

"Now there's that curly Jem of yours, that likes nothing he gets so well As what he gets with his granny and you, as I've heard you so often tell, That just when you're sitting down to your meat, he's sure to be peeping in ; You wouldn't like it so well, neighbour, to see him growing thin."

"I shouldn't like it all, neighbour, I tell you ; but where's the good Of talking when folks are starving, sure I'd help them if I could."

"Well, there's nothing so easy as that, neighbour, you haven't got far to send, It's only like taking a bit of your dinner across to an ailing friend."

"Why, not quite so easy as that, neighbour, for if things are as bad as you say, It's little to better them that one could do by giving them once in a way."

"Well, giving just once in a way, perhaps, *would* come rather short, but then There is nothing to stop us that I can see from giving them once and again."

"Why, that's very pretty talk, neighbour, but then to be always giving, Doesn't come quite so easy to folks like us that have to work hard for our living."

"Well, as to the matter of that, neighbour, if we have but little to spare, There'll just be the less to send, but still there may always be something to share ;

"We might all of us give far more than we do, and not be a bit the worse, It was never yet loving that emptied the heart, or giving that emptied the purse. We must be like the woman our Saviour praised, and do but the best we can."

"Ay, that will be just the plan, neighbour, that will be just the plan !"

DORA GREENWELL.

It Home in the Scriptures.

A SERIES OF FAMILY READINGS FOR THE SUNDAY EVENINGS OF NOVEMBER.

FIRST EVENING.

THE MINISTRY OF THE SPIRIT, SUPREME.

"Quench not the Spirit."—1 THESS. v. 19.

CHRIST the Son of God is himself the Saviour of sinners. He revealed the Father ; gave himself the just for the unjust ; rose from the dead ; ascended into heaven, and ever liveth to make intercession for us. The prophecy, "Believe in the Lord Jesus Christ, and thou shalt be saved," although originally spoken in reference to a particular case, is not "of any private interpretation." It is a rule absolutely universal ; it is true for all persons, in all times.

But when his work was done on earth, the Saviour of men ascended into heaven. It was, in his own judgment, expedient for his disciples that he should go away from their sight. Before his departure he promised to bestow the Holy Spirit the Comforter ; and after his departure he fulfilled his promise. When the Son ascended to plead with God for men, the Spirit came to plead with men for God. We have an advocate with

the Father ; the Father has an advocate with us. The office of the Spirit, as explained by the Lord himself, is effectually to apply Christ's redemption, and so glorify Christ. The Church is placed under the ministry of the Spirit, until the Lord come again in power.

In the beginning of the Gospel the Spirit was bestowed in two distinct forms ;—one, extraordinary and miraculous, for a limited time and a special purpose ; another, ordinary, not miraculous, for all times and all places. Let it be observed, however, that the ministry of the Spirit, which is not miraculous, is not on that account less divine. To provide bread through the ordinary processes of nature is as great a work as to feed five thousand on a few small loaves. The two are distinguished not by their magnitude, but by their form. Both alike require and imply omnipotence ; but in the one case the Omnipotent works in an

ordinary, and in the other in an extraordinary way. One form of the Spirit's ministry was needed eighteen hundred years ago to establish Christianity in the world; and another form of the Spirit's ministry is needed to establish Christ on the throne of a human heart to-day; "there are diversities of gifts, but the same Spirit; and there are differences of administration, but the same Lord; and there are diversities of operations, but it is the same God which worketh all in all" (1 Cor. xii. 4, 6).

The miraculous gifts of the Spirit, such as interpretation of tongues and the power of healing, were conferred upon the first apostles, for the purpose of enabling them to get a footing for Christ's kingdom in the world; when that object was gained, the miracles ceased. This is the representation given in the New Testament, and this is the fact as it may be gathered from the history of the infant Church. If any one is disposed to look with a sceptical eye on the supernatural gifts attributed to the apostles, we invite him to approach the facts from the opposite side, and observe the conclusion to which his inquiry must lead. The religion of Jesus spread. The Galilean fishermen prevailed over Greece and Rome. In point of fact, the feeblest mission that ever went forth, triumphed over all the powers of the world, and rose on their ruins. How do you account for the fact? Those who reject one miracle, immediately stumble over a greater. Concede the primary miracles according to the statement of the inspired record, and you obtain an adequate cause for an otherwise inexplicable fact; set aside the miracles of the New Testament history, and you thereby create a miracle which neither Scripture nor reason can explain.

Besides, we are accustomed, in other departments, to observe phenomena which owe their origin to one species of power, and their continuance to another. The motion of the planets, for example, is *preserved*, but was not *produced*, by the law of gravitation. The planetary system in motion is a present fact; but this fact, by its very existence, demonstrates that a force has at some remote period been put forth which does not now continue to act. An analogy, sufficient for our purpose, may be gathered from the ground as well as drawn from the sky. We are familiar with the laws which regulate the growth and reproduction of vegetables; but those forces which keep the machinery going, did not and could not set the machinery agoing at first. The growth and ripening of a wheat-stalk is not a miracle; but the existence of that wheat-stalk is proof that a miracle has once been wrought. When once it is there, we understand easily how it continues; but how did it begin to be?

The Scripture testifies, and reason countersigns the evidence that a miraculous ministry set the gospel agoing in the world, and that another ministry of the Spirit, not miraculous, but still divine, keeps it up.

The injunction, Quench not the Spirit, was applicable in Paul's day to both ministries; in our day it is applicable only to one. It is the personal and private ministry with which we are concerned—the ministry of conversion. To this practical aspect of the subject we invite the reader's attention now. With our limited space and our humble aim—charged to supply from the Scripture thoughts suitable to inquiring spirits on the evening of the day of rest—we must turn away from fields of speculation, however inviting, and point our arrow directly to the heart. "What must I do to be saved?" is, after all, the greatest question for a creature that is at once sinful and immortal; and he who helps his brother to an answer is the best benefactor to his kind.

Take these lessons from a brother's lips, and may the Holy Spirit bring them home with power.

The Spirit as a convincing, quickening, converting power is offered,—is pressed upon men. This is obviously implied in the apostolic precept. The Giver of all good beseeches us not to spurn away his benefits; when he pleads with us not to throw the boon away, the plea is proof that he is freely bestowing the boon. But is it true that the Divine Spirit is even now touching the conscience of the writer and the reader of these lines, to convince of sin, and to commend Christ as the Saviour? It is. It is proved in the first place by the promises, the precepts, and the threatenings of Scripture. The warning that we should not resist the Spirit, implies that the Spirit strives with us. In some cases, an appeal to the consciousness of men might elicit a confession that in doing evil they knowingly crushed the opposition of a heavenly monitor who counselled better things. But as a general rule, the striving of the Spirit of God in the conscience for good is not observed or acknowledged as long as it is resisted. Consequently we must mainly depend for practical evidence on the testimony of converted men. They who resisted long and boldly, detect and confess that resistance, after it has ceased. The same rule may be observed in matters that are material and palpable. From your window you observe a little vessel with white sails spread, lying on the bosom of a river or an inland lake. It stands still, either aground or frozen in. While it stands still you cannot certainly determine whether the wind is beating on it or not. The breath of heaven may be pressing on its sails, but you have no evidence of the fact.

When it is set loose, and begins to move, you know the pressure of the wind by its effect; all the more decisive is the evidence if the ship under that impulse moves upward against the stream. It is thus in conversion. It is when the Spirit of God overcomes the resistance, that both the resistance and the power that overcomes it becomes known to yourself and your neighbours. Although the pressure is constant, it is not noticed until the effect reveals it. As Paul never confessed himself carnal, until he ceased to be carnal; so a human soul never rightly knows its own sinful striving against the Holy Spirit, until that striving has ceased.

The convincing work of the Spirit in the human heart is, in some respects, like concentrated sun-rays, at once a shining light and a burning fire. It is the process of showing to a man both himself and God. Evil thoughts as well as evil deeds love the darkness and hate the light. Thieves are disturbed when their den is opened to the day: hence the cries that accompany first convictions of sin. Possessing demons start at the inroad of light from heaven. To Jesus still at his approach they cry, "Art thou come to torment us?" In the processes of grace, as well as in those of nature, where there is a shining light there is also a burning fire. When the Holy Spirit comes in power into a human heart, the lusts of the flesh are consumed as fuel, and love to the Saviour rises toward heaven like a flame.

Men may, and often do, try to quench the good Spirit of God in their own hearts. The express command of the text clearly implies the probable effort, and, in a certain sense, its possible success. Hating the pain of admitted entertained convictions, a man may, like Felix, banish the preacher when he becomes too pointed. The deed is generally done, as that Roman ruler did it, in the form of resenting the word of a fellow-man: but if the

word of a brother be divine truth, to stifle conviction is to quench the Spirit. It is easier when you lie down on your bed at night to think that you have quarrelled with a man or a book, than to own to yourself that you are fighting against God. When Saul of Tarsus persecuted the disciples, Jesus from heaven said, "Why persecutest thou Me?" So those who put away the word of a true preacher because it disturbs an unclean conscience, will find here or hereafter that they have been putting away the Christ whom he preached. His own words are, "He that receiveth you receiveth me."

If any should inquire, How can puny man quench the Spirit of God? let him reflect that while a man cannot pluck the sun from the sky, he may put out his own eyes, and so as effectually leave himself in darkness; or extinguish the spark which the sun has once kindled, and so leave himself without warmth. It is part of God's plan both in Providence and in Redemption to make our co-operation necessary to the success of his own work. He makes us fellow-workers with himself in our own salvation. The gospel would not be so glorious as it is, if men were not left free to receive or reject it.

It is a special prophetic characteristic of the Messiah, that "the smoking flax he will not quench." When a spark of true conviction is deposited in the conscience, and is feebly, slowly endeavouring to spread and occupy for God the whole inner man, Christ looks on with tenderness, and will not impatiently extinguish feeble beginnings of grace because in their beginnings they are feeble. The Lord graciously fans the spark: but often the man himself madly stamps it out. There are many Antichrists: but the Antichrist that each man has most cause to fear is himself.

SECOND EVENING.

THE MINISTRY OF MEN, SUBORDINATE.

"Despise not prophesyings."—1 THESS. v. 20.

THROUGHOUT the course of Divine Revelation, from its commencement to its close, Prophecy was of two kinds. One branch of it was the enforcement of God's present will, and another the revelation of his future purpose. The word both in the Old and New Testaments is ordinarily used as a generic term, including Prophecy specifically so called, and Preaching. Some of the prophets, such as Elijah and Elisha, were preachers of present duty rather

than foretellers of future events. Some, like Ezekiel and Hosea, mingled the two departments together throughout their ministry. Some, such as Isaiah and John, considered as a prophet in the Apocalypse, were mainly occupied with predictions, and yet interspersed at intervals some specimens of preaching, all the more bright because of the affluent imagery in which they were set.

The gift of Prophecy in its specific sense re-

mained in the Church of the New Testament, like the other extraordinary exercises of the Spirit's ministry, till the kingdom of Christ had obtained a footing on the earth. Then prediction disappeared, but preaching continued. This department of prophesying will be exercised till the Lord come again. There are prophets in the world still. They are the gifts of the exalted Saviour to his suffering Church. They have no power to foretell the future: they are occupied in a greater and more necessary work. They make no new revelations; they apply the revelation already made for the salvation of themselves and their fellows. The prophets of our day are the successors not of Isaiah, but of Elijah, and his counterpart the Baptist. Their office is, like the first Elias, to rebuke sin in the high places of its power, and, like the second, to proclaim to all comers, "Behold the Lamb of God that taketh away the sin of the world."

To the Preaching of the Gospel, then, as the department of scriptural prophesying which remains permanently in the Church, the brief precept of the text applies. Despise it not. This command has, in the nature of the case, two sides, and both should be alternately exposed to view. Its under side, as it lies here, silently demands a true and earnest preacher: its upper side expressly claims true and earnest hearers. The preaching should be worthy of respect, and the listeners should show respect to the preaching. This should not be despicable: these should not be despisers.

1. The preaching should not be such as to provoke contempt. Failure here is as fatal as failure on the other side; and counsel here as needful. If wanton worldly contempt of preaching slays in our day its tens of thousands, preaching that provokes contempt slays its tens of thousands too. I could not venture to affirm whether the larger portion of the existing evils comes in by this breach or by that.

First of all, the matter of our New Testament prophesying must be the gospel of the grace of God. He who, treading in Paul's footsteps, preaches Jesus Christ and him crucified, as only Saviour of sinners, need not be ashamed, in as far, at least, as his theme is concerned. In this respect, God will honour him, and if men despise him it is at their peril. But, further, the true gospel must be truly preached. The Master's name must be published by a real disciple. In the morning within his own house, the sower receives for himself as bread of his life that same grain that in public throughout the day he spreads in the field. So the public preacher of the word secretly lives on the word which he preaches. Although the doctrine proclaimed be scriptural, if its proclaimer toil through his task as the exercise of his profession and the condition of his reward, the word will certainly be despised. If he has not caught fire, he will not communicate it. Nor will it suffice to repeat with laborious accuracy the prophesyings of a former and much revered age. Every generation and every individual should be original, in as far as to draw direct from the fountain in the Scriptures, and not take all at second-hand from the lowest reach of the ecclesiastical stream. Ancient confessions may be both clear

and scriptural: they may be the work of greater and better men than ourselves; and yet, to hand down these in lumps as the spiritual food of our own generation, is a method of prophesying which, if it do not altogether deserve contempt, will in point of fact assuredly be met by a cold neglect. The theological terms and disquisitions of a former day, when served up whole to a section of this present human kind, is like fossil food taken from a quarry. The organization has been preserved complete in every part; but in effect the presentation becomes the offering of a stone instead of bread to hungry men. Give them not the manna that somebody gathered long ago, but the manna that God sent from heaven, that you gathered this very morning round your tent. The amount of talent with which the truth is presented may be indefinitely varied. There may be ten talents, or there may only be one. This is not the hinge on which honour or contempt of the preaching turns. Let it be taken from the Bible, and made your own. Taste it yourself, and offer it to your neighbours. If good sense and God's grace be in the preaching, fair minds will not despise it; and unfair minds would find some ground for despising it, although it were spoken by an angel from heaven.

2. Despise not prophesying. The injunction has not yet become superfluous, although the present generation is, in this respect, an improvement on the one that immediately preceded it. The rule is transgressed in various forms and degrees, by various classes and persons, sometimes consciously, sometimes unconsciously. In as far as the preaching of the place and the day is the true, honest proclamation of the revealed will of God applied to the need and the duty of men, they who despise it, despise it to their own hurt. The position of the writer, as himself a minister, should scarcely weaken the force of his warning here. As a Protestant and a Presbyterian, his prejudices do not lean to the side of clerical authority. His sympathies go with the universal brotherhood of Christians: his stand-point is on their level and in their midst. He thinks and writes at this moment, not as a minister, but as a man, while he catches from an apostle's lips, and reduplicates the warning note, "Despise not prophesying."

Literally the term signifies to make light of any thing, or count it nothing serious or practically important. This error may be committed in different forms. One may treat the preaching of the gospel with open contempt, and another with silent neglect; but the result in both cases is substantially the same. The use of all preaching is to propose Christ the Saviour to sinners for their acceptance; they who hear the proposal and do not close with it are guilty of despising the prophesying, despising the Christian preacher, and rejecting the Christ crucified whom he has preached.

On this count Rome is found guilty. The system leaves little room for prophesying by the lips of living men. Without the Bible indeed, preaching, although it were encouraged, could not be of much value. Those who withhold the word of God deserve no thanks for offering the comments of men in its stead. Accordingly, although some real preachers have arisen at intervals in the com-

munion of Rome, the gospel is not proclaimed to the multitude. The ministers of the Reformation were descriptively denominated preachers as distinguished from the priests of the ancient *régime*. The same characteristics distinguish the two systems at the present day; the one makes much of preaching, and the other little. The one honours, and the other despises it.

In this field, as elsewhere, extremes meet. The class whose tastes gravitate to the pole opposite to that of the Romanists, unconsciously in this matter, follow in their wake. Sceptics and freethinkers of all degrees scorn and slight preachers and preaching. Politicians who practically ignore religion go to the same lobby with infidels, who theoretically reject it. Together, it need not be denied, they constitute a goodly number. But the unkindest cut of all is given by those who value and support the preaching as a necessary instrument to rule the vulgar, but consider it unnecessary for themselves.

It is not difficult to discern, and is indeed very generally acknowledged, that Protestant nations owe much of their freedom and greatness to the practice of preaching which was universally diffused after the Reformation, and has long been consolidated into habit. Among Protestant countries it might further be shown that the freedom and intelligence of the people run parallel with the abundance, the soundness, and the power of the preaching which they enjoy. Nor does it detract from the value of this remark, that the advancement of the people may in some measure be a cause as well as a consequence of a high degree of excellence in

the gospel ministry. It is enough that the two affect each other's company, and doubtless they act reciprocally and alternately as cause and effect.

But while we gladly acknowledge these secondary and subordinate benefits which result to a people from possessing and esteeming an evangelic ministry, we warn our fellow-citizens faithfully, on the other hand, that the secondary benefits will not long continue to flow if the primary are neglected. Persons, families, or communities who seek first the kingdom of God and his righteousness, may expect to obtain individual liberty and national greatness as an additional boon; but where the higher end of preaching is neglected, the lower is not obtained. They who in this matter aim high, get the high objects which they desire, and all that hangs beneath them: they who aim low, miss the low things to which their regard is directed, and all that lies above them.

If you employ the gospel and its ministers as a political engine, it will soon become powerless in your hands; but if you seek through them in simplicity to give glory to God in the highest, and spiritual peace to men on earth, you will gain your object, and more. Count and make the ministry a ministry of reconciliation between God and man through the death of Christ; this is the purpose for which it is bestowed; and the giver is displeased when we turn it to any meaner use. The vessels are earthen vessels, but the treasure which they bear is the word of eternal life. Despise not prophesying; take heed how ye hear; for though the words are uttered by a brother's lips, the message is mercy from God to man.

THIRD EVENING.

FAITH GETTING IN AND GIVING OUT.

"Take heed to yourselves: If thy brother trespass against thee, rebuke him; and if he repent, forgive him. And if he trespass against thee seven times in a day, and seven times in a day turn again unto thee, saying, I repent; thou shalt forgive him. And the apostles said unto the Lord, Increase our faith."—LUKE xvii. 3-5.

WE select as the subject of our exposition the brief prayer of the apostles, "Increase our faith;" but we shall look upon it throughout in the light of the Lord's lesson on forgiving injuries recorded in the two preceding verses.

Faith in the Christian life is, as to its place and functions, like the heart in the animal economy. Alternately it draws in, and sends forth. It is continually receiving and continually giving. Because it must put forth energy, it must take in supply; and because it takes in supply it is able to put forth energy. This heart within a living body is always busy beating. Its ceaseless activity is not play: it is work,—necessary, productive labour. Every throb draws in the necessary life-blood at one side, and forces out at the other side an all-pervasive impulse to the farthest extremities of the frame. It is because it gives out much that it is obliged to take in much: and because it takes in much that it can afford to give much away.

Thus Faith lives and labours in the vitals of the new creature. It is in the regeneration, the organ which draws in a constant supply of life, and gives out a constant stream of energy. The spiritual is like the material instrument in this, that it does

not depend for healthful action on an accurate reflective knowledge of its own constitution and methods. As a heart may carry on vigorously all the functions of nature while its possessor scarcely knows that he has a heart; so a true disciple, a member of Christ's mystical body, may draw life in a great continuous volume from the fountain-head on high, and send forth a man-loving, God-glorifying stream of beneficent effort on the world, while he could not logically define, or even intellectually comprehend, the nature and operation of faith.

Faith, then, in its exercise and increase, is the working of the new life in regenerated men. Something in the soul, as mysterious in its origin as the beginning of natural life, moves like an instinct, and being in contact with the upper spring of grace in God, draws in life at every movement, satisfying all the new creature's wants. The sense of spiritual need, while the needy consciously cleaves to Christ, is like the expansion of the heart, which by the very act of emptying the place, fills it; and the insatiable desire of a saved satisfied soul to serve the Saviour is like the contraction of the heart's cavity, whereby the invigorating life-blood is forced through all the frame.

Hence it follows, that if a Christian is to any extent straitened in receiving supply, he will be proportionately straitened also in contributing effort. He who gets little, gives little. The less that a Christian enjoys of his Redeemer's forgiving love, the less can he bear or do in the trials and duties of life. Based upon this law of the kingdom is that apostolic precept, "Save thyself, and them that hear thee." It is he who obtains and retains faith's fast hold of Christ for his own steadfastness, that is able to stretch out a helping hand to a fainting, falling brother. In the same sense the Master introduced into the commission of the twelve, when he first sent them forth, the clause, "Freely ye have received, freely give." Where great faith opens its mouth wide, and receives a "plenteous redemption," there faithfulness labours unwearied, unceasing, in bearing and doing the will of God.

Obviously the receiving side of faith lies uppermost and acts first. "What must I do to be saved?" is the earliest inquiry of an awakened man. In us there dwelleth no good thing; the good that may be found in the fallen is not indigenous, it has been imported. We must get good ere we can be good or do good.

Except a man be born again he cannot even see the kingdom, how then can he do effective work in the service of the King? We must beware lest we spoil all by beginning at the wrong end. With the "poor and miserable, and wretched, and blind, and naked," receiving comes in the order of nature before giving. Pardon of sin through the blood of the Lamb is the first necessity for the fallen. For those who have not been reconciled to God through the death of his Son, the word in season is not an exhortation to issue forth upon an appointed task of religious activity: for these the first and great commandment is, Be ye reconciled unto God; and the second is, Serve the Lord that bought you. When you are charged with such an inflow of forgiving love, the question then legitimately rises, How much of obeying love will the great but softly plying pressure cause to flow in your life and conversation? They who are full by faith's indrawing, are strong to bear and to do in the miscellaneous labour of life. Conversely, those who are called to much active work or much patient endurance, thirst for larger experience of redeeming love, as the hart panteth for the water-brooks.

When an additional demand is made on the giving side, either for doing or bearing, loving faith instantly instinctively makes an additional demand on the receiving side for the necessary supply. In the text, we see the new creature opening its mouth wide to draw more from the Lord's fulness. "Increase our faith," is the sudden, short, strong cry of the disciples to their Master at a pause in his discourse. Why did those simple Galilean believers interrupt their Teacher in his lessons, then and there, with this specific request? The immediate cause of the demand made by the servants on the receiving side, was a large demand which had, in the course of his address, been made upon them by their Master on their giving side. To forgive an injury seven times, or, as it is expressed elsewhere (Matt. xviii. 21, 22), until seventy times seven, is the formula for an absolutely limitless endurance.

Such was the draft suddenly made at that moment upon their love; and, poor men, they felt that it instantly absorbed all their capital without being satisfied. It exhausted their stock of brotherly kindness and charity, extending as far as seven faults, and counted ample in Pharisaic computation, as the fire that fell from heaven licked up the water in the trench round Elijah's sacrifice, and fiercely craved more fuel to feed its flame. In their occasional quarrels with neighbours they had allowed some measured, counted drops of forgiveness to flow from their hearts. These they considered respectable in amount, and creditable to their profession. A very small quantity received was sufficient to supply such a diminutive outlay. But now, much more is required than they had ever given, or ever considered due. The old resources were utterly inadequate to meet the new claim. Forgive your brother till seventy times seven: that is, let your forbearing, forgiving love be not like a little water in a vessel, but like a river in its flow, constant, resistless, exhaustless. So much more machinery has now been put upon the shaft, that with the former power the movement cannot continue, and the whole stands still; the needy men, accordingly, cry for a broader, deeper, more fully charged reservoir, which may discharge a volume sufficient to carry all actual or possible obstacles away.

Faith works by love. Through faith from God his Saviour a believer's own heart is filled; then and thereby, through love, he exerts a beneficent influence on the world. Standing in the midst between God and his neighbour, a Christian—not himself a motive power, but only a receptive vessel—gets on the upper side, and so gives on the lower side. By faith he receives, and by love he labours; thus, his life on earth alternates, like the heart that is beating in his breast, until, with the heart's last throb, the life leaps over into a larger place—a life free, full, eternal.

Love's labour consists of two parts, *doing* and *bearing*. These two are different but inseparable, like the two confluent sources of a river, or the two diverging stems of a bifurcate tree. Still more exactly, perhaps, both in their distinction and their union, they may be compared to the right and left hands of a living man. In the body, sometimes the right hand and sometimes the left bears the chief strain, while the corresponding member is for the moment left comparatively at ease; at other times the weight is distributed equally between them. In like manner the Christian life is sometimes mainly a laborious activity, sometimes mainly a patient enduring, and sometimes both at the same time and in equal measure.

I could not venture to determine whether is the greater Christian, the man who bears injuries patiently in a forgiving spirit, or the man who labours heroically in some department of active duty, bearing down by sheer force all the obstacles that stand in his way. The Doers, as a general rule, are better known in the church and the world than the Bearers. The results of active love bulk more largely in history than those of passive love; but perhaps in the inherent merits of the case, and in the judgment of the Omniscent, faith has borne as much and as precious fruit in enduring evil as in doing good. Those ancient warriors who were

left-handed, and could sling stones at an hair's-breadth and not miss, contributed as much to the prowess of the army in the day of battle as their fellow-soldiers who grasped broadswords in strong right hands. The meek Christ-like bearer of evil is as much needed and as much used in the work of the kingdom, as the active, Christ-like doer of good.

In the particular case which is now under consideration, it was on the side of bearing injury that the heavy demand was made. Assuredly those early disciples of the Lord found the duty as difficult as any positive work in which they had ever been engaged. In trying to fulfil it, they speedily reached the bottom of their own resources; finding that they possessed not the sufficient supply for meeting and satisfying this new demand, they "said

to the Lord, Increase our faith." If the city were suddenly doubled in size, and consequently a double quantity of water drawn from the ever-increasing multitude of openings in its water channels, the inhabitants, feeling some faintness and fearing more, would raise a united cry for a larger supply from the fountain-head. It is thus that the disciples of Christ are kept from falling. Their confidence rests not on the sufficiency of their own attainments, but on the fullness and freeness of their Saviour's love. Although it seem paradoxical in form, it is, nevertheless, strictly true in fact, that their security in great emergencies, lies not in their fullness but in their emptiness, according to Paul's sharply-defined, experimental antithesis, "when I am weak, then am I strong."

FOURTH EVENING.

INCREASED TRIALS DEMAND INCREASED FAITH.

"And the apostles said unto the Lord, Increase our faith."—LUKE xvii. 5.

TRULY to forgive an injury implies, either as essential constituent elements, or necessary effects, these three things at least:—1. A full, frank forgiving from the depths of the forgiver's heart, pure and free like that which he receives from God. The small pardons which man bestows upon his fellow, must be moulded on the pattern of the great pardon which a believing man obtains through the blood of Christ. The manner as well as the matter is the subject of express scriptural precept; "Be ye kind one to another, tender-hearted, forgiving one another, even as God for Christ's sake hath forgiven you" (Eph. iv. 32). 2. The absolute suppression of desire and effort to hurt the injurer in the way of recompense. "Vengeance is mine, I will repay, saith the Lord." Wisely and kindly the father snatches that sharp sword from the child's hands; the child, if he were permitted to wield it, would wound both his adversary and himself. Retaliation, both in the appetite and the act, must be conclusively abjured. As you hope, and because you hope, that God, reconciled in Christ, will not inflict deserved punishment on you for your sin against him, you cast away from your heart and hand all desire and effort to inflict deserved punishment on a brother for his sin against you. 3. The improvement of every offered opportunity to do the injurer good. Bless them that persecute you; bless and curse not. It is not a matter of choice which may either be done or left undone. The tendency to forgive works like a law in the members of the forgiven man. He who casts a penitent fellow-servant into prison for a debt of a hundred pence, has really not received remission of the debt of ten thousand talents which he owed to his Lord. Goodness gotten from God impels the receiver to impart goodness to his brother as steadily as the stream of water turns the wheel on which it falls. To render good for evil to a fellow-man is an effect of receiving good for evil from God in the gospel, so necessary and so constant, that where the resulting fruit is wanting, you may confidently conclude that the producing cause is wanting too.

But duty here has two sides, and we must not

forget the one in our zeal to establish the other. To forgive an injury does not mean, and does not imply, that you shall permit the injurer to do you as much harm as he pleases, without remonstrance and without defence. To abandon either your property or your character to the will of a man who is dishonest or false, is, in point of fact, to do him evil and not good. For his sake as well as your own, bring his wicked deeds and words to a close as early as you can. By all lawful means preserve your property from his grasp, and your good name from his slander. These things are not your own. They belong to the Lord, and to his church: you are not at liberty to abandon them as a prey to robbers. Discrimination is needed here as well as patience. The wisdom of the serpent should enter as a constituent into the character of a Christian, as well as the harmlessness of the dove. "If any man lack wisdom, let him ask of God, who giveth to all men liberally."

In cases where much of self-denial is required, either you must have great faith, or you will come miserably short of your duty. Either you must get great grace from the Lord, or you will bring great disgrace upon his cause. Here lies great need; but here also opens a grand opportunity. It is in such pressing emergencies that true epistles of Jesus Christ become legible to friends and foes. If we be much with Jesus in secret, receiving increase of faith from his fullness, our neighbours in public will take knowledge of us where we have been.

All things work together for good to them that love God, and the injuries which they suffer may be reckoned in the long inventory of profitables with the rest. Much injury endured, calling for large measures of patient, forgiving love, gives an empty disciple another and another errand to the fullness of his Lord. This is by itself a boon beyond all price.

Trials are an essential element in the discipline of our Father's family. In the twelfth chapter of the Epistle to the Hebrews their necessity is logically vindicated, and their usefulness tenderly explained. "If ye endure chastening, God deal-eth with you as with sons; for what son is he

whom the father chasteneth not?" To be allowed to grow up without correction, getting every wish fully gratified, is the greatest misfortune that can befall the son of an earthly parent. Through the imperfection of parental rule, such calamities are by no means rare in human history; but in the family of the regenerate, during the period of their education here, blunders of the kind do not occur. Our Father in heaven is watchful and wise; he doeth all things well. He will not deny to the children any of the children's rights; in particular, the trial of their faith, which is much more precious than that of gold, he has pledged himself to impart. Accordingly it finds a place in a remarkable inventory of a disciple's privileges recorded in Mark x. 30: "He shall receive an hundredfold now in this time, houses, and brethren, and sisters, and mothers, and children, and lands, *with persecutions*; and in the world to come eternal life."

These "persecutions" could not be wanted: they constitute one of the promises of God. Without them, faith, never exercised, would, on one side, remain always feeble. Nor is it necessary, in order to obtain this species of discipline, that the blood of martyrs should again be shed as the seed of the Church. Here, as in other departments, there are diversities of administration. God can literally make "flaming fire his minister" to test and exercise the faith of his children in one age, and accomplish the same beneficent operation by much gentler means in another. How willingly and joyfully should Christians of our day bear the sufferings that overtake them in the world, when they reflect that the Master is conducting for them, through the light stroke of a neighbour's slander, that education which for others, in a former age, was only attained through imprisonment and death? Ask and ye shall receive: the apostles asked, and doubtless they obtained what they asked from the Faithful Promiser. But, incidentally, they owed increased faith for bearing evil, to the evil which in the world they were called to bear. "My brethren, count it all joy when ye fall into divers temptations; knowing this, that the trying of your faith worketh patience" (James i. 2, 3).

In your garden there is a well from which you have drawn water, sufficient for the wants of your family for many years. The wants have been comparatively few, and the supply has been always abundant. Every time you have come to the well with your vessel, you have obtained as much water

as you desired; but you have never yet on any one occasion desired very much. The resources of the well, in short, have never been severely tested.

But one day your house takes fire. Your family at first, and then your neighbours afterwards, combine their utmost efforts to extinguish the flames. Many hands bear many vessels to the well. An hour—two hours, the pump is driven without intermission by relays of labourers, that a constant stream may be poured upon the burning beams. The hope begins to spring, and the word begins to pass that if this process can be continued a little longer, the fire will be subdued, and the property saved. At this crisis a cry is heard that the supply of water in the well is failing. At first what had formerly been clear comes up muddy; next gravel is thrown out, mixed with scanty drops; and at length the water wholly ceases to flow. Empty air resounds through the valves, as the eager hands continue to ply the appropriate machinery. After this the well will be deepened, and so the supply increased; but, oh that it had been deepened before, or could have been deepened in a moment! It was the increased demand that revealed the deficiency, and produced the cry for a deeper piercing to reach a larger vein.

In the exigencies of life, a similar draft is often made upon the graces of a Christian; and in the day of trial he is often found at fault. In ordinary times he seemed to have enough: he went out and in with credit among his neighbours; he trusted in God, and did good to men. But suddenly a great demand arose,—a demand especially for patience to bear injury and love to forgive it. By the extraordinary draft upon the well for water to quench the fire, its supply was soon exhausted. Even a true disciple may be caught at fault, and put to shame, by great sudden emergencies of trial. Instead of true Christian forgiveness flowing pure and free from his heart, spurts of human passion come out, foul and fitful, hurting the man himself, and disappointing his friends. It is well, if such a disciple, instead of justifying his own wrath by arguments, shall supply his wants by prayer. It is well if, conscious of emptiness, and confiding in Christ, he turn and plead, Lord, increase my faith. If he act thus, he will live yet to bless the tempest that drove him deep into the Refuge and Rest of his soul. Everything, friendly or hostile, good or evil, is good for a Christian that brings him, conscious of his need, nearer the fulness of Christ.

FIFTH EVENING.

MEN OF GREAT FAITH, MEN OF LITTLE FAITH, AND MEN OF NO FAITH.

"And the apostles said unto the Lord, Increase our faith."—LUKE xvii. 5.

THERE is a class expressly recognised and described in Scripture who have faith, but are not strong in faith,—who believe, but have not peace and joy in believing. The Lord himself addressed them in the memorable terms, "O ye of little faith," at once determining for their comfort that they had a place among the children, and intimating for their reproof that their place was low and their attainments feeble. To acknowledge the substantial safety of those who have made the

least progress in the spiritual life, does not, when rightly apprehended, weaken the motive to exertion. It is of the nature of feeble life, if there be life at all, to strain after greater strength. He who sits down satisfied with "little faith," on the ground that it places him safe at least within the gate of heaven, has not attained even a little faith. A little life strives for more; it is death that lies silent and still. It is good to be of little faith, but it is better to be of great faith; and he

who does not desire to be a man of great faith, is not a man of little faith but a man of no faith.

The disciples were at this time weak in faith, for they prayed to the Lord for an increase of its strength: but the same prayer that proves that their faith was feeble proves that they had faith. "To him that hath shall be given, and he shall have abundance." "Ask, and ye shall receive." Here we must beware lest we should confound two things that are widely different—a great man who has faith, and a man of great faith. Great men are comparatively few: but there is no reason why great faith should be a rare attainment. The greatness of the man who has faith, and the greatness of faith in a man, do not necessarily go together. They may coincide in the same person, but they may also be, and in point of fact often are, separated. He who is not a great man, may be a man of great faith. It is even a characteristic of the Divine government to hide from the wise and prudent what is revealed unto babes. A poor Joseph whose intellectual faculties are barely sufficient to constitute the basis of moral responsibility, may be "strong in faith, giving glory to God." Some of the sublimest characters known to history have been constituted by the union of moderate intellectual power, and fervent faith in God.

As a reason why Christians should forget the things that are behind, and reach forth unto greater attainments in the spiritual life, let them remember that great demands may in providence be suddenly made upon them, especially on the side of suffering with patience. Poverty may overtake you; pain and sickness may fall to your lot; you may be forsaken or bereaved; your good name may be undermined, and your confidence betrayed; those to whom you looked as leaders may make shipwreck of the faith, and bring shame upon that holy name by which you and they were called; in these or in other forms your faith may be tried by a greater strain than it has ever hitherto been called to bear: in prospect of such emergencies, cleave to Christ now, and be ready to draw from his fulness in the time of need. Some living creatures that swim under water are provided with air vessels; and when their specific gravity increases so that they would sink like clods to the bottom, they seem endowed with the power of rising to the surface, and drawing in an additional supply of air to increase the buoyancy of their bodies. Thus when the faithful are feeble, and ready to sink under the burden of their temptation, it is their instinct and their wisdom to rise into contact with the source of their life, and draw from his fulness such measures of faith as will sustain their spirits under every weight.

The principle that severe exercise invigorates life, although true, must be employed with caution both in the material and spiritual departments. The fire is low: let a gust of wind sweep through the dying embers; what then? The fire grows lower. What next? Another blast? Nay: hold your hand: another blast upon this smoking flax may quench the spark outright. The thing that is wanted in such a case is more fire: then the blast which would have extinguished a feeble spark will make a strong fire stronger. I have seen a youth who had enjoyed a religious education, and made

sincerely a religious profession, venturing into the company of the licentious and profane, and in consequence of the contact becoming himself licentious and profane. The feeble flickering spark that was indeed a light in the mind, and seemed also a life in the soul, was extinguished by the rude blast to which it was exposed. I have also seen a youth, full of faith and love, going in among the licentious and profane, doing a noble saving work among the perishing, and emerging with his spiritual life fanned into a keener flame, even by the foul breath that circulated in that house which is the gate of hell. The Christian who cleaves to Christ will increase in faith; and increased faith will enable him meekly to bear injury, and safely to pass through temptation. A faith made strong through the disciple's prayer to Christ, and Christ's prayer for the disciple (Luke xxii. 32), imparts to the spirit, as it were, a charmed life, so that "they shall take up serpents; and if they drink any deadly thing it shall not hurt them" (Mark xvi. 18). New supplies obtained in secret communion from the Lord enable them to resist the temptations of the world, and the temptations that assail them make their strong life still more strong. Thus, "they that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary; they shall walk, and not faint."

In conformity with the text we have all along spoken of those who, though men of little faith, are still men of faith; the question naturally rises now in the close, what of those who are not men of faith at all? What of the sinful who do not close with Christ? Or, to adopt the simple interrogation of the Scriptures, "How shall we escape if we neglect so great salvation?" The question rings forth from the Bible in the hearing of the generations as they pass, but no answer to it is supplied,—no answer to it can be given by God or man. There is no way of escape for those who, needing this salvation, neglect it to the last.

It is strange in the nature of the case, although not rare in human experience, that men should get up a sort of general confidence in the gospel, while they do not personally cleave to the Saviour of sinners. Redemption provided by God does not save, if it is not accepted by men.

Among the mountains there is a lake, broad and deep, containing practically exhaustless supplies of the purest water. One city has formed a channel between itself and the lake. The channel is full; the water is flowing, and the inhabitants are abundantly supplied. A neighbouring city makes a song about the lake, celebrating, in classic strains, the vastness and purity of its supply, but it digs no channel, and effects no connexion between that reservoir and itself. The drought comes; and the people perish.

Ah, woe is me for those who set mercy to music in their songs, and shut the doors of their hearts against the Merciful One! Plenteous Redemption! Yea, brothers, it is Redemption, and it is plenteous; but it does not redeem those who take the world's pleasures warmly into their hearts, and leave the world's Saviour standing at a distance in the cold dead letter of their creed.

W. ARNOT.

ON VAGABONDS.

A BEGGAR who should carry in his person the traditions of his race would be a sight to strike terror into a parish beadle. His rags should flutter to the wind like banners that have flapped for centuries over knights' stalls. His grizzled locks should tell of ancient fortunes. His form should be the wreck of fallen greatness. His whine should be the song of "blind Mæonides." The thin palm outstretched for an alms should be the hand that smote the Vandal hordes at Carthage. His head-gear should be the battered emblems of a crown. His staff should have propped his tottering steps before the deluge. He should have received largess from Augustus, and prowled about the kitchen of Semiramis, sat at the gate of Baalbec, and filled his wallet from the tent of Achilles. What *Bumble* would thrust the *Beggar of Bethnal Green* into the casual ward? What Board of Guardians would not throw open the doors to King Cophetua's beggar-maid? Is there a policeman who would dare bid Homer move on, or lay but the point of his baton on Lear? Polyphemus, eyeless and unshapely, groping round the world for bread, Diogenes snarling in his tub, Ulysses fed with scraps by his own cook,—even the parish of ——— would bend before such greatness, and the tub might be rolled to the corner of Tyburnia. The Mendicity Society would not unseat Belisarius from his corner, nor stay the hand that slipped a coin to Edie Ochiltree. The royal "gaberlunzie man" in the stocks; Timon's headstone over a workhouse grave!—who does not smile at the absurdity? Let the beggar pass, "the only free man in the universe." As well arrest the flying sand of the desert.

He belongs to the oldest of corporations; yet no party man, but a citizen of the world. Climate and soil are alike to him; he does not avoid tropic heats, polar frosts do not chill his blood; but he affects the society of his kind, and abounds most in temperate zones. "The world goes up, and the world goes down," but not he; like Humility, he walks safe in the valley. He is so long in the world that it is his by prescriptive right; the green lanes, and heaths, and shady copses; the broken meats, and bones, and all the coppers; and that antique division between *meum* and *tuum* is abolished in his favour. He is conservative of ancient customs, and has not changed either his dress or his habits these thousands of years.

With all this he is a vagabond; of the lineage of heroes it may be, but of the corporation of vagabonds. Charles Lamb will have it, that beggars are "standing morals, emblems, mementoes, dial-mottoes, Spital sermons, books for children, the

salutary checks and pauses to the high and rushing tide of greasy citizenry;" he has a grudge against the poor-laws—"scrips, wallets, bags; staves, dogs, and crutches; the whole mendicant fraternity with all their baggage, are fast posting out of the purliens of this eleventh persecution;" he sighs over the "*bellum ad exterminationem* proclaimed against a species;—much good might be sucked out of these beggars." He will not recognise them to be vagabonds. "If I were not the independent gentleman that I am, I would choose, out of the delicacy and true greatness of my mind, to be a beggar." Society sees them to be vagabonds and nothing else; wages war on them as such; shuts her door upon them; builds poorhouses, and drives them in through the stern gates; gives them over to policeman Z; holds them in suspicion and abhorrence. And I am afraid that Society is right, and Charles Lamb is wrong. Perhaps she would be the better for something of his gentleness; if even she would sometimes say to herself with him: "Rake not into the bowels of unwelcome truth to save a halfpenny." Human life is too living to be gauged by rigid theories of political economy, the more rigid the less likely to be true; and those who button up their pockets at the distant prospect of an alms, may be violating the very science they profess, and which in its highest form is, *thou shalt love thy neighbour as thyself*. It was only the other day the papers told of some lone woman among those brave suffering artisans of Lancashire; how in the depth of her need and almost despair she went out to sing a ballad in the streets, a sweet old plaintive ditty that her mother had often sung to her, and how she sung it in her low, modest, tremulous way, till, as she finished and looked round and saw by the group of faces she was in public, she burst into tears; and how a Lancashire lad stepped up, and took round his hat, and brought it to her well stored with coppers, and sent her home. Who would not wish to have stood in that Lancashire lad's place? who would not have dropped a penny into the hat? who would be so unfeeling as have met her with a surly *Go to the workhouse*? If the kind soul that warmed to little carol-singing Martin Luther had handed him to the constable for a noisy young beggar, what might have been the fate of modern Christendom? The theory is good, but life requires we should sit loosely to it; that we should not read the second and great commandment as if it was in the second table, and ran, *thou shalt not*. Perhaps, also, Society is over-confident in her work-houses and poor-laws, and that they are not the very best system that can be devised; that the way has

to be found yet for helping the poor out of their poverty without crushing them down into mere alma-takers; that the poor-house bears too much of the same relation to the poor as the jail to the criminal, punitive and not preventive; the simple acknowledgment of poverty as a fact, and the effort to keep it within bounds and prevent it obtruding on the susceptibilities of the public. Nor may this same Society be altogether guiltless of a comfortable satisfaction in having her duties done vicariously, by boards and officials, within dreary stone walls, out of sight, and, by the old proverb, out of mind. But upon beggars the judgment is sound. They are vagabonds, and vagabonds make war upon Society, and Society must make war upon them even in self-defence. They are the universal parasites, to be found wherever society is found. They prey upon her, draw their strength from her, and assail her in return. It is a parricidal war of the offspring upon the parent; a struggle between the rogues and the honest men;—the determined effort to pasture their leanness upon their neighbour's fatness. The vagabond in this light ceases to meet with any sentimental pity. We can hardly be patient with Goldsmith for telling such a charming story, under the title of *The Philosophic Vagabond*. Lamb's love for mendicants seems a crime. Wordsworth, of course, might make heroes of one-legged tramps, and heroines of evil-looking gipsy-women; but it is too bad that Vincent Bourne could find no better subject for "the sweetest of his poems" than a blind beggar's dog. Do we not know that the dogs are of a piece with their master? Do we not know that when Gerard's Italian hound followed Dr. Burgess, and that simple-minded divine took him up, it was only, to his horror, to have the dog picking everybody's pocket in the street, and sneaking with the booty to his new master? War to the knife, we cry, against the whole crew; and fetch down Mr. Mayhew's ponderous volumes; and gaze with a horrid fascination on those statistics, lists of vagabonds, beside which Homer's Catalogue of Ships is a bagatelle,—vagabonds that must be classified with the Roman alphabet, and the Greek alphabet, and numerals large and small; armies of vagabonds who march over successive pages until we fancy them all on the march against our slender purse and unbarred doors.

Now without exaggeration this Vagabondage is an alarming evil, and one that has reached such proportions as almost to dishearten those who are eager for social reform; one, too, which needs be mastered in its history and bearings before fairly grappling it. For it has a history stretching back to the very farthest antiquity, till the shadow of Cain—first of vagabonds, arch-vagabond

of the race—falls darkly across it; a history that is preserved in the crime and pauperism of every nation; the history of a distinct, comprehensive, and well-organized system, which employs against society more than three hundred kinds of rogues, and against which society in its turn employs poor-laws, prisons, reformatories, Magdalens, and those other punitive and curative measures that take up so large a space in modern social studies. And the beggar, with his *Give a poor man a penny, Sir*, crouches there in the street as the representative of Vagabondage and its history. For out of Beggardom does our modern Vagabondage seem to have sprung, carrying with it, as it widened down the centuries, certain clear indications of its origin.

Out of beggardom born, and in the old, heroic Middle Ages. It grew up on fat abbey lands, and round the great cathedrals; and the gallant, gay crusaders had it for retinue as they rode to Palestine—*post equitem sedet atra cura* in a literal and very terrible sense. For eleven centuries the Church had fostered and petted beggars; and Ambrose's remonstrance of the year 400 only marked the beginnings of a begging plague. In time the inert mass of beggary received an impulse. The great orders of mendicant friars sprang up, and the monk with his wallet was met in every street and on every road. The lesson was easily learnt. Mock orders went out on plea of Church penance: *Flagellants* whipped themselves, and stole from their neighbours; the Dancing devotees whirled through great part of Europe, and sucked up numbers of idle fellows in their course; groups of beggars slipped themselves from the great body like the small puffs of foam that scud away from large patches; and before long Beggardom was up in organized vagrancy. During this time the crusading spirit had died out, but not without leaving behind it a restless spirit of adventure. The Crusades themselves, like all wars, swelled the number of idlers and poor; and when this chivalry had lost its finer and nobler elements it became mere vagrant knight-errantry. The old feudalism provided it with organization, and bands of men wandered over the country at large,—the 30,000 "Devils," and lesser bodies,—plundering as they went, and leaving a thirst for plundering in their route. And as if this had not been enough to set all Beggardom in motion, the fifteenth century witnessed the advent of the Gipsies, from where no one could tell, from Egypt they said themselves. "Counting from the birth of Christ fourteen hundred and seventeen years," says old Sebastian Munster, "were there first seen in Germany the *Zigeuner*,* an un-

* From which come the modern *Gauerner* and *Gauernerthum*, resembling, but more significant than our Vagabond and Vagabondage.

formed, black, wild, and filthy people, greatly given to stealing. They have a count and some knights among them, well clothed, and truly honoured. They give out that they are on penance, and that they set off from Lower Egypt. But these are stories. They have no fatherland; wander idly about; support themselves by thieving; live like dogs; and have no religion." They even showed honest Sebastian a letter from Emperor Sigismund in which it stood that their forefathers had apostatized from the Christian faith, and that they were to journey on penance as many years as the years of their unbelief. In ten years accounts came from Paris that twelve mounted Gipsies, with eighty women and children, had passed through the streets, saying that the Pope had sent them on pilgrimage, and that every bishop was to give them ten francs. A hundred years later an English statute was made, rehearsing that "many outlandish people calling themselves Egyptians, using no craft nor faict of merchandise, have come into this realm, and gone from shire to shire and place to place in great company, and used great subtle, and crafty means to deceive the people, bearing them in hand, that they, by palmistry, could tell men's and women's fortunes, and also have committed many and heinous felonies and robberies." The Gipsies were fairly loose upon Europe; vagrants by descent and profession; incapable of either rest or honesty; with the low cunning and subtlety of Asiatics; systematic thieves; a vagabond knight-errantry. The beggar assumed a more distinct and formidable type—part gipsy, part soldier, part monk. The land was full of low adventurers, wandering priests, barefoot friars, discharged soldiers, schoolmasters and their scholars, artisans out of work, streaming vagrantly hither and thither, setting all the loose population afoot. And when the Reformation came and closed the monasteries, and swept clean round the church doors, Vagabondage received a final accession, and the convent pauper became an unwilling tramp.

Meanwhile for two centuries there was a Golden Age of beggars. They grew into corporations with corporate rights. Permission to beg was granted with legal forms. They had certain citadels, like the Kohlenberg in Basel; free quarters, from which they rushed out to prey upon the town. They rose to the dignity of a profession, and paid income-tax. The beggar who had begged his five pounds' weight of coppers had entrance to the infirmary. In Lubeck he paid sixpence a year to the town dues. Poetry stooped down, and painted him in the hues of romance. In a restless and unsettled age men turned vagrants in the same spirit of adventure that had led their fathers to the Holy Sepulchre, and the Knights of the

Round Table in quest of the Sangreal. Robin Hood and Rob Roy were no better than they should be, plain vagabonds and thieves, but that the one wore Lincoln green, and the other the kilt, and the Muses dealt kindly with them both. Prince Hal, with all respect to his friend Falstaff, was a highwayman. And long after, a certain low and shabby romance clung to the vagabond. A century ago he was the pet of fine ladies. They visited him in prison, kept mementoes of him from Tyburn, pressed round his scaffold for farewell of a hero. The thief became the property of the story-teller; our worthy ancestors crowded to see *The Beggar's Opera*; there were even noble marriages contracted with the slums. And through Schiller's *Robbers* we can see the same feeling, as it existed at the close of last century, when Buckler overran the Netherlands, and made his name of *Schinderhannes* almost historic; and Picard with his "tangled coal-black beard and flaming eye" proclaimed himself *king of the midnight*, and the village of Mersen on the Maas was only a robber's den.

The Golden Age has passed away. The beggar's immunities have perished. The highwayman has disappeared from our roads. The poetry has faded; and thieves' stories are only chaunted in thieves' haunts. But Vagabondage survives, and has grown into a riper system and a deeper wrong. It has been slowly perfecting itself; gathering strength from various quarters, wisdom from the lore of centuries. It sprang from the dead Church of the Middle Ages; it was moulded by a Judaism as dead, and by Asiatic heathenism. It grew up under the shadow of Christian forms; masked itself in Christian phrases; copied ecclesiastical orders; imaged out on the side of evil what the Church strove to represent on the side of good. It is an orderly structure of disorder, an organization of all the elements of disorganization. The old kingdom of Beggardom is but a minor province in the present kingdom of the vagabonds. They have become a mighty power, arrayed against social order; swarming in the purlieus of our great cities, and lurking in quiet country districts; set to do wrong as the calling of their life; existing in despite of law and police and Christian churches; sullen, determined, on the whole increasing. They stand out, a dark huge mass; that is, to those who see it. For there are some, too far off, too easy and pleasant in their lives, to know what it is, to whom faint tidings of it are borne, but as of something vague and dreamlike. And there are many who see it, and ignore it; leave it in the hands of the Government and police, and go their way. And it is not a pleasant thought. But it is reality; a reality that must be faced as boldly as it faces us, to which the Chris-

tian turns as to the saddest and darkest of unsolved problems, and yet a problem for which he, if any, should have the solution.

Most curious perhaps of its characteristics is, that it is a corporation based upon imposture; a corporation of various trades, which are filled up as professions are in common life, and every trade a cheat. Mr. Mayhew mentions about a hundred and twenty-six varieties of persons who will not work. An author of a hundred years ago specifies three hundred ways of getting a dishonest living! The classic authority on the subject, and to which Luther has added a singular fame by writing a singular and characteristic preface—the *Liber Vagatorum* of 1527—betrays the very same feature, and reveals the antiquity of the imposition, and the conservative reverence with which it has been handed down. This book mentions the *Lossners*, “knaves who say they lay in captivity among the infidel,” and answering to our shipwrecked mariners. There are the *Klenkers*, who “sit at the church-doors with sore and broken legs, and all the while as little ails them as other men.” “At Schlestad one was sitting at the church-door. This man had cut the leg of a thief from the gallows. He put on the dead leg, and tied his own leg up. He had a quarrel with another beggar. This one ran off, and told the town-serjeant. When he saw the serjeant coming he flew, and left the sore leg behind him—a horse could hardly have overtaken him.” There are the *Salvers*, who “besmear themselves with salve, and lie down before the churches, looking as though they had been ill a long time.” Of these and the like the author says warmly, “Give them a kick if thou canst.” *Scaldrum* and other “dodges” are still practised in London. Mayhew was informed of a man who had pricked the flesh of his leg all over to draw pity; and reports another “whose right sleeve hung loose at his side, and there appeared to be nothing left of his arm but a short stump. On being examined at the police-office, his arm was found strapped to his side, and the stump turned out to be a stuffing of bran.” There are the *Dobissers*, “who beg alms to repair a ruined chapel,” and two of whom drove a great trade in Ireland some months ago; the *Strollers*, “exorcisers of the devil for hail, storm, and witchcraft” (also not uncommon in some English counties); the *Schleppers*, abounding in the Black Forest, false priests who collect for an altar-cloth, and release souls out of purgatory at a penny a piece; the *Dallingers*, who have been hangmen, and who whip themselves with rods before the churches; and “when they have practised for a while, and cheated many people, they become hangmen again as before;” the *Süntwegers*, who “say they have taken a man’s life away in self-defence, and, unless they bring back a sum of money at the right time, their heads will be cut off;” there are pretended noblemen and mercers, “clothed prettily and with neatness;” “baptized Jewesses, who can tell people whether their fathers or mothers are in hell or not;” those who borrow children; *Gensscherer*, or distressed mechanics, who are ashamed to beg; *Sefeldiggers*, who can find hid treasures; tinkers, who “mayhap will break a hole in thy kettle with a stick or a knife, to give work to a multitude of

others;” and *Grunterers*, “who fall down before the churches with a piece of soap in their mouths, whereby the foam rises as big as a fist, and they prick their nostrils with a straw, causing them to bleed, as though they had the falling sickness.”

Some of these tricks are disappearing; others have been developed with greater skill. Begging letters were in their infancy then; but Czaplinski, our contemporary, makes from £20 to £60 a day. The Mendicity Society found the writer of a “most touching letter” crouching in a miserable London garret; and found again that he lived handsomely with his wife and family in another part of the town. The romantic “Kaggs” family lived for years “in a sort of vulgar luxury, at no cost but invention, falsehood, and a ream or so of paper.” An old man about Russell Square “will pick up a small piece of bread which has been thrown out to the sparrows, wipe it on his velvet coat, and begin to eat it. I followed him one day,” says Mr. Mayhew, “into a low beer-shop in St. Giles’s, and found him comfortably seated with his feet up on a chair, smoking a long pipe, and discussing a pot of ale.” There are men who throw themselves into the Serpentine on the chance of a glass of brandy when they are pulled out. In 1816, a Commons’ committee reported of children let out by the day at half-a-crown: of a woman that sat ten years at a corner with twins that never grew older; of beggars who paid 50s. a week for their board; and of one negro beggar who retired to the West Indies with a fortune of £1500. “The personal appearance of the vagabond,” says one writer, “is itself a bodily lie.” The body is altered in height and character. In one instance alteration of height was made at six different times, varying from three to four inches. Another lived seventeen months at Lubeck with a high shoulder and a stiff finger, and would have been arrested afterwards at another place, but for having neither. The face and hands are often marked with lunar caustic. More recently a skilful tattooing has been discovered, which presently disappears on the colouring stuff being absorbed by the lymphatic glands. Even dumbness has been feigned successfully for many years. A Berlin Jew once robbed a grave Canon in his hotel, and among the ducats in his strong-box he found the apparatus for house-breaking.

Imposture is the universal sign from the beggars’ dependant (for there is even lower than the beggar) to the ticket-of-leave man. All Vagabondage is a swindle. But yet it is true to itself. In no other way would its coherence and persistence be explicable. It is held together by rigid and careful bonds, by mutual trust and mutual interest. It is worked on a definite plan; a huge secret society issuing its edicts and passwords, distributing its forces, maintaining its communications with all the capitals of Europe, passing its members from place to place, on the alert for every crime, in universal watchfulness of every police. One close bond is their relationship; what passes for marriage with them being in most cases intermarriage. Another is secrecy. No pains are spared to keep it. Prisons have been stormed for no other reason than to relieve prisoners who might have betrayed

their fellows, or even their crime. A comrade of Picard began to inform. Picard freed him, went to a robbery with him, and shot him on the way. One of a robber's gang concealed two crowns of the common plunder, and his companions tortured him to death. Wichern has observed the same darkened honour in Berlin. If a thief, he says, has stolen 2500 crowns, and reports only 2000 to his companions, woe to him! They are sure to find out the true sum from the police reports. The least punishment is a brand in the cheek to make the traitor known; and the informer has often to be transported for safety, a questionable safety when this underground *Vehmgericht* compasses the world.

A third bond they owe to the Gipsies; besides giving Beggardom the vagabond impulse, the Gipsies gave it speech, and taught it the use of a secret tongue. Stragglers who joined them were unacquainted with the so-called *Egyptian*, but seem to have gathered its vocabulary with that quickness of cunning which belongs to evil. The *Egyptians*, in turn, picked up words from the countries through which they passed. Fresh words were being continually coined; and little rivulets of speech were always flowing into the great stream, from the Church mendicants of the Middle Ages, with their religious slang, the *Jew fences*, with their Hebrew-German, and the *Lingua Franca*, down to the modern *Cadger's cant*. A composite language was thus formed, by which vagabonds in every part of Europe, and possibly in the parts beyond Europe, communicate with each other, which none but vagabonds understand, commonly a traditional, rarely a written speech, in which their secrets are lodged, beyond the ken of keen-sighted policemen, and hitherto of keener sighted philology. Its basis would seem to be oriental. Many of the primitive words have been traced to Hebrew and Sanscrit. In a page or two of the vocabulary of the *Liber Vagatorum* occur the Hebrew words for priest, bread, flesh, house, God. The various orders of thieves in Germany have Hebrew names; the two classes of thieves' implements are called *Great and Little Purim*. An Indian friend, looking over Mr. Hotten's dictionary the other day, recognised a crowd of words that are still used in Gujerati slang. The Latin of the friars survives in such common words as "patter" (*paternoster*) and "fake" (*facere*); and there are names of common coins that sprung up under the classic shade of Rome. Dr. Latham declares that "the thieves of London are the conservators of Anglo-Saxonisms;" there are phrases of Shakespeare and Ben Jonson, Beaumont and Fletcher, to be heard now only at the Seven Dials or the New Cut. Each country appears to have grafted its own vocabulary on the old stock, and the English, by virtue of our insulation, is the most distinct of any. It is peculiar also for its variety-slang that must be read backwards, slang that is merely euphonious, cant by multiplication of consonants, and cant by transposition of consonants. Lascars and Malays, Genoese and Danes, have contributed their quota; there are odd words selected for their unmeaningness, words that have been coined in some brilliant vagabond inspiration, and words that have been transmitted through the

various grades of society until both usage and spelling have made them new. This outer region of the vagabond's tongue is marked by great fluctuation, by the same alteration of sense in words that are retained, and the same dropping of words once popular, that characterize our English itself. The subject is one which cannot be pursued here; it demands, by its importance and extent, separate treatment. But the fact of a secret language is clear; a language spoken in our own streets, yet unintelligible to us; spoken in every great capital, yet unintelligible in each; the thieves' and beggars' *vade mecum*; the sign of a people that in this aspect resemble only the Jews, scattered through every nation, and combining with none. And this language reveals the degradation of that people in the most appalling form; turning the holiest words to the basest uses, inverting every principle of honour and morals, laughing at sin through some whimsical cant, twisting all social order and Christian life into a satanic burlesque, *making a mock at sin*; the very language of sin itself, where every phrase conceals an assault upon virtue, without a word for goodness, or purity, or honour.

A society constructed out of such elements as this, maintaining its unity by such a tongue, and yet holding together for centuries undecayed, is surely as awful a proof as need be of the mystery of evil. But it has still another bond of secret communication. A clergyman whose pastoral work led him for two years through a thieves' quarter, tells us, that "a gesture which may seem unmeaning to the passer-by would make him quake with fear if he knew its significance." "Every movement of the eye and mouth," says another writer, "every shuffling of the feet, the touching of the neck or mouth or hair, a cough, a hem, a sneeze, let it seem never so accidental, is a sign." There is a finger alphabet, commonly practised with one finger; words are traced by the finger in the air, or, in the dark, on the hand of a comrade; the finger letter C carelessly made as the hand lies carelessly on the table announces one of the order; a peculiar wink conveys a mystery. There is a vagabond heraldry by which every vagabond has his crest, and every profession its coat of arms; and the vagabond who should assume his neighbour's quarterings would atone for it in blood. His crest may be either out of the world of animals or Euclid, a horse or a parallelogram; sometimes a cross wound round with a serpent; perhaps a visor over a fox. As inviolable as his heraldry is his *nom de plume*; the Jews having the manufacture of this article, and furnishing to the world of vagabonds at least one apiece. The thieves' arms are a key pierced by an arrow; in the beggars', the arrow pierces a heart; it figures also in the gamblers' through three dice. The arrow, surmounted by a black globe, signifies fear of capture; a stroke with a twisted line about it signifies an exploit; a line attached to this points out the way the writer has gone; the hooks above the line are for men, those below for the women; the cipher above for the leader's children—he being marked by his crest; those below for the children of the rest; even the date may be as openly written as 1/12/62. In 1724, Gipsies are described as "sticking up boughs

of divers kinds, that one company may know which way another is gone;" in 1852, they are described performing the same office by "strewing handfuls of grass at a foot lane or cross roads, by a cross made on the ground with a stick or knife, and by a cleft stick placed in a fence. The marks are always placed on the left-hand side." The hieroglyphics are as old as the fifth century, and once we find them there, who can say how much older? They are made with coal, or chalk, or pencil; sometimes in the sand or snow. They are found on churches, public buildings, inns, mile-stones, solitary trees. A Government report from Hampshire speaks of them as "on corners of streets, on door-posts, and on house-steps. The murderer's signal is even exhibited from the gallows; as a red handkerchief held in the hand of a felon about to be executed, is a token that he dies without having betrayed any professional secrets." Few notice these secrets, though they are common enough on the ways into any town; the country peasants who see them are superstitious enough to preserve them.

These are but some of the characteristics of this strange world. Many as curious might be noticed; their superstitions and the connexion these have with Talmudical writings; their mystical and cabalistic letters; their class distinctions and rigid etiquette; their peculiar science; their common physical type; the adaptation of their industries to the seasons and fashions; their knowledge of the polite world and its movements; their schools for teaching their language and craft; their haughty contempt of all the world beside, as a Jew might speak of a Gentile, or a German student of the *Philister*. But they are there before our doors; stealing up our streets; plotting against our property; darkening our feasts; a kingdom of darkness, of which we learn by police reports, at which we shudder when some more evil and daring spirit glides out of it—some Williams, or Dumolard, or Karl Maasch, or Catherine Wilson—smiting down a score of victims with a single hand, but which men turn to wearily and unwillingly, as to the inevitable. What is to be done with it? Repression has been tried, and it may be said, failed. Before Luther's time, a beggar that was caught in theft was incontinently drowned. Whipping and burning, the stocks and the gallows, ear-slitting, and even slavery, were abundantly used by our forefathers, and Henry VIII. has the credit of hanging 72,000 rogues and vagabonds. Yet beggars and thieves flourished apace, and made it a savage war of reprisals; "burnt carts laden with charcoal, set fire to heaps of felled wood, barked apple and pear trees, and cut out the tongues of cattle and the ears of the king's subjects." Master Franz of Nuremberg, relates, that from 1573-1615 he put 361 to death, and tortured 375 others in that district alone. At Giessen in 1726, five were broken on the wheel, nine hanged, and eleven beheaded. At Gotha a *lunatic* vagabond was slowly butchered by seven sword-strokes. In France, forty were shut up in a house that was then mined, and blown into the air. Schinderhannes was guillotined with nineteen of his band at Mayence. And still the evil grew under the very hands of justice; in apparent subsidence in one century, but

only to rise with greater force in the next. Repression of the severest was ineffectual, and with our present time there came milder measures.

A more humane and comprehensive Poor-Law was established, on the principle that it was as much the duty of the nation to care for its poor as to have an army or a fleet; that the poor could not be banished; that the vagrant must have at least the option of shelter. Poor-houses rose up over the country; poor-rates were levied; and men were content. It was a contrast to the older time when the magistrate fixed the days a beggar should take from place to place, and if they were exceeded, the unfortunate tramp was whipped through every village on the rest of his route. Prison discipline was revised, and based upon juster views. It was made correctional as well as punitive. The prisoner might be a vagabond; but he was treated like a human vagabond, not like an evil beast. And the theory of correctional prisons and reforming prisoners by discipline, was pushed far enough, so far that the vagabond prefers the prison to the work-house, and the worst of all criminals is a ticket-of-leave man. Yet somehow Vagabondage increases, and is almost as daring and terrible in 1862 as in the days of the Mohawks, and the gentlemen of the road. If the mendicant has slunk away, the mendicant spirit is rife. And in spite of the Poor-Laws, there are beggars, and perhaps not altogether by their own fault. Vagabondage is there, and what is to be done?

From the Huguenot wars up till now there have been a million professed vagabonds in Germany: their families and auxiliaries have been at least three millions more. Take an English county like Yorkshire, or two like Hereford and Berks. People them with vagabonds as thick as they are peopled now with honest men. Put the inns and public-houses into their hands. Let the children in the streets be vagabond children; let the green lanes be walked by vagrants and thieves; let them fill every town. Let their speech be as different from ours as Dutch from English; their history and traditions purely criminal; their instincts against order; their secrecy and organization perfect; their morals, immorality; their knowledge of God derived from oaths; without sense of either sin or righteousness. That is something like the evil that faces us; that has grown up as part of our social life and system; that is in the very heart of a Christian nation. Are detectives and constables and jailers the best missionaries to send into such a region? Is there any likelihood that they will change it? Is it seemly that this work should be given over to them? Nay, as long as that is our only remedy, we may be hopeless of anything but mere safety from this Vagabondage, if even that. And, is it not to be held as a reproach on a Christian nation that this Vagabonds' Kingdom should exist in it at all; a reproach on a Christian Church that has not used the remedies within its reach; that has not acted by faith in the mighty power of God for the overthrow of sin? It is peculiarly a question for the Christian Church. There, if anywhere, men will look for the redress of social wrongs, and the remedy for social evils. If the

Church gives it over, is it likely that philanthropy or law will succeed? Christian effort—of the Church, of the individual—is the last hope; but by faith there is more than hope in it. There are points of contact which any honest, hearty Christian will find enough.

"The Vagabond," says Dr. Ave-Lallemant, with every right to speak, "is not incurable; it is hard to improve him, but no genuine Christian work is easy." He has strong affections. Marriage scarcely exists for him, though sometimes the form is gone through in mockery, with one vagabond for clergyman and another for sexton; their so-called wives are exchanged as a matter of business for a poodle or five crowns; a long sentence authorizes a temporary divorce; and their union is always dissoluble by considerations of policy and selfishness. Yet there is affection, capable of much sacrifice, celebrated in some of their ballads, revealing some hidden softness and purity. A mother has been known to carry the dead body of her child for days, and would not leave it in her flight. "I should just like to make one last theft," said a cruel Dutch robber to his confessor, as they went to the block. "What?" replied the Capuchin, confounded. "Just that; and then I would take the money, and give it to the Ursuline nuns, and they would bring up a certain poor child I know, that must otherwise perish." Schinderhannes was always very tender to his father; and Hans to the last honoured with all obedience the parent who ruined him. Their callousness arises as much from ignorance as from deliberate criminal purpose. "What religion are you?" was asked of a robber in 1812. "One about as much as the other. My mother taught me as many prayers as got me confirmed; but I am certainly no Jew." "You know that robbery and stealing are forbidden?" "Yes, I knew that, but I *never knew it was sin*." Some Württemberg pastors visited a certain notorious Constanzer Hans in prison. He, too, had never been taught of sin, and when he learned it from their lips, it was like scales falling from his eyes. He died a thoroughly changed man.

It may look at first like a blind groping in a dark world, but these rays of tenderness and conscience throw some light and hope into it. And they throw light upon the remedy. Whose fault is it but the fault of the Christian Church that these men know nothing of sin? Who is to teach them that, if Christians will not? And what hope is there of a thief giving up theft merely because law forbids it? The police and the prisons are on the one side, but balanced on the other by excitement, adventure, the outlaw's revenge upon society, and the difficulty of an honest calling. Let the vagabond be smitten with the sense of sin, dealt with in a patient manful spirit by those whom God has taught both of sin and redemption; and there is hope to see him "clothed and

in his right mind." But we dare not approach him as the only guilty one. Whatever in us and in our social life has helped to make him what he is, has made us guilty likewise. Nor dare we come with anything like dead sermonizing, like that old preacher of last century, who put 128 questions to every convict, and made him repeat as many printed answers. It must be in the power of a living faith, and with the keen perceptions of a Christian conscience, and a love that can endure all things. And the work is but begun when the single soul is rescued. It is not enough to reclaim the vagabond, and then leave him to the mercies of a suspicious public. That same Gospel which is preached to the solitary sinner is good for the order of the world. Social reform is not even to go hand in hand with the gospel, but it is part of it. For the spiritual and personal relations of man are not given over to Christians; the social and material to legislators and philanthropists; but the entire man is the domain of God's work, and of every Christian as fellow-worker with God, and the work must go on until society is set upon a righteous basis, built up in purity, truth, unselfishness, and sympathy.

Reformatories and Ragged Schools are admirable; in a time when vagabondage is signalized by its juvenile crime, they are above all needed. But it is not enough to *have* them. Least of all is it seemly for the Christian Church to stand by, and let others work them, or throw them with every other heavy burden upon the Government. They are the direct concern of every Christian man and woman; they will be effectual just in proportion as Christian men and women work them; they will never get beyond the awkwardness of an experiment until we recognise them as a personal Christian duty. Workhouses and poor-laws are also admirable; institutions that mark more than any other the progress and humanity of our century. But they will not make an end of mendicancy. Luther saw towards the right way when he wrote that "every town and village should know their own paupers, as written down in the registry, and assist them." Falk saw it more clearly at Weimar. Chalmers proved it in the great cities. In Erlangen, in Bavaria, the poor are managed on the principle that the Church is their proper caretaker and administrator of the highest and most authoritative poor-law; and Pastor Schunk's reports are of singular interest and encouragement. The great experiment at Elberfeld is as vigorous as ever. And it is in this direction that we must move upon Beggarism. It is a Christian enterprise in which none but Christians can thoroughly overcome. It is peculiarly the business of the Church, of the Christian congregation, of the individual. It is only by personal Christian contact with it that Vagabondage can be lessened and finally cured. Otherwise it will be a perpetual tax upon the State, a constant apprehension, a fearful reproach.

S. W.

THE COUNTRY SURGEON.

BY REV. J. DE LIEFDE.

I.

I do not wish to intrude myself as a judge between the theorists and the practitioners when they quarrel upon the question which is preferable, learning or skill. But this much I am sure of, that when I am ill, I prefer a physician who, with a prescription in my own language, restores me to health, to another who, with a Latin one, hurries me to the grave. In this opinion, the inhabitants of the pretty village of S— agreed to the full, for though they were but two miles distant from the town of Utrecht, where there were then, and are still, a University, and many learned professors and practitioners of medicine, yet they never went to it to get a limb taken off, or a disease cured. They were perfectly satisfied with their own country surgeon, Mr. Henry Morgenop, though he could not tell what Hippocrates used to call the liver when he spoke his native Greek. His good wife, whom old and young called "Mother Susanna," was of opinion that our Saxon word *liver* was the best name that could be given to that part of our body, since it was obvious that nobody could live without it. Indeed, Mother Susanna was, in her own way, also a connoisseur of the human system, and of the medicines that were required for curing its diseases. Only she called everything by a name of her own invention. Thus she could not comply with the custom of calling the dandelion *taraxacum*; she thought *grass-candle* was a much more appropriate name for it, and as she prepared all the prescriptions for her husband, he never wrote *Extr. Tarax.*, but *Extr. grassc.*

Mr. Morgenop's youthful years had fallen in with that period of civilisation, when every blacksmith was a veterinary surgeon, and every barber a medical man. In those days, Hungarian quacks, with their long blue cloaks and broad-brimmed hats, used to visit the villages of Holland at regular times of the year to sell a powder which cured all diseases, from epilepsy to toothache, and, at the same time, was a *probatum* for killing rats and mice; and German dentists were seen at every fair, sitting in their gigs, and getting their patients to climb up under tears on one side, to slide down with smiles on the other. Mr. Morgenop accordingly had begun his career in life as a barber, but being by nature endowed with a rare talent for medical science, he gradually acquired such a profound knowledge of the human frame, and of the various herbs furnished by the benevolent Creator for its benefit, that he became known throughout the whole district as one of the ablest surgeons within thirty miles round. It so happened that his good wife likewise seemed to be born with a bump for therapeutics. Already, before her husband had acquired his fame, the mothers of the village used to consult her about a sick child, a scald, wound, or bruise. It was acknowledged that no one in the world could spread a better plaster or roll a nicer pill, and in serious cases she was always called to the sickbed, for a better nurse could not be got than good Mother Susanna.

Their marriage was blessed with the birth of a son, who, to the great joy of his parents, soon proved to have inherited their talents to an extraordinary degree. Already, as a boy of six, young William Morgenop showed amazing skill for dissecting a flower, or anatomizing a dead mouse. Whatever came under his little fingers, if capable of disjunction, was sure to be reduced to the very atoms it was composed of, and, if reunion were possible, he did not rest till he had restored the whole to its pristine condition. The latter feature of his character showed that destruction was not the end he aimed at, but only the means to arrive at knowledge. Indeed, he always manifested a great aversion to destruction for the mere pleasure of destroying. In this respect, he betrayed an extraordinary tenderness of feeling. He never killed a living creature to satisfy his desire for anatomy. And however gladly he would like to dissect a flower in the garden, he never attempted it if he thought that any one in the house would like to see its colours or to smell its fragrance.

William had reached his eighteenth year, when events took place in the political world, which brought about a considerable change in the social administration of the country. Among the many alterations and improvements that were introduced by the Government, was a law regulating the medical practice. The body of practitioners was henceforth divided into two classes, one for the towns and another for the country. Nobody was permitted to practise in a town without his having obtained a doctor's degree at a University. To get this, a classical training of five years at a College was necessary. For the country surgeon an easier course was prescribed. Of him no knowledge of Greek or Latin was required, but he had to go through a course of three years at one of the clinical schools established by the Government, and to pass an examination at the close of the curriculum. This law at once deprived William of the right of continuing his medical practice. His father happily had reached the age at which that law was not applicable. The old surgeon would fain have sent his son to the University to make an M.D. of him, but his means did not admit of such expenditure. Besides, William lacked the required preparatory training; he scarcely knew a mouthful of Latin or Greek. So nothing was left but to send him to one of the clinical schools. Nor was he sent there in vain. After studying for three years with indefatigable zeal, he passed a most creditable examination, and returned home with the highest recommendations of his professors.

This being gone through, William could henceforth undisturbedly continue his profession by the side of his father. His fame grew with every day, and soon equalled that of the old man, if it did not surpass it. God was with the young man, who feared Him with a sincere heart, and, as it was said of the patriarch Joseph of old, so it might be said of him, "that which he did the Lord made it to prosper." Even from Utrecht and other neighbouring

towns such invalids as were able to move about came to consult him, and many of those who were bed-ridden deeply regretted the law which prevented him from paying them a visit.

Thus three happy years passed, when a sad affliction befel this amiable family. Old Mr. Morgenop, one morning, felt unable to rise. A paralytic stroke had lamed him during the night. That same day

another shock struck him, and before the sun set he was dead.

The whole village mourned when the sad news was known, and so did the whole country round about. But there was a consolation left, with which each one comforted his neighbour, "Thank God that the old doctor has left us a son who is worthy of such a father."

II.

I MUST request my readers to follow me to the grey-headed town of Utrecht. We enter the splendid house of the rich Baron van Berkendam. It is evident that disease has here taken up its abode. Disease and death, as you know, spare neither wealth nor title. The pavement of the street is thickly covered

with sand, to deaden the rattling of the carriages. A bill pasted at the door tells you that the sick one has passed an uneasy night, and is in a very precarious state, and that you are requested, without urgent necessity, not to ring.

A magnificent marble flight of stairs leads up to a richly carpeted passage on the *bill etage*, at the

end of which a door opens into a spacious bedroom. It is nearly ten o'clock at night. A thin wax candle, placed upon a small mahogany table at a distance from the invalid's bed, affords the only light for this gloomy apartment. At the little table two ladies are seated, talking in a whispering voice. The one is the Baron's only child Clara, the other, a middle-aged woman, is Miss Bronkhorst, formerly Clara's governess, now her bosom friend, and for many years an inmate of the house. Clara is not a brilliant beauty. Though scarcely twenty years old, the paleness of her countenance gives her the appearance of a lady of thirty. Still there is an unmistakable beauty manifest in her face. It is the beauty of the spirit, the beauty of high intellect combined with tenderness of feeling, which shines from those bright blue eyes, and speaks in every motion of those delicate, finely-carved features. A royal air is cast over the tall, slender frame, whose upright, almost manly attitude bespeaks the nobleman's daughter. Yet nothing of pride or haughty conceit mars the beauty of her presence. Perhaps in former days, when a child, she would lift her head higher than humility permitted, but an exceedingly winning expression in her eyes and round the corners of her mouth, seems to indicate that in later years she has learned to submit that natural propensity to the control of a nobler power.

The two ladies were so seated that they could keep their eyes upon the invalid, who was lying in a state of unconsciousness.

"I really do not know what to do," said Clara, folding her hands on her knees. "I never felt the loss of my dear mother so much as now. How can I, an inexperienced girl, decide in this case? Suppose it turns out badly, will not everybody cast the blame upon me?"

"But, my dear," replied Miss Bronkhorst, "it scarcely can turn out worse than it will do if you go on with Dr. Ceder. I am fully persuaded he has failed in his diagnosis. He takes your dear father's illness for something quite different from what it is. Besides, I don't know, I may be mistaken, but it appeared to me that he smelled of strong drink again this afternoon, and—"

"Dear Miss Bronkhorst!—"

"Undoubtedly I smelt it. In short, however highly your father may think of him, I have no confidence in that man. If I were you, I should call in Mr. Morgenop, and—to speak it out at once, dear—I should send for him without a moment's delay."

"You don't mean to-night!"

"Of course I do. If you wait till to-morrow it may be too late. You see your poor father is getting worse and worse."

"But let us rather call for Professor —."

"No professor, dear. The professor will not come without Dr. Ceder. They are friends, as you know, and the Professor may be a clever physician, but he is a man of very pliable character. Somebody is wanted here to take the bull by the horns, and such a man is Mr. Morgenop."

"But Mr. Morgenop cannot possibly come. The law prohibits him under the penalty of a heavy fine."

"Very well, we'll pay the fine for him."

"I do not know Mr. Morgenop," said Clara, after a pause. "I never saw him. Are you sure he is an able doctor?"

"There is not an abler one in the whole of the province of Utrecht, dear. Everybody knows that, from the children on the street to the old woman at her spinning-wheel. It is not for nothing that every day numbers of people of this town walk out to the village to get his advice. They even come from Amsterdam, which is thirty miles distant, as you know. I advise you to send Dick, the gardener, with the gig. Dick is a faithful fellow. He will do the thing quietly, and tell nobody about it. I will go and order Dick."

With these words Miss Bronkhorst left the room. No sooner was she back than Clara, looking through the window, saw the gig start in the direction of the village of S—.

III.

It was far beyond midnight when William returned home. Mother Susanna opened the door.

"Well, how have you found the Baron?" she asked in an urgent tone.

"It is a serious case, mother, but more so from wrong medicines than from the complaint itself. I cannot make out how Dr. Ceder could take such a foolish course. He has treated for congestion of the brain, while he should have treated for inflammation of the bowels."

"Then write down your prescription, and I will prepare it quickly," said Mother Susanna, taking a step towards the dispensary shop.

"No, that's not necessary," answered William, "we'll rather go to our beds. I wrote the prescription at the Baron's, and they have sent it to the apothecary's. No time was to be lost. The poor man might have died before I could be back with the medicine."

"Oh, dear! oh, dear! exclaimed Mother Susanna, wringing her hands, "Only that was needed; only that, I say. You foolish boy! So you have left evidence behind in your own handwriting that you practised in town. To-morrow you will have the officer summoning you before the judge."

"Not so soon as that, mother," replied William, with a smile. "If no prosecutor turns up, no charge will be made."

"No prosecutor?" cried Mother Susanna. "Plenty of them, sir. Ten to every finger. The whole band of the town doctors will grasp you by the throat, and Dr. Ceder at the head of them. They are as fond of you as a green-grocer is of a rotten cabbage. How they will rejoice to have an opportunity at last of plucking the feathers out of your tail."

"Ah, well, come need, come help," rejoined William. "If the Baron recovers, he, of course, will pay for me, and if he does not recover, his daughter will. She repeatedly assured me that she took all responsibility upon herself. And she is such a lovely, intelligent, kind-hearted creature, mother. You have no conception of her kindness and affability. She is one of the most interesting girls I ever met. Her face is just—"

"Stop! stop!" cried Mother Susanna, not a little amazed at the fervent eloquence with which her son began to give Clara's portrait. "What

will be the use of that if, after all, they leave you in the lurch? I have known those folks for forty years. They are the stingiest misers in the world. Our cousin Jane's mother-in-law has for twelve years served them as a laundry maid, and can tell you stories about their niggardliness, which make one's heart turn upside down in one's body. The Baron allows his beard to grow every second day, to save the expense of a barber, and his late wife expressly hired popish servants to be free from giving them butcher's meat on Friday. You may be sure they will leave you alone when necessity comes."

"Well, never mind," said William, taking a candle and proceeding towards his bedroom. "I know I have done my duty, though it was against the law of the country. A saved life is worth more than an unbroken human law. Whatever may be the penalty, I will bear it with joy; I only hope that the Baron may recover. Good-night, mother."

"Good night, Willie dear. May God bless you, my darling."

IV.

ONE evening, shortly after William's visit to the Baron, Dr. Ceder, his wife, and Charles, were sitting in the drawing-room taking tea. The two eldest daughters were away from home on a visit at the Hague; and the three others were taking tea with a friend. The conversation of the party ran upon the recent and truly remarkable recovery of the Baron.

"It is very extraordinary, indeed," said Mrs. Ceder, "that that young Morgenop's practice should always be attended with such wonderful success. He must have been born under a lucky star. I heard this morning that he has also cured that poor widow in the Tadel-street, whom you gave up, Albert."

"Hem!" answered the doctor, "I don't care. Sometimes a quack by a daring throw of the dice may gain the game. But soon his good luck will leave him in the lurch, and then you will see what comes of the miraculous wonder-doctor."

"I beg your pardon, father," said Charles, in a respectful tone, "it appears to me that you are ill informed about the character and the ability of young Morgenop. I never saw him; but from what my friends, who know him, have told me about him, I have a high respect for him. Even Professor Van Stegen, who saw his prescription for the Baron at the apothecary's the other day, acknowledged that it was anything but a quack's production. At any rate, the Baron got better from using it."

"Stop a moment, sir!" exclaimed the doctor, rather in an animated tone; "it is true that the Baron became better *after* he had taken that young chap's medicine; but *post hoc* is not always *propter hoc*. I have also seen those grand prescriptions, but I call them a piece of reckless temerity. I at least told the Baron that he might be thankful to have come safe out of it, and he now fully believes with me that he has recovered not *by*, but *in spite of* that young desperado's novelty."

Charles was silent, but it was clear from the blush that rose to his cheek, that only filial reverence withheld him from bursting into indignation

at such monstrous ingratitude. Even Mrs. Ceder felt that such a view of the matter was too absurd to be tenable.

"I do not wish to cast a stain on a clever young man's character," said she, "nor do you, dear Albert, I'm sure," added she with a gentle smile. "Still, dear Charles, there is truth in what your father has been saying just now. It is not *proved*, at any rate, that the Baron would not have recovered without Mr. Morgenop's draughts. This much, at least, appears to me to be plain, that the young man is greatly to be blamed for having broken the law of the country. This is a proof of a revolutionary spirit, which, if left to its free course, would upset social order, and end in total anarchy."

"But, dear mother, a man's life was at stake," rejoined Charles quickly, "and—"

"At stake?" cried the doctor angrily, "at stake, sir? Not at all. The Baron was just lying in his critical sleep, which would have terminated in a beneficial perspiration had he been left alone, I'm sure."

"Well, but even suppose his life had been at stake," interrupted Mrs. Ceder, "yet it was not Mr. Morgenop's business to interfere. There are so many lives at stake every day, that Mr. Morgenop ought to be gifted with the talent of ubiquity, were he to save all of them. But certainly all patients whose lives are at stake are not rich Barons."

"Oh, dear mother!" said Charles, rather warmly, "if such were Mr. Morgenop's motives, he surely would not have visited the poor widow at the Tadel-street in the dead of night."

"Well, then," resumed Mrs. Ceder, "if covetousness has not impelled him, pride may. A young man surely must deem himself something wonderful, to step in where a physician, who far surpasses him in years, experience, and learning, declares the case to be hopeless."

"After all, he has shown that it was *not* hopeless," observed Charles, in a half audible voice. Fortunately the doctor did not hear it, otherwise a painful scene might have ensued.

"Still it is my firm conviction," resumed Mrs. Ceder quickly, "that the medical men of this town should at once put a stop to the absurd proceedings of that presumptuous youth. What will be the end of it, if they allow matters to go on in this way? The whole medical faculty will be put to scorn in the sight of the public. I fully believe, dear Albert, that it is your duty to bring in a charge."

"Yes, I think I must," answered the doctor. "This is the second time that young fellow has come across me. My character as a man of order and duty does not allow me to let such irregularities pass by unnoticed. I will see my lawyer about it to-morrow."

The next day Dr. Ceder spoke to his lawyer. William was soon summoned to the bar. Dr. Ceder was his prosecutor. He was fined in a considerable sum—a sum far surpassing the means of the young country physician and his widowed mother. It is true the extraordinary increase in his practice had also increased his income. But as the fees of a country surgeon were very moderate, and nearly the half of his patients belonged to the

poorest class, his balance, though quite sufficient to meet the costs of his profession and household, was not equal to an expensive law-suit. Besides, the greater portion of that balance was to come in the next year, and he had to pay down the fine within four weeks from the time the verdict was pronounced.

V.

NEARLY three of the four weeks had elapsed. Clara was sitting in her room, her head leaning on her hand, her thoughts leaning upon nothing at all. Those thoughts were roving about in all directions through a universe of fancy, but could find no spot to alight upon. She reviewed the whole circle of her friends both in and beyond the town; and she mustered them over and over again to pick out such as might be suitable for her plans, but she could not discover a single one. She wanted to slay a terrible Goliath, but among the whole army of her acquaintance she knew no David. She was in a fearful perplexity, poor girl. She had not been forgetful of her promises to the young country surgeon, so repeatedly and decisively uttered on the evening of his first visit to her father. No sooner was the verdict of the court known than she had reminded the Baron of his duty to the saver of his life; but the old miser proved as deaf as a beetle on that subject. He was of opinion that the young man was more than fairly paid by the twenty-five gilders (£2, 2s.) he had ordered to be sent to him. Besides, he was told that it was not so much on account of his visit to him as of his visits to the poor widow that Mr. Morgenop had been fined. Had he stopped practising in town after his first transgression, Dr. Ceder would have winked at it, on account of his youth and inexperience. But now that he had interfered with the doctor's practice a second time, the Baron could not but fully approve of the doctor's proceeding against him. When, thereupon, Clara assured him that she had pledged herself for all the consequences, and besought him with tears not to compel her to break her solemn promises, the Baron turned angry, scolded her for a foolish girl, who, in a moment of nervous confusion, might have called in all the barbers, Hungarians, and conjurers of the neighbourhood to crowd his bedroom, and might have promised each of them a new suit of clothes, a carriage-and-four, and a dinner to boot.

Thus poor Clara, quite at a loss what to do, was sitting in great distress in her lonely room. She had poured out her heart to God, whom she knew as the friend and helper of the grateful. The first thought that occurred to her mind was to sell her watch, her trinkets, and all she could possibly dispense with. But after the highest estimate of their worth, she found that their price would scarcely cover one-fourth part of the required sum. It is true she was possessed of many jewels and precious stones, bequeathed to her by her mother, or presented by kind relatives, and she would gladly have sold them, but they were locked up in a chest, the key of which was kept by her father. She then thought of appealing to the liberal sympathy of her numerous rich relatives, but she knew only a few among them who would

be likely to help her without her father's cognizance, and she hesitated to speak to those few about the matter, as by so doing she would expose her father's unworthy and ungrateful conduct.

In these and similar reflections she was deeply absorbed when the door was opened, and Miss Bronkhorst entered.

"Have you arrived at any solution?" asked she, taking her place opposite her young friend.

"Unfortunately I have not," answered Clara, without lifting her head from her hand. "Look where I will, I see no opening."

"It is frightful," said Miss Bronkhorst; "I wish I could lay hold of my Austrian state bonds, but unfortunately, as you know, they are kept by your father. This is a time of great trial for us, my dear."

"I would be quite at peace," answered Clara, "if the present trouble only regarded myself; but the heaviest part of the stroke will come down upon that noble man and his good mother."

Tears gathered in Clara's eyes, and her quivering lips showed the deep emotion that agitated her mind.

"The Lord will also prove his consoler," quoth Miss Bronkhorst, after a pause. "I could not help admiring his calmness and cheerful submission to the will of the Lord when I saw him last night. You perceive it was a hard task to me to tell him that, as far as we could see at present, scarcely any help could be afforded on our part. He took it very kindly, and appeared not at all surprised. He said he had expected nothing else, as he was informed of your father's disposition in the matter, and knew that Dr. Ceder had succeeded in fully regaining his confidence."

"Noble young man," exclaimed Clara, with enthusiasm, "he stands in every respect alone among the children of men, as if he were a being from a higher world than this miserable one of ours. Did you ever meet with such a complete combination of ability, humility, and grandeur of spirit? What a keen intellect, and yet what a simplicity of heart! What a deep feeling of dependence upon God's assistance, and yet what a power of will and decision did he display when he stood by my father's sickbed, and, without the slightest air of arrogance or self-complacency, showed that he was the master, and the disease his obedient servant! Then, again, take that perfectly gentlemanlike behaviour of his, that tender discretion, mixed with manly dignity, those easy and refined manners, unblended with the least pretension whatever, and yet accompanied with a firmness of character which commanded the deepest respect. Did you ever in your life, Miss —"

Here Clara lifted up her shining eyes, which met those of her friend, who, with a smile almost threatening to burst out into a loud laugh, looked at her with perfect amazement. She at once stopped her eloquent encomium, and, casting down her eyes, hid her blushing face in her handkerchief.

"Dear, dear!" exclaimed Miss Bronkhorst, joyfully, "I almost believe you could be cruel enough to wish your father ill again, in order to have another visit from the young physician."

"For shame!" exclaimed Clara, without uncovering her face. "You cannot possibly find fault

with the feelings of gratitude which impel a loving daughter to acknowledge the high qualities of the savor of her father's life?"

"If it was only the 'loving daughter' who uttered that praise about our young friend, I could not admire it too much," said Miss Bronkhorst, archly, "but I cannot help suspecting, dear, that poor Charles's cause has now become more hopeless than ever."

"Miss Bronkhorst," answered Clara, raising her head with dignity, "Mr. Charles Ceder's cause is not more hopeless now than it was before. Or rather, let me frankly tell you, that there cannot be a comparative or superlative of hopelessness in his cause, since it never had any hope whatever. I know no one for whom I feel a higher respect than for that excellent young man. I almost think he is too good, too amiable for this world. I wish he were my brother, I really should be proud of him, but as for any closer relationship, it can never be."

"Poor fellow," sighed Miss Bronkhorst. "Did you ever indicate this disposition of yours towards him?"

"Of course not," resumed Clara. "How could I? You know he never spoke out his heart to me. I wonder whether he knows that I have the slightest idea of his inclination towards me. Whenever his timidity allowed him to betray anything of the kind, I always appeared not to take the least notice of it. I am sure he thinks his passion is only known to himself—that it is a perfect secret to me. And I believe that he never will gain enough of confidence to tell me that he wishes to be more to me than a friend."

At this moment a knock was heard at the door of the parlour. The servant announced Mr. Charles Ceder, who wanted to see the young Baroness.

"What? me?" asked Clara, in a voice of the greatest astonishment.

"Yes, ma'am," answered the servant. "The gentleman told me that he particularly wanted to see yourself."

"That will do," replied Miss Bronkhorst, beckoning the servant to retire.

"What am I to do?" exclaimed Clara. "Should he really—"

"You see," interrupted Miss Bronkhorst, with a waggish smile, "you have not yet completely studied Mr. Charles's character. He seems to evince more courage than you ever deemed him capable of."

"But it is too absurd," answered Clara, with an expression on her face in which perplexity seemed to wrestle with humour. "He is not capable of making such a blunder. At this late hour of the day! Without my father's notice! Without any preparatory introduction whatever! He is too discreet and well educated a young man to be able to commit such a *faux pas*."

"Of course he is," replied Miss Bronkhorst, lowering her face to its usual earnest expression; "and therefore you may be assured that he comes to speak to you upon quite a different subject. Perhaps he wants your charitable assistance for some poor patient of his father's."

Apparently tranquilized, though not yet quite sure about the matter, Clara opened the door,

and with slow, nearly trembling steps, descended the staircase, and gently entered the front parlour, where Charles was waiting for her. Surely, if he had come to utter his solemn declaration now, a worse time could hardly have been chosen. The two parties were scarcely able to discover one another in the hollow space of the big, high-ceiled room in which their forms, by the shimmering flame of a little candle, cast ghostly shades on the oil-painted walls.

"I hope you will forgive my boldness in disturbing you at such an untimely hour," commenced Charles, in a scarcely audible voice, "but an important object, in which my peace of mind is deeply concerned, impels me to call just now, and I trust I shall find, madam, that you are taking an equal interest in the matter."

Here the speaker stopped to draw a breath. Clara was silent. It was fortunate that the dim glare of the candle rather concealed than revealed the expression of her face. Had Charles been able at this moment to feel her pulse, he most certainly would have ordered her a dose of *eau de carmes*.

"I suppose," continued Charles, "that you are aware, as well as I am, of the painful predicament in which Mr. Morgenop finds himself at this moment."

"Yes, I am," answered Clara, quickly, while a deep sigh audibly escaped her, evincing the relief she experienced upon hearing that Mr. Morgenop, and not Charles himself, was to be the subject of their conversation.

"I am very sorry to find," proceeded Charles, "that both our fathers are equally prejudiced against that excellent young man. And so, in fact, is the whole aristocracy of the town."

"Indeed!" said Clara, "I was not aware of that. How do you know it is so?"

"Though I have not the pleasure of Mr. Morgenop's personal acquaintance," answered Charles, "yet I am bound to him by ties of gratitude, as well as by feelings of high respect and admiration. I cannot but consider him as the savor of your father's life, madam, and this of itself would be sufficient to command my highest esteem and gratitude. Now, when I was informed that he was unable to pay the heavy fine which the court, backed and goaded by the jealousy of the doctors of the town, has inflicted upon him, I in secret tried to move the hearts of several wealthy members of the aristocracy to come to his rescue. But I am sorry to say I everywhere met with the cold shoulder. His transgression of the law is imputed to him as an unpardonable crime, as a monstrous evidence of a seditious and revolutionary spirit. Had Mr. Morgenop allowed himself to be led by such financial calculations, madam, your father, humanly speaking, would be in another world now, and mine would be—"

Charles did not finish the sentence, but Clara fully understood him.

"Sir," she said, after a pause, "I have no words to express my admiration of your conduct in this affair. How could I ever suppose that the very son of Mr. Morgenop's prosecutor should be his most faithful friend?"

"Pray do not speak of admiration," rejoined Charles, "I am only trying to do my duty."

"Noble soul!" thought Clara. The dim glare of the candle prevented Charles from observing the expression of admiration on her face. Indeed, had he at this moment been able to declare his heart's affection towards her, he would have had a better chance of success than even Clara could have thought possible.

"I am fully prepared to suffer with our excellent friend," said she; "indeed I should bless the hour in which I might be favoured with an opportunity of taking up a part or even the whole of the burden that is now pressing upon him. But, alas! I cannot see how I can be of any service to him. I have tried every way and means within my reach, but all in vain. You perceive, dear sir, that since my father refuses to do anything in the matter, my power must come far short of meeting such a case as this."

"I fully understand that," replied Charles, "and you perceive, madam, that my power must come further short still. But it occurred to me the other day that a union of many little powers might produce a great one. You know that Mr. Morgenop has many friends among the middle and lower class of the town. In fact the sympathy of those people with his case is all but general. I suggested to a fellow-student, who is a good fellow, and a great admirer of Mr. Morgenop's, that a private collection in the houses of those people might go a great length towards the amount required. I would fain have begun canvassing myself, but my relationship to my father of course put it out of the question. My friend, however, joyfully took it up, and the result has fairly answered my expectation—three quarters of the required amount being made up. Now, permit me to ask you, whether—"

"Oh, I am so glad!" exclaimed Clara, before Charles could finish his sentence. "Then we are at once in smooth water. Do call upon me the day after to-morrow, and I shall be delighted to hand you the remainder of the amount. But, dear sir, how shall I find words to express to you my feelings of gratitude for your generous and magnanimous conduct!"

Poor Charles! He only rejoiced at learning that the required sum was made up, and he thought that no other feeling than that same joy caused the ardent enthusiasm with which Clara uttered those words. Had he been able to read the pages of her heart, of which those words were only a few faint sentences, he would have returned home with the distressing apprehension, that while taking off the cross from his neighbour's shoulders, a much heavier one had for ever come down upon his own.

VI.

WILLIAM MORGENOP was sitting in his consulting-room on the second evening after Charles's interview with Clara. He thought of Clara, whose image had never disappeared from his mind since he had seen her at her father's sickbed. Little knowing that she thought as much of him, and that full many a time they were meeting at the throne of grace, he allowed his mind to be buried in all the dark shades which the consciousness of a hopeless love, together with the expectation of an approaching bankruptcy, threw round about him. A foolscap ledger, in which he used to write the

visits he had paid, and the amount of the fees he had received from his patients, was lying open before him, but his pen, instead of moving over the red-lined pages, was drawing all sorts of fanciful figures, such as triangles, squares, trapezia, and parallelograms, on a slip of paper, while every now and then he threw it down, and leaning his head on both his hands, he wandered in fancy to Utrecht, entered the Baron's sick-room, where Clara was standing by his side, left it again to return to the village, where he saw his furniture and library sold, his mother taking refuge into a neighbour's house, and himself carried off to prison.

The door was opened, and his mother came in.

"Again that big book before you," said she, taking a seat opposite him. "I wish you threw it out of the window. What is the use of all that calculating? Only four days, and we shall be as lonely sparrows on the roof."

The good woman covered her face with her apron, and indulged in sobbing.

"Dear mother," replied William, "I know quite well that figures on paper are not cash in hand, but I only want to be able to show that I am an honest man, and that if everybody had dealt honestly with me, I should have been able to meet all my obligations."

"Yes," answered Mother Susanna, wiping the tears from her cheeks, "if that niggard of a Baron had paid you as he ought to have done, you would be as free as a swallow in the air. But you now see that it has happened just as I foretold you. As long as king Death was knocking at their door, that young girl smiled you in with everything your heart could desire; but no sooner could her father blow a feather from his lips, than she scowled you out again, and locked the door upon you."

"Mother, don't speak in that way, I beseech you," said William, in a supplicating voice; "I have repeatedly told you that the young Baroness is as guiltless in the matter as a new-born babe. You know that Miss Bronkhorst assured me the other day that her young friend suffers beyond expression from her father's hardness. I am sure, if she could help me, no other person would be required to do so. But let us not look to the creature, dear mother. Did you not yourself often exhort me, when a child, only to put my trust in God? Now do not wipe off those words from my heart with tears of unbelief and fear."

"You are right, William," answered Mother Susanna, altering her countenance from an expression of anger into one of submission. "My flesh had the better of me just now. I am ashamed of myself. But mind, child, I am a widow, and you are my only staff and strength under God. What is to become of me if you are taken away from me, and the staff of our bread is broken? Oh, I know the Lord will prove a husband, and more than ten sons to me, but my flesh is weak, and when ruined for this life, surely my grey hairs will go down with sorrow into the grave. You know, William, how I have loved you with a mother's love. To see you happy has been my only delight and comfort since your dear father's death. But oh, could I ever think that I should ever be spared to witness your shame and misery!"

Good Mother Susanna again burst out into tears,

and William, not able to check his heart's emotion, knelt down at her knees, and buried his face in her lap. "Oh, mother," he whispered, "look up to Jesus! look up to the cross. Oh, mother, speak a word of consolation to thy poor, guilty son!"

They continued speechless in this position for a few minutes, when a knock at the street door was heard. William hastily resumed his seat, and Mother Susanna opened the door. She announced a young gentleman, most likely a patient from the town.

"Are you Mr. Morgenop?" asked the stranger, "the physician of this place?"

"I am," answered William, drawing the oil-lamp to the corner of the table, to be the better able to look the supposed patient in the face.

"Can I be of any service to you, sir?"

"Yes, of great service," answered the young man, with a gentle smile. "I have for a long while been carrying a burden that pressed heavily upon me, and you will oblige me by taking it off."

With these words the young man drew a parcel from his bosom, which he, with a courteous bow, handed to William. It contained nothing but bank-notes.

"What is the meaning of that?" asked William, with amazement.

"If you count these notes at your leisure," replied the stranger, "you will find that they are equal to the amount you were fined at the court. Your friends in town are thankful to make you this present, and I am glad to say that the Baroness Clara of Berkendam is the first among them."

"Oh, I thought so!" exclaimed William, with eyes beaming from joyful surprise and grateful admiration. "I thought it *must* be so."

"I am requested to add," continued the young man, "that you will oblige by never telling anybody that she was among those who came to your assistance. You perceive that it would put her in an awkward position with regard to her father."

"But I must tell my dear mother," cried William. "She, at least, may know it; may she not?"

Mother Susanna being quickly called in, seemed not to have sufficient eyes in her head to assure herself that really the money was lying there on the table.

"That is from the Lord our God," whispered she, looking down in astonishment. "Truly the Lord is a loving God, hearing prayer and answering prayer."

The young man must now, of course, tell them his name. He would, on the one hand, have fain kept it secret, but he perceived that they would soon recognise him on the street. On the other hand, he longed too much to make William's acquaintance, not to embrace this opportunity of introducing himself to him. I need not say that the surprise of Mother Susanna and her son went beyond description when they learned that the bearer of this glad intelligence was the very son of that same Doctor Ceder, who prosecuted them so severely. Charles, however, gave them as much explanation as was consistent with his reverence for his father. He frankly acknowledged that he differed from his father as to the value and efficacy of the medicines which William had administered to the Baron, but he only put it in the form of a

mere matter of opinion, sparing his unhappy father as much as filial love was capable of doing. The two young men now entered into an interesting conversation upon medical subjects, which soon convinced them that their opinions perfectly agreed as to the chief questions of their trade. Mother Susanna, for whom this talk became too learned, soon left them to prepare a simple supper, which Charles gladly consented to partake of. The more the two young men revealed their minds to each other, the more they felt that ties of cordial friendship were being wound round about them; and soon the strains of their conversation passed over into that sort of confidential familiarity, which evinces the absence of all selfishness, and the removal of every barrier between two souls that are destined to be united in perfect love.

From this time Charles spent many an evening at William's house; in fact, a visit to his friend, whom he loved more the more he saw him, was the only thing that afforded him comfort amidst the many sorrows he had to suffer at home.

VII.

CLARA took ill. Her disease proved to be of such a serious nature that her father and friends became greatly alarmed. It was an epidemic of unknown character, which had recently been raging in the town. It seemed that the medical men could as little trace its origin or ascertain its seat in the human system, as they could discover any means of cure. Some ascribed it to a miasma in the atmosphere, some to certain supposed injurious substances in the water, some called it a nervous affection, and some a derangement of the blood. Whatever it was, this much was certain, that none of them knew any way to cure it, for out of ten cases eight or nine proved fatal. One can picture to one's-self the anxiety with which the Baron and Miss Bronkhorst saw the object of their tenderest affections approaching the brink of the grave with rapid strides. Dr. Ceder this time was faithful at his post, and so was Charles, who often spent hours at the bedside of the beloved invalid. How often did he wish William by his side! Indeed, he had several times already consulted him, and tried to persuade his father to administer the medicines which William had suggested. Of course, he broached them without naming the prescriber. Dr. Ceder, however, stubbornly declined having anything to do with them. In this fearful predicament poor Charles a hundred times resolved boldly to take the bull by the horns, and frankly confess that he entertained serious misgivings about his father's treatment. But every moment he was about to speak out his mind in this way, his courage forsook him, and all his determination exploded in a deep sigh. One evening, however, Clara was lying in utter prostration from a hot fever, which for a moment seemed to pause as if to gather fresh power for a new attack. Dr. Ceder, while feeling her pulse, said with a sigh: "If such a fever comes upon her again, then may God have mercy upon us!" At this the Baron rose, in a spasmodic fit of despair, placed himself before the doctor, and said to him, "Then, doctor, I beseech you to call in somebody else for consultation."

"Most gladly," replied the doctor; "but really

I do not know whom to call. We are all of us at our wit's end."

Here Clara, who had heard this conversation, which despair had raised to a louder tone than prudence might have allowed, turned her head towards her father, and with a power of voice which astonished every bystander, said, "Call in Mr. Morgenop."

Half an hour had not elapsed when the Baron entered William's study.

"Can you forgive the evil I have done to you?" asked he, spasmodically grasping both William's hands, while tears gushed down his cheeks. "Come with me, I beseech you, my daughter is at the point of death. But perhaps God will make you her restorer as He made you mine."

William uttered not a word, but taking his hat, flung himself into the gig, and, *ventre à terre*, galloped the horse into town.

It was not too late. The fever had not again set in. A smile of delight lit up Clara's face when he entered the room.

"God has sent you in time," she whispered.

The result confirmed this prediction of the invalid, although six weeks elapsed before Clara was fully restored to health. During that period William visited her every day, but, in the latter half of it, less as her doctor than as her lover.

Doctor Ceder this time had not the courage to bring an action against William. Nor had any other physician in the town. Indeed there was but one opinion spoken out in all circles: What a pity that young man is prevented from settling down amongst us!

This turn in the course of affairs at once settled a strife which had long agitated Charles's mind. If any one rejoiced at the success that had crowned his friend's intervention at the Baron's, it was he, and no task more difficult was ever prescribed to him, than he had to perform now,—that of concealing his joy in the presence of his parents.

The noble young man, now fully convinced that all desired William's promotion to the rank of a town physician, resolved to offer him his services as a teacher. He accordingly proceeded one evening to S—— with the intention of revealing his plan to his friend. While walking along the road he amused himself by anticipating the joyful surprise he would cause in William's heart and house; and in the expectation of this delightful enjoyment he entered his friend's study with a cheerful glow on his face. He was not a little surprised, however, to find that William's face shone as brightly as his.

"You seem to be in extremely good spirits to-night," exclaimed William, joyfully, while shaking his friend's hand with extraordinary cordiality.

"I may return the same compliment," replied Charles. "Has anything wonderful happened to make you smile so cheerfully?"

"Yes," answered William, assuming a humorous air of mock mysteriousness. "Something very extraordinary. It is a secret though, but I will tell you if you promise me to be silent as the grave."

"Of course, of course," rejoined Charles, taking a seat.

"Well, then," said William, little aware that he was taking up a dagger to plunge into his friend's heart, "I will tell you at once. I am betrothed to Clara. She is mine! She is mine, Charles! Her father has at length given his consent, provided I pass my examination as an M.D."

I shall not venture to describe the effect of this communication upon the poor victim. William saw him turning pale as a sheet, and shaking all over.

"Good heavens, what ails you?" cried he in a voice of alarm.

But Charles kept silent as a corpse. William ascribing this unexpected indisposition to some bodily cause, hurried into his shop for some medicine. "I should have been more cautious," he said to himself.

Meanwhile Charles had time to come to himself, and when William returned, he said "I feel better now. Happy man, may God bless your love."

Then rising, he begged to take leave, as he thought a walk in the open air would do him good. William accompanied him as far as the gate of the town; when there he was so far recovered as to be able to go home alone, and William returned full of admiration for such tender-hearted friendship. Clara had never told him her surmise as to Charles's passion, nor did she tell him, when he, the next day, described to her the scene of the night before.

Again a heavy struggle rose in Charles's mind. The Baron, it is true, had given his consent, upon finding that Clara had made up her mind, and was immovable in the matter. To put an obstacle in the way, however, he had made the condition of the examination, expecting that William would never be able to fulfil it. Consequently no hope could be entertained of obtaining any help from the rich but stingy nobleman, to assist William in this matter. "If he truly loves my daughter," he would say, "let him try to get her."

Again a heavy struggle rose in his mind. But burying his secret sorrow in his bosom, he visited William a few days after the last-mentioned interview; and upon learning how matters stood with regard to the condition made by the Baron, cordially offered his friend his service. Never had abler teacher abler pupil. The distance from *mensa* and *moussa* to Cicero and Xenophon melted away under their rapid strides.

But the joy of Charles's life was gone. His delicate system could not stand the shock it had sustained. A chronic disease soon began undermining its vital power. He lived just long enough to congratulate his friend on his successfully gained doctor's title.

Two months after his death, a marriage took place, at which a seat was left empty next to the bridegroom. "Thus," he whispered into his happy bride's ear, "a place in our hearts will be left which nobody ~~over~~ shall occupy."

Doctor Ceder shortly after his son's death followed him into the grave. His wife and daughters removed to a distant village down the country. Nobody could tell what they were living upon, as the doctor had left no means. But every year, on the anniversary of Charles's death, the widow received a parcel of bank-notes, with the inscription: "In memory of a never-to-be-forgotten friend."

TRUE OR FALSE?

So you think you love me, do you ?
Well, it may be so ;
But there are many ways of loving
I have learnt to know.

Many ways, and but one true way,
Which is very rare ;
And the counterfeits look brightest,
Though they will not wear.

II.

Yet they ring, almost, quite truly,
 Last (with care) for long ;
 But in time must break, may shiver
 At a touch of wrong :
 Having seen what looked most real
 Crumble into dust ;
 Now I choose that test and trial
 Should precede my trust.

III.

I have seen a love demanding
 Time and hope and tears,
 Chaining all the past, exacting
 Bonds from future years ;
 Mind and heart, and joy and sorrow,
 Claiming as its fee :
 That was Love of Self, and never,
 Never Love of me !

IV.

I have seen a love forgetting
 All above, beyond,
 Linking every dream and fancy
 In a sweeter bond ;
 Counting every hour worthless,
 Which was cold or free :—
 That, perhaps, was—Love of Pleasure,
 But not Love of me !

V.

I have seen a love whose patience
 Never turned aside,
 Full of tender, fond devices ;
 Constant, even when tried ;
 Smallest boons were held as victories,
 Drops that swelled the sea :
 That I think was—Love of Power,
 But not Love of me !

VI.

I have seen a love disdaining
 Ease and pride and fame,
 Burning even its own white pinions
 Just to feed its flame ;

Reigning thus, supreme, triumphant,
 By the soul's decree ;
 That was—Love of Love, I fancy,
 But not Love of me !

VII.

I have heard—or dreamt, it may be—
 What Love is when true ;
 How to test and how to try it,
 Is the gift of few :
 These few say (or did I dream it ?)
 That true Love abides
 In these very things, but always
 Has a soul besides.

VIII.

Lives among the false loves, knowing
 Just their peace and strife ;
 Bears the self-same look, but always
 Has an inner life.
 Only a true heart can find it,
 True as it is true,
 Only eyes as clear and tender
 Look it through and through.

IX.

If it dies, it will not perish
 By Time's slow decay,
 True Love only grows (they tell me)
 Stronger, day by day :
 Pain—has been its friend and comrade ;
 Fate—it can defy ;
 Only by its own sword, sometimes
 Love can choose to die.

X.

And its grave shall be more noble
 And more sacred still,
 Than a throne, where one less worthy
 Reigns and rules at will.
 Tell me then, do you dare offer
 This true Love to me ? . . .
 Neither you nor I can answer ;
 We will—wait and see !

ADELAIDE A. PROCTER.

A WINTER IN CANADA.

CANADA is invariably associated in the mind of an Englishman with snow, and something like a shiver creeps over him when the name of the country is mentioned. It was, therefore, with feelings of much surprise, that we listened to the speculations of the people as to the coming winter. It was with no feelings of dread that they looked forward to the winter's shroud that was to wrap up all nature in the stillness of death. They longed for it, as the husbandman for a plenteous harvest, or the Israelites for the wonted fall of manna.

They were as fastidious, too, about the proper timing of the fall as the husbandman is in reference to a shower of rain. The snow may fall very inopportunistically. Great is the disappointment when it comes before the ground is sufficiently indurated by frost, or the lakes and rivers have acquired a sufficient crust of ice. In that case, the snow acts as a warm covering, the ice beneath ceases to increase in thickness, and a treacherous footing, during the whole winter, is the necessary consequence. Great is the joy, on

the other hand, when no snow falls till the ice is able to bear the skater or the sleigh, and the earth is hard as iron.

This kindly feeling towards the snow can be accounted for on various grounds. The sudden sinking of the temperature, along with the fall of snow, produces a wonderful exhilaration of spirits. The languor induced by the extreme heat of summer is at once banished; and men and animals seem intoxicated with the new and bracing conditions of the atmosphere. The small Normandy horses prance with delight, and can hardly be reined in. The Newfoundland dogs roll in ecstasy in the snow, and everything that can move abroad seems as if awakening from a long sleep. The more remarkable effects are not seen, except when the temperature sinks considerably below zero. The sudden access of new life and spirits is usually accounted for by the dryness of the atmosphere. But it is doubtful whether this is a satisfactory explanation. It is more probably due to the fact, that, with every inhalation of the air into the lungs, there is a greater proportion of oxygen. This may also account for the beneficial effects of the climate in certain diseased states of the lungs. It is not unusual for a catarrh to disappear, as if by magic, when the temperature suddenly drops below zero. A similar effect is witnessed in the churches on Sunday. There is no coughing to disturb the preacher—all tendency to bronchial irritation being subdued. The beneficial effect of the atmosphere of Canada, in certain pulmonary ailments, is now so well understood that invalids are frequently sent to spend the winter there. We returned from Canada, in the Spring, with a young naturalist of great promise, who has prolonged his life for several years by spending his winters in Canada, and his summers in Europe. His valuable collections showed that science as well as his own health benefited by this necessity.

The dryness of the atmosphere accounts for a Canadian feat, which at first looks like a traveller's story, viz., the lighting of gas by merely pointing the finger to the burner. The performer first shuffles with his feet along the carpet; and, in presenting his finger to the burner, a spark of electricity is emitted which is sufficient to produce the effect. The friction of the foot develops the electricity, which is conducted by the body to the point of emission. This feat, however, can be performed only in very low temperatures, and when the room is heated by a stove. Sometimes the difference between the temperature of the room and that of the external atmosphere is 100° , so that the most favourable conditions are afforded for the development of electricity.

Another reason for welcoming the snow is the important consideration, that the country becomes a universal highway. Nature macadamizes the whole country, and the settlers, shut up in the back woods, have now free access to the towns and cities. The lumberers can now drag their logs to the railway or the river, and fire-wood sinks in price as soon as the carriage becomes easy. Wheeled carriages disappear from the roads and streets; and the sleigh, which is the peculiarly national vehicle of the Canadians, takes their place. The sleigh is seen in every variety of form; but it

essentially consists of a shallow, oblong body set upon a pair of skates or runners. That of the farmer is of the rudest form, with buffalo skins upon the cross seats. The more affluent citizens decorate their sleighs with gay trappings and bearskins, which flaunt over the back of the vehicle. The wheeled carriages are generally inelegant and inconvenient, but all the resources of the coach-builder are employed to render the sleigh both elegant and luxurious. To a stranger, a drive in a sleigh is a new and delightful sensation. The rapid pace, the smooth and noiseless motion, the bright sunshine, the joyous excitement of the horses, the bracing atmosphere, all combine to refresh and exhilarate. The Canadian goes out for a pleasure drive at a temperature far below zero, and that in his open vehicle, while in England nothing but dire necessity would warrant one to go abroad in similar circumstances. This does not arise from the superior hardness of the Canadian, for he is much more sensitive to cold than the Englishman who has newly arrived in the country. It is due altogether to the peculiarities of the climate. One never feels in Canada the raw, chilling cold which pierces through the whole frame in England. This is also ascribed to the dryness of the air, but it is more probably owing to the highly oxygenated state of the atmosphere—a given amount of inhalation assimilating a greater amount of oxygen, and thus producing a greater degree of animal heat. It may be thought that life would be unendurable in an atmosphere 30° or 40° below zero. And such would be the case, if the physiological indications of the temperature corresponded with those of the thermometer. But this is far from being the case. The variation of 10° about the freezing point produces an incalculably greater physiological effect than a similar variation below zero. One can hardly guess the temperature by his feelings within 10° , when the thermometer stands at the extreme cold of Canada. The natives and old residents usually wear fur caps and gloves, but the Englishman, when he first goes out, feels no necessity for any change in his apparel. In a few years, however, he is glad to adopt the customs of the country. At first, the temperature of the rooms is intolerable, but he gradually comes to acknowledge their comfort. The popular explanation of this change is, that the blood is thinned by the summer heat, and that, in consequence, it is less able to resist the cold of winter. The explanation may be doubted, but the fact is not the less true.

Though the sensations indicate but imperfectly the degree of extreme cold, there are other natural indications which cannot be mistaken. When the thermometer is about zero, the snow emits a peculiar creaking sound under the foot, and the pitch of the note increases as the temperature falls. The smoke from the chimneys also serves as a rude thermometer. When the temperature is moderate, it is hardly visible, as it proceeds generally from wood fires, but when the temperature is very low, it is white like steam issuing from the escape-pipe of a boiler. This is caused by the condensation of the warm vapour mingled with the smoke.

There is still a third reason for the glad welcome of winter, viz., that it is the great holiday season of Canada. Agricultural labour ceases, the

navigation is closed, and commerce is no longer active. The winter is devoted to social entertainments and outdoor amusements. In these amusements the snow and ice are turned to excellent account. As soon as the margins of the lakes are frozen, the ice is thronged with skaters. This amusement is not confined to the male sex. The Canadian ladies are seen in equal numbers on the ice, and often excel the stronger sex in rapidity of movement and gracefulness of evolution. Great distances are often accomplished during a morning's exercise. A favourite feat is to circle round some of the group of the thousand islands at the lower end of Lake Ontario, and explore the winter aspects of this the most striking scenery of Canada. One of the finest sights is to witness the setting of the sun upon the frozen lake while the skaters crowd the ice. The red glare of the sun communicates a peculiar hue to the ice, and as the group of skaters, with glancing steel, glide between you and the fiery ball, you feel that you have a truly Canadian scene presented to you. In the sunsets of Canada there is a tint which is never seen in England. It is a deep apple green. It is seen in its greatest intensity only in the lower St. Lawrence, and it is worth while taking this route from England, notwithstanding its hazardousness, were it only to enjoy the gorgeous sunsets in autumn.

It is not often that the Canadians can enjoy skating on their lakes and rivers. The opportunities are much fewer than in England. In Canada, when the snow falls, the ice is spoiled for the rest of the winter, as the covering remains the whole season. In England, successive thaws present opportunities of forming new surfaces. With so strong a passion for skating, it was not to be supposed that the Canadians should submit to have their amusements suddenly curtailed by a fall of snow. They have therefore resorted to the device of artificial rinks. An extensive piece of ground is levelled and covered in by a wooden shed. The area is flooded with water at night, and a smooth surface is formed by the morning. A thin sheet of water is added every day to obliterate the roughening effect of the day's exercises. The rink is lighted up at night, so that the amusement may be continued after sunset. By constant practice, the feats performed are very wonderful. The rink is often crowded, and many a sharp turn is necessary, but each glides smoothly in his own orbit, and collisions are rare. The most intricate movements of the dance are also successfully imitated. Such a resource is very valuable in a country where the snow renders walking exercise very difficult. The children, instead of being cooped up in heated rooms, are sent to take a few hours' exercise in the skating rink, to which the family subscribes.

It is only in the shallower part of the great lakes that the water freezes. The depth of water is so great, that it is only at the margin a crust is formed. The St. Lawrence, however, is frozen through nearly its whole extent, so that, in the case of an invasion from the American side, the attacking force could readily advance on foot against all the great cities and fortresses of Canada. The rigour of winter, however, will always prove a formidable barrier to an advancing enemy.

Snow-shoeing is also a favourite amusement, though a stranger cannot well understand the source of the pleasure it affords. To the Indian and the backwoodsman it is often useful, as without the broad support which the snow-shoe gives, it would be impossible to move across the country; but when snow-shoeing is resorted to as an amusement, it is more for the difficulty than the ease of walking it is employed. Instead of easily moving along the beaten track with ordinary shoes, a snow-shoe walker seeks the untrodden snow, that he may display his agility encumbered by serious clogs to his movements. The movement is very ungainly, as the feet require to be so far apart, and this awkwardness is greatly increased when an attempt is made to run; and snow-shoe races are common during the winter. Snow-shoeing forms a regular part of military drill. It is quite conceivable, that the use of snow-shoes, in certain military movements, would give one body of men a great advantage over another, and, in former military operations in Canada, the advantage has been tested.

Taboganing is an amusement borrowed from the Indians. The tabogan consists simply of a light board, or the bark of a tree, shaped somewhat like a sleigh. It is brought to the top of a slope, the party sits upon it, and he immediately glides down with a rapidity proportioned to the steepness of the incline. At Quebec, the cone of ice formed by the spray of the Montmorency falls is employed for this purpose. Grave senators, as a relaxation from the duties of parliament, resort to the cone to enjoy this exciting and bracing exercise. The only disadvantage is, that at every trip the party must carry both the tabogan and himself to the summit of the cone; but the rapid descent seems to be an ample compensation for the requisite labour. The Scotch have brought with them to Canada the national game of curling, and it is enjoyed, like skating, under cover. The curling-stone, though retaining the name, is made of iron, as stone, in low temperatures, is found to be a material much too brittle. Though introduced by the Scotch, the game is a favourite one with all the nationalities.

The most remarkable device of the Canadian to gain amusement in his winter fetters is the ice-boat. We had not heard of the contrivance when we first saw one. It was startling in the extreme to see it glide with railway speed across the ice like a phantom ship. At a distance, it appears precisely like a small yacht with its sails set. It is simply a boat set upon a pair of long skates or runners. It is managed much like an ordinary boat, and, so smoothly does it glide, that in a side wind it actually goes faster than the wind itself. When there is only a light breeze blowing, one is surprised to see the boat shooting across the lake as if impelled by a stiff gale. She can sail nearer to the wind than if in water, and the bite of the skate prevents her making any lee-way. This device is not turned to any practical account; the object aimed at is simply to enjoy the sensation of rapid locomotion, which, in all forms, seems to be very grateful to a Canadian's feelings. A stranger, on first landing in Canada, is at once struck with the more rapid rate at which all vehicles move.

Even waggons, heavily laden, are drawn by horses at a trotting pace. The leisurely walk of the cart-horse of the old country is unknown in Canada.

The only exception to the rule of rapid locomotion is the railway. The Grand Trunk, which runs along the whole length of the St. Lawrence and Lake Ontario, is both slow and safe, and the safety is due to the slowness. Accidents frequently occur, but they are not very destructive to life or property. One train may run into another, or get off the track, but the injury is comparatively slight when the speed is only fifteen or twenty miles an hour. When the speed is increased, the destructive power increases in a much higher ratio. When it is doubled, the destructive power is increased fourfold; or, in other words, the destructive power increases as the square of the velocity. This law accounts for the appalling character of the late collision on the Edinburgh and Glasgow Railway. The combined velocities of both trains would probably be not less than eighty miles an hour, which represents a crashing energy sixteen times greater than that of a Canadian train running into a stationary object at the rate of twenty miles an hour. The danger on English railways arises from the demand of the people for speed. In Canada, the safety is due to the financial necessities of the line, it being much more economical to run slow than fast trains. In winter, the difficulty of railway travelling is so great that the sleigh frequently asserts its superiority. In Toronto and Montreal, the street railway system is adopted, but the snow drives the cars off, and large sleighs are employed instead, so that, for a considerable part of the year, the rails are practically useless. An ingenious Yankee, resolving to baffle the climate, strewed with salt the whole line of railway in Toronto, expecting that the rails would be thus cleared of snow, but the device failed, as the gritty compound was not suitable for either rail or sleigh.

It was found, on sending troops to Canada, last winter, that the real difficulty began with the railways. Under the admirable management of General Lumley, the transport of the forces by sleigh from Halifax to Quebec was accomplished with the greatest ease, though at first it appeared a most perilous undertaking. The officers and men enjoyed the journey as they would a holiday. When the troops reached Quebec, it was thought that every difficulty was over, as there was now railway communication with the interior. But here the difficulty began. The railway, unlike the sleigh, was not intended, in its original construction, to struggle against the rigour of an almost arctic climate. In a snow drift, the locomotive is like a maddened bull charging its enemy with the greatest impetuosity. It plunges into the snow, then backs out; and, with deep-drawn breath, renews the charge; but frequently its rage is impotent, it gives up the task in despair, and the slow process of the shovel must be resorted to. The engine carries in front a snow-plough for clearing the rails, but this is effectual only when the drift is not formidable. Sometimes three or four engines come to the rescue of a train buried in the snow, and, with their united strength, charge through the opposing drift.

It is one of the common incidents of Canadian travel to be snowed up in a cutting on a railway.

The snow of Canada, almost invariably, falls in the form of fine, white dust, consisting of separate gritty crystals. The large flakes of England are almost never seen. This dry form of snow is much more liable to drift, and, with the slightest wind, it comes pouring over the edge of a cutting in the railway like sand pouring down from a sand-glass. It is one of the most unpleasant things in travel, to be caught in one of these drifts. You may be in the midst of a forest, far from help; and the Canadian railways do not carry provisions, like those of their more provident neighbours in the United States. The firewood may fail while you are under the snow at a temperature below zero, and you may have the prospect of being snowed up for days in this miserable plight. We had the misfortune of being snowed up, along with many others, on one occasion last winter, when we had an unexpected rescue from our impending fate. We stuck fast in the wreath, after the usual attempts to push through. We could not even back out, and retreat to some spot where there was less chance of being buried up. When all the usual expedients were tried and failed, an American volunteered to go under the machinery, and shovel out the snow that clogged its movements. He worked on with a hearty good will, but it was all in vain; besides, the feed-pipe was frozen, so that the boiler could not be supplied with water from the tender. All the passengers had now given themselves up to blank despair. Night was fast coming on, and there was every prospect of spending it in the train, without food, and without the ordinary comfort of a sleeping car. The snow began gradually to rise around the carriages. It reached the windows, and then the light began to be gradually shut out by the ever-rising stratum. All looked wistfully through the narrowing chinks of the windows, and each had his speculations as to the dreary night coming on, and the thoughts of anxious friends at home. The situation was, however, not so miserable as to prevent one from admiring the beautiful forms assumed by the snow as it rose around the carriages. At first sight, its surface appeared quite uniform, but a little attention showed that there was great diversity. Sometimes it was ribbed with parallel lines, drawn with great exactness; at others, it was diversified with minute conical elevations. Then there were concentric wavy lines, and all the various forms blended together. The process of formation was all visible before you by looking minutely into the structure. With the aid of a glass, you could see the minute particles rolling over and taking their allotted place, so as to fit in to the general pattern. Some of the forms were not unlike the spiral nebulae which Lord Rosse's telescope has revealed to us; and the great laws which pervade the universe can as well be illustrated by the play of atoms as by the revolution of worlds. The wisdom with which the Great Architect has planned all things is stamped as vividly upon the little as upon the great. The formula expressive of the laws of the universe are altogether independent of magnitude. Our snow studies were soon curtailed by the closing in of night, and the pangs of hunger began to assail the whole company, with no hope of having them appeased. It was like an angel's visit when a boy, with a Scotch accent, stepped

into the carriage with a pitcher of hot tea, and a basket full of bread and cheese. This was sent by his mother, and he was told not to take anything for it. Many were the blessings on the good woman for her timely supply. Her kindness, however, did not end here. She sent down her eldest son to the train with the instruction, that if he saw any "kent body," he should ask him to spend the night at her house. Her heart was large, but her house was small, and she could afford only limited hospitality. Her son, on looking round the train, soon recognised the son of a Scottish minister with whom we were travelling, and who is known throughout Canada for his labours of love in behalf of religious and philanthropic enterprise. We were fortunate in sharing the invitation; but it was with no little difficulty we reached the settlement in the cleared forest. The snow, thawed by the sun, and subsequently frozen, forms a treacherous crust, which now bears you up, but the next moment allows you to sink to unknown depths. The deer is, from the same cause, easily killed in winter, as its small foot sinks through the crust, while the broader foot of the hunter bears him up. When we arrived at the farm-house, we were first ushered into the large kitchen, where we found the patriarch of the family sitting by the stove, with his daughter, son-in-law, and numerous grandchildren, all intent on showing hospitality to the rescued strangers. The grandfather, well stricken in years, belonged to the parish of Lesmahagow, in Scotland, and now that he had little more to do than sit by the stove and revive the scenes and stories of olden times, many were the questions he put us about the present and former ministers of his native parish and surrounding district, showing that fifty years of exile could not eradicate the love of his native soil. There could not be a finer picture than this homestead, of the successful career of a Canadian settler. And it is the rule for the industrious settler to achieve similar success. This family enjoyed an abundance of the comforts of life. The children were intelligent and well educated. The house was equal in extent, comfort, and elegance to the ordinary farm-houses of England; and, above all, the house and the extensive farm around were their own property. It may be said that their lot was, after all, but a moderate one; but it ought to be remembered, that the successful settler is, most frequently, the farm-servant who would probably have never risen above that position had he remained at home. The probability that the farm-servant will become in Canada a well-to-do proprietor, is as great as that he will continue to be a farm-servant to the end of his days should he remain in England. It was not merely the material prosperity of the above family that arrested our attention. We found that the religious training of the young was carefully attended to, and that their sympathies were awakened for missionary enterprise. Our companion in misfortune happened to be secretary to a society for the support and Christian training of orphan children in India; and it was discovered that some of the family were collectors and contributors to the same society, which had strongly enlisted the interest of the neighbours in the district. There was much gladness when the dis-

covery was made, and some of the young people in the neighbouring settlement were called in to enjoy the meeting. The secretary produced photographic portraits of the orphan children, who were all known by name to the Canadian girls who contributed to their support. It seemed to give them no ordinary delight to gaze on the swarthy features of the children about whom they had often talked. How marvellous the power of that faith that could blend in one the hearts of children in the snows of Canada and on the plains of Hindostan. As the evening advanced we withdrew to the parlour, which had now been heated and lighted for our reception. Before retiring for the night, the head of the family took down the "big ha Bible," as was evidently his wont, and after the singing of a psalm and the reading of a chapter, we joined in prayer at the throne of grace. Long will that forest home, with its hospitality and devotions, be gratefully remembered. As to the train left in the cutting, it was released during the night, several engines having come to the rescue. In the morning the settlers turned out, and cut the snow wreaths on the turnpike road, so that we might be sent on by sleigh in time to keep our engagements.

It was not always that we were so fortunate in receiving aid in our difficulties. On another occasion, we had, as we supposed, the good fortune to get, by special favour, a seat in an express train, which was conveying a British regiment to Toronto. The journey, which ought to have been performed in ten hours, took altogether three days,—the whole of the time being spent by the officers and soldiers in the cars, and that, too, without sleeping berths. The officers filled one car, and the privates the others. The men were fortunately provided with three days' rations, but the officers had nothing, as they trusted to their wants being supplied at the different stations. They were, during one part of the journey, without any food for twenty-four hours. We admired much the good humour with which they bore it all. The long weary hours were whiled away by various methods. The older officers chaffed the younger, and all told stories of their adventures in many lands. Among the number, there were some excellent mathematicians and classical scholars, and their stores of knowledge furnished themes for graver conversation. The pangs of hunger seemed to be greatly subdued by smoking tobacco, of which they had an abundant supply. It was matter of surprise that English officers should have so few resources in such an emergency as this. Instead of attempting to scour the country for food, they patiently endured hunger, smoked their cigars, and stuck by the train immovably fixed in the snow.

The good points of the Canadian cars are all borrowed from those of the United States, and, certainly, no people excel the New Englanders in ingenious contrivances for domestic and travelling comforts. The great feature of these cars is their sleeping-berths. In a few minutes, a day car is converted into a sleeping car; and when thus changed, it presents the appearance of a long passage, with three tiers of shelves on each side. These shelves form the berths of the passengers who choose to pay for this luxury. One learns to

sleep in course of time with wonderful soundness. It is also an economy of time, for the traveller can often so arrange as to do his travelling and sleeping at the same time. It is also possible, in this way, to evade the equality system of the States, by which all classes travel in the same carriage. A higher rate is charged for these convertible cars, and consequently the company is more select. In long journeys, a car in the States is set apart for refreshments, so that meals may be had as on ship-board. Iced water, a stove, and retiring rooms, are found in every car; so that, in long journeys, the inconveniences of English railways are much felt by those who have been accustomed to travel in America. Another great advantage of the American system is, that the passenger may move about from car to car while in motion, and speak to any one of several hundred people whom he may wish to meet. He can also at pleasure take an airing outside of the train, instead of being imprisoned for hours together in the car. In the short distances of English railway travel, the necessity for such conveniences is not so much felt, but in Switzerland and other parts of the continent, the American plan is being gradually adopted.

There is a popular notion in England, that frost-bites are so dangerous and frequent, that mutilations are very common, and that it is not unusual to meet unfortunate martyrs to the climate deprived of ears and noses. A frost-bite, however, does not infer any mutilation or serious inconvenience. The effect is simply to arrest the circulation in the part, but it is readily brought back by gentle friction with the glove. On entering a warm room it is advisable to apply snow to the affected part, that the warmth may not be too sudden. No bad effect is left except when the circulation is long arrested. The parts most liable to be bitten are the ears, the nose, and across the temples. The party may not be aware of a frost bite, but the whiteness of the part arrests the attention of others, and it is held courteous to stop a stranger on the road and tell him of the danger. The part blisters if frozen for a considerable time, but we have never met with a case in which any part of the face was mutilated. In the hospitals, however, there are occasional cases where the feet are so badly bitten as to require amputation. Such cases frequently arise from intoxication, and subsequent sleeping in the snow.

Let us now turn from the climate to the people of Canada. Perhaps the most frequent inquiry in England at present, refers to the loyalty of the Canadian; but no one can reside in Canada, for however short a period, without being convinced of their devoted attachment to the British throne. There are keen political parties, violently differing on local matters, but loyalty is a universal sentiment, and it is much deeper than mere self-interest. There is even a warmth of feeling on the subject which one does not find so strongly expressed at home. The most tangible expression of loyalty was given last winter, when the whole population rose as one man to drill in volunteer corps. The proximity to the United States does not at all tend to enlist their sympathies in favour of American institutions or American alliance. The effect is the very opposite, and when any anti-American

feeling exists at home, it is sure to be found in Canada in an intenser form. A strong patriotic feeling is rising everywhere, but, instead of tending towards a severance from the mother country, its aim is to secure a closer alliance in feeling and interest. Not the least loyal of Her Majesty's subjects are the Red Indians. They look upon the Queen, whom they style their "Great Mother," as a bounteous female deity, supplying them with blankets and ammunition. They listen with indignation to all questioning of her right to universal dominion. It is told of a Scotch divine, that, wishing to enlighten an Indian tribe on the subject of co-ordinate jurisdiction, he ventured in his address to question the Queen's authority in spiritual matters. This was treading on perilous ground, and the address was brought to a sudden close by an angry flourish of the Erastian chief's tomahawk over the head of the speaker.

Whether it be the effect of climate, or of the concourse of different nationalities, it is undoubted that the native Canadian youths display great precocity in their manners and early education. In the common and grammar schools, the pupils display a greater degree of quickness and intelligence than in similar schools in the old country. Time is not yet given to see whether this early promise is to result in future greatness. The names best known in Canada, are those of men who have been imported from the mother country. There is, however, one man, a native of the country, of whom the Canadians are justly proud, and whose name is not unknown in England. We refer to Dr. Ryerson, the founder and Chief Superintendent of the educational system of Canada. No man has done so much to mould and develop the character of the people. He travelled in Europe, and carefully studied the educational systems of different nations. The system which he planned, and which has been adopted by the Legislature, is substantially that of the United States, in which the educational activity of the various religious bodies is entirely ignored. As a necessary consequence, the teaching is exclusively secular. In a new country, this system is the one most generally acceptable, as the various churches have to struggle for their existence, and are glad that the state should take upon itself the burden of education. When, however, society is better organized, and the churches gain an easier position, educational life is inevitably awakened; and whether with or without the aid of the state, they will engage in the work of educating the people. Dr. Ryerson saw this tendency, and, at an early period, was constrained to give separate grants to the Roman Catholics. This anomaly could not long be continued; and last winter a bill was introduced to give separate aid to all Protestant denominations that choose to engage in the work of national instruction. Canada thus practically abandons the system of the United States, and adopts that of England, in which aid is given to all denominations, if they impart a due amount of secular knowledge. Evidence is afforded even in the United States, that the common-school system is only provisional, and that the state must yield to the educational activity of the people acting through their various churches. Already, almost

every denomination has begun to erect schools for itself, though as yet no aid is derived from the State. The first demand for separate aid is always made by the Roman Catholics; and the next step of aiding other denominations, is inevitable. We found it to be the opinion of a high educational official in the State of New York, that in less than ten years the common-school system would begin to disintegrate, from the necessity of giving separate grants to the Roman Catholics. He clearly saw that the system of England was the only one that could satisfy the educational activities of a highly developed state of society; and that the mechanical uniformity of the common school was suited only to the early periods of a new country.

Although the educational system of Canada is only in a transition state, it has worked, so far, admirably. There is, perhaps, no country where the advantages of a common school and academic education are so accessible to the mass of the population. The result of this is shown in the very large proportion of the youth of Canada who devote themselves to learned professions. The aptitude usually displayed by the youths at the university augurs well for future achievements in literature and science.

The winter of Canada is prolonged into spring, or rather the spring is altogether sunk as a distinct season, and the winter is terminated by the commencement of summer. It is well on in June before vegetation makes any marked progress, and then nature advances with a bound. The days are, however, often very hot before there is any symptom of spring; and one wonders that nature should not take a start with such heat, but the cold nights are an effectual check to vegetation. Even in the coldest days of winter, the direct rays of the sun are hot, the latitude of Upper Canada, to which we chiefly refer, being considerably lower than that of England.

In returning from Canada, we selected the route by Boston. In passing through the New England States we saw few signs of the war. The aspect of things was very different from that of last year, when we travelled along the same line. It was then the romance of war, and the whole country resounded with war songs and martial music. Now it was the terrible reality of war, and little outward demonstration was visible. There seemed to be no lack of prosperity, and many insisted that war was very profitable. It is not difficult to understand how the manufacturing or commercial towns of New England, and Boston in particular, should derive substantial benefit in the meantime. The immense sums spent upon army stores have enriched a numerous class, and stimulated to an unhealthy prosperity various branches of manufacture.

While in Boston we visited the workshop of the distinguished optician, Mr. Alvan Clarke. Our chief object was to inspect the great telescope, of which we gave an account in a previous number of *Good Words*. On our former visit it was only in the process of construction, and it was uncertain how the optician would succeed on a telescope of such unwonted dimensions. It was now completed, and mounted in a temporary tube, swung against the tower of the observatory. The focal length is

23 feet, and the diameter of the object-glass is 18½ inches. It was executed for the University of Mississippi; the contract price of the object-glass being £2237. On account of the war it was impossible for the Southern University to fulfil its part of the engagement, so that the telescope is now in the market. It was with tremulous anxiety that Mr. Clarke first tested the telescope, by turning it upon the stars; for, however well it stood the other tests applied, there is none so trying as the fixed stars. It was first turned to the most conspicuous star in the heavens, viz., Sirius; and we may well imagine his satisfaction when he instantly discovered a companion star, which had hitherto eluded the search of the most powerful telescopes in the world. This companion was not only seen, but seen with ease, in all conditions of the atmosphere. Mr. Bond, whose observatory is only about half-a-mile distant, on learning the discovery, turned his great equatorial upon Sirius, and also detected the companion,—thus illustrating the fact, that an inferior telescope may describe an object previously undiscernible when once its existence is made certain by a superior telescope. The discovery is interesting, not only as testing the power of the telescope, but as throwing light upon a physical phenomenon which long puzzled astronomers. The proper motion of Sirius has long been an enigma, and it was supposed that there was a dark body in its vicinity disturbing its motion. This bright companion will probably solve the difficulty. It is only four seconds' distant from Sirius. The telescope was next tested by directing it to the great nebula in Orion. Twenty new stars were discovered in a small space around the trapezium, which has been often explored by the most powerful telescopes. These tests clearly establish the superiority of Mr. Clarke's over all existing telescopes. The process by which such satisfactory results were obtained was minutely explained by Mr. Clarke. He claims merely the merit of working the glass into the requisite shape; the glass itself being supplied by Mr. Chance of Birmingham, which was of faultless excellence. The glass must be worked into a convex shape to form an image; but the difficulty lies in giving to a large lens that exact degree of convexity to every part which is necessary to form a well-defined image. The object-glass is made large, so as to secure brightness in the image, but brightness is of little value unless distinctness or definition is also secured; and, in order to secure definition, each portion of the glass must have precisely the same focus as every other part. The object-glass may be regarded as a compound eye, consisting of innumerable constituent eyes, each of which forms an image of the object. The vision is not satisfactory unless all the images perfectly coincide to form a single image. If one eye be of longer focus than another, the resulting compound image is indistinct, as if the object were seen through a fog. If the hand be placed over the object-glass of a telescope, so that only a small part of its surface is left uncovered, that part will give a distant image, if the instrument is well executed. If successive parts be left uncovered, the same result will be obtained. If, however, the glass is not

well figured, one part may give a good image, while another will give an imperfect one with the same adjustment of the eye-piece. The object of Mr. Clarke was, therefore, in the course of the working, to test every part successively. For this purpose, he divided the object-glass into rings or zones, like the target of a rifleman, and each zone was worked so as to bring it to a given focus. To secure this object, he formed a long tunnel, leading from his workshop through his garden, which had its termination in the wall fronting the road. This end was filled up with a board, having a small hole in the centre. The hole served as a star, the image of which was to be formed by the lens. The lens was mounted on small wheels, so as to admit of being moved backwards and forwards to catch the exact focus. When any particular ring was to be tested, the rest of the lens was covered up, and if the focus was found to be too long or too short, the glass was removed to the workshop, and there subjected to the requisite manipulation. Innumerable trials were necessary to give the lens a faultless figure. The difficulty was increased by the circumstance that the glass was compound, one part being flint-glass and the other crown, so that four surfaces required to be accurately figured. This compound structure is necessary to render the glass achromatic. There is much unwillingness to part with this noble instrument to foreigners, and efforts are making to retain it in the States.

On our former visit we sought refuge from the tumult of war in the workshop of Mr. Clarke, but now we found that our friend had also caught the war furor, and could with difficulty speak on any other subject. His art was also turned to war purposes. Astronomical instruments were abandoned, and he was busily engaged in making small telescopes, to be fixed on the barrels of rifles, which probably proved more lucrative than the astronomical telescopes. This affords an illustration of the manner in which the war, while it injures one branch of trade, improves others. Mr. Clarke is the inventor of a new rifle, which did much execution in the rifle pits at Norfolk. It is short, and very heavy—the metal of the barrel being half an inch thick. The bullet is a solid cone, without any cavity, and is loaded at the muzzle by the aid of a ring, which is put on before loading. The barrel recoils upon a spring, so that the shock is not felt till the ball has left the piece. Greater steadiness of aim is thus secured. We explained the contrivance to Southern officers, who afterwards crossed the Atlantic with us, but they were unwilling to

allow that there was any novelty in this Northern invention. They held that they were far ahead of the North in all munitions of war, having now factories in which all modern refinements are executed. These officers had run the blockade at Charleston, and joined the Cunard steamer at Halifax. During the whole voyage they had an eager circle of listeners around them, as they gave thrilling details of their exploits in the South. The Southern versions of the Northern victories were listened to with keen relish by the English passengers. The Northerners, though largely preponderating in numbers, were dumb before the more fluent and fiery Southerners. They, however, took the opportunity of muttering, in private, deep imprecations against their foes. One of the most atrocious was that of an apparently pious New Englander. "If it be necessary, but only if it be necessary for the maintenance of the Union, we shall exterminate man, woman, and child, as the Lord commanded the Israelites to exterminate the Canaanites." The mission to England of the Southern officers was not, of course, divulged, but we afterwards learned that they manned the war steamer, No. 290, which eluded the pursuit of the *Tuscarora*. It was attempted to console a Northerner by saying, that he ought to be proud that the glorious Union should have nurtured such brave soldiers in the South, but his reply was—"What would you think of a son who slapped his father on the face?" With such combustible elements, an explosion was at one time feared, but a lady of Boston acted as mediator between the parties, and, thanks to her persuasive powers, she charmed down the rising storm, and succeeded in keeping the peace.

On our visit to the observatory of Albany last year, we found the astronomer Mr. Mitchell on the eve of starting for Washington to join the army. Since that time he has been promoted to the rank of general, and is now one of the popular heroes of the North. Though advanced in years, he has been distinguished for his brilliant and rapid movements. His name is, however, connected with one of the greatest atrocities of the war, viz., the outrage on the boarding-school in Alabama, to which the aristocracy of the South sent their daughters to be educated. Those who know Mr. Mitchell best, are persuaded that every means in his power would be used to restrain his soldiers; but in the American army the best officer can exercise only the feeblest discipline. Science will have reason to lament, should his fame be tarnished by so foul a deed.

WILLIAM LEITCH.

MECHANICS OF NATURE.

BY MRS. RYMER JONES.

DURING the past summer we have had in that gigantic building devoted to the display of the greatest efforts of man's industry and genius, an opportunity of inspecting a variety of machines admirably designed to diminish human toil; and an infinite diversity of tools and implements, more or less adapted to facilitate the labour of the mechanic.

After such a display, it cannot but be interesting to compare with these the mechanical contrivances of nature, which far exceed them in ingenuity and completeness.

We will begin with some of the simplest illustrations of these.

One of the most useful implements of the artisan is the *saw*, with which he is enabled to cut in pieces the hardest timber or stone. The principle upon which the saw is constructed is familiar to every one, but in order the better to understand the difference between the saws of nature and those of art, it may be as well to remind the reader what that principle is: saws of human manufacture are made of the hardest steel, their cutting edge is divided into sharp teeth pointing in the same direction, by means of which the fibres of wood are torn into minute pieces, and thus solid timber is gradually worn through. The saw made use of by the human artisan is but a bungling contrivance when compared with those employed in the economy of nature. The saw-fly, one of a remarkable race of insects, as a means of preserving its eggs from destruction, and of providing a proper supply of food for the young to which they give birth, is instructed to deposit its eggs in the leaves or tender shoots of the growing branches of trees. To enable it to effect this, the female saw-fly is provided with a very remarkable apparatus, which consists of two saws, placed back to back, and so arranged that they can alternately be pushed forward and backward. One only of these saws is first driven forward, and, while it is retracted, its fellow is pushed out, and this is continued until an aperture of sufficient size has been made. These saws, however, are not only furnished with teeth at their edge, but have smaller ones distributed over their whole surface, so that they perform the office of files as well as saws, and not only cut a slit in the wood, but enlarge the opening until it is sufficiently capacious to receive the eggs into its interior. To protect this delicate instrument when not in use, it is enclosed in a case formed by two hinged flaps, one on each side of the saw. The eggs, deposited with so much skill, are not left to chance. Immediately after the puncture has been made, the part of the stalk around it begins to swell, and an excrescence is formed, such as we frequently see on the stem of a rose-tree, or the leaf of a willow. In a few days the eggs produce young grubs, which, after under-

going a change into a chrysalis state, finally assume the form of their parent, a four-winged fly. It is related of the female of one kind of saw-fly, that she will remain on the leaf within which she has deposited her eggs till they are hatched, that she feeds them carefully, and, resting with her wings stretched over them, protects them from the heat of the sun, or from the attacks of enemies; and that she continues to do so for several weeks, until her young ones no longer require her maternal care.

A still more wonderful piece of instinct is exhibited by the ichneumons or cuckoo flies, a race of insects to whom is intrusted an important department in the police of nature. The common butterfly will lay, perhaps, 500 eggs in the course of a single summer; and, although butterflies themselves are not generally regarded as dangerous enemies, a very little reflection will show, that if not rigidly watched over they would become exceedingly formidable. The butterfly, be it remembered, produces as its progeny, not butterflies like the parent animal, but active, hungry caterpillars, with ravenous appetites and horny jaws. If, therefore, a garden was, at any time, during a single season, visited by 500 of these pretty flutterers, which is by no means improbable, the consequence would be a progeny of 25,000 caterpillars; a number obviously quite sufficient to cause serious injury to the garden. If each of these in its turn was to lay 500 eggs, it is evident that the country would soon be rendered uninhabitable by the overwhelming increase of butterflies. On the other hand, it is equally obvious that if the supply of caterpillars was to be diminished to any considerable extent, vast numbers of birds and other animals would be deprived of food. The consequences under either supposition would be equally detrimental to the harmony of Nature. The agents employed by the Creator to insure an adequate supply of caterpillars, and, at the same time, to prevent a too rapid multiplication of butterflies, are the little ichneumons above alluded to. The apparatus employed for this purpose resembles in some respects that of the saw-flies, before described, but instead of a cutting instrument, it is in this case converted into an awl, the end of which is flattened and sharp. By the assistance of this the cuckoo-fly is enabled to deposit her eggs in the back of the caterpillar, which, unconscious of its injury, feeds and enjoys its life, regardless of the brood of young ichneumons feeding upon the very nutriment on which it is dependent for its existence. It lives on apparently unharmed, but when the time arrives for undergoing its metamorphosis, too feeble to make the usual change into a chrysalis, it dies.

Shears and scissors it might naturally be supposed would require human hands to guide them, but long before mankind possessed such useful in-

struments, they were busily at work in the depths of the sea, and that with an unerring fatality as the fabled shears of Atropas. The rocks and grottoes of the ocean are as richly carpeted with a verdure of their own, as our hills and valleys. Seaweeds and corallines, exquisite in colour and beautiful in form, clothe them in rich profusion. But though away from the view of man or of those animals with whom he is more familiar, there are creatures formed to revel in this luxuriant growth, and to whom it affords a continual banquet. The Tritonea, a kind of marine slug, is one of these, and it is furnished with scissors to clip off the living flowers which serve it for sustenance. The mouth of the Triton is of a most singular construction. Enclosed within two fleshy lips which form the external part of this organ, lie two flat horny jaws, united at one end by an elastic joint; a strong muscle brings together the sharp jaws, which pass one over the other like the blades of shears, and are enclosed again by the spring which connects them. Within this destructive mouth is a tongue covered with sharp hooks, all bent in the direction of the throat, to which they convey the ample supply of food prepared by the jaws.

One of the most useful of the tools of the carpenter, is a chisel, and efficiently enough it does its work, so long as it can be kept sharp; but even with the utmost care it is apt to become dull and blunted. Could some ingenious mechanician produce a set of these useful instruments, that would always retain a sharp cutting edge, and never need grinding, they would certainly be classed among the most ingenious and useful inventions. Now in the animal creation such sets of tools are constantly at work, in the mouth of every rat and mouse and squirrel. Hour after hour will a rat continue its patient gnawing at the hardest board, day after day, and week after week, will it pursue the same employment; and yet its teeth never appear to be worn in the least. We say appear, because this constant gnawing does wear away even the teeth of a rat, but provision has been made for this constant attrition. The teeth of the Rodents, or gnawing animals, never cease growing. Fresh matter is added from behind to the tooth, as it is gradually pushed up in front, and thus no obvious diminution of size takes place. Still it would seem impossible but that the sharp edge should become blunted, even though the tooth should retain its proper length. So it would be, indeed, were the tooth of the same material throughout. But these gnawing teeth are formed of two different substances. The bulk of the tooth is of ivory, which of itself would not be hard enough for the work that has to be done. Its front is therefore covered with a thin plate of enamel, extremely hard and durable, and as this wears away much more slowly than the ivory, a sharp cutting edge is always maintained. But in order to estimate properly the efficiency of these chisels of Nature's contrivance, we ought to know what amount of work they are capable of performing, and of this the structures erected by the beavers will give us some idea.

The beavers are a race of animals inhabiting the northern parts of Europe, Asia, and America, but now fast disappearing from the earth, in conse-

quence of the unrelenting persecution to which they have been subjected, in order to obtain their skins, so much employed in the manufacture of hats. These industrious creatures have long been celebrated for their skill in erecting their dwelling; but as some readers may be unacquainted with their manner of building, it may not be superfluous to recount it. The beavers, who always work in companies, assemble together in the months of June and July to establish their settlement. They congregate in numbers of two or three hundred on the bank of some river, and the place of meeting is usually the spot on which they commence their operations. The object of these united labours is twofold; first to form a species of pond in which the water may be always retained at the same height; and secondly, to construct an assemblage of secure dwellings for the whole colony of labourers. On the bank of some running stream, at a part where the water is shallow, and shaded by poplars or overhanging willows, these four-footed engineers begin their work. Their first object is to select some large tree conveniently overhanging the river, and, seating themselves around it in sufficient number, they begin to cut it down with their sharp chisel-like teeth, enjoying meanwhile the morsels of fresh wood and tender bark, which are their favourite food. The tree, although often as thick as a man's body, is soon cut down by their joint efforts; it falls across the stream, and forms the principal beam in their building. They cut the branches from the top to make it lie evenly, while others fell trees of smaller girth, and divide them into stakes of a proper length. These they convey to the edge of the river, and then bring them by water to their building-place. There they have to begin the task of pile-driving, without the mechanical contrivances to which human engineers have recourse. With their ever-ready teeth some of the beavers uplift the stakes and drive them into holes, which others of their party, plunging below the water, have already made for their reception. Many rows of these piles are driven, and the intervening spaces filled up with branches, which the intelligent creatures weave in between them. Others go in search of earth, which they beat with their tails, and temper with their feet until it is of a proper consistence to fill up all the crevices in their building. The dam erected in this manner across the river is a construction of no small labour, being often from 80 to 100 feet long, and from eight to ten feet wide. It is formed of numerous piles of equal height, planted close together. These piles, which are perpendicular on the outer side of the dam, are placed in a sloping direction on the inner side; thus giving all the solidity necessary for supporting the weight of the water, and for preventing its overthrow. On this dam, the top of which is flat and smooth, the beaver village is erected, the huts of which it consists are sometimes ten feet in diameter, having walls two feet in thickness, which are usually built to the height of a few feet, and then covered in by a vaulted roof. Sometimes, however, a second, or even a third storey is added. These huts have each two apertures, one of which gives admission from the general causeway, and the other a window looking upon their pond. It sometimes

happens that the water is frozen over below the level of their window, and their entrance to the bathing-place precluded. In this case, they make another opening beneath the ice; for access to the water is essential to their well-being. The houses are neatly plastered throughout with mortar, which they beat and temper with their feet. To assist them in their work, they have been provided with a most excellent trowel; the tail of the beaver is flat, and covered with scales; with this they plaster the walls of their houses, to render them quite impervious to rain, and effect it with such mason-like skill, that it is difficult to imagine that human hands have not been employed in the work. Each hut serves for the abode of several pairs of beavers; and close to each dwelling is a storehouse for the food of the family. This consists of stems and branches of trees cut into short lengths. The beavers have only recourse to this stock when fresh green wood, their favourite aliment, cannot

be procured. Thus furnished with commodious habitations and a plentiful supply of provisions, the beavers pass a happy and a busy life. Great care is taken to keep their village and the dam upon which it is built in good repair, and general harmony prevails. Part of their time is passed in the water, and for this they have been well fitted by nature. Their hinder feet, which serve to row them along in the water, are webbed, and their broad flat tails serve as a rudder to direct their course, and thus these singular quadrupeds are enabled to occupy a situation in which an animal without such various adaptations would not be able to exist. To creatures so circumstanced the possession of chisel-like teeth, which no wear can blunt, is obviously indispensable; and it would be difficult to imagine any contrivance more perfect than that adopted to secure the lasting efficiency of the inimitable tools with which they are furnished.

COOKING DEPOTS FOR WORKING PEOPLE.

WHILE the pleasures of the table are not to be too eagerly sought after by those who desire to see man's faculties wisely used, a generous hospitality cannot be censured, nor improvement in the art of cookery be condemned, seeing that health and sociality are promoted by well-prepared and well-served dinners. But when the reasonable and pleasurable satisfaction of our natural wants gives place to ostentation and expense in feeding, important duties are too often neglected, in order that one inordinate appetite may be unduly gratified. The old Roman gourmands, who feasted their friends on peacocks' brains and nightingales' tongues, sacrificed health and pleasure to ostentation: and Cleopatra, when she quaffed dissolved pearls, acted more like a silly self-willed queen, than a sensible and modest woman. Apicius spent in good eating, if we are to believe ancient chroniclers, a million and-a-half sterling, and then committed suicide, fearing he should die of starvation because he had only £50,000 left. This may be mere folly, but it may be said that there is something approaching to *wickedness* in the culinary art, if we are to take literally what we read of as necessary in connexion with the cooking and preparation of the meats served up at many of the best modern tables. Crimped cod, we are told, only possesses half its virtue if the steaks are not cut whilst the fish still lives. And that famous artist of the kitchen, Ude, has laid it down as a fact proved by long practice, that eels should be thrown on the fire alive before they are skinned, so that the oil may pass into the skin,

and be removed with it. Calves have to be bled gradually to death to secure veal white enough for respectable tables; whilst the *foies gras* of Strasbourg is only attained in perfection by cramming geese with food, nailing their feet to a plank, fixing them near a great fire and denying them drink, that their livers may become of the right size and quality to please the palates of modern epicureans.

But in providing for the working portion of our population no such arts can be required. Bread, porridge, potatoes, and a little broth and meat, furnish the chief part of their food; and they only require that these be of good quality, sufficient quantity, passingly well cooked, and served in a cleanly and comfortable manner.

How these things are attended to in the homes of the working people forms no part of the subject of this paper; though it may be said, in passing, that in that which constitutes good housewifery they are often sadly lacking. With all its drawbacks, however, there is no place either for eating or drinking so fit for any man as his home. It is more economical, more natural, and if anything like a right spirit prevails amongst those who form the family circle, the reunions at meals in the intervals of labour will strengthen domestic affections, and invigorate life. In the large cities and towns of the empire, however, there are, necessarily, large numbers of the working people who cannot, without great inconvenience, pass from their employment to their homes at the ordinary meal hours; and it is a matter of considerable moment that some plan should be devised and carried out to provide accommodation for persons so situated,

in which shall be combined the comforts, the cleanliness, and the economy which are characteristics of decent and happy homes amongst our working population.

The best attempt that has yet been made to do this, that we are aware of, is that which Mr. Corbet has set on foot in Glasgow; and as it is not only singular in the mode of its operation, but successful in realizing the objects in view, we shall give a general outline of its history and operations.

In July 1860 Mr. Corbet first conceived the idea of trying this experiment; and, in September of the same year, the first establishment was opened at the Sailors' Home in that city. The working people generally were offered breakfast, dinner, and tea, at a price so low as to create some degree of astonishment amongst all who had inspected or partaken of the rations furnished. To attain this cheapness, it was decided to have a continued and never-varying uniformity in the articles furnished, that each day's work should be a mere repetition of what had gone before, and that the articles purchased should to the last ounce be capable of consumption. This arrangement made large purchases almost imperative, and as cash payments to tradesmen from the first were decided on, it will at once be seen that everything was bought at the lowest possible price. Meal, milk, tea, coffee, bread, butter, and eggs are the only things used for breakfast. If it is necessary to any person's comfort or health to have something not named here, he or she must go somewhere else to procure it. Hence the cooking is all one job, the service is easy and simple, and waste is almost impossible. At dinner there are soup, broth, potatoes, bread, meat, and pudding. Nothing else can be had for dinner; and if a mutton chop, a little fish, or a slice of any other kind of meat is required, the answer is, that it is not kept, and cannot be served. In the evening, tea or coffee can be had, with an egg if required, and then the service of the day is done, and the business of the one day is the business of the year. Cheapness has secured abundance of custom, whilst custom, being so constant as to prevent waste of food, or waste of time on the part of those employed in these establishments, secures and makes permanent the cheapness. The best proof of the success of these establishments is the rapidity with which they have spread throughout Glasgow. There are now thirteen large establishments doing an amount of business, which at first could not have been calculated on. The average consumption per month, before the last large establishment was opened, was as follows:—55,000 bowls of broth and soup, 52,000 plates of beef, 33,000 plates of potatoes, 14,500 bowls of porridge, 54,000 cups of tea and coffee, 82,000 rolls and slices of bread and

butter, 7000 boiled eggs, 14,000 rations of milk, making a monthly total of rations of 311,500.

That these rations are excellent in quality, and, for the price charged most satisfactory, is undeniable; and that they are served respectably and consumed with a quietness and decorum creditable to those who frequent these establishments, must be at once admitted by all who may have had the curiosity to drop in and take pot-luck at the ordinary meal hours. One man quietly unfolds the bread packed up by his wife when he left home for work, calls for a basin of broth or soup, as the case may be, and a large steaming basin being laid before him, he eats his bread with this for a relish and departs, his whole entertainment having cost him one penny, in addition to the before-mentioned bread. Another, whose finances it may be are in happier condition, orders first his broth, then his potatoes and meat—the potato supply being abundant—and having made a good meal, finds that his bill amounts to fourpence. It may be remarked, that what is here said as applying to the service of the dinners, applies also to what is served at breakfast time, and in the after part of the day; the penny ration is the rule, and for threepence a man may make a breakfast such as would be pleasant to think of as being within the reach of all our working men.

The class of people to be seen at these *placés* is unmistakably the working class. Many evidently belonging to the more comfortable classes may be seen amongst them; but whether they are drawn by curiosity or a love of economy it is difficult to say, as during the hours of business there is silence and despatch, and the customers come and go so rapidly that there is little time or opportunity for gratifying an idle curiosity.

In opening these establishments the founder has kept three things in view as regards the situations in which to place them. First, poor neighbourhoods—so that those who need most to get comfortable, well-cooked, and wholesome food at the lowest cost, may be served. Next, in the neighbourhood of large works—that the working men employed in them, instead of walking a long distance to their meals, or instead of their wives being under the necessity of bringing their meals to them, may without any trouble have a comfortable room, obtain what they require, for a few pence, read the daily papers, and return to work without suffering the annoyance or discomfort to which so many of the working people are otherwise liable. And thirdly, public thoroughfares,—where large numbers of people continually pass and repass, and where pedestrians from the outskirts of the city, as well as visitors from the towns of the district, may without much trouble

find what they want in the way of cheap refreshment.

That Mr. Corbet's plans have been well arranged is proved by their success, every new place he has opened having been at once filled to overflowing with customers; and that the mode of conducting them was well matured before any practical step was taken, is made evident by the fact, that from the first, no alteration has been made either as to the price charged for any article of food or as to the quantity given.

A new plan like this so extensively carried out must, of course, be carefully managed, or much confusion and great loss will attend its workings. Mr. Corbet did not feel it necessary to call in the assistance of managers, head-cooks, head-waiters, or other clever officials. He required no abstruse potages, no tortured poissons, no luscious rôts, no puzzling relevés or entremets. The waiters in his establishments are young women, quiet in their manners, and simple and cleanly in their dress, who have been taken from all sorts of employments, with no other recommendation beyond that of good character. For the work they perform they are paid from £12 to £14 a year, are provided with food, and lodging if required, and are under the superintendence of the more matured persons who are over them as managers or matrons.

By laying down a system as to time, and simple methods as to boiling and preparing plain household dishes, Mr. Corbet has succeeded in placing before those who visit these establishments good beef, well boiled; and good broth and soup, plainly but well made; indeed, in regard to all the articles in his bill of fare, there is a household look and odour which cannot but be satisfactory to those who partake of them. The meat is boiled and the broth made at a central cooking place, and sent from thence to the various branches for consumption; but the tea and coffee are prepared at each branch, and so also are the potatoes.

To secure carefulness in these matters, a general superintendent moves continually about from one place to another; not to reprimand or find fault, should he see reason to do so, but to note in his diary what he does see, and this is brought daily under the eye of the proprietor, who promotes or displaces those in his employment as circumstances may require. Thus a quiet efficiency is secured, and the work goes forward without bungle or dispute.

A most interesting question in connexion with this experiment is as to whether it will pay; and here it may be said that little information can be given in the absence of an authenticated balance sheet, beyond the general assurance of the pro-

prietor that he started the scheme to a certain extent as a commercial speculation, and that it has answered its purpose. About this he declares that he wishes no disguise, he does not desire that it should go before the world as a philanthropic effort made for the benefit of the working classes, through any kind of enthusiastic zeal on their behalf. What there is in it of benefit to a class, he wishes to be attributed to the excellence of the scheme, and not to any disposition to sacrifice money or time in the interest of those who benefit by it; at the same time it would be wrong not to acknowledge a claim to the gratitude of the public, simply because that claim is not openly and pertinaciously urged. In doing what he has done, Mr. Corbet has conferred a very great benefit on a class of his fellow-citizens who stood in need of it; and the acknowledgment of this is a duty which ought not to be omitted here. But, although without formal recognition of his services, Mr. Corbet, after two years of experiment, declares that he has already received sound practical recognition of the most satisfactory kind, in the conviction that his money is invested in a scheme which will bring him a satisfactory profit.

It would appear that the public notice which has been taken of these cooking depôts in Glasgow, has led to a desire to have the same sort of establishments opened in other large cities and towns in the kingdom. In attempting this, however, it would be well if those who contemplate such a thing would take steps to make themselves practically acquainted with the working of these Glasgow establishments. The principles of management are few and simple,—plain but comfortable rooms, plain, wholesome, unvarying dishes,—simple and intelligent plans,—and such business arrangements with those who supply the articles consumed as prevent indebtedness, and secure the articles needed at the lowest cost. These things being attended to—if in Manchester or its neighbourhood they seek to start such establishments as a means of mitigating the distress felt by the working people, the best plan to insure success would be to send some intelligent man of practical good sense to Glasgow, who, on the spot, and in the presence of what is done, could become fully acquainted with the whole working of the system; and to an arrangement of this kind Mr. Corbet, it is said, is quite willing to accede.

Having stated very frankly the various points of excellence about these new restaurants, we must point out just as frankly what would, we think, be improvements. It is well known that the great working-day luxury of large numbers of our operatives is a smoke after meals. Those who move constantly amongst them know how intensely a "blast of the pipe" is enjoyed in the interval

between the close of the meal and the resumption of work. This almost universally felt want ought to be provided for; a well-ventilated smoking-room, to which smokers could adjourn and enjoy the fragrant weed, would be a real improvement worthy the consideration of the proprietor, and most certainly worthy the attention of those who may contemplate starting such establishments elsewhere. Smoking may be a weakness, a great injury to the health, and a great waste of money that might be better spent. The world, however, has decided otherwise. At present tobacco smoking is a luxury as tyrannical almost as any natural want, and its comfortable enjoyment ought to be provided for. And the same may be said of a glass of wholesome beer. If Mr. Corbet could enable the working-man to wash down his dinner with an imperial half-pint of beer for a penny, he

would confer a real boon on his customers. In Scotland this is not so much required as in England, but in either country, if such a want could be satisfied in such a place, it would do away with all excuse for adjournment to the public-house, and in many ways would be a real benefit to the working people. The penny ration of beer, like the other penny rations, might be made the maximum supply, and if so, such places could never become the haunt of the drunken and improvident. On the contrary, the decent regularity of a clean, cheap, and comfortable dinner, accompanied by a half-pint of sound beer, might in multitudes of cases, by making plain the use as distinguished from the abuse, beget temperate habits, and cause a wise discrimination which would be most beneficial to the working men of Great Britain.

L. J.

HONESTY.

ONE evening a poor man and his son, a little boy, sat by the wayside, near the gate of an old town in Germany. The father took a loaf of bread, which he had bought in the town, and broke it, and gave the half to his boy. "Not so, father," said the boy, "I shall not eat until after you. You have been working hard all day, for small wages, to support me; and you must be very hungry. I shall wait till you are done." "You speak kindly, my son," replied the pleased father; "your love to me does me more good than my food; and those eyes of yours remind me of your dear mother who has left us, and who told you to love me as she used to do; and indeed, my boy, you have been a great strength and comfort to me; but now that I have eaten the first morsel to please you, it is your turn now to eat." "Thank you, father, but break this piece in two, and take you a little more; for you see the loaf is not large, and you require much more than I do." "I shall divide the loaf for you, my boy, but eat it I shall not—I have abundance; and let us thank God for His great goodness in giving us food, and in giving us what is better still, cheerful and contented hearts. He who gave us the living bread from heaven, to nourish our immortal souls, how shall He not give us all other food which is necessary to support our mortal bodies!" The father and son thanked God, and then began to cut the loaf in pieces, to begin together their frugal meal. But as they cut one portion of the loaf, there fell out several large pieces of gold of great value. The little boy gave a shout of joy, and was springing forward to grasp the unexpected treasure, when he was pulled back by his father. "My son, my

son!" he cried, "do not touch that money; it is not ours." "But whose is it father, if it is not ours?" "I know not as yet to whom it belongs; but probably it was put there by the baker, through some mistake. We must inquire: run!" "But, father," interrupted the boy, "you are poor and needy, and you have bought the loaf, and then the baker may tell a lie, and—" "I will not listen to you, my boy; I bought the loaf, but I did not buy the gold in it. If the baker sold it to me in ignorance, I shall not be so dishonest as to take advantage of him. Remember Him who told us to do to others as we would have others do to us. The baker may possibly cheat us; but that is no reason why we should try and cheat him. I am poor, indeed, but that is no sin. If we share the poverty of Jesus, God's own Son, O let us share also His goodness and his trust in God! We may never be rich, but we may always be honest. We may die of starvation, but God's will be done should we die in doing it! Yes, my boy, *Trust God, and walk in His ways, and you will never be put to shame.* Now, run to the baker, and bring him here; and I shall watch the gold until he comes." So the boy ran for the baker. "Brother workman," said the old man, "you have made some mistake, and almost lost your money;" and he showed the baker the gold, and told him how it had been found. "Is it thine?" asked the father; "if it is, take it away." "My father, baker, is very poor, and—" "Silence, my child; put me not to shame by thy complaints. I am glad we have saved this man from losing his money." The baker had been gazing alternately upon the honest father and his eager boy, and upon the gold which

lay glittering upon the green turf. "Thou art, indeed, an honest fellow," said the baker; "and my neighbour David, the flaxdresser, spoke but the truth when he said thou wert the honestest man in our town. Now, I shall tell thee about the gold.

A stranger came to my shop three days ago, and gave me that loaf, and told me to sell it cheaply, or give it away to the honestest poor man whom I knew in the city. I told David to send thee to me, as a customer, this morning; and as thou

wouldst not take the loaf for nothing, I sold it to thee, as thou knowest, for the last pence in thy purse; and the loaf, with all its treasure—and certes, it is not small!—is thine; and God grant thee a blessing with it!" The poor father bent his

head to the ground, while the tears fell from his eyes. His boy ran and put his hands about his neck, and said, "I shall always, like you, my father, trust God, and do what is right; for I am sure it will never put us to shame."

MISTRESS AND MAID.

A HOUSEHOLD STORY.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

CHAPTER XXVI.

LET us linger a little over this chapter of happy love ; so sweet, so rare a thing. Ay, most rare : though hundreds continually meet, love, or, fancy they do, engage themselves, and marry ; and hundreds more go through the same proceeding, with the slight difference of the love omitted—Hamlet, with the part of Hamlet left out. But the real love, steady and true : tried in the balance and not found wanting : tested by time, silence, separation ; by good and ill fortune ; by the natural and inevitable change which years make in every character,—this is the rarest thing to be found on earth, and the most precious.

I do not say that all love is worthless which is not exactly this sort of love. There have been people who have succumbed instantly and permanently to some mysterious attraction, higher than all reasoning ; the same which made Hilary 'take an interest' in Robert Lyon's face at church, and made him, he afterwards confessed, the very first time he gave Ascott a lesson in the parlour at Stowbury, say to himself, "If I did marry, I think I should like such a wife as that brown-eyed bit lassie." And there have been other people, who, choosing their partners from accidental circumstances, or from mean worldly motives, have found Providence kinder to them than they deserved, and settled down into happy, affectionate husbands and wives.

But none of these loves can possibly have the sweetness, the completeness of such a love as that between Hilary Leaf and Robert Lyon.

There was nothing very romantic about it. From the moment when Johanna entered the parlour, found them standing hand-in-hand at the fire-side, and Hilary came forward and kissed her, and after a slight hesitation, Robert did the same, the affair proceeded in most mill-pond fashion :

"Unruffled by those cataracts and breaks,
That humour interposed too often makes."

There were no lovers' quarrels ; Robert Lyon had chosen that best blessing next to a good woman, a sweet-tempered woman ; and there was no reason why they should quarrel more as lovers than they had done as friends. And, let it be said to the eternal honour of both, now, no more than in their friendship days, was there any of that hungry engrossment of each other's society, which is only another form of selfishness, and by which lovers so often make their own happy courting-time a

season of never-to-be-forgotten bitterness to everybody connected with them.

Johanna suffered a little : all people do when the new rights clash with the old ones ; but she rarely betrayed it. She was exceedingly good : she saw her child happy, and she loved Robert Lyon dearly. He was very mindful of her, very tender ; and as Hilary still persisted in doing her daily duty in the shop, he spent more of his time with the elder sister than he did with the younger, and sometimes declared solemnly that if Hilary did not treat him well he intended to make an offer to Johanna !

Oh, the innumerable little jokes of those happy days ! Oh, the long, quiet walks by the river-side, through the park, across Ham Common—any where—it did not matter—the whole world looked lovely, even on the dullest winter-day ! Oh, the endless talks ; the renewed mingling of two lives, which, though divided, had never been really apart, for neither had anything to conceal ; neither had ever loved any but the other.

Robert Lyon was, as I have said, a good deal changed, outwardly and inwardly. He had mixed much in society, taken an excellent position therein, and this had given him not only a more polished manner, but an air of decision and command, as of one used to be obeyed. There could not be the slightest doubt, as Johanna once laughingly told him, that he would always be "master in his own house."

But he was very gentle with his "little woman," as he called her. He would sit for hours at the "ingle-neuk"—how he did luxuriate in the English fires !—with Hilary on a footstool beside him, her arm resting on his knee, or her hand fast clasped in his. And, sometimes when Johanna went out of the room, he would stoop and gather her close to his heart. But I shall tell no tales ; the world has no business with these sort of things.

Hilary was very shy of parading her happiness : she disliked any demonstrations thereof, even before Johanna. And when Miss Balquidder, who had, of course, been told of the engagement, came down one day expressly to see her "fortunate fellow-countryman," this Machiavellian little woman actually persuaded her lover to have an important engagement in London ! She could not bear him to be "looked at."

"Ah, well ! you must leave me, and I will miss you terribly, my dear," said the old Scotchwoman. "But it's an ill wind that blows nobody good,

and I have another young lady quite ready to step into your shoes. When shall you be married?"

"I don't know—hush; we'll talk another time," said Hilary, glancing at Johanna.

Miss Balquidder took the hint and was silent.

That important question was indeed beginning to weigh heavily on Hilary's mind. She was fully aware of what Mr. Lyon wished, and, indeed, expected; that when, the business of the firm being settled, in six months hence he returned to India, he should not return alone. When he said this, she had never dared to answer, hardly even to think. She let the peaceful present float on, day by day, without recognising such a thing as the future.

But this could not be always. It came to an end one January afternoon, when he had returned from a second absence in Liverpool. They were walking up Richmond Hill. The sun had set frostily and red over the silver curve of the Thames, and Venus, large and bright, was shining like a great eye in the western sky. Hilary long remembered exactly how everything looked, even to the very tree they stood under when Robert Lyon asked her to fix definitely the day that she would marry him.

"Would she consent—there seemed no special reason to the contrary—that it should be immediately? Or would she like to remain with Johanna as she was, till just before they sailed? He wished to be as good as possible to Johanna—still"—

And something in his manner impressed Hilary more than ever before with the conviction of all she was to him; likewise, all he was to her. More, much more than even a few short weeks since. Then, intense as it was, the love had a dream-like unreality; now it was close, home-like, familiar. Instinctively she clung to his arm; she had become so used to being Robert's darling now. She shivered as she thought of the wide seas rolling between them; of the time when she should look for him at the daily meal and daily fireside, and find him no more.

"Robert, I want to talk to you about Johanna."

"I guess what it is," said he, smiling; "you would like her to go out to India with us. Certainly, if she chooses. I hope you did not suppose I should object?"

"No; but it is not that. She would not live six months in a hot climate; the doctor tells me so."

"You consulted him?"

"Yes, confidentially, without her knowing it. But I thought it right. I wanted to make quite sure before—before— Oh, Robert!"

The grief of her tone caused him to suspect what was coming. He started.

"You don't mean that? Oh, no, you cannot!"

My little woman—my own little woman—she could not be so unkind."

Hilary turned sick at heart. The dim landscape, the bright sky, seemed to mingle and dance before her, and Venus to stare at her with a piercing, threatening, baleful lustre.

"Robert, let me sit down on the bench, and sit you beside me. It is too dark for people to notice us, and we shall not be very cold."

"No, my darling;" and he slipped his plaid round her shoulders, and his arm with it.

She looked up pitifully. "Don't be vexed with me, Robert, dear; I have thought it all over; weighed it on every side; nights and nights I have been awake pondering what was right to do. And it always comes to the same thing."

"What?"

"It's the old story," she answered, with a feeble smile. "'I canna leave my minnie.' There is nobody in the world to take care of Johanna but me, not even Elizabeth, who is engrossed in little Henry. If I left her, I am sure it would kill her. And she cannot come with me. Dear! (the only fond name she ever called him) for these three years—you say it need only be three years—you will have to go back to India alone!"

Robert Lyon was a very good man; but he was only a man, not an angel; and though he made comparatively little show of it, he was a man very deeply in love. With that jealous tenacity over his treasure, hardly blamable, since the love is worth little which does not wish to have its object "all to itself," he had, I am afraid, contemplated not without pleasure, the carrying off of Hilary to his Indian home; and it had cost him something to propose that Johanna should go too. He was very fond of Johanna; still—

If I tell what followed; will it for ever lower Robert Lyon in the estimation of all readers? He said coldly, "As you please, Hilary;" rose up, and never spoke another word till they reached home.

It was the first dull tea-table they had ever known; the first time Hilary had ever looked at that dear face, and seen an expression there which made her look away again. He did not sulk; he was too gentlemanly for that; he even exerted himself to make the meal pass pleasantly as usual; but he was evidently deeply wounded, nay, more, displeased. The strong, stern man's nature within him had rebelled; the sweetness had gone out of his face, and something had come into it which the very best of men have sometimes: alas for the woman who cannot understand and put up with it!

I am not going to preach the doctrine of tyrants and slaves; but when two walk together, they *must* be agreed, or if by any chance they are not agreed, one *must* yield. It may not always be

the weaker, or in weakness may lie the chiefest strength; but it must be one or other of the two who has to be the first to give way; and, save in very exceptional cases, it is, and it ought to be, the woman. God's law, and nature's, which is also God's, ordains this; instinct teaches it; Christianity enforces it.

Will it inflict a death-blow upon any admiration she may have excited, this brave little Hilary, who fought through the world by herself; who did not shrink from traversing London streets alone, at seemly and unseemly hours; from going into sponging-houses and debtors' prisons; from earning her own livelihood, even in a shop;—if I confess that Robert Lyon being angry with her, justly or unjustly, and she, looking upon him as her future husband, her "lord and master," if you will, whom she would one day promise, and intended, literally to "obey"—she thought it her duty, not only her pleasure, but her *duty*, to be the first to make reconciliation between them? Ay, and at every sacrifice, except that of principle.

And I am afraid, in spite of all that "strong-minded" women may preach to the contrary, that all good women will have to do this to all men who stand in any close relation towards them, whether fathers, husbands, brothers, or lovers; if they wish to preserve peace, and love, and holy domestic influence; and that so it must be to the end of time.

Miss Leaf might have discovered that something was amiss; but she was too wise to take any notice, and being more than usually feeble that day, immediately after tea she went to lie down. When Hilary followed her, arranged her pillows, and covered her up, Johanna drew her child's face close to her, and whispered—

"That will do, love. Don't stay with me. I would not keep you from Robert on any account."

Hilary all but broke down; and yet the words made her stronger, firmer; set more clearly before her the solemn duty which young folks in love are so apt to forget, that there can be no blessing on the new tie, if for anything short of inevitable necessity they let go one link of the old.

Yet, Robert— It was such a new and dreadful feeling to be standing outside the door, and shrink from going in to him; to see him rise up formally, saying, "perhaps he had better leave;" and have to answer with equal formality, "Not unless you are obliged;" and for him then, with a shallow pretence of being at ease, to take up a book and offer to read aloud to her while she worked. He—who used always to set his face strongly against all sewing of evenings—because it deprived him temporarily of the sweet eyes, and the little soft hand. Oh, it was hard, hard!

Nevertheless, she sat still and tried to listen;

but the words went in at one ear, and out at the other—she retained nothing. By and by her throat began to swell, and she could not see her needle and thread. Yet still he went on reading. It was only when, by some blessed chance, turning to reach a paper-cutter, he caught sight of her, that he closed the book and looked discomposd; not softened, only discomposd.

Who shall be first to speak? Who shall catch the passing angel's wing? One minute, and it may have passed over.

I am not apologizing for Hilary the least in the world. I do not know even if she considered whether it was her place or Robert's to make the first advance. Indeed, I fear she did not consider it at all, but just acted upon impulse, because it was so cruel, so heart-breaking, to be at variance with him. But if she had considered it, I doubt not she would have done from duty exactly what she did by instinct—crept up to him as he sat at the fireside, and laid her little hand on his.

"Robert, what makes you so angry with me still?"

"Not angry; I have no right to be."

"Yes, you would have, if I had really done wrong. Have I?"

"You must judge for yourself. For me—I thought you loved me better than I find you do, and I made a mistake; that is all."

Ay, he had made a mistake; but it was not that one. It was the other mistake that men continually make about women; they cannot understand that love is not worth having, that it is not love at all, but merely a selfish carrying out of selfish desires, if it blinds us to any other duty, or blunts in us any other sacred tenderness. They cannot see how she who is false in one relation may be false in another; and that, true as human nature's truth, ay, and often fulfilling itself, is Brabantio's ominous warning to Othello—

"Look to her, Moor! have a good eye to see;
She has deceived her father, and may thee."

Perhaps, as soon as he had said the bitter word, Mr. Lyon was sorry; anyhow, the soft answer which followed it thrilled through every nerve of the strong-willed man—a man not easily made angry, but when he was, very hard to move.

"Robert, will you listen to me for two minutes?"

"For as long as you like, only you must not expect me to agree with you. You cannot suppose I shall say it is right for you to forsake me."

"I forsake you? oh, Robert!"

Words are not always the wisest arguments. His "little woman" crept closer, and laid her head on his breast; he clasped her convulsively.

"Oh, Hilary! how could you wound me so?"

And, in lieu of the discussion, a long silence

brooded over the fireside ; the silence of exceeding love.

"No *er*, Robert, may I talk to you?"

"Yes. Preach away, my little conscience!"

"It shall not be preaching, and it is not altogether for conscience," said she, smiling. "You would not like me to tell you I did not love Johanna?"

"Certainly not. I love her very much myself, only I prefer you, as is natural. Apparently you do not prefer me, which may be also natural."

"Robert!"

There are times when a laugh is better than a reproach ; and something else, which need not be more particularly explained, is safer than either. It is possible Hilary tried the experiment, and then resumed her "say."

"Now, Robert, put yourself in my place and try to think for me. I have been Johanna's child for thirty years ; she is entirely dependent upon me. Her health is feeble ; every year of her life is at least doubtful. If she lost me, I think she would never live out the next three years. You would not like that?"

"No."

"In all divided duties like this, somebody must suffer ; the question is, which can suffer best. She is old and frail, we are young ; she is alone, we are two ; she never had any happiness in her life, except, perhaps, me,—and we, oh, how happy we are ! I think, Robert, it would be better for us to suffer than poor Johanna."

"You little Jesuit," he said ; but the higher nature of the man was roused ; he was no longer angry.

"It is only for a short time, remember ; only three years."

"And how can I do without you for three years?"

"Yes, Robert, you can." And she put her arms round his neck, and looked at him, eye to eye. "You know I am your very own, a piece of yourself, as it were ; that when I let you go it is like tearing myself from myself ; yet I can bear it, rather than do, or let you do, in the smallest degree, a thing which is not right."

Robert Lyon was not a man of many words ; but he had the rare faculty of seeing a case clearly, without reference to himself, and of putting it clearly also, when necessary.

"It seems to me, Hilary, that this is hardly a matter of abstract right or wrong, or a good deal might be argued on my side the subject. It is more a case of personal conscience. The two are not always identical, though they look so at first ; but they both come to the same result."

"And that is"—

"If my little woman thinks it right to act as she does, I also think it right to let her. And let

this be the law of our married life, if we ever are married,"—and he sighed,—"*that* when we differ, each should respect the other's conscience, and do right, in the truest sense, by allowing the other to do the same."

"Oh, Robert ! how good you are !"

So these two, an hour after, met Johanna with cheerful faces ; and she never knew how much both had sacrificed for her sake. Once only, when she was for a few minutes absent from the parlour, did Robert Lyon renew the subject, to suggest a medium course.

But Hilary resolutely refused. Not that she doubted him,—she doubted herself. She knew quite well, by the pang that darted through her like a shaft of ice, as she felt his warm arm round her, and thought of the time when she would feel it no more, that after she had been Robert Lyon's happy wife for three months, to let him go to India without her, would be simply and utterly impossible.

Fast fled the months ; they dwindled into weeks, and then into days. I shall not enlarge upon this time. Now, when the ends of the world are drawn together, and every family has one or more relatives abroad, a grief like Hilary's has become so common that nearly every one can, in degree, understand it. How bitter such partings are, how much they take out of the brief span of mortal life, and therefore, how far they are justifiable, for anything short of absolute necessity, Heaven knows.

In this case it was an absolute necessity. Robert Lyon's position in "our firm," with which he identified himself with the natural pride of a man who has diligently worked his way up to fortune, was such that he could not, without sacrificing his future prospects, and likewise what he felt to be a point of honour, refuse to go back to Bombay, until such time as his senior partner's son, the young fellow whom he had "coached" in Hindostanee, and nursed through a fever years ago,—could conveniently take his place abroad.

"Of course," he said, explaining this to Hilary and her sister, "accidental circumstances might occur to cause my return home before the three years were out, but the act must be none of mine ; I must do my duty."

"Yes, you must," answered Hilary, with a gleam lighting up her eyes. She loved so in him this one great principle of his life—the back-bone of it, as it were—duty before all things.

Johanna asked no questions. Once she had inquired, with a tremulous, hardly concealed alarm, whether Robert wished to take Hilary back with him, and Hilary had kissed her, smilingly saying, "No, that was impossible." Afterwards, the subject was never revived.

And so these two lovers, both stern in what they thought their duty, went on silently together to the last day of parting.

It was almost as quiet a day as that never-to-be-forgotten Sunday at Stowbury. They went a long walk together, in the course of which Mr. Lyon forced her to agree to what hitherto she had steadfastly resisted, that she and Johanna should accept from him enough, in addition to their own fifty pounds a year, to enable them to live comfortably without her working any more.

"Are you ashamed of my working?" she asked, with something between a tear and a smile. "Sometimes I used to be afraid you would think the less of me because circumstances made me an independent woman, earning my own bread. Do you?"

"My darling! no. I am proud of her. But she must never work any more. Johanna says right; it is a man's place and not a woman's. I will not allow it."

When he spoke in that tone, Hilary always submitted.

He told her another thing, while arranging with her all the business part of their concerns, and to reconcile her to this partial dependence upon him, which, he urged, was only forestalling his rights,—that before he first quitted England, seven years ago, he had made his will, leaving her, if still unmarried, his sole heir and legatee, indeed in exactly the position that she would have been had she been his wife.

"This will exists still; so that in any case you are safe. No further poverty can ever befall my Hilary."

His—his own—Robert Lyon's own. Her sense of this was so strong that it took away the sharpness of the parting; made her feel up to the very last minute, when she clung to him—was pressed close to him—heart to heart and lip to lip—for a space that seemed half a lifetime of mixed anguish and joy—that he was not really going; that, somehow or other, next day or next week he would be back again, as in his frequent reappearances, exactly as before.

When he was really gone—when, as she sat with her tearless eyes fixed on the closed door—Johanna softly touched her, saying, "My child!" then Hilary learnt it all.

The next twenty-four hours will hardly bear being written about. Most people know what it is—to miss the face out of the house; the life out of the heart. To come and go, to eat and drink, to lie down and rise, and find all things the same, and gradually to recognise that it must be the same, indefinitely, perhaps always. To be met continually by small trifles—a dropped glove, a book, a scrap of handwriting that yesterday would

have been thrown into the fire, but to-day is picked up, and kept as a relic; and, at times, bursting through the quietness which must be gained, or at least assumed, the cruel craving for one word more—one kiss more—for only one five minutes of the eternally ended yesterday!

All this hundreds have gone through; so did Hilary. She said afterwards, it was good for her that she did; it would make her feel for others in a way she had never felt before. Also, because it taught her that such a heart-break can be borne and lived through, when help is sought where only real help can be found; and where, when reason fails, and those who, striving to do right irrespective of the consequences, cry out against their torments, and wonder why they should be made so to suffer,—child-like faith comes to their rescue. For, let us have all the philosophy at our fingers' ends, what are we but children? We know not what a day may bring forth. All wisdom resolves itself into the simple hymn which we learned when we were young—

"Deep in unfathomable mines
Of never-failing skill,
He treasures up His vast designs,
And works His sovereign will.
Blind unbelief is sure to err,
And scan His work in vain:
God is His own interpreter,
And He will make it plain." *

The night after Robert Lyon left, Hilary and Johanna were sitting together in their parlour. Hilary had been writing a long letter to Miss Balquidder, explaining that she would now give up, in favour of the other young lady, or any other of the many to whom it would be a blessing, her position in the shop; but that she hoped still to help her—Miss Balquidder—in any way she could point out that would be useful to others. She wished, in her humble way, as a sort of thank-offering from one who had passed through the waves, and been landed safe ashore, to help those who were still struggling, as she herself had struggled once. She desired, as far as in her lay, to be Miss Balquidder's "right hand" till Mr. Lyon came home.

This letter she read aloud to Johanna, whose failing eye-sight refused all candle-light occupation, and then came and sat beside her in silence. She felt terribly worn and weary; but she was very quiet now.

"We must go to bed early," was all she said.

"Yes, my child."

And Johanna smoothed her hair, in the old, fond way, making no attempt to console her, but only to love her—always the safest consolation. And Hilary was thankful that never, even in her sharpest agonies of grief, had she betrayed that

secret which would have made her sister's life miserable, have blotted out the thirty years of motherly love, and caused the other love to rise up like a cloud between her and it, never to be lifted until Johanna sank into the possibly not far-off grave.

"No, no," she thought to herself, as she looked on that frail old face, which even the secondary grief of this last week seemed to have made frailer and older. "No, it is better as it is; I believe I did right. The end will show."

The end was nearer than she thought. So, sometimes—not often, lest self-sacrifice should become a less holy thing than it is—Providence accepts the will for the act, and makes the latter needless.

There was a sudden knock at the hall door.

"It is the young people coming in to supper."

"It's not," said Hilary, starting up, "it's not their knock. It is—"

She never finished the sentence, for she was sobbing in Robert Lyon's arms.

"What does it all mean?" cried the bewildered Johanna, of whom, I must confess, for once nobody took the least notice.

It meant that, by one of these strange accidents, as we call them, which in a moment alter the whole current of things, the senior partner had suddenly died, and his son, not being qualified to take his place in the Liverpool house, had to go out to India instead of Robert Lyon, who would now remain permanently, as the third senior partner, in England.

This news had met him at Southampton. He had gone thence direct to Liverpool, arranged affairs so far as was possible, and returned, travelling without an hour's intermission, to tell his own tidings, as was best,—or as he thought it was.

Perhaps, at the core of his heart lurked the desire to come suddenly back, as, it is said, if the absent or the dead could come, they would find all things changed: the place filled up in home and hearth,—no face of welcome,—no heart leaping to heart in the ecstasy of reunion.

Well, if Robert Lyon had any misgivings—and, being a man and in love, perhaps he had—they were ended now.

"Is she glad to see me?" was all he could find to say, when, Johanna having considerably vanished, he might have talked as much as he pleased.

Hilary's only answer was a little, low laugh of inexpressible content.

He lifted up between his hands the sweet face, neither so young nor so pretty as it had been, but, oh! so sweet, with the sweetness that long outlives beauty,—a face that a man might look on all his lifetime, and never tire of—so infinitely loving,

so infinitely true. And he knew it was his wife's face, to shine upon him day by day, and year by year, till it faded into old age—beautiful and beloved even then. All the strong nature of the man gave way; he wept almost like a child in his "little woman's" arms.

Let us leave them there, by that peaceful fireside; these two, who are to sit by one fireside as long as they live. Of their further fortune we know nothing—nor do they themselves—except the one fact, in itself joy enough for any mortal cup to hold, that it will be shared together. Two at the hearth, two abroad; two to labour, two to rejoice; or, if so it must be, two to weep, and two to comfort one another: the man to be the head of the woman, and the woman the heart of the man. This is the ordination of God; this is the perfect life; none the less perfect that so many fall short of it.

So let us bid them good-bye: Robert Lyon and Hilary Leaf, "good-bye; God be with ye!" for we shall see them no more.

CHAPTER XXVII.

ELIZABETH stood at the nursery window, pointing out to little Henry how the lilacs and laburnums were coming into flower in the square below, and speculating with him whether the tribes of sparrows which they had fed all winter from the mignonette boxes on the window-sill, would be building nests in the tall trees of Russell Square; for she wished, with her great aversion to London, to make her nursing as far as possible a "country" child.

Master Henry Leaf Ascott was by no means little now. He would run about on his tottering fat legs, and he could say "Mammy Lizzie," also "Pa-pa," as had been carefully taught him by his conscientious nurse. At which papa had been at first excessively surprised, then gratified, and had at last taken kindly to the appellation as a matter of course.

It inaugurated a new era in Peter Ascott's life. At first twice a week, then every day, he sent up for "Master Ascott," to keep him company at dessert; he even changed his dinner-hour from half-past six to five, because Elizabeth with her stern sacrifice of everything to the child's good, had suggested to him, humbly but firmly, that late hours kept little Henry too long out of his bed. He gave up his bottle of port, and his after-dinner sleep, and took to making water-lilies and caterpillars out of oranges, and boats out of walnut-shells, for his boy's special edification. Sometimes when, at half-past six, Elizabeth, punctual as clock-work, knocked at the dining-room door, he heard father and son laughing together in a most jovial manner, though the decanters were in their places, and the wine-glasses untouched.

And even after the child disappeared, the butler declared that master usually took quietly to his newspaper, or rang for his tea, or perhaps dozed harmlessly in his chair till bed-time.

I do not allege that Peter Ascott was miraculously changed; people do not so change, especially at his age; externally he was still the same pompous, overbearing, coarse man, with whom, no doubt, his son would have a tolerably sore bargain in years to come. But still the child had touched a soft corner in his heart, the one soft corner which in his youth had yielded to the beauty of Miss Selina Leaf; and the old fellow was a better old fellow than he had once been. Probably, with care, he might be for the rest of his life at least manageable.

Elizabeth hoped so, for his boy's sake, and little as she liked him, she tried to conquer her antipathy as much as she could. She always took care to treat him with extreme respect, and to bring up little Henry to do the same. And, as often happens, Mr. Ascott began gradually to comport himself in a manner deserving of respect. He ceased his oaths and his coarse language; seldom flew into a passion, and last, not least, the butler avouched that master hardly ever went to bed "muzzy" now. Towards all his domestics, and especially to his son's nurse, he behaved himself more like a master and less like a tyrant; so that the establishment at Russell Square went on in a way more peaceful than had ever been known before.

There was no talk of his giving it a new mistress; he seemed to have had enough of matrimony. Of his late wife he never spoke; whether he loved her or not, whether he had regretted her or not, the love and regret were now alike ended.

Poor Selina! It was Elizabeth only, who, with a sacred sense of duty, occasionally talked to little Henry about "mamma up there"—pointing to the blank bit of blue sky over the trees of Russell Square, and hoped in time to make him understand something about her, and how she had loved him, her "baby." This love—the only beautiful emotion her life had known, was the one fragment that remained of it after her death; the one remembrance she left to her child.

Little Henry was not in the least like her, nor yet like his father. He took after some forgotten type, some past generation of either family, which reappeared in this as something new. To Elizabeth he was a perfect revelation of beauty and infantile fascination. He filled up every corner of her heart. She grew fat and flourishing, even cheerful; so cheerful that she bore with equanimity the parting with her dear Miss Hilary, who went away in glory and happiness as Mrs. Robert Lyon, to live in Liverpool, and Miss Leaf with her. Thus both Elizabeth's youthful dreams ended in nothing,

and it was more than probable that for the future, their lives and hers being so widely apart, she would see very little of her beloved mistresses any more. But they had done their work in her and for her; and it had borne fruit a hundred-fold, and would still.

"I know you will take care of this child—he is the hope of the family," said Miss Leaf, when she was giving her last kiss to little Henry. "I could not bear to leave him, if I were not leaving him with you."

And Elizabeth had taken her charge proudly in her arms, knowing she was trusted, and inwardly vowing to be worthy of that trust.

Another dream was likewise ended; so completely that she sometimes wondered if it was ever real, whether she had ever been a happy girl, looking forward as girls do to wifehood and motherhood; or whether she had not been always the staid middle-aged person she was now, whom nobody ever suspected of any such things.

She had been once back to her old home, to settle her mother comfortably upon a weekly allowance, to 'prentice her little brother, to see one sister married, and the other sent off to Liverpool to be servant to Mrs. Lyon. While at Stowbury, she had heard by chance of Tom Cliffe's passing through the town as a Chartist lecturer, or something of the sort, with his pretty, showy London wife, who, when he brought her there, had looked down rather contemptuously upon the street where Tom was born.

This was all Elizabeth knew about them. They, too, had passed from her life, as phases of keen joy and keener sorrow, do pass, like a dream and the shadows of a dream. It may be, life itself will seem at the end to be nothing more.

But Elizabeth Hand's brief love-story was not so to end.

One morning, the same morning when she had been pointing out the Ways to little Henry, and now came in from the Square with a branch of them in her hand, the postman gave her a letter, the handwriting of which made her start as if it had been a visitation from the dead.

"Mammy Lizzie, Mammy Lizzie!" cried little Henry, plucking at her gown, but for once his nurse did not notice him. She stood on the door step, trembling violently; at length she put the letter into her pocket, lifted the child, and got up stairs somehow. When she had settled her charge to his mid-day sleep, then, and not till then, did she take out and read the few lines, which, though written on shabby paper, and with more than one blot, were so like—yet so terribly unlike—Tom's calligraphy of old.

"DEAR ELIZABETH,—I have no right to ask any kindness of you; but if you would like to see an

old friend alive, I wish you would come and see me. I have been long of asking you, lest you might fancy I wanted to get something out of you; for I'm as poor as a rat; and once lately, I saw you, looking so well and well-to-do. But it was the same kind old face, and I should like to get one kind look from it before I go where I shan't want any kindness from anybody. However, do just as you choose.—Yours affectionately,

T. CLIFFE.

"Underneath is my address."

It was in one of those wretched nooks in Westminster, now swept away by Victoria Street, and other improvements. Elizabeth happened to have read about it in one of the many charitable pamphlets, reports, etc., which were sent continually to the wealthy Mr. Ascott, and which he sent down stairs to light fires with. What must not poor Tom have sunk to before he had come to live there? His letter was like a cry out of the depths, and the voice was that of her youth, her first love.

Is any woman ever deaf to that? The love may have died a natural death: many first loves do: a ripper, completer, happier love may have come in its place: but there must be something unnatural about the woman, and man likewise, who can ever quite forget it,—the dew of their youth—the beauty of their dawn.

"Poor Tom, poor Tom!" sighed Elizabeth; "my own poor Tom!"

She forgot Esther; either from Tom's not mentioning her, or in the strong return to old times which his letter produced; forgot her for the time being, as completely as if she had never existed. Even when the recollection came, it made little difference. The sharp jealousy, the dislike and contempt, had all calmed down; she thought she could now see Tom's wife as any other woman. Especially if, as the letter indicated, they were so very poor and miserable.

Possibly, Esther had suggested writing it? Perhaps, though Tom did not, Esther did "want to get something out of her"—Elizabeth Hand, who was known to have large wages, and to be altogether a thriving person? Well, it mattered little. The one fact remained: Tom was in distress; Tom needed her; she must go.

Her only leisure time was of an evening, after Henry was in bed. The intervening hours, especially the last one, when the child was downstairs with his father, calmed her: subdued the tumult of old remembrances that came surging up and beating at the long-shut door of her heart. When her boy returned, leaping and laughing, and playing all sorts of tricks as she put him to bed, she could smile too. And when, kneeling beside her in his pretty white night-gown, he stammered through

the prayer she had thought it right to begin to teach him, though of course he was too young to understand it,—the words "Thy will be done;" "Forgive us our trespasses, as we forgive those who trespass against us;" and lastly, "Lead us not into temptation, but deliver us from evil," struck home to his nurse's inmost soul.

"Mammy, Mammy Lizzie's 'tying!'"

Yes, she was crying, but it did her good. She was able to kiss her little boy, who slept like a top in five minutes: then she took off her good silk gown, and dressed herself; soberly and decently, but so that people should not suspect, in that low and dangerous neighbourhood the sovereigns that she carried in an under-pocket, ready to use as occasion required. Thus equipped, she started without a minute's delay for Tom's lodging.

It was poorer than even she expected: one attic room, bare almost as when it was built. No chimney or grate, no furniture except a box which served as both table and chair: and a heap of straw, with a blanket thrown over it. The only comfort about it was that it was clean: Tom's innate sense of refinement had abided with him to the last.

Elizabeth had time to make all these observations, for Tom was out; gone, the landlady said, to the druggist's shop round the corner.

"He's very bad, ma'am," added the woman civilly, probably led thereto by Elizabeth's respectable appearance, and the cab in which she had come—lest she should lose a minute's time. "Can't last long and Lord knows who's to bury him."

With that sentence knelling in her ears, Elizabeth waited till she heard the short cough and the hard breathing of some one toiling heavily up the stair.

Tom, Tom himself. But oh, so altered! with every bit of youth gone out of him; with death written on every line of his haggard face, the death he had once prognosticated with a sentimental pleasure, but which now had come upon him in all its ghastly reality.

He was in the last stage of consumption. The disease was latent in his family, Elizabeth knew: she had known it when she had belonged to him, and fondly thought that as his wife, her incessant care might save him from it: but nothing could save him now.

"Who's that?" said he, in his own sharp fretful voice.

"Me, Tom. But don't speak. Sit down till your cough's over."

Tom grasped her hand as she stood by him, but he made no further demonstration, nor used any expression of gratitude. He seemed far too ill. Sick people are always absorbed in the sad present; they seldom trouble themselves much about the past. Only there was something in the way Tom

clung to her hand, helplessly, imploringly, that moved the inmost heart of Elizabeth.

"I'm very bad, you see. This cough; oh, it shakes me dreadfully, especially of nights."

"Have you any doctor?"

"The druggist close by, or rather the druggist's shopman. He's a very kind young fellow, from our county I fancy, for he asked me once if I wasn't a Stowbury man, and ever since he has doctored me for nothing, and given me a shilling too now and then, when I've been a'most clemmed to death in the winter."

"O Tom, why didn't you write to me before? Have you actually wanted food?"

"Yes, many a time. I've been out of work this twelvemonth."

"But Esther?"

"Who!" screamed Tom.

"Your wife."

"My wife? I've got none! She spent everything, till I fell ill, and then she met a fellow with lots o' money. Curse her!"

The fury with which he spoke shook him all over and sent him into another violent fit of coughing, out of which he revived by degrees, but in a state of such complete exhaustion that Elizabeth hazarded no more questions. He must evidently be dealt with exactly like a child.

She made up her mind in her own silent way: as indeed she had done ever since she came into the room.

"Lie down, Tom, and keep yourself quiet for a little. I'll be back as soon as I can, back with something to do you good. You won't object?"

"No, no; you can do anything you like with me. You always could."

Elizabeth groped her way down stairs, strangely calm and self-possessed. There was need. Tom, dying, had come to her as his sole support and consolation; thrown himself helplessly upon her, never doubting either her will or her power to help him. Neither must fail. The inexplicable woman's strength, sometimes found in the gentlest and apparently weakest character, nerved her now.

She went up and down, street after street, looking for lodgings, till the evening darkened, and the Abbey towers rose grimly against the summer sky. Then she crossed over Westminster Bridge, and in a little street on the Surrey side she found what she wanted—a decent room, half sitting, half bedroom, with what looked like a decent landlady. There was no time to make many inquiries; anything was better than to leave Tom another night where he was.

She paid a week's rent in advance; bought firing and provisions; everything she could think of to make him comfortable; and then she went to fetch him in a cab.

The sick man offered no resistance; indeed, he hardly seemed to know what she was doing with him. She discovered the cause of this half-insensibility when, in making a bundle of his few clothes, she found a packet labelled "opium."

"Don't take it from me," he said pitifully. "It's the only comfort I have."

But when he found himself in the cheerful room, with the fire blazing and the tea laid out, he woke up like a person out of a bad dream.

"Oh, Elizabeth, I'm so comfortable!"

Elizabeth could have wept.

Whether the wholesome food and drink revived him, or whether it was one of the sudden flashes of life that often occur in consumptive patients, he seemed really better, and began to talk, telling Elizabeth about his long illness, and saying over again how very kind the druggist's young man had been to him.

"I'm sure he's a gentleman, though he has come down in the world; for, as he says, 'misery makes a man acquainted with strange bed-fellows, and takes the nonsense out of him.' I think so too, and if ever I get better, I don't mean to go about the country speaking against born gentlefolks any more. They're much of a muchness as ourselves—bad and good; a little of all sorts; the same flesh and blood as we are. Aren't they, Elizabeth?"

"I suppose so."

"And there's another thing I mean to do. I mean to try and be good like you. Many a night, when I've lain on that straw, and thought I was dying, I've remembered you, and all the things you used to say to me. You are a good woman; there never was a better."

Elizabeth smiled, a faint, rather sad smile. For, as she was washing up the tea things, she had noticed Tom's voice grow feebler, and his features sharper and more wan.

"I'm very tired," he said. "I'm afraid to go to bed, I get such wretched nights; but I think, if I lay down in my clothes, I could go to sleep."

Elizabeth helped him to the small pallet, shook his pillow, and covered him up, as if he had been a child.

"You're very good to me," he said, and looked up at her,—Tom's bright, fond look of years ago. But it passed away in a moment, and he closed his eyes, saying he was so terribly tired.

"Then I'll bid you good-bye, for I ought to have been at home by now. You'll take care of yourself, Tom, and I'll come and see you again the very first hour I can be spared. And if you want me, you'll send to me at once? You know where?"

"I will," said Tom. "It's the same house, isn't it, in Russell Square?"

"Yea." And they were both silent.

After a minute, Tom asked, in a troubled voice,

"Have you forgiven me?"

"Yes, Tom, quite."

"Won't you give me one kiss, Elizabeth?"

She turned away. She did not mean to be hard, but somehow she could not kiss Esther's husband.

"Ah, well; it's all the same! Good-bye!"

"Good-bye, Tom."

But as she stood at the door, and looked back at him, lying with his eyes shut, and as white as if he were dead, Elizabeth's heart melted. He was her Tom, her own Tom, of whom she had been so fond, so proud; whose future she had joyfully anticipated, long before she thought of herself as mixed up with it; and he was dying, dying at four-and-twenty; passing away to the other world, where, perhaps, she might meet him yet; with no cruel Esther between.

"Tom," she said, and knelt beside him, "Tom, I didn't mean to vex you. I'll try to be as good as a sister to you. I'll never forsake you as long as you live."

"I know you never will."

"Good-bye, then, for to-night."

And she did kiss him, mouth to mouth, quietly and tenderly. She was so glad of it afterwards.

It was late enough when she reached Russell Square; but nobody ever questioned the proceedings of Mrs. Hand, who was a privileged person. She crept in beside her little Henry, and as the child turned in his sleep, and put his arms about her neck, she clasped him tight, and thought there was still something to live for in this weary world.

All night she thought over what best could be done for Tom. Though she never deceived herself for a moment as to his state, still she thought, with care and proper nursing, he might live a few months. Especially, if she could get him into the Consumption Hospital, newly started in Chelsea, of which, she was aware, Mr. Ascott, who dearly liked to see his name in a charity list, was one of the governors.

There was no time to be lost; she determined to speak to her master at once.

The time she chose was when she brought down little Henry, who was now always expected to appear, and say, "Dood morning, papa," before Mr. Ascott went into the city.

As they stood, the boy laughing in his father's face, and the father beaming all over with delight, the bitter, almost fierce thought, smote Elizabeth, Why should Peter Ascott be standing there, fat and flourishing, and poor Tom dying? It made her bold to ask the only favour she ever had asked of the master whom she did not care for, and to whom she had done her duty simply as duty, without, until lately, one fragment of respect.

"Sir, if you please, might I speak with you a minute, before you go out?"

"Certainly, Mrs. Hand. Anything about Master Henry? Or perhaps yourself? You want more wages? Very well. I shall be glad, in any reasonable way, to show my satisfaction at the manner in which you bring up my son."

"Thank you, sir," said Elizabeth, curtseying; "but it is not that."

And in the briefest language she could find, she explained what it was.

Mr. Ascott knitted his brows, and looked important. He never scattered his benefits with a silent hand, and he dearly liked to create difficulties, if only to show how he could smooth them down.

"To get a patient admitted at the Consumption Hospital is, you should be aware, no easy matter, until the building at Queen's Elm is complete. But I flatter myself I have influence. I have subscribed a deal of money. Possibly the person may be got in in time. Who did you say he was?"

"Thomas Cliffe. He married one of the servants here, Esther" —

"Oh, don't trouble yourself about the name; I shouldn't recollect it. The housekeeper might. Why didn't his wife apply to the housekeeper?"

The careless question seemed hardly to expect an answer, and Elizabeth gave none. She could not bear to make public Tom's misery and Esther's shame.

"And you say he is a Stowbury man? That is certainly a claim. I always feel bound, somewhat as a member of Parliament might be, to do my best for any one belonging to my native town. So be satisfied, Mrs. Hand; consider the thing settled."

And he was going away, but time being of such great moment, Elizabeth ventured to detain him till he had written the letter of recommendation, and found out what days the application for admission could be received. He did it very patiently, and even took out his purse, and laid a sovereign on the top of the letter.

"I suppose the man is poor; you can use this for his benefit."

"There is no need, thank you, sir," said Elizabeth, putting it gently aside. She could not bear that Tom should accept anybody's money but her own.

At her first spare moment she wrote him a long letter, explaining what she had done, and appointing the next day but one, the earliest possible, for taking him out to Chelsea herself. If he objected to the plan, he was to write and say so; but she urged him as strongly as she could not to let slip this opportunity of obtaining good nursing and first-rate medical care.

Many times during the day the thought of Tom alone in his one room,—comfortable though it was, and though she had begged the landlady to see that he wanted nothing,—came across her with a sudden pang. His face, feebly lifted up from the pillow, with its last affectionate smile—the sound of his cough, as she stood listening outside on the stair-head—haunted her all through that sunshiny June day; and, mingled with it, came ghostly visions of that other day in June,—her happy Whitsun holiday,—her first and her last.

No letter coming from Tom on the appointed morning, she left Master Harry in the charge of the housemaid, who was very fond of him, as indeed he bade fair to be spoiled by the whole establishment at Russell Square, and went down to Westminster.

There was a long day before her, so she took a minute's breathing space on Westminster Bridge, and watched the great current of London life ebbing and flowing—life on the river and life on the shore; everybody so busy and active and bright.

"Poor Tom, poor Tom!" she sighed, and wondered whether his ruined life would ever come to any happy ending, except death.

She hurried on, and soon found the street where she had taken his lodging. At the corner of it was, as is too usual in London streets, a public-house, about which more than the usual number of disreputable idlers were hanging. There were also one or two policemen, who were ordering the little crowd to give way to a group of twelve men, coming out.

"What is that?" asked Elizabeth.

"Coroner's inquest; jury proceeding to view the body."

Elizabeth, who had never come into contact with anything of the sort, stood aside with a sense of awe, to let the little procession pass, and then followed it up the street.

It stopped; oh no! not at that door! But it was; there was no mistaking the number, nor the drawn-down blind in the upper room—Tom's room.

"Who is dead?" she asked, in a whisper that made the policeman stare.

"Oh! nobody particular; a young man, found dead in his bed; supposed to be a case of consumption; verdict will probably be, 'Died by the visitation of God.'"

Ay, that familiar phrase, our English law's solemn recognition of our national religious feeling—was true here. God had "visited" poor Tom; he suffered no more.

Elizabeth leaned against the doorway, and saw the twelve jurymen go upstairs with a clatter of feet, and come down again, one after the other,

less noisily, and some of them looking grave. Nobody took any notice of her, until the lodging-house mistress appeared.

"Oh, here she is, gentlemen. This is the young woman as saw him last alive. She'll give her evidence. She'll tell you I'm not a bit to blame."

And pulling Elizabeth after her, the landlady burst into a torrent of explanation; how she had done her very best for the poor fellow, how she had listened at his door several times during the first day, and heard him cough, that is, she thought she had, but towards night all was so very quiet; and there having come a letter by post, she thought she would take it up to him,—

"And I went in, gentlemen, and I declare, upon my oath, I found him lying just as he is now, and as cold as a stone."

"Let me pass; I'm a doctor," said somebody behind; a young man, very shabbily dressed, with a large beard. He pushed aside the landlady, and Elizabeth, till he saw the latter's face.

"Give that young woman a chair and a glass of water, will you?" he called out; and his authoritative manner impressed the jurymen, who gathered round him, ready and eager to hear anything he could say.

He gave his name as John Smith, druggist's assistant; said that the young man who lodged upstairs, whose death he had only just heard of, had been his patient for some months, and was in the last stage of consumption. He had no doubt the death had ensued from perfectly natural causes, as he explained in such technical language as completely to overpower the jury, and satisfy them accordingly. They quitted the parlour, and proceeded to the public-house, where, after a brief consultation, they delivered their verdict, as the astute policeman had foretold, "Died by the visitation of God," took pipes and brandy all round at the bar, and then adjourned to their several homes, gratified at having done their duty to their country.

Meantime, Elizabeth crept upstairs. Nobody hindered or followed her; nobody cared anything for the solitary dead.

There he lay—poor Tom!—almost as she had left him; the counterpane was hardly disturbed, the candle she had placed on the chair had burnt down to a bit of wick, which still lay in the socket. Nobody had touched him, or anything about him, as, in all cases of "Found dead," English law exacts.

Whether he had died soon after she quitted him that night, or whether he had lingered through the long hours of darkness, or of daylight following, alive and conscious perhaps, yet too weak to call any one, even had there been any one he cared to call,—when, or how, the spirit had passed away unto Him who gave it, were mysteries that could never be known.

But it was all over now ; he lay at rest ; with the death-smile on his face. Elizabeth, as she stood and looked at him, could not, dared not weep.

"My poor Tom, my own dear Tom," was all she thought, and knew that he was all her own now ; that she had loved him through everything, and loved him to the end.

CHAPTER XXVIII.

ELIZABETH spent the greatest part of her holiday in that house, in that room. Nobody interfered with her ; nobody asked in what relation she stood to the deceased, or what right she had to take upon herself the arrangements for his funeral. Everybody was only too glad to let her assume a responsibility, which would otherwise have fallen on the parish.

The only person who appeared to remember either her or the dead man, was the druggist's assistant, who sent in the necessary medical certificate as to the cause of death. Elizabeth took it to the Registrar, and thence proceeded to an undertaker hard by, with whom she arranged all about the funeral, and that it should take place in the new cemetery at Kensal Green. She thought she should like that better than a close, noisy London churchyard.

Before she left the house, she saw poor Tom laid in his coffin, and covered up for ever from mortal eyes. Then, and not till then, she sat herself down beside him and wept.

Nobody contested with her the possession of the few things that had belonged to him, which were scarcely more than the clothes he had on when he died ; so she made them up into a parcel and took them away with her. In his waistcoat-pocket she found one book, a little Testament which she had given him herself. It looked as if it had been a good deal read. If all his studies, all his worship of "pure intellect," as the one supreme good, had ended in that, it was a blessed ending.

When she reached home, Elizabeth went at once to her master, returned him his letter of recommendation, and explained to him that his kindness was not needed now.

Mr. Ascott seemed a good deal shocked, inquired from her a few particulars, and again took out his purse, his one panacea for all mortal woes. But Elizabeth declined ; she said she would only ask him for an advance of her next half-year's wages. She preferred burying her old friend herself."

She buried him, herself the only mourner, on a bright summer's day, with the sun shining dazlingly on the white grave-stones in Kensal Green. The clergyman appeared, read the service, and went away again. A few minutes ended it all. When the undertaker and his men had also de-

parted, she sat down on a bench near, to watch the sexton filling up the grave—Tom's grave. She was very quiet, and none but a closely-observant person watching her face could have penetrated into the truth of what your impulsive characters, always in the extremes of mirth or misery, never understand about quiet people,—that "still waters run deep."

While she sat there, some one came past her, and turned round. It was the shabby-looking chemist's assistant, who had appeared at the inquest, and given the satisfactory evidence, which had prevented the necessity of her giving hers.

Elizabeth rose and acknowledged him with a respectful curtsy ; for under his threadbare clothes was the bearing of a gentleman, and he had been so kind to Tom.

"I am too late," he said ; "the funeral is over. I meant to have attended it and seen the last of the poor fellow."

"Thank you, sir," replied Elizabeth, gratefully.

The young man stood before her, looking at her earnestly for a minute or two, and then exclaimed, with a complete change of voice and manner,—

"Elizabeth ! don't you know me ? What has become of my aunt Johanna ?"

It was Ascott Leaf.

But no wonder Elizabeth had not recognised him. His close-cropped hair, his large beard hiding half his face, and a pair of spectacles which he had assumed, were a sufficient disguise. Besides, the great change from his former "dandy" appearance to the extreme of shabbiness ; his clothes being evidently worn as long as they could possibly hold together, and his generally depressed air giving the effect of one who had gone down in the world, made him, even without the misleading "John Smith," most unlikely to be identified with the Ascott Leaf of old.

"I never should have known you, sir," said Elizabeth, truthfully, when her astonishment had a little subsided, "but I am very glad to see you. O how thankful your aunts will be !"

"Do you think so ? I thought it was quite the contrary. But it does not matter ; they will never hear of me, unless you tell them,—and I believe I may trust you. You would not betray me, if only for the sake of that poor fellow yonder ?"

"No, sir."

"Now, tell me something about my aunts, especially my Aunt Johanna."

And sitting down in the sunshine, with his arm upon the back of the bench, and his hand hiding his eyes, the poor prodigal listened in silence to everything Elizabeth told him ; of his Aunt Selina's marriage and death, and of Mr. Lyon's return, and of the happy home at Liverpool.

"They are all quite happy, then ?" said he at length ; "they seem to have begun to prosper

ever since they got rid of me. Well, I'm glad of it. I only wanted to hear of them from you. I shall never trouble them any more. You'll keep my secret, I know. And now I must go, for I have not a minute more to spare. Good-bye, Elizabeth."

With a humility and friendliness, strange enough in Ascott Leaf, he held out his hand—empty, for he had nothing to give now—to his aunt's old servant. But Elizabeth detained him.

"Don't go, sir; please, don't; not just yet." And then she added, with an earnest respectfulness that touched the heart of the poor, shabby man, "I hope you'll pardon the liberty I take. I'm only a servant, but I knew you when you were a boy, Mr. Leaf; and if you would trust me, if you would let me be of use to you in any way,—if only because you were so good to him there."

"Poor Tom Cliffe; he was not a bad fellow; he liked me rather, I think; and I was able to doctor him, and help him a little. Heigh-ho; it's a comfort to think I ever did any good to anybody."

Ascott sighed, drew his rusty coat-sleeve across his eyes, and sat contemplating his boots, which were anything but dandy boots now.

"Elizabeth, what relation was Tom to you? If I had known you were acquainted with him I should have been afraid to go near him; but I felt sure though he came from Stowbury, he did not guess who I was; he only knew me as Mr. Smith; and he never once mentioned you. Was he your cousin, or what?"

Elizabeth considered a moment, and then told the simple fact; it could not matter now.

"I was once going to be married to him, but he saw somebody he liked better, and married her."

"Poor girl; poor Elizabeth!"

Perhaps nothing could have shown the great change in Ascott more than the tone in which he uttered these words; a tone of entire respect and kindly pity, from which he never once departed during that conversation, and many, many others, so long as their confidential relations lasted.

"Now, sir, would you be so kind as to tell me something about yourself? I'll not repeat anything to your aunts, if you don't wish it."

Ascott yielded. He had been so long, so utterly forlorn. He sat down beside Elizabeth, and then, with eyes often averted, and with many breaks between, which she had to fill up as best she could, he told her all his story, even to the sad secret of all, which had caused him to run away from home, and hide himself in the last place where they would have thought he was, the safe wilderness of London. There, carefully disguised, he had lived decently while his money lasted, and then,

driven step by step to the brink of destitution, he had offered himself for employment in the lowest grade of his own profession, and been taken as assistant by the not over-scrupulous chemist and druggist in that not too respectable neighbourhood of Westminster, with a salary of twenty pounds a year.

"And I actually live upon it," added he, with a bitter smile. "I can't run into debt; for who would trust me? And I dress in rags almost, as you see. And I get my meals how and where I can; and I sleep under the shop-counter. A pretty life for Mr. Ascott Leaf, isn't it now? What would my aunts say if they knew it?"

"They would say it was an honest life, and that they were not a bit ashamed of you."

Ascott drew himself up a little, and his chest heaved visibly under the close-buttoned, threadbare coat.

"Well, at least it is a life that makes nobody else miserable."

Ay, that wonderful teacher, Adversity,

"Which, like the toad, ugly and venomous,
Wears yet a precious jewel in its head,"

had left behind this jewel in the young man's heart. A disguised, beggared outcast, he had found out the value of an honest name; forsaken, unfriended, he had learnt the preciousness of home and love; made a servant of, tyrannized over, and held in low esteem, he had been taught by hard experience the secret of true humility and charity—the esteeming of others better than himself.

Not with all natures does misfortune so work; but it did with his. He had sinned; he had paid the cost of his sin in bitter suffering; but the result was cheaply bought, and he already began to feel that it was so.

"Yes," said he, in answer to a question of Elizabeth's, "I really am, for some things, happier than I used to be. I feel more like what I was in the old days, when I was a little chap at Stowbury. Poor old Stowbury! I often think of the place in a way that's perfectly ridiculous. Still, if anything happened to me, I should like my aunts to know it, and that I didn't forget them."

"But, sir," asked Elizabeth earnestly, "do you never mean to go near your aunts again?"

"I can't say; it all depends upon circumstances. I suppose," he added, "if, as is said, one's sin is sure to find one out, the same rule goes by contraries. It seems poor Cliffe once spoke of me to a district visitor, the only visitor he ever had; and this gentleman, hearing of the inquest, came yesterday to inquire about him of me; and the end was, that he offered me a situation with a person he knew, a very respectable chemist in Tottenham Court Road."

"And shall you go?"

"To be sure. I've learned to be thankful for small mercies. Nobody will find me out, or recognise me: you didn't. Who knows? I may even have the honour of dispensing drugs to Uncle Ascott, of Russell Square."

"But," said Elizabeth, after a pause, "you will not always remain as John Smith, druggist's shopman, throwing away all your good education, and position, and name?"

"Elizabeth," said he, in a humbled tone, "how dare I ever resume my own name, and get back my rightful position, while Peter Ascott lives? Can you or anybody point out a way?"

She thought the question over in her clear head; clear still, even at this hour, when she had to think for others, though all personal feeling and interest were buried in that grave, over which the sexton was now laying the turf that would soon grow smoothly green.

"If I might advise, Mr. Leaf, I should say, save up all your money, and then go, just as you are, with an honest, bold front, right into my master's house, with the fifty pounds in your hand—"

"By Jove, you've hit it!" cried Ascott, starting up. "What a thing a woman's head is! I've turned over scheme after scheme, but I never once thought of any so simple as that. Bravo, Elizabeth! You're a remarkable woman."

She smiled, a very sad smile; but still she felt glad. Anything that she could possibly do for any creature belonging to her dear mistresses seemed to this faithful servant the natural and bounden duty of her life.

Long after the young man, whose mercurial temperament no trouble could repress, had gone away in excellent spirits, leaving her an address where she could always find him, and give him regular news of his aunts, though he made her promise to give them, as yet, no tidings in return, Elizabeth sat still, watching the sun decline and the shadows lengthen over the field of graves. In the calmness and beauty of this solitary place, an equal calm seemed to come over her; a sense of how wonderfully events had linked themselves together and worked themselves out; how even poor Tom's mournful death had brought about this meeting, which might end in restoring to her beloved mistresses their lost sheep, their outcast, miserable boy. She did not reason the matter out, but she felt it, and felt that, in making her, in some degree, His instrument, God had been very good to her in the midst of her desolation.

It seemed Elizabeth's lot always to have to put aside her own troubles for the trouble of somebody else. Almost immediately after Tom Cliffe's death, her little Henry fell ill with scarlatina, and remained for many months in a state of health so

fragile as to engross all her thought and care. It was with difficulty that she contrived a few times to go for Henry's medicines to the shop where "John Smith" served.

She noticed that every time he looked healthier, brighter, freer from that aspect of broken-down respectability which had touched her so much. He did not dress any better, but still "the gentleman" in him could never be hidden or lost, and he said his master treated him "like a gentleman," which was apparently a pleasant novelty.

"I have some time to myself also. Shop shuts at nine, and I get up at 5 A.M.—bless us! what would my Aunt Hilary say! And it's not for nothing. There are more ways than one of turning an honest penny, when a young fellow really sets about it. Elizabeth, you used to be a literary character yourself; look into the —, and the —" (naming two popular magazines), "and if you find a series of especially clever papers on sanitary reform, and so on, I did 'em!"

He slapped his chest with Ascott's merry laugh of old. It cheered Elizabeth for a long while afterwards.

By and by she had to take little Henry to Brighton, and lost sight of "John Smith" for some time longer.

It was on a snowy February day, when having brought the child home quite strong, and received unlimited gratitude and guineas from the delighted father, Master Henry's faithful nurse stood in her usual place at the dining-room door, waiting for the interminable grace of "only five minutes more" to be over, and her boy carried ignominiously but contentedly to bed.

The footman knocked at the door. "A young man wanting to speak to master on particular business."

"Let him send in his name."

"He says you wouldn't know it, sir."

"Show him in, then. Probably a case of charity, as usual. Oh!"

And Mr. Ascott's opinion was confirmed by the appearance of the shabby young man, with the long beard, whom Elizabeth did not wonder he never recognised in the least.

She ought to have retired, and yet she could not. She hid herself partly behind the door, afraid of passing Ascott; dreading alike to wound him by recognition or non-recognition. But he took no notice. He seemed excessively agitated.

"Come a-begging, young man, I suppose? Wants a situation, as hundreds do, and think that I have half the clerkships in the city at my disposal, and that I am made of money besides. But it's no good I tell you, sir; I never give nothing to strangers, except—Here, Henry, my son, take this person there this half-crown."

And the little boy, in his pretty purple velvet frock and his prettier face, trotted across the room, and put the money into poor Ascott's hand. He took it; and then to the astonishment of Master Henry, and the still greater astonishment of his father, lifted up the child and kissed him.

"Young man, young fellow—"

"I see you don't know me, Mr. Ascott, and it's not surprising. But I have come to repay you this"—he laid a fifty-pound note down on the table. "Also, to thank you earnestly for not prosecuting me, and to say"—

"Good God!"—the sole expletive Peter Ascott had been heard to use for long—"Ascott Leaf, is that you? I thought you were in Australia, or dead, or something."

"No, I'm alive and here, more's the pity perhaps. Except that I have lived to pay you back what I cheated you out of. What you generously gave me I can't pay, though I may some time. Meantime, I have brought you this. It's honestly earned. Yes"—observing the keen doubtful look, "though I have hardly a coat to my back, I assure you it's honestly earned."

Mr. Ascott made no reply. He stooped over the bank-note, examined it, folded it, and put it into his pocket-book; then, after another puzzled investigation of Ascott, cleared his throat.

"Mrs. Hand, you had better take Master Henry up stairs."

An hour after, when little Henry had long been sound asleep, and she was sitting at her usual evening sewing in her solitary nursery, Elizabeth learnt that the "shabby young man" was still in the dining-room with Mr. Ascott, who had rung for tea and some cold meat with it. And the footman stated, with undisguised amazement, that the shabby young man was actually sitting at the same table with master!

Elizabeth smiled to herself, and held her tongue. Now, as ever, she always kept the secrets of the family.

About ten o'clock she was summoned to the dining-room.

There stood Peter Ascott, pompous as ever, but with a certain kindly good-humour lightening his heavy face, looking condescendingly around him, and occasionally rubbing his hands slowly together,

as if he were exceedingly well pleased with himself. There stood Ascott Leaf, looking bright and handsome in spite of his shabbiness, and quite at his ease,—which small peculiarity was never likely to be knocked out of him under the most depressing circumstances.

He shook hands with Elizabeth warmly.

"I wanted to ask you if you have any message for Liverpool. I go there to-morrow on business for Mr. Ascott, and afterwards I shall probably go and see my aunts." He faltered a moment, but quickly shook the emotion off. "Of course, I shall tell them all about you, Elizabeth. Any special message, eh?"

"Only my duty, sir, and Master Henry is quite well again," said Elizabeth formally, and dropping her old-fashioned curtsy; after which, as quickly as she could, she slipped out of the dining-room.

But long, long after, when all the house was gone to bed, she stood at the nursery window, looking down upon the trees of the Square, that stretched their motionless arms up into the moonlight sky—just such a moonlight as it was once, more than three years ago, the night little Henry was born. And she recalled all the past, from the day when Miss Hilary hung up her bonnet for her in the house-place at Stowbury; the dreary life at No. 15; the Sunday nights when she and Tom Cliffe used to go wandering round and round the Square.

"Poor Tom," said she to herself, thinking of Ascott Leaf, and how happy he had looked, and how happy his aunts would be to-morrow. "Well, Tom would be glad too if he knew all."

But, happy as everybody was, there was nothing so close to Elizabeth's heart as the one grave over which the snow was now lying, white and peaceful, out at Kensal Green.

Elizabeth is still living;—which is a great blessing, for nobody could well do without her. She will probably attain a good old age; being healthy and strong, very equable in temper now, and very cheerful too, in her quiet way. Doubtless, she will yet have Master Henry's children climbing her knees, and calling her "Mammy Lizzie."

But she will never marry. She never loved anybody but Tom.

ABOUT TOYS.

I AM an old bachelor—quite a hopeless, hardened case of that social disorder—and have not yet learned to appreciate the graces even of the most precious of babies. To make amends, however, let me avow that I doat upon children; I mean, those little lads and lasses who have ceased, on the one hand, to be bald, goggle-eyed, and scarlet, whose noses have risen above the level of their countenances, and who can express themselves more intelligibly than by an inarticulate howl, and who, on the other hand, have not yet arrived at that other melancholy stage of existence—hobbledehoyism. Even if we did not love these little ones for their own sake, we should for the good we may gain from them. When one is tired of the make-believe ways, and weary, artificial communion of “society,” how refreshing is the frankness of those open-hearted, outspoken prettlers, who have just words enough to say what they think, and ask for what they want, and not enough to cloak their feelings, and disguise their desires. Master Jack has no hesitation in straightway demanding sugar-plums, or in crying, “Hullo, mister, come and be my horse,” if his desires lie that way; and Miss Jill puts her tiny arms round one’s neck, and with the most touching candour and sincerity declares, unblushingly, “I do love ’oo so much!” It puts a new edge on one’s worn-out appetite for amusement, to see how easily children are diverted, and how thoroughly they enjoy themselves. To the simple little souls, a go-cart, a climbing monkey, or a picture-book seems a joy for ever, and a joke or a story is none the worse for being told for the fiftieth time. Is it not quite exhilarating to see with what zest they give themselves up to their games? No playing at playing there, but real, earnest work, into which all the little heart and soul are hotly thrown. And then their faith and trustfulness, how precious they are to us, when we begin to grow sceptical and suspicious, as even the best men will at times, from much dealing with the world, and when we are tempted to wonder whether the Oxford scholar was far wrong when he said, there is nothing true or new, and it does not matter. One cannot have a child put its soft, little hand in ours (and look for comfort in our face), with implicit confidence in our guidance and protection, without feeling the charm that lies therein to melt the hardest heart, to make the veriest coward brave, to dethrone Self from its most cherished shrines. It is then one knows the might of trust and faith, and the power of the spirit of a little child. Before its fearless weakness the strong

man, in his pride of thews and sinews, is abashed; but from its very helplessness he gathers a diviner and more enduring force—the force of calm, unwavering belief in the loving care of One in whose eyes the most mature amongst us is but a tottering babe—

“An infant crying in the night,
An infant crying for the light;
And with no language but a cry.”

There is nothing like an occasional hour in the nursery for preserving those springs of fresh and tender feeling which are essential to true manhood, and should be set as much store by as the old Romans did by a well within the citadel. As long as the precious reservoir endures, the siege of evil may be defied, but when its waters begin to blacken and dry up, the triumph of the enemy is at hand. The society of children is, as it were, a fine moral shower-bath, into which one may go jaded, chilly, and torpid, but from which one is sure to come out refreshed and glowing with a brisker circulation and a lighter heart. Napoleon playing with the infant king of Rome is one of the few bright human touches in that stormful life, in which the blackest night only alternated with lurid day. In the recent biography of Edward Irving, I think there is no more touching portrait of the great preacher than that which shows him, when the most popular man in London, stalking through the streets of an afternoon, bearing his baby in his arms, with a superb pride in his burden.

I own I have my doubts whether the period of childhood be really so joyous as we afterwards picture it. At any rate I am satisfied that we never draw from it such pure and unalloyed enjoyment as when we re-live our own early days in the gambols and merry-makings of our little friends. Then the past comes back upon us, clothed with a halo of enchantment, appearing all the more splendid on account of the dark cares and sorrows of the present—

“As when the sun, conceal’d
Behind some cloud that near us hangs,
Shines on a distant field.”

A good game at romps will whisk one back to by-gone days, and surround one with a phantom group of old familiar faces. “Round about, and round about, and round about we go!” and here come Archie and Willie, my bosom friends, with whom I used to quarrel and be reconciled half a dozen times in a day. There, too, I declare, is a certain bright little maiden, with large grave eyes,

who used to walk hand-in-hand with me, and share my sweetest goodies. She did not let concealment, like a worm in the bud, prey on her damask cheek, for she told me, and everybody else, how fond she was of me. It was decided that we were to be married to each other, but when, with

the impetuosity of an accepted lover, I besought her to name the happy day, she suggested (for her prudence was beyond her years) serious doubts as to whether we could live respectably on half-a-crown, a doll's house, and a cricket bat. There also are—but ah! off fly two of my waistcoat

buttons with a crack; the charm is broken, and I return to the work-a-day world, where are headaches, and heart-aches, and corns. I grow fat and scant of breath, and I fear my romping days are over. A quiet game with toys is more suitable at my age. I prefer ring-taw to billiards, and

though I have an aversion to tea-parties, I like to partake of that refreshment served out, by some young (very young) lady friends of mine, in the most diminutive of cups and saucers, even at the imminent risk of swallowing my spoon dissolved in the hot liquid. Nor am I ashamed to

confess (having therein the notable example of Socrates to fortify me) that I enjoy a ride on a high mettled hobby-horse, with a young gentleman of my acquaintance, the owner of the animal, who holds on by the mane, while I hold on by the tail.

Every one who has given any thought to the subject of toys must admit that it is worthy of more serious attention than is usually bestowed upon it. A great fuss was made about the appearance of Mr. Cremer's toy-trophy in the nave of the Great Exhibition; but in truth scarcely any branch of art or science deserved to be illustrated more conspicuously. The force and permanence of first impressions have passed into a proverb, yet how little regard do we bestow on those things from which our children receive their earliest and most vivid ideas. The infant goes to school as soon as it is born, and the rattle is its primer. Toys are its first text-books, and their uses are neither few nor insignificant. We all know that a valuable insight into the character of a child may often be obtained by watching it at play. Newton, at school, flew his kite in the spirit of a philosopher. He took pains to ascertain the figure and properties best adapted to it, and the proper mode of attaching the string. He devised lanterns of paper, which lighted him to school on dark winter mornings, and which at night he fastened to the tail of his kite, to the consternation of the bumpkins, who took them for comets presaging ill. His biographer also tells us that he invented diversions above the vulgar kind, to allure his school-fellows from trifling amusements, and to teach them to play philosophically. "I remember," says Goethe, "that as a child, I pulled flowers to pieces, to see how the leaves were inserted in the calyx, and dismembered insects in order to discover how the limbs were attached to the body." Have we not here a forecast not only of his eager spirit of research, but also of the cold, pitiless determination with which he pursued it? At school, Napoleon's favourite pastime was to form his companions into two parties, one of which attacked, while the other defended, a fortress of snow constructed under his direction, after the fashion of those of which he had read. We all know the game Watt played with a spoon and the steam from the tea-urn. George Stephenson's toys were a pipe-stalk and a lump of clay, out of which he fashioned model engine-houses. Telford gave early tokens of his engineering skill, in the construction of little pumps and wind-mills; and Chantrey's favourite recreation, as a boy, was to model figures out of butter, instead of spreading it on his bread, and to carve heads on the end of his stick. Such stories could be multiplied without number.

Then, again, there can be no question that playthings not merely reflect, but, in some degree, influence character. In some instances, the taste for particular toys is due partly, no doubt, to the latent disposition of the child, but perhaps equally to the fact that he is introduced to them at an early impressionable age, and is taught to take a deep interest in them. Hence, I think, something may be done for the young in the selection of their toys. National character, of course, influences the choice of toys in particular countries.

Look, for example, at those which German children love—models of houses and shops, appropriately furnished, clock-work scenes, and figures. There were plenty of them in the Zollverein court of the Great Exhibition. One represented a landscape, with a railway train constantly darting in and out of a tunnel, and a regiment of soldiers marching across a bridge; another portrayed an old castle with a fountain, and a mill with a water-wheel; while a third showed a painted ship, for ever tossing on a painted ocean. There were also little shoemakers, who wagged their heads, and moved their arms; and grotesque barons, who made all sorts of queer gesticulations. Well, these things were very beautiful and artistic in their way—some of them being not without a dash of genuine humour. One might admire them or laugh at them once perhaps, but the defect of such things is that they are meant to be looked at only, and not touched. Eyes on, hands off, is the rule, and after the first examination they grow stale and wearisome. It is easy to conceive how the child, who can enjoy such playthings, is father to the dreamy, passive being who "evolves the philosophy of life from the depths of his moral consciousness," and not by practical work or active experience. Again, in France (especially under the present régime), military toys are most in vogue—tiny helmets, and swords, and guns. The Prince Imperial, with his body guard of boys, has set the fashion of juvenile soldiery; and young France is decked in a uniform almost before it is breached. I hope it is not true, as I have been given to understand, that French girls soon lose a relish for their dolls, and show a disagreeable precocity for dress and coquetry; if so, it throws some light on various dark phases of Gallic life. With ourselves, ships and dolls are the popular playthings, as becomes a nation whose sons take to the ocean as naturally as ducks to a pond, and whose daughters make the best wives and mothers in the world. You find the partiality for these toys in every grade. The ragged little lass hugs her halfpenny wooden doll, wrapped in a piece of dirty calico as fondly as the more fortunate Miss does her grand *poupée*, which is clothed in purple and fine linen, and has a wax head, blue eyes that open and shut, and beautiful flaxen curls. St. Giles, the city Arab, is as proud of his walnut-shell rigged out with a mast and a main-sail of paper, as he floats it down the gutter, as St. James of his 24-gun ship, with flags, and forecables, and jib-booms, and ever so many things which my limited nautical vocabulary does not enable me to catalogue.

Viewed in a proper light, an expedition to the German Fair or Lowther Arcade in search of a good set of toys becomes a mission requiring some thought, and involving not a little responsibility. As one passes in review the long array of brilliant stalls with their pretty fantastical stores, the embarrassment of selection is apt to increase at every step. There are some objects, however, which a moment's reflection enables one to condemn. Here, for instance, is a deceitful bon-bon box out of which, when one puts forth a hand to take a goody, springs an ugly little devil, with red glaring eyes and a hairy face; and here is a group of hideous masks. All such ugly repulsive toys (as well as those horrible legends about blood-

thirsty ogres, and the like, which somehow or other have obtained so large a space in our nursery literature) are objectionable in the extreme. I would have them all despatched into perpetual exile. We do not always find out, till after the mischief has been done, how injurious an effect such things have on tender, sensitive natures. Children have often too much pluck to disclose their fears in company; but it is more than likely that, when they get away to their silent cots, they will spend the night in a delirium of terror, and people the dark with all manner of appalling sights. Nothing weakens mind and spirit more than a childhood haunted by such horrors. Again, it is a mistake to have toys which are too fine and elaborate, because they are not only thrown away on the little ones, but do not yield a proper amount of fun. To this class belong those German toys of which I have already spoken—toys which are the same to-day, yesterday, and to-morrow, and are fit only to be looked at under a glass-case. A healthy English child has too much life and spirit in him to be satisfied with merely feasting his eyes in that style. It is essential to his enjoyment that he should have the object in his hands, and be able to pull it about, and turn it upside down or even inside about. I own I look upon the children who never break their toys, and who never have any desire to see what they are made of, as little monstrosities who will never do any good in the world. Of course, some check should be put on the destructiveness of children, but a little scope in the way of breaking and smashing is wholesome and necessary. It indulges a natural thirst after knowledge which ought not to be discouraged. It also helps to impress the all-important lessons, that many things are fair and pleasant to the eye which are mean and hollow in the core; and that it is easier to destroy than to create or repair. Drums and trumpets abound at some of the stalls, but these I hold in abhorrence. I recollect, however, that once upon a time I took much delight in them, and could scarcely forgive an exasperated relative who having no taste for music was, of course, fit for "treason and stratagem," and who, abusing the sweet confidence of childhood, incited me to make my drum a stepping-stone to reach some sweetmeats from the mantelpiece, with what result to my melodious instrument may readily be conceived.

Although toys should not be too elaborate, there is no reason why they should not be artistic. Those of us who can count the grey hairs in our moustaches, or the missing hairs on our pates, can bear testimony to the vast improvement which has taken place in this branch of art during the last score or two of years. Through the mist of years appears a vision of the wooden horse of my infancy. Its body was a mere spindle with flattened sides, having four posts for legs, and covered with an eruption of red spots as large as government wafers. Its mane—a scrap of fur—was nailed on to its neck, as the harness was to its sides, by big brass nails. Suppose I wanted a specimen of this strange beast now-a-days, where should I seek for it? It has gone the way of the Dodo and the Mastodon: it is an extinct species. It has been supplanted by a handsome figure of a Lilliputian horse, in which shape and colour are imitated with great success,

and which has a hide and flowing mane of real hair and a real harness that you can take off and on. In Mr. Dickens's story, old Caleb the toy-maker begs leave to pinch a dog's tail, because he is making a "barking puppy," and "would like to go as close to natur' as he could for sixpence." Our toy-manufacturers of to-day all appear to be animated by a similar desire; and the anatomical accuracy and artistic finish with which animals of all sorts are portrayed in toy menageries and Noah's ark is really wonderful. Those fashioned out of brown unpainted pine-wood by the clever carvers of Nuremberg or the Black Forest are the best, I think, not only because they are the most spirited, but because they will survive a good deal of knocking about, and can be sucked with impunity. From the first dawn of recollection, children are thus familiarized with the forms of natural objects, and may be well up in natural history before they have mastered the A B C.

There is much sport and some philosophy in a child's game with a Noah's Ark. The following verses, which have been gracefully and skilfully translated from the German by a friend, depict a familiar episode of nursery life, which is as entertaining for the old as for the young:—

PICTURE OF THE MILLENNIUM IN THE NURSERY.

The Prophet's eye was opened

The golden time to see,
When wolf and lamb together
Shall dwell in unity;

When calf and royal lion
Are led by tiny hand,
And none shall hurt or injure
Within God's peaceful land.

Upon thy little table,
Thy childish play to me
Presents the golden era,
Earth's blessed jubilee.

When from thy ark thou takest
Beasts tame as well as wild,
And sheep and wolves together
Receive thy welcome mild.

The lamb, whose leg was broken,
Thou playfully dost chide,
And givest to the tiger,
That he may be its guide.

Thou feedest dove and martin
With crumbs of bread and cake;
The hungry bear and lion,
The same repast do take.

A cosy bed thou makest
The hen and heavy bear;
The timid hare and leopard,
How soundly they sleep there!

Thus on thy little table
Thy play reveals to me
The sacred, golden future;
Peace be, dear child, with thee!

Of course, it should never for a moment be forgotten that amusement is the chief end and aim of all toys, but I think some degree of instruction may generally be afforded, as a subordinate feature, and so contrived as not to lessen, but even to enhance and render more permanent, the amusement they afford. I protest altogether against the notion that "a dunce at syntax and a dab at law," is at all a necessary or natural combination, and I hold with that eminent educational authority, Mistress Goody Two Shoes, that the teaching of little children should be made as like play as possible. I have also much admiration for the kindly philosopher who taught his boy the Greek alphabet by means of letters cut out of gingerbread. Such was the youth's affection for knowledge (in this form) that he got down to *iota* in an hour or two. I have heard that one Katz, a Dutchman, has written a long poem, in which he shows how the games of children may be employed to inculcate moral lessons; but as I don't include a knowledge of the melodious tongue in which it is written among my accomplishments, I can't give any account of it. It is easy, however, to see how truth, courage, self-denial, generosity, and other moral qualities, may be instilled while children are at play. And morals apart, it is certain that a great deal of valuable information, even on abstruse subjects, may be imparted easily and pleasantly by means of playthings.

Indeed, an infant school (*Kinder-Garten*) has been established by a German gentleman, in the north of London, where that system is adopted. Wooden bricks, dried peas, and moveable letters are the elementary school-books. In the spelling lessons, the pupils pick out the letters, and arrange them in words and sentences; and ciphering is performed with the peas. The wooden cubes serve to convey notions of various objects, and also assist in counting. "The *Kinder-garten* system," says one writer, "is nothing more than a continuation in the school-room of the training which the child has already been receiving on its mother's lap or at its father's knees. Many a good lady has been practising it, as M. Jourdain talked prose without knowing it. Herr Froebel (its great expounder) himself tells us he has invented nothing; he has merely called attention to the advantage of the natural free and easy method of teaching, over the strained and formal, and suggested that the governess and the schoolmaster should adopt, as far as possible, the mother's manner and the mother's spirit, developing and expanding the system of the nursery, instead of starting on a new, unnatural, and disagreeable tack of their own. Observe the behaviour of a child when left to himself to play with some new toy, and you will find that when he has

turned it over and over, and looked at it in various lights, his next impulse is to take it to pieces, and see what there is in the inside of it. Satisfied on that score, he will then try to put the fragments together again. It serves him also as a sort of peg to hang his childish fancies upon, and to illustrate various expressions which he hears used. He soon learns to bestow numerous names on it, and to put it through a variety of motions. It is astonishing how much a child may learn in this way, how many questions the toy will suggest to him, how well he will remember the answers through force of association. "Well," says Froebel, "learn from the child himself how to teach him. Let his task-books be toys; provide him with occupations in which head and hand are alike active; and as in a young child the powers of action generally prevail over those of thought, let him advance by handling and forming objects to a knowledge of them. Don't fatigue and puzzle the child with vague abstract ideas; speak to him of the things he knows; put before his eyes or in his hands the object (or at least the image of it) about which you want to tell him. In Madame Rouge's '*Guide to the Kinder-Garten*' great stress is laid on 'stick laying, plaiting, and pea-work,' as the means of exercising the youthful mind; but, in truth, these are mere dry, worthless bones, unless quickened and informed by an understanding heart and sympathetic spirit. Let the teacher only be in the right mood for the work, and oyster shells or dirt-pies may be turned to just as good account as cubes or spheres, coloured paper or wooden watches."

Much success is said to have attended this "humanistic system," as it is called; and there appears no reason why it might not be beneficially extended. Miniature printing-presses may also be turned to good account in teaching spelling and punctuation: and dissecting maps in imparting clear ideas as to the relative position and peculiar configuration of countries. To little girls, again, dolls and doll-houses may be made a good text for various lessons in domestic economy, especially the great clothes-philosophy, and the art and mystery of gussets, tucks, and herring-bone hems.

"Wisdom sits with children at her knee," says the poet, and as to the toys of the older children, Professor Faraday declares that they are the most philosophical things in the world. "Philosophy in sport," says Sir David Brewster, "never fails to become science in earnest—the toy which amuses the boy will instruct the sage, and many an eminent discoverer and inventor can trace the pursuits which immortalize them to some experiment or instrument which amused them at school. The soap bubble, kite, baloon, water-wheel, sun-dial, burning-glass, and magnet, have all been valuable in-

centives to the study of science." Among toys which have been the favourites of philosophers, a distinguished place has always been held by the kite,—

"The strangest long-wing'd hawk that flies,
That, like a bird of Paradise,
Or herald's martlet, has no legs,
Nor hatches young ones, nor lays eggs."

We have seen how enamoured young Newton was of it, and we know to what results it led Franklin. Euler, the mathematician, did not think it beneath him to devote a special treatise to this "most strange wild-fowl;" and the principle which it illustrates, amongst others, of the composition and revolution of forces, is unquestionably very important. Again, the spinning of a top, Professor Airey tells us, is applicable to the elucidation of some of the greatest phenomena of nature, for it proves the power of whirling motion to support the axis of a body in an unaltered position. A lesson in optics may also be gathered from it, for, as it spins round, the spots and bruises on its surface vanish, and it presents the appearance of an elegant zone. A very ingenious top (Gorham's kaleidoscopic colour top) has been contrived for the purpose of explaining the phenomena of colour. Cards bearing variegated designs are placed on the top in such a way that as it spins, the most remarkable changes in appearance are produced. Colour and form are thus combined as if by a magic shuttle in a fairy web, in endless variety, and present patterns of the utmost novelty and beauty. There are whistling and humming tops too, which illustrate some of the curiosities of sound. A game at ball does not at first sight seem a very scientific occupation; yet Dr. Paris assures us, that it illustrates many interesting phenomena, such as elasticity, when it leaps from the ground; rotatory motion, when it runs along the surface; reflected motion and the angles of incidence and reflection, as it rebounds from the wall; and the principle of projectiles, as it is whirled through the air. A game at ring-taw is equally profound, if we only knew it, for it exhibits the collision of elastic and non-elastic bodies, their velocities, and direction after impact, and the composition and revolution of forces. The hoop reveals the nature of centrifugal force. A soap bubble is an-

other childish toy to which science owes not a little, for it led Faraday to the discovery of new laws in regard to the magnetic character of different gases. From the iridescent colours which glitter on the bubble, we may also gather deep lessons as to optics. To speak to Master Jacky of such things in the abstract, and to call them by big learned names, would only be to bewilder the boy. But if you take the trouble to illustrate them by his favourite toys and his everyday experience, he can comprehend, not only without difficulty, but with pleasure. In fact, all the time he has been flying his kite, or trundling his hoop, or whipping his top, he has been studying certain great physical laws, though he did not know it, and all that is required is to point them out to him, and make him aware of the value of the knowledge he has unconsciously acquired. The more intelligent his playing becomes, the deeper enjoyment will he derive from it. The whirling of his top, or a victory at ring-taw, will be doubly gratifying when he knows that it is due to the scientific skill which taught him to hit the top on a certain spot, and at regular intervals, or to strike one marble against another at a certain angle.

If any youngster reads this, let him not take me for his enemy, and imagine that I would fain convert his sport into a weary task-lesson, which would be all the more aggravating from the mockery of the misnomer. Let him rather reckon me a sure ally in "barring" the pedagogue out of the play-ground. I prize fresh, spontaneous, thoughtless mirth too highly to countenance such an invasion. No, my desire is not to spoil sport, but to extend the empire of toys, and bring even the school-master under subjection to it. There has been too long an angry divorce between amusement and learning, but I think there are cheering signs of a speedy reconciliation. Let us hope that before long we may

see the academy invested with some of the attractions of the play-ground, and the first steps of the temple of learning strewn with tempting toys. I should like to see engrafted on the tree of knowledge some of the branches of that other tree, around which, with its bright little tapers and glittering fruit, I hope my young friends may have a merry dance this Christmas season.

At Home in the Scriptures.

A SERIES OF FAMILY READINGS FOR THE SUNDAY EVENINGS OF DECEMBER.

FIRST EVENING.

THE GREAT CONFLICT—ITS NATURE AND OBJECTS.

"For I would that ye knew what great conflict I have for you, and for them at Laodicea, and for as many as have not seen my face in the flesh."—COL. ii. 1.

HERE is a Christian in his element. The spiritual life is not indolent repose. In this respect the servant is like his Lord: wist ye not that I must be about my Father's business? The life of the new-born is a life of labour; but in spite of this,—nay, because of this, it is a life of enjoyment. Life in earnest is the happiest life. Activity is a condition of wellbeing both in nature and in grace. If life had no burdens to bear, itself would become a burden. To cease from labour is both the symptom and the cause of sickness. This is the week of work: an everlasting Sabbath lies beyond it.

The text presents for our consideration the four following things:—

1. *The conflict*.—What it is.
2. *The objects* in whose behalf it is waged,—Who are they?
3. *The benefits* to be obtained for them thereby.
4. *The desire of the contender*, that those for whom he contended, should know of his contending.

I. *The conflict*.—What it is. It is an earnest outgoing energy; an effort that implies suffering as well as action. It is action so extended and intensified, that it runs into suffering. The whole being is on the stretch to the utmost of its capacity. The word in the original is *agony*; and it means what it says. It is the same term that is employed in that great commandment of the Lord, "*strive* to enter in at the strait gate, for many shall seek to enter in, and shall not be able." For the supreme example of this agony we must look unto Jesus, the author and finisher of our faith.

In some of its aspects Paul's agony was like Christ's: in a certain sense and measure the disciple here is like his Lord. A shadow of the Redeemer's own doing and suffering is reproduced in every one who bears his image. As the one Mediator's conflict was double, with God for man, and with man for God: so a disciple is, in his own sphere, a mediator too, striving both for his brother, and with him. As to the dignity of the intercessors, and the power of the intercession, no comparison can be made between the finite and the infinite: but the direction and design of a disciple's conflict are borrowed from the conflict of the Head, as a shadow takes its shape from the substance. "Follow me!" was the formula of Messiah's call in the days of his personal ministry. As in other things, every true disciple follows his Saviour's footsteps; so in this, that the energy he exerts, the agony he undergoes, is a twofold twin life and growth, giving God no rest till he arise and show mercy, and man no rest till he arise and receive it.

Both these parts of the double conflict may be distinctly traced in the immediate neighbourhood of the text. For the conflict upward, see chapter i. 9-11. There is a man evidently straining with all his might. He is applying to the door of mercy that violence which the kingdom suffers, and the King loves to feel. Entering into that which is within the veil, and leaning on the worth of the forerunner who is already there, he is praying with all prayer and supplication. He is wrestling, like Jacob, with the same angel of the covenant, and refusing to let him go. For the other side of the double conflict, witness the whole of this letter to the Colossian people, with its manifold and various appeals: and, in particular, see the last two verses of the first chapter, in immediate grammatical connexion with the text. See the great wrestler as he has been taken in the act, and pictured on this page. He has twined himself round his neighbour, antagonist yet friend, friend yet antagonist;—friend of his neighbour's soul, but enemy of the old man in his neighbour. Bowing himself with all his might at once upon the brother whom he would save and the enemy whom he would destroy, every limb in motion, every muscle on the stretch, he wrestles like a Roman for the prize: "whom we preach, *warning* every man, and *teaching* every man in *all* wisdom: that we may present *every* man *perfect* in Christ Jesus: *whereunto* I also labour, *STRIVING*."

But who has quickened and inspired, and energized and strengthened this man of flesh and blood like ourselves, that he should be able to stand in the midst leaning on the one Mediator, and prevail both with God and with man? The answer is there: "according to his working which worketh in me mightily." It is the Spirit of Christ given to this man, and dwelling in him richly, that makes him bold and strong. Alone, he would be weak and like another man. The secret of his power lies in this, that he is strengthened with all might by the Spirit in the inner man. He was infirm, but the Spirit helped his infirmities: he could not intercede, but the Spirit made intercession for him with groanings which meant more than was articulately uttered. There is only one way in which a member can be enabled to plead and strive like the Head, and that is by being in the Head. When you are "in the bowels of Jesus Christ," then will your compassion flow. The Spirit of Christ becomes in Christians the Spirit of prayer and supplication.

II. *The objects* in whose behalf the conflict is undertaken and carried on. As expressed in the

text, it is a conflict "for you, and for them at Laodicea, and for as many as have not seen my face in the flesh." There they stand, tier upon tier, symmetrically and gracefully rising; first the Colossian people his friends, next the Laodiceans their neighbours, and last an outer, wider circle, stretching to earth's utmost end. We have here the full outgoing of a Christian's brotherly love, but not its beginning. The successive layers of the superstructure are visible, but the foundation is hid. In plain terms, Paul would never have had a conflict great or small for these people, if he had not first passed through a conflict for himself. The love that rises highest is a love that springs in the secret deeps of a soul: the charity that goes effectively farthest abroad, is a charity that begins at home. "Take heed to yourselves, and to all the flock." "Save thyself, and them that hear thee."

In buildings, the lowest layer is generally concealed, while all the rest of the structure is exposed to view. At certain times and for certain purposes, even that lowest line may of design be laid open, but ordinarily, while it lies beneath sustaining all, it is itself unseen. Paul's conflict for his own soul's life, lay underneath, and sustained all his efforts for other men, although he does not mention it here. It was the first spiritual agony which he endured. When he had a purpose to serve by the exposure, he was nothing loth to lay it bare, and invite the whole world to examine it; witness the grand act of spiritual self-dissection which is recorded in the seventh chapter of the Epistle to the Romans; but generally the things that bulk most in this Apostle's writings are prayers and pains for the conversion and edification of other men. These efforts fill up his writings—filled up his life.

Paul's agony for himself in secret was the root of all his out-branching and fruitful exertions for his neighbours. Wanting that root, these exertions might indeed have spread out over a large space, but they would have been withered branches, barren all.

The conflict is twofold in its root, as well as in its branches. Downward the struggle was with himself. At an early period of the contest he found a law in his own members which it behoved him to overcome and cast out, for it was enmity against God. Right eyes must be plucked out, and right hands cut off, that one's-self may not be cast into hell at last. This is a good fight as to the side you have espoused, and the victory that is already sure; but it is not an easy fight. It cannot be easy to nature, for your own heart is at once the ground on which the battle rages, and the enemy whom you must strike down.

The other side of this conflict reaches unto the heavens, and offers violence to the kingdom in faith's prevailing prayer to the king. He stands,—this warrior, beating on his breast, and pleading, God be merciful to me a sinner, until he is permitted to go down to his house justified. He who so fights wins, and bears off his own soul for a prey.

From the commotion of this conflict in the solitary centre of the soul, the wave of Christlike

compassion rises, and rolls onward on all sides, and outward, touching indeed the nearest first, but ceasing not as long as it finds a brother's breast to beat upon.

First, Colossian brethren, "for you." Paul's family ties were all and only spiritual. He had no home but heaven; no child but the new-born who had been converted through his word; no brother but the heirs with himself of the grace of life. Nearest his heart for that time were these Colossian converts whom he had taught, and to these accordingly his love flows first: but its impulse overleapt the limits of that nearest brotherhood, and reached the men of another city that lay beyond. Thence onward to all men. Such is the instinct of the new creature, and such its operation in all the household of faith. Brother love once generated in a believing human heart, by the Spirit's application of Christ's love there, goes out like light or sound, nor stops until it strike on the farthest limits of this great human dwelling-place.

Reader, in your conflict, when like Jacob you weep and make supplication for the needy, begin with those who lie closest to yourselves in the body, but do not stop, as long as by geography and history and imagination, you feel a human being living without God and without hope in the world. When all the surface of the world is still and cold like a frozen sea, it is difficult to keep the several nations in mind and memory: but at the present time we could not forget them although we would. The surface of the earth is in violent commotion, as in a universal earthquake. First, and nearest ourselves, a very great company in our own city and our own land, who have hitherto been lying still in the deep sleep of spiritual death, but have lately begun to stir and heave, and start and cry with half intelligent terror, and half articulate words, "What must we do to be saved?" and next, France, Italy, and the neighbouring European nations, are held aloft and shaken in our sight; next, Syria and the other districts of Asia, where Mahomet, like a wounded lion, is dealing death around by his own last death-struggle; and next, India, where, though the great insurrection has been suppressed, the wound is not yet healed; and outmost, China, poor, multitudinous, childish, cruel, treacherous China, where the long-closed gates have at length been opened. Verily, a great conflict British Christians ought to maintain at the throne of the Eternal Majesty for Home, and France, Italy, Syria, India, and China, and as many of the human family as are still living without God in the world. Nor should America be excluded from the list. The two portions of the nation wage a bloody conflict with each other. They sin and suffer. It is the part of Christians in this land to pity and pray for them. Railing against them is a weed that grows readily in the breasts of rivals, and in some quarters among ourselves it has shot up thick and rank: praying for them springs from a heavenly seed in believing hearts, and is probably more rare. In this land at this day there should be a great conflict in secret and social prayer that peace and love, and purity and liberty may be restored to our kindred on the American Continent. We do not counsel indifference to their sin. *Eathe the truth*

in love, and then in fitting time and place, let it be frankly spoken. We do not bespeak flattery instead of faithfulness: but we desiderate that humble

prayer for them in secret should be substituted for the supercilious criticism that has been freely flung in their faces.

SECOND EVENING.

THE GREAT CONFLICT—ITS AIMS AND RESULT.

"For I would that ye knew what great conflict I have for you, and for them at Laodicea, and for as many as have not seen my face in the flesh."—COL. ii. 1.

III. *The benefits* to be obtained for those needy objects through the conflict which Christians maintain. The benefits are not expressly specified in the text; nor was it needful that they should. They lie scattered over the whole surface of the Epistle, over the whole area of the Scriptures. This wrestler well knew and clearly tells what he wrestled for. Paul was the very last man to occupy himself in beating the air, for want of a precisely marked substantive design. Whenever you see this workman swinging his arms, you may be well assured that there is a nail near him to be driven, and that he is hitting it on the head.

We know already from whom he expects to get by this striving; it is from God the Father through the Son Jesus Christ. We know also for whom he expects to get the benefit; they are his own personal Christian friends, the people who lived near them, and those who lay beyond, the whole human race. If we now inquire *what* he expects to get from God for his brethren, we shall find an answer in almost any sentence of his letter: take for example the last clause of the 27th verse of the first chapter. What are the benefits which this man strives to obtain for those whom he loves? These three:—*Christ in you: Christ in you the hope of glory.*

Did you ever know, did you ever hear of such a man? Oh, Paul, you will not go away with little for want of courage to ask much! What has given him so great confidence? not great merits, but great faith. He knew in whom he had believed: and knew that "in Him dwelt all the fulness of the Godhead bodily." Poor Abraham, who saw Christ's day afar off, and therefore saw it dimly; poor Abraham, he could not open his mouth so widely as Paul, and therefore he did not get it so liberally filled. Spare the city if it contain fifty righteous, if it contain thirty, twenty, ten! Hitherto went Abraham's confidence, and no farther. He asked little, and received little; the city was not spared. But the least in the kingdom after Christ came was greater than the greatest of the elder saints: and Paul was not the least in the new kingdom. Hear how he prays: hear what he asks; give me for my friends,—*Christ: Christ in them: Christ in them their hope to-day, their glory at his coming.* Oh man, great is thy faith!

Brother, do you feel reproof, do you see instruction here? You pray for others: well; but what do you ask, and what do you desire to obtain in their behalf? What shall determine the size and kind of the boon which you try to draw from heaven, and pour into the empty bosom of your

brother? Will your request take shape from the greatness of the Giver's store or the urgency of your neighbour's need? No; your request for another takes the measure of what you have asked and gotten for yourself. As well might you expect water to rise spontaneously above the level of its source as that a suppliant should really ask in prayer for his brother a kind or quantity of grace which himself has never tasted. But, conversely, when we have tasted that the Lord is gracious, and as far as we have so tasted we shall, by the laws of the new nature, ask also the same for other men. As well might you fear that water, duly confined in an impervious tube, would cease to rise at one extremity before it reached the level at which it stands in the other, as that a man in whose heart Christ dwells should ask less for his friend than he enjoyed himself.

IV. *The desire of the contender* that those for whom he contended should *know* of his contending. "I would that ye knew what great conflict I have for you." The conflict is one thing, the knowledge of it by its objects is another.

First of all, God knows it, whether these Colossians shall ever know it or not. None of it shall be lost. Although those for whom the prayer is offered should neither know the request nor get the benefit, that upward outpouring of a trustful heart reaches the throne of heaven, and descends again in blessing to the earth. As the mists that rise, drawn by the sun's rays from the moistened ground, though they disappear, are never lost, but come back in showers to refresh the land from which they rose,—so prayers for needy men, near or distant, that ascend from full hearts to heaven, are never and in no measure lost. They will return in showers of grace upon the gracious souls that send them upward. To him that hath shall be given, and he shall have abundance. To pray for needy men, whether personally known or known only nationally at a distance, is pleasant work and profitable. As the husbandman's labour becomes a double blessing, healthfully exercising his bodily frame at the time, and securing the substantive boon of a ripened harvest afterwards, so the effort which a believing man puts forth in conflict for neighbours, makes his own faith more strong at the time, and also secures a separate subsequent answer. First of all, then, on this point, God knows the conflict, and therefore it cannot be made in vain.

The direct application of the lesson here, however, belongs to those who are the objects of such an agony. Would that *ye knew* what great conflict

I have for you. Why did he so earnestly desire that they should know it? Might he not have been contented with praying for them in secret, and waiting until, by the outpouring of his Spirit on Colosse, the Hearer of prayer should reward him openly? Yes, Paul will pray and wait; but his waiting was not of the indolent kind. He waited indeed; but he waited working. He cried to God to touch them with his Spirit sent down from heaven; and forthwith he proceeded to touch them on the tenderest place of their natures, and with the keenest instrument he could command. This is a true man, and a wise Christian. He will not for a moment separate *prayers for them from pains with them*. Love is inventive. He watches for an opening. He casts about for a weapon whose stroke may be felt. When people grow callous under methods to which they have long been accustomed, he will invent a new one, in the hope that its novelty may arouse and arrest. Here he has found a sharp point that ought to penetrate: If you knew how my spirit strives with God in prayer for you. Yes, if they knew it, how could they follow vanity?—how could they sell themselves to the world?

This knowledge is power. It has often touched a hard heart, and forced it to flow down. I think, if the unconverted of every age and name in this land really knew the conflict that God's remembrancers have for them, they could not hold out. If their eyes were opened, like those of the ancient prophet's servant, to see not a mountain full of chariots of fire and horses of fire, ready to fight on their behalf, but a houseful of single-eyed, meek, unobtrusive Christians, striving with God for them in prayer, that blow would probably break the flinty heart that had resisted a thousand public appeals. No wonder that Paul desired that the Colossians should know his conflict. His preaching was like repeated strokes in front, where the conscience, through the wiles of Satan, was encased in defensive armour; but if they should come to know of the strong cry that was rising to the throne for mercy to them, while they were not seeking mercy for themselves, that knowledge would be a stroke behind, where they were not armed against conviction; or rather a touch within underneath all defences, which would make the strong man spring in, trembling and crying, "Sirs, what must I do to be saved?"

A youth has run the whole circle of sin. He has dishonoured his parents, quenched the Spirit, trampled the blood of the covenant under foot as an unholy thing. He has gone all lengths; and is now brought to a pause from mere lack of room within the limits of his nature to go farther away. During this breathing-time, in his darkness and distance, long after all other bands have been burst, one line reaches and gently touches him still. It is the knowledge—not the report, nor the suspicion, but the knowledge generated from early experience, and now sovereignly revived by the Holy Spirit of God—the knowledge flashing into his conscience like lightning, that his

mother is at the moment in agony for him—drawing at God's mercy for her prodigal with all the energy of an ebbing life;—this knowledge grasps him as if by a bit in his mouth, and turns him from darkness to light. Listen to the prodigal's resolve: "I will arise and go to my father." See, he goes as he is, straight to the father; see, the father falls on his neck and weeps!

But others not so openly prodigal need and get this tender touch, and this effective arresting. Some who read these lines may be living in vanity, though not in vice—living in the world, of the world, for the world: not in Christ, and not willing to go; not born again, and not wanting to be born again, lest present liberty should be curtailed; not very happy, and yet almost within reach of happiness, if God and Christ, judgment and eternity were out of the way. You, brothers, have not yet been broken, melted, brought to the cross, by the terrors of the Lord that may at times have thundered over you, or by the persuasions of a free Gospel that have often fallen on your ear. You are in a sad state,—not noted among men for a life of wickedness, but marked in the book of judgment as living without God, and lying under condemnation. Oh, if you knew what great conflict some friends of Jesus, and lovers of your souls, are maintaining this day—this hour, for you! If you knew it, you could not resist. If a faith, distinct and firm—like sight, should dart into your heart to-day, that some whom you have kept at a distance are cleaving to the throne of mercy now, that you may be plucked as brands from the burning—that knowledge might be the turning-point, and of you the report of ministering angels to-night might be, *Behold, he prayeth!*

But perhaps some cannot realize with anything like the certainty of knowledge that any Christian is agonizing in prayer for them. Perhaps it is partly a doubt of the Christianity of Christians, and partly a thought that though the faithful may be praying for others, they will not think of you. Ah, as even Elijah miscalculated by thousands the numbers who in his day sought and found communion with God, so you doubtless under-estimate the agony of intercession that is now drawing you by name to God's mercy, and drawing God's mercy down to you by name; but whatever the number of the suppliants who plead for you, brother, from the earth in the body, there is one intercessor who never wearies, and never forgets,—Jesus Christ, the same yesterday, to-day, and for ever. He makes intercession for you.

Think of this; while you are following your vanity, He is thinking, speaking, pleading for you. If you knew what great conflict the Christ whom you are crucifying maintains to-day for you!—if you knew how the heart of the man of sorrows beats, bleeds for you to-day, you could not hold out another hour. This night that same Lord would hear from your sobbing breast the full surrender, "My Lord, and my God." He would see of the travail of his soul and be satisfied.

THIRD EVENING.

INSTRUMENTS OF RIGHTEOUSNESS—HOW THEY ARE FORMED.

"Yield yourselves unto God, as those that are alive from the dead, and your members as instruments of righteousness unto God."—ROM. vi. 13.

THAT God is, that he made all things, and that he continues to govern all things he has made, may be safely assumed as undisputed doctrines. Many frivolous people forget them, indeed, but few thoughtful people deny them.

God has a purpose in view, and a work in hand. He has not launched the world into being, and then left it to itself. He sees the end from the beginning; and from the beginning he makes all things work together to accomplish his design.

In the material department, the work of the Almighty now is not creation, but preservation. In the moral department, it is neither creation nor preservation, but restoration. The fine gold has become dim, and it must be purified in the furnace. The temple has fallen, and another more glorious must be erected out of the same material, and on the same foundation. The living have died, and the dead must be brought to life again. A short sentence from the Apocalypse might be adopted as the motto of the Divine administration: "He that sat upon the throne said, Behold, I make all things new."

The world, in the person of its intelligent head, has become a ruin. Christ has stood upon it, taught upon it, died upon it, in order to build again that which had been cast down. In the first Adam was the fall; in the Second shall be the rising again.

When a building has fallen, especially if it was originally great and high, the ruin presents an appalling and hopeless appearance. The heaps seem to defy every effort. It seems as if to rebuild it were impossible. There is no opening where a beginning can be made. But an architect undertakes, tries, and succeeds. When he begins his work, the onlookers imagine that he makes no progress: he is making progress, however; and he knows it. He is busy making the foundation sure. Many days and much labour have been consumed, and still the observers do not perceive one mark of advancement: to their eyes the confusion seems as great as at the first; in some places it may even seem to have been increased. But he who has planned and undertaken the work knows that his task is far advanced. The hardest portion has been done, and all the rest is easy now.

Such are the appearances, and such the fact in the fall and the rising again of the world. This being whom God made as his son and servant,—this being was great and high. The structure that towered in beauty to the heavens, fell, and its fall was great. The work of reconstruction has been undertaken by One who is mighty to save. In some portions of the world, and from some points of view, every effort seems to have proved fruitless; the confusion and corruption seem as great to-day as at any previous period of the world's history. In this case, however, we are incompetent to judge. Our stand-point is too near

the ground, and the range of our view too limited. One day is with the Lord as a thousand years, and a thousand years as one day. If our eye were as searching, and our horizon as wide, we should be able to trace a progress, and predict a triumph. Much time may be taken up especially in laying a foundation; much time may be occupied in reaching through the rubbish to the spot where a solid foundation may be found. Thus many centuries were spent in preliminary institutions until Christ came; and many centuries have passed since, in work that is still preparatory. In all such cases, when the work is wisely managed, the progress towards an ultimate solution is greater than it seems. Such a work well begun is in effect half completed. In its later stages it may advance with greater rapidity: a nation may be born in a day.

The two chief points are: how the instruments are formed, and how the instruments are used. They must first be made fitting instruments, and then employed in the work. In human operations the first is ordinarily the more difficult of the two. To make the instrument demands more skill than to wield it after it is made. The most rare and curious of all machines, are machines for making machinery. From the dull, rude ore that is brought out of the mine, the skill of man must form the keen instrument, and then with that instrument perform the work.

Thus the Omnipotent Worker too: from the ruins of a lost world, he must construct instruments wherewith afterwards he may renew the world.

The blind cannot lead the blind: He opens the eyes of one, and then employs him to lead his brother by the hand. Expressly in the text the instruments are described as those that are "alive from the dead." All are dead spiritually; as is the iron ore when it is raised from the pit. As human art quickens and sharpens one piece of the dull ore, and then with that instrument cuts and fashions the rest into shapes of usefulness and beauty, so the Spirit in regeneration first quickens the dead, and then employs the living, to breathe upon the dry bones that lie in the valley.

The command to yield, indicates that resistance is expected. Alas! when a loving Saviour calls, those who hear his voice are generally glued, by their heart's affections, to farm or merchandise. By some more immediate and direct application of his love, the fishermen and publicans of Galilee came easily away from their nets and their tolls. They followed Jesus at the first word. They fell at a touch, like ripe fruit from the shaken branches into the owner's lap. But this is not the ordinary rule. Human hearts more commonly stick to what they grow on, even when the hand of the Lord is laid gently on to draw them, like green fruits that keep their hold

till the branch is rent. Suffer me first to go and bury my father; or suffer me to go and bid them farewell that are at home at my house. Such was the respectful and seemly language which the worldly mind adopted; but how much lay beneath these harmless petitions I know not. The son, after he has buried his father, will perhaps remain at home to possess the heritage: the friend who bids friends farewell, will perhaps be prevailed upon to remain at home. The reasons assigned for delay in these cases seemed good, and the delay requested seemed very short; but, for aught we know, these may have been only polite excuses given by those who had secretly determined that they would not become disciples of Jesus.

I have seen a sheep, when by its own folly its life was placed in danger, resisting as desperately the hand that was stretched out to save, as it would have resisted a hand stretched out to slay. The creature in its ignorance regarded its deliverer with as much terror as its destroyer. Thus in ignorance and enmity human hearts resist Christ, when, through convictions of sin in the conscience, he puts forth his hand to save. They cling with desperation to whatever portion of the world may lie nearest to their hand. They shrink from him who comes to save, as if he had come to destroy.

Nor is this instinct of resistance altogether destitute of truth. The flesh,—a Scriptural term for a sinful, self-seeking, unreconciled human heart,—the flesh entertains a secret presentiment that, if it surrenders to the gospel, it will be crucified. It is quite true that Jesus has come to torment the evil spirit which possesses a man, and the evil spirit cries out accordingly. The old nature dreads the Redeemer's approach; and with reason, for it must be crushed in the agony of regeneration, and for ever cast away.

So far are we from being at first instruments fit to be employed by the Lord in his work of righteousness, we are actually busy, when he meets us, in the service of his adversary. The sentence immediately preceding the text is an express invitation to desert the service of the wicked one, in order that we may begin to work for a new Master: "Neither yield ye your members as instruments of unrighteousness unto sin; but yield yourselves unto God." When one has been long accustomed to do evil, it requires a great force to wrench him away. Saul of Tarsus has tasted Stephen's blood, and is off to Damascus, like a tiger, on the scent of more. This man will yet be made a chosen vessel, and employed in the accomplishment of another work, but a dreadful rending awaits him ere the change can be effected.

He resists as much and as long as he can. He is seized at last against his will, and broken with violence from his old tastes. "Thy people shall be willing in the day of thy power."

When Christ meets Saul, or any other sinful man, and saves him, the end is not yet. This saving work is not itself an end, but a means toward an end. The Redeemer uses saved men as instruments in saving men that are lost. If you are saved, you will be employed in some department, more high or more humble, of saving work.

Iron ore is brought up from the mine, and smelted and refined with great labour and at great expense. A vast capital in money, and a vast amount of human toil are represented by these furnaces that belch lurid flames at short steady intervals far into the sky throughout the long wintry night, as if they were emitted by the heart-pulses of some Titanic monster imprisoned in the pit. All this watchfulness, labour, and skill are not expended merely for the purpose of treasuring heaps of iron on the surface of the earth. The iron is raised from the mine and purified, not for idle accumulation, but for active use. It is converted into instruments of various kinds, for doing work withal. It is sought with so much care and labour, not for its own sake as an end, but for its usefulness as an instrument. In like manner wealth is accumulated, not to lie idle, but to be employed. No man who knows the value of money will allow it to remain unproductive for a single day. It must be laid out, and laid out in the most profitable investment.

Now, our Lord Jesus has laid out in toil and suffering more than finite mind can measure, that he may convert the lost into the saved, the sinful into saints. Of these, the fruit of his soul's travail, although he still complains that few are coming, he has a goodly number here in the body now. A multitude whom no man can number already walk with him in white on the path of life. These are his treasure. He rejoices over the wealth that he has obtained; but he does not permit it to lie unproductive. His coin he puts to usury. He is not satisfied unless one talent gain one, and five talents gain five.

It results that every one who hopes in Christ for pardon should report himself for work in some department of the kingdom. The master demands neither the same kind nor the same amount of work from all his servants. The diversities of gift and consequent requirement are all but infinite. According to what they have, and where they stand, true disciples gladly fall in with the Lord's universal law, "Ye shall be witnesses unto me."

FOURTH EVENING.

INSTRUMENTS OF RIGHTEOUSNESS—HOW THEY ARE USED.

"Yield yourselves unto God, as those that are alive from the dead, and your members as instruments of righteousness unto God."—Rom. vi. 13.

It is a bright, elevating thought, that every one who is saved is in some way employed to save others. The salvation of a sinner, through the

pardon of his sin and the renewing of his heart, is not an end but an instrument.

To be saved is, I confess, very great. To those

who are awakened, and not yet at peace—who, in some measure, are aware of their need, but have not yet obtained its supply, this one question, What must I do to be saved? bulks so largely, that it fills up, and shuts in the view. The awakened seeking soul sees this, and sees no more.

But when safety, and the consciousness of safety have been attained, he who has attained them cannot rest, as if all were over. Safety, even from sin and condemnation, does not satisfy the saved. In this he becomes like his Lord. Jesus was holy and safe. He had no sin, and needed not to fear any condemnation; but he did not rest with these. It was his meat and his drink to do the Father's will, and to finish his work. The joy that he possessed was not enough. "For the joy that was set before him" he endured the cross. The corn of wheat must abide alone, unless it die; he will therefore die, for he cannot endure to be alone. He is safe; but he must be a saviour.

In their own feeble measure, the disciples are herein like their Lord. They are safe; but that does not satisfy them so as to make them lie down, and seek no more. When they are saved, they are eager to be saviours. When they have come to Christ, forthwith they endeavour to bring to Christ. They act as if their coming to Christ for pardon and life were not an end but a means,—a means of making them fit instruments for doing their Master's work, and helping needy neighbours.

Look around you in the world; you will find that all things are instruments. In earth and air and sea, nothing is an end; everything is an instrument working towards an end. The tree grows up, not for the sake of being a tree merely, but for the purpose of shedding seed whence other trees shall spring. See the water of a river. It is never at rest. Ceaselessly it rushes down, as if it were running a race. It seems eager not to lose a moment, and frets impatiently against every stick or stone that stands in its way. It is coursing down as quickly and as diligently to fill the sea, as if it feared the sea might be empty if it did not get there in time. But even this is not the end. It reaches the sea, only to rise from it again, as soon as it can, into the sky. And when it is poised aloft in the sky it does not rest a moment there, but flies on the wings of the wind across a continent, till it touches some mountain-summit. Thence it hastens down to run its race as a river again. Nothing is an end; all are instruments, and all the instruments are busy. The end is the Lord's. He alone sees it, and marshals all his instruments so as to work towards it every moment. These streams, and winds, and seas, are his angels, going his errands, doing his work.

Such, in a higher department of the Divine government, are saved men and all their faculties. Their salvation is not God's end, and should not be their own. It does well enough for an end, as long as it lies before you in the distance. Strive by all means to reach it. But when you reach it, you must not stop: if you reach it, you will not stop; and if you stop, the fact is evidence that you have not reached it. As the water when it gains the sky as a cloud does not remain there, but

hastens down to refresh the thirsty ground; so a human spirit, as soon as it has obtained mercy, becomes impatient to go forth and show mercy.

In prosecuting his purpose of reclaiming and renewing the world, the Supreme Disposer employs two distinct classes of instruments in distinct stages of his work. In coarser operations he uses coarser instruments: for the finishing touch he grasps a more delicate tool. In breaking up his own way through the external incrustations that fence in a corrupt nation or a corrupt man from the light of saving truth, he scruples not to employ the powers of nature or the passions of men: but when an avenue has thus been opened, saved men must enter, and bear salvation to their brothers. In such a case, ye who are "alive from the dead," the Lord hath need of you. A work of righteousness, for example, must be performed in the heart and life of a Greek jailer at Philippi; and let us mark how the Omniscient Worker selects and wields the suitable instrument at each successive stage. A coarse tool will suit best to break through the outer defences: a finer edge would make no impression on the rugged mass. The gentle, inviting word of an apostle would have drawn only a jeer from the jolly, well-fed, well-contented official who had obtained a situation for life as the governor of a provincial prison. An earthquake rent the prison, and rent too the hard searing that encased the keeper's conscience, opening a way right into his soul. At this stage the Lord laid aside the powers of nature; they were not capable of carrying his message farther. Now is the time for employing that "chosen vessel" whom he had long ago prepared for this very end, to bear the name of Christ to the awakened sinner. Believe in the Lord Jesus Christ, said the apostle; the man believed and lived. That saving work, begun by a rending of the earth, was finished by the lips of a saved man pouring the balm of the Redeemer's mercy on the wounded conscience of his brother.

Man's wisdom, too, such as it is, becomes an important instrument in certain departments of the work. Railways, and steam-ships, and electric wires will not convert the world: but they bring its various peoples closely together, so that when the quickening Spirit pervades one country, the influence will more quickly penetrate to another.

The wrath of man as well as his wisdom is freely employed in subordinate operations, bearing on the accomplishment of the grand design. The Revolution in Italy affords an example. Those political earthquakes that have of late years shaken thrones from their foundations in the peninsula, and left gaping rents through the fabric of society, from its summit to its base,—those earthquakes cannot convert the Italians to the gospel, but they open a wide path for the entrance of other evangelists. By these openings other evangelists are now going in: the ruder instruments have done their part; the finer have now taken up the task. Political convulsions have battered down the fortifications within which the miserable captives were held; heralds from the King will enter now to lead the captives out to liberty. A deep narrow crevasse has been made through a mountain range by some primeval convulsion, and a stream of pure water is flowing in the prepared channel. The open-

ing through the rock seems to have been made for the purpose of admitting the water, although the engineering bears no mark of human skill or human hands; and the water has obediently taken the course prepared for it, as soon as it was prepared. It is thus that political commotions have rent the rocks and opened Italy for the gospel: it is thus that the gospel, hitherto kept out by insurmountable barriers, obedient to its nature is now rushing in. The first part of the work is done for us: the second must be done by us. By the providential administration of nations the operation is conducted in its earlier stages: but it has now reached a point, where the Omniscient Worker seems to stand still and call for other instruments. Yield yourselves, ye disciples of the Lord Jesus, Italian and non-Italian, in wise loving concert, yield yourselves as instruments at this critical but hopeful stage. The organizations of earthly kingdoms cannot do much more; Christ has need of Christians in Italy now—Christians with wise heads, and loving hearts, and tender hands, and unselfish views. As the water lay pressing on the mountain-side before the rock was rent, and rushed through as soon as the opening was made, Christian love in Christian hearts, long kept distant from that field by artificial barriers of persecution, flows in by the law of its nature, as soon as the barriers are removed.

During the present generation the Church of Christ has made considerable progress in realizing and reducing to practice the principle that every member should contribute his share of labour to evangelize the world. The positive work is not now so exclusively abandoned to ministers as it was in the last generation. In this respect we have advanced beyond the position of our fathers; but we ought to use the position which we have attained as a base for pushing our advantage still further. It is a cause worthy of an apostle, if one were sent to the church in these latter days, to carry this question forward and drive it home. When the whole community of believers shall have been leavened with the conviction that doing for Christ is co-extensive with getting from Christ, we may expect an outbursting of evangelic work on the right and left such as no previous age has witnessed. When every one who comes to Christ for pardon shall yield himself to Christ as an instrument to be employed in his work, a great enlargement will ensue. The kingdoms of this world will soon thereafter become the kingdoms of our Lord.

In our great cities, and on the busiest thoroughfares there, you may observe at all seasons, some of the Queen's soldiers, in full uniform, walking to and fro in the throng, and conversing from time to time with the passengers. You may observe them there as you pass in the morning, and find them still there when you return at night. What do soldiers in the throng of peaceful citizens? No fighting is needed there. They are not fighting; they are recruiting. This is a department of an army's duty, the most essentially and fundamentally necessary of all. Those who are already sworn, tried, faithful soldiers, are employed to entice others into the ranks. Soldiers of Jesus Christ, go ye and do likewise. "He that winneth souls is wise." No man is called out of his place: but every one is required, in his place, to be a

faithful witness. Christians should study to be winsome in all their ways, that so they may entice those who are without to enter the service of the King.

Nor should a disciple's regard be all turned outward: his first duty and hardest task lies within his own heart. It is not that one Christian serves the Lord by bringing his own life into subjection, and another by bringing strangers nigh: both departments of the work must be simultaneously carried on. Unless both are prosecuted faithfully, neither will be prosecuted effectually. "The kingdom of God is within you;" within you, therefore, will its worst enemies also be found. If you yield yourselves as instruments unto God for the accomplishment of his work, the heaviest blows must be dealt upon the plagues of your own heart. When your own right arm offends, yourself must cut it off: when your own right eye offends, yourself must pluck it out. He who does not surrender himself unreservedly to God as an instrument to be employed in crucifying his own lusts, will not be of any use as an instrument in the external missions of the Church. Some other good things, besides charity, begin at home; and if they do not begin at home, they will never perform efficient service abroad. Set up Christ's throne, and strike down Christ's foes, within your own bosom, and along the line of your own life; if not, the blow which you deliver against external evil will fall powerless or recoil upon yourself. Home missions! It is a good and a needful work. It is a blessed thing for the Church in our land that the name and the idea are in the ascendant: but here, as elsewhere, unless we begin at the beginning we shall never reach a happy end. The true rule is, first, every man at once his own mission-field and his own missionary; thereafter and therewith other work may be safely undertaken, and efficiently done.

Besides the general surrender of the whole man as an instrument or operator in the work of righteousness, a clause of the text intimates that the "members" should be detailed singly, each to its appropriate place. In all moral duty, as well as in material toil, it is a precious rule to descend from wholesale generality to specific details. Enumerate and estimate the various members and faculties of your being, think of them as the gifts of God, polluted by your sin, but redeemed by the blood of Christ; and render them one by one willingly to the Lord that bought them. These lips,—let them speak no guile; let the truth in love ever flow from them as a pure rivulet trickles over the brink of a mountain spring, refreshing every living plant upon its border. These hands,—let them never hurt a brother; keep them busy doing good. These feet,—let them be swift to help the needy. It is a good method to go into detail when in secret we surrender ourselves to the service of our Lord. Name the faculties over, and enrol each in the ranks. Freely ye have received; freely give.

If a universal and permanent peace should suddenly succeed the wars and rumours of wars that now shake the nations, a vast quantity of warlike instruments would become useless. Fortifications and iron ships; rifled cannon and charged shells, would become antique curiosities. Suppose any

one should ask what shall become of Christians and their members, in their capacity of warlike instruments, when the war is finished, and Christ's reign established over all the earth; the answer is easy. In forming his new creation fit for war, the Lord did not form it unfit for other kinds of work. The same renewed men, and the same sanctified human faculties that served well as instruments to overthrow the kingdom of darkness, will find plenty of congenial employment in the administration of the

kingdom of light. Those who are faithful as instruments in God's hand for the coarser work of contending against evil, will be fully employed for ever in the congenial work of being and doing good, when there shall no longer be any evil to contend against, either in themselves or their fellows. In the Father's house are many mansions, every child shall have an eternal home; in the Father's kingdom is much employment; every child will be permitted to serve.

W. ARNOT.

NOTE TO ARTICLE ON COLONEL BAIRD SMITH IN SEPTEMBER PART.

[We have much pleasure in presenting the following letter, correcting an error which occurred in the Sketch of Colonel B. Smith, recently published in *Good Words*.—Ed. G. W.]

"To the Editor of *Good Words*.

"SIR,—In the Memoir of Colonel Baird Smith, given in the September Part of your Journal, there is an error concerning a matter of fact which, judging from my own feelings, I should imagine every friend of Colonel Baird Smith, and every friend of Lieutenant Taylor who is a reader of *Good Words*, would wish to see corrected.

"The writer of the memoir says,—'His (Colonel B. Smith's) wound prevented his carrying out personally his own share of the great achievement. The part which should have been his was ably performed by Lieutenant Taylor.' Now, this is quite inaccurate. The great reputation deservedly acquired by Lieutenant Taylor during the siege, was entirely due to the brilliant manner in which he performed his own subordinate duties, not, as is erroneously supposed by the writer of the memoir, to his having had an opportunity of temporarily supplying the place of Colonel B. Smith, and of performing during the latter part of the siege the higher duties of chief engineer.

"From the 2d July, the day on which Colonel B. Smith joined the besieging force, until the 20th September, the day on which the capture of the city was completed, no officer, excepting himself, performed even for a single day the duties of chief engineer.

"During the whole of that trying period, although latterly suffering not only from his wound, but also from ill health, he continued without interruption or relaxation, to perform the arduous and most responsible duties of his office.

"During that time no vital act was done, excepting at his suggestion and on his responsibility, and at one apparently desperate crisis, when

the necessity of abandoning the attempt to capture the town was seriously contemplated by the general, his energetic resistance to the proposal was one of the main reasons which encouraged General Wilson to persist in the attack.

"The annexed extract from a letter to his wife, dated 29th March 1861, and written during a subsequent visit to Delhi, shows, that during the last days of the siege, so far from being disabled by his wound from performing his duties, or even being confined to his quarters, his toil was so great and unremitting as to deprive him of time to sleep, that on the day of the assault his post was in the midst of the battle, and that on the night of that day he slept within the walls of the city:—

"On Sunday I went to church, where it was very curious to see the strange changes since I had been there last. I had my first sleep, for nearly seventy-two hours, under one of the church pillars; and where I saw a great congregation worshipping God on Easter Sunday, I recollected the dead and dying being scattered all about, and the round shot coming in through the walls and sweeping through the church, while the whole air was alive with musket-balls."

"I have, Sir, the honour to be,
Your most obedient servant,
A. CUNINGHAM ROBERTSON,
Lt.-Lieut.-Col. 8th, the King's Regt.

"SHEFFIELD, 14th October 1862."

By the Writer of the Sketch.

The inaccuracy here noted had been previously pointed out to me; and I had intended to ask the Editor's permission to insert a correction at the close of the volume, that is, in next number of *Good Words*. I deeply regret having fallen into the error, and beg leave to tender my best thanks to Colonel Robertson for his correction, and to the Editor for his insertion of it.—T. S.
