A WORD IN SEASON.

BY THE EDITOR.

OUR Lord has said, "He that is faithful in that which is least, is faithful also in much."

Now there is "*much*" indeed in which God requires us all to be faithful; but when that "*much*" is contemplated, and some estimate is made of its greatness, we are apt, with a despondency almost amounting to despair, to inquire how it is possible that a good account can be rendered of it at last? Our reply is,—By God's grace faithfully attend to the "*least*" things which compose the "*much*," and fear not the result! This is our lesson for the New Year.

What then may be called "*much*?"

Life is much.—Be it short or long, if we spend it as responsible beings, it is a great talent. *As a whole*, a certain character must be attached to it when it is rendered back to God. It must be either "a good life," or "a bad life;"—a life spent with, or without, God or Christ in the world. Do you wish to be found faithful in your use of this talent? Remember, then, that it is made up of small fractions. As the corn-field is composed of innumerable ears of grain—the ocean of drops—the huge material universe of particles of dust—even so is this great talent of life made up of seconds of time. Every tick of the clock, every throb of the pulse, measures and decreases its quantity. It is possible, that when you think of the necessity of being faithful during "a long life," and of spending well so many years as threescore and ten, it may appear a matter so difficult as to

make the very thought overwhelming. Had you only *one* year assigned to you! But threescore years and ten! Or, had God seen fit to limit your exertions to a week, or a month, it would have been unreasonable to despair. Who would not try, at least, to live *one* week or month—much more a single day—soberly, and prayerfully, and piously, if that was all which was required of him? but sixty or seventy years! Now, the short period which you my supposed reader would have selected for this trial of obedience is just the period which God has actually assigned to you! Nay, He has given you less than you are willing to accept of. For He does not hand over to you the talent of one week, or one day, even, but only of the passing hour and minute; and says, with reference to it, "Be faithful in this *least* portion of time, and you will be found faithful in the *much* of life. Attend to the *minutes* and the *hours*, days and years will take care of themselves." But this rule is by most people reversed. Instead of being faithful in their use of the *day* which God gives them, and for which they are alone responsible, they plan and contrive how they will be faithful over the *morrow*, which God has never promised them! They gamble away the pence, but resolve to be faithful over the pounds. They mispend the items of days and weeks, but resolve to redeem the sum of months and years! And so it will be seen at the last great day of account, that the man who is then found unfaithful in his use of the "*much*" sum of life, will be convicted

of having been unfaithful in his use of "the least" items, months, and days, and hours without number, which made up the sum.

Again, *Habits*, good or bad, are "much." They are the grand *result*, for weal or woe, of many items, and the end of a journey attained by a countless succession of steps. If, for instance, you would understand how this "much" of evil has been reached in an old man—"a grey-haired iniquity, a ruffian in years"—you would require to know how unfaithful he has been in his use of the "least" things which have been daily given him, and be able to trace back his life almost to childhood, and see how long ago he had been unfaithful to the call of duty in school—silenced conscience—put away all thoughts of God as unwelcome—entertained at first the thoughts of sin, then formed plans to indulge it, then lived in the habit of it, until, bit by bit, it hardened the heart, seared the feelings, and produced the awful result of an old man *dead* in trespasses and in sins! Such a man is, at last, verily poor and needy; perhaps he knows not how. But, alas! his case is easily accounted for. He has, in old age, lost the "much" of his moral fortune, because throughout life he was a spendthrift of the farthings which composed it! It is thus, too, with the "much" of a good character. The man who is habitually prayerful—who watches over his spirit and conduct—daily carries his cross, and crucifies the flesh, with its affections and lusts—and who, possessed by the love which seeketh not her own, is considerate of the claims, the wants, and feelings of others,—in one word, the strong man in Christ, has not attained even this "measure of the stature of the perfect man" in a day, by a single act of the will, or by any single or sudden effort. In one day, indeed, he may have entered the kingdom of light, and turned towards Zion; but not in a day has he advanced so far on his journey, and formed those *habits* of piety which have become, as it were, the easy and graceful actions of his second and renewed nature. To estimate aright how this "much" result has been obtained, it would be necessary to trace his life, also, back to remote years, and to study the biography of succeeding weeks and days from youth upwards. Select one day even in his history, and see how it was begun by prayer, and spent as a whole with a wish to please God; how, during that day, temptations were resisted, and leadings of good followed; how the thoughts were controlled, the tongue governed, deeds of kindness and self-denial performed,—until the evening brought thanksgivings to God, ending with peaceful repose upon His gracious care. And thus only, when day after day are examined, and the Christian's faithfulness in its "least" things perceived, would

it be possible to understand how his faithfulness in its "much" had been at last attained.

It is true, indeed, that sometimes one sees a result so sudden and unexpected, that it *appears* to be unconnected with any previous details of things which could have caused it. A man well thought of, for example, by the world that knew him not, suddenly commits a crime, which takes society aback, and overwhelms himself in disgrace. Yet, had that man's private history been known to others as it was known to himself, it would have been discovered, that while the explosion was sudden, the combustibles which occasioned it had been long accumulating, and that a spark only was needed to produce the conflagration. The gambler makes his family a beggar in a night, or the swindler disgraces them; but many days and nights of carelessness, greed, vanity, unconscientiousness, and the like, unchecked and indulged in, have made the gambler and the swindler. And thus, too, the act of noblest duty, which delights the world, has generally been the sudden blaze only of light, and love, which were long cherished, and shone within the soul, unseen and unknown by human eye.

Learn, then, how to attain the "much" of good habit, by a patient attention to those "least" details which are necessary to its formation. Not alone by wishing it, or resolving it, can you be a good man, any more than a healthy, a learned, or a rich one. If you wish the "much" of a good temper, be faithful in checking the "least" rising of a bad one. If you desire the "much" of enjoying the blessedness of prayer, pray without ceasing. If you would be "much" better, learn to do the "least" things well. If you would receive the welcome of, "Well done, faithful servant," and be made lord over many things, learn, by patient continuing in well-doing, to be faithful now over few things.

We might illustrate the same principle by showing how such a blessing as "much" influence for good has been acquired by those who have been most distinguished for its exercise. It is impossible to study the biographies of such men as Wilberforce, for example, without being impressed by their early, and diligent attention to details. We find they did good as God "gave them the opportunity," within the sphere, however limited, and in the circumstances, however trying, in which Providence was pleased to place them. Just as they used their few talents well, other talents were given them "according to their several ability." The least work, the humblest duty, assigned to them was accepted promptly and performed conscientiously, and "much" work, with increasing influence and power to do it, was given them at the fitting time. But had the one talent

been neglected, the ten talents would have been withheld; had the power of doing good to the one city been refused, the power of blessing ten cities would never have been possessed. If therefore we would have "much" influence, the only way of obtaining it is by being faithful in the exercise of "the least" which God gives us.

Be assured, that if, in our present condition, we are unfaithful over "the least" which God has given us, we would be unfaithful over "the much" at any time, and in any circumstances. The man who is, here and now, cruel to his children or dependents, would be a bloody tyrant if seated on an African throne. The man who, in this day of gospel light, scoffs at religion, lays a stumbling-block in the way of its professors, tempts his neighbours to sin, and sacrifices conscience to worldly interests, or the praise of men, is possessed by a spirit which would have made him a Nero if on Nero's throne, a Judas if among the apostles, or a worshipper of the golden image if on the plains of Dura. Do not ask, then, for a change of circumstances, or an increase of your talents in order to be good, to do good, or to prove your loyalty to God. Be faithful now, in what you have, in "the least," here where God has placed you, for this is all God seeks; and your being so will afford abundant evidence of one who would be faithful

everywhere over much, were the much committed to his care!

Reader! are you disposed to sink beneath the burden of a New Year? Does the thought pain you of all the duties to which it will summon you, all the temptations, and all the trials which it may bring to you? Is it your earnest wish, that should you see the first of January 1863, the previous months, now dark and unknown in prospect, shall, in retrospect, be bright and beautiful as any months in this cloudy world can be? and that you shall be able to recall, with humble gratitude to the God of all grace, duties performed, temptations resisted, spiritual comforts experienced, and spiritual strength imparted,—with afflictions, if such are to be your lot, sanctified?—If so, then "*Take no heed of the morrow*;" it is not yours; but, by God's grace helping you, *take great heed of each day* as it dawns upon you, and *each hour* of the day as it comes round, for *they* are yours. Divide the great year's burden of duty into three hundred and sixty-five parts, and each of them into so many hours as are in each day, and carry the little burdens only; and at the end of the year you will find that the great burden was carried, and was comparatively light! And thus you will have a good New Year, and because a good—a happy one!

THE FACTS AND FANCIES OF MR. DARWIN.

IN thus characterizing the contents of Mr. Darwin's work, *On the Origin of Species*, our readers will understand that it contains much valuable knowledge, and much wild speculation. Interesting facts and idle fancies have seldom been combined in physical researches, and when such an alliance has been formed, the value of the new facts has often compensated for the errors of their application. There are many cases, indeed, in the history of science, where speculations, like those of Kepler, have led to great discoveries in the very attempts which they suggested in order to establish or to refute them. It is otherwise, however, with speculations which trench upon sacred ground, and which run counter to the universal convictions of mankind, poisoning the fountains of science, and disturbing the serenity of the Christian world. Such is doubtless the tendency of Mr. Darwin's work on the origin of species. Trained in a less severe school than that of geometry and physics, his reasonings are almost always loose and inconclusive: His generalizations seem to have been reached before he had obtained the materials upon which he rests them: His facts, though frequently new and interesting, are often little more than conjectures; and the grand phenomena of the world of life, and instinct, and reason, which other minds

have woven into noble and elevating truths, have thus become in Mr. Darwin's hands the basis of a dangerous and degrading speculation.

We cannot suppose that he intended to undermine the foundations of natural and revealed religion; but we cannot conceal our conviction that the hypothesis, which he makes it the object of his life to support, has a tendency to expel the Almighty from the universe, to degrade the god-like race to which he has committed the development and appreciation of his power, and to render the revelation of his will an incredible superstition. That great Name, indeed, which true philosophy has never failed to respect, has not been wholly omitted in the pages of our author. It has no other title, however, but that which breathed life into one primordial form, from which all organic beings have been descended that have ever lived upon this earth—plant, fish, fowl, quadruped, and man! The Influence thus acknowledged, is the electric spark of a previous speculator which disappears for ever, when it has lighted the train of causes and effects by which all the orders of organic life have been fashioned and perpetuated. That tender Parent who longs to gather His children "*as a hen gathereth her chickens under her wing*;" who opens when they knock; who gives good things to them

that ask him, and without whose knowledge not a hair of their head can fall to the ground, takes no charge of the family of orphans who people the gloomy universe of our author.

In order to justify these strictures, we must make our readers acquainted with Mr. Darwin's views as stated by himself; and as he appeals to facts and principles in their support, we must appeal to facts and principles in their refutation. Without any profound knowledge of natural history, or indeed without any knowledge of it at all, the nature of this remarkable speculation may be made plain to the lowest capacity, and the humblest inquirer may be made to understand that it has not one fact to support it, and though now presented in a new form, that it has been long ago refuted by the most distinguished of our naturalists.

In discussing questions of this kind, which excite a general interest, we are naturally anxious to know something of the parties engaged in the contest. Mr. Darwin has been long known to the public as an eminent naturalist. He is the grandson of the celebrated Dr. Darwin, a poet and a physiologist, and the author of several ingenious works, in some of which he traced the origin of all organized beings, plants, animals, and even man, to living filaments, susceptible of irritation. The first work of Mr. Darwin was entitled *The Voyage of a Naturalist*, in which he gives an account of the celebrated voyage of four years during which Captain (now Rear-Admiral) Fitzroy circumnavigated the globe in Her Majesty's ship "Beagle," in the years 1832-1836. As naturalist to this expedition, Mr. Darwin was led to study the structure and distribution of coral reefs in the Pacific Ocean, to explore the minute organizations of invertebrate animals, such as the Cirripeda, and to investigate the geology of South America, the structure of the Falkland Islands, and the volcanic islands of Australia. In the various works in which he has given an account of these researches, he has shown himself an accomplished naturalist, and they are all written with a degree of elegance and perspicuity not very common in works of the same class. His health, we regret to say, is such as to preclude him from continuous study, but we trust that he may be long preserved to advance natural history by his experimental investigations, and may be led, by means of his own discoveries, to renounce the opinions which have so deeply offended both the naturalist and the Christian.

The views which Mr. Darwin endeavours to establish are contained in the following passage at the end of his work:—"I believe that animals have descended from at most only four or five progenitors, and plants from an equal or lesser number. Analogy would lead one step farther, namely, to the belief that all animals have descended from

some one prototype. But analogy may be a deceitful guide. Nevertheless, all living things have much in common in their chemical composition, their germinal vesicles, their cellular structure, and their laws of growth and reproduction. We see this even in so trifling a circumstance as that the same poison often similarly affects plants and animals, or that the poison secreted by the gall-fly produces monstrous growths in the wild rose or oak tree. *Therefore I should infer from analogy that probably all the organic beings which have ever lived on this earth have descended FROM SOME ONE PRIMORDIAL FORM, into which life WAS FIRST BREATHED.*"

In supporting this extraordinary doctrine, Mr. Darwin devotes his first chapter to the changes produced in plants and animals "under domestication." These changes, which are universally admitted, he ascribes to difference of climate and treatment during several generations, the variations increasing with the time, and, when once begun, continuing for many generations. "No case," he says, "is on record of a variable being ceasing to vary under cultivation. Our oldest cultivated plants, such as wheat, still often yield new varieties; our oldest domesticated animals are still capable of rapid improvement or modification." In what gardeners call "sporting plants," where a single bud or offset assumes a new and sometimes "very different character from that of the rest of the plant;" and such "sports," which are very common under cultivation, support our author's view, that variations are not necessarily connected with the act of generation. Slight changes may also be produced from "the conditions of life," such as increased size from amount of food, colour from particular kinds of food, and perhaps thickness of fur from climate; but though such causes of variation may be numerous, yet the variations themselves are unimportant compared with those which are inherited; and hence Mr. Darwin concludes that "if strange and rare deviations of structure are truly inherited, less strange and commoner deviations may be freely admitted to be inheritable." It follows therefore that, after many generations, these accumulated variations may amount to a change of species from inheritance. In order to establish these views, Mr. Darwin describes the variations which have taken place in the breed of domestic pigeons. The carrier-pigeon, the short-faced tumbler, the runt, the barb, the porter, the turbit, the jacobin, the trumpeter, the fan-tail, are all described as differing in their beaks, their necks, their bodies, their feet, their tails, and even their skeletons, and to such a degree, that an ornithologist, were he told that they were wild birds, would certainly, he thinks, rank them as well-defined species; and yet all of these pigeons are

admitted to have been descended from the blue and barred rock-pigeon, the *Columba Livia*. Now, admitting all this to be true, it is no evidence that any of the varieties constitute a new species, though the variations may have been accumulating for four thousand years. On the contrary, there is no tendency in these variations to become permanent, but rather to disappear, so that the fancy pigeon returns to the rock-pigeon, from which it descended. The same law of reversion to the original type is proved in various domesticated animals. Pallas informs us that the wild horses of the Kalmucks, when no longer taken care of by man, relapse into their untamed condition; and Dr. Prichard states that the escaped domesticated animals—the horse, the ass, the sheep, the goat, the hog, the cow, the dog, the cat, and the gallinaceous fowls, which the Spaniards took from Europe to America, had lost all the most obvious appearances of domestication.

That the changes produced by domestication effect no permanent variation amounting to a specific difference, is strikingly shown in the case of the dog, which, of all domestic animals, exhibits the most numerous and marked variations in regard to size, colour, character of hair, and form of head; yet, notwithstanding these, as Professor Owen remarks, "the naturalist detects, in the dental formula, and in the construction of the cranium, the unmistakable generic and specific characters of the *Canis familiaris*." "How differently," he adds, in support of the same truth, "does the giant Newfoundland behave to the dwarf pug, on a casual rencontre, from the way in which either of them would treat a jackal, a wolf, or a fox. The dumb animal might teach the philosopher that unity of kind or of species is discoverable under the strongest masks of variation."

Our limits will not permit us to follow our author in his attempt to show that great changes take place under the principle of artificial selection, where domestic races have been produced by man, in accumulating in certain directions useful to him, the successive variations produced by nature. A much more powerful cause of variation he finds in what he calls *Natural Selection*, or the power which Nature exercises "in rejecting that which is bad, preserving and adding up all that is good, and silently and insensibly working whenever and wherever opportunity offers, at the improvement of each organic being, in relation to its organic and inorganic conditions of life." To this principle our author assigns almost a creative power. It can modify the structure of the young in relation to the parent, and of the parent in relation to the young; but it cannot modify the structure of one species without giving it any advantage for the good of another species. "If it had to make the beak of a

full-grown pigeon very short for the bird's own advantage, the process would be slow, and there would be simultaneously the most vigorous selection of the young birds within the egg, which had the most powerful and hardest beaks, for all with weak beaks would inevitably perish; or more delicate or easily broken shells might be selected." As an example of the process of natural selection, Mr. Darwin tells us that "in North America the black bear was seen by Hearne swimming for hours with widely-opened mouth, thus catching, almost like a whale, insects in the water;" and he adds, "even in so extreme a case as this, if the supply of insects were constant, and if better adapted competitors did not already exist in the country, I can see no difficulty in a race of bears being rendered by natural selection more and more aquatic in their structure and habits, with larger and larger mouths, till a creature was produced as monstrous as a whale!"

Owing to the great rapidity with which plants and animals increase and multiply, the earth would soon be covered by their progeny, if numbers of them were not destroyed during some period of their lives. Hence there is "a struggle for existence," during which superfluous life is taken, and the vigorous, the healthy, and the happy survive and multiply, while those of feeble constitutions, incapable of providing for themselves and their offspring, must annually perish. In this war of races, this struggle for food and existence, favourable variations are preserved, and injurious ones rejected; but there is no example of any specific form having been gradually changed by the accumulation of these favourable variations. In admitting the fact of this struggle for existence, naturalists have drawn from it the very opposite conclusion. When God saw that every living creature which he made was good, we cannot doubt that the type of each of them was perfect. The struggle for life, therefore, is to prevent, and not to promote a change in the original form. The strong tiger that survives the struggle will have more of its native ferocity than its sickly congener that has perished. The vigorous buffalo will not cease to be herbivorous, in consequence of its strength; and the lion will not feed upon straw, because it has a better appetite and stronger teeth than its feeble companion. Nor will the Red-Indian boy that has escaped from drowning, while his brother has perished, be a less perfect Red-Indian than his father who threw him into the sea. Instead, therefore, of there being "a constant tendency in the improved descendants of any one species, to supplant and exterminate in each stage of descent their predecessors, and their original parent," there will be the very opposite tendency to preserve unimpaired the relative perfection which that species received from the Creator's hand.

Such is a brief and very imperfect notice of the processes by which, according to Mr. Darwin, species are so changed that, since the first act of creative power, man has risen from a primordial atom, through the numerous stages of plant, fish, fowl, and quadruped.

If this speculation has any evidence to support it, it will be found in the history of organized beings during the several thousand years of the historic period. In the course of this long period, no change of species has taken place, and no new species has appeared. The birds and beasts of Egypt, as preserved in her ancient tombs, have experienced no change in their specific character during the two, three, or four thousand years that have elapsed since the artist prepared their mummies for preservation. Though the large runt pigeon, with its massive beak and its huge feet, differs from its blue and barred progenitor the rock, it is a pigeon still. Though the slender Italian greyhound has a strange contrast with the short-legged bull-dog, they are both dogs in their teeth and in their skull. The mouse, even, has not been transmuted into the cat, nor the hen into the turkey, nor the duck into the goose, nor the hawk into the eagle, and still less the monkey into the man. When the highest instinct has passed into the lowest reason, when the chatter of the parrot has risen into speech, and when the lion on his forest throne has addressed his subjects in the vernacular of man, we may then submit to the imputation of an ignoble origin. The Almighty, however, as if foreseeing the degradation of His image, seems, as stated by Cuvier, to have provided the Egyptian embalmers to refute the speculation. "It might seem," says he, "as if the ancient Egyptians had been inspired by nature, for the purpose of transmitting to after ages a monument of her history. That strange and whimsical people, by embalming with so much care the brutes which were the object of their stupid adoration, have left us, in their sacred grottos, cabinets of zoology almost complete. Climate has conspired with art to preserve the bodies from corruption, and we can now assure ourselves with our own eyes what was the state of a good number of species three thousand years ago." The same lesson is read to us by the annals and the literature of ancient times. "The camel that bore his bride to Isaac," says an able writer, "and drew nigh as he was meditating at the evening tide, still projects the same outline sharply chiselled on the horizon wall of the Eastern deserts, between the sky and the sand; the war-horse, 'his neck clothed with thunder, and that said among the trumpets, Ha, ha,' in Syrian warfare, shows the same noble instincts on the battle-fields of Europe; and the dog that endangered the *incognito* of Ulysses was but a living rehearsal of the favourite of Abbotsford." The hippopotamus and crocodile which Herodotus saw and described are precisely the same as they will be seen, and would be described, by a modern visitor of the Nile. The salmon still mounts the river barrier, as when the Roman soldiers named it the Leaper, when they first saw it in the streams of Gaul; and the polypus and the sponge, and other inhabitants of the Mediterranean, exhibit the peculiar properties which were noticed in them by

Aristotle. In tracing the formation and growth of coral reefs in Florida, M. Agassiz has shown that eight thousand years are required to raise one of these coral reefs or walls from its foundation to the surface of the ocean; and as there are four wall reefs round the southern extremity of Florida, the first of these must be thirty thousand years of age, and yet all of them are built by the same identical species. "These facts, then," says he, "furnish as direct evidence as we can obtain, in any branch of physical inquiry, that some, at least, of the species of animals now existing have been in existence over thirty thousand years, and have not undergone the slightest change during the whole of that period."

These interesting facts, and others equally demonstrative of the immutability of species, are admitted to be difficulties by Mr. Darwin himself, and his only reply to them is, that more time is wanted than the age of Egyptian tombs, or even that of the coral reefs, for the transmutations which he advocates. Fortunately for our argument, there have been more animals embalmed than those of Egypt. The plants and animals which nature has preserved in the cemeteries of primeval times speak the same language as those in the Egyptian tombs, and we must now appeal to them in search of any evidence of a transmutation of species.

Geologists have agreed in dividing the crust of the earth into three different formations; namely, *Primary*, *Secondary*, and *Tertiary*, or, to use the more expressive names, *Paleozoic*, or the strata containing the most ancient forms of life; *Mesozoic*, or those containing less ancient forms; and *Oinozoic*, or those containing more recent forms. The thickness of these different masses is as follows:—

Paleozoic strata, about . . .	60,000 feet.
Mesozoic " " . . .	15,000
Oinozoic " " . . .	3,000

making altogether 78,000 feet, or nearly 15 miles. In the lowest of the paleozoic strata, namely, the Cambrian, there are no traces of plants or animals. In the next strata, the lower Silurian, trilobites and cephalopods (cuttle-fish) are found. In the upper Silurian, the earliest fishes appear. In the Old Red Sandstone, placoid and ganoid, or armour-clad fishes, are found; and in the Limestones and Coal-Measures, the upper paleozoic beds, reptiles and insects appear for the first time. In the lower mesozoic strata, or Sub-Oolite, birds and marsupial mammals are found. In the Oolite beds, reptiles are abundant; and in the Supra-Oolite, or chalk and Wealden formations, the cycloid and ctenoid fishes, soft-scaled and pectinated, make their appearance. In the lower strata of the oinozoic, the London clay, bats, dolphins, bees, etc., are found. In its middle formations, the coralline rag, the ape, dog, lion, elephant, ox, whale, etc., appear; and in its upper or most recent strata, the finest mammalia and man are found.

In this long range of created life, from its commencement with the trilobites and cuttle-fishes in the lower Silurian strata, to the occupation of the earth by man, there is not one fact indicating the transition of one species to another. Mr. Darwin him-

self confesses that the intermediate varieties are wanting, that "Geology assuredly does not reveal any such finely graduated organic chain;" and that "this is the most obvious and grave objection to his theory." "The explanation lies," he adds, "in the extreme imperfection of the geological record." In order to escape from the difficulty, thus candidly acknowledged, he is obliged to call in question the faith of geologists. He denies that life began in the lower Silurian strata. He believes that there must be strata much older than the *azoic* formations, or those without life; and in order to explain why, among fossil remains, none of the species are found which form the links between one race and another, he conjectures that the formations which contain them have been removed by denudation, and other causes, and may exist beneath the ocean, or in localities not yet explored by geologists. In thus maintaining "the imperfection of the geological record," in consequence chiefly of only a small portion of the globe having been explored with care, Mr. Darwin rejects all the leading truths of the science; and, conscious of the untenableness of his position, he seems frequently on the very eve of abandoning it. "He who rejects these views," he says, "on the nature of the geological record, will rightly reject my whole theory. For he may ask in vain where are the numberless transitory links which must formerly have connected the closely allied or representative species found in the several stages of the same great formations." In reference to the great geological truth that the earlier formations, stretching over vast extent, and perfectly unaltered, do not contain the least traces of organized beings, and that the dawn of life is in the lower Silurian formation, our author admits that, "if his theory be true, it is indisputable that before the lowest Silurian stratum was deposited long periods elapsed, as long as, or probably far longer, than the whole interval from the Silurian age to the present day, and that during these vast yet quite unknown periods of time the world swarmed with living creatures." But if the geological record has all the imperfections urged against it by Mr. Darwin, and if they were all supplied according to his hypothesis, it would still present some important facts utterly subversive of his views. The existence of such creatures as the trilobites and the cephalopods or cuttle-fishes in the Silurian formations, with organs of sensation of the most perfect kind, is an unanswerable difficulty in the development theory. Mr. Darwin is sorely puzzled with the transition of organs. "Natural selection," he says, "will not produce absolute perfection, nor do we always meet with this high standard under nature. The correction for the aberration of light is said, on high authority, not to be perfect even in that most perfect organ, the eye." The meaning of this we presume to be, that though the eye is the most perfect of organs, it is yet not perfect, and therefore may be produced by natural selection. Now it is quite true that the correction for the aberration of colour is not complete in the human or in any known eye. But, notwithstanding this, *vision is perfect*. The uncorrected colour is never seen in using that organ, and consequently *the human eye, as the organ of vision, is perfect*, and

therefore not the result of natural selection. Upon Mr. Darwin's principle the ear is not perfect, because it is insensible to the music of the spheres, or the lense imperfect because it cannot discover every shade of colour. An over-sensitive ear would be destroyed by the sounds to which nature subjects it, and a touch sensitive to colour would be torture to its possessor. Natural selection, however, under Mr. Darwin's guide, may reconcile these difficulties, and the eye of the future may be furnished with crystalline lenses doubly or triply achromatic. Our author himself sometimes stands aghast before his own opinions. He declares that "the belief that an organ so perfect as the eye could have been formed by natural selection is more than enough to stagger any one;" but what can he say when he learns what he ought to have known, that the lens of the cuttle-fish, one of the earliest of animals, is as perfect and more complex even than that of man. The crystalline lens of the *Sepia Loligo* differs from that of all other animals in being a compound lens, consisting of a principal lens of a paraboloidal form, deeply convex behind, and slightly convex before, united to a meniscus with a predominating convexity placed in front of it. The concave face of the meniscus is kept in contact with the slightly convex face of the principal lens by means of a transparent cartilaginous ring, so that the lens actually consists of *three separate parts*. In all other lenses the laminae are composed of fibres, but in the *Loligo* they are films having a fibrous structure, radiating from the pole of the posterior surface of the lens. In the lenses of man, and other animals, the fibres terminate in poles or lines. The virtual fibres, or the edges of the laminae in the cuttle fish, terminate like a bunch of hair cut across, forming the anterior surface of the principal lens; and their extremities, composing that surface, are curiously bound together, and covered with a fine membrane. Here then we have an organ of sensation unique in the animal economy, and exhibiting a degree of complexity and high organization which is found in no other animal. If the *Loligo* has sprung from a lower or has been transmuted into a higher type, we ought to have found in both some traces of so extraordinary an organ. The cuttle-fish has furnished to Cuvier other arguments against the Darwinian theory. "No deviation," he says, "in the ordinary form of this animal has ever produced, or can constitute a being placed beneath it; nor can, or ever will, its better development give rise to a series of animals of a more perfect species to be placed above it. . . . In vain shall we attempt to approximate these mollusca to some fishes whose skeleton has almost disappeared. . . . In a word, we see here nature passing from one plan to another, making a leap, and leaving between its productions a manifest *hiatus*. The cephalopods are not passing into anything else. They have not resulted from the development of other animals, and their proper development has not produced anything superior to themselves, a consideration which gives them a high degree of importance in natural history, because they overturn a great number of vain systems."

But there are other organs than the eye which baffle the highest powers of natural selection. The

electric organs of fishes, Mr. Darwin himself tells us, "offer a case of special difficulty," and he confesses "that it is impossible to conceive by what steps these wondrous organs have been produced." The electric fishes are not even related to each other, and there is no appearance of ancient fishes having had electric organs, which most of their modified descendants have lost. The presence of luminous organs in a few insects of different families and orders, offers a parallel difficulty to our author; and he candidly mentions another puzzling case in which the *orchis* and the *asclepias*, two flowering plants of genera "almost as remote as possible from each other," have the same very curious contrivance of a mass of pollen grains borne on a footstalk with a sticky gland at the end. In order to explain how two very distinct species, as in the preceding cases, are furnished with the same anomalous organ, Mr. Darwin expresses the following extraordinary opinion:—"I am inclined to believe that in nearly the same way as two men have sometimes independently hit on the very same invention, so natural selection working for the good of each being, and taking advantage of analogous variations, has sometimes modified, in very nearly the same manner, two parts in two organic beings which owe but little of their structure in common to inheritance from the same ancestor"!!

In discussing the transition of organs, Mr. Darwin seems wisely to avoid the transition of brains, the organ of reason in man, although he must believe that the brain of the biped is an improvement upon that of the quadruped, under the discernment of natural selection. He tells us "that he has nothing to do with the origin of the *primary mental powers*, any more than he has with life itself;" but as he includes under instinct *several distinct mental actions*, he is bound to tell us how these mental actions of the brutes rise to reason, or the higher mental actions of man. As natural selection can produce every degree of perfection but absolute perfection, instinct must have risen into reason, and since, as Mr. Darwin remarks, "a little dose of *judgment or reason* often comes into play even in animals very low in the scale of creation," a greater dose of judgment or reason, such as that exhibited in the exercise of the "*primary mental powers*," must be accumulating in the human family in the course of their development. What then is to be the future of man in his physical, mental, and moral nature? To what form of being is the primordial atom to rise? Under the tutelage of natural selection, it is advancing to a state of perfection, short only of the absolute, and some time or other that goal must be reached.

Declining to receive light from above, how is the speculative philosopher to close the history of life which he has traced through such singular transformations? The physical astronomers of no distant age believed that all the planets of our system, moving in a resisting medium, were necessarily approaching to the sun, and would finally perish in its blaze. Might not Mr. Darwin escape from his difficulty, by throwing the cause of life into a circle, and by a process of natural deterioration, throw it backwards from its highest to its

lowest form—from intellectual man, through all his various ancestors, to the primordial atom from which he sprung? It is a more rational belief that man may become a brute than that a brute may become a man; and it is an easier faith that plants and animals may dwindle down into an elemental atom, than that this atom should embrace in its organization, and evolve, all the noble forms of vegetable, animal, and intellectual life.

From this slight and imperfect sketch of Mr. Darwin's speculations it will be seen that he has not adduced a single fact in its support. Had our limits permitted us to give some of the natural history details and experimental results which his work contains, we should have found that though they prove the existence of small variations in species, a fact admitted by every preceding naturalist, yet the small amount of these variations, both in number and character, establish the very truth which they are adduced to overturn. When the physical astronomer saw in the small secular acceleration of the planetary motions the final destruction of the system, the very study of these accelerations, which the hypothesis promoted, led to the discovery of its cause, and placed beyond a doubt the stability of the planetary system. The same result will be obtained from the study of those changes in the organization and habits of plants and animals which arise from domestication, from artificial selection, from the struggle for existence, and from food and climate. The comparative anatomist, the physiologist, and the botanist, will discover their nature and extent, and, instead of finding in them the materials of a wild speculation, they will see and admire the beautiful provision which has been made for enabling the various species of animal and vegetable life to adapt themselves to the different conditions in which civilisation may have placed them. Had Mr. Darwin written a work on the change of species, as determined by observation and experiment, without any other object but that of advancing natural science, he would have obtained a high place among philosophical naturalists. But after reading his work, in which the name of the Creator is never distinctly mentioned, we can hardly believe that scientific truth was the only object the author had in view. Researches, conducted under the influence of other motives, are not likely to stand the test of a rigorous scrutiny; and some of Mr. Darwin's not unfriendly critics have produced ample evidence that the idol of speculation has been occasionally worshipped at the expense of truth.

If Mr. Darwin has any loving disciples who lean upon him for instruction, they must have asked him some perplexing questions regarding the history of his primordial form. In what part of the earth was it placed? What placed it there, and whence came the planet which it was to enrich and adorn with all the varieties of life that it embosomed? Although he has not answered such natural inquiries, yet philosophers of the same school have found in a universe of dust, the creative power which made even the planetary worlds.

The theory of the origin of species is but an off-set from the Nebular Cosmogony which pretends to explain the origin and formation of the primary and secondary planets, and which stands in direct con-

tradition to all the facts and laws of the solar system, and especially those of the system of comets. That form of it in which the mass of the Sun is supposed to have been expanded in nebulous matter to the orbit of the remotest planet, has been recently submitted to the scrutiny of mathematical analysis, by M. Babinet, a distinguished member of the French Academy of Sciences. Adopting the present period of the Sun's rotation about his axis, scarcely $25\frac{1}{3}$ days, he has proved that the rotation of the nebular matter at the distance of the Earth,

must have been 3181 years! and, at the distance of Neptune, nearly three millions (2,862,900) of years,—“numbers,” he says, “so infinitely superior to those which mark the times of revolution of the Earth and Neptune, that it is impossible to admit that these planets have been formed from the mass of the Sun expanded to the planetary orbits.”

In this overthrow of the great parent heresy, by the severe test of geometry, we may read the fate of its more offensive offspring.

DAVID BREWSTER.

VESPER.

BY THE COUNTESS DE GASPARIN, AUTHOR OF “THE NEAR AND HEAVENLY HORIZONS.”

“Make haste home, children; the soup is smoking on the table; Granny is rising from her spinning-wheel; Father is shouting for you! Quick! Quick!”

I.—JANUARY.

THAT morning there was no hum of insects in the grass, no song of birds in the woods. It was a January morning, cold and brilliant, such as winter shakes down from his diamond-spangled robe, as he paces to and fro in his icy halls.

The serenity, the very cold itself, the distinct colouring, the well-defined outline, seemed to set the heart at ease. There are certain winter days more exhilarating than those of spring.

In spring the moist exhalations of the earth infuse a sense of languor into the spirit. Those rain-saturated winds of the deserts, that dilate the hard soil, that relax the rugged bark, and make it throb with sap, occasion in us strange gushes of sudden tenderness, aspirations after the ideal, soon congealed again by more boisterous gusts. Is it the contrast between the warm breezes and cutting east wind,—is it the pitiable aspect of young leaf-buds, curled up, shivering in their sheaths,—is it

an ill-defined interim between the dying out of our winter fires and the waking up of orchard blossoms? I cannot say, only the air seems rent by discord.

See, here is the country once more, with her coronal of wild grasses, lilies of the valley, and apple-blossoms on her brow. Not a pod that has not its emerald cup, not a hedge that does not conceal treasures of poetry,—even things in themselves ugly grow beautiful now. Spring has no need of mountains, or forests, or valleys. Give me only the showers and the sunshine of April, and from mere waste land, mere thickets tangled with thorns, such perfumes shall arise, such exquisite shades of colour open out, the immaculate loveliness that has never known the least human contact, shall gush with such abundance from the soil that you will be dazzled by it. Yes, but with all this there shall come a sadness too. For if you look within your own home—I mean the home of your hearts,—your character, your habits, the atmosphere will, by contrast, seem unhealthy. Your life will share the fate of winter garments displayed on a mid-summer day, be they brocade or serge, it matters not; they are out of keeping; they are hideous.

If we are mourners, our burden seems heavier in proportion as all around smiles at us. But in addition to this there stirs within an infinite craving for happiness, one of those ardent thirsts that reality can never quench.

And this is why in spring we, poor birds without any shelter, fluttering between a nest that is spoiled, and one that has still to be made, feel dreamy, sickly, out of place.

But that morning there was nothing that reminded of spring, nothing that debilitated the soul. On the contrary, the keen air gave it vigour, the sun brightened it. The days, as we say in our village,—the days had turned. Instead of the nine hours of uncertain light that they dole us out in December, they were beginning to lengthen a little at each end.

It is but a sad sort of month, December. From morning to night a grey fog hides the horizon. Objects are neither far nor near, positively they are not. One might suppose that the whole universe had sunk into the abyss. But when January tears December's winding-sheet of mist; when its scattered fragments are borne away by the wind, and the lost sun bursts out once more from behind the Alps, one feels that the battle is won.

As for the earth, indeed she remains bare; there is nothing expected from her as yet; but the sky asserts all its dignity. From east to west the great dome is blue, intensely blue; before the sun is risen it grows lighter in the east; then from a zone, pale yellow first of all, next orange, next dusky-

red, the Alps detach their colossal outline. Peaks, serrated ridges, giant shoulders, all sharply marked out, incomparable in their might, ineffable in their serenity. All at once the sun emerges; his disk passes slowly behind one of the great mountains; he rises a crimson ball without rays. Look again! in streams, showers, clouds of flaming, vibrating arrows, he shoots out his beams. The scene has changed, the valleys and the lakes are resplendent. No verdure in the oak wood, no velvet spread upon the fields to temper the brilliancy of the light. It is an absolute reign this of the royal sun as he passes over the unclothed earth, and laughs at her while he darts down his fires.

That morning, then (for if I go on thus I shall certainly not proceed far), the skies had just this glory; the ground was hard and crisp, it rung beneath the feet; the voice not muffled by any foliage, any climbing vines, seemed to strike sharply upon the angles of the walls and to be thrown back with a rough resonance. Everything spoke of force, of will, of energy.

I passed through the village, and took the road to the mountain.

You accompany me, do you not?

The mid-day chimes, with their loud burst, made the old steeple shake again. For prospect I had the Jura, rearing himself up to his full height, solemn, austere. In the barns, the threshers, in winter dress, were beating the sheaves in cadence with their flails. A triple row of straw surrounded the door of the stables, in which one could hear the loud breathing of the oxen as they pulled out the hay from the manger. The tom-tits came and went, displayed their pretty wings, picked up a grain of millet, and sat on the wooden gallery while they cracked it. Some of them, indeed, intoxicated with hemp, set about trilling the most spring-like of their songs on this thorough winter day. The trunks of pine-trees are heaped up each side the street. Not without trouble, nay not without fatal accidents, were they brought this autumn down the steep mountain-sides. Beside them we have their branches, with their metallic green; they lie along the whole village, forming a kind of lengthened arbour; the resin weeps its amber tears wherever the stroke of the axe has wounded the wood.

On Sunday the old people of the village will come and seat themselves here. Every day when school breaks up, the lads clamber about these branches. In groups of four they burst out, running with all their might, their books under their arm; the young girls having gone first, merry, too, but discreet and shy, all on a sudden, if they meet an elderly neighbour.

Make haste home, children; the soup is smoking on the table; granny is rising, a little unsteadily at

first, from her spinning-wheel; father is shouting for you! Quick, quick, into the corner by the stove, snug and warm. That's the place for squeezing tightly into when evening comes; for jostling and chattering, while our elder brother reads out loud, in a pompous voice, just like the schoolmaster's.

But see, under the porch of the town-hall, here is something, indeed, to attract our lads, and keep them staring; here are two Italian tinkers,—*magnins* we call them. Two noble-looking figures; clothes cut after a quite different fashion; scarlet sashes we should never venture upon here! Cold as it is, their necks are bare; their mouths smile out of black beards, that the young girls keep looking at from a distance; the sun that has browned their foreheads is a warmer one than ours. Our countrymen are strong, firmly built, capital men for work; but somewhat awkward at rest, and, as it were, a good deal inconvenienced by their limbs! Not so these. Whether, with a charmingly graceful gesture, they fling their jacket over their shoulder, or walk up and down with that elastic tread of theirs, humming a cavatina the while, they always move freely through the free air.

One of them, the youngest, stirs up the brazier, the other deliberately lays on the tin upon the sides of the invalided vessels. All around are coffee-pots, sauce-pans, dropsical, attenuated, grotesque, and tragic shapes, shining here and there with the silver-bright stripes the tinker has girded them with. Our schoolboys group themselves round, their hands in their pockets, their eyes riveted on the strangers; they nudge each other with their elbows every time that exquisite Italian language rolls in golden waves from their blackened lips.

Melodious intonations! There is sunlight, methinks, in your every cadence.

Just hearing you thus, amidst all this frost, beneath this inclement sky, a soft breeze seems to pass which wafts me very far.

But if, indeed, I did linger beneath thy orange-trees, Riviera of Genoa; if I did inhale thy perfumes, Sorrento; if I let my thoughts lose themselves on thy sapphire waves, oh Mediterranean,—how after that could I go and see Jacques across these ice-bound clods, and through this frozen air which congeals my breath!

I have left the charcoal-burner's heap on my right. For one moment its smoke wrapped me in its warmth. The crows, that hunger has driven from their solitudes, strut about the last houses I pass. Before me spreads out the cemetery.

The cemetery in our village does not hide itself behind high walls; does not retreat into some desolate spot where no one willingly goes. The cemetery lies all round the church; smiles at the spring, smiles at the autumn. It is a field whose

gently-swelling undulations are bright with red carnations or white roses. And as our church stands on the brow of the hill, commanding a full view of the valley and the mountains, the young girls group themselves there on Sundays, in their smart dresses, their little striped shawls crossed over their breast. They look at the landscape, and chat away, with little stifled bursts of laughter. Each day at dawn and eve the labourer crosses, pensively indeed, but without fear or gloom, the precincts where slumber the remains of those he loved. The little children, too, as they go to the gleaming, pass that way, and sometimes stop there a moment to gather some bit of a flower or to breathe the evening wind.

My glorious Jura! I behold thee! There thou art, just as I love thee best. Thy forests gird thy base with an inky band; higher up, the snow that fell yesterday has lightly powdered thy pines. A strongly-marked line, white as chalk, defines the torrent channels, scooped out in thy sides. My thought soars proudly into that cold and tranquil atmosphere. It floats in those ethereal regions; more entirely free from domestic customs and cares; more penetrated with the eternal greatness of God. Only the word *liberty* can express this sense of gladness and power.

And so I walk along. The ground stretches out before me into frozen-up meadows, withered stubble-fields, rugged up-ploughed land; the clumps of oak-trees stretch out their gnarled branches, to which a few tufts of yellow leaves still cling. Not one voice is heard throughout the whole expanse, not one ploughshare grinding against the furrow.

If you only look below, nothing can be poorer or more insignificant than the details of the landscape; but the moment that you rise above the plain—that your eyes rest on those forest promontories grandly jutting out, on their inexpressibly gentle outline, contrasted with the mighty battlements of limestone rock, and the shining summit that looks down on all, from that very moment the wild beauty of the scene lays hold upon your imagination, and that impression that I vainly endeavour to describe; having in it a something like happiness and victory blent in one, something like a sudden plunge into the eternal, the indestructible,—this it is that makes your very soul exult within you.

And now we are indeed alone. A few scattered houses left far behind shine out sometimes, gilded by the sun; in the shade, their brown tint renders them scarce distinguishable from the soil.

Amidst this death, of all that once lived and blossomed, one thing alone lives still—the streams.

We mountaineers have this special privilege of living, limpid water.

Other and richer streams spread their opaque

sheets over fields that they fertilize by merely laving; our streams, for their part, are clear and pure as crystal; you may count each pebble in their bed. My brook, the one over which I linger now, is an energetic little current. The snow may try to stifle it in its fleece; the north winds strive hard to freeze it by their violence; it is all in vain, its triumphant stream glides and babbles still, and mocks their efforts. It alone retains its voice, it alone stirs, it leaps, it bounds; here it frets and fumes against this patient shore; there it froths past those drooping boughs that have got caught by the ice. Only look at its tiny cascades, its showers of bright drops, and listen to its gay summer song!

This is what it is singing, this brook of mine. 'A few more cold nights, a few more gloomy days, and the primrose will open her stars, the branches of the willow grow golden, the alder-buds drop their down, the blackbirds whistle on my brim.' This it keeps singing to the dry reeds round whose tufts the morning fogs hang frost-bound; to the leafless branches studded with red berries, each in a crystal prison; to the bare and shivering clematis that droops around. Then it suddenly swells out beyond its proper limits, and overflowing a great piece of a field, paints it green.

As for me, I go on rising, still rising, and here I am, nearly arrived at Jacques' house.

You would hardly find one more lonely in the whole district; at the foot of the mountain, in a secluded valley. From this small property where Jacques has lived all his life long, where he is dying now, one sees to the west that summit of the Jura I was speaking of just now; to the east, the barrier of the Alps.

The few passers-by who take this way across the mountain in summer, have generally seen Jacques and his family either mowing or making hay, or binding up the sheaves. A peaceful picture, done as it were in Indian ink, all its shades mere varieties of grey; very little talking, no loud laughter, contented, dignified faces, with a certain native grace beneath their shyness and reserve.

Jacques has some property. He has a good wife. His only daughter, married to a cheese-maker,—who, when the fine weather comes, takes the flocks to the upper pastures,—has never given him anything but pleasure. Jacques loves them with all the energy of his honest nature. And yet Jacques is going away from them, tranquilly and without regret. I will not say that I admire this in him. I would not at my last moment have a heart thus detached from earthly ties.

But in order to understand Jacques, one must learn something of our village life, and of the character of our peasantry.

In our village folks die as a mere matter of course. I might almost say too much so. Death,

deprived of its awful character, loses something too of its sublime aspect. Death in our village is quite other than that hideous skeleton, scythe in hand, who, on some stormy night, knocks imperiously at the door, insists on having it opened, and carries away, wrapped in a fold of his squalid garments, now this one, now that of its terrified inhabitants. Death is rather a quiet wanderer, with slow step and gentle hand, who passes and repasses, comes and goes, sits in summer by the barn-door, in winter on the hearthstone, who talks to us of rest, and whom we rise up and follow whenever she beckons.

A man of peace, humble by nature, still more so from mature self-knowledge, it was thus that Jacques was now about to depart. His faith, which indeed had hardly ever known a conflict, grew stronger and stronger as evening closed in.

When I entered the room, he was sitting up in his bed, oppressed, silent, and calm. His wife was musing beside him. His daughter wept. As for him, a smile lit up his meek face. He had taken off his cap, and was looking at the sky through the open window.

In truth, Jacques was not so much dying conquered by disease, as going away, because he had had enough of life.

It was a striking spectacle, though a little chill. There was that sort of sadness about it beneath which one can feel that happiness is still alive.

Should I try to console them! To what purpose? The daughter alone, who was very young, not yet bent to the docility that sorrow teaches, clung to her father's arm as though she had power to retain him. Her face reminded me of a charming young head that I had once seen under another sky, on the fever-fraught plains of Greece, bent low amid the folds of the long white veil that wrapped it round.

In this case the young mouth had hardly lost the habitual smile, the lip still kept its curve. Yet suffering had set its seal there. You know it well, that seal of supreme sorrow, that impress of a last farewell, that nothing can ever quite efface. Hours of enjoyment will succeed to these hours of mourning, joy may dilate the features now shrunk beneath the touch of woe; still, hidden indeed, but permanent, the seal will be there. An icy hand has touched the brow. Let some sudden distress come, instantly the irrevocable sign re-appears; as if by some lightning-flash, life and movement were instantly arrested.

Jacques turned his eyes towards me. I am quite comfortable, he said.

"He is glad to go," added the wife, not without some slight bitterness. Jacques stretched out his hand to her; his lips trembled a little: "Thou and I are going along the same road." Then address-

ing me, "I am better pleased than if I'd got invited to some fine feast." His poor wan face was radiant. Ay, truly, there was a fine feast waiting for him; the wedding-feast of heaven. The Father of the great family had sent to call him; Jesus was wrapping him in his royal garments; a bliss, whose intensity is only revealed to the dying, lit up his humble face.

What can I tell you more? An hour or two later I reached the pines. Winter reigned everywhere else. Here, without any transition, was spring at once; nay, summer; an atmosphere invariably fresh, mild, genial.

The winter blasts may rage across the plain, the air remains still beneath these antique arches, perfumes float suspended therein, a green light streams through the dome that no frosts have power to despoil. Sometimes a sunbeam darts down athwart the shade, and kindles the spot it touches. Not a breath to lift the silvery lichens that hang from the venerable branches; the tree-moss covers the roots with its elastic cushions. Great erratic boulders, come down from the Alps when glaciers crushed the ground now covered with towns, villages, waving fields, are seated in these solitudes, dotted here and there with greenish lichens, the periwinkle twining around their base, the ivy clinging to their sharp angles, that thousands of years have not been able to round. There is no other plant to be seen; the despotic pine trees will not give them leave to grow. At the most you may perhaps see in some more open glade a holly, with its varnished, thorn-festooned leaves, and scarlet berries here and there.

The Elysian fields must have had this same attenuated daylight.

Here one may wander for hours, the soul lifted above all worldly cares, sating itself with these tints, this silence, this perfection of climate, special privilege of our forests, free alike from the severity of winter, the fierce heat of July, and the relaxing influence of the spring.

How often I have wandered in your shades, ye mountain forests; how often my steps have paced your avenues; how I have listened to the majestic murmur in your summits as the wind swept by; how I have gazed, ye mountain tops, at your immutable barriers with their inflexible outline that stimulates one's will like a defiance!

Will you ascend to the snows? By this torrent-bed? Boldly? Believe me, the struggle does one good. There is a delight in the sense of fuller life that it produces. Do you feel this first kiss already blown us from the snows? Do you feel the keen rarefied air? One more effort. Breast heaving, face burning, fire in our veins, here we are, conquerors, upon the highest ridge.

The ground seems strewn with sparks; it crackles beneath our tread, the breath floats away like wreaths of smoke.

What! can there really be a small world, with small cares, lying far below yonder?

In this region of light we have only two colours left—blue above our heads, white below our feet. Deep down below us the land stretches away, marked in places by blue spots—the woods; brown spots—the towns. Mere loose threads, thrown across the plain, seem to bind the hamlets to the larger villages. But the Alps have grown; they lift their colossal pyramids into the very sky.

It is good to be here; you could go on thus the whole day long, your wings have unfolded, you hover over abysses of atmosphere. The outlines are quite ideal, the snow severely pure; not an insect, not a bird lost in this vast expanse to mar its brightness. The pine-trees turned into gigantic candelabras, stretch out their silver branches laden with dangling ice-drops. Everything is effulgent, glistening; and in this silence, interpenetrated with radiant light, a triumphant peace sweeps one away into regions higher still.

I know certain woods in the plains, where the effect is a perfectly different one; there are times in the course of the winter when the rows of pines there, divided by long white avenues, put on a decorated appearance, which recalls the trim groves of Versailles: a far-fetched simile, you say, and yet a true one. The effect is quite stately; one might expect in a few moments to see a whole court procession of grandees coming along that broad alley, gentlemen in satin dresses, ladies in long trains.

There is nothing like this in the colossal amphitheatre profusely strewn with spangles, where we stand now. The powers of nature play here with tremendous earnestness. They laugh, indeed, but in a tone that makes one tremble.

Let us go straight down. Sheer ice, I warn you. One often goes along faster than one quite likes. Never mind, one way or another, we shall manage it.

Here is the foot of the mountain. The sun is set. Carmine flashes go wandering over the sky. The wild-rose, opening out its petals on a May morning, has a less luminous blush than these. In streaks and flecks of varying size, the clouds soon cover the immeasurable vault with a fiery coat of mail; no colour upon the earth can reflect that glow. The shell alone that blends the iris of the mother-of-pearl with the warm tint of the coral, hides the same flame-tint beneath the bed of ocean.

Perhaps at this very hour the soul of Jacques is traversing the ether. Perhaps it is hovering in that flood of light. Perhaps it is delighting itself in the presence of the Lord.

AT SEA IN WINTER.

WINTER-TIME off the Cape of Storms, the Cape of Good Hope, *Vasco de Gama's* perilous promontory; the place of old Vanderdecken's doleful fate! Astern, along the ship's white track, the little black stormy-petrels are running with her; the great snowy albatross floats into the wind at times, and spreading his vast pinions on a wave-top, silently sails by: no other living thing in sight, save where at long intervals, far away, the back of a dark billow breaks as if the gale were coming, and lifts in a sharp jet like steam—where a whale spouts, heaves up his hump, still lurches on, then spouts and spouts again, and “fluking” his broad tail, dives deep from the troubled waters. A sign, indeed, are those successive blowings of theirs, if sign were needed, that true Cape weather is at hand. Even if the thick grey haze to westward had not shut that South-Sea whaler out of sight since morning, with her three “stump”-to-gallant-masts tossing over close-reefed topsails, little heed could she have paid now, to the best whale, right-fish or sperm, that ever blew. No gale as yet: but, an under-swell from westward begins to cross the long south-easterly sea; the early sunset gloomily flaring down the haze that thickens the horizon; high in the bare south-east, over the cold greenish clearness of its sky, a thin scud flying like the breath of tempests. And what sullen, slow, majestically-swelling waves! Their colour a sombre indigo, foam-freckled where they mount to the eye, blackening in each wide hollow—the liquid masses come on unbroken by a touch of spray, except that single crest which the ship's bow makes, as she cautiously rolls up and plunges forward. While the West flames out astern, they wash its lurid light away; they heave and overwhelm its omens from before the starry space that widens with them. Beauty they had then, of their own, compared to which the sunset was pale as it sank,—blue wrinkled glitterings from mile to mile, eddying back to the east; shifting tints as on the necks of doves, and rich wet crimson streaked with gold, that flashed over in fire against the cloudy sun. Our good ship sitting them still in succession, like a burden they knew and turned with; each giving her one mighty side-heave to the rear of battle, each wildly leaving her, as it bounded riderless onward.

We all in the brave old “Westminster,” that evening, knew full well our doubling of the Cape would be no trifle at the best. The fact began already to be proved, ere the first of the two short “dog-watches” was past: and the twilight of the second dog-watch bade fair to verify it; as one after another of the lighter sails was taken in, those favourite “flying-kites” of our smart chief-mate, which vexed his heart to resign at last. The expected cry came soon,—“All hands reef topsails!” and before the reefs were fast, we felt it coming in right earnest. Sleet, mist, scud, and spray together, it drove over us, mingling sea and sky: sharp work it was, to creep down the lee yard-arms and “light-up the sail to windward;” sharper still to pass the weather-earings, with a thundering gale upon the starboard

beam, that sent her heeling over into the foam; and hardest of all, to have an eye to see and wonder at it the while, lifted above terror, and swift thoughts of home, and awful fancies of the calm below the sea—when the pale heads of the waves rose up, ridge after ridge, scattering toward us before the blast. But passengers below may have time for fear, with the steward who helps to grind up the steering-wheel, or the cook and little cabin-boy that help the mates and carpenter at the halliard-ropes—whereas the youngest apprentices hang absorbed in seaman's work, and grin to it, side by side with old Harry the sailmaker to leeward, or even rashly creeping next to wild Anderson, that chief of briny barbarians, whose grim face turns from the very eye of the gale to roar impatience, whose bare feet push the foot-rope out from him as he leans to thread the earing-cord through its ring—who yells so fiercely to know “if they aren't ready there yet,” and turns a deaf ear to the bellowing Mate himself; and who, if you proved unfit one moment for your ambitious post beside him, would shove you with a curse away. Pulling, hauling, clutching, shouting, like thirty savages, we did it, though; as in many a squall, and gales not a few, it had been done before. Then down on deck, by back-stay or running-rope, whatever way was nearest, each gang went hurrying to hoist up their topsail-yard again; and singing out into the wind, raised it heartily, hauled taut the braces to keep her to her course, coiled up the ropes; then, at the call to “splice the main-brace,” walked joyously aft to the staggering steward's place, where he served the reef-topsail grog to all. The very youngest apprentice drank it stoutly, and never winced—oily, fiery, leather-twanging corn-brandy though it was: all except grim Anderson, who took, but quietly poured out, his glass; for he had vowed to some power unknown, throughout that voyage, not to taste a drop at sea.

Heavy weather, doubtless; but the stars still pierced the clouds at intervals, the gale was but a gale. The ship, by dint of our chief-mate's skilful trimming at the yards, still held the captain's resolute course; right under the southern cross, south-east by south, almost as due for the pole itself as the helm would bear. Rough Anderson relieved the wheel when the other watch went down, steering as few but he could steer, with the weather-leech of the fore-topsail just tremulous when that strange constellation glittered beyond its edge, ever as the vapoury scud flew over. From down below, in the forepeak, you could hear them set the topgallant-sails over the reefed topsails again, to press her faster to the point in view; for the chief mate walked the watch out with the captain, and they two were at one, whoever more might join them, on the matter of the “Westminster's” stormy course.

It might have been anywhere in the dreariest world of fancy, that dark old “forepeak”—deep below some tower that rocked to its foundations, or cavern in the bowels of the earth—into which the larboard watch came down, alone, to spend the

little that was left of the social dog-watch, and snatch a cold supper ere they faced the first four hours of that night on deck: the last man on the ladder dragging to the scuttle of the hatch overhead, to shut out the spray, the sleet, and the sound of the gale. All nine of them, they shook the drops from their shirts, like water-dogs; swelling the current of a small rivulet that trickled from the darkness, forward above one of the ship's breast-hooks, and plashed up at times when she rolled. The boy of the watch, the youngest apprentice, as usual, swabbed it up into a bucket; he then hurried to find the beef-kid and bread-barge, with what was left of the tea in the hanging hook-pots; and afterwards trimmed up the wick of the dimslush-lamp that swung between the two pillars of the bowsprit-bitts, there rooted from the fore-deck above. A sickly glimmer was shed on the rough visages clustering towards it from beneath the hammocks, and especially on the sour, cross-grained look of old Jakes, with his knobby, wrinkled face, and his one horny, fishy eye, ever looking on the black side of things—a more unmitigated tyrant by far than Anderson, and all but intolerable in the latter's absence, save for Sailmaker Harry, whom no one could fail to respect. The shake of Old Jakes's head spoke volumes, with that spectral eye of his, and an ear which made up for deafness by seeming to hear more than others heard. He drew up his feet on his rickety old sea-chest from the damp, and deigned no word further, except the muttered epithet of abuse to the lad who raised the biscuit-box to his lordly-extended hand. In calling Jakes *old*, it is only meant that his thin locks were grizzled, his cheek furrowed, his frame bent and broken, by the habits and hardships of the sea; the date of his birth was among the many tattooings of his shrivelled arm, and he was not near sixty yet, but he looked a hoary, patriarchal, failing mariner, like to break down some day on a sudden and miss his watch, perhaps that very voyage. A cheery young Boston man looked up at him and said, holding up the cold tea as if to quaff good liquor to his health, "Here's luck, 'mates all! No more frittering and fretting at fine-weather work, I guess, for a long spell? Watch-and-watch, turn-in and turn-out, always a warm hammock ready—no more knocking the rust off the anchors and chains, eh?"

"Ay, the captain before the mate, any day," says the best and smartest scaman of the watch. "The skipper, he's bent on showing us the ice-blink, I hear, ere ever he tacks ship to double the old Cape. 'Tan't the first time some of us has weathered it, but never by a long chalk, I bet ye, so far suth'ard as that comes to!"

"It's a new kick—it's what they call science, it seems," chimed two or three together, doubtfully. "He's one o' your navigators, is Captain Park. What d'ye think of it yourself, old ship?"

Both Old Jakes and Sailmaker Harry, thus by turns referred to, summoned wisdom to reply. The sailmaker was old too, as seamen are old; that is to say, a battered veteran air had already passed upon him, when he was scarce turned of fifty, stiffening a frame cast in the finest mould, giving it a somewhat portly shape, and wearing off the hair from a forehead that seemed as if it might

have joined council, in happier circumstances, with geometers and sages themselves: he was a foreigner by birth, a Hanoverian, so that his slow and occasionally broken speech offered room at times for Old Jakes's sidelong leers or sneers. It was Old Harry, though, whom the men chiefly looked to; it was his soothing view of matters that had grown on them of late. This, too, under grievances, causes of discontent, excitements, and even temptations, beyond our space to tell; which yet were no melodramatic figment, even in well-found British ships on the high seas not many years ago, owned by well-known firms, with new-school captains in command, rich freights on board, and passengers and new-fledged aspirants of the sea who never told the tale. Old Jakes, as he sat mumbling, almost toothless, at the "old-horse" beef and the flinty though maggoty biscuit, sipping the little tea he had on *short allowance* of water, with the scurvy once more troubling his old gums and his lean shanks, as at his first outset in the profession—Old Jakes spoke out again, and called the roll-call over, of undeniable injustice which three months and a half had gathered; mingling viciously, with all, the facts of a leaky ship, a wet fore-castle berth, a short-handed crew, a watch that was half made up of lads and boys. Yet, by the way, he never seemed to care a whit for what a *boy* might feel, humbly waiting upon one like him, Old Jakes—who scoffed at mothers, coupling hideous epithets with the very thought—ignorant to the lowest depth, even of the commonest elements of knowledge. But quite as heartily as could be wished, with the energy of a far younger man, did Old Jakes inveigh against perilling life and property on a new-fangled crotchet of head-knowledge men at home, poring over charts through spectacles, calculating beforehand with ciphers and paper. He was all for experience and long-tried practice; scarce in so many words, but meaningly, hinting that seamen had their rights, their side of bargains—therefore, when bargains were broken, it was no time to be plunging six hundred miles farther south than ordinary, in doubling the Cape of Storms.

When Sailmaker Harry answered, it was mildly and in his half-broken, German way, but at the same time steadier than ever. There was something of a mellowed fruit of action and hardship about his weather-worn quietness; he had knocked about the world, in reality, more than old Jakes himself—with all that tarry mariner's innuendoes about the life seen near the collieries, which he had gone through, or his grinning references to long-past smuggling deeds, and to worse, in convict-ships, on rafts at sea, among wreckers, in vessels on fire, in craft that went ashore and perished. The sailmaker had been a man-o'-war's-man—one vast source of superiority; what was more, he had once sailed long before in the same ship with Anderson, chief of our crew, over whose inscrutable temper he somehow possessed a singular influence. He himself, this same voyage with us in the "Westminster," had begun of late to exhibit a marked growth of the gravity that characterized him; he had been quietly reading, no doubt with difficulty, a book

or two from the chest of a young apprentice, and from the friendly offer of a passenger. Old Harry was one of those men who have antique quadrants among their clothes, treasured up and carefully carried with them, the token of former purposes—which some accident causes them once more to try and use, in a manner that in this case had been almost pathetic—for he had put his old quadrant away again, one quiet Sunday in the tropics, with the air of giving up the attempt for ever. None on board but he could have ventured in that forepeak to deplore, with a heavy sigh and a moistening of the eyelids, as he did that moment, neglected opportunities of learning, which might have enabled him now to speak from knowledge of his own. But Sailmaker Harry had that deep respect for education which sometimes shines into rude hearts, like starry reflections into the darkest pools: the name of science evidently brought to his lips again the name of "his old fader, clock-and-instrument-maker in Hanover"—the name engraved upon that quadrant, made by one who had never even seen the sea, yet who had constructed first-rate chronometers, sextants, telescopes, theodolites, and compass-boxes, for many a good ship; and who had fondly thought his son was to profit afterwards by the theories of knowledge he revered himself, studied, wished to have applied by future Columbases and Captain Cooks.

So when Old Harry mastered a certain hoarseness in his voice, he counselled loyal trust in Captain Park of the "Westminster," whose seamanlike handling of the ship, at least, had been so far proved in no small trial: he showed his own shrewd notion of the grounds for thinking, however bold the course to southward, yet that it was surer and shorter as concerned their passage on the whole. And the rest inclined to believe with him; except that ill-omened old Jakes, cautiously putting on his shiny oilskin and his helmet-like sou'-wester, and nodding his head, in bitter silence.

"Are ye done," he croaked at last, "ye hopefuls? Better look alive, though, with yer rough-weather togs—d'y'e hear the wind a-choppin' round to nor'ard—another reef it'll be ere the watch are out! Ay, *close-reef* ere the starbowlines sleep out—mark my words! A long spell we'll have of it, if some on us ever comes through."

"More by token," agreed the leading topman of the watch, "there was a star i' the old moon's weather-horn this morning; nor I didn't much like the coppery clouds this dog-watch gone. If she'd lie to her course, it mightn't matter."

"What's the odds, so long as ye're snug laid-to!" spoke in the light-hearted Boston man, tightening his belt. "At the worst, I expect it's nothing to Cape Horn and the icebergs!"

"Tell ye what," hissed Jakes, "you and your Cape-Horning—there's more bergs afloat off here-away, this season, than ever Cape Horn saw—and that the sailmaker can tell ye."

And old Harry could not but agree; yet he drew an argument thence, that the Captain had in view to give them a wide berth, as well as to clear the great Lagullas current, and the most distant glimpse of Table Mountain. Strange was it, never-

theless, to hear how the elder seaman took a pleasure in rousing doleful thoughts, showering open scorn on all, save the sailmaker, whom he cared not to face—and most of all on those that sided with himself, as if it mattered little how soon or how ill things ended for him, even as if he wearied to be done. Strange also, how their dreary place of shelter seemed responding to his look, as he glanced disgusted round; the lamp swinging and showing the dark curye of the ship's bows to her black keelson, the ribbed sides, the cross-beams overhead, the dripping steps of the ladder from the trap-door, the gloom backward through the half-bulkhead, heaped with water-casks and cargo-lumber, along to the chaos above the hold. It made the shadows shift and swing in turn, as it vibrated, like the very pendulum, of all the creaking timbers, of the working masts, of the rolling ship and growing gale.

"It's a palace, an't it?" muttered Old Jakes; "it's a sweet life to leave. The starboard watch won't need the light this hour, yet—dowse it—out with it! Keep the nice house careful again' fire, good wench, whiles we're out o' doors—out with it, I say!" With an oath he snatched and snuffed it out between his horny fingers, as none obeyed him; cackling an ugly laugh in the dark at any gruff objection, as was the way with Jakes: and almost the next moment, as if in answer to his words, the scuttle was thrust aside from deck, letting in the roar of the wind with the summoning shout beneath it—

"Reef topsails! Bear a hand there—another reef!"

"Ho! ho! I feel't as much—them plaguy aches and rheumatiz sarves me *that* far, anyhow," cried the old man, first to spring on deck. "It's always another glass o' grog to heat one's miserable ould vitals!—Ay, ay, sir," in return to the boatswain's stentorian orders, "all-clear it is—ready, here, forward. Clap on, my hearties—O-ho yeo, ye-o-oh!" Like a noble British tar, singing out in a cracked yell, which even the gale could not drown, he leapt and dragged at the reef-tackle above the heads of his comrades as they pulled: he was foremost to follow the leading topman aloft, to hang at the lee-yard-arm over the seething abyss till the earing was passed to windward; you would have thought the growth of the coming storm excited a defiant spirit in Old Jakes, with which for the time he matched his stoutest fellows.

Away aloft! Up the leaning rope-ladders, up into the blast and the wrestling fury of swollen sail and palpable night, again to strive with them, to master them, to help the faithful ship in her gallant fight; while two mates held her convulsive wheel, in order that Anderson the whaler's dauntless foot and sinewy strength might not be wanting at her maintop-sail-easing. Thrilling to behold, from above, how the mile-wide billows of three meeting oceans broke and heaved athwart her, now hissing and torn by the shifting south-easter; in valley and hill alike stupendous, struggling to rise higher, but shorn, discredited, pressed by the upper force upon its way, whose clouds came on like Alps beyond, with seeming snowy-avalanche or pale-green iceberg glimmering on their breasts. Grand to

see, too, how, as soon as she was lightened of superfluous sail, she mounted and swam cleaving on ; surging, indeed, to her weather-headrail, where an anchor leant black amid the glare of spray ; burying her martingale before her in foam, while the hawse-holes spouted inward and gurgled back, the lee-scupper-holes gushed, and at times a green sea curled from the black-blue element to her very waist, as if to wash all bare from her deck, every timber of her fabric straining and complaining. But still, with yards braced to suit the change, she lay her course ; she buffeted it nobly, and yet beat onward. And grandest of all to see, how the silent Captain stood and watched, smiling a little

as he saw it ; and resolutely persevered in pressing her, hour by hour, yet farther on his purposed track : how his smart young chief-mate sobered down and steadied, to back him out ; how each other mate, and all the men besides, were blent together under them for the same ; and how the starboard watch were sent below, to sleep their time out, in that faith.

Close-reefed at midnight, when the other watch was called at its due time, she weathered it none the less as it grew. They alone, who were left, set storm-staysails and furled the foretopsail without need of help ; the sleepers slept sound in the sleep of toil, some dreaming deep, dreaming

"The immense weight of water fell on board, knocking the launch out of the chocks," etc.

long, of quiet scenes at home, as a moment's dream will serve to do. There was little required when they were called again ; and as they stood at their places, sheltering, holding, dozing, wrapped in their rough coats, the wild dawn broke on them, the morning found them there. It was *something* to see the day once more. It was even something to have the decks washed for them without trouble—something to have no work invented for them by zealous under-mates—no small orders, no petty spites and tyrannies—to look forward to a forenoon's sleep below, warm hammocks swinging for them, after the four-hours' troubled rest. Fine weather allows no luxuries like these to sailors. To young

hearts there, among them, stormy latitudes are welcome.

"Blow, blow, thou winter wind,
Thou art not so unkind
As man's rough hardihood."

Days and days of storm, though, try the most patient spirit. When, with a "feeding" gale, at last the Tempest is acknowledged by all, even by the oldest and most inured to such—when at length the very captain yields so far, as at least to attempt making way no longer, *laying-to* his ship beside the blast, to keep it company—and weeks of storm may pass before she even hopes to turn its raging corner, much less to change her tack, and begin to

double the unseen phantom-cape—then, in truth, the pitch of sufferance seems to come. This was our case in the brave old "Westminster," for days so long as to seem Polar, as to seem endless—lifetimes of buffeting, ages of tossing, dipping, drifting sea-winter.

She was still lying-to on the larboard tack, under storm-staysails alone, making what seemed by comparison easy weather of it, when the signs of the next approaching night threatened worse than ever. Heavy black clouds had risen to northward, driven along to meet the south-east scud; at length with lightning and tremendous thunder-peals, followed by hail and sleet. Near midnight the huge cloud-bank lifted, all along from north to west, showing a sharp, fierce streak as clear as day; again a flash and peal, succeeded by a sudden and awful change of wind from north-north-west.

The hurricane struck her, laid-to as she was, in a trim to feel it partly; it held her down, the sea swelling over the decks, some of the upper portion of the cargo seeming to shift at the terrible moment. With the first violence of it, too, her mizen-staysail split, blowing out of the bolt-ropes like a puff of steam from an engine's blow-pipe, so that she fell off, and brought the sea abeam. Voices were lost, and the sound of the deck-trumpet as well: fortunately the wind had not blown long enough that way to make dangerous rollers, but rather levelled the crests of the waves; and, at the crisis, Anderson the whaler, like one who needed no mate's or captain's hint, if hint were audible, led the way up the steep weltering deck for the few near him, with help in his brawny arms—up into the mizen rigging, where his wild hair blew as he spread a broad tarpaulin, and clutched it fast, staggering together to the mounting surge that bore the good ship free, till they had lashed it safe. She righted: the two other staysails thrashed and tore, but steadied at last, and were hauled down; more of the tarpaulins being lashed in their place, till she lay lifting and drifting again on the billows' tops.

And yet, by daybreak, so fierce the tempest, she could face it thus no longer with safety. It was absolute necessity to our lives to put her again before the wind, and scud it out, right course or not. Every seaman knows the danger, however, of the steps required to get her so once more, in such weather as we had. It needed the best skill and caution of the very primest and coolest seamen aboard, headed by the boldest, to slacken the tack of the big fore-course down, cutting away the lashed tarpaulins, while the frightened ship was gradually trimmed to fall off from the gale, and fly before it. But Anderson was chief, as I have said, of briny, peril-trained, unflinching barbarians of the sea: it was strange to mark how he even calmed and rose solemn in the elemental terror—a man that might have led forlorn hopes to siege and charge, at Badajoz or Balaclava. For a moment the strong vessel shook and faltered, though not he; his yell was heard like a command, where the captain stood mutely signing; and she began to fall off.

It was then, when she was falling about four points off the wind, that a frightful sea came rolling on. She could not clear it. "Hold on—for your lives! hold on, men!" shouted Captain Park, suiting his example to the call.

The immense weight of water fell on board, knocking the launch out of the chocks, sweeping away spars, water-casks, and the starboard bulwark from gangway to fore-rigging. Ere she dipped, Anderson had stood there erect, the last man about to leap from the shrouds. When she rose, his figure was gone. Next moment, in the breast of a combing mountain sea, as if it were a mile away, you saw the warm tint of his face, and his wet black hair all dripping out of its lucid, half-transparent green. It bore him up, washed him skyward, gaashed its fierce, toothed crest beyond, then sank with him, streaking its surges out, down into the shadowy trough.

"Hold hard,—clue up the sail,—hard down the helm again! *Hard down!*" was our captain's noble cry. Without a breath all saw his aim; for if she gathered way, the man was gone as we swept past him. At all hazards, Anderson was to be saved, if saving there might be, from the jaws of that wallowing tempest. Again laid-to, drifting slowly from against the blast, she would, on the other hand, yield fathom by fathom towards him as the wave recoiled from leeward where he floated. He struck out strong and stoutly yet, though almost blindly: there are three lesser waves, before the cresting fourth one, amidst which, as a momentary lull appeared to pass upon the gale, he might yet be touched by a well-hove line of rope, and catch it in the sullen lee-eddy made by our drifting bulk.

Stretching out from the mizen chains, as we caught sight of the floating head again, stood Sailmaker Harry, as a leadman stands to heave. All others had given way to Harry, sternly bent to save his old friend and shipmate, if man could do it. In the old man's face you could have seen that it was succeed or die, if need be—in his attitude, his eye, his ready but not hasty hand, the years and years of trial that had made his throw of that rope so unerring. How near—how frightfully near was Anderson swept to the gulf below us! The coming surge would wash him toward the sky; and, at the best, one dash against our solid sides must batter him to pulp! When the sailmaker couched for the throw, and sprang, and heaved the coil double about the swimming shoulders of the lost man—oh, what a dizzy, blinding, sickening gulp of every heart there seemed to come! But yet amidst it, a seethe and hiss of the wild waters bearing in as the men pulled, till, with a bleeding, drenched face, he was hanging there beneath the quarter-boat, and was caught and lifted up on board, reeling in our midst.

The work of but a giddy minute or two, all of it. We had forgot the gale that thundered upon us next moment, although it was fiercer than before. But again was the ship brought slowly round, and spreading scarce half her foresail, she bore up safely, dashed away, careened to it, and scudded—with the swelling rollers in her track.

After some anxious hours, it moderated about noon; the danger of the tempest was gone, the sea regular and following. She lay-to as before, and next day hoisted sail, close-hauled, under close-reefed topsails, to lie her former course.

WILLIAM HANSARD.

CONCERNING THE REASONABLENESS OF CERTAIN WORDS OF CHRIST.

I LOOK back this evening to a certain day, very long since past and gone, on which a little band of Jews approached our blessed Lord; and one of them, a lawyer, no doubt a man sharp of wit and ready of speech, acting as spokesman for the others, asked the Saviour a certain question. The lawyer asked the Saviour, "Which is the great commandment in the law?" He put that question; and quite right too. It was quite fair to try the new Teacher by the severest tests; and thus to discover whether his wisdom and goodness were really such as to make him a safe guide. And you could have pitched upon few questions which would be more important in themselves, or more significant tests of the new Teacher's wisdom, than the question, What is the first and most important thing that God requires of man? Nor does it necessarily follow, from the words in which the Evangelist tells the story, that the lawyer put the question in a bad spirit. Words, you know, change their meaning as time goes on. When we are told that the lawyer put the question to Jesus, *tempting him*, we are ready to conclude that he put it in a malignant spirit, hoping to entangle the Saviour in his talk, and to get the Saviour to commit himself by saying something in a hurry, which, on longer reflection, he might find it hard to justify out and out. We cannot say whether or not the lawyer had some hope of catching the new Teacher tripping; but one thing we are sure of, that it is not from the word *tempt* that we are to conclude that he had; for, when our translation of the Bible was made, the word meant no more than to test, to put to the touch, and find out what a thing is made of. And it was quite right that the lawyer, before declaring himself Christ's disciple, should make fair trial of the Redeemer's wisdom, and see if it would stand the proof.

But in any case, my reader, you and I may well be thankful that the question was put; because it drew forth an answer rich in wisdom, and of personal interest to each of us. It is a great thing for any man to know, in any circumstances, what it is he ought to do. How much precious time is wasted, and how many a wrong step is taken, for want of knowing *that*! And it is a grand thing to be told, on unimpeachable authority, of one great rule, by acting according to which we never shall go wrong; of one great spring of conduct which shall prompt to everything that is right. Now, the Saviour's answer tells us all *that*. It tells us the first and great thing we are to do. It tells us of a law, by conforming to which we shall never go

wrong. It tells us of a spring of conduct which, if we once get into our hearts, will prompt to every form and degree of right conduct. The Jews, I daresay you know, had various opinions as to what was the most important precept in the law. Some thought that the great commandment of the law was that of sacrifice. Some said it was that of circumcision. And there were people who sunk so inconceivably low, as to maintain that the chief commandment was in regard to washings and formal purifyings. How immeasurably superior to these unworthy notions was the teaching of our blessed Lord! He did not evade the lawyer's question: he met it with a full and distinct answer; an answer miles and miles away from such details as washings, or circumcisions, or even sacrifices. "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment!"

Well, my reader, there is no difficulty in discerning that to love our heavenly Father in that way, is the first and great commandment. You know that we, human beings, living as we do in this world, may reckon up an almost unlimited list of separate duties. Yet all these may be arranged in the two classes, of our duty to God, and our duty to man. And first in natural order—first in importance—first in the sense that, rightly understood, it includes the other also—stands our duty to God. And although there are many separate duties which we owe to God, we can run them all up to one source; and that source is, love to God. This commandment, then, mentioned by our Saviour, is the first and great commandment, because it includes within itself all the duty that we owe to God. The essence of the first table of the law is contained in this comprehensive precept; and, indeed, in a certain sense, the essence of the second table of the law is here too. For all duty consists in obeying, from right motives, the Divine commands; and whoever supremely loves God, will certainly seek to the utmost to obey God's will. That supreme love to God in the heart, will be a root whence all obedience, all duty, will assuredly spring. It is a happy thing that it is so. Is it not better a thousand times that, when you wish to instruct a little child in its duty to its parents, you should sum up all you have to say in the comprehensive advice, "You must love your parents and obey them,"—than that you should make out a list of a thousand separate details of duty, which, after all, would in practice be found to be very defective

indeed? And so, when Jesus would instruct us, that the first and great thing we have to do is our duty to God, he does not say to us,—God forbids you to have any other gods before him; so don't do *that*: God forbids you to worship images, so don't do *that*: God forbids you to take his name in vain, so don't do *that*: God commands you to hallow his day, so do *that*: God bids you at passover time draw out a lamb according to your family, to kill it, to eat it with bitter herbs in a certain fashion, so mind and do *that*: God commands that on certain occasions you are to bring to his temple a burnt-offering, or an offering of first-fruits, a turtle-dove, or a young pigeon; so do not on any account omit to attend to all these matters. No, my reader; not such was the commandment of our blessed Lord. *He* did not fritter down the sublime simplicity of Christian precept upon such petty details as these last. Under an inferior dispensation, in the dim twilight of the Jewish ritual, and for the guidance of an earthly and sensual race, it had been fit and well to write the countless little enactments of Leviticus; but *that* day had gone by. The time had come in which duty was to be taught from within outwards; not from without inwards. The heart was to be set right; and then all outward details would follow from *that*. Men now, instead of a host of little rules, were to have given them a great sweeping principle, that should comprehend them all. Love God, says the gospel: love him supremely; and *that* will prompt you to do all your duty to him.

So far the subject is simple enough. Now we come to what is more difficult. Not much argument is needed to prove that, if any man had his heart filled with a supreme love to God, he would do his duty towards God, and indeed towards man as well. But I can well imagine a thoughtful person saying to all this: I see it is right to love God; I see that to love God fitly would prompt to all right conduct; and I wish to love God. But how am I to do it? Love is a thing that will not come at command. I cannot love either God or man merely because I see I ought to do so, or merely because I wish to do so. How am I to get into my heart this supreme love towards God?

Well, I admit at once that this affection of love to God must be drawn forth, just as all other affections are, in accordance with the well-understood laws of human thought and feeling. And some religious writers, well-intentioned but injudicious, appear entirely to forget this. You cannot frighten men into loving God. You will never get any one to love God merely by telling him that he will be tormented in hell for ever if he do not love God. *That* is not the way. You cannot force yourself to love any being merely because you think you ought to love him, or merely because

you see that it will be very much for your advantage that you should love him. And if you could, by threats of future punishment, bring men to love God for fear of the consequences of not doing so,—oh! *that* would not be the right love; *that* would not be the love our Saviour wished to see! Is it love at all, the devotion of a crouching slave, trembling for fear of the lash? Let it be borne always in mind, that the worship and service God wants, must be prompted by love and not by terror. We hear, with wonder, of the sect of devil-worshippers in India: do you know why they worship the devil? It is not that they love him at all; not that they think he deserves worship at all; but they erect temples to him, and they worship him, because they think he is a malignant and powerful being who can do them a world of mischief if they do not thus try to pacify him. Then let us remember that it is the very essence of devil-worship, when you love and worship God just as a Being who can do you harm; and when you serve him just with a view to avert his anger. Most unworthy, most unchristian, is that way of regarding God! True, it is generally by fear that men are awakened; it is mainly by the terrors of the law that they are roused from worldliness, and heedlessness about religion; but it is by love that they are constrained to go on in the way to heaven;—rather drawn by Christ and heaven before them, than driven by hell and Satan behind. And must it then be said that, forasmuch as men cannot be frightened into loving God, though they may be frightened into pretending to love him; and forasmuch as love to God is a thing that will not come at will; therefore it is unreasonable to tell us to love God? Was it futile, was it preposterous, when Christ told us that the great commandment of the law is to love God, seeing that love to God will not be got up at command? Nay, my reader; not so. We know the way in which we may come to love God. It is our own fault if we do not love God. The commandment to love God is reasonable and just; and though we remember that we cannot do anything that is right but by the grace of God, we say, remembering *that*, that we are just as able to obey this commandment as any other, provided we set about obeying it in the right way.

And how, then, are we to set ourselves to obey the commandment, to love God with heart and soul and mind? Why, how is it that love to any human friend springs up in your breast? You love your best friend, because he is so amiable and good; because he has so many winning and engaging and loveable qualities about him. And you love him, too, because he is so kind and good to you; because he has done so much for you already, and is willing, when needful, to do so

much more. Well, have you not the selfsame reason for loving God? You are not commanded to love God without seeing or knowing why; you are to love God because he deserves so well to be loved; because he is so kind and good and amiable; and because he has been so kind and good to you,—has given you so much, and done so much for you. Every reason that you have for loving your dearest in this world, you have in a thousand-fold greater degree for loving God. Every good, pure, kind, amiable, excellent quality that you have ever noted in a human being, is but the faint reflection of that perfect excellence which dwells in Him who is infinitely good and infinitely lovely. You wish, do you, to obey the commandment to love God? Then look at God; think of God. Think how good he is; think how much he has done for you, how much he has loved and cared for you; and surely by God's grace you will be able to love him! If you have ever seen something that warmed and touched your heart in a mother's self-sacrificing love for her child, as she watched that little thing through days and nights of suffering that threatened to end its short life; think that in all that tender care you had given you the faintest and farthest shadow of that unwearying love which abides in our Heavenly Father's heart. If you have been touched by the story of human philanthropy, that sought through prisons and lazar-houses for misery and want to relieve, and wore out strength and life to relieve them; think that all that was amiable and kindly *there* was so, just in so far as it was made after the image and likeness of God. And then call to remembrance all the blessings and mercies which you have yourself received ever since you came into this world; and think that every one of these was a kindness bestowed by God on your own self, a separate reason for gratitude and love towards him! Of course we all know how sadly natural it is for us to feel very grateful for one kindness or favour; and then, if we receive not one favour but a thousand, to begin to take them all as a matter of course; and rather to get sulky if one be withheld, than to be grateful for the thousand that are granted. Let it not be so in our feeling towards God! Let us not cease to be thankful for His benefits, because they are so innumerable, and because they have been continued so constantly and so long. But if we love the kind friend who bestowed upon us one great benefit, or shielded us from one great danger, or guided us through one anxious day; let us supremely love that best Friend whose kindnesses are absolutely innumerable; who gave us absolutely everything!

Well, my reader, I know that all this is sound in argument. It is an argument for loving God that cannot be gainsaid, that we ought to love him

because he is so good and because he has been so good to us. But I confess to you, that I feel that something more than this is needed before we shall really be put in the track which will lead us to the obeying of the great commandment. We have not, hitherto, thought of God in a way that can really lead poor, sinful, blinded creatures like us to love him. God may be very good and very kind, the very kindest and best; but still, when we think of God as he is absolutely in himself, we cannot love him. We shrink away from him; we are afraid of him; his infinite perfections terrify us; and, to say the truth, we have a kindly sympathy, we have a feeling of being at home, with the imperfect goodness of a human being, that makes us really love *that* better than the pure, unapproachable, infinite goodness of God. No: do you not feel, that before we can truly love God, we must see him in the face of Jesus Christ; we must see him as Immanuel, God with us? It was said by a great philosopher, that we think of God unworthily; that if we look into our thought of him, we shall find we are really thinking of him as man; as our own best and noblest thrown upward on the concave of the sky. But this is not an unworthy thought of God. It is, in truth, from a sublimed humanity that we get our only realized idea of God; the only thought of God that we can really love. We see "the glory of God in the face of Jesus Christ." He is "the image of the invisible God." Do you wish to think of God? Then think of Christ. He is God. Do you shrink in fear from that almighty, eternal, unapproachable God whom you are commanded to love? Then look to Christ. Surely you do not shrink away from Jesus of Nazareth: surely you could have loved *him* in his days in this world: surely you can love him yet! Is it not easy to love God, when you remember that Jesus Christ, that kind, patient, considerate Redeemer, who went about doing good, and who died for you and me, is God? What hearts should we have if we did not love him! How infinitely did he surpass all human excellence; all that ever you loved in a human being: How much he did, how infinitely he suffered, for you! You would not have been afraid to see that gracious face looking upon you: you would not have been afraid to touch the hem of his garment: you would have gone to him confidently, as a little child to a kind mother: you would have feared no repulse, no impatience, as you told out to him the story of all your sins, and wants, and cares! You can picture to yourself, even yet, the kindly, sorrowful features, which little children loved; and which drew those unsophisticated beings to cluster round him without a fear. You can imagine, even yet, the accents of that touching voice, which spake as never man spake, not merely for wisdom, but for kindness

and sympathy. Tell me, my reader, is the law a hard one, that bids us love such a Being!

And when you love Christ, you are loving God. Christ is God's visible image: a fair and faithful representation to our poor understanding of what the Almighty is. "He that hath seen me," said Jesus, "hath seen the Father." Just such as Christ was, God is. Now, we need to be reminded of this, for we are very ready to forget it. A great many people think of God as quite different from what Christ was. A great many people have in their minds a strong, though unexpressed impression, that God is a harsh, severe being, who wished and intended to condemn us all to eternal misery, and was with difficulty prevented from doing so by the entreaties and the sufferings of Christ. Oh, what a miserable, gloomy delusion! God was not, as some would seem to think, reluctantly driven to permit the salvation of Christ's people, because he could not well avoid doing so, when the kinder Saviour was willing to die for us. No, He went heartily into the work of man's salvation: yea, it originated in his love to man; for "God so loved the world, that he gave his only begotten Son, that whosoever believeth in him might not perish, but have everlasting life." It is not true to say that God pities us, and loves us, and wishes our eternal happiness, because Christ died for us: it was because he pitied us, and loved us, and wished our eternal happiness, that he gave his Son to die for us; and in all the Saviour's burning desire that men should believe and live, you see the manifestation of the desire of the whole Godhead that men should believe and live. Father, Son, and Holy Spirit, all work together with equal heartiness to save us. There is no one Person in the Trinity who loves us less than another,—who is less anxious for our happiness and holiness than another. God, the entire Godhead, loves us. And all that wins our love and gratitude as we look to Jesus, and as we think of him, exists, with equal power to win our love and gratitude, in the nature and character of the entire Godhead.

When I had written as far as this, and finished what I wished to say, I did what I generally do when I have finished an essay which is to be printed: I gathered up the leaves, and went and sat by the fire, and read them over. And I thought, when I had read them: Now, is it not a curious thing, that it is so much easier to write what will

interest people, on any subject rather than a religious one? Somehow, people have a vague sense of unreality about spiritual things. They think, that is all very well: it is all true and right enough in a theological sense; but it is all quite away from the reality of daily life, and not at all so solid and so pressing. Now, my friend, it is the condition of our being in this world, that it should be so: it is God's manifest purpose that we should "walk by faith and not by sight;" and that faith should not always, or to all people, bring things home as sight and sense can do. And then, in the nature of things, work can never be so pleasant as play: instruction can never be so interesting as amusement. And thoughts about religious truths and duties must always belong rather to the class of instructive things than to that of amusing things. They go against the grain of our fallen nature. And just because of these facts, I daresay you know people who write and talk interestingly on secular subjects, but whose sermons are very dull. Yet their sermons are just their talk or their writing on religious subjects. You have the same turn of thought, and the same kind of style, which interested you elsewhere; yet you yawn over the pages, or you think of something else while the words are spoken in your hearing. Let us face the fact, that because our nature is not what it ought to be, and what it once was, it is harder to make religious thoughts interesting and real-like than common thoughts. They can never be made like some light discussion of worldly matters, or like a pleasant tale. We need not try to make a sharp distinction between secular and sacred thoughts and writings, as some good people do: it is the sacred spirit that makes all work sacred, and writing like the rest. And I believe that the Spirit of God, to do good to man's heart, may avail himself of an essay in a magazine of which no part is intended to be read on Sunday, just as much as of any other. Yet, as we turn over the pages of this magazine you hold in your hand, let us remember that it aims at something beyond the mere pleasant occupation of a vacant hour; that it is the wish and the prayer of those who write in it, that it may serve, in some degree, to make its readers more earnest, more cheerful, more Christian; and that, for this end, they hopefully look for the blessed influences of the Holy Spirit, to give their words an interest and a force far beyond their own.

A. K. H. E.

OLAF THE SINNER AND OLAF THE SAINT.

Nor alone by prodigal largesses to Rome did the first Christian kings of Norway, Sweden, and Denmark, strive to atone for their excesses. The old king Harald Hildetand, entering the lists of Bravalla, blind and infirm, to perish on his battle-car; the last stave of the famous death-song of Ragnar Lodbrok, in Ella's den of serpents,—

"The hours of life have glided by;
I fall! but laughing will I die,"

had left them other examples.

King Olaf, of the line of Harald Haarfager, had the widest reverses, the stormiest career of all the Norse warriors. King Olaf had known slavery in Esthonia, as well as the sea-king's rule on the deck of his ship, and not a rover in the north bore so high a renown. London itself had bought him off by a heavy tribute; but a monk in the Scilly Isles, who converted the heathen, did more to save Britain from his future incursions than all the gold and gear, beeves and grain, on the banks of the Thames. Elected king of Norway in the room of Hakon Jarl, the old pirate and new Christian Olaf conducted a straightforward crusade against heathenness, honoured and rewarded all who espoused his opinions, and burnt Pagan temples, mutilated their idols, and carved on human flesh the spread eagle of Scandinavian cruelty. Alas for King Olaf! he forgot that even before the veiled statue of Hertha, carried through the northern land, all clash of arms was hushed. Balder, great Balder, received the darts hurled at his invincible body in the tilt-yard of the gods, but returned no thunder-bolt from his invincible arm; not even when his blind brother, Hoder, pierced him with the fatal mistletoe, the only substance in the entire universe which was not bound to spare lovely Balder. It was but the Trolls, with their knotted clubs and uprooted trees, who dashed their foes to hideous destruction. The crushed, outraged pagans, rose in open resistance; and, in the Island of Mære, the two contending religions, craving a mutual hearing, came to hand-to-hand blows. In that queer theological debate, Olaf himself, in a fit of impatient fury, struck with his mallet the statue of Thor, and led the van in the *mêlée* in which Jarnskegg, Thor's priest, was slain.

In compensation for his rashness, Olaf, with what appeared to him right princely liberality, offered his contentious subjects the choice of baptism or a pitched battle. The writhing rebels dissembled, and received ruefully the Christian rite. Then Olaf evinced further his lately acquired lessons of Christian forgiveness and restoration, by proposing to wed Gudruna, the

daughter of Jarnskegg, to furnish the maiden with a doughty husband for a stern father. Gudruna too dissembled, and at the dead of night a hue and cry rose in the palace of King Olaf, when his last bride attempted to murder her husband on the very night of their bridal. Gudruna was no Christian. She secreted a dagger, and struck home with good will, but a woman's trembling hand could do little against the mighty man. Olaf "could climb the steepest rocks, walk along an oar when the ship was impelled by the rowers, use both hands with equal dexterity, and amuse himself with twirling three sharp swords in the air at once, catching each in turn by the hilt." Olaf stood on the prow of "the Long Serpent" when his fleet was betrayed at Stralsund, his deck slippery with blood, and Erik Jarl, and Svend of Denmark, hard at his back, and leapt into the churned waves of the Baltic, mad with the old Berserker instinct of death before defeat.

Women were not over-kind to King Olaf, and Olaf was not over-complacent to more women than one. He once condescended to woo Sigrid the Proud, but when she demurred at being baptized at his bidding, he flew into a rage, told her roundly that "he would never consent to live with an old heathen," and struck her sharply with his glove. Sigrid spitefully nursed the taunt and blow, and vowed vindictively that it should cost him his throne and life, if craft and long malice and inordinate revenge dwelt in woman. Sigrid married in time Svend of Denmark (doubtless inflicting on him his troubles in the passing), and blunt, warm-hearted Olaf sank at last like a stone in the deep, cold waters.

Another woman left a grievous stain on Olaf's faith. A fugitive Vend princess was aweary of her husband, and with her restless, faithless heart, aflame for adventure, landed in Norway. She subdued and corrupted stout Olaf's heart into marrying her, and her wandering reputation, in violation of the Divine law, which gives to a man one wife—to a woman one husband. But you do not know King Olaf, if you suppose him a man to sin without repentance. His was a noble nature, rough, vehement, erring extravagantly if you will, but earnest as the wind and clear as the sun.

It was the season of spring, when the sudden breaking up of the ice caused compulsory idleness, not merely in field-work, but in all open-air journeys and sports. King Olaf and his whole court were compelled to pause for that fortnight or three weeks, which changed the country from the blank whiteness of winter to the vivid green of spring.

Foaming torrents were tearing through all the passes, the ice-bridges were cracking and rending, great rocks and their *débris*, loosened by the thaw, were falling with the noise of thunder across the mountain track, famished wolves were prowling in the wake of the beset traveller. The cottage-hearth of serf and charcoal-burner, the palace-hall of prince and noble, were the only safe abiding places. Better the rude carving in wood, and the more inane twirling of the sharp swords in the smoky tameness within, than the risk to limb and life in the bright tumult without.

Olaf, with his frank, hearty nature, must have welcomed the approach of summer. In another week the floating hair of the birch woods would be powdered green; the rye and the oats would be sprouted a full foot; the wild cherry would be white with the snow of summer before the snow of winter had ceased to swell the brook; the blue gentian bluer than the sky or the waters of the fiords, would put to shame the steel-blue of the ice; while the delicate bells of the saxifrage would nod in silent mimicry of the sledge-bells, in every breeze. The fishers would be out on the lakes, moored in such fleets as even King Olaf had not seen in his roving days. Horses, cattle, and reindeer, long fed on bark and leaves, would be set loose to career in the meadows. Great flocks of birds—lark and thrush, redbreast and chaffinch—would arrive every day; the white stork would begin to build its nest on the roof of the house, and the ger-falcon and the eagle their eyries on the brow of the dizzy cliff. Even the swarms of gnats and mosquitoes, which were born to be bedded in the sweated resin, destined to form the amber veins in the sands of the *haafs*, would be enduring. They would announce the *seaters*, the merry march of men and maidens, flocks and herds, to the free mountain life. I warrant King Olaf loved the lures which called the cows on the uplands as well as the blasts of the horns in the *skals* or great hunting-expeditions, when bear, glutton, and elk were driven to the centre of the woods. In that arena bow and spear brought down the prey thick and fast, like autumn leaves, in slaughtered piles, panting, bleeding, grisly, ghastly, but, in spite of all, invested with a savage beauty.

It was a time of promise and hope, but King Olaf sat dark and moody, and vouchsafed no word to his silent courtiers. King Olaf thought of his life's struggles and his life's wrongs, and in the dreary reckoning few and scant seemed the intervening successes, which at their dawning he had clutched greedily. He thought of the faith which had won him wonderfully, and which he had striven with all his rude strength to propagate. He had not been able to keep it in his single person; he had failed in a thousand of its require-

ments. Well for Olaf that the Son of Mary had lived and died, but he could not at this moment lay hold of that refuge. The homily of yon monk, standing preaching on the rush-strewn floor, in his rope-girdled frock and his sandalled feet, to the king and his court, in furred doublets and the gleam of barbaric gold, had smitten Olaf with remorse, and stung him with shame. He knew the people called him an overthrower of land-marks, an aggressor against ancient usages, a tyrant over men's consciences, nay, a liar and a hypocrite, for he had not maintained in his own life the rules he had instituted for his neighbours. Olaf had, as he was aware, small place in his people's hearts. He was brave, skilled, stately, the patron of the *skalds* (though they twanged their harp-strings against his innovations), the boat-builder, the encourager of commerce, in vain. He founded the royal city of Trondheim as a granary for the surrounding country in seasons of scarcity; but his successor and namesake reared its magnificent cathedral, and slept there for ages, glorified by a martyr's pale halo and a saint's burning crown. Olaf shared the lot of the reformer, and had a harder doom. He was looked upon as a profaner of temples, a destroyer of relics, an oppressor, a very traitor. The craftsmen who made their gain by such shrines as that of the great goddess Diana of Ephesus, the superstitious, the vile, were in league and uproar against him, with difficulty stilled by his warlike character, his sovereign sway, his few devoted servants. Olaf had seen the meaning glance, the covert sneer, the bitter reproach in the very circle round his chair, as the monk sped his winged words of "righteousness, temperance, and judgment to come," the same sounding words that caused the Roman to tremble where he sat as a god in the distant Asiatic province.

Yes, Olaf had provoked the enmity of his subjects by much more than individual shortcoming; but it did not seem to him that he could have escaped the unnatural contention. He had the fate of Hakon the Good before his eyes. That poor faltering king had begun so bravely, till he was taken by the beard, and then he was fain to consecrate the Yule feast, and make the sign of the cross over the drinking-horn of Odin, and his shifts and grants served him so ill that he died the horrible death of an apostate. He cried out in his despair, when they offered him the wretched boon of a Christian burial, "As a heathen have I lived, as a heathen, and not as a Christian, must I be buried."

King Olaf plucked his yellow locks indignantly, and then with his unsheathed dagger began to hack and hew the billet-wood by his side. Oh for a chance to prove his truth, an hour to show to the

slanderers and malcontents, and the whole jealous nation, how dear to him the soaring Christian faith, so far beyond his reach! how light in comparison his own miserable bodily pain and loss! The big heart within King Olaf was sore, and suffocated in its constraint.

A thin, quavering voice broke the brooding silence waiting on the great king's reverie: "It is Monday, Sire, to-morrow," said an old jarl, with austere significance, and he pointed in solemn mockery to

the frayed and jagged splinters about the King's broad hand. Had not King Olaf demanded one day in seven for his God, and punished with violence him who by so much as putting foot in stirrup, or piping on his dog-call, dared to disturb Olaf's God's rest.

Olaf started; a light flashed into his hazel eyes—those red-brown eyes, which glared at times like the eyes of a wild beast at bay. He clapped his right hand on the board with a ringing vibration.

"Bring me here a brand from the embers," he shouted, with an accent that sounded like the neigh of a horse, when he flings off bit and bridle—like the ho! ho! of the wind when it bursts in the casement. On his bare, brown hand he flung the glowing fire, and the splinters of the wood, and there, in defiance of the murmurs and outcries, the prayers and womanish tears of that wilful company, he let it scorch the skin, and simmer the

blood, and bite to the bone. He never drew back the quivering hand, or opened the set teeth, or relaxed the knit brows, till no more than a little grey dust—penitential ashes—spread over and hid with a sorrowful covering the charred flesh and the gnawed bone. Thus King Olaf taught his Northmen how he revered God's commandment to the hating of his own flesh and blood.

H. K.

THE UNION OF MAN WITH MAN.

THE mutual dependence which obtains among material things is perceived by us on a moment's reflection. Not one atom in creation, for example, exists by itself or for itself alone, but, directly or indirectly, influences and is influenced by every other atom. The movements of the tiniest wave

which rises slowly over the dry pebble on the beach, marking the progress of the advancing tide in the inland bay, is determined by the majestic movements of the great ocean, with all its tides that sweep and circulate from pole to pole. The raindrop which falls into the heart of a wild-

flower, and rests there with its pure and sparkling diamond-lustre, owes its birth to the giant mountains of the old earth, to the great sea, to the all-encompassing atmosphere, to the mighty sun, and is thus, by a chain of forces, united in its existence, its figure, its motion, and its rest, to the most distant planet, which, beyond the ken of the telescope, whirls along its path on the mysterious outskirts of space. Thus, too, the needle of the electric telegraph trembles beneath the influence of hidden powers which pervade the earth, which flash in the thunder-storm, awaken the hurricane, or burst in those bright and brilliant coruscations that shoot across the midnight of our northern sky. And so

"The whole round earth is everywhere
Bound by gold chains about the throne of God."

But the unity which exists among intelligent and responsible *persons*, their mutual dependence and relationship, is just as real as that which obtains among material *things*, and is far more wonderful, more solemn and important in its nature, causes, and consequences.

The human race is an organic whole. The individual man is more intimately united to every other man, and to all past and coming generations, than the leaf which flutters on the twig of a great tree is connected with the tree itself, and with every other leaf that swells its foliage, or with the seed which was ages ago planted in the soil, and from which the noble plant has issued. That organic unity of the Church, springing chiefly out of a common life, derived from Christ and maintained by his indwelling Spirit, and which the apostle Paul so fully illustrates by the union of the members of the human frame, holds equally true, though on different grounds, of the whole family of man.

And what is true of the human race, is true of all spiritual intelligences in the universe of God. "We are all members one of another." We form a part of a mighty whole that finds its unity in God. Subtle links from within and from without in God's infinite network, bind us for good or evil, for weal or woe, to spirits of light and of darkness; to principalities and powers in other spheres and systems of being, from the lowest outcast in the unseen world of criminals, up to Gabriel before the throne of God; while over all, comprehending all, sustaining and harmonizing all, is the Great I Am, Father, Son, and Spirit.

Consider, for example, how, according to the arrangements of the Divine government, man is linked to man from the mere necessities of his physical and social being.

In this aspect of our life it is evident that its whole history is one of mutual dependence, and one in which we are compelled to receive and to

give, to partake and to share. We enter upon life as weak unconscious infants, depending every moment on other eyes to watch for us, and other hands to minister to us, while we kindle in their hearts the most powerful emotions. But not less dependent are we on our fellow-creatures for our continuance in life from the cradle to the grave. There is not a thread of clothing which covers our body, not a luxury which is placed on our table, not an article which supplies the means of labour, not one thing which is required by us as civilized beings, but involves the labours and the sacrifices of others in our behalf—while by the same law we cannot choose but contribute to their wellbeing. The cotton which the artisan weaves or wears, has been cultivated by brothers beneath a tropical sun, and possibly beneath a tyrant's lash. The tea he drinks has been gathered for him by brothers on the unknown hill-sides of distant China. A mother writes a letter to her son in some distant spot in India, and conveys it in silence to the post-office, perhaps thinking only when she may receive a reply from her boy. But how much is done before that letter reaches its destination! The hands of unknown brethren will receive it, and transmit it; rapid trains will convey it over leagues of railways; splendid steam-ships will sail with it, and hundreds of hands will pass it from port to port, from land to land. It is watched day and night, through calm and hurricane, and precious lives are risked to keep it in security, until in silence and in safety, after months of travel, it is delivered from the mother's hand into the hand of her child!

And thus it is that, whether we choose it or not, we are placed by God as "members one of another," so that we cannot, if we would, separate ourselves from our brother. For good or evil, prosperity or adversity, we are bound up with him in the bundle of this all-pervading and mysterious life. If one member suffers or rejoices, all are compelled in some degree to share his burden of joy or sorrow. Let disease, for example, break out in one district or kingdom, and, like a fire, it rushes onward, passing away from the original spot of outbreak, and involving families and cities far away in its desolating ruin. Let war arise in one portion of the globe, it smites another. The passion or the pride of some rude chief of a barbarous tribe in Africa or New Zealand, or the covetousness and selfish policy of this or of that party in America, tell upon a poor widow in her lonely garret in the darkest corner of our great city; and she may thus be deprived of her labour through the state of commerce, as really as if the hand of the foreigner directly took her only handful of meal out of her barrel, or extinguished her cruise of oil, leaving her in

poverty and darkness to watch over her dying child.

Now all this system of dependence is, as we have said, beyond our will. We do not choose it, but must accept of it. It is a fact or power like birth or death, with which we have to do in spite of us. No questions are asked by the great King as to whether we will have it so or not; yet of what infinite importance to us for good or evil is this great law of God's government! We are thus made to feel that a will higher than ours reigns, and that by that supreme will we are so united to one another, that no man can live for himself or die for himself alone; that we are our brother's keeper, and he ours; that we cannot be indifferent to his social wellbeing without suffering in our own; that our selfishness which would injure him, must return in some form and shape on ourselves; and that such is the ordained constitution of humanity, that though Love and a consistent selfishness start from different points, they necessarily lead to the same point, and make it our interest in its lowest form, as it is our highest duty and privilege, to love our neighbour as ourselves!

And here we may just notice, that some of those evils which afflict one portion of the human family are surely the occasion of good, when they remind us of this our common humanity. Such painful events, for example, as the famine in the Highlands of Scotland, which called forth the sympathies of kindreds and tongues, unknown by name, to the sufferers, and was relieved by the inhabitants of China and Hindustan; or the like famine in Ireland, which the Mohammedan Sultan was among the first to help to alleviate; or the Syrian massacres or Indian famine, that united Jew and Gentile, Protestant and Catholic, in the bonds of pity;—these wounds of humanity are surely not without their good, when they afford an opportunity to the Samaritan of showing mercy to the Jew, and cause the things which separate and the differences that alienate man from man, to be even for a time forgotten in the presence of their common brotherhood. And thus, too, the shutting of the Southern ports of America, which entails temporary distress upon many in our manufacturing districts, reminds us how the sufferings of others must be shared by ourselves, while, on the other hand, it may form the indirect means of developing the growth of cotton, and the consequent industry of thousands in Africa and India, who will thus be brought into closer and more fraternal relationships with civilized nations.

But there is another link, and one more spiritual, which binds man to man for good or evil, and that is *moral character*. This influence is partly beyond and partly within the region of our will. That which is beyond our will is the fact of the neces-

sary influence of character; while within our will is the character, good or bad, which we may choose to possess. Now it cannot be questioned that character tells for good or evil beyond its possessor. That which a man is; that sum total made up of the items of his beliefs, purposes, affections, tastes, and habits, manifested in all he does and does not, is contagious in its tendency, and is ever *photographing* itself on other spirits. He himself may be as unconscious of this emanation of good or evil from his character, as he is of the contagion of disease from his body, or—if that were equally possible—of the contagion of good health. But the fact, nevertheless, is certain. If the light is in him, it must shine; if darkness reigns, it must shade. If he glows with love, it will radiate its warmth; if he is frozen with selfishness, the cold will chill the atmosphere around him; and if corrupt and vile, he will poison it. Nor is it possible for any one to occupy a neutral or indifferent position. In some form or other he *must* affect others. Were he to banish himself to a distant island, or even enter the gates of death, he still exercises a positive influence, for he is a *loss* to his brothers; the loss of that most blessed gift of God, even that of a living man to living men—of a being who ought to have loved and to have been beloved.

The influence of individual character extends even from generation to generation. The world is moulded by it. Does not its history turn on the influence exercised by the first and second Adam!

But no less real is the influence upon others of a *holy* character. "The evil men do lives after them;" but we do not believe that "the good is oft interred with their bones." No, it is as immortal as the Divine Being in whom it originates. The good must ever live, and "walk up and down the earth," like a living spirit guided by the living God, to convey blessings to the children of men. It lives in humanity, in some form or other, like the subtle substance of material things, which though ever changing never perishes, but adds to the stability, the beauty, and the grandeur of the universe. The influence of the holy character passes also beyond the stars, giving joy to our angel brothers; and to our elder brother Jesus Christ, who in seeing his own love to his God and our God, to his neighbour and ours, reflected in his people, beholds the grand result of the travail of his soul, and is "satisfied."

But our space does not permit of our advancing further along the line of thought which this subject suggests. We cannot now illustrate the power of a positive purpose and continued effort to do good to others; nor the influence exercised upon mankind by great and distinguished men; nor, above all, by national life and character. Neither can we touch even on the great subject of the

functions of the Christian church as a body, realizing in itself, and witnessing for this brotherhood, and as the chief instrument for establishing it on earth—all through Him who is "born a brother," and in whom and through whom "the whole family in heaven and earth is named," and by whom alone can man be truly united to man.

We cannot, however, conclude this subject without alluding to two events in our national history, which at this moment possess the hearts and thoughts of millions. One is the death of Prince Albert, and the other is the threatened American war. By the former of these events—the saddest which has befallen our nation during the memory of the present generation—the world has lost "the foremost of his time" as the wise, loving, and practical friend of union between man and man.

It is not possible, for example, to estimate duly the present social position of Great Britain as a mighty power of God in uniting the nations of the earth by commerce, free institutions, education, and, above all, by the influence of Christianity, without connecting this national influence with the personal influence of our beloved Queen, the best who ever sat upon a throne. We were much struck by a remark made by the late noble-hearted Bunsen, in a private conversation immediately after the revolutions of 1848 in Europe. "What a change," he said, "has taken place through the influence of Christianity in the social position of woman, since that day when the disciples wondered that Christ spoke to the woman at the well!" Then, after a pause, he added, "One woman—the Queen of England—has done more in these times to strengthen monarchy in Europe, and all that is good in the world, than any person living."

But, believing this, have we ever fully realized how God has twice blessed us in having given us the Prince Consort as well as Queen Victoria? His Royal Highness came among us as a young man and a stranger, to marry the young Sovereign of the greatest empire upon earth. The past history of courts—our own not excepted, as the days of George the Fourth bear witness—made us then naturally look with anxiety to the future. But that future is now passed. Prince Albert lived among us for twenty-two years. He occupied for nearly a quarter of a century a position of singular difficulty. He was the inhabitant of a gay and luxurious capital. He sat upon a throne beside that of the Queen of England, and was the father and preceptor of princes and of princesses, who are likely to play a great part in the history of Europe. He was higher in rank than the members of our old and powerful aristocracy; and necessarily exercised an influence in connexion

with the Crown, which was watched by different ambitious parties in a House of Commons, singularly jealous of its privileges. He was, moreover, cast among a great commercial people, whose tastes and habits were alien to his previous life as a German prince and a German student;—yet placed in such peculiar circumstances, who ever heard one whisper breathed against the moral character of the illustrious prince? What false step in politics did he ever take? What wrong advice was ever with justice attributed to him? What enemies did he ever make in any class or in any party? Commerce and agriculture, science and art, the college and the camp, each claimed him as their sympathizing friend and patron. With earnest religious convictions, he never offended any church party, but conciliated all by his personal sincerity and public justice, at a period too in our national history when almost every form of religious thought was intensely alive, and peculiarly observant both of friend and foe. Prince Albert, accordingly, with his wife and family, worshipped with the same humble and unaffected reverence in the church of Crathie as in the Royal chapel of Windsor, and thus linked together the churches of England and Scotland by his example of love for their common Christianity. In whatever was most worthy of pursuit by the peers or by the people of this great kingdom "the Prince of all the land led them on!" He discharged, in short the duties of every situation of public and private life with consummate ability, finest tact, and scrupulous conscientiousness. His wise silence was, if possible, more eloquent than his eloquent speech;—his reserve as remarkable as his action. The very balance and nice adjustment of all his powers, and the absence of everything eccentric, exaggerated, or disproportioned in him, perhaps hindered men from being arrested by his rare excellence, until now when death, alas! irresistibly compels us to gaze upon him, and to call to our remembrance all he was.

No wonder we should associate with the blessing of human brotherhood a man of such wide sympathies, such catholic feelings, and such a reconciler of various interests, different classes, opposing parties, and contending nations. The Great Exhibition, which is the most remarkable type in modern history of the union of man with man, and, which, under God, was a chief means of promoting it, we all know owed its origin, in idea, to the noble Prince, and that its ultimate success was secured by his wisdom and influence. He thus inaugurated a World's Alliance for the promotion of industry and the arts of peace, which promises soon to become a permanent means of gathering the nations of the earth from time to time together, and of becoming therefore "a fellow-worker" with the gospel, as a

message of peace on earth and of good-will to man. The name of Prince Albert will be for ever associated with such a noble project.

One word more. No false or unworthy suspicions of our motives will deter us from saying, that having had the honour and privilege of frequently coming into personal contact with the Prince in the frank intercourse of his Highland home, we were ever profoundly impressed most of all by his unaffected simplicity, transparent truthfulness, touching modesty, considerate kindness, and thorough Christian earnestness. The noble prince was almost forgotten by us in the noble man. With a full heart, therefore, we express, before Him who sees it, our profound veneration and affection for his memory! "Blessed are the pure in heart, for they shall see God." "Blessed are the peacemakers, for they shall be called the children of God."

And now we join in the prayers of this nation—prayers more numerous, more fervid and sincere than ever before rose from earth to heaven for a monarch—that the King of kings, the widows' Friend, the Father of the fatherless, may strengthen, comfort and help our beloved Queen and her bereaved family, in this their hour of need and of bitter sorrow!

If America now threatens to disturb the brotherhood of nations, we cannot forget that the first Prince of Wales who ever trod on the Western Continent was sent thither by Prince Albert, with the desire of thus linking the United States, as well as our own Colonies, more in the bonds of peace with their mother England. But, to all appearance, the burial of the Prince and the burial of peace between America and Britain will almost be contemporaneous.

Such a crisis of our history in relation to America naturally suggests an application of the principle we have been considering to our national duties, in the performance of which every Christian citizen must feel the deepest interest. Now, leaving aside for the present all abstract questions as to the lawfulness of war, about which we have no doubt whatever (recognising, as we do, a righteous war to be a nation's noblest form of self-sacrifice for the sake of righteousness); forgetting also for a moment the provocations we may have received from the unprincipled press of America, from the vain boastings of her vulgar mob, and from her more vulgar and truculent leaders; admitting even that there is good cause, as we firmly believe there is, for our engaging in war, unless the demands of our Government be complied with;—yet how is it possible for any thoughtful or Christian man to entertain even this idea without the most oppressive thoughts? In the exercise of public justice a judge may be compelled to condemn a man to be

executed on the scaffold; yet what jury would bring in the verdict of guilty, or what judge pass sentence of death with any other than the most solemn feelings? We do not ask our readers to subscribe to any political creed regarding this cruel war which divides the once United States. For ourselves we boldly confess our belief that the North has both right and might on her side; and that a more uncalled for or more unprincipled secession, or rather rebellion, against constitutional government, never has been recorded in the annals of history than that of the Southern States against the Federal Government. And believing this, we should accept it as a national calamity if Britain, the foremost nation of all on earth as a constitutional power, and now the firmest friend of the slave, should be found practically on the side of selfish rebellion, degrading slavery, and the government of a proud and unprincipled oligarchy. But if we are forced into this position, oh, let us feel before God, on other grounds stronger still, what a dreadful one it is to occupy! There, on the other side of the Atlantic is a nation of men united to us by such ties as never bound any other two nations on earth—by blood; by language; by past history; by personal friendships; by commercial interests; and by all that is worth living and worth dying for. In her churches nearly 20,000 Protestant clergy every Lord's-day preach the same gospel in which we believe, and millions of her people rejoice in it with ourselves. Her one thousand missionaries are labouring along with our own in every part of the globe. And thus the liberty and Christianization of the world, as far as we can see, depend more upon the union of America and Britain than on any other alliance which exists on earth. Shall we, without exhausting every possible expedient, consistent with truth and honour, engage in a war with such a nation? Shall we send the fratricidal ball without a pang into our brother's home? Shall we glory in the anticipation even of victories that must become the seeds of constant jealousies, and therefore of future war? Heaven forbid!

But if, in defence of the national independence of England, in which the wellbeing of the world is involved, war must be proclaimed against the United States of America, let us begin it, in God's name, with the calmness of brave men, and with the gravity of Christian men. While accepting the awful duty imposed upon us without any fear, let us not choose it without real sorrow! We were never better prepared for war; let our very power be a guarantee for our generosity. If America were as Sodom and Gomorrah, let us not forget the ten—yea the ten thousand thousand righteous men within her borders, who are not only our brethren of mankind, but our dear brethren in Christ Jesus!

NORMAN MACLEOD.

F O O D.

BY ARCHBISHOP WHATELY.

THE diversity prevailing in different nations in reference to articles of food, seems to confirm, in its literal sense, the proverbial saying, that "One man's meat is another man's poison."

Many an article of food which is in high esteem in one country, is regarded in others with an abhorrence which even famine can hardly surmount.

In the Shetland Islands it is said that *crabs* and *lobsters* abound; which the people catch for the London market, but refuse to eat, even when half-starved.

The *John Dory* is reckoned by epicures one of the choicest of fish; but in Devonshire, where it abounds, and also in Ireland, it used to be thrown away as unfit for food. There seems to be some superstition connected with this; as it is said that a Devonshire cook-maid flatly refused even to dress it.

EELS, which are abundant and of good quality, in Cumberland and Westmoreland, and also in Scotland, are regarded by the people there with as much disgust as snakes.

SKATE, which is in high estimation in England, in Ireland is hardly ever eaten, except by the fishermen.

SCALLOPS, on the other hand, which are reckoned a dainty in Ireland, are hardly ever eaten in England; and though they are abundant on many of the coasts, few of the English have any idea that they are eatable.

THE CUTTLE-FISH (that kind which produces the inky fluid), though found on our coasts, is not eaten by us; but at Naples it is highly esteemed; and travellers report that it tastes like veal. Cockchafers are, by the Italians, candied, and served up with other confectionery.

THE ECHINAS, or Sea-egg, is also unknown to us as food, but is reckoned a delicacy in the West Indies.

THE HEDGE-HOG no one in England thinks of eating (either "*à la sauce piquante*," or otherwise), except the gipsies, and some who have joined them, and who report that it is better than rabbit.

The sailors in the English and Dutch whale-ships do not eat the flesh of the *whale*. But those in the French whalers (with their well-known national skill in cookery), are said to make a palatable dish of it.

By almost all the lower classes in England, *venison* and *game* of all kinds are held in abhorrence; and so are *fresh figs*.

By the Australian savages, *frogs*, *snakes*, large

moths, and *grubs* picked out of rotten wood, all of which the English settlers turn from with disgust, are esteemed as dainties; but they are shocked at our eating *oysters*.

Milk, as an article of food (except for sucking babies), is loathed by the South Sea Islanders. Goats have been introduced into several of the islands; but the people deride the settlers for using their milk, and ask them why they do not milk the *sows*. On the other hand, *dogs* and *rats* are favourite articles of food with them.

These last (as is well known) are often eaten by the Chinese; who also eat salted *earthworms*, and a kind of *sea-slug* (*Holothuria*), which most Europeans would turn from with disgust.

In the narrative of Anson's voyage, is a full account of the prejudice of the South Americans (both Creoles and Indians) against *TURTLE*, as poisonous. The prisoners captured in the prize-ships warned our sailors against eating it, and for some time lived on bad ship-beef; but seeing that our men thrived on the turtle, they began to eat it; at first sparingly, and at length heartily. And when set ashore and liberated, they declared that they blessed the day of their capture, which had introduced them to a plentiful supply of wholesome and delicious food.

Horse-flesh, which most Europeans would refuse to eat except in great extremity, is preferred by the Tartars to all other; and the flesh of a wild *ass's colt* was greatly esteemed by the ancient Romans.

As for *pork*, it is on religious grounds that Jews and Mohammedans abstain from it (as the Hindus do from *beef*), but the Christians of the East seem to have nearly an equal aversion to it; and the like prevailed to a great degree, till lately, in Scotland also. (See *Waverley* and *The Fortunes of Nigel*.)

The large *shell-snail*, called *Escargot*, was a favourite dainty with the ancient Romans, and still is so in a great part of the south of Europe, though most Englishmen would be half-starved before they would eat it.

It is said that in Vienna the large *wood-ants* are served up and eaten alive! And small land-crabs are eaten alive in China.

The *Iguana*, a large species of lizard, is reckoned a great dainty in some of the West India Islands. And the *monkey* and the *alligator* are eaten both in Africa and in South America; and some travellers who have overcome their prejudices, have pronounced them to be very good eating. A large crocodile or alligator, indeed, is said to have a strong

musky flavour; but a young one tastes much like a skate.

Even when the same substances are eaten in different countries, there is often a strange difference in the mode of preparing them. Both we and the Icelanders use *butter*, but *they* store it up without salt, till it is rancid and sour.

We agree with the Abyssinians in liking *beef*; but they would probably object as much to the "*Roast-beef* of Old England," as we should to the half-living morsels of raw beef, in which they delight.

MAIZE has been introduced into New Zealand by the missionaries; and the people cultivate and highly esteem it. But their mode of preparing it for food is to Europeans most disgusting. They steep it in water till it is putrid, and then make it into a kind of porridge, which emits a most intolerable stench.

HUMAN FLESH has been, and still is, eaten in many parts of the world; and that by people considerably above the lowest rank of savages; such as the Fiji Islanders, and an Indian people called the

Batta, who are said even to have a written language.

And even in cannibalism there are great diversities. Some nations eat their enemies, and some their friends. Herodotus relates that a Persian king asked the Indian soldiers that were in his service, what reward would induce them to *burn* the dead bodies of their friends, as the Greeks did, instead of *eating* them. They replied by entreating him not to mention anything so shocking (*εὐφημεῖν αὐτὸν ἐκέλευον*).

On the other hand, the New Zealanders before their conversion, who seem to have considered that "the proper diet of mankind is man," seem to have eaten only their enemies. Among the Australian savages, on the contrary, it is said, that if a mother finds a young baby troublesome to carry about, she will eat it (although she would not allow any one else to do so), under the full persuasion that she has merely *deferred* its birth, and that the next child she bears will be a re-appearance of the eaten one. When remonstrated with by the Europeans, she will reply, "Oh, massa, he plenty come again!"

GO AND COME.

Thou sayest to us, "Go,
And work while it is called to-day; the sun
Is high in heaven, the harvest but begun;
Can hands oft raised in prayer, can hearts that
know

The beat of Mine through love and pain be slow
To soothe and strengthen?" still Thou sayest,
"Go;

Lift up your eyes and see where now the Line
Of God hath fallen for you, one with Mine
Your Lot and Portion. Go, where none relieves,
Where no one pities, thrust the sickle in
And reap and bind, where toil and want and sin
Are standing white, for here My harvests grow:
Go, glean for Me 'mid wasted frames outworn,
'Mid souls uncheered, uncared for; hearts forlorn,
With care and grief acquainted long, unknown
To earthly friend, of Heaven unmindful grown;
In homes where no one loves, where none believes,
For here I gather in my goodly sheaves;"

Thou sayest to us, "Go."

Thou sayest to us, "Go,
To conflict and to death;" while friends are few
And foes are many, what hast Thou to do
With peace, Thou Son of Peace? A man of war
Art Thou from Youth! when Thou dost girded
ride,

Two stern instructors, Truth and Mercy, guide
Thy hand to things of terror; friends and foes
Thine arrows feel; a sword before Thee goes,
And after Thee a fire, confusion stirred
Among the nations seen by the word
Of Meekness and of Right; "Yea, take and eat
Of these my words," Thou sayest, "they are
sweet

As honey; yet this roll that now I press
Upon your lips will turn to bitterness
When ye shall speak its message; lo, a cry
Of wrath and madness, ere the ancient Lie
That wraps the roots of earth will quit its hold,
A shriek, a wrench abhorred; and yet be bold,
Oh, ye my servants! take my rod and stand
Before the King, nor fear if in your hand
It seem unto a serpent's form to grow;
Rise up, my Priests! my Mighty Men, with sound
Of solemn trumpet, walk this city round,
A blast will come from God, His word and will
Through hail, and storm, and ruin, to fulfil;
Then shall ye see the Towers roll down, the Wall
Built up with blood, and tears, and tortures, fall,
And from the Living Grave the living Dead
Will rise, as from their sleep, disquieted;
O Earth, this Baptism of thine is slow!
Not dews from morning's womb, not gentle rains
That drop all night can wash away thy stains.—
The fire must fall from Heaven; the blood must
flow

All round the Altar;"—still thou sayest, "Go."

And that thou sayest, "Go,"
Our hearts are glad; for he is still Thy friend
And best beloved of all Whom Thou dost send
The furthest from Thee; this thy servants know;
Oh, send by whom Thou wilt, for they are blest
Who go Thine errands! Not upon Thy breast
We learn Thy secrets! Long beside Thy tomb
We wept, and lingered in the garden's gloom;
And oft we sought Thee in Thy House of Prayer
And in the Desert, yet Thou wert not there;
But as we journeyed sadly through a place
Obscure and mean, we lighted on the trace

Of Thy fresh footprints, and a whisper clear
 Fell on our spirits,—Thou thyself wert near;
 And from Thy servants' hearts Thy name adored
 Brake forth in fire; we said, "It is the Lord."
 Our eyes were no more holden; on Thy face
 We looked, and it was comely; full of grace,
 And fair Thy lips; we held Thee by the feet,
 We listened to Thy voice, and it was sweet,

And sweet the silence of our spirits; dumb
 All other voices in the world that be
 The while Thou saidest, "Come ye unto me,"
 And while Thou saidest "Come."

We said to thee, "Abide
 With us, the Night draws on apace; but, lo!
 The cloud received Thee, parted from our side,
 In blessing parted from us! Even so

"The Sun is high in heaven, the harvest but begun."

The Heaven of Heavens must still receive Thee!
 dark

And moonless skies bend o'er us as we row.
 No stars appear, and sore against our bark
 The current sets; yet nearer grows the Shore
 Where we shall see Thee standing, never more
 To bid us leave Thee! though Thy Realm is wide,
 And mansions many, never from Thy side

Thou sendest us again; by springs serene
 Thou guidest us, and now to battle keen
 We follow Thee, yet still, in peace or war,
 Thou leadest us. Oh, not to sun or star
 Thou sendest us, but sayest, "Come to Me,
 And where I am, there shall my servants be."
 Thou sayest to us, "COME."

D ***

MISTRESS AND MAID.

A HOUSEHOLD STORY.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

**CHAPTER I.**

SHE was a rather tall, awkward, and strongly-built girl of about fifteen. This was the first impression the "maid" gave to her "mistresses," the Misses Leaf, when she entered their kitchen, accompanied by her mother, a widow and washerwoman,

III—3

by name Mrs. Hand. I must confess, when they saw the damsel, the ladies felt a certain twinge of doubt as to whether they had not been rash in offering to take her; whether it would not have been wiser to have gone on in their old way—now, alas! grown into a very old way, so as almost to

make them forget they had ever had any other—and done without a servant still.

Many consultations had the three sisters held before such a revolutionary extravagance was determined on. But Miss Leaf was beginning both to look and to feel "not so young as she had been;" Miss Selina, ditto; though, being still under forty, she would not have acknowledged it for the world. And Miss Hilary, young, bright, and active as she was, could by no possibility do everything that was to be done in the little establishment; be, for instance, in three places at once—in the school-room, teaching little boys and girls, in the kitchen, cooking dinner, and in the rooms upstairs, busy at house-maid's work. Besides, much of her time was spent in waiting upon "poor Selina," who frequently was, or fancied herself, too ill to take any part in either the school or house duties.

Though, the thing being inevitable, she said little about it, Miss Leaf's heart was often sore to see Hilary's pretty hands smeared with blacking of grates, and roughened with scouring of floors. To herself this sort of thing had become natural,—but Hilary!

All the time of Hilary's childhood, the youngest of the family had, of course, been spared all house-work; and afterwards her studies had left no time for it. For she was a clever girl, with a genuine love of knowledge: Latin, Greek, and even the higher branches of arithmetic and mathematics, were not beyond her range; and this she found much more interesting than washing dishes or sweeping floors. True, she always did whatever domestic duty she was told to do; but her bent was not in the household line. She had only lately learnt to "see dust," to make a pudding, to iron a shirt; and, moreover, to reflect, as she woke up to the knowledge of how these things should be done, and how necessary they were—what must have been her eldest sister's lot during all these twenty years! What pains, what weariness, what eternal toil must Johanna have silently endured, in order to do all those things which till now had seemed to do themselves!

Therefore, after much cogitation as to the best and most prudent way to amend matters, and perceiving with her clear common sense that, willing as she might be to work in the kitchen, her own time would be much more valuable spent in teaching their growing school, it was Hilary who, these Christmas holidays, first started the bold idea, "We must have a servant;" and therefore, it being necessary to begin with a very small servant on very low wages (£3 per annum was, I fear, the maximum), did they take this Elizabeth Hand.

So, hanging behind her parent, an anxious-eyed and rather sad-voiced woman, did Elizabeth enter the kitchen of the Misses Leaf.

The ladies were all there,—Johanna arranging the table for their early tea; Selina lying on the sofa, trying to cut bread and butter; Hilary on her knees before the fire, making the bit of toast—her eldest sister's one luxury. This was the picture that her three mistresses presented to Elizabeth's eyes; which, though they seemed to notice nothing, must in reality have noticed everything.

"I've brought my daughter, ma'am, as you sent word you'd take on trial," said Mrs. Hand, addressing herself to Selina, who, as the tallest, the best-dressed, and the most imposing, was usually regarded by strangers as the head of the family.

"Oh, Johanna, my dear."

Miss Leaf came forward, rather uncertainly, for she was of a shy nature, and had been so long accustomed to do the servant's work of the household, that she felt quite awkward in the character of mistress. Instinctively she hid her poor hands, that would at once have betrayed her to the sharp eyes of the working-woman, and then, ashamed of her momentary false pride, laid them outside her apron and sat down.

"Will you take a chair, Mrs. Hand? My sister told you, I believe, all our requirements. We only want a good, intelligent girl. We are willing to teach her everything."

"Thank you kindly; and I be willing and glad for her to learn, ma'am," replied the mother, her sharp and rather free tone subdued in spite of herself by the gentle voice of Miss Leaf. Of course, living in the same country town, she knew all about the three school-mistresses, and how till now they had kept no servant. "It's her first place, and her'll be aw'k'ard at first, most like. Hold up your head, Lizabeth."

"Is her name Elizabeth?"

"Far too long and too fine," observed Selina from the sofa. "Call her Betty."

"Anything you please, miss; but I call her Lizabeth. It wor my young missis's name in my first place, and I never had a second."

"We will call her Elizabeth," said Miss Leaf, with the gentle decision she could use on occasion.

There was a little more discussion between the mother and the future mistress as to holidays, Sundays, and so forth, during which time the new servant stood silent and impassive in the doorway between the back-kitchen and the kitchen, or, as it is called in those regions, the house-place.

As before said, Elizabeth was by no means a personable girl, and her clothes did not set her off to advantage. Her cotton frock hung in straight lines down to her ankles, displaying her clumsily shod feet and woollen stockings; above it was a pinafore—a regular child's pinafore, of the cheap, strong, blue-speckled print which in those days

was generally worn. A little shabby shawl, pinned at the throat, and pinned very carelessly and crookedly, with an old black bonnet, much too small for her large head and her quantities of ill-kept hair, completed the costume. It did not impress favourably a lady who, being, or rather having been, very handsome herself, was as much alive to appearances as the second Miss Leaf.

She made several rather depreciatory observations, and insisted strongly that the new servant should only be taken "on trial," with no obligation to keep her a day longer than they wished. Her feeling on the matter communicated itself to Johanna, who closed the negotiation with Mrs. Hand, by saying,—

"Well, let us hope your daughter will suit us. We will give her a fair chance at all events."

"Which is all I can ax for, Miss Leaf. Her bean't much to look at, but her's willin' and sharp, and her's never told me a lie in her life. Curtsey to thy missis, and say thee't do thy best, Lizabeth."

Pulled forward, Elizabeth did curtsey, but she never offered to speak. And Miss Leaf, feeling that for all parties the interview had better be shortened, rose from her chair.

Mrs. Hand took the hint and departed, saying only, "Good-bye, Elizabeth," with a nod, half-encouraging half-admonitory, which Elizabeth silently returned. That was all the parting between mother and daughter; they neither kissed nor shook hands, which undemonstrative farewell somewhat surprised Hilary.

Now, Miss Hilary Leaf had all this while gone on toasting. Luckily for her bread, the fire was low and black: meantime, from behind her long drooping curls (which Johanna would not let her "turn up," though she was twenty), she was making her observations on the new servant. It might be, that, possessing more head than the one and more heart than the other, Hilary was gifted with deeper perception of character than either of her sisters; but certainly her expression, as she watched Elizabeth, was rather amused and kindly than dissatisfied.

"Now, girl, take off your bonnet," said Selina, to whom Johanna had silently appealed in her perplexity as to the next proceeding with regard to the new member of the household.

Elizabeth obeyed, and then stood, irresolute, awkward, and wretched to the last degree, at the furthest end of the house-place.

"Shall I show you where to hang up your things?" said Hilary, speaking for the first time; and at the new voice, so quick, cheerful, and pleasant, Elizabeth visibly started.

Miss Hilary rose from her knees, crossed the kitchen, took from the girl's unresisting hands the

old black bonnet and shawl, and hung them up carefully on a nail behind the great eight-day clock. It was a simple action, done quite without intention, and accepted without acknowledgment, except one quick glance of that keen yet soft grey eye; but years and years after Elizabeth reminded Hilary of it.

And now Elizabeth stood forth in her own proper likeness, unconcealed by bonnet or shawl, or maternal protection. The pinafore scarcely covered her gaunt neck and long arms: that tremendous head of rough, dusky hair was evidently for the first time gathered into a comb. Thence elf-locks escaped in all directions, and were for ever being pushed behind her ears, or rubbed (not smoothed; there was nothing smooth about her) back from her forehead; which, Hilary noticed, was low, broad, and full. The rest of her face, except the before-mentioned eyes, was absolutely and undeniably plain. Her figure, so far as the pinafore exhibited it, was undeveloped and ungainly; the chest being contracted and the shoulders rounded, as if with carrying children or other weights, while still a growing girl. In fact, nature and circumstances had apparently united in dealing unkindly with Elizabeth Hand.

Still here she was; and what was to be done with her?

Having sent her with the small burden which was apparently all her luggage, to the little room—formerly a box-closet—where she was to sleep, the Misses Leaf—or as facetious neighbours called them the Miss Leaves—took serious counsel together over their tea.

Tea itself suggested the first difficulty. They were always in the habit of taking that meal, and indeed every other, in the kitchen. It saved time, trouble, and fire; besides leaving the parlour always tidy for callers, chiefly pupils' parents, and preventing these latter from discovering that the three orphan daughters of Henry Leaf, Esq., solicitor, and sisters of Henry Leaf, Junior, Esq., also solicitor, but whose sole mission in life seemed to have been to spend everything, make everybody miserable, marry, and die—that these three ladies did always wait upon themselves at meal-times, and did sometimes breakfast without butter, and dine without meat. Now, this system would not do any longer.

"Besides, there is no need for it," said Hilary, cheerfully. "I am sure we can well afford both to keep and to feed a servant, and to have a fire in the parlour every day. Why not take our meals there, and sit there regularly of evenings?"

"We must," added Selina, decidedly. "For my part, I couldn't eat, or sew, or do anything with that great, hulking girl sitting staring oppo-

site;—or standing; for how could we ask her to sit with us? Already, what must she have thought of us—people who take tea in the kitchen?"

"I do not think that matters," said the eldest sister, gently, after a moment's silence. "Everybody in the town knows who and what we are, or might if they chose to inquire. We cannot conceal our poverty if we tried; and I don't think anybody looks down upon us for it. Not even since we began to keep school, which you thought was such a terrible thing, Selina."

"And it was. I have never reconciled myself to teaching the baker's two boys and the grocer's little girl. You were wrong, Johanna, you ought to have drawn the line somewhere, and it ought to have excluded tradespeople."

"Beggars cannot be choosers," began Hilary.

"Beggars!" echoed Selina.

"No, my dear, we never were that," said Miss Leaf, interposing against one of the sudden storms that were often breaking out between these two. "You know well we have never begged nor borrowed from anybody, and hardly ever been indebted to anybody, except for the extra lessons that Mr. Lyon would insist upon giving to Ascott at home."

Here Johanna suddenly stopped, and Hilary, with a slight colour rising in her face, said—

"I think, sisters, we are forgetting that the staircase is quite open, and though I am sure she has an honest look, and not that of a listener, still Elizabeth might hear. Shall I call her downstairs, and tell her to light a fire in the parlour?"

While she is doing it,—and in spite of Selina's forebodings to the contrary, the small maiden did it quickly and well, especially after a hint or two from Hilary,—let me take the opportunity of making a little picture of this same Hilary.

Little it should be, for she was a decidedly little woman; small altogether, hands, feet, and figure being in satisfactory proportion. Her movements, like those of most little women, were light and quick rather than elegant; yet everything she did was done with a neatness and delicacy which gave an involuntary sense of grace and harmony. She was, in brief, one of those people who are best described by the word "harmonious;" people who never set your teeth on edge, or rub you up the wrong way, as very excellent people occasionally do. Yet she was not over-meek, or unpleasantly amiable; there was a liveliness and even briskness about her, as if the everyday wine of her life had a spice of champagniness, not frothiness but natural effervescence of spirit, meant to "cheer but not inebriate" a household.

And in her own household this gift was most displayed. No centre of a brilliant, admiring circle could be more charming, more witty, more

irresistibly amusing than was Hilary sitting by the kitchen fireside, with the cat on her knee, between her two sisters, and the schoolboy Ascott Leaf, their nephew;—which four individuals, the cat being not the least important of them, constituted the family.

In the family Hilary shone supreme. All recognised her as the light of the house, and so she had been, ever since she was born, ever since her

"Dying mother mild,
Said, with accents undefiled,
'Child, be mother to this child.'"

It was said to Johanna Leaf—who was not Mrs. Leaf's own child. But the good step-mother, who had once taken the little motherless girl to her bosom, and never since made the slightest difference between her and her own children, knew well whom she was trusting.

From that solemn hour, in the middle of the night, when she lifted the hour-old baby out of its dead mother's bed into her own, it became Johanna's one object in life. Through a sickly infancy, for it was a child born amidst trouble, her sole hands washed, dressed, fed it: night and day it "lay in her bosom, and was unto her as a daughter."

She was then just thirty: not too old to look forward to woman's natural destiny, a husband and children of her own. But years slipped by, and she was Miss Leaf still. What matter? Hilary was her daughter.

Johanna's pride in her knew no bounds. Not that she showed it much: indeed, she deemed it a sacred duty not to show it; but to make believe her "child" was just like other children. But she was not. Nobody ever thought she was—even in externals. Fate gave her all those gifts which are sometimes sent to make up for the lack of worldly prosperity. Her brown eyes were as soft as doves' eyes, yet could dance with fun and mischief if they chose: her hair, brown also, with a dark-red shade in it, crisped itself in two wavy lines over her forehead, and then tumbled down in two glorious masses, which Johanna, ignorant, alas! of art, called "very untidy," and laboured in vain to quell under combs, or to arrange in proper, regular curls. Her features—well, they too were good; better than these unartistic people had any idea of; better even than Selina's, who in her youth had been the belle of the town. But whether artistically correct or not, Johanna, though she would on no account have acknowledged it, believed solemnly that there was not such a face in the whole world as little Hilary's.

Possibly, a similar idea dawned on the apparently dull mind of Elizabeth Hand, for she watched her youngest mistress intently, from kitchen to

parlour, and from parlour back to kitchen; and once when Miss Hilary stood giving information as to the proper abode of broom, bellows, etc., the little maid gazed at her with such admiring observation that the scuttle she carried was tilted, and the coals were strewn all over the kitchen-floor. At which catastrophe Miss Leaf looked miserable, Miss Selina spoke crossly, and Ascott, who just then came in to his tea, late as usual, burst into a shout of laughter.

It was as much as Hilary could do to help laughing herself, she being too near her nephew's own age always to maintain a dignified, aunt-like attitude; but nevertheless when, having disposed of her sisters in the parlour, she coaxed Ascott into the school-room, and insisted upon his Latin being done—she helping him, Aunt Hilary scolded him well, and bound him over to keep the peace towards the new servant.

"But she is such a queer one. Exactly like a South Sea Islander. When she stood with her grim, stolid, despairing countenance, contemplating the coals—oh, Aunt Hilary, how killing she was!"

And the regular, rollicking, irresistible boy-laugh broke out again.

"She will be great fun. Is she really to stay?"

"I hope so," said Hilary, trying to be grave. "I hope never again to see Aunt Johanna cleaning the stairs, and getting up to light the kitchen-fire of winter mornings, as she will do, if we have not a servant to do it for her. Don't you see, Ascott?"

"Oh, I see," answered the boy, carelessly. "But don't bother me, please. Domestic affairs are for women, not men." Ascott was eighteen, and just about to pass out of his caterpillar state as a doctor's apprentice-lad, into the chrysalis condition of a medical student in London. "But," with sudden reflection, "I hope she won't be in my way. Don't let her meddle with any of my books and things."

"No; you need not be afraid. I have put them all into your room. I myself cleared your rubbish out of the box-closet"—

"The box-closet! Now, really, I can't stand"—

"She is to sleep in the box-closet; where else could she sleep?" said Hilary, resolutely, though inly quaking a little; for, somehow, the merry, handsome, rather exacting lad had acquired considerable influence in this household of women. "You must put up with the loss of your 'den,' Ascott: it would be a great shame if you did not, for the sake of Aunt Johanna, and the rest of us."

"Um!" grumbled the boy, who, though he was not a bad fellow at heart, had a boy's dislike to "putting up" with the slightest inconvenience. "Well, it won't last long. I shall be off shortly. What a jolly life I'll have in London, Aunt Hilary! I'll see Mr. Lyon there too."

"Yes," said Aunt Hilary, briefly, returning to Dido and Æneas,—humble and easy Latinity for a student of eighteen; but Ascott was not a brilliant boy, and being apprenticed early, his education had been much neglected, till Mr. Lyon came as usher to the Stowbury grammar-school, and happening to meet and take an interest in him, taught him and his Aunt Hilary, Latin, Greek, and mathematics together, of evenings.

I shall make no mysteries here. Human nature is human nature all the world over. A tale without love in it would be unnatural, unreal, in fact a simple lie; for there are no histories and no lives without love in them; if there could be, heaven pity and pardon them, for they would be mere abortions of humanity.

Thank heaven, we, most of us, do not philosophize: we only live. We like one another, we hardly know why; we love one another, we still less know why. If on the day she first saw—in church it was—Mr. Lyon's grave, heavy-browed, somewhat severe face; for he was a Scotsman, and his sharp, strong Scotch features did look "hard," beside the soft, rosy, well-conditioned Saxon youth of Stowbury; if on that Sunday any one had told Hilary Leaf that the face of this stranger was to be the one face of her life, stamped upon brain, and heart, and soul with a vividness that no other impressions were strong enough to efface, and retained there with a tenacity that no vicissitudes of time, or place, or fortunes had power to alter, Hilary would, yes, I think she would, have quietly kept looking on. She would have accepted her lot, such as it was, with its shine and shade, its joy and its anguish: it came to her without her seeking, as most of the solemn things in life do; and whatever it brought with it, it could have come from no other source than that from which all high, and holy, and pure loves ever must come—the will and permission of God.

Mr. Lyon himself requires no long description. In his first visit he had told Miss Leaf all about himself that there was to be known: that he was, as they were, a poor teacher, who had altogether "made himself," as so many Scotch students do. His father, whom he scarcely remembered, had been a small Ayrshire farmer; his mother was dead, and he had never had either brother or sister.

Seeing how clever Miss Hilary was, and how much as a schoolmistress she would need all the education she could get, he had offered to teach her along with her nephew; and she and Johanna were only too thankful for the advantage. But during the teaching, he had also taught her another thing, which neither had contemplated at the time—to respect him with her whole soul, and to love him with her whole heart.

Over this simple fact let no more be now said. Hilary said nothing. She recognised it herself as soon as he was gone; a plain, sad, solemn truth which there was no deceiving herself did not exist, even had she wished its non-existence. Perhaps Johanna also found it out, in her darling's extreme paleness and unusual quietness for a while; but she too said nothing. Mr. Lyon wrote regularly to Ascott, and once or twice to her, Miss Leaf; but though every one knew that Hilary was his particular friend in the whole family, he did not write to Hilary. He had departed rather suddenly, on account of "some plan which, he said, affected his future very considerably; but which, though he was in the habit of telling them his affairs, he did not further explain. Still Johanna knew he was a good man, and though no man could be quite good enough for her darling,—she liked him, she trusted him.

What Hilary felt none knew. But she was very girlish in some things; and her life was all before her, full of infinite hope. By and by her colour returned, and her merry voice and laugh were heard about the house just as usual.

This being the position of affairs, it was not surprising that after Ascott's last speech Hilary's mind wandered from Dido and Æneas, to vague listening, as the lad began talking of his grand future—the future of a medical student, all expenses being paid by his godfather, Mr. Ascott, the merchant, of Russell Square, once a shop-boy of Stowbury. Nor was it unnatural that all Ascott's anticipations of London resolved themselves, in his aunt's eyes, into the one fact that he would "see Mr. Lyon."

But in telling thus much about her mistresses, I have, for the time being, lost sight of Elizabeth Hand.

Left to herself, the girl stood for a minute or two looking around her in a confused manner, then, rousing her faculties, began mechanically to obey the order with which her mistress had quitted the kitchen, and to wash up the tea-things. She did it in a fashion that, if seen, would have made Miss Leaf thankful the ware was only the common set, and not the cherished china belonging to former days: still she did it, noisily it is true, but actively, as if her heart were in her work. Then she took a candle and peered about her new domains.

These were small enough, at least they would have seemed so to other eyes than Elizabeth's; for, until the schoolroom and box-closet above had been kindly added by the landlord, who would have done anything to show his respect for the Misses Leaf, it had been merely a six-roomed cottage—parlour, kitchen, back-kitchen, and three upper chambers. It was a very cosy house notwithstanding, and it seemed to Elizabeth's eyes a perfect palace.

For several minutes more she stood and contemplated her kitchen, with the fire shining on the round oaken stand in the centre, and the large wooden-bottomed chairs, and the loud-ticking clock with its tall case, the inside of which, with its pendulum and weights, had been a perpetual mystery and delight, first to Hilary's, and then to Ascott's childhood! Then there was the sofa, large and ugly, but oh! so comfortable, with its faded, flowered chintz, washed and worn for certainly twenty years. And over all, Elizabeth's keen observation was attracted by a queer machine apparently made of thin rope and bits of wood, which hung up to the hooks on the ceiling, an old-fashioned baby's swing. Finally, her eye dwelt with content on the blue and red diamond-tiled floor, so easily swept and mopped, and (only Elizabeth did not think of that, for her hard childhood had been all work and no play) so beautiful to whip tops upon! Hilary and Ascott, condoling together over the new servant, congratulated themselves that their delight in this occupation had somewhat faded, though it was really not so many years ago since one of the former's pupils, coming suddenly out of the school-room, had caught her in the act of whipping a meditative top round this same kitchen-floor.

Meantime, Elizabeth penetrated farther, investigating the back-kitchen, with its various conveniences; especially the pantry, every shelf of which was so neatly arranged and so beautifully clean. Apparently this neatness impressed the girl with a sense of novelty and curiosity; and though she could hardly be said to meditate—her mind was not sufficiently awakened for that—still, as she stood at the kitchen fire, a slight thoughtfulness deepened the expression of her face, and made it less dull and heavy than it had at first appeared.

"I wonder which on 'em does it all? They must work pretty hard, I reckon; and two o' them's such little uns."

She stood a while longer; for sitting down appeared to be to Elizabeth as new a proceeding as thinking; then she went up stairs, still literally obeying orders, to shut windows and pull down blinds, at night-fall. The bedrooms were small, and insufficiently, nay, shabbily furnished; but the floors were spotless—ah, poor Johanna! and the sheets, though patched and darned to the last extremity, were white and whole. Nothing was dirty, nothing untidy. There was no attempt at picturesque poverty—for whatever novelists may say, poverty cannot be picturesque; but all things were decent and in order. The house, poor as it was, gave the impression of belonging to "real ladies;" ladies who thought no manner of work beneath them, and who, whatever they had to do, took the pains to do it as well as possible.

Mrs. Hand's roughly-brought-up daughter had never been in such a house before, and her examination of every new corner of it seemed quite a revelation. Her own little sleeping nook was fully as tidy and comfortable as the rest, which fact was not lost upon Elizabeth. That bright look of mingled softness and intelligence—the only thing which beautified her rugged face—came into the girl's eyes as she "turned down" the truckle-bed, and felt the warm blankets and sheets, new and rather coarse, but neatly sewed.

"Her's made 'em hersel', I reckon. La!" Which of her mistresses the "her" referred to, remained unspecified; but Elizabeth, spurred to action by some new idea, went briskly back into the bedrooms, and looked about to see if there was anything she could find to do. At last, with a sudden inspiration, she peered into a washstand, and found there an empty ewer. Taking it in one hand and the candle in the other, she ran down stairs.

Fatal activity! Hilary's pet cat, startled from sleep on the kitchen-hearth, at the same instant ran wildly up stairs; there was a start—a stumble—and then down came the candle, the ewer, Elizabeth, and all.

It was an awful crash. It brought every member of the family to see what was the matter.

"What has the girl broken?" cried Selina.

"Where has she hurt herself?" anxiously added Johanna.

Hilary said nothing, but ran for a light and then picked up first the servant, then the candle, and then the fragments of crockery.

"Why, it's my ewer, my favourite ewer, and it's all smashed to bits, and I never can match it. You careless, clumsy, good-for-nothing creature!"

"Please, Selina," whispered her distressed elder sister.

"Very well, Johanna; you are the mistress, I suppose? why don't you speak to your servant!"

Miss Leaf, in an humbled, alarmed way, first satisfied herself that no bodily injury had been sustained by Elizabeth, and then asked her how this disaster had happened?—for a serious disaster she felt it was. Not only was the present loss annoying, but a servant with a talent for crockery-breaking would be a far too expensive luxury for them to think of retaining. And she had been listening in the solitude of the parlour to a long lecture from her always dissatisfied younger sister, on the great doubts Selina had about Elizabeth's "suiting."

"Come now," seeing the girl hesitated, "tell me the plain truth. How was it?"

"It was the cat!" sobbed Elizabeth.

"What a barefaced falsehood!" exclaimed Selina.

"You wicked girl, how could it possibly be the cat? Do you know you are telling a lie, and that lies are hateful, and that all liars go to"—

"Nonsense; hush!" interrupted Hilary, rather sharply, for Selina's "tongue," the terror of her childhood, now merely annoyed her. Selina's temper was a long understood household fact—they did not much mind it, knowing her bark was worse than her bite—but it was provoking that she should exhibit herself so soon before the new servant.

The latter first looked up at the lady with simple surprise: then as, in spite of the other two, Miss Selina worked herself up into a downright passion, and unlimited abuse fell upon the victim's devoted head, Elizabeth's manner changed. After one dogged repetition of, "It was the cat," not another word could be got out of her. She stood, her eyes fixed on the kitchen-floor, her brows knitted, and her under-lip pushed out,—the very picture of sullenness. Young as she was, Elizabeth evidently had, like her unfortunate mistress, "a temper of her own"—a spiritual deformity that some people are born with, as others with hare-lip or club-foot; only, unlike these, it may be conquered; though the battle is long and sore, sometimes ending only with life.

It had plainly never commenced with poor Elizabeth Hand. Her appearance, as she stood under the flood of sharp words poured out upon her, was absolutely repulsive. Even Miss Hilary turned away, and began to think it would have been easier to teach all day and do house-work half the night, than have the infliction of a servant—to say nothing of the disgrace of seeing Selina's "peculiarities" so exposed before a stranger.

She knew of old that to stop the torrent was impracticable. The only chance was to let Selina expend her wrath and retire, and then to take some quiet opportunity of explaining to Elizabeth that sharp language was only "her way," and must be put up with. Humiliating as this was, and fatal to domestic authority, that the first thing to be taught a new servant was to "put up with" one of her mistresses, still there was no alternative. Hilary had already foreboded and made up her mind to such a possibility, but she had hoped it would not occur the very first evening.

It did, however, and its climax was worse even than she anticipated. Whether, irritated by the intense sullenness of the girl, Selina's temper was worse than usual; or whether, as is always the case with people like her, something else had vexed her, and she vented it upon the first cause of annoyance that occurred, certain it is that her tongue went on unchecked till it failed from sheer exhaustion. And then, as she flung herself on the sofa—oh, sad mischance!—she caught sight of her nephew standing at the school-room door, grinning with intense delight, and making faces at her behind her back.

It was too much. The poor lady had no more

words left to scold with; but she rushed up to Ascott, and, big lad as he was, she soundly boxed his ears.

On this terrible climax let the curtain fall.

CHAPTER II.

COMMON as were the small feuds between Ascott and his Aunt Selina, they seldom reached such a catastrophe as that described in my last chapter. Hilary had to fly to the rescue, and literally drag the furious lad back into the schoolroom, while Johanna, pale and trembling, persuaded Selina to quit the field, and go and lie down. This was not difficult; for the instant she saw what she had done, how she had disgraced herself and insulted her nephew, Selina felt sorry. Her passion ended in a gush of "nervous" tears, under the influence of which she was led up stairs and put to bed, almost like a child,—the usual termination of these pitiful outbreaks.

For the time nobody thought of Elizabeth. The hapless cause of all stood "spectatress of the fray," beside her kitchen fire. What she thought history saith not. Whether in her own rough home she was used to see brothers and sisters quarrelling, and mothers boxing their children's ears, cannot be known; whether she was or was not surprised to see the same proceedings among ladies and gentlemen, she never betrayed; but certain it is, that the little servant became uncommonly serious; yes, serious rather than sulky, for her "black" looks vanished gradually, as soon as Miss Selina left the kitchen.

On the re-appearance of Miss Hilary it had quite gone. But Hilary took no notice of her; she was in search of Johanna, who, shaking and cold with agitation, came slowly down stairs.

"Is she gone to bed?"

"Yes; my dear. It was the best thing for her; she is not at all well to-day."

Hilary's lip curled a little, but she replied not a word. She had not the patience with Selina that Johanna had. She drew her elder sister into the little parlour, placed her in the arm-chair, shut the door, came and sat beside her, and took her hand.

Johanna pressed it, shed a quiet tear or two, and wiped them away. Then the two sisters remained silent, with hearts sad and sore.

Every family has its skeleton in the house; this was theirs. Whether they acknowledged it or not, they knew quite well that every discomfort they had, every slight jar which disturbed the current of household peace, somehow or other originated in "poor Selina." They often called her "poor" with a sort of pity—not unneeded, heaven knows!—for if the unhappy are to be pitied, ten times more so are those who make others miserable.

This was Selina's case, and had been all her life. And, sometimes, she herself knew it. Sometimes, after an especially bad outbreak, her compunction and remorse would be almost as terrible as her passion; forcing her sisters to make every excuse for her; she "did not mean it," it was only "ill health," or "nerves," or her "unfortunate way of taking things."

But they knew in their hearts that not all their poverty, and the toils it entailed, not all the hardships and humiliations of their changed estate, were half so bitter to bear as this something—no moral crime, and yet in its results as fatal as crime—which they called Selina's "way."

Ascott was the only one who did not attempt to mince matters. When a little boy he had openly declared he hated Aunt Selina; when he grew up he as openly defied her; and it was a most difficult matter to keep even decent peace between them. Hilary's wrath had never gone further than wishing Selina was married; that appearing the easiest way to get rid of her. Latterly she had ceased this earnest aspiration; it might be, because, learning to think more seriously of marriage, she felt that a woman who is no blessing in her own household, is never likely much to bless a husband's; and that, looking still farther forward, it was on the whole a mercy of Providence which made Selina not the mother of children.

Yet her not marrying had been somewhat a surprise; for she had been attractive in her day; handsome and agreeable in society. But perhaps for all that, the sharp eye of the opposite sex had discovered the cloven foot; since, though she had received various promising attentions, poor Selina had never had an offer. Nor fortunately had she ever been known to care for anybody; she was one of those women who would have married as a matter of course, but who never would have been guilty of the weakness of falling in love. There seemed small probability of shipping her off, to carry into a new household the restlessness, the fretfulness, the captious fault-finding with others, the readiness to take offence at what was done and said to herself, which made poor Selina Leaf the unacknowledged grief and torment of her own.

Her two sisters sat silent. What was the use of talking? It would be only going over and over again the old thing; trying to ease and shift a little the long-familial burden, which they knew must be borne. Nearly every household has, near or remote, some such burden, which Heaven only can lift off or help to bear. And sometimes, looking round the world outside, these two congratulated themselves, in a half sort of way, that theirs was as light as it was; that Selina was, after all, a well-meaning, well-principled woman, and, in spite of her little tempers, really fond of

her family, as she truly was, at least as fond as a nature which has its centre in self can manage to be.

Only when Hilary looked, as to-night, into her eldest sister's pale face, where year by year the lines were deepening, and saw how every agitation such as the present shook her more and more,—she who ought to have a quiet life and a cheerful home, after so many hard years,—then Hilary, fierce in the resistance of her youth, felt as if what she could have borne for herself she could not bear for Johanna, and, at the moment, sympathized with Ascott in actually “hating” Aunt Selina.

“Where is that boy? He ought to be spoken to,” Johanna said at length, rising wearily.

“I have spoken to him; I gave him a good scolding. He is sorry, and promises never to be so rude again.”

“Oh, no; not till the next time,” replied Miss Leaf, hopelessly. “But, Hilary,” with a sudden consternation, “what are we to do about Elizabeth?”

The younger sister had thought of that. She had turned over in her mind all the pros and cons, the inevitable “worries” that would result from the presence of an additional member of the family, especially one from whom the family-skeleton could not be hid, to whom it was already only too fatally revealed.

But Hilary was a clear-headed girl, and she had the rare faculty of seeing things as they really were, undistorted by her own likings or dislikings,—in fact, without reference to herself at all. She perceived plainly that Johanna ought not to do the housework, that Selina would not, and that she could not,—*ergo*, they must keep a servant. Better, perhaps, a small servant, over whom they could have the same influence as over a child, than one older and more independent, who would irritate her mistresses at home, and chatter of them abroad. Besides, they had promised Mrs. Hand to give her daughter a fair trial. For a month, then, Elizabeth was bound to stay; afterwards, time would show. It was best not to meet troubles half way.

This explained, in Hilary's cheerful voice, seemed greatly to reassure and comfort her sister.

“Yes, love, you are right; she must remain her month out, unless she does something very wrong. Do you think that really was a lie she told?”

“About the cat? I don't quite know what to think. Let us call her, and put the question once more. Do you put it, Johanna. I don't think she could look at you, and tell you a story.”

Other people, at sight of that sweet, grave face, its bloom faded, and hairs silvered long before their time, yet beautiful, with an almost child-like simplicity and child-like peace,—most other people would have been of Hilary's opinion.

“Sit down; I'll call her. Dear me, Johanna,

we shall have to set up a bell as well as a servant, unless we had managed to combine the two.”

But Hilary's harmless little joke failed to make her sister smile; and the entrance of the girl seemed to excite positive apprehension. How was it possible to make excuse to a servant for her mistress's shortcomings? how scold for ill-doing this young girl, to whom, ere she had been a night in the house, so bad an example had been set? Johanna half expected Elizabeth to take a leaf out of Selina's book, and begin abusing herself and Hilary.

No; she stood very sheepish, very uncomfortable, but not in the least bold or sulky,—on the whole, looking rather penitent and humble.

Her mistress took courage.

“Elizabeth, I want you to tell me the truth about that unfortunate breakage. Don't be afraid. I had rather you broke everything in the house than have told me what was not true.”

“It *was* true; it was the cat.”

“How could that be possible? You were coming down stairs with the ewer in your hand.”

“Her foot got under my feet, and threw me down, and so I tumbled, and smashed the thing again the floor.”

The Misses Leaf glanced at each other. This version of the momentous event was probable enough, and the girl's eager, honest manner gave internal confirmatory evidence pretty strong.

“I am sure she is telling the truth,” said Hilary. “And remember what her mother said about her word being always reliable.”

This reference was too much for Elizabeth. She burst out, not into actual crying, but into a smothered choke.

“If you donnot believe me, missis, I'd rather go home to mother.”

“I do believe you,” said Miss Leaf, kindly; then waited till the pinafore, used as a pocket-handkerchief, had dried up grief and restored composure.

“I can quite well understand the accident now; and I am sure if you had put it as plainly at first, my sister would have understood it too. She was very much annoyed, and no wonder. She will be equally glad to find she was mistaken.”

Here Miss Leaf paused, somewhat puzzled how to express what she felt it her duty to say, so as to be comprehended by the servant, and yet not let down the dignity of the family. Hilary came to her aid.

“Miss Selina is sometimes hasty; but she means kindly always. You must take care not to vex her, Elizabeth; and you must never answer her back again, however sharply she speaks. It is not your business; you are only a child, and she is your mistress.”

"Is her? I thought it was this 'un."

The subdued clouding of Elizabeth's face, and her blunt pointing to Miss Leaf as "this 'un," were too much for Hilary's gravity. She was obliged to retreat to the press, and begin an imaginary search for a book.

"Yes, I am the eldest, and I suppose you may consider me specially as your mistress," said Johanna simply. "Remember always to come to me in any difficulty; and, above all, to tell me everything outright, as soon as it happens. I can forgive you almost any fault, if you are truthful and honest; but there is one thing I never could forgive, and that is deception. Now go with Miss Hilary, and she will teach you how to make the porridge for supper."

Elizabeth obeyed, silently; she had apparently a great gift for silence. And she was certainly both obedient and willing: not stupid, either, though a nervousness of temperament which Hilary was surprised to find in so big and coarse-looking a girl, made her rather awkward at first. However, she succeeded in pouring out, and carrying into the parlour, without accident, three platefuls of that excellent condiment which formed the frugal supper of the family; but which they ate, I grieve to say, in an orthodox southern fashion, with sugar or treacle, until Mr. Lyon—greatly horrified thereby—had instituted his national custom of "supping" porridge with milk.

It may be a very unsentimental thing to confess, but Hilary, who even at twenty was rather practical than poetical, never made the porridge without thinking of Robert Lyon, and the day when he first stayed to supper, and ate it, or as he said, and was very much laughed at, ate "them" with such infinite relish. Since then, whenever he came, he always asked for his porridge, saying it carried him back to his childish days. And Hilary, with that curious pleasure that women take in waiting upon any one unto whom the heart is ignorantly beginning to own the allegiance, humble yet proud, of Miranda to Ferdinand—

"To be your fellow

You may deny me; but I'll be your servant

Whether you will or no."

Hilary contrived always to make his supper herself.

Those pleasant days were now over; Mr. Lyon was gone. As she stood alone over the kitchen-fire, she thought—as now and then she let herself think for a minute or two in her busy prosaic life—of that August night, standing at the front door, of his last "good-bye," and last hand-clasp, tight, warm, and firm; and somehow she, like Johanna, trusted in him.

Not exactly in his love; it seemed almost impossible that he should love her, at least till she

grew much more worthy of him than now; but in himself, that he would never be less himself, less thoroughly good and true than now. That, some time, he would be sure to come back again, and take up his old relations with them, brightening their dull life with his cheerfulness; infusing in their feminine household the new element of a clear, strong, energetic, manly will, which sometimes made Johanna say that instead of twenty-five the young man might be forty; and, above all, bringing into their poverty the silent sympathy of one who had fought his own battle with the world—a hard one, too, as his face sometimes showed—though he never said much about it.

Of the results of this pleasant relation—whether she, being the only truly marriageable person in the house, Robert Lyon intended to marry her, or was expected to do so, or that society would think it a very odd thing if he did not do so—this unsophisticated Hilary never thought at all. If he had said to her that the present state of things was to go on for ever; she to remain always Hilary Leaf, and he Robert Lyon, the faithful friend of the family, she would have smiled in his face and been perfectly satisfied.

True, she had never had anything to drive away the smile from that innocent face; no vague jealousies aroused; no maddening rumours afloat in the small world that was his and theirs. Mr. Lyon was grave and sedate in all his ways; he never paid the slightest attention to, or expressed the slightest interest in, any woman whatsoever.

And so this hapless girl loved him—just himself; without the slightest reference to his "connexions," for he had none; or his "prospects," which, if he had any, she did not know of. Alas! to practical and prudent people I can offer no excuse for her; except, perhaps, what Shakspeare gives in the creation of his poor Miranda.

When the small servant re-entered the kitchen, Hilary, with a half sigh, shook off her dreams, called Ascott out of the schoolroom, and returned to the work-a-day world and the family supper.

This being ended, seasoned with a few quiet words administered to Ascott, and which on the whole he took pretty well, it was nearly ten o'clock.

"Far too late to have kept up such a child as Elizabeth; we must not do it again," said Miss Leaf, taking down the large Bible with which she was accustomed to conclude the day,—Ascott's early hours at school and their own house-work making it difficult of mornings. Very brief the reading was, sometimes not more than half a dozen verses, with no comment thereon; she thought the Word of God might safely be left to expound itself. Being a very humble-minded woman, she did not feel qualified to lead long devotional

"exercises," and she disliked formal written prayers. So she merely read the Bible to her family, and said after it the Lord's Prayer.

But, constitutionally shy as Miss Leaf was, to do even this in presence of a stranger cost her some effort; and it was only a sense of duty that made her say "yes" to Hilary's suggestion, "I suppose we ought to call in Elizabeth?"

Elizabeth came.

"Sit down," said her mistress; and she sat down, staring uneasily round about her, as if wondering what was going to befall her next. Very silent was the little parlour; so small, that it was almost filled up by its large square piano, its six cane-bottomed chairs, and one easy-chair, in the which sat Miss Leaf, with the great Book in her lap.

"Can you read, Elizabeth?"

"Yes, ma'am."

"Hilary, give her a Bible."

And so Elizabeth followed, guided by her not too clean finger, the words, read in that soft, low voice, somewhere out of the New Testament; words simple enough for the comprehension of a child or a heathen. The "South Sea Islander," as Ascott long persisted in calling her, then, doing as the family did, turned round to kneel down; but in her confusion she knocked over a chair, causing Miss Leaf to wait a minute till reverent

silence was restored. Elizabeth knelt, with her eyes fixed on the wall: it was a green paper, patterned with bunches of nuts. How far she listened, or how much she understood, it was impossible to say; but her manner was decent and decorous.

"*Forgive us our trespasses, as we forgive those that trespass against us.*" Unconsciously Miss Leaf's gentle voice rested on these words, so needed in the daily life of every human being, and especially of every family. Was she the only one who thought of "poor Selina?"

They all rose from their knees, and Hilary put the Bible away. The little servant "hung about," apparently uncertain what was next to be done, or what was expected of her to do. Hilary touched her sister.

"Yes," said Miss Leaf, recollecting herself, and assuming the due authority, "it is quite time for all the family to be in bed. Take care of your candle, and mind and be up at six to-morrow morning."

This was addressed to the new maiden, who dropped a curtsy, and said, almost cheerfully, "Yes, ma'am."

"Very well. Good-night, Elizabeth."

And following Miss Leaf's example, the other two, even Ascott, said civilly and kindly, "Good-night, Elizabeth."

ALL ABOUT THE INDIGO.

In a certain Scottish village, there was, long ago, a worthy man, who kept himself in good and honest repute, and in good and comfortable livelihood, by supplying the people of the neighbourhood with most of the commodities which their simple mode of life required. He was, in short, the shopkeeper of the village. Now, amongst the wants of his customers there was one, which existed indeed on a very limited scale, but which still required to be supplied. It so happened that the good linen shirts of the worthy people, when washed with soap and water, and made as white as hard rubbing could make them, had invariably a yellowish tinge after they were dried on the green. It was ascertained that this evil was remedied, or rather prevented, by the mixture of a very minute quantity of indigo with the "graith." Thus it was that a little implement, shaped like a shuttlecock, composed of a little knot of indigo wrapped in a rag, and tied round the neck with a thread, became as essential a belonging to a well-regulated household, as a kail-pot or a frying-pan. A very small quantity was necessary, but that quantity must be had, and, of course, it must be kept in stock in the universal

store. On one occasion, finding his stock running low, the "merchant" indited and sent off by the carrier, to the wholesale house in Glasgow with which he dealt, a note, which ran somewhat thus:—"Pleas sen too pon Indgo immediat. And remains, etc." Typography does not enable us to show precisely how the mistake originated; but the intelligent reader who has had occasion to see such documents will comprehend that it was not very wonderful that what was in the mind of the writer "two pounds" should have been to the eye of the reader 100 tons. The Glasgow house, though greatly astonished at the magnitude of the order, intimated that they would send, from week to week, as much as the carrier could take of their own stock, which might be some three or four tons; but that they had sent on the order to their correspondents in London, with instructions to lose no time in executing it. The worthy merchant was completely overpowered by this intelligence; and while he was meditating on the course of action that might be necessary in the astounding circumstances, he received another letter from the Glasgow house, enclosing a despatch from the London firm, to the effect that the indigo was pur-

chased "as per their esteemed favour," and ready for shipment; but that, since the purchase was effected, there had been a sudden rise in the price, and that the "parties" from whom they purchased were willing to forfeit £500 per ton if the sale were cancelled. The worthy shopkeeper now "rose to the occasion," and would not accept the terms offered. The result was that, after some negotiation, he received some £50,000 in hard cash, which, of course, he invested in land, and became the "forebear" of one of the richest families in the Upper Ward of Clydesdale.

NOW there are, no doubt, various points in this story that will not bear criticism, and we are not going to stand up for its absolute accuracy. But there is a point in it which makes us think it not impossible that it had some foundation in fact. Why was indigo selected, if the story were altogether fictitious, in preference to a thousand other commodities which are to be found in village shops? In point of fact, indigo is the only substance whose fluctuations of price bring the story to the confines of possibility.

Supposing it were a myth, it undoubtedly embodies the great fact, that multitudes of splendid fortunes have been made and lost by the fluctuations in the price of indigo. One instance was very notorious in Bengal about a quarter of a century ago. In Calcutta, where it is said that lawyers and undertakers are the only two classes who never require to appear in the insolvent court, a gentleman of the former class had realized a comfortable fortune of some three lakhs—that is, about £30,000—while he was yet little past the prime of life. Deeming it wiser to retire with this competence than to risk the loss of his health by remaining longer in an unhealthy climate, he resolved to return to England. Having consulted a mercantile friend as to the best method of transporting his savings, he was advised to invest his capital in indigo, and bring it home in the ship with him. He acted on this advice, and, on disposing of his cargo, found that he had just doubled his capital by the transaction. He had not been long in England before he began to reason with himself, that, if £30,000 had become £60,000, there was no good reason why £60,000 should not become £120,000. He therefore remitted nearly the whole of his money to his mercantile friend, with instructions to invest it in the most advantageous manner. In those days the East India Company, with the view of encouraging the exportation of country produce, granted advances on goods shipped, on the security of the bills of lading, protecting themselves, of course, by a considerable "margin." In this way indigo purchased for £60,000 might be shipped; and an advance of perhaps £40,000 might be got upon it. As soon as that was shipped, an advance,

it may be, of £25,000 might be got on that, and so on, in what the mathematicians call a converging series. This course was adopted in the present case; and the result was, that when the indigo was sold, and all charges paid, and the advances of the Company settled, with interest, the whole capital originally invested had simply disappeared; and the worthy lawyer had barely enough left to pay his passage back to Calcutta, to begin life anew. In this case the figures may not be absolutely correct, but the story is substantially true.

All commodities, except perhaps corn, are liable to great variations in the demand; but there does not appear to be any one of which the supply is so precarious as that of indigo. Accordingly, we find the prices varying, within a few months, from 1s. to 3s. 6d. per pound for the worst, and from 5s. 6d. to 10s. 8d. for the best. This shows that the tradition which we have recorded is not beyond the bounds of possibility, as a rise of 5s. per pound would make a difference of £560 on a ton. The quantities imported from India show the extreme variation of the out-turn of the crops. We find, for example, that, in 1822, the export from India was only 2,549,284 pounds, while in 1828 it was as high as 9,683,626 pounds. In 1829 it was under six millions, in 1830, nearly eight millions, and in both 1834 and 1835, it was under four millions. Suppose the demand had been uniform during all that period, it is very evident that there must have been a great fluctuation of prices; but if from any cause the demand in 1828 happened to be below the average, or that in 1822 it was above the average, it is clear that, in the one case, indigo must have been worth little or nothing, while in the other, it would bring enormous prices. Why the amount produced is so variable, will appear from a consideration of the casualties to which it is subjected at every stage of its progress. Of these our readers will have some idea if they will favour us with their attention, while we give a short account of the cultivation and manufacture of indigo, as they are practised in the most important indigo-field, the province of Bengal.

To begin formally, then, we should state that indigo may be extracted from various plants; but that which is mainly cultivated for the purpose of yielding it, both on account of the quality and the quantity of the colouring matter which it affords, is that called by the botanists *Indigofera tinctoria*. We think we have been told that it is a biennial plant; but it is always cultivated as an annual, being sown, very much as wheat is in this country, partly in autumn and partly in spring, and reaped in summer. The ground is well ploughed and harrowed, and a great deal depends upon the seed being sown when it is neither too wet nor too dry.

If it be too wet, the seed may be all rotted; if too dry, the young plants are burnt up before they can root themselves in the soil. These are the first dangers to which the crop is exposed. If the former mistake be committed, it can be remedied by a second sowing, with only the loss of the original seed; the latter is without remedy. The moisture of the earth at the autumn sowing is dependent upon the drying up of the inundation with which the whole country has been covered. There is, therefore, always a right time, and the skill of the farmer should enable him neither to anticipate it nor let it pass. But for the preparation of the ground for the spring sowing, the planter is dependent upon precarious showers, which may not come at all, or which may come too suddenly in large quantities, in either of which cases the seed-time is unfavourable. Farmers everywhere are in the habit of grumbling about the weather; but indigo-planters seem to outdo all their brethren in this exercise. The Calcutta newspapers, at certain seasons of every year, teem with letters, signed, "Blue Ruin," "In the Blues," "Nil" (in Bengali, "indigo," in Latin, "nothing"), predicting the utter failure of the crop, and the ruin of all concerned in it. It is sometimes hinted that these are written not without a view of influencing the London market. These predictions are, of course, sometimes realized; but generally the fields in the month of May look very well. There is nothing particularly pretty in the indigo plant, which is a shrub of about four feet in height, with a small reddish flower; but a field of it looks very well. By the end of May the rivers begin to swell, through the melting of the snows in the mountains, and by the middle of June the rains generally set in. These two causes soon flood the country, and the indigo must be cut before this takes place. It is found that the plant yields the best return, both in quantity and quality, when it is just bursting into flower. But sometimes the rise of the water makes it necessary to cut it before it has attained this

Cutting the plant.

stage; sometimes it cannot be cut rapidly enough, so that the colour is literally washed out of it.

The indigo-harvest, when all has gone well, is, like harvest everywhere, a joyous season. The plant is cut down, very much as our corn is cut, with a kind of sickle. It is then tied into sheaves, and these

Bringing the Indigo in carts, unloading, etc.

gathered into bundles of a fixed size, and conveyed on carts, or boats, to the indigo factory. The autumn-sown indigo is generally cut in the latter half of June, and the spring-sown in the latter half of July, and former half of August.

When the cut plant is delivered at the factory,

Bringing the Indigo in Boats.

it is carefully built into large vats. These vats are about twenty feet square and four feet deep. The plant is stacked to about a foot above the edge, and then pressed down by levers to about three inches within the brim. Water is then immediately let into the vat, and the process of fermentation begins. Various circumstances influence the time that is necessary for the completion of this process; and the judgment of the planter—or, as we must now call him, the manufacturer—is taxed to the uttermost to hit the exact moment of stopping it. The time requisite may range from ten to twenty hours, according to the temperature and state of the weather, and the condition of the plant with respect to greenness or ripeness. If the fermentation is stopped too soon, a portion of the indigo is left in the leaves; if it is continued too long, a portion of the woody fibre is mixed with it, and its quality is deteriorated. This is probably a main cause of the great range of price, not at different times, but of different indigos at one and

the same time. At one sale, indigo may be purchased at a shilling and at eight shillings a pound. There are, however, other causes that contribute to this result. Some soils will not produce so good a quality of indigo as others under any management.

When the superintendent considers that the water contains all that it ought to contain, and nothing more, a cock is opened, and it is run off into a lower vat, where it is to undergo the pro-

Beating the Indigo.

cess of "beating," which is administered by a number of men, who stand in the vat, and strike it smartly with paddles. This is a mechanical rather than a chemical process, and seems to us to be precisely analogous to that of churning. Indigo is insoluble in water, and is merely held in suspension in it. The object of the beating is to collect it together, form it into grains of a proper size, and so facilitate its deposition. So far the beating is simply churning. But as not only is the quantity of the indigo diminished by imperfect beating, but also its quality is deteriorated by too much, it is probable that the bringing of every particle of the dye-impregnated liquid into contact with the atmosphere is necessary, in order to produce the perfection of colour. During this process, the water, which was green when it was run off from the fermenting vat, becomes a fine purple blue. When this change is thoroughly effected, the process is complete. The indigo is still held suspended in the water, but is now granulated; and on being left to stand for two or three hours, subsides to the bottom of the vat. As the water originally was green, it, of course, when the blue is separated from it, becomes yellow. A series of holes in the side of the vat are now unplugged, and the water is run off, leaving the indigo. It is then mixed with a smaller quantity of clean water, and run through one or more cloths, or sieves of fine wire-gauze, into a boiler. It is here boiled briskly until a considerable portion of the water is evaporated, being constantly stirred all the time to prevent what cooks call "setting on." This process also may err by defect or excess.

We have already described an operation that bears a striking resemblance to the making of butter; what still remains to be described as much resembles another process in our dairies, the making of cheese. The indigo is run off from the boiler, and received in a large sheet, which is hung from iron rings fixed to the inside of an immense tub. Through this sheet a considerable portion of the water runs; and as it carries off a portion of the indigo with it, it is pumped back into the boiler, and mingled with the next boiling. When the sheet is full, the corners of it are drawn together, and weights are laid upon it, which press out more of the water, until the indigo is reduced to the consistency of thick mud. It is then put into square boxes, with perforated sides and bottoms, and lined with cloth, precisely as curd is put into a cheese-vat. When put in, it is almost a foot thick. It is then put under a powerful screw-press, and the power is slowly and carefully applied, until it is reduced to a solid slab three inches thick. This slab is taken out, and cut into cakes three inches square; so that each cake is an exact cube. Each one of these is marked with the factory mark. These cakes are then removed into

Pressing the plant.

a drying-loft, and are in due time packed in chests and conveyed to market.

The indigo-planting interest is a powerful one in India, and is every year becoming more so. An immense amount of capital is embarked in the trade, which might undoubtedly be one of the most powerful agencies for developing the resources of the country. A great deal has been said and written of late respecting the character of the planters, and the relation in which they stand towards the native agricultural population. On the former point, we believe it may be safely said that, as in all other classes of society, so amongst the indigo-planters, some are most excellent men; some are very bad; and the great majority are neither very good nor very bad. We have before us a book, written and exquisitely illustrated by an excellent friend of ours, describing a visit to an indigo factory; and it would almost appear,

from his descriptions, that a factory is a little paradise.* Now this, we are sure, is not merely the effect of artistic colouring, but is quite true with respect to the particular factory described. We know the owner of that factory to be a gentleman of high principle, wielding his immense influence with an earnest desire to make his numerous dependants the better for him. But all indigo-planters are not like him. It must, we think, be admitted, that the circumstances in which those engaged in the cultivation are placed, are unfavourable to the development of high qualities. A very large number of them go on from year to year, losing money every season, borrowing at enormous interest, and waiting for a season which shall not only make them square with the world, but put them in possession of a large fortune. We hope and believe that there is a considerable improvement now, and that there is good reason to expect a much greater improvement soon; but during the earlier part of our Indian residence, it was quite an understood thing, that a factory was not complete without a troop of *lattaies* or club-men. These were constantly ready to stand on the defensive, and probably sometimes on the offensive also, against similar troops in the pay of the zemindars.

The *ryots*, or cultivators, have complained grievously of the treatment which they have received at the hands of the planters; and almost all planters have acknowledged that the relations betwixt the two classes have been most unsatisfactory. The land-tenure in India is very peculiar, and we cannot here enter upon its varieties at any length. We may state, however, in general terms, that, so far as Bengal is concerned, the Government is the sole owner of all the land. The zemindars, who are frequently spoken of as proprietors, are rather the agents of the Government for drawing their rents, and with various privileges connected with that office. But the *ryot*, or tenant farmer, is so far a proprietor, that he has an absolute right to his farm in perpetuity, provided that he regularly pays his rent. Now the zemindars are exceedingly jealous of the influence of the indigo-planters over the *ryots*, and, undoubtedly in many instances, stir them up to refuse to sow indigo, even when they might be persuaded that it was for their advantage to do so. The indigo-planter is, to a great extent, dependent upon the good-will of the *ryots* for the success of his operations, indeed for the power of

carrying on these operations at all. The general mode of proceeding is this:—The planter furnishes seed to the *ryot*, charging it at a certain fixed price, which, even the *ryots* admit, is almost always below its market value. They are generally also willing to give advances in money; indeed, one of the charges against them is that they force their advances upon the *ryots*, in order to have them as much as possible in their power. In consideration of these advances, the *ryot* binds himself to deliver the produce of the field at the factory, and is to be paid for it at so much per bundle. Now many a *ryot* takes the seed and the money, and then refuses to sow the indigo. Independently of considerations of profit, there is a religious motive mixed up with this, as there generally is with every evil action of a Hindu. It is a great work of merit to cultivate rice, or indeed any human food; it is correspondingly wicked to give up land for the growth of a plant which is not fit for the food of man.

This gives rise to a state of ill-feeling betwixt the planters and the *ryots*; which is doubtless aggravated by the oppression exercised upon the latter by the native servants of the former, without the knowledge of their masters. This ill-feeling lately reached such a climax that the Government appointed a commission to inquire into the whole matter. The result certainly was to clear the planters as a body from many of the charges that had been constantly brought against them. But as to some of the most important questions referred to them, the commissioners held diametrically opposite opinions to each other. Shortly after this, that is, a few months ago, arose the famous *Nil Durpun* controversy. Some native poet had written a Bengali drama, in which an indigo planter was introduced as the *mauvais sujet* of the piece. It doubtless contained a good deal of scurrilous abuse. With a view of letting it be known by influential men what are the sentiments of the natives with respect to the character and conduct of the planters, and without endorsing these sentiments, a very intimate friend of ours, the Rev. James Long, of the Church Missionary Society, translated the play into English; and asked another friend of ours, Mr. Seton-Karr, of the Civil Service, then Secretary to the Government of Bengal, to have copies of it sent post-free to many influential men. To this Mr. Seton-Karr assented, and in so doing undoubtedly exceeded the line of his duty as a public officer. The planters were indignant at this, and endeavoured to raise an action for libel against Mr. Long. Finding that a civil action for damages could not be maintained, they had recourse to a criminal prosecution. Mr. Long was found guilty, and sentenced to pay a fine of 1000 rupees, and to undergo a month's imprisonment.

* *Rural Life in Bengal.* By a Calcutta Artist. We have presumed, on the strength of old friendship, to borrow some of Mr. Grant's beautiful sketches; and take the liberty to recommend such of our readers as are interested in India to procure a copy of his book, which is not so well known in England as it deserves to be.

We cannot but regard this controversy as deeply to be regretted. We say frankly that if our friend Mr. Long had asked our advice, as he has often asked our advice in other days, we should have dissuaded him from the publication of this play. But we cannot imagine vindictive feelings to have led honourable men to a more unworthy course of conduct than that to which the Indigo-Planters' Association were led in the prosecution of Mr. Long. And few things have surprised us more than that a British judge should have recommended a jury to find Mr. Long guilty, and that a British jury should actually have found him guilty. Suppose even that Mr. Long had been the author of the play, we cannot imagine that there was any ground for convicting him of the charge brought against

him. Sure we are that if the principles were to obtain which guided that verdict, we should not be safe in reading from our pulpit such a verse as this from the Word of God, that "every imagination of the thoughts of man's heart is evil, and that continually." We regret that our two friends, Mr. Long and Mr. Seton-Karr, should have taken the parts they severally did in the publication. We acknowledge that there was ground for a good deal of irritation on the part of the indigo-planters. The judge and the jury who tried the case, we are bound to believe, had respect to their oaths. All that we can say is, that if we had been upon that jury, it should not have been unanimous.

THOMAS SMITH.

"ABOVE THE CLOUDS."

Above the Clouds by Day.

"ALAS!" begins a Russian poet, in a description of a landscape scene that was not intended to be mournful; but where the country, though flat, yet assumed in its plains so sublime an immensity, that the writer, looking with true religious fervour through nature up to nature's God, could not but touchingly feel his own littleness and then

exclaim in prayer with the Psalmist, "What is man that Thou art mindful of him, or the son of man that Thou visitest him!"

If such is the true sentiment to be excited by the contemplation of the mere level portions of God's earth, much more impressively still will the same idea be called forth in every well-constituted

mind on approaching a great mountain; i.e., one of those really great mountains which make themselves visible while yet many days' journey distant; up to which all the country-surface slowly rises for hundreds of miles around; and when we draw close to their steeper features, these multiply before us into buttressing ridges and branching ravines, until the surrounding plains are by degrees shut out of view; and only after passing and transcending many inferior ranges in a continual upward climb, the final and highest mass is caught sight of at last. But even then, solely its inferior portions; for the upper enter the clouds above, and no man may tell what is there. So in some final

elevated valley, overhung by precipitous cliffs, and close under the rolling canopy of mist, there men may listen to the roar of the cataract leaping forth in its might from that unknown upper region, or to the crash of occasional falling rocks, or the rush of the passing whirlwind, and again feel the glory of God the Creator—much as prophets of Israel were accustomed to do in their mountain homes, or early Christians seeking shelter from persecution amidst the caves and the rocks, and the tops of the ragged rocks.

Such a scene will be moving in the extreme to a devotional spirit, and, haply, not un-improving to its best interests; yet there is no necessity for

Above the Clouds by Night.

being perpetually there confined, seeing that more exalted and ecstatic scenes still have been prepared by God; and to his regenerated sons it is given, ever "as the sparks fly upward," to be continually aiming, in their physical life as well as their religious experiences, at something always higher, better, purer. To stand amidst the steep purple crags of the mountains immediately under their dark mysterious clouds is intensely grand, no doubt; but, oh! to pierce those clouds, to soar far, far above them, and then gaze on the placid heavens overhead, with all their brilliant orbs undimmed by a single film—that, seems to promise even to raise nobler emotions in the soul, and in impressiveness to bring man nearer to God,

inducing us to think more of heavenly and less of earthly things.

Now it happens rather curiously, that precisely this same thought of getting "above the clouds," which may so reasonably arise in the religious mind, has been of late considerably agitated, and even practically followed up among scientific men; and although there is no cause why the scientific should not be the religious man also, but rather great probability thereof, yet it does not, and generally in the common course of life it cannot, follow that every religious person should be scientific as well; much less that he should have had those peculiar experiences which but very few persons in the world have yet shared in. And hence it

may be of interest to the great mass of the religious, that we collect out of the scanty though accurate descriptions recently given for the purposes of science alone, the leading features of various phenomena actually observed in the clouds and above them; leaving the connecting of those dry facts with appropriate ideas to the internal furniture of each reader's own mind.

Amongst astronomers, then, the desire to get above the clouds has long been a fond speculation; not only to avoid the absolute concealing of all view of the heavens which so frequently takes place below by actual clouds intervening, but for the purpose also of getting above the heavier and more impure of the constituent aerial portions of the atmosphere, which portions are always the lowest. This air, or atmosphere enveloping the earth, is a continual veil spread between man's eye and all heavenly things; and though it is usually taken as a type of transparency, merely because it is rarer than any other substance about us,—yet, had we a really and perfectly transparent medium to compare with the air, we should find the latter largely opaque, and most materially dimming to the splendour not only of moon and stars, but the burning sun himself, even as seen by the naked eye. In fact, through the atmosphere, as through a glass, we see the heavenly orbs at best only darkly and most imperfectly. So much so indeed, that when the magnifying power of a telescope is turned upon them, there is often little to be made out of the objects themselves, amidst the mass of tremulous and broken rays of light which then reach the eye; rays broken and rendered undefined, like reflections in troubled water; but caused in this case by the unequal temperatures, densities, and materials of the air. Hence it was that Sir Isaac Newton, one of the greatest of scientific philosophers, but with the humblest mind before God, when engaged on the improvement of the telescope, soon found that there is a point beyond which the mere mechanical excellence of the instrument is of no avail. "Telescopes," says he, "cannot be so formed, as to take away that confusion of rays which arises from the tremors of the atmosphere. The only remedy is a most serene and quiet air, such as may perhaps be found on the tops of the highest mountains above the grosser clouds."

HOW TO GET ABOVE THE CLOUDS.

To get above the clouds, then, was the idea by which this great mind proposed to overcome the difficulty he had met with; and to ascend a high mountain was with him the best, if not the only practical method by which any mortal could raise himself above them. To several generations of learned men, however, who succeeded him, the

proposed plan did not wear the appearance of being really practical; for, said most of them, mountains have so inveterate a tendency to attract and retain clouds on their summits, that going up to the top of such an eminence is the most sure way of getting into a cloud and not seeing anything at all of the heavenly bodies; rather than of getting above the clouds and seeing everything.

There is much physical truth in this objection, and most persons in our country already well know of their own mountains, how grassy or mossy the vegetation becomes towards the summit; plainly indicating that the general rule of their climate must be moisture, and a shrouded sun. But in that admirable manner in which,—all through creation, the farther we examine and the more we inquire, always the more unexpected and grander phenomena open before to excite our wonder, love, and praise,—it has been ascertained that this first result of mountain-top and concomitant cloud is only one particular form of application of a vastly more general law; this law being the height of what is called the vapour plane, or the particular level at which clouds form in the atmosphere all the world over.

Now this vapour plane is no doubt, to us, continually altering; sometimes being at the level of the sea, and then we have what we call a fog; more geneally it is at two or three thousand feet in height, and then we see only the larger mountains with their heads lost in the clouds; but sometimes it is several miles high, and then those tops are all clear to spectators below, though the blue of heaven be by no means visible. In our own climate these variations of cloud-level, in the present state of meteorological science, appear somewhat capricious; or, at least are subject to very frequent variations; but when nearer to the equatorial regions of the earth, all phenomena of climate assume a more regular character under the potent, directing influence of a vertical sun; and for nearly six months at a time one character of weather, one direction of wind, and one level for the clouds, remains constant.

We may even further particularize, from the condensed result of many observations, and say that the north-east wind—which blows as the trade-wind of the tropical belt of the northern hemisphere, chiefly through the summer season—has its cloud-level at about three thousand feet only above the surface of the sea, and its clouds are not in general above one thousand feet thick; so that the top of a mountain of five or six thousand feet would be decidedly above the upper edge of such clouds; they forming a sort of collar only around and below the summit. But the upper level of the clouds of the south-west wind, on the

contrary, which blows chiefly in winter, is often fifteen or twenty thousand feet high, and its mist stratum is not unfrequently as much as ten thousand feet thick; so then, evidently, a moderate-sized, and even a large mountain, would be capped by a most impervious mass of fog; besides the wintry climate rendering an elevated station nearly untenable by man on account of cold.

Here, then, to one who wishes to ascend above the clouds, and to live there for a while enjoying and improving the 'peculiar influences of the place (which last desire, of course, puts any madcap scheme of going up in a balloon quite out of the question), the field of doubt, difficulty, and uncertainty, as to what he should do, is narrowed in the extreme. Summer must be the season for such a one, and the mountain he chooses, not less than five thousand feet high, though the higher the better; and it should be situated, as to latitude, in or near the tropics, but as to general physics, in an oceanic rather than a continental region; the laws of the atmosphere being more uniform and less disturbed by surface influences over the former than the latter.

THE ATTEMPT ACTUALLY MADE.

These were nearly the data on which, in 1856, an earnest attempt was made to commence a series of astronomical observations "above the clouds;" and the first point of preparation was to choose the most suitable mountain. The Alps, though high enough, were rejected for their inland character and high northern latitude; the Pyrenees were not much better; Etna, then suggested some one; better in latitude than the others, rather more than ten thousand feet high, but situated in a small sea, more like an inland lake than the true ocean, and too actively volcanic near its summit.

Islands in the Atlantic, then, were evidently to be preferred, and they are mostly high; Madeira, which we know abundantly has many recommendations, and might have been tried, but that a few degrees south of it rises, to double its height, another and better island of the ocean, chief of the Canary group, the Peak of Teneriffe. In latitude 28° N., surrounded by deep sea on every side, rather more than two miles high, or 12,180 feet (equal to fifteen of our picturesque hill of Arthur's Seat, placed one on the top of the other); higher than any of the Cape de Verde Islands to the south, Madeira to the north, and the Azores in the north-west,—Teneriffe combines more of the required advantages than any other mountain we know of within easy reach of Europe, and was chosen, therefore, for the experiment of the summer of 1856.

The sea approach to it in the beginning of July was characteristic and striking. Fully then within the region and the swing of the north-east trade-

wind, the exploring party had to sail day after day on the same sailor's tack, with a whistling gale ever blowing in the same direction; and overhead ever the same long parallel streaks of half-puffy, half-foggy cloud, that formed streaks extending in the same direction as the wind; but so long, as to reach from the coast of Portugal to the Canary Islands. At length, on the morning of July 8, Teneriffe itself was seen; and how? As the most appropriate station in all the northern hemisphere for European astronomers to observe the stars from? Not outwardly, in the least degree; for all that was visible of it was the threatening base of sea-cliffs, against whose feet the roaring waves of the Atlantic broke in furious masses of foam, and whose heads were shrouded in a dense canopy of cloud and thick mist, which, extending on every side, made even a summer's day on the African coast look dark and gloomy. (See woodcut 3, or Teneriffe below the clouds.)

But these clouds being still the clouds proper to the north-east current of the atmosphere, and which ought therefore to be found at a low level; their present untoward appearances by no means disconcerted the faith of our observers in the several atmospheric laws we have above enunciated.

It was only a few days after—on a morning also cloudy, and with north-east cloud too—that the little party set forth from the town of Orotava, on the northern coast of Teneriffe, to climb the great mountain, and put to the only true test of actual practice their hopes of getting "above the clouds." Through long-winding stony pathways, between vineyards and cactus plantations, between orange groves and fig-trees they proceeded, always ascending; past gardens, and then past orchards, still ever ascending; past corn-fields and oat-fields, ascending yet higher; and then amongst natural vegetation only, ferns and heath and some few wild laurels; and now, at a height of 3000 feet vertical, they are close under the cloud. Before entering therein, let us pause for a moment and survey the beauties of creation in the region we are leaving behind. If, for that one purpose of severe astronomy, a position below the clouds is unsuitable, yet what an infinite amount of benefits for man to enjoy and beauty for him to contemplate, are connected therewith. Beneath the clouds are kindly rains and gentle dews; and these, assisted by a warm climate, encourage all those exquisite forms of vegetation we have admired clothing the lower slopes of the mountain. Without these, where were the fruits to support human life; where the buds, and blossoms and fading flowers which teach us many a lesson useful to eternal life!

But duty now calls us on our upward way; and, before many more seconds are passed, first comes one cold hurrying blast, with mist upon its wings,

and then another and another, until, in the midst of a constant dense wet fog, all creation is shut out of our view, except the few feet of sloping earth on which we are treading, and they appear of a dull grey, and the occasional spiders' webs seen across our path are loaded with heavy drops of moisture.

For half an hour we must toil on and on through this winding-sheet of gloom; perpetually on the same upward rising way, but strong in hope and faith of what must in the end be presented to our eyes; on still, and up higher, when suddenly a momentary break appears overhead, and a portion of sky is seen,—oh! so blue; but it is lost again. In a few minutes, however, another opening, another blue patch is seen, and then another and another; while before three minutes more are passed, all the hurrying clouds seem blown on one side; blue sky is everywhere above and around; a brilliant sun is shining; and there, there below us, is the upper surface of the clouds, extending far and wide, like a level plain, shutting out lowland and city and sea all from view, and in their place substituting brilliant reflections of solar light which make the surface of this new mist-country look whiter than snow. Yes, indeed, we are now "above the clouds;" and that view we have attempted to describe is the first example of the heightened, the advanced, the glorified appearance of even earth's sombre fog-banks to those who are privileged for a time to look on them from the heaven-ward side.

ABOVE THE CLOUDS BY DAY.

"Above the clouds," not only no rain, no mist, no dew, but a searching sun, and an air both by day and by night dry to almost an alarming degree. The further we advance, and the higher we ascend, the drier becomes the air, while at the same time the strength of the north-east trade-wind is continually decreasing, and, at the height of about six or seven thousand feet, has completely died away. Not that it has ceased elsewhere as well, for the driving clouds below show that it is still in its accustomed violence there; but we have reached the upper limit of that north-east aerial current, between which and the upper south-west current a calm and placid region prevails. At the same height we enter the "great crater" of the mountain, and, in its pellucid air and the rich sunshine now showered down without stint upon everything, we can give ourselves up to admiration of the diverse beauties of the scene.

Rocks are now the ruling features; rocks of the most brilliant colours, and sharpest angular forms. For just as nature moulded them so many thousand years ago, exactly so they remain without decay, without disintegration, or any concealment in the thin and dry air; a slow combination with

its oxygen is almost the only effect that takes place during long ages, and this but produces new tints of warm colour, which the rich sunlight renders more captivating than ever. "The Great Crater" is an elliptical plain nearly eight miles in diameter, surrounded on three sides by precipitous walls of mountain-height; and having in its centre a conical mound five thousand feet high above the basin surface, which is itself seven thousand feet above the sea; and thus contains alike the terminal point of the Peak of Teneriffe, and the once active volcanic centre of this large crater-plain. The sides of the central cone are accordingly scored with ancient streams upon streams of lava. Some of them faint and uncertain, have stopped in mid-career; but others have rushed on like a giant rejoicing to run his course, and have inundated half the elevated plain with huge waves and surf-like lines of once molten, but now adamant and jagged rock.

Through and amongst groups of these, wherever the sifted pumice of ages long ago has filled up their dangerous clefts and crevices, and given soft footing for horse and mule,—we must travel on; and, hour after hour, become more and more deeply impressed with the sublime of scenes of primitive volcanic violence. On the left, a vertical crater-wall, more than one thousand feet high in solid rock, yet rent from top to bottom by huge dykes of diversely coloured lava; and then on the right are the scenes of gigantic confusion filling all the broad plain, of lava-rocks hurtling over each other, and fire-roasted mouths of small parasitic craters, with mounds of ashy pumice, and in the distance the great central Peak; while all the time the mighty sun, almost in our zenith, is inundating everything with his ruling light. This is "above the clouds by day." (See Woodcut, No. 1.) Yet is not the scene devoid either of some tender influences; for though now, with the clouds for full six months depressed far below this level, and abandoned for that time to fierce drought and unmitigated light, no encouragement is held forth to any plant to germinate; yet, in winter, under the then reign of south-west winds, this plain is visited with both rain and snow. The latter does indeed melt and the former disappears early in spring, but on the mere remembrance of their vanished moisture, that wonderful bush, the *retama* of the natives, *Cytisus nubigenus* of botanical lore, contrives to exist, and produce large hemispherical masses of its glaucous quill-like branches. These, rather mournful than otherwise to behold in summer and autumn, break forth in spring with multitudes of deliciously scented white blossoms, and form a gracious scene, which no man can hope to witness unless he raises himself more than a mile vertically into the air and on the flanks of this very moun-

tain; for the plant grows nowhere else in the world, and even here at no lower level. But during that short spring period all the gales are scented by the balmy odours of these flowers of the mountain-top; even violets then spring up between rough volcanic rocks; and the peasants below, packing their bee-hives on horses, bring them up in haste with all their industrious little workers inside, whom they then allow, at a height of 7000 feet above the sea, to cull the abundant honey from these elevated plants, during a few precious weeks which bring back both the simplicity and purity of old patriarchal life; man placed in immediate proximity with the grandest and fairest scenes in nature.

ABOVE THE CLOUDS BY NIGHT.

Higher still and yet higher must we push on out of the protected area of the great crater-plain; up the steep sides of its enclosing wall, and finally to the very summit of this bold ridge, in order to find a spot suitable, in all respects, for observing astronomical phenomena freely on every side. Such a spot, 8900 feet in height, is reached at last; tents are rudely pitched after the sun has set; but none of the tired party can think of going to rest; for, with hardly any interlude of evening or twilight, day changes into night, and multitudes of stellar orbs come rushing out of darkness into sight over every part of the sky. There is a moon too, which seems to glow in whitened light with a brilliancy never before witnessed; and, bright as her illuminated crescent may appear, the usually dark ball, or "the old moon in the young moon's arms," of quaint country legends, is intensely visible also. The moon then sets, and the stars of the whole firmament shine forth more brilliantly than ever, out of a sky which looks by contrast absolutely black.

But tired human nature must rest itself at last; and the sleep of hard toilers up the mountain side is heavy; yet one, more anxious than his fellows, must again, at the small hours after twelve, take another earnest inquiring gaze at the heaven-lit scene of night. He looks! but what is that which so astonishes him! He cannot at first believe his senses; he had already that night seen the moon go down in the west; but now there is another moon in the sky, and right overhead; for see here is the bluish light showered down by it, making a faint lavender-coloured illumination over every rock and every stone. What can be the meaning of this? he leaps in his astonishment out of the tent door, and looks up—but only to find that it is no moon; it is only one of the planets, "Jupiter," who, in that clear transparent air of the mountain top, instead of being visible only as a star when

directly looked at, is able to throw down a sensible radiance over all the upper earth.

How calm and quiet those midnight hours on the elevated summit of the mountain. The winds were hushed, the turmoil of man far removed; and in that dry air and arid volcanic region "above the clouds," not a stream murmured, or a single torrent rattled the round stones along its rugged bed. Steeply sank the sides of the mountain peak in every direction; until, at five thousand feet in depth below its top, they were lost in the stratum of cloud that still existed there, and spread over lowlands and sea (see Woodcut No. 2, or, "above the clouds by night"); obscuring to gazers there all view of any part of the glorious orb-filled heavens above. And still, too, the distant movements of those rollers of white cloud betrayed also that that unquiet north-east wind must yet be raging down there in all its strength, tearing the mist piecemeal, and bowing down the heads of suffering palm-trees, and lashing the sea into foam-crested waves. Heaven grant that no cry of shipwrecked mariners be borne on the breeze; and, more still, that no evil thoughts be engendering in the cities of men.

From time to time, in the firmament of the mountain-top, a meteor shot past; but ever distinguished by its reddish light and close look from the distant silent stars. Then again, when even yet several hours from dawn, that strange lenticular glow of nebular splendour, the zodiacal light, appeared in the east; clear sign it is considered now of meteors innumerable circulating around the sun, and continually increasing in numbers with every approach to his surface. And what a surface that is, for, with all its enormous distance of ninety-five millions of miles, and the various media through which it is seen, its whole area is yet intrinsically brighter than any artificial brightness that man can produce; and in quantity, how vast! one of its least effects being to light up all the earth's atmosphere with the brightness of day, even before the disk itself appears upon the horizon.

"Above the clouds" the colours of day-dawn are even more brilliant, and certainly more pure than below. A large roseate arch springs up high above the first blue, then yellow, then orange light of dawning day; and finally, the actual orb of that burning star, our sun, appears amidst ineffable splendour which rules everything from east to west, and from north to south. Once that this powerful star has made its appearance, all others vanish from before him; and all the scientific observations made through the live-long day, have reference to one or other of the manifestations of the dominant orb. At first, indeed, when, by reason of the height of the mountain, and the depression of the horizon, as well of the cloud-ocean as the salt-water ocean,

the sun's disk is seen through an immense thickness of terrestrial atmosphere—its light is comparatively faint, and its heat is even less; so that in fact the lowering of the thermometer with the past night's coldness still goes on; but hardly has the sun continued his upward march from the depressed horizon into the heavens more than seven minutes, before his rays, having then surpassed the previous reduplications of the earth's envelopes of air low down, begin to shoot along vigorously over the upper surface of that sea of cloud below; and striking with power on the isolated mountain-top above, instantly make the mercury of the thermometers commence an upward movement also in their scales, and so rapidly, that it needs the utmost activity of every observer to note the momentarily increasing effects. Thus is one side of the Peak daily heated to more than African degree, while the other side is cold in the counter-radiation of the blue sky and thin air.

YET HIGHER ABOVE THE CLOUDS.

But not yet, even at 8900 feet of altitude, is the air so thin and transparent as could be desired: the clouds have been indeed transcended; and day after day they are seen stretching out over lower hills, and valleys, and sea,—far, far below the mountain observers; but these men in their watchings still find wreaths of fine dusty matter between them and the heavens, and still experience the existence of some of those telescope tremors of the air, which Newton was so desirous to overcome. A higher station, therefore, must be occupied; and what place so appropriate as the great central volcanic peak, which rises in the middle of the huge eight-mile crater, and attains there a total height of 12,180 feet. The whole, indeed, of that height cannot be utilized, for the very top of the mountain is still in a slowly burning-out condition, emitting jets of steam and hot gases; and the sides, for some distance down, are inaccessible to loaded animals.

"Let us see, however, to what height we may penetrate." So said the party; and descending again to the crater-plain, they crossed that rugged region to the base of its central cone; a long day's journey, and "above the clouds" the whole of the way. Then they climbed and climbed, up a steep, pumice slope, far above the limits of all plants, between two monstrous ridges of blackened rocks, once red-hot flowing lava streams; climbed on until the last limit of the pumice was reach-

ed; and there, in a little nook, surrounded on three sides by the ancient scorise of the volcano, established themselves for observation once again.

This place proved to be 10,710 feet high, the barometer standing at twenty inches and a half, showing that about one-third in weight, and probably much more than that in impurity of the atmosphere, had been overpassed. There then, the party's largest telescope was erected; and moon, planets, and stars were gazed at night after night, in an air which, though still by no means perfect, was serene and quiet, pure and transparent to an extent that would indeed have delighted the soul of Newton; and did give promise of savingly increasing our knowledge of astronomical phenomena, were the experiment properly repeated under improved circumstances year after year.

How hard is it for those at a distance fully to realize the circumstances of another region. Of another sphere, who can tell the nature! It was when our party on the mountain were in the fullest enjoyment of their daily and nightly views of the heavens, that their friends in the towns of Teneriffe, near the sea-coast, wrote to them most sympathizingly: "Oh! what dreadful weather you must have been suffering! Down here we have had for three weeks the most frightful continuance of storms; constant clouds, rain, and howling winds; and if that was the case with us, what must it not have been with you at the greater height."

Yet, at the greater height, at that very time the air was tranquil and serene, the sky clear, and bad weather entirely confined to that lower depth in the atmosphere, beneath "the grosser clouds."

Marvellous, indeed, and soul-inspiring are the rewards which God in his goodness has allowed to be attained by those amongst men who diligently explore and read his book of works, coincidently with his inestimable book of revealed words.

More it is not in our power to add to this; but further exemplifications of the principle may be richly afforded ere long by a party of Russian astronomers, who have recently been sent to that goodly mountain, the mountain Ararat; whose name no Christian can hear without deep emotion, and on whose hoary, time-honoured summit, full 17,000 feet above the sea, they are to try, under improved circumstances, and in a more copious manner, the same Newtonian experiment which the British Government inaugurated on Teneriffe in 1856.

C. PIAZZI SMYTH.

Teneriffe below the Clouds.

THE CHRISTMAS CHILD.

I.

THE rain is cold, the sky is pitch,
Above the city's lengthening piles,
Gleaming across an inky ditch,
The glimmering lamp-lights stretch for miles.

'Tis Christmas Eve, nor late though dark;
Still out upon the busy street
The windows shine, and one can mark
The passers hurrying through the sleet.

One hastens on with heavy tread;
Had any tried his face to scan,
"A common man," they would have said;—
Thank God! he was "a common man."

More lonely grew the way he took,
And once he stopped, amid the rain,
To cast a bright ungrudging look
On what he saw through lighted pane.

A Christmas feast! a table spread!
A cheerful glow of lamp and fire!
A heap of children, head o'er head,
And one in arms uplifted higher!—

Uplifted to the father's lips!
But just as he had kissed the boy,
They closed the curtains, and eclipse
Fell on the sharer of his joy,

Who sighs, and on his way doth wend,—
A shadow on his face hath come.
What waits him at his journey's end?
A cheerless hearth? a joyless home?

Nay, both as any warm and bright,
And wont to light his weariest way,
Through longest road and blackest night,
But now the brightness fades away.

No small feet cross that stainless hearth,
Or patter on that dainty floor!
One pair, long laid in wintry earth,
Will greet his coming never more.

II.

Yet rest and hearty cheer await
Our dripping wayfarer; for him
The board is spread in simple state,
The curtain'd bed stands white and trim.

The housewife sits, with musing eye,
Contemplating her labours done;
Her Christmas cheer, her own mince-pie,
Her ample store of cake and bun.

She sigh'd in fulness of content,
And then she gave another sigh,—
"What's all the good of this," it meant,
"With none to eat but John and I?"

Frugal she was, nor much would take
Or give; what moved the worthy soul?
She rose and took her largest cake,
And forth on gentle errand stole.

Across the way a neighbour dwelt,
With many little mouths to feed;
Heart-sickening care who daily felt,
For failing strength and growing need.

To them her Christmas gift she took,
Leaving ajar the cottage door—
Painting each sharer's joyful look,
The weltering road she hasten'd o'er.

And through the storm swift-falling—Hark!
Was that a sob? One moment nigh,
A wild face peered from out the dark—
Some woful heart was passing by.

III.

The dame had lingered for a space,
And now upon the threshold met
Her spouse, and with a radiant face,
Shut out the darkness and the wet.

A little stir their entrance makes,
But soon a genial quiet falls;
When, lo! an infant's wail awakes
Within the unaccustomed walls.

And both are in mid-speech struck mute,
And quick, with startled looks, arise,
And listening stand—nor stir a foot—
Till, hark! again those pining cries!

Then moving to the couch, that stands
So white and trim, they—half in awe,
And curious half—with eager hands,
Aside the snowy curtains draw.

And there it lay, a tiny thing
 All meanly clad and weeping sore ;
 Such tears no elvish trick could wring,
 No less than mortal grief could pour.

Soon as the baby-form was prest
 In woman's arms, it hushed its cries ;
 And turned toward the mother's breast
 With quivering lips and drowning eyes.

They bring it to the light, nor mark
 Without—the wreck of woe and sin—
 A form that crouches in the dark,
 A wild, white face that peers within.

Praying the woman-soul to save
 Her babe : and to that peaceful hearth
 She saw the kiss that welcome gave,
 And fled an outcast of the earth.

The cautious dame had questioned still
 The bounds of charity and right,
 Although her inmost soul would thrill
 Above the babe that blessed night.

But for a whisper in her ear,
 That boundless love that hour had claim,
 "A Christmas gift," we'll keep it, dear,
 It was to-night the Saviour came.

ISA CRAIG.

At Home in the Scriptures.

A SERIES OF FAMILY READINGS FOR THE SUNDAY EVENINGS OF 1862.

FIRST EVENING—THE PARABLE OF THE SOWER.

"Behold, a sower went forth to sow," etc.—MATT. xiii. 3.

"At this period, a great and eager multitude followed the steps of Jesus, and hung upon his lips. A certain divine authority, strangely combined with the tenderest human sympathy, marked his discourses sharply off as entirely different in kind from all that they had been accustomed to hear in the synagogue. Finding that instincts and capacities hitherto dormant in their being, were awakened by his word, "the common people heard him gladly." At an earlier hour of the same day in which this parable was spoken, the circle of listeners drawn around the teacher had become so broad and dense, that his mother and brethren who had come from home to speak with him, were obliged to halt on the outskirts of the crowd and pass the message on from mouth to mouth. In these circumstances the preacher's work was heavy, and, doubtless, the worker was wearied. Having paused till the press slackened, he secretly retired to the margin of the lake, desiring probably to "rest a while;" but no sooner had he taken his seat beside the cool still water, than he was again surrounded by the anxious crowd. At once to escape the pressure, and to command the audience better when he should again begin to speak, he stepped into one of the fishing boats that floated at ease close by the beach on the margin of that tideless inland sea. From the water's edge, stretching away upward on the natural gallery formed by the sloping bank, the great closely-packed congregation presented to the preacher's eye the appearance of a ploughed field ready to receive the seed. As he opened his lips and cast the word of life freely abroad among them, he saw—he felt the parallel between the sowing of nature and the sowing of grace. Into this mould, accordingly, the Lord at that time threw the lesson of saving truth. He grasped the facts and laws of his own material world, and wielded them with sure and steady aim, as instruments in the establishment of his new spiritual kingdom. "Behold, a sower went forth to sow."

Whether a sower was actually in sight at that moment in a neighbouring field or not, every individual in that rural assemblage must have been abundantly familiar with the act, and would instantly recognise the truthfulness of the picture.

The sower, with his bag of wheat dependent from his shoulder, steps slowly forth into the prepared field. He marches in a straight line along the furrow with measured equal steps. His hand, accustomed to keep time with his advancing footsteps, and to jerk the seed forward with considerable force in order to secure uniformity of distribution, cannot easily stop when he approaches the hard trodden margin of the field. By habit, the right hand executes its wonted movement, each time the right foot makes a step in advance; and thus portions of the seed are thrown at every

turning on the surface of the trodden way-side. Birds, scared for a moment by the sower's approach to the spot, hover in the air till his back is turned on another tack, and then, each eager to be first, come swooping down, and swallow up all the grain that found no soft place where it fell for hiding in. Even if it should happen in any case that no birds were near, the seed that fell on the wayside was as surely destroyed in another way: the alternative suggested in Luke's narrative is, that it is "trodden under the feet of men."

But while the portion of seed that fell on the wayside was thus certainly destroyed, it does not follow that all the rest came to perfection. "Some fell upon stony places, where they had not much earth, and forthwith they sprang up, because they had no deepness of earth; and when the sun was up they were scorched, and because they had no root they withered away." The stony places are not portions of the field where many separate stones may be seen lying on the surface, but portions which consist of continuous rock underneath, with a thin sprinkling of soft soil over it. Here the seed springs, and springs earlier than in spots where it is more deeply covered; but when the rains of spring have ceased, and the summer sun has waxed hot, the moisture is soon all exhaled from the shallow stratum of soil, and forthwith the young, tender wheat-plants die.

But there may be yet another "slip between the cup and the lip:" even from the seed that falls on deep soft ground, you cannot count with certainty on a rich return in harvest. Although the plants should without obstruction strike their roots deeply into the soft moist earth, and rear their stalks aloft into the balmy air, they may be rendered barren at last by the simultaneous growth of rivals more imperious and more powerful than themselves. Unless the grain not only grow in deeply broken ground, but grow alone there, it cannot be fruitful: "Some fell among thorns, and the thorns sprang up and choked it."

As truth is one and error manifold; so, in regard to the sown seed, the story of failure is long and varied; the story of success is short and simple. "Other fell into good ground, and brought forth fruit, some an hundredfold, some sixtyfold, some thirtyfold." The design of the picture is to exhibit the various causes which at different times and places render the husbandman's labour abortive, and leave his garner empty; this done, there is no need for more. The seed, when none of these things impeded it, prospered as a matter of course, and came to perfection under the ordinary care of man and the ordinary gifts of God.

Three distinct obstructions to the growth and ripening of the seed are enumerated and explained. The statement is exact, and the order transparent. The natural sequence is beautifully and strictly

maintained. The three causes of abortion,—the wayside, the stony ground, and the thorns, follow each other as do the spring, the summer, and the autumn. In the first case, the seed does not spring at all; in the second, it springs but dies before it grows up; in the third it grows up, but does not ripen. If it escape the wayside, the danger of the stony ground lies before it: if it escape the stony ground, the thorns at a later date threaten its safety; and it is only when it has successively escaped all the three, that it becomes fruitful at length.

In this case the Lord himself gave both the parable and its explanation; he became his own interpreter. The Master takes us like little children by the hand, and leads us through all the turnings of his first symbolic lesson, lest in our inexperience we should miss our way. The Son of God our Saviour not only gave himself a sacrifice for sin; he also laboured as a patient painstaking teacher of the ignorant. He is the Apostle as well as the "High-priest of our profession." His instructions have been recorded by the Spirit in the Scriptures for our use. We may still sit at his feet and listen to him who spake as never man spake. He has taken his seat on the elevated deck of a fishing-boat, while the waters of the lake are calm, and is discoursing to a congregation of Galileans from the neighbourhood, who stand clustering on the shore. Let us join the outskirts of the crowd, and hear that heavenly teacher too.

From the Lord's own express exposition, here and elsewhere recorded, we learn that the seed is the word of God,—that the sower is the man who makes it known to his neighbours,—and that the ground on which the seed falls is the hearer's heart. The main drift of the parable concerns the ground, and to it, accordingly, our attention must be chiefly directed. The lesson, however, lies not in the inherent essential properties of the soil, but in the accidental obstructions to the growth of grace, which in certain circumstances it may contain: Some notice, therefore, of the seed and the sower, in their spiritual signification, is not only profitable at this stage, but peremptorily necessary to the full apprehension of the instruction which the parable conveys.

"The seed is the word." Seed has been created by God and given to men. If it were wholly lost, it would be impossible, through human power and skill, to procure a new supply; the human race would perish, unless the Omnipotent should interfere again with his creating power. For spiritual life and food the fallen were equally helpless, and equally dependent on the gift of God. The seed is the Word, and the Word is contained in the Scriptures. When we drop a verse of the Bible into listening ears, we are sowing the seed of the kingdom. But the Scriptures, whether spoken or written, are not of themselves living or life-giving. Wanting the Spirit they are a dead letter; and the dead letter kills. The Jews went to the Scriptures for eternal life, and missed it, because they found not Christ there, and would not receive Him when he offered himself. The seed is the Word, but the Word is Christ. "In the beginning was the Word, and the Word was with God, and the Word was God. . . . And the Word was made flesh and

dwelt among us." John i. Christ is the living seed, and the Bible is the husk that holds it. The husk that holds the seed is the most precious thing in the world, but all its preciousness is owing to the seed which it holds. The Lord himself precisely defines the place and value of the Scriptures:—"they are they which testify of me;" John v. 39. The seed of the kingdom is himself the King.

There is no inconsistency in representing Christ as the seed, while he was, in the first instance, also the sower. Most certainly he preached the Saviour, and also was the Saviour whom he preached. The incident in the synagogue at Nazareth, Luke iv. 16-22, is a remarkably distinct example of Christ being at once the sower and the seed. When he had read the lesson of the day, a glorious prophetic gospel from Isaiah, "he closed the book and gave it again to the minister and sat down. And the eyes of all them that were in the synagogue were fastened on him. And he began to say unto them, This day is the Scripture fulfilled in your ears." As soon as he had taken from the Scriptures the proclamation regarding himself, he laid the Scriptures aside and presented himself to the people. The Saviour preached the Saviour,—himself the sower, and himself the seed.

In the beginning of the gospel, when the chosen band of sowers first went to work upon the ample field, taught of the Spirit they knew well what seed they ought to carry, and were ready, wherever they saw an opening, to cast it in. One of them, and he the greatest, formed and expressed a determination to know nothing among the people but Jesus Christ and Him crucified. Twice over in one chapter, Acts vii., we learn incidentally, but with great precision, what seed Philip the evangelist always carried about and cast into every furrow, whether great or small. When a large congregation assembled in the city of Samaria to hear him, "he preached Christ unto them." And when on a subsequent occasion he was called to deal with an anxious inquirer alone in the desert, he opened his mouth and began at the same Scripture,—"He was led as a sheep to the slaughter," etc.—"and preached unto him Jesus." This is the seed sent from heaven to be the life of the world.

The sowers, although they have become a great company in these latter days, are still, like the reapers, "few" in relation to the vastness of the field. In commencing the history of the apostles' ministry (Acts i. 1), the Evangelist Luke refers to his own gospel as a treatise "of all that Jesus began both to do and teach." The servants took up and carried on, under the Spirit's ministry, their Master's work. Before he ascended into heaven the Lord had called and qualified a chosen number to spread the seed on earth. From that day to this the supply has never failed, and it will not fail until all this wilderness under their hands shall have become the garden of the Lord.

The Lord's message to Ananias of Damascus regarding Paul, immediately after his conversion, graphically defines the office of a minister as a sower of the seed:—"He is a chosen vessel unto me, to bear my name before Gentiles and Kings, and the children of Israel," Acts ix. 15. A vessel for holding Christ, and dropping that living seed into human

hearts wherever an opening should appear; this is the true idea of a minister of the gospel. Nor is the work limited to those who, being trained for it, and freed from other cares, may be capable of conducting it on a greater scale: as every leaf of the forest, and every ripple on the lake that receives a sunbeam on its bosom, may throw the sunbeam off again and spread the light around; so every one,

old or young, rich or poor, who receives Christ into his heart, may and will publish, with his life and lips, that blessed name. In the spirit of our Lord's own precept regarding the harvest, we may all be encouraged to adopt and press the prayer that our Father, the husbandman, would send forth sowers into his field.

SECOND EVENING—THE WAYSIDE.

"Some seeds fell by the wayside."—MATT. xiii. 4.

A path beaten smooth by the feet of travellers skirts the edge of the field, or, perhaps, in cases of great carelessness, strikes, by way of short-cut, right through the middle: on this portion, as on the softened parts, the good seed falls; but the seed that falls there, lying exposed on the surface, is picked up by birds who are watching for it as their prey. Behold in one picture God's gracious offer, man's self-destroying neglect, and the tempter's coveted opportunity!

The analogy, being true to nature, is instantly and easily recognised. There is a condition of heart which corresponds to the smoothness, hardness, and wholeness of surface, where a frequented footpath skirts or crosses a ploughed field. The spiritual hardness is also like the natural in its cause as well as in its character. The place is a thoroughfare: a mixed multitude of this world's affairs tread over it without intermission from morning till night, and from year to year. It is not fenced like a garden, but exposed like an uncultivated common. The secret of the Lord,—"Enter thy closet and shut thy door," is scarcely known, or if known it is neglected. The soil is trodden by all comers, and is never broken up and softened by a thorough self-searching or application of the truth to the conscience. A human heart may thus become marvellously callous both to good and evil. The terrors of the Lord and the tender invitations of the gospel are alike ineffectual. They fall upon the eye or ear and drop off again, as the good solid grain, thrown from the sower's hand, rattles on the smooth hard roadside, and lies on the surface till the fowls carry it away.

The seed is good: "the word of God is quick and powerful," that is, living and working its own way. Like buried moistened seed, it swells and bursts and forces its way over or through opposing obstacles. A heart of clay, smoothed and hardened on the surface, may hold it out for a lifetime; but a heart of stone could not hold it in, if it once were in, for a single day.

We shall here take a handful from the heap, and spread it on the field.

All have sinned, and all are lost by sin. The wrath of God lieth on the children of disobedience. Reader, if you have not since your birth-day been born again, and so passed from death unto life, you are one of the lost to-day. You have destroyed yourself; but you cannot save yourself. You can neither blot guilt from your conscience, nor doom from the book of God. If the Judge should mark iniquity you could not stand. There is but a breath

between you and eternity; and if you enter it with your sin marked to your own account you will perish; but God is love. He has pitied lost men. He has sent his Son to seek and save them. The eternal Son having taken our nature, became Immanuel, God with us. He gave himself a sacrifice, the just for the unjust. Having obtained redemption by the price of his blood, he offers pardon, full, free; and he offers it to sinners.

If you are not saved, it is not the fault of the seed: it is not even the fault of the sower, although his work may have been feebly and unskillfully done. If the seed is good and the ground in a right condition, a very poor and awkward kind of sowing will suffice. Seed flung in any manner into good ground will grow; whereas if it fall on the wayside it will bear no fruit, however artfully it may have been spread.

My father was a practical and skilful agriculturist. When very young, I was wont to follow his footsteps in the fields farther and oftener than was convenient for him or comfortable for myself. Knowing well how much a child is gratified by being permitted to imitate a man's work, he sometimes hung the seed-bag, with a few handfuls in it, round my shoulder, and sent me into the field to sow. I contrived in some way to throw the grain into the air, and so it fell among the clods. But the seed that fell from the feeble infant's hand grew as well and ripened as fully as that which the strong skilful man had scattered. In the spiritual department, too, the skill of the sower, although important in its own place, is altogether subordinate. The cardinal points are the seed and the soil. In point of fact, throughout the history of the Church, while the Lord has abundantly honoured his own ordinance of a standing ministry, he has never ceased to show, by granting signal success to feeble instruments, that His work is not dependent on the talents of the servants whom he employs.

Nor does the blame of failure in the last resort, lie with the soil. The man who still receives the gospel on the hard surface of a worldly careless life, is of the same flesh and blood—of the same understanding mind and immortal spirit with his neighbour who is now a new creature in Christ. Believers partake of the same human nature with those who are still unrenewed. As the ground which has been trodden into a footpath across the field or along its margin, is in all its essential qualities the same as that on which the waving grain is growing: so the human constitution and faculties of one who lives without God in the world, are

substantially the same as those which belong to the redeemed of the Lord. It was the breaking of the ground that made the difference between the fruitful field and the barren wayside; so those minds and hearts that now bear the fruits of faith were barren till they were broken; and those on which the seed has been often thrown but only thrown away, may yet yield an increase of a hundredfold to their owner, when conviction and repentance have rent them open for the admission of the word of life.

Felix, the Roman governor, was a specimen of the trodden way-side. Worn alternately by the cares of business and the pleasures of sin, his hardened, hackneyed conscience presented no opening for the entrance of the gospel. Paul, accordingly, when called to preach before him, did not in the first instance pour out the message of mercy: he spoke of "righteousness, temperance, and judgment to come," thus plying the seared, seasoned heart with the terrors of the Lord, in the hope of breaking thereby the covering crust, and preparing a seed-bed in its depths for the word of eternal life. But the earth in that case was as iron, and did not yield even to the apostle's blow. From the heart of Felix the message of mercy was effectually shut out. The jailer of Philippi was doubtless equally hard in a more vulgar sphere; but his defences were shattered: in that night of visitation his heart was rent as much as his prison, and over the opening, Paul the sower promptly dropped a great solid grain of the precious seed,—"Believe in the Lord Jesus Christ, and thou shalt be saved." The word entered, and its entrance gave life.

This portion of the parable does not directly speak to established disciples, or backsliding professors,

or convicted anxious sinners. The lesson here is addressed to those who have hitherto lived without God in the world, and who have lived in the main, comparatively at ease.

You might understand your case, friends, if you would consider it, as you consider other branches of business. Look on the hard, dry road that skirts a corn-field: you are not surprised to find it barren in a harvest-day. You know that grain would not grow although it were sown there; and you know the reason. The reason why the gospel does you no good may be as surely, as distinctly seen. A constant succession of cares, vanities, or passions tread upon your heart, and harden it, so that Christ's message of mercy, though it sound on the surface, never goes in, and never gets hold. Think not that saints are a different sort of people by nature, and so indolently despair of ever becoming like them. They were once what you are; and you may yet become what they already are, and more. "Break up your fallow ground." Look into your own heart's sin, until you begin to grieve over it. Look unto Jesus bearing sin until you begin to love him for his love. Tell the Lord, in prayer, that your heart is hard, and plead for his Holy Spirit to make it tender. The saints already in rest, and disciples in the body still, were once a trodden way-side like yourself, as hard and as barren. Place your heart as they did, without reserve, in the Redeemer's hands: bid him take its hardness out, and make it new. Invite the Word of Life Himself to take up His abode within you; and throw the doors wide open that the King of Glory may come in. When Christ shall dwell in your heart by faith, a godly sorrow underneath will soften every faculty of your nature, and over all the surface fruits of righteousness will grow.

THIRD EVENING—THE STONY GROUND.

"Some fell upon stony places."—MATT. xiii. 5.

A human heart, the soil which receives the precious seed, is in itself, and before cultivation, hard both above and below; but by a little easy culture, such as most people in this country may enjoy, some measure of softness is produced on the surface. Among those warm and newly stirred affections, the seed speedily springs. Many young hearts in this favoured land take hold of Christ, and let him go again. This, on the one hand, as we learn by the result, was never a true conversion; but neither was it, on the other hand, a case of conscious, intentional hypocrisy. It was real, but it was not thorough. Something was given to Christ, but all was not given, and therefore the issue was the same as if nothing had been given.

Believing parents, or watchful teachers, observe in the young a tenderness of conscience, an earnest attention to the truth, a subdued and reverential tone, with frequency and fervency in prayer. They cherish these symptoms with mingled hope and fear. The symptoms increase and multiply. The converts are added to the church, and perhaps their experience is narrated as an example. This is not a deception: it is a true out-growth from

the contact of human hearts with the word of life. Man, who looks on the outward appearance only, cannot with certainty determine in whom this promise of spring will be blasted by the summer heat, and in whom it will yield to the reaper a manifold return. When you cast your eye over the corn-field soon after the seed has sprung, you may be unable to detect any difference between one portion and another: all may be alike fresh and green. But if some parts of the field be deep, soft soil, and other parts only a thin sprinkling of earth over unbroken rock, there is a decisive difference in secret even now, and the difference will ere long be manifest to every observer. Come back and look upon the same field when it has lain a week or two without rain, beneath a scorching sun, and you will find that while some portions have increased in strength without losing any of their freshness, in other portions the green covering has disappeared, and left the ground as brown and bare as it was on the day when the "sower went forth to sow" upon it. When the ground is broken underneath, and so permits the roots of the growing seed to penetrate its depths, and drink up its fatness, the towering stalks defy

the summer's drought; but where the roots are shut out from the heart, the leaves wither on the surface.

The person who, without a rending and renewing of the heart, merely receives the gospel on some superficial softness of the old nature, gets his Christianity more easily and more quickly than others that have been more deeply exercised,—hope springs up at once, without delay and without difficulty. But testing trials are the method of the Divine government; discipline the order of Christ's house. He that endureth to the end shall be saved, but he that falls away in the middle shall not. The fair profession that grows over an unhumiliated heart "dureth for a while," but does not endure to the end. "When tribulation or persecution ariseth because of the word," the religion which did not go farther than the surface, could not remain on the surface: it withers root and branch. The inward affection, such as it was, and the outward profession together disappear. From him that hath not shall be taken even that which he seemeth to have.

In the earlier centuries of the Christian era, the profession of faith, when lightly assumed, was frequently and suddenly scorched off the so-called Christian's lips, by the pitiless persecution of heathen governments: in subsequent ages, and down even to our own day, Papal fires have burned fiercely in many lands; and before them every faith has faded, except that which is of God's own planting, and grows in the depths of the believer's soul. Nationally we have greater privileges, but beware. The divine law, "All that will live godly in Christ Jesus must suffer persecution," has not yet been repealed. Nor is this a mere expression, introduced to keep our theology correct: it is a present, operating, powerful truth. In every season and in every clime the sun of persecution is hot enough to kill the Christianity which springs in accidentally softened natural affections over a stony heart. It may be difficult for philosophy to explain the reason, but experience incontestably establishes the fact, that slight persecutions have often been as effectual as the heaviest in blasting the deceptive appearance of religion which, under favouring circumstances, grew for a while in the life of an unrenowned man. In point of fact, the sneer of a few fashionable free-thinkers in a drawing-room, or of a few rude scoffers in a workshop, has done as much as the fagot and the stake to make a fair but false disciple deny his Lord.

Young Christians, whose faith and hope are bursting through the ground and blooming, should be, not distrustful of the Lord, but jealous of themselves. "Let him that thinketh he standeth, take heed lest he fall." Deeper sense of sin, clearer views of truth, warmer love to Jesus—these are the safeguards against the danger of backsliding. Strive and pray for these. Do not keep Christ, as it were, lying on the surface; let him possess the bulk and the best of your heart. "Whosoever will save his life," keeping its central mass all and whole for himself, "shall lose it; and whosoever will lose his life for my sake," opening and abandoning it to Christ from its circumference to its core, "shall find it."

It seems to have been in this manner that King Saul's faith grew, and in this manner that it withered ere it was ripe. It came away quickly at first, and presented a goodly appearance for a while. But the ground, broken and softened on the surface, by Samuel's ministry and the call to the kingdom, was rocky underneath, and the rock was never rent. When he was seated on the throne, his own master, with "the thousands of Israel" coming and going at his nod, he began to feel the restraint of piety irksome, and the reproof of the aged prophet rude. The sun of prosperity scorched the green growth that had suddenly overspread his outward life. Michal his daughter, more acquainted with the kingly airs of his later, than the humble professions of his earlier life, seems to have partaken of his inward hardness, without adopting his profession of piety. Like him she was not godly in the depths of her soul; but unlike him, she made no superficial pretence of godliness. When she put forth all her irony in order to make her husband David ashamed of his own zeal in "dancing before the Lord," she truly reflected the inner spirit, if not the outward profession, of her father's court. That taunt from the supercilious, curling lip of the royal princess, who had honoured him by consenting to become his wife, was a burning ray of persecution streaming on David's defenceless head. If his religion had been lying on the surface while the pomp and circumstance of royalty occupied his heart, it would have died out then and there, as the tender sprouting corn whose roots rest on a rock, dies out in the scorching clime of Galilee. But David's faith was deep, and it ripened rather than withered under the scornful glance of the worldly-minded princess, as corn growing in good ground is better filled and sooner ripe where the sky is cloudless and the sun is fierce.

That deep-seated, stony hardness of heart which defies all the efforts of human cultivators, is often broken small by the hand of God. It appears that Lydia through natural temperament or association with Christians, or both together, had attained some measure of spiritual susceptibility, for she professed the truth, and attended the prayer-meeting by the river side; but the seed of the word which had sprung on the surface of her life, had not yet struck its roots so deep as to withstand persecution if it should come in power. She is described as a woman who sold purple, and worshipped God: she had an honest business, and a true religion; and were not these enough? No; the next fact in the history was the cardinal point of her life; "whose heart the Lord opened, that she attended to the things that were spoken of Paul." The seed from that sower's hand went in, and took possession, but it entered by an opening which was made by the power of God. Whether the rock was rent by the dew of the Spirit dropping silently, or by some substantial stroke of providence upon her person or her interests, we do not know. If ordinary providential methods were employed, we do not know the specific instrument which was in that case wielded. Perhaps this honest and religious woman had a child that lay on her bosom, and that bosom reft of its treasure rent with aching. Perhaps she came to the prayer-

meeting on the day that Paul attended it, arrayed for the first time in widow's weeds, and the stroke that tore her other self away, had left a wide avenue open in her heart. Or,—for instruments of small weight do great execution when they are wielded by an Almighty arm,—perhaps an adverse turn of trade had left the matron, who had proudly maintained her family by honest industry, dependent on a neighbour's bounty for daily bread. Were other dealers underselling her in the market? Was her foreman unsteady; for, being a woman, she must needs depend much on hired helpers? Or

did a living husband grieve her more than a dead one could have done? By one of these instruments or by another diverse from them all, or without any visible means, the Lord opened Lydia's heart, and the word of life came in with power. Henceforth she was not her own; Christ dwelt in her heart by faith, and her life was devoted to the Lord that bought her. Deep in that broken heart the seed is rooted, and now no temptation, however intense and long continued, will be able to blanch its green blade, or blast its filling ear. "Lord, increase our faith."

FOURTH EVENING—THE THORNS.

"And some fell among thorns."—MATT. xiii. 7.

In the application of the lesson, the term thorns must be understood not specifically, but generally. In the natural object it indicates any species of useless weed that occupies the ground and injures the growing crop; in the spiritual application, it indicates worldly cares of every kind that usurp in a human heart the place due to the kingdom of heaven, and Christ its king.

The earthly affections, which render religion unfruitful in the heart, as thorns choke the grain that grows among them, are enumerated under two heads, "the care of this world, and the deceitfulness of riches." In Luke, pleasure and riches are both expressly mentioned, and therefore we may assume that in Matthew's narrative the single term "riches" is intended to include also the pleasures which they profess to buy.

Both from our own experience in the world, and the specific terms employed by the Lord in the interpretation of the parable, we learn that all classes and ranks are equally exposed to danger. This is not a rich man's business, or a poor man's, it is every man's business. The words seem to point to the two extremes of human life, and to include all that lies between. "The care of the world" becomes the snare of those who have little, and "the deceitfulness of riches" the snare of those who have much. Thus the world, both in its short-coming and its excess, wars against the soul. Rich and poor cannot, in this matter, cast stones at each other. Pinching want and luxurious profusion are indeed two distinct and widely diverse species of thorns, but, when favoured by circumstances, they are equally rank in their growth, and equally effective in destroying precious grain.

In two distinct aspects, thorns growing in a field of wheat reflect, as in a mirror, the kind of spiritual injury which the cares and pleasures of the world inflict when they are admitted into the heart; they exhaust the soil by their roots, and overshadow the corn by their branches.

1. Thorns and thistles occupying the field suck in the sap which should go to nourish the good seed, and leave it, though living, a hungry skeleton. The capability of the ground is limited. The agriculturist scatters as much seed in the field as the field is capable of sustaining and bringing to maturity. When weeds of rank growth spring up, their roots greedily and masterfully drain the soil of its fat-

ness for their own supply, and as there is not enough both for them and the grain-stalks, the weakest goes to the wall. The lawful, useful, but feeble grain is deprived of its sustenance by the more robust intruder. Under the ground, as well as on its surface, might crushes right. Robbers fatten on the spoil of loyal citizens; and loyal citizens are left to starve. Moreover, the weeds are indigenous in the soil; this is proved by the very fact of their growth, for certainly they were not sown there by the husbandman's hand. The grain, on the other hand, is not native, it must be brought to the spot and sown; it must be cherished and protected as a stranger. The two occupants of the ground are consequently not on equal terms. It is not a fair fight. The thorns are at home; the wheat is an exotic. The thorns are robust, and can hold their own; the wheat is delicate, and needs a protector. The weeds accordingly grow with luxuriance, while the wheat-stalks in the neighbourhood, cheated of their sustenance under ground, become tall, empty, barren straws.

2. Thorns and thistles, favoured as indigenous plants by the suitableness of soil and climate, out-grow the grain, both in breadth and height. The out-spread leaves and branches constitute a thick screen between the tender ear of corn and the sunshine. Under that blighting shadow, although the stalks may grow tall, and the husks spread out in their exquisite natural arrangement, no solid seed is formed or ripened. On the spot which the thorns usurped, the reaper gathers only straw and chaff.

How vivid, on both its sides, is the picture, and how truthfully it represents the case!

The faculties of the human heart and mind are limited, like the productive powers of the ground. Neither the understanding nor the affections are infinite. That soil, indeed, even where it is deepest and richest, is soon exhausted, especially if rival and reciprocally hostile emotions grow together on the spot. You hear the word and understand it; you are conscious of guilt, and cry for pardon; you look unto Jesus, and hope for mercy through His blood: "Lord, I believe, help thou mine unbelief," is your self-distrustful and child-like cry. You begin to hope in God's salvation, and to do His commandments; to trust in the redemption of Christ, and to serve the Lord that bought you. Thus far it is well. The field

has been broken ; the seed has been covered in the ground ; the covered seed has sprung ; the sprung seed has grown apace, and now seems near maturity. When evil comes, it does not come in the form of speculative unbelief. When you begin to backslide, you do not begin by abjuring your religion, or denying your God. You do not pull the grown, but unripened, corn up by the roots, and cast it over the hedge. The harvest is marred in a more silent, secret way. The kingdom of Satan, cunningly in this matter imitating the kingdom of God, "cometh not with observation." Weeds spring up among the wheat. At first they are small and scarcely perceptible ; no danger is apprehended from that source. Their first leaves are smooth, tender, and very innocent-like, giving to the inexperienced eye, no indication of their rough, ravenous nature. But if they are not watched and destroyed, they will in the end cause the loss of the soul. If you are poor, anxieties about work and wages, clothes and food, wife and children, become the thorn plants, harmless in appearance and unsuspected at first, which in the end choke the seed of grace in your heart. If you are rich, the pleasure which wealth may bring, or the love of the wealth itself, becomes the root of evil secretly growing in your heart, which, in the day of its strength, will blast all spiritual life, and leave nothing but chaff to be driven away in the great day of the Lord. Watch and pray ; these cares and pleasures creep in at first in a humble and submissive guise ; it is by their gradual growth that they do a deadly mischief. By degrees their roots drain all the sap of your soul ; and the kingdom of God "within you," although never formally abjured, is permitted silently to sink into decay. Your time, your money, your memory, your imagination, your affections, your thoughts at night, and thoughts in the morning—all that is within you, instead of being devoted to a trust in the Redeemer for reconciliation, and a walk with God in an obedient life, is absorbed by the things that perish in the using. When you betake yourself to the word, prayer, communion, your heart already searched, drained, scourged, by the greedy roots of rank, earthly lusts, is a sapless, impoverished, shrivelled thing, where faith in God and communion with Him can no longer grow. Thus perish many bright promises. Christ's word remains a witness against those who have been undone by neglecting it. "Ye cannot serve God and mammon !"

Worldly cares in the heart are farther like thorns growing in a corn-field, in that they interpose a veil between the face of Jesus and the opening, trustful, longing look of a believing soul. It is the want of free habitual exposure to the Sun of righteousness that prevents the ripening of grace in Christians. Unless we turn our eye often upward, and expose the springing, growing, struggling seed of faith to the beams of Immanuel's love, there will be no substantial growth in grace, and no ultimate fruit of righteousness. It is thus that insinuating, overspreading, dominant cares quench both hope and holiness ; they prevent the simple, tender, frequent confiding look unto Jesus, which is necessary to the increase or maintenance of spiritual life. The love of Christ freely streaming

down from heaven, and freely admitted into an open willing heart, by degrees turns fear into hope, doubt into confidence, and the feeble struggle of a child into the strong man's glorious victory ; as unimpeded sunlight changes the minute mustard-seed into a towering tree, and the tender sprouts of spring into the golden treasures of harvest. A thickly-woven web of cares and pleasures, outspread between the soul and the Saviour, is a chief cause of failure in "God's husbandry."

Nor is the harvest safe, although the thorny shade that overhangs it be not altogether imperious and constant. Fitful glances of sunshine now and then will not bring the fruit to maturity. Stand beneath the branches of a forest tree on a day that is at once bright and breezy, you may observe on the grass at your feet a curious network of flickering light, trembling and dancing about in continuous motion. The sunbeams penetrating through the openings of the agitated branches, are barren, though beautiful. The grass that gets no other light grows slim and pithless, bearing no seed-bunch on its slender top. Sunlight now and then admitted through apertures in the leafy awning is not sufficient for the processes of nature : the grain-field must have its bosom opened, without impediment, permanently to the sun. It is thus that snatches of spiritual exercise do not avail to promote the growth or even to preserve the life of grace, in a heart that is in the main habitually overshadowed by greedy overgrown cares. Evening and morning you may open the Bible and bend the knee, but the fading plant of the word within you is not revived by these brief and fitful glances. Before the drooping leaves and ears have had time to feel the genial warmth, another cloud has blocked up the orifice, and left them again in the chill, damp shade. Even the Lord's day, as a gap left open between earth and heaven, is not by any means so wide as it seems : for the memory of the past day's business and pleasure stretches over on the one side, until it meet, or almost meet the anticipation of the next day's business and pleasure, so that even on the Sabbath the world overshadows the soul of its votary. Shut out, except at inconsiderable and uncertain intervals, from the light of life, he passes through the summer of probation with a well-proportioned but empty form of godliness : and the Lord, when he comes at the close to gather the wheat into his garner, finds on that portion of the field only the rustling chaff of a dead profession, instead of fruit unto holiness on a living soul.

And now, under the guidance of the Great Teacher's own interpretation, we have gone through the series of successive obstacles which hinder the growth and mar the fruitfulness of God's Word in the hearts of men—gone through weeping as we went. At the close of this sad but instructive journey, a beauteous sight bursts into view. It is a field of grain on a sunny harvest day. The surface was broken and the seed sunk beneath it from the sower's hand ; the ground was soft and sapful to a sufficient depth, and the roots of the springing corn found room to spread in ; the soil was clean, and its fatness, not shared by usurping weeds, went all to the nourishment of the sown grain ;

therefore, in the balmy air and under the beaming sun, it is ripe to day and ready to fill the reaper's bosom. It is a refreshing, satisfying sight; but fair though it be, we shall not linger long to gaze upon it. By the parable the Master mainly meant to teach us what things are adverse to his kingdom. Having learned this lesson from his lips, we go away grateful for his pungent warnings, without lingering long over the glad prospect to which our stony, thorny path has led.

While all the field is fruitful, some portions of the seed produce a larger return than others. The picture is true to nature, and the fact in the spiritual sphere exactly corresponds. There are diver-

sities in the Spirit's operation, diversities in the amount of energy exerted by believers as fellow-workers with God in their own sanctification, and diversities in the resulting fruitfulness of pardoned and converted men. While all believers are safe in the Saviour, each should covet the best gifts. No true disciple will be contented with a thirty-fold increase for the Lord, in his own heart and life, if through watchfulness and prayer, if by denying ungodliness and worldly lusts, if by sternly crucifying the flesh, and trustfully communing with the Lord, he may rise from thirty to sixty, and from sixty to an hundred fold.

W. ARNOT.

OUR WIDOWED QUEEN.

EYES sorely weeping, hearts strained nigh to breaking,
Over the land are seen;
Of thy deep grief thy people are partaking,
Our Queen! our Queen!

O that our souls could ease thee in thy sorrow,
Could bear away
The grief that will be keener on the morrow,
Than 'tis to-day!

It is for thee our hearts sad notes are ringing!
He who hath gone to rest
Is with the morning stars, God's praises singing,
Where all are blest.

From those who are the nearest to thy station,
Down unto those
Who are the very lowest in the nation,
The mourning goes.

A people standeth with their eyes turned sadly
When thy tears flow;
Saying, with pitying accents, "We would gladly
Bear all thy woe."

Let not thy faith in the All-wise be shaken,
But may the prayer be heard:
"Thou, Lord, hast given, and again hast taken—
Blest be thy name, O Lord!"

We can scarce picture thee, a widow weeping
Upon the bed,
Where lately thy beloved one was sleeping,
And now lies dead!

It is for thee! for thee! that we are sighing,
Sharp was the stroke and keen,
That broke the staff on which thou wast relying,
Our Queen! Our Queen!

W. H. LATCHMORE

MOMENTS IN LIFE.

BY THE EDITOR.

By moments in life, I mean certain periods which occur more or less frequently in our history, —when the spirit in which we then live, the step we then take, the word we then utter, or what we at that moment think, resolve, accept, reject, do, or do not, may give a complexion to our whole future being both here and hereafter.

Let me notice one or two features which characterize those moments.

They may, for example, be very brief. Napoleon once remarked, that there was a crisis in every battle, when ten minutes generally determined the victory on one side or other. Yet on the transactions of those few minutes, the fate of empires may hang, and on the single word of command rapidly spoken amidst the roar of cannon and the crash of arms, the destinies of the human race be affected. Men in public life, who are compelled every day to decide on matters of importance, appreciate the value of minutes, and estimate the necessity of snatching them as they pass with promptness and decision; —of “taking advantage of the chance,” as they say, knowing well that if that moment is allowed to pass, “the chance” it brings is gone for ever; that whatever their hand “finds to do” must be done then or never. The results to them of what they decide at that moment may be incalculable. What is then done may never be undone; yet not another second is added to the time given them for action. Within the germ of that brief moment of life is contained the future tree of many branches and of much fruit.

What a brief moment in our endless life is the whole period even of the longest life on earth! It is compared to a vapour, which appeareth for a short time, and then vanisheth away; to “a watch in the night,” —“a tale that is told.” And if we but consider how nearly a third portion of our threescore years and ten is necessarily spent in sleep; and add to this the years spent during infancy while preparing for labour; during old age, when our labours are well-nigh past; and many more consumed in adorning and supporting the body, or giving ease to body and mind in the midst of work; and then if, after making those deductions, we sum up what remains of time at the disposal of the oldest man for the formation of that character which will fix his eternal condition, oh! how brief is the whole period of our mortal life, when longest, though its transactions are to us fraught with endless and awful consequences!

Another characteristic of those moments in life

is the silence with which they may come and pass away. No “sign” may be given to indicate their importance to us. They do not announce their approach with the sound of a trumpet, nor demand with a voice of thunder our immediate and solemn attention to their interests; but stealthily, quietly, with noiseless tread like spirits from another world, they come to us, put their question, speak the word, and vanish to heaven with our reply. In after years, possibly, with “the long results of time” to guide us upward as by a stream to the tiny threads of this fountain of life and action, we may be able in a greater degree to realize of what tremendous importance they were to us. “Had we only known this at the time!” we exclaim, as we revolve those memories, and think of all we would have said or done —“had we only known!” But it is not God’s will that we should know how much of the future is involved in the present, or how all we shall be is determined by what we may resolve to be or do at any particular moment. Such a revelation would paralyse all effort, and destroy the main-spring of all right action. Sight would thus be substituted for faith; the fear of consequences for the fear of evil; and the love of future benefits for the love of present duty. God will have us rather cultivate habitually a right spirit at each moment, so as to be able to act rightly when the all-important moment comes, whether we then discover its importance or not. Let us not be surprised, then, if God, when he thus comes to us, should not come in the strong wind, in the earthquake, or the fire, but only in the still small voice which speaks to the heart or to the conscience, demanding the conduct which becomes us as responsible beings, and as obedient children.

But let me illustrate these remarks by a few examples of “moments in life,” and such as must come to us all.

It is a solemn “moment in life” when the glad tidings of the love of God in Christ Jesus are heard and understood. Remember that we are saved by “the truth,” born again “of the Word,” sanctified “by the truth.” To receive the truth of God, then, as a living power into the mind and conscience, is of infinite importance to us. Now, while God’s truth comes to us “at various times and in diverse manners,” there are moments in life when we cannot choose but feel as if it was addressing our inner spirit, as it never did before, and earnestly knocking for admission. The circumstances in which this appeal is made may be what are called commonplace; such as when hearing a

sermon preached from the pulpit; when reading a book by the fire-side; or when conversing for a few minutes with an acquaintance,—yet at such times truth expressed in a single sentence, or in a few words, may search our spirits, and gave on us with a solemn look, saying, “Thou art the man I am in search of!” Yet, as it sometimes happens, the circumstances in which we are arrested by the truth, and are compelled to listen to it for weal or woe, may be peculiarly impressive; as when we are ourselves in sickness or danger, or when addressed by a parent or dear friend on their dying bed, or when in deep family distress, or when standing beside the grave that conceals our best earthly treasure from our sight. At such moments the voice of God’s Spirit is awfully solemn as he cries, “Now is the day of salvation;” “To-day if ye will hear his voice, harden not your hearts;” “Believe and live.”

These moments may be very brief. The crisis of the battle between God and self, right and wrong, truth and falsehood, may be concentrated into a few minutes. But time sufficient is, nevertheless, given wherein to test our *truthfulness*, the soil in which truth grows, the mirror that reflects its beams—time sufficient is given to say Yes or No to that God who claims our faith and love. Truth comes with authority and majesty as an ambassador from the living God, and with clear voice, pure eye, and an arm omnipotent to save, offers to give light, life, and liberty to the captive spirit. But we may evade his bright glance, and close our ears to his voice, and refuse to consider his claims, and deal falsely with his arguments; we may reject his offers, and, shrinking back from his touch and his helping hand, retire into the gloom of self-satisfied pride, preferring the darkness to the light; or we may make merry with Heaven’s ambassador, and mock him as they did the prophet of old; or cry out, “Away with him!” as the world cried to the Lord of light and life. And what if Truth never comes again with such pressing earnestness, but passes by the door once so rudely closed against him, and will knock no more? Or, though he may in mercy return again and again, what if the eye gets blinded by the very light which it rejects? and the ear becomes so familiar with the voice, that it attracts attention no more than the winds that beat upon the wall? and the heart becomes so hardened as to be unimpressible, until the dread sentence is at last passed,—“Because I have called, and ye refused; I have stretched out my hand, and no man regarded; but ye have set at nought all my counsel, and would none of my reproof: I also will laugh at your calamity; I will mock when your fear cometh; when your fear cometh as desolation, and your

destruction cometh as a whirlwind; when distress and anguish cometh upon you. Then shall they call upon me, but I will not answer; they shall seek me early, but they shall not find me: for that they *hated* knowledge, and *did not choose* the fear of the Lord: they would none of my counsel; they despised all my reproof: therefore shall they eat of the fruit of their own way, and be filled with their own devices.”

A young man came to Jesus seeking eternal life. “Jesus, looking on him, loved him,” and answered his prayers by teaching him how eternal life could alone be attained. But the young man went away sorrowful, because he had much riches. What a history was contained in that brief moment of his life!

Again, young King Agrippa, when only about seventeen years of age, along with the young Bernice, hear a sermon from Paul the prisoner. The outward picture presented to the eye on that day, had nothing more remarkable or peculiar about it than has been witnessed a thousand times before and since. Those royal personages entered “the place of hearing” with “great pomp,” accompanied by “the chief captains and principal men of the city.” And before them appeared an almost unknown prisoner upon whom his own nation, including “the chief priests and elders from Jerusalem,” demanded the judgment of death to be passed. That prisoner, “in bodily presence weak and contemptible,” was however “permitted to speak for himself;” and verily he did speak! He spoke of God and Christ; of repentance and the new life, and of his own glorious commission to “open the eyes” of men; “to turn them from darkness to light, from the power of Satan unto God, that they might receive the forgiveness of sins, and inheritance among them that are sanctified through faith in Jesus.” What a revelation was this from God to man! The voice which spoke from Sinai and through the prophets, the voice of Him who is truth and love, spoke at that moment of life through Paul to those royal hearers, and to the captains and principal men. But Agrippa, with a sneer or with some conviction of the truth, replied, “Almost thou persuadest me to be a Christian.” Unlike Paul himself, when the Lord spoke to him on his way to Damascus, Agrippa was disobedient to the heavenly vision. And so the sermon ended; the gay multitude dispersed; the place of hearing was left in silence, and echoed only the midnight winds or the beat of the sea-wave on the neighbouring shore. Paul retired to his cell; Agrippa, Festus, and Bernice to their chambers of rest, to sleep and dream by night, as they slept and dreamt by day. But they never heard Paul preach again! It was their first and last sermon; that moment in their life came and passed, but never returned. Like two ships

which meet at midnight on a moonlit sea, those two persons spoke, then each passed into the darkness, and onward on their voyage to their several ports, but never met again! Oh! how awful are such moments when truth reveals herself to the responsible spirit of man! And so, my reader, does it oftentimes happen between thee and God's Spirit. Let me beseech of thee to "redeem the time," to know this "the day of *thy* visitation," and to hear and believe "the word of the Lord."

Another "moment in life" which may be specially noticed, is that in which we are tempted to evil. Temptations are no doubt "common to man." Our whole life in a sense is a temptation, for whatever makes a demand upon our choice as moral beings, involves a trial of character, and tests the "spirit we are of." But nevertheless there do occur periods in our lives when such trials are peculiarly testing; when large bribes are offered to the sin that doth so easily beset us, tempting us to betray conscience, give up principle, lose faith in the right and in God, and to serve the devil, the world, or the flesh. Such moments may be very brief, yet decisive of our future life. They may come suddenly upon us, though possibly many notes of warning have announced their approach. For they are often but the apex of the pyramid to which many previous steps have gradually and almost imperceptibly led; the beginning of a battle, which must at last be fought, and very shortly decided, but yet the ending of many previous skirmishings. Be this as it may, that moment of life does come to us all, when evil like the enemy appears to concentrate against us its whole force, and when we must fight, conquer, or die; when like a thief it resolves to break into our home and take possession; when as a deceiver it promises happiness, and demands immediate acceptance or rejection of the splendid offer,—*"All these will I give thee, if thou wilt fall down and worship me!"*

What a moment is this in the life of many a young person! How unutterably solemn is the first deliberate act which opposes conscience, rebels against the authority of God and of his law, shuts out the light, and prefers darkness! Future character, and the life and happiness of years, may be determined by it. The step taken in that brief moment, the lie uttered, the dishonesty perpetrated, the drunkenness or debauchery indulged in, the prayers for the first time given up, and the father's home left for the far country,—who can realize the consequences of those first acts! Who can estimate the many links of evil, and the endless chain itself, that may spring out of the one link of sin fashioned in that moment of life! Who can foresee the streams ever increasing in breadth and depth which may flow from this letting in of water! Would God that my readers, young men

especially, would but believe in the possibility even of the choice they make at such a time determining their future destiny! The thought of this might at least make them pause and consider.

There is no exaggeration in this language. To realize the danger, all we need assume is the law of habit; for, according to that law, we know that any act of the will, good or bad, has a tendency to repeat itself with increasing ease and decreasing consciousness, until it becomes "a second nature." Hence the first resistance of evil is much less difficult than any subsequent attempt; and he who in one moment of life could by a manly effort become a conqueror, and enter on a life of principle and peace, may, by yielding, very soon sink down into a degraded slave, who is held fast by the iron chain of habit, each link of which he has himself forged by his own self-will.

What a moment was that in the life of Herod, when he permitted evil desire for Herodias to enter his soul! That desire conceived sin, and sin when finished brought forth death. Acts passed into habits, and habits into a life of abandoned passion. Then came the festive birthday, and the dancing before him of the daughter of his paramour; and then the foul murder, with the spectacle of the bloody head, closed eyes, and sealed lips of the greatest and noblest man of his time; and then followed the hour when Jesus himself was brought before the murderer, when the Lord spoke not one word of warning, rebuke, or mercy to him, but smote the wretch with the terrible wrath and righteous judgment of silence!

What a moment in life was that, too, when Judas welcomed covetousness into his heart as a most profitable guest! Then one day Covetousness offered him thirty pieces of silver if he would betray his Lord; and Judas agreed to the proposal. A whole eternity of misery was involved in that moment of his life! For the night soon arrived when the bargain was to be kept. A few moments more, and the history will end here to begin elsewhere. Yet there is not a sign on earth or heaven to indicate the importance of that brief hour to Judas! He forms one among the most distinguished company that ever sat at the same table since the earth began; and never did mortal ears listen to such words uttered by human lips, nor did mortal eyes ever contemplate such a scene of peace and love as was witnessed in that upper room in Jerusalem! But the hour has struck, and Judas rises to depart. The deed of darkness must now be done. It is late, and he has made a most important appointment; unless he keeps it, he may lose his money,—and what a loss to the poor follower of a man who had nowhere to lay his head! Judas leaves that company,—and what was there in things visible to

make him suspect even that an awful moment of life—his last—had come! All was calm within that upper room. All was peace in the world without. The naked heavens shone in the calm brilliancy of an eastern night. The streets of Jerusalem, along which the traitor passed on his dreadful errand, echoed his footsteps in their silence. Yet Judas, "the son of perdition," was at that moment on his way "to his own place!"

And thus it is with many a man in the hour of temptation. The voice of sin speaks not loudly, but whispers to his inner spirit. He pursues his path of evil without alarm being given by sight or sound from heaven or earth. There is nothing in the world without to disturb the thoughts and purposes of the world within his false and unprincipled soul. The moment of his life comes with the temptation, and he yields his soul to its power, and the moment passes with as noiseless a step; and soon the last moment comes and passes away—but he too has noiselessly passed away with it "to his own place!"

The "moment in life" when we are called upon to perform some positive duty, is one which is often very critical and full of solemn consequences to us. The duty may *appear* to be a very trifling one; such as writing a letter, visiting a friend, warning some brother against evil, aiding another, or sympathizing with a sufferer in his sorrow. But whatever the work may be, and in whatever way it is to be performed, whether by word or deed, by silence or by speech, yet there is a time given us for doing it, very brief perhaps, and unaccompanied by any sign to mark its significance; a time, nevertheless, when whatever has to be done must be done quickly, "now or never."

What a moment in life, for example, was that in the history of the three apostles who accompanied our Lord at his own request, in order to watch with him in his last agony! As a man he deserved their thoughtful presence, their watchful sympathy, when enduring the dread sorrow which filled his cup, from realizing by anticipation all that was before him. Thrice he came to them from the spot, not far off, where he wrestled in prayer with his terrible agony. Thrice he found them asleep. "What!" he asked, "could ye not watch with me one hour?" Ah! they knew not what an hour that was!—what it was to him—what it was and might have been to them! They might have had the joy, the exalted privilege, which for ever would have been as a very heaven of glory in their memory, of helping, through the power of sympathizing love, to share the burden of their Lord's anguish. But they yielded to the flesh, and permitted that moment of time to pass; and when they at last roused themselves from their slumber, it was too late! That moment in life had come and gone, and could return no more! "Sleep on, and take your rest; behold, he who betrayeth me is at hand!"

And thus does it often happen in the life of us all. An hour is given us when something may be done for our Lord, which cannot possibly be done if that hour is permitted to pass away unimproved. Then we may teach an ignorant soul, or rouse a slothful one to action; we may alarm one who is lethargic, worldly, sensual, "without God

or Christ in the world," so as to win him to both! or we may comfort the feeble-minded, and support the weak. Circumstances may give us the opportunity, the "moment in life," when such works may be done. The persons to be helped are perhaps inmates of our dwelling; they are our relations: they are sick or dying; or they have cast themselves upon our aid. But we let the moment pass. The work given us is not done. We have neglected it from sloth, procrastination, thoughtlessness, or selfishness. And we may become awake to our culpable negligence, and rouse ourselves to duty. But alas! those whom we could have aided are past help. They are dead; or are removed from our influence, or in some way "past remedy." And so the moment in life given us is gone, and gone for ever, except to meet us and to accuse us before the bar of God. And so is it with duty in countless forms. What our hands find to do must be done quickly, if done at all, and in the time given us. If not, a night comes, and may come soon and come suddenly, in which either we ourselves cannot work, or in which, though at last willing to do it, it is no longer given us to do.

But there is one moment in life—and I conclude by suggesting it to your thoughts—which must come to every man, and which generally comes with signs sufficiently significant of its importance,—I mean the last moment which closes our life on earth. Come it must. And, as an old writer remarks, "the day we die, though of no importance to the world, is to ourselves of more importance than is all the world." That moment in life ends time to us and begins eternity; it ends our day of grace and begins the day of judgment; it separates us from the world in which we have lived since we were born, and introduces us to the unseen, unknown world of things and persons in which we must live for ever during the life of God. What a moment is this! It may come in the quiet of our own chamber, or amidst the confusion and excitement of some dread accident by land or sea; it may be heralded by long sickness or old age, and accompanied by much weakness and bodily suffering. But if that moment, when it comes, is to bring us peace, let our present moments, as they come, find us watchful, conscientious, believing, and prayerful. And should these words of mine be read by chance by one who has begun his last moment without having begun the work for which he was created, preserved, and redeemed, let me beseech of him to improve it, by repentance towards God and faith in Jesus Christ, who will pardon his sins, give him a new heart, and save him as he did the thief on the cross. If every hour of his day of grace has been misimproved, let not this last be added to the number. If he has stood all the day idle, let him in the eleventh hour accept his Master's work of faith alone in his own soul, and do what he can for the good of others. But let this moment in life pass, then shall the next moment after death bring only fear and anguish; for, be warned and also encouraged by the words of the truthful and loving Jesus, uttered with many tears over lost souls,—"*If thou hadst known, even thou, at least in this thy day, the things that belong unto thy peace; but now they are for ever hid from thine eyes!*"

DAYS AND NIGHTS IN GREENLAND.

BY DAVID WALKER, M.D., F.R.G.S., F.L.S.

ALTHOUGH no missionary hymn is better known or more frequently sung than Bishop Heber's, although nearly every child knows something of "India's coral strand," of the history of its people and its present condition, how few have any acquaintance with "Greenland's icy mountains," with its scattered population, or its geographical or zoological peculiarities. My aim in writing this paper is to contribute information obtained in rather a desultory manner, during various visits to the western coast of Greenland, and to give sketches of the habits and social condition of the Eskimo people, from intercourse with them during those visits.

The coast of Greenland is visited by the whaling ships which annually make their voyages to the icy seas of Davis' Strait and Baffin's Bay; lately by the different exploring vessels sent by the English and American governments to search for Sir John Franklin and his missing companions; and by the Danish ships which, during the navigable season, are despatched to supply the settlements scattered along the coast with a renewed stock of provisions, and to carry back to Denmark the products of Eskimo hunting and fishing. Greenland belongs to Denmark, and its trade is monopolized by the government, the Royal Danish Company yearly sending out ships freighted with European goods and provisions, and bringing back skins of the reindeer, seal, walrus, bear, etc., vast quantities of codfish, and occasionally dried salmon.

The Danish settlements and habitations of the Eskimo are situated along the coast from Cape Farewell, the most southern point of Greenland to lat. 73° N., and at each settlement a governor or chief factor resides with his small staff of Danish officials and workmen. Round them gather a mixed Eskimo population, subsisting by the chase, the results of which they bring to the Danish storehouse, and barter for goods and provisions.

It was in the middle of July that I first saw the coast of Greenland. The mountains in the neighbourhood of Cape Farewell looked in the distance like the teeth of a jagged saw, peak after peak looming out of the mist, and showing their uneven tops covered with snow, which clothed their slopes down to the sea, or inland to the valleys lying between them and the mountains of the interior. No name seemed to be more inappropriate than Greenland; nothing appeared but dark rock and unsullied snow. On landing, however, I found some little vegetation; greener than other Arctic lands it may be, and is, but to one whose recollections were fresh of the pleasant grassy fields of our own country, the name seemed a mockery.

On a nearer approach to the coast, the low land appears stretching out as islands with interlying passages and sounds, barren and bare enough in appearance, but free from snow during the summer. Nearer still, at the distance of a mile or so, there appears a considerable quantity of verdure among the small valleys, though the vegetation which

covers them is of a brownish colour. Following the windings which are visible between the islands, we pass up the deeper fjords, where is the greatest quantity of vegetation to be seen in all Greenland: some six or eight miles up the fjords the land is even covered with stunted willow and birch bushes; these are the only representatives of "forests" in this barren land, and never attain a greater height than four feet. The hollows and slopes of the mountains are covered with loose stones of considerable size, barely hidden by these bushes. At the extremities of the fjords the mainland should appear; that lying outside is more or less surrounded by the sea, formed into peninsulas and islands, and bearing a resemblance to the deeply-indented Norwegian coast. Access is obtained from one fjord to the other by crossing the flat valleys which intervene, which are pleasanter and richer in vegetation than the others; but beyond them it is impossible to pass, on account of the ice-mass covering the interior.

The vast icebergs which thickly strew these seas have their origin from the ice-fjords and the coast glaciers, thus: this frozen mass being constantly pushed forward, a sort of outward draught takes place, its surface becomes crevassed and fissured by passing over uneven ground, and the exposed face of the glacier being eaten away by the warm water at its base, becomes top-heavy, breaks away from the mass, and a new child of the Arctic is launched into the world. The icebergs vary in size according to the glaciers from which they have been formed, and the conditions under which they have been separated. Imagine St. Paul's Cathedral, St. George's Hall, or Holyrood Palace floating upon the surface of the water, having five or six times its own size underneath: picture it made of the purest white marble, carved into innumerable domes, turrets, and spires. Again, imagine some vast island undulated, caverned, and massive, or some immense but mastless Great Eastern—glistening in the sun, reflecting hues of the emerald, beryl, and turquoise; here you may see one towering heavenward,

"As a stately Attic temple
Rears its white shafts on high;"

then another without a single elevation, presenting to the eye nothing but an irregular crevassed surface. The former are not more beautiful than dangerous; the ice navigator knows that they may turn over at any moment, the water in which they float gradually melting that portion which is submerged, the centre of gravity slowly moves up toward the water-line, and the slightest shock is sufficient to upset the whole mass. The solid, squarish bergs are those used by the shipmasters as temporary moorings. Drawing perhaps some 300 to 1000 feet, they ground and act as anchors to the ships. On these bergs are usually found small lakes of fresh water, the ice being of land origin. The constant action of the powerful Arctic sun

thawing the surface, the water either collects in pools or miniature lakes, or trickles down the side.

It is almost impossible for those who have not seen them to imagine the sublimity and grandeur of a belt of these ice-islands. Their fantastic shapes traced out in pure glistening white against a pale blue sky, floating in water of a still deeper hue, form a picture which but few artists could paint. They strew the Arctic seas in thousands, and float south to be dissolved in the warm waters of the Atlantic, becoming the dread of the navigator of the Newfoundland banks. The reader may try to conceive the difficulties and dangers which beset vessels navigating the northern seas, and picture the imminence of the peril should they encounter a heavy gale. The air thick with fog and snow-flakes, the ropes stiff with frozen spray, the bitter temperature numbing the hands and feet, the ship surrounded by huge mountains of ice, roaring and crashing, heaving and rearing, one against the other, and against the poor ship—now she is tossed against the ice,—now the ice-blocks beat and bump against her side,—masts and yards crack,—bells ring,—men shout,—the storm howls,—every minute seems to be the last,—

“And the boldest hold their breath for a time.”

As we approached the Spitzbergen ice-stream, we found the sea strewn with detached pieces of ice, with occasional small packs some four or five miles in extent, their colour varying from the purest white to a deep blue, according to the shape and the reflected light. The waves surging against the masses sounded like the dashing of the sea against a rocky coast. The wind falling calm, we were enveloped in fog, and had to get up steam to urge our way through this frozen barrier, which often fouled the ship, and caused her to shake from stem to stern, and at times altogether arrested her progress. The most fantastic shapes were at times assumed by the ice. I remember one group in particular, the grotesqueness of which was remarkable. It consisted of a gracefully-formed pelican of ice, escorted by a huge water-jug, and both apparently surrounded by barn-door fowls. All round these were multitudes of the most queerly-shaped monsters: you can hardly mention one family of animals which did not seem to have its icy representative, the oddity of their forms causing as much amusement as the beauty of their tints occasioned admiration.

Having passed through this ice-stream, we still continued our landward course. Finding, however, by the afternoon of the 18th July, that we could not get sight of the shore, we shortened sail, let down steam, and lay-to till the fog should clear off and show us our position. This it did at six P.M., revealing a beautiful coast-line as it lifted off the land, the landscape bounded by the far inland white mountain-tops, clear cut against the deep blue sky. Farther north, along the coast, we saw the “blink” of the glacier, which there stretches along, or rather forms the coast-line, for eight or ten miles, relieving, with its gleaming whiteness, the sombre aspect of the black and barren peaks of primary rock on either side.

And now we saw a couple of kajaks coming off towards the ship. These kajaks are from 18 to

20 feet long, tapering to a point at both ends, like a weaver's shuttle, some 15 inches wide, and eight or nine deep, flattish above and convex below. The frame is made of laths of wood, and covered over with sealskin prepared by the Eskimo, and sewed on whilst wet. A small hole is left in the middle, surrounded by a ledge: into this the native “wriggles,” sitting with his body at right angles to his legs; then fastening his sealskin shirt, or “jumper,” he forms a continuous water-tight surface up to his throat. Seated thus, with his “payortit,” or paddle, held by the middle in his hands, by alternate strokes with its right and left blades he propels the canoe at the rate of six to eight miles per hour, passing through waves and encountering seas which, in an ordinary boat, would be neither safe nor pleasant. These natives brought us some eider-duck eggs, and received biscuit in exchange. We then stood in toward Frederikshaab, eight or nine bergs appearing in sight, but none very close to us.

The evening was beautiful, and seemed warm and agreeable compared with the previous one. Cautiously sailing between the islands, guided by an Eskimo pilot, we reached our destination in the morning, and moored near the Danish brig which had arrived with provisions, etc., for the use of the settlement. We were at anchor in a small cove, flanked on either side by hills 600 or 800 feet high. The end of the bay opened to the interior, which, some two or three miles off, was shut in by mountains. Scarcely was our anchor down before the ship was surrounded by kajaks. Soon numbers of women, girls, and children trooped along the rocks abreast of the ship to the nearest point, where they sat laughing and jabbering to their hearts' content. On the ladies of the community being pointed out to me, I was rather incredulous; a glance at the portraits will show the reason. The only mark which distinguishes their dress from that of their lords is the presence of a “top-knot.” Their hair, instead of being dressed in the ordinary way, is drawn upwards to the crown of the head, and then tied in a knot; this is surrounded by a ribbon, the colour of which varies with the social position of the wearer. Some of them displayed considerable taste in the selection of the pattern of the ribbons, which are, of course, imported from Denmark, and are very probably of English manufacture.

We were speedily visited by the Danish officials, namely, the chief factor, his assistant, and the priest. Dr. Rink, the Royal Inspector of South Greenland, who happened to be at the settlement at the time, also came on board. We found these gentlemen very agreeable and intelligent. The inspector, a man of high scientific acquirements, was promoted to his present position after having been for many years engaged in a mineralogical survey of Greenland. Pastor Barnsfeldt, who, with his wife, had been for some time resident in the country, gave us some interesting statistics, illustrating the social condition of the Eskimos. The assistant-factor had only been two or three years in Greenland. He had formed one of the noble band of volunteers engaged in the war with Sleswig and Holstein; he was a knight of the

order of Dannebrog, and wore his decoration. Chief-trader Müller, father-in-law to the inspector, for many years resident in the country, was becoming tired of its monotony, and anxious to return to Copenhagen. Accompanied by these gentlemen, we went on shore, and partook of their hospitality. The houses of the officials are all built of wood, thickly coated on the outside with black tar, the windows and doors being double, and painted white. They are kept spotlessly clean, according to the custom of the Scandinavian peoples. The beams supporting the ceiling are plainly seen, giving to the room an aspect not unlike the ward-room of a man-of-war. The side-panels are painted blue or green, the rest of the walls being white; the stove in the corner is brightly polished; the floor without carpet, and beautifully clean; the windows adorned with a few European garden flowers, which bloom with difficulty in this inhospitable region.

After luncheon, we walked some way into the interior, passing the neat little wooden church in which the natives have a Lutheran sermon every Sunday or holiday, and visiting, on our way, some of the huts. These are essentially dirty and disagreeable, to one unused to their ways. The better class have a wooden frame and a window; but the greater part have only a shell made of sods and earth, with a few props of wood or bones of the whale in the inside. The approach to the interior is through a narrow passage some 3½ feet high, opening into the hut, which rises to an elevation of five feet or so. A raised dais serves the purpose of a seat by day and a bedstead by night. On this dais the ladies sit, tailor-fashion, and occupy themselves in domestic work. Cooking is performed by means of a stone lamp hanging at one extremity of the platform, and supplied with blubber and moss. In a small hut of about six feet square, seven, eight, or even a larger number of persons will contrive to exist; and as personal cleanliness is not a virtue practised by the Eskimos, the heat and the offensive smell may more easily be imagined than described. The ablutions of the men generally consist in moistening their fingers with saliva, and rubbing the salt spray from their faces; the mothers use their tongues, like cats, to clean and polish their children. The men do not dress their hair in any particular fashion, merely shortening it over the forehead, and allowing it to hang down on the cheeks and neck; the women often wrap a handkerchief round their heads, to keep them warm, as the drawing up of the hair to the crown leaves the greater part of the head uncovered. The shape of the Eskimo face is somewhat oval, the greatest breadth being below the eye, at the cheek bones; the forehead arches upward, ending narrowly; the chin is a blunt cone; the nose is more or less depressed, broad at the base, with somewhat thickened nostrils; the lips thickish, but the teeth generally very white and regular. Occasionally, among the young women, we saw a good-natured, pretty face; but the old women are frightfully ugly. Their teeth drop out; they discontinue the use of the head-band, showing a bald place where the hair has fallen out by being pulled against the grain; the face, deeply furrowed, assumes a very harsh expression; and the legs are bowed by the

constant use of the "tailor posture" while sitting. The resemblance between the sexes is further increased by the absence of beard and moustache among the men, any stray evidence of either being ruthlessly pulled out by means of a couple of shells.

We were not sorry to escape from the stifling atmosphere of the huts, and presently leaving the settlement behind us; and crossing a swampy valley traversed by numerous streams, we proceeded up the mountains, over some ridges of yet undissolved snow. I was fortunate in my companion. Dr. Rink never seemed at a loss, he had a ready and instructive answer to all my questions, whether they related to flowers, minerals, or the physical condition of the country. Climbing to the top of the first hill, we took a survey of the district; wild and rugged in the extreme, the whole interior visible from the point where we stood appeared to consist of mountains with intervening winding passages, I cannot call them valleys, for our idea of a valley is connected with verdure and softened beauty, while these passes are covered with blocks of stone and boulders, very few flowers interspersed among them, and those apparently pleading for life. We were happy enough to obtain a few minerals, some specimens of rough garnets, allanite, tantalite, molybdenite, etc., with copper, tin, and iron ores in small quantities.

Passing round the corner of one of the huge blocks which bestrewed our way, we startled a couple of hares quietly feeding at its base; they scampered off some distance before one of them fell at the discharge of my gun. At that season it did not differ in appearance and colour from the hares of this country, but its coat becomes completely white in the winter time, giving it a greater chance of escape from its enemies; it is then generally traced by its footprints, an Eskimo being able to distinguish by the shape and feeling of these whether the track has been made days, hours, or minutes before. As the spring advances after the long winter, they are often found sitting at the corner of a stone, intently gazing at the sun.

We found a pretty good sprinkling of flowers during our ramble: a species of buttercup was occasionally seen in the marshy plain behind the settlement; a variety of poppy, with its large yellow flower, looking like a sickly child with an overgrown head, peeped out from under the shelter of a piece of rock; while the Alpine stitchwort occasionally showed itself, reminding me of the common flower in our own hedges. In some few favoured places the hill-sides would be covered with the purple saxifrage, while still more rarely specimens of other species of this Alpine genus of flowers were obtained. In one sequestered nook my eye was delighted with the sight of a violet and a campanula in cordial juxtaposition, and the presence of a dandelion and an alchemilla almost induced the idea that I was on a Scotch mountain, among civilized people, rather than among glaciers and Eskimos. The most ambitious growth here was that of beech and willow bushes, eighteen or twenty inches high, having stems about the thickness of a man's thumb. These are gathered by the natives as firewood for the winter in the Danish houses.

In the Spitzbergen Ice-Stream, off Cape Farewell.

As we continued our walk we came to the edge of a small lake, on the far corner of which some ducks were quietly floating. By a series of manoeuvres, the chief of which consisted in almost breaking one's back by stooping, we crawled from behind one block to the next, and succeeded in getting within shot, when we obtained a couple of brace. On our way back to the ship a thick fog came on, rendering our clothes rather weighty objects to carry when well saturated by it; and had it not been that my companion was well acquainted with the country, we should have been at a loss to find our way, as scarcely a landmark was visible. When we got on board and changed our clothes, we felt quite ready for our dinner, of which our four Danish guests partook with us.

Our conversation was at first limited to an interchange of looks and gestures, as only one of our party understood Danish thoroughly. Dr. Rink, however, speaking English fluently, by the additional aid of French and German, we contrived after a time to be quite a voluble party. It was amusing to hear the disjointed sentences at one end of the table commenced in German and eked out with French at the other, the *patois* consisting of an alternation of English and Danish.

After coffee we went on shore, where we found our men had preceded us, and were showing their gallantry to the Eskimo young ladies. The sound of the fiddle attracted us to a very small ball-room, twenty-five feet square, where from sixty to eighty people had managed to crowd themselves, and

Eskimo Men and Women at Godhavn—from a Photograph by the Author.

Danish Eskimo Settlement at Holsteinborg—from a Photograph by the Author.

were dancing to their hearts' content. The dexterity of the ladies not requiring much extra space, it was marvellous to see the ease with which they glided in and out of this close-packed assemblage, always keeping time to the music, which consisted of two violins, a flute, and a tub-end covered over with seal-skin, serving as drum for the nonce. One of the sailors had elected himself master of the ceremonies, and, seated in the window, endeavoured to keep proper order, greatly to the detriment of the room, it must be admitted. This had evidently not been cleaned since the last stock of blubber-casks and seal-skins had left it, and filled with this crowd, of not very cleanly persons, going through the exciting exercise of a sailor's reel or an Eskimo dance, with only the door and one window as ventilators, the effect may be imagined when the latter was obstructed by the major-domo. A glance in was quite sufficient for us, and we proceeded to have a look at the different "build-

ings" of which the settlement consists. The principal are the governor's house and the neat wooden church already mentioned, which boasted its belfry and organ, and had seats for some 150 people. Close down to the water's edge was the storehouse, in which the fruits of the last winter's hunt were deposited, consisting of seal and reindeer skins, blubber, etc., to the value of about 15,000 dollars. Then there is the import storehouse, where a miscellaneous assortment of articles, biscuit, blankets, and bullet-moulds; stockings, shot, sugar, and stewpans; rice, rifles, and ropes, etc., were to be found in incongruous proximity. Currency consists of paper notes, printed in Copenhagen, which become valuable on their arrival in Greenland, little silver money changing hands. After seeing the different piles of goods stowed away in these buildings, we turned our attention to the exterior of the dwellings of the Eskimo. Round one of them were grouped a number of

Danish Eskimo Settlement at Godhavn—from a Photograph by the Author.

natives, talking in a slow, hesitating way; one of them seemed from his looks to be rather irate, but the easy manner in which he allowed his words to gurgled out of his throat would not have led any one to suppose that he was otherwise than at peace with all mankind. The interesting operation of cutting up a seal which had just been brought in, was going on inside one of the huts; the dainty bits, such as the liver, etc., were taken possession of by the favoured ones of the household, to be cooked over the stone blubber-lamp. A couple of old dames were entertaining each other over a cup of coffee, which luxurious beverage was the first-fruits of the seal-skin just deposited in the store. We next visited the minister's quarters, where by Madame Barnsfeldt we were entertained at tea, which seemed all the more refreshing coming from the hands of the only European lady within many miles of us.

On return to the ship at even that late hour, we found a number of kajaks, the owners of which were bartering with the sailors newly-caught codfish for the morrow's breakfast; these fish are so abundant in the season, that thirty per hour is the usual catch. Heartily tired after my day's ramble, I joyfully turned in for the night, which was gloomy and dark for this part of the world; the ship and settlement being wrapt in a mantle of the wettest fog I ever remember to have seen. My face and hands were sore from the innumerable mosquito bites, those wretched insects making incessant onslaughts on me during the heat of the day; an ungreased skin being evidently a novelty to them, they showed the appreciation of the delicacy by their voracity.

The next day was spent more particularly in ascertaining the botany and geology of the neighbourhood of Frederickshaab. There is only one peculiarity about the latter, which I need allude to here; the presence of immense boulders in the valleys and near the shore, at a considerable elevation above high-water mark, several of them weighed at least above twenty-five tons, and one at least was much larger. These must have been deposited either by icebergs or glaciers. Most likely at some previous period the valleys in which these boulders lay had been under water, and some icebergs stranding there had deposited them. Some authorities, however, suppose the valleys to have originally been the beds of rivers, and that these immense stones had been precipitated into the stream and rounded *in situ*. The former is the more probable theory. Near the entrance to the harbour I saw a boulder some ten tons' weight stranded about five feet above high-water mark; this had evidently been brought in from seaward by some floe-ice, as it was of quite a different lithological character from that on which it rested. Another peculiarity which I may mention *en passant*, is the presence of a number of dykes of trap which traversed the gneissic formation of the hills, some of them being several yards wide with altered gneiss on either side.

On the 28th April we made the land near Holsteinborg; not being aware of the exact position of the settlement, we kept along the coast to avoid the numerous shoals and sunken rocks. Being early in the season, the latter were topped by sea-ice of considerable thickness, which was somewhat

an aid to us in finding out their position, but being similar in appearance to small pieces of ordinary floating ice, they were often mistaken for it, to the great risk and danger of the ship. We passed many icebergs aground near the off-lying islands.

The afternoon being thick and foggy, as it often is in spring in Greenland, and a native who had been out seal-hunting in his kajak coming alongside, with the bight of a rope at either end of the kajak, he and it were brought on board. Being acquainted with the coast-line even in a fog, he piloted the ship in and out of the island passages as easily as if she had been his own canoe. Presently the sun burst through the clouds for a while, dissipating the mist, and affording us a peep of the coast along which we were creeping. Occasionally we passed the mouth of one of these wondrous fjords, the sight of which would alone repay a visit to the north; its deep and placid waters winding inland amid every variety of scenery and colouring of which these grim Arctic regions are capable, or we coasted under cliffs some thousand feet high with their miniature glaciers between rocks of gneiss; the stillness of the uninhabited land, the smooth clear water, the ship stealing along with nothing to break the solemn silence, save the plunge of the seaman's lead or the flap of some wild-fowl passing us, while the awe of our silence was intensified by the constant fear of being overwhelmed by a *dé-bâcle* or avalanche. Our pilot soon left us, as he had some distance to go before he reached his home. Scarcely were we left alone before it began to snow; the fog came down again from off the land; again we had to grope our way. Fortunately, however, other Eskimos had been out hunting; two of whom came on board and piloted us between the islands to the sheltered bay, at the head of which the settlement stands, just outside which the assistant factor came alongside with a boat's crew, the coxswain taking the ship in to her berth, where we let go in seventeen fathoms, mooring her to the rocks with bow and stern hawsers.

The natives in their kajaks at once crowded round the ship; fastening their frail canoes together with pieces of seal line, numbers of them came on board, and showed, by hauling on the hawsers, ropes, etc., that they would willingly do us a kindness. When the deck was cleared, and all the ropes coiled down, an immediate barter was set up between the sailors and the natives; seal-skin boots, trousers, and jumpers soon changed hands, and many an old jacket, etc., went on shore. The greatest demand among the young ladies was for silk handkerchiefs, which they used as head bandages, and their triumph was considerable when one of them became the happy possessor of so rare and prized an article; as there were but few on board available for barter, they were soon at a high premium.

Being early in the season, there was some little night; consequently the ship's deck was deserted soon after ten o'clock by all except the quartermaster of the watch. The next morning was bright and lovely, with a pleasant breeze off the land; the harbour in which we lay was well landlocked, so that we were secure from any of those williewaws so frequent in the fjords of this coast. Snow lay thickly over all the land, the summer

sun having only denuded the surface of a few rocks, the houses of the settlement having a coating of black tar, had almost entirely thrown off their winter covering, and stood out well on the white background. The little chapel, with its heaven-pointing turret, was buried on all sides in snow, the windows and doors being the only spots free from it; a deep pathway, with a four-foot bank of snow on either side, formed the approach to this house of God.

As the evening closed in, the sight of the setting sun was splendid. Close to us was the arm of a fjord, at the upper end of which, as if wedged in between the rocks, the sun was sinking. The few clouds immediately above were of a deep golden hue, in striking contrast with the dark purple of those some distance beyond; the rays reflected from white snow, dark rock, and blue water gave innumerable and gorgeous tints; the moon came peeping over an adjoining headland; the rocks were mirrored in the water, which seemed rising to kiss the golden sunbeams; our boat lay idly by the shore; and it was only when the low quack of a coming flock of ducks brought us back to material things that we were reminded that the game-bag was not yet full.

The next day being Sunday, we had, as usual, divine service on the lower deck, after which I went on shore, as the sound of the bell told that the time for service approached.

"It was a little church, and plain, almost
To ugliness, yet lacking not its charm."

Groups of Eskimo women and children were walking quietly thither as I landed, and, when I reached it, it was almost full. Taking a seat close to the door, I felt a thrill of pleasure in worshipping God among these far-off children who also call Him Father. The minister, with his gown and frill, reminded me, by his dress and general appearance, of the pictures of Luther. As the organ began to sound, and the rich roll of the young voices swelled up to the rafters of the little sanctuary, a sympathetic chord was touched, and more than one English voice joined in the song of praise and thanksgiving. The pastor delivered a short address in Eskimo, and, after again joining in a psalm, the little congregation dispersed. It did one good to hear the melody sung by the women and children, the men's voices giving solidity to the tune with their lower octave notes; of course, all sang in unison. I copy here a verse of one of their hymns:—

"Gudimit pingormet silla tamenna
Nagluungarsusia tekkoa,
Sajmaminiglo okarpok inerma;
Arnadlo ama sennaissauka!
Saerbsarmeta tanko okauziagut
Sorarpok innardlugalloarmerput."

The Danish Government deserves much commendation for the attention bestowed on the spiritual welfare of the Greenlanders; and the success which has hitherto attended the labours of the pastors who have undertaken the care of this people must, in some measure, compensate them for their banishment and its unusual privations.

After dinner, taking a walk over the rocks, I had a fine view of the sea and its countless islands. It was indeed a lovely maritime landscape, out of

the power of better pencils than mine to depict. Beneath me lay our own ship, snugly sheltered in the little cove; outside, a heavy bank of vapour seemed rolling to the southward; in the north-west, low billowy clouds appeared, with their blue bases and white tops;

"And, in the west, dark masses, plashed with blue,
With outline deep of misty steep and dell,
Clomb o'er the island tops."

In the evening there was a halo round the sun,—that is, a circle of light forty-five degrees in diameter, with the sun for a centre, and the mock sun on either side, on a plane passing horizontally through it. This phenomenon is dependent on the reflection of the solar rays from small snow crystals, with which the air is often loaded in these northern climes. Returning from my walk late, I remained on shore, and supped with the governor. The priest, his wife, and the two assistants joined us. We partook of an excellent repast, consisting of venison, dried salmon, ptarmigan, and other delicacies, which seemed strangely out of place in this secluded spot. As I proceeded to my boat, the Eskimo dogs which were there collected made the night hideous by baying the moon,—the coming gale seeming to have stirred all their innate powers of howling. Seaward all looked black, even our vessel, whose tall masts, pointing heavenwards, seemed to invite the storm. On Monday it blew half a gale all day, and snowed constantly. It was miserably cold, so that I did not leave the ship, except for a couple of hours, to sit with the governor. On Tuesday there was only a gentle breeze from the northward, and scarcely a cloud to be seen.

"Blue, sunny sky above; below,
A blue and sunny sea;
A world of blue, wherein did blow
One soft wind steadily."

An iceberg, about 160 feet high, had come into the harbour during the night, and gleamed brightly against the dark rocks. I again ascended a neighbouring mountain, and, from an elevation of 1800 to 2000 feet, had a good panoramic view. As the sun reached its highest, and seemed to rest before it declined, the sky formed a splendid picture. In the north nothing appeared but the deep azure of the sky; east and west the sun shone glaringly upon the solid masses of flocculent clouds which appeared above the horizon. Massively they seemed to roll, one upon the other, rivalling, in their whiteness, the few icebergs that lay along the coast, and shading into deep neutral tints. Now they seemed to sprout out lines into the blue expanse, as though they wished to root themselves in the sky; whilst to the south they rose higher and higher, losing their caverned appearance, and looking like white-crested waves. The hues of silver frost, purple and neutral, would have enchanted a painter, while the hopelessness of any attempt to catch them, and transfer their fleeting beauty to his canvas, would well-nigh have broken his heart.

In the afternoon I took a photograph of the settlement, from which the accompanying engraving is taken. In the evening I visited the carcasses of three whales, which, having been

denuded of their blubber, lay stranded on the shore, and served as banqueting-rooms for the Eskimo dogs. These were so satiated with their repast, they could hardly screw up their tails upon their backs—their way of manifesting pleased recognition—but lay alongside the scene of their enjoyment, smiling benignly, and unable to move. Our approach frightened away some half-dozen ravens, which had been attracted by the carrion lying at our feet. These birds are found very far north; I remember seeing two in the middle of January, at a temperature of -50° , flying as leisurely as if it had been the hottest day experienced by any of their species. These same birds built their nest and bred in lat. 72° N., showing an instance of a bird which breeds both in arctic and tropico-temperate climates. Those which we now disturbed from their feast flew lazily away, and settled on a rock a few yards from us, evidently looking upon us as intruders, and patiently waiting our departure.

A few words about the Eskimo dog, which has been mentioned here for the first time. This animal, whose services are indispensable to the inhabitant of Northern Greenland, is not unlike our shepherds' dog in its general aspect, but is more muscular, and has a broader chest, owing, in a great measure, to the hard work it is inured to. The ears are pointed, and, with its long muzzle, serve to increase the wolfishness of its appearance. An ordinary well-grown dog will be somewhat smaller than a Newfoundland dog, but broad, like a mastiff. The coat of this dog consists of long hair, and in the winter it is further protected by a soft, downy under-covering, which does not appear during the warm weather.

Their education begins at a very early age. When about two months old, eight or ten puppies are harnessed to a sledge with two experienced runners, and by means of frequent and cruel beatings, and angry repetitions of their names, they are taught their duty, but not without much hard labour on the driver's part, and great patience. Personal experience has taught me some of the peculiar difficulties of managing a puppy-dog team. Each dog is harnessed to a separate line; and these, being about eight abreast, fully endowed with all—and more than all—the playfulness of young animals in this country, the effect may be pictured when, all jumping on each other in most admired confusion, the lines become entangled, and are only set right after many efforts. This process has to be repeated again and again, as the gambols or quarrels of the young dogs render it necessary. The whip, too, would puzzle a London cabby, and is not easy for a novice to use,—a lash from 20 to 24 feet long, attached to a handle one foot long; it requires no small amount of dexterity to avoid wounding your own person in an attempt to make an example of one of your pupils. When trained, however, they are guided only by a touch of the whip to the near or off leader, and over smooth ice, with a light load, can be made to go seven or eight miles per hour.

The voyage from Holsteinborg to Godhavn was rather tedious. Being prevented by fog and ice from at once reaching our destination, I was enabled to dredge, and procure a considerable variety

of treasures,—star-fishes, holothurians, crustacea, annelids, and shells. On the evening of the 10th May, we had hoped to find ourselves in port, but our wishes were not realized, and we were in much danger. At one time we were startled by finding the end of one of the Kron Prins Islands right under our bow. We had not much time to make our escape, being hardly more than half the ship's length off before perceiving our perilous position. At another time we found ourselves within forty yards of a formidable iceberg, which the fog had hindered our seeing. Had we struck it, our hopes of escape would have been truly small, as we were going six or eight knots an hour.

On the 11th we made the Whalefish Islands, after beating about all day, and anchored in thirteen fathoms. From the hills near us we could view the changes going on in the ice off the south end of Disco Island; and a Danish official—the cooper—residing in a small settlement on one of the group, was able to give us further information on this, to us, momentous point. Two of us went ashore to shoot ducks, but were not very successful.

Walking over Kron Prins Island, I found the tomb of a young English seaman, with its quaint, homely epitaph. It brought sad thoughts to my mind. Insensibly imagination carried me to the tombs of our countrymen who had perished in far distant lands, martyrs to science, often to their unselfishness; especially that of James, the navigator, who met his fate two hundred years ago, after a perilous voyage, in which he found himself caught in the ice in Hudson's Bay. His puny craft shattered and wrecked, he and his crew wintered on an island which bears his name, and on it the graves of some of the brave fellows were discovered, with this epitaph above them, fastened to a rude cross:—

“ Their lives they spent, to the last drop of blood,
Seeking God's glory and their country's good.

So have they spent themselves, and here they be,
A famous mark of our discovery.
We that survive perchance may end our days
In some employment meriting no praise;
They have survived this fear, and their brave ends
Will ever be an honour to their friends.”

Or it might be the graves of Sir John Franklin and brave Lieutenant Bellot, or less distinguished names, unknown to fame, but shining brightly, no doubt, in the unseen register on high.

For six days we were detained at the Whalefish Islands; but on the 17th May we at last anchored close to the settlement of Godhavn, the seat of the Northern Inspectorate of Greenland. It is situated on a spur of metamorphic rock, which juts out in a peninsular form from Disco Island, the mainland of which is composed of trap or basalt of recent igneous origin. These rocks reach the height of 3000, 4000, or even 5000 feet, and are, in some places, formed into pillars, in a manner which may be imagined by those who have visited Staffa or the Giant's Causeway. Numerous high fields are found in the island, and there are three fjords of considerable extent,—North, Middle, and Disco Fjords, the latter the largest, and nearest the settlement.

The engraving—from a photograph I took on the spot—will give some idea of the appearance

of the settlement. The situation, it will be seen, is singularly beautiful, with its promontory separated from the land by a bay of half a mile in width; and a walk of another half mile brings you to the foot of the beetling cliff of dark rock, like the turrets of some giant fortification, stretching darkly before the traveller, and presenting the same aspect from seaward,—inaccessible, inhabited only by sea-birds, such as guillemots, loons, ducks, gulls, etc.

Our stay at Godhavn was marked by little incident. Danish hospitality, as displayed to us by Inspector Olrik, was even more warm than at Holsteinborg or Frederikshaab; but to relate the incidents of each day would be only a repetition of those in the previous pages.

A few remarks on the religion and social life of the Eskimos of Greenland will fitly conclude these crude and imperfect sketches of this distant land.

It is always difficult to obtain a correct idea of the religion of a heathen people. The stranger must first become acquainted with their language; and before this task has been accomplished, the priests have most probably become jealous of the curious inquirer, and either completely mystify him, or refuse to expose their religious ceremonies to his ridicule. In the case of Greenland, these ordinary difficulties were further increased by the severity of the climate, and the scanty population presented a very uninviting prospect for missionary enterprise. It was not till the time of Pastor Egede that any attempt was made to ascertain the religious condition of the Eskimos, or to apply to their case the ameliorating influences of Christianity.

At that time (1721) they believed—as the “wild” Eskimos of the arctic regions do still—in the existence of two great and a number of inferior spirits. The chief of these, “Tongarsuk,” the great spirit, is supposed to give power to the “angerkok,” or priest, who is the medium of communication between him and the people, by whom he is only known by name, which is never mentioned without becoming reverence. This great spirit is supposed to assume different forms,—at one time that of a man, at another that of a bear, while often he is spoken of as purely spirit. The other great spirit, supposed to be the principle of evil, is represented as a female, but has no name. The angerkoks profess, by means of their familiar spirit, to charm away bad luck from the hunter, to change the weather, or to heal the sick. The lesser spirits are believed to control the different elements, and from their ranks Tongarsuk selects the familiars for the priests. One of these lesser spirits, who rules the air, is supposed to be so vicious, that the Eskimos are loath to stir out after dark for fear of offending him.

Egede found among these people some confused idea of a deluge; but the tradition only existed in a vague and undefined form. They believed, to some extent, in the eternity of matter, having no idea of creation. They supposed the sun and moon to be brother and sister, who having quarrelled, the sun bit off one of his sister's breasts; and the maimed appearance presented by the moon is caused by her turning her wounded side to the earth. The aurora borealis is supposed to be the

game of “hockey,” played by the departed spirits of their friends and relatives.

Now, however, owing, under God, to the unwearied labours of the Danish and Moravian missionaries, these superstitions are relics of the past. Christianity, although in a low form, is the nominal religion of Greenland, and even the “angerkoks” profess to be converted. I saw the last of this race—an ill-looking man—who gave in his adherence to Christianity some time ago.

At each settlement there is now a pastor, and also a schoolmaster, who is employed by Government to give the young Eskimos the rudiments of a good general education. I have frequently been surprised at the amount of information possessed by these children, some of whose pertinent answers to questions proposed might have put to the blush many of our own “national” scholars. They are also taught to sing when young; but as they pass beyond the control of the master before the complete formation of the voice, it is rare to meet with a bass or tenor singer. Occasionally a more cultivated person is met. I remember being introduced to an Eskimo young lady at Godhavn, Sophie, who sang very sweetly, played the flute, violin, and concertina; and, besides speaking Danish fluently, had a tolerable acquaintance with English. Of course, this was a very exceptional case.

Every Sunday and holiday, the little churches at the different settlements are filled with an Eskimo congregation, and a sermon is preached, alternately in Danish and Eskimo. The effect of this is, that in Danish Greenland, I believe, there is not one heathen remaining. In Smith Sound, and on the western shores of Baffin's Bay or Davis Strait, the Eskimos are yet in the darkness of heathenism, and there are many “angerkoks,” who believe all the superstitions I have mentioned; but in Danish Greenland all these are abandoned, except a few customs which are followed more from habit than belief, and are not more absurd than many which obtain in any country district in Great Britain or Ireland.

From incidental reference to the social life of the Greenlanders, some idea will have been already gained of its nature. Filthy in his person and habits, and regardless of the amenities of civilized life, yet the Eskimo is not a *savage*, being possessed of a certain negative amiability of nature which would prevent his being placed in that category. On the whole, he behaves well in his social relations,—is a moderately affectionate son, husband, and father. By the bye, I did see one case where the husband, holding the wife by her top-knot, administered several sound cuffs; but I do not doubt that he had strong provocation. This was the only use to which I have seen the top-knot applied.

The occupation of the Eskimos, though substantially the same throughout Greenland, differs somewhat according to the latitude. In South Greenland it is seal-hunting and cod-fishing. Seated in his *kajak*, with his spear alongside, his coil of line in front, his seal-skin buoy behind, two bird-spears on the upper part of the canoe, and his rifle inside, the hunter takes his departure, putting on a white calico jumper over his sealskin,

if he be likely to meet with ice. Paddle in hand, and gliding through the water at the rate of six miles per hour, he soon sees a seal's head above the surface. Cautiously getting his spear ready, as he rests on his paddle, and clearing his line, he quietly follows in the track of the animal, whose keenness of hearing obliges him to be as noiseless as possible. Arrived within proper distance, he launches the spear, which, striking the seal, leaves the harpoon-head sticking, and away go line, buoy, and prey. The buoy prevents the seal from sinking too low, or swimming to any distance. If the wound be not fatal, the animal quickly rises to the surface to breathe, and, the spot being indicated by the buoy, the ready hunter, adroitly darting another spear, ultimately succeeds in his object. It is then hauled on the top of the kajak, or fastened alongside. The hunter is often content with killing one; but should he meet with any piece of floating ice, knowing the propensity of the seal to bask and rest on these, he paddles up to them. The white jumper now stands him in good stead. The animal, aroused by the plashing of the paddle, rises on its hind flippers, gazes with its large, lustreous eyes at the kajak; seeing the white surface, mistakes it for a piece of ice, and resumes its former position. The hunter now balances himself as well as possible, and, taking a good aim, fires, often killing the seal, but occasionally inflicting mere flesh wounds, or even missing his aim. In the first case only he obtains the object of his pursuit.

In Middle Greenland, the Eskimos add the pursuit of the deer, in the spring and autumn, to the two descriptions of hunting mentioned above. The hunters resort to the passes and valleys frequented by the deer; then, lying in wait for the herd, they single out their game, and either get it at once, or, wounding it, stalk as is done in Scotland. The numbers which are daily destroyed in this manner, during the season, are so great, that the natives often do not encumber themselves with anything

but the skin and the tongue, the latter being considered a delicacy; they leave the bodies to go to waste. At times, however, the deer are very scarce.

In North Greenland, besides seal-hunting and deer-stalking, the Eskimos are occasionally engaged in the chase of the walrus and the narwhal (or sea-unicorn); but as the danger is great, the natives are loath to attack either single-handed. In one of the settlements I met a man whose brother, having harpooned a walrus, was at once turned upon by the infuriated beast, who, in the sight of my informant, struck him in the back with his tusks, and killed him at one blow. This same man had another brother drowned in his kajak, after having harpooned a walrus. The line not being clear, the animal, in sinking, dragged the canoe under water.

Sometimes a gale off the land springs up whilst the hunter is out at sea. His only chance then is to make for the nearest ice, and, hauling his canoe upon it, to drift with it till the gale be over. This ice has at times, though rarely, drifted more than half way across Davis Strait. In case of such accident befalling the hunter, he subsists by seal-hunting till he reach the western shore, that being the land towards which he then steers his course. One instance I have myself met, and it may not be a singular one, in which an Eskimo was lost sight of for four to five years, his family believing him dead. At last, however, he was brought home by a whaling ship from England, whither he had been taken, after being picked up on the western shore of Davis Strait, where one of these gales had drifted him.

The perils of such a life can hardly be appreciated, however, by the inhabitants of these islands, scene following scene of danger and privation. Even the ordinary conditions of existence in Greenland would be considered fearful hardships by those "gentlemen of England, who sit at home at ease."

THE WORSE THE BETTER.

THIS is a paradox, the universal truth of which I would, of course, by no means venture to affirm; but I think that, within rather wide limits, it will be found correct. When we contemplate either the ills which we are compelled individually to endure, or those by which society at large is afflicted, we feel that we need all the encouragement and consolation that can be derived from any and from every source; and I think that the maxim, "the worse the better," is capable of affording us some relief under a variety of annoying, troublesome and painful circumstances.

Few of us, I suppose, are very partial to a severe winter. Such a season is, to multitudes, a source of great distress; thousands of working men are thrown out of employment; the price of coals rises; poor people are half-starved; the number of applicants for parochial relief is augmented; old persons are cut off; weakly and consumptive persons cannot stand before the cold; sheep are buried

in the snow; the tires of railway carriage-wheels snap; and not a few bones are broken by falls upon the icy streets. It would be very easy to show that a good many evils attend a severe winter. But, on the other hand, an old proverb reminds us that "a green Yule makes a fat kirk-yard." This may not be quite correct; possibly a severe winter is more fatal than a mild one; still many of us do feel greatly invigorated by a sharp, cold season; where there really is robust health, such a winter seems to be of great service. And, whatever be the effects of a severe winter upon the human constitution, it is generally believed that, unless it be very severe indeed, it has a good effect upon the land—

"If the grass grow in Janiveer,
It grows the worse for't all the year."

If, however, the physician can prove that a severe winter is detrimental to the public health, and the

agriculturist can show that it is injurious to his operations, I will nevertheless draw this consolation from such a season, viz., that it makes the spring all the more welcome. It strikes me that the inhabitants of tropical countries have not much in their climate whereof to glory over us. If they know nothing of the severity of winter, it is impossible for them to experience the exquisite enjoyment which thrills our hearts when we can say—"Lo, the winter is past; the flowers appear on the earth, and the time of the singing of birds is come." And so our paradox, "the worse the better," may help to cheer us in the cold wintry weather.

Sometimes this paradox is true of great public calamities. The fire of London, in the year 1666, burned down five-sixths of the city, covered with ruins a space more than a mile long and half a mile broad, and destroyed property worth from ten to twelve millions sterling. To many individuals that catastrophe was commercial destruction; but it is now tolerably clear that no piece of good-fortune that ever gladdened the hearts of the citizens was of so great and valuable service as that furious fire. The city was soon rebuilt, not exactly in the best style possible, but in a style that was a great improvement upon the previous state of things; the streets were not made wide enough, but they were made wider than they had been before; and instead of the mean and wretched hovels of lath-and-plaster, which had been such ready fuel for the flames, substantial houses of brick were erected, which rendered the occurrence of anything like so great a calamity all but impossible. But this was not the only advantage; the city, as reconstructed, was much more healthy than it had ever been before. In the very year before the fire the Plague destroyed nearly one-third of the inhabitants; from that time until the present day the Plague has been all but unknown in London. Had no such conflagration occurred, it is difficult to imagine how a great and thorough improvement of the metropolis would ever have been effected; and had the fire been confined within a small area no large improvement would have resulted. The fact is, that the great fire of 1666 was just exactly what London wanted to save it from becoming the most inconvenient and most pestilential city in Europe, if not in the world.

And what the great fire did for London, cholera has done for many other towns. This frightful malady has been a very useful teacher. In many of the places that were almost decimated by it we have learned to adopt sanitary measures, and so have considerably raised the value of life, and prolonged its average duration. If the cholera had not been severe, and the deaths from it frightfully sudden, as well as very numerous, we should have gone on temporizing and dawdling, thinking about expenses, and no great reform would ever have been attempted; the streets would have remained imperfectly sewered, or not sewered at all; houses would still have been crowded with people from the cellar to the garret. Happily the cholera struck hard, and struck people of every class, and thus thoroughly frightened us, and compelled us to make our towns more cleanly. The work is not effectually done yet, and therefore it will not be a

matter greatly to be deplored if cholera, or some other pestilence, should again give us the admonition that we need, and teach us once more that "cleanliness is next to godliness."

I do not know but that even to a railway accident we might apply this paradox, and say, "the worse it is the better." On the thousands of miles of railway in Great Britain, a fatal accident is unhappily a very common occurrence; and accidents on a small scale, though in the aggregate, fatal to large numbers, do not attract much attention. But if a severe collision or break-down took place, involving the deaths of two or three hundred persons, then the public feeling would be so mightily aroused that inquiries would be stimulated to the most extraordinary exertions to make railway travelling as safe as it is expeditious. The more severely the necessity for increased security is felt, the more likely are those inventions which will produce it to be forthcoming.

Of many a political injustice and abuse, we may say, "the worse the better." Things must, generally, become very bad indeed before anything is likely to be done to cure them. It was the Old Sarums that stirred us up to Reform; and it is, to a great extent, the fact that there are no Old Sarums now, that renders it impossible, at all events difficult, to get up a Reform agitation at the present time. Small grievances people will endure, without much impatience, from one generation to another; but get a grievance that is a grievance indeed, and then see how things will go! Had the Stuarts been a little more moderate than they were, they might have retained the throne, and prolonged, for some time at least, much of their despotic power. Happily they had not good sense enough to temper their administration with mildness; happily James II. was a thorough-going tyrant, and to that prince's bad qualities, as much perhaps as to the virtues of the Prince of Orange, we owe the Revolution of 1688. Indeed, as confirmatory of the paradox which I am endeavouring to illustrate, history reveals cases of which it *must* be said—"the better the worse." "Evil for evil," says John Stuart Mill, in his *Considerations on Representative Government*,—"a good despotism in a country at all advanced in civilisation, is more noxious than a bad one; for it is far more relaxing and enervating to the thoughts, feelings, and energies of the people. The despotism of Augustus prepared the Romans for the despotism of Tiberius. If the whole tone of their character had not been prostrated by nearly two generations of that mild slavery, they would probably have had spirit enough left to rebel against the more odious one."

Our paradox is illustrated by the Protestant Reformation. It seems far from improbable that if the Church of Rome had manifested common prudence, if it had checked the multiplication of superstitious rites, if it had not been quite so barefaced in the sale of Indulgences, if its priests and monks had, as a rule, led chaste and sober lives, and if it had dealt mildly and reasonably with heretics, it might have retained its authority and influence longer than it did. Not for a small matter would whole nations have left its communion; not under a light and easy yoke would they have proved restive and unmanageable. But the Pa-

pacy was infatuated; it scouted the idea of moderation; it set at defiance common sense by its superstitions, common decency by its licentiousness, common humanity by its cruelties; and so the Reformers found a sympathizing audience, and the Reformation was achieved. Sometimes the last feather breaks the camel's back; but sometimes it causes the top-heavy load to tumble over, and so the camel is relieved.

I think that our motto is also applicable to infidelity. If we are to have infidelity at all, I give my vote for a thorough-going, out-and-out infidelity, that halts not in its march until it reaches absolute scepticism; until it doubts everything, denies everything, and can go no further. As long as infidelity pays a dubious respect to Scripture, expresses its admiration of the character of Christ, exhorts men to follow his example, argues for the immortality of the soul, and maintains a theistic belief, so long it is a rather formidable foe to vital Christianity. Happily, however, it cannot, with any show of consistency, act in this moderate manner. The Scriptures demand that they be received as the Word of God, or repudiated as the fabrication of wilful impostors; the character of Christ can be respected only as long as he is recognised as the Son of God and the Saviour of men; his death cannot be resolved into a mere martyrdom, nor his life into a mere example; he is what he professes himself to be,—a Divine Redeemer of men, or he is a person convicted of dishonesty and most shameful untruthfulness. Infidelity, if true to itself, must give up every great principle of religion; it must lead us down from one depth of darkness to another, until it leaves us nothing, to believe in. "The worse the better;" for from such a state of dark, cold, absolute negation, the human soul instinctively recoils with horror. Therefore, it seems to me that in what is called Secularism there is not much that should give uneasiness to the friends of Christian truth. Its bold avowal that we know nothing, and can know nothing, and need to know nothing of a future state, is very startling; but by all means let it make this avowal; let it tell men that death is the final extinction of conscious being, that there is nothing to fear, nothing to hope, that there is no God, no heaven, no hell; let the avowal be made—"the worse the better." Give this system rope enough, and it will hang itself; let no man stay it, let no man seek to moderate its tone; let it go on, denying every principle that we hold dear, denouncing every character that we admire, blaspheming every name that we consider sacred; be it so; so much the worse for itself, so much the better for us. The best, the most encouraging fact about Scepticism is this—that its logical terminus is Atheism.

Many persons will find, on reflection, that this paradox has been verified in their own experience. For example, if some one has unjustly assailed your character, and slandered you very shamefully, then "the worse the better." If, while you and your friends know that you are an upright, sober, generous man, your detractor has spoken of you as a rogue, a drunkard, or a miser, you need

not be in the least annoyed. Had your enemy been moderate, had he censured you mildly, then you might find it necessary to adopt active measures of self-defence; but, as the case stands, you are saved the trouble of making any reply or taking any notice. The more unjustly you have been treated, the stronger is the reaction in your favour. Indeed, I think that if a cunning fellow wished to rise to popularity, his best plan would be to hire, not some flatterer who should try to write him up, but some detractor, who should do his best to write him down. Or he might do the thing himself; he might write severe, cutting, unfair criticisms upon his own sermons, speeches, and books; he might anonymously hold himself up to scorn and contempt; all the world would then feel interested to know something about him, and finding him undeserving of such treatment, they would deeply sympathize with him. But to speak seriously; in the great struggle of life our paradox is often exemplified. It is not always an advantage to begin the world with money in one's pocket, and friends at one's back, and a business ready-made to one's hand. Favourable as such circumstances may appear, and favourable as they prove to some, they have been the ruin of thousands. Whereas, on the other hand, many men have lived to rejoice in the fact, to thank Divine Providence for the fact, that they commenced their life-battle penniless and friendless. For when a young man is so circumstanced, if he has any pluck in him, the difficulties of his position will prove an invaluable stimulus, will call into exercise all his powers. Don't pity him; down to a very low degree in the scale of what are called advantages, we may safely say, for many men, "the worse the better."

And so, my indulgent readers, unless I am very much deceived, there is, for many of us, some consolation under the troubles of life, in this paradoxical expression. There are limits beyond which it is not true, and there are cases, of a moral character, in which it is not true at all. Far be it from me to lend the shadow of an encouragement to the utterly vicious maxim—"Let us continue in sin that grace may abound," which is a perverted application of "the worse the better." No! let us have none of this vile doctrine. I speak not of evils which we bring upon ourselves, but of those which are inflicted upon us, and which are not under our control. Of these, at least of many of them, I am audacious enough to say, "the worse the better." I have often found the paradox true. I have often been greatly helped through difficulties by the paradox, and I believe that you, my readers, may also find in "the worse the better," a motto which will enable you to set some evils at defiance, and to endure others in a patient and a hopeful spirit. Paul says something very like "the worse the better," when he says, "We glory in tribulations also;" and when he makes this assertion, "When I am weak, then am I strong." Depend upon it, that great man had learned to say, in his own way, concerning many things, "THE WORSE THE BETTER!"

H. STOWELL BROWN.

VESPER.

BY THE COUNTESS DE GASPARIN, AUTHOR OF "THE NEAR AND HEAVENLY HORIZONS."

III.—OLD CUSTOMS, OLD FOLK.

THE farm joins on to the manor-house. Properly speaking, farm and manor are one. In by-gone days there were children in that manor-house ; and in the farm and the village, old women and old men.

What quantities of old-fashioned things, to be sure, the walls of the manor-house enclosed ! Whenever, with furtive step, the children glided towards its uninhabited rooms, when they opened a little bit of the shutters, and a slender ray of light

coming through lit up the tapestried medallions, what an odour of antiquity emanated from the furniture around !

The subjects represented on this tapestry, with which the walls were hung, were repeated in oil-painting beneath the pier-glass on the chimney : two foxes discreetly seated—their noses high in air, their tails erect, and between them a bunch of grapes that must have been gathered in the land of Canaan ; or else a startled bird of the bustard family pursued by a white greyhound ; and in her

forsaken nest, amidst reeds of which the shortest must have been thirty feet, eggs as large as those of an ostrich. A damask canopy spread its pavilion above the spiral bed-posts. On the dressing-table the patch-box, the powder-puff were still to be found, and when little hands shook the latter, the white cloud sent out a subtle perfume.

But the chief admiration of the manor-house children, the darling objects of their desire, were the great mother-of-pearl buttons on the old satin waistcoats. What profuseness of gold! what diamonds! Each tiny spangle, each paste ornament conjured up before their eyes the enchantments of an era of marvels.

Every now and then, too, an odd volume of Madame de Sévigné would throw some light on that unknown world of which these were the vestiges. Our children made as much out of it as they possibly could. To be sure the chain of events was not always unbroken, the characters not always preserved. But, for all that, never has any course of history since that time taught them what those chance pages, those old-world scents, and those hours of reverie revealed.

In the granaries one came upon another epoch—other manners and customs. There, a small fresco-painted turret was seen to rise, the refectory or *belvedere* of the monks of the sixteenth century; the narrow windows of this turret opened out upon the leafy branches of the tallest walnut-trees. All day long, linnets, wrens, and blackbirds carolled there.

When one looked about carefully, one discovered at the far end of the dark niches made by the vagaries of the roof, sometimes a carved-oak bas-relief, some pilgrim of the Holy Land wending his way beneath palm-trees very like cabbages, accompanied by dogs very like elephants; sometimes gigantic paintings, black as ink—Claude Lorraine's, no doubt!

Up in the corners leaned several carved chests. The ornamented locks, the fine trefoil-handled keys, with triple wards which opened with a loud report,—every bolt and bar a proof of mechanical genius; our children examined all these—not one richly-wrought ring, not one grotesque head, not one unicorn's horn, which is not faithfully recorded in their memory.

And then these expeditions had such a delicious touch of fear about them too! Not the fear of ghosts indeed, but of a much more practical danger. In the secret drawers of a wondrous piece of furniture, terrible engines of war were known to be hidden. Balls full of grape-shot; nameless articles covered with pitch, stuffed with gunpowder, with yellowish matches,—Greek fire—nothing short of that! Accordingly, how quick one had been to discover the secret of the mystery,

and how one kept returning to it again and again, and with what a timid hand one meddled and remeddled with that deadly machinery!

Crusades, chivalry, the whole middle ages were there.

Then, besides the manor-house, there were the barns. One stole away there on every holiday that came.

On Sundays one ran thither at break of day. As for getting up early on week-days, one did not care for that—but on Sundays!

The shutters had little square holes, through which the first rays of day-light came. What palpitations these occasioned! Was it the new-born dawn or the rising moon? One dared not stir. One's parents were asleep close by.

Come!—the light grows stronger. Moonlight would not have so warm a tint. The sun is rising, that is certain. Nay, he is risen, for I hear the swallows.

Then one rose on tiptoe, feeling softly round for one's clothes,—finding them, putting them on anyhow. One advanced; the first step—the second; never did thief turn a handle so discreetly. Take care of the hinges—the door-step! Some one has coughed. Silence! the hand upon the latch. It was a false alarm. The passage—here I am; the great door—here. . . . A hand is laid on my shoulder!

"Where in the world are you going?"

"I—I—"

"It is only three o'clock! Go back to your room."

Reinstated in my prison cell till six!—till six! And the beams come streaming in; a ladder of gold, through the chinks in the shutter. Would I were that small gnat dancing up and down in the luminous streak, he has got out! How the fountain is leaping in its basin! There is the blackbird whistling away in the box-tree hedges. Oh! what a pleasant puff of wind: it smells of roses. They are getting up at the farm. Granny is calling to the hens. Are not they happy, that's all!

But generally one succeeded in making one's escape. Then one hurried to the farm, to find the old farmer and his wife and three sons, grown men themselves. Above them lived the gardener's wife, with her mother, both well stricken in years. I do believe the daughter was the elder of the two.

A lamentable creature that daughter. She was called *La Jeannottette*, after Jean her husband.

One fine morning, to escape from the eternal whining of *La Jeannottette*, the poor man had decamped,—to the *Russias* said some, to the *Americas* reported others,—for good and all, at all events. *La Jeannottette* was left to console herself

as best she could. Indeed, misfortune was less oppressive to her than happiness.

Did the sky happen to be clear in April—Clear moon, frost soon, sighed Jeannotte. Was the fine winter matter of rejoicing—Who doffs his coat a winter day, will gladly put it on in May. Did the crops come up thick—Blades too near, empty ear. Was there a wandering cloud, large as a man's hand, visible on the horizon, La Jeannotte presaged hail-storms destroying the vineyards; if it thundered, a fire; if it rained, a flood. But as for fine weather, bright seasons, meadows laden with hay, barns full of grain, fruit in abundance, flourishing flocks, and the land flowing with milk, why, that was to her the very abomination of desolation.

In this way La Jeannotte went through life, shaking her head, dragging her limbs slowly along, the corners of her mantle drooping, her eye dull, shrugging her shoulders at the folly of mankind, —a worthy woman, after all, and compassionate to sorrow. Indeed, human woe was her very element. Whoever laughed offended her, but he who wept confessed by implication the accuracy of her previsions. So she went on, announcing small misfortunes to the young, heavier calamities to the old, and just stirring the garden beds like a mole. To see her was enough to set any one yawning. You may be sure the children had not much to do with her. All the cheerfulness she lacked had taken refuge with her mother, an octogenarian with a radiant face and eyes of black velvet.

When she bestirred herself in her kitchen—back bent indeed, but more alert and lively than many a girl of fifteen—she kept humming a little song about a bird in the greenwood, a youthful smile playing around her furrowed lips, a smile of indelible innocence.

As for her, the children followed her every step. Their eyes delighted to rest upon her pure forehead, and to catch the simple words that fell like pearls from that old and delightful mouth.

She did all the work of the house. Gay as a lark, and quick-witted, everything seemed cheerful to her, even death.

"Here he comes," she would say to us children.

"Where, granny, where?"

"Behind me, there; *quite close*. Don't you see?"

The children opened wide their eyes, without a shade of fear, and the little old woman kept calling out, "Look well, look well."

When she was at her wheel (she span beautifully), her hand no longer trembled, the silken hemp lengthened out under her fingers, the wheel flew, and an even thread rolled itself round the shuttle.

"What easy work it must be!" cried the children.

"Try."

"Will you let us, granny?"

"There; your foot on the board, the hemp in your left hand. Now for it; gently!"

Crack goes the thread, the wheel stops, and granny bursts out laughing.

"Children, children, the gosling does not fly far the first day it is hatched!"

She did not talk much, this dear granny; she liked singing better, especially when her daughter scolded. Just a few words, her eyes full of clear light, and I don't know why, but you began at once to think of God.

The lower storey was the domain of the farmer and his wife. They occupied the fine large kitchen and the best room. The swallows hung their nests to the beams of the passage. They kept flying in all day long, and as soon as the young brood heard them, each opened its beak wider than the other. One used to spend many a five minutes there, contemplating those ivory beaks with their yellow rims, listening to the twittering of the mother bird, her little lectures intermingled with joyous cries.

After that one went in to see the farmer. Such as he was, he bore an ancient name of France. It is not unusual to find such, slightly modified by the provincial *patois*, at the foot of our mountains. The political convulsions of past times have scattered them along the frontiers. The good man wore his name without pretension, he knew nothing of its lofty origin; but there was about him that inherent nobility which nothing can efface when it is in the blood. A grand bearing, a grizzled beard, a proud face in the style of Francis the First, he managed his four sons with a glance of the eye. It was one of those aspects that are always serious without being sad, and somewhat unsocial, because out of place in a common sphere; you might read a whole chivalrous genealogy there. Whether he threw his scythe across his shoulder, or held the plough, you could never come across him without thinking of gentlemen in satin doublets. His sons had the same dignified bearing. Haughty spirits below their obedient demeanour, taciturn like their father, grave, reserved.

Their mother, a strongly-built woman, the very soul of honour, managed all household affairs with a high hand.

There was little laughter amongst them, and as little singing. There were no quarrels, and no bursts of joy. A serious patriarchal life theirs, where everything got accomplished in due season. But there was an ineffable charm about that house; the fascination of a native refinement and a reserved kindness. The more rare the smiles, the better they lit up the faces.

And then that paved kitchen had a mantel-piece

of a width you rarely meet with now-a-days. Jugs and ewers of obsolete shape were displayed on the rack. Great carved chests held the flour, and when the farmer's wife lifted their heavy lid, the children would peep in full of curiosity, half expecting to see some monkish relics of former times emerge.

In the best room was a well-waxed sideboard, and an enormous bed of green serge. There were prints all round the walls; ladies in sacks, powdered marquises, all, even down to the pussy-cat, tricked out in top-knots. The highly-coloured box in which the farmer's wife kept her lace coifs, was displayed on the old bandy-legged table. The worms that had been working away at the oak wainscot for generations, had pricked its carvings into patterns of their own. Here and there the wall receded into niches, in which at evening the *crozet** was wont to be placed. Chairs that resembled canonical stalls, were ranged against the panels. In the middle of the room projected the rotund stove, supported by four griffin's feet, with its little recess, in which in winter one might hear the hissing and spluttering of roasted apples. This stove alone took up about a third of the best room. Greek temples intermixed at random with Chinese pagodas; Dutch housewives busy trying to catch their ducks beneath the arches of a Venetian palace, drawbridges, cottages, hanging gardens of Babylon! everything was to be found there.

One day in the year, or more correctly one evening, this grave family circle departed from its usual routine. That evening not only laughter, but even singing was to be heard among them. This happened on a November eve—the *Eve of the Walnuts*, as it was called.

About six o'clock the lads and lasses began to assemble. The tables were ranged around the best room, baskets full of walnuts were heaped upon them. The father sat apart near the stove, the mother beside him. The father resembled the King of Thule, an imposing figure, especially when, about to drink his first glass of wine, standing, he silently touched the glass with his lips, then, with a courteous gesture, passed it on to his aged companion, the whole room crying out a loud *vivat* with one voice. After which away went the hammers, such cracking on the part of the youths, such peeling on that of the damsels, and when some luckless lad chanced to rap his own fingers, I leave you to imagine the peals of laughter.

The little ones who were not entitled either to crack or to peel, kept running round and round picking up the shells, with a pretty good chance of finding a fragment of kernel every now and then. They swell into heaps, these beautiful white

kernels, *grumeaux* as they are called. The wine goes round with the brown bread and the cheese, they are hardly touched, such is the haste all are in. As the night wears on, the tongues unloose. From those rustic lips come phrases in which the true old Burgundian spirit, full of caustic railery beneath an apparent simplicity, is to be found in full perfection. Meanwhile the couplets of the plaintive provincial songs are strung one after another in melancholy cadence. And when midnight strikes, then one o'clock, and the well-filled sacks stand straight in rows along the wainscot, and the last stroke of the hammer has sounded, then the shells are collected into heaps and thrown upon the kitchen fire. How they crackle, how they flare! Again, again! The flames rise, light up the circle of laughing faces; then they fall, they die down; nothing remains but purple cinders. Then with their hands under their aprons the young girls make their way home shivering through the cold night air, the lads betake themselves to the stable. And this eve of the walnuts will be talked of long.

In those times I speak of, the watchman used to go his rounds on winter nights. His iron-shod shoes resounded on the court-yard pavement. His lugubrious voice used to set its words to two notes, —one major, one minor. "Struck ten! Struck ten!"—we children shuddered beneath the bed-clothes. But when the watchman in the same doleful tone went on to add the truly benevolent exhortation—

"Rest safe from harm
And keep you warm,"

no words can convey the terrors that froze up our spirits.

The most daring among us had actually seen the watchman by the light of a frosty moon; seen him in his greatcoat, with its hood thrown back, his lantern swinging, held out at arm's length. Yes, they had seen him glide along the range of farm-buildings, look through the windows of the stables, then approach the house slowly, cry the hour, and vanish into the gloom.

But there was one evening when the watchman's cry had nothing sinister about it. That night we used to watch for his return with quick beating, impatient hearts. One, two, three—the New Year is about to begin.

Midnight! In the courtyard a cheerful sound of wooden shoes. Courage! ghosts do not wear wooden shoes. Quick to the window! Beneath the falling snow a group of village boys. Would you like to know what they are singing? Here are the verses, such as they are, in their original simplicity.

"The first day of the year,
In bidding you good day,
God send you happy years
Throughout your life, we pray.

* A little iron lamp of antique form.

"Oh, Christians, be not chary,
But give us of your wealth;
You'll only be the richer
In happiness and health.

"Oh, Christians, we advise you,
Seek to amend at last,
And better do in future
Than you've done in the past.

"Wake up, wake up, fair sleepers,
Enough of slumbering;
Come, look out of the window,
The lads are come to sing.

"They've fiddles brought and bass
To wish sweet ladies luck;
Here comes the New Year by,
For twelve o'clock has struck."

In those days we had a remarkable old woman living in the village (though it is hardly correct to designate her thus; for, in truth, she was still in all her autumnal vigour) named amongst us *The Salome*.

Whenever I turn the corner, and see that little house with carved galleries and sharply-pointed roof that was Salome's, a thousand sweet recollections, sweet but sad also, lay siege to my heart.

Formerly one saw on that wooden gallery, father, mother, and ten children. Now one only sees strangers there.

The Salome had a jovial sort of countenance, and broad square shoulders. She was the very essence of common sense and compassion. Salome fed and cherished all hungry creatures, animals and people alike. And, moreover, she was bone-setter to all the neighbours round.

Sprained arms, twisted limbs, started muscles, all cases that the regular faculty looked down upon, Salome would set to rights. She felt about, she decided—"this should go like that." And with a turn of her thumb—a good large strong thumb it was—she would push back a bone into its place.

Never did she receive one penny for her pains. On the contrary, she would often give a thimble-full of wine to her patients. She had *re-made*, as she phrased it, about a third of the village population. When one wanted to know how she had attained such skill, "God Almighty put it into my head," would be her reply.

As to any theoretical explanation, you might as well have expected such from the Sphinx itself. Language and definitions, it must be owned, were not Salome's strong point. Her *this way* and *that way*, her cause and effect, got quite inextricably entangled. Never mind, the dislocated folk that she had put to rights were not particular about theories.

The Salome had one weakness, that of stuffing children with cakes. In justification of this weakness she had a favourite axiom,—"*What pleases*

does not hurt." Fortunately, she only applied this proverb in the matter of cakes, and on *oven-days*. On these high festivals, *salées* (the favourite cake of our district), as large as full moons, used to blossom out in her kitchen. Butter fizzed on them, they were so hot; the golden eggs puffed themselves up. Salome would cut sections which we had to take both hands to lift. "Eat that up," she would say. For her there were no little gentlemen and little ladies; *the Salome* petted and spoiled all children alike, *be they what they may*, as she said. Oh, how we loved her!

In Salome's house, too, animals swarmed from top to bottom.

In the cellar there were guinea-pigs at the bottom of an old chest—the master-piece of the clever ones amongst us children.

Oh, the saws that we had blunted, the pianes that we had spoiled! The consultations, the calculations necessary to execute that prodigious labyrinth, that dwelling-place destined to the guinea-pigs! As to whether they liked their palace or not, who knows? we never asked them! But to have found fault with it after the profound cogitations, the sleepless nights it had cost us, would have been black ingratitude on their part. There must have been about a thousand nails laid out there! And then the passages and gateways, and halls and side-chambers, to say nothing of the straw! The fact is, that once inside it, one never saw anything more of the guinea-pigs than just the tips of their noses. Generations accumulated in that chest. They themselves must soon have lost the thread of their genealogies.

At all this Salome would laugh. "What would you have; they are but young things!" she would say.

Then, next to the guinea-pigs came the rabbits. No chest for them; but a charming little stable, in company with the cow, the goat, and the kid. The cow lowed, the goat butted, the kid leaped, while the rabbits, snug in a corner, their ears laid back on their sides, swarms of young around them, with wide-staring eyes, nibbled away at the delicate hearts of freshly-gathered cabbages.

In the gallery, *Zai*, the black cat, took up her position, with eyelids half closed over her sea-green balls, a quivering tail, a purr melodious as the cooing of ring-doves.

In the garret, the pigeons sat in a row on the little plank like a string of pearls. As for the hens, they laid their eggs in the hay-loft. We used to go to look for them. The exquisite delight of this was that the whole place was so tumble-down. The staircase shook, the boards cracked, the beams bent, underneath the hay were holes, through which Salome herself, who was by no means a slight figure, might have fallen.

"Children, you'll break your necks!"

One made one's-self light, one crept on hands and feet, one was deliciously aware of danger on the right hand, on the left. And there, amidst the fragrant hay, in a corner all tapestried with spiders' webs, the hen sat with ruffled feathers. *Burr!* she flies away frightened; one slips one's hand in—a nest full of eggs, and all are warm.

Poor old house, what poetry, true poetry, there was beneath thy roof! what contemplation of God's creatures! and when, half smothered beneath the sheaves, perched as high as possible in those far regions, where neither Salome nor her husband ever ventured, how free and far our glance hovered! It lingered awhile lovingly on the oak-tree tops, then it lost itself quite in the fathomless depths of the great blue sky.

In those times I am speaking of, just as the twelve o'clock bell was swinging to and fro against the azure background, you might have seen advancing along the meadows an old man with a pannier on his back. *Advancing*, though, is hardly the right word. I do believe that a cricket, if he had happened to be at all in a hurry, would easily have left Lois—the good Lois, as he was called—behind.

The good Lois, quite lame, and almost one-handed, was the postman of the district. He wore on his head a fabulous hat, of straw, tied together with packthread; black straw, yellow, white, green, red, all colours of liberty and despotism both, in horrible confusion. Under this hat lengthened out a pair of hollow cheeks, a grizzling chin, with eyes of China blue, a courteous mouth, an innocent expression, that reminded you of the flowers of the field.

Such was the bearer of our good and evil tidings.

Between the moment when the children first discerned him at the end of the shrubbery, and that in which Lois entered the manor-house court-yard, a good half hour at least intervened. Those who were anxious for letters ran to meet him; but usually he was leisurely waited for.

Very placidly, very deliberately, Lois moved his crutch along the path, then up the steps, then through the gate, then across a bit of grass-plot. Then he leant his staff against the basin of the fountain, and took off his hat.

"Here you are, Lois!"

"Here I am; here I am!"

"What do you bring us?"

"Oh, as for that—whatever pleases God."

Then, but not without help, Lois took off his pannier. He placed it with utmost precaution on the bench. When once it was placed, he steadied it; eyes, bright with childish impatience, sometimes, too, with tears and suspense, were greedily fixed upon the old portfolio. A leather portfolio

it was, strongly corded, half hidden by miscellaneous packages. Lois plunged his one hand to the very bottom of the pannier.

"Would you like me to unfasten the string, good Lois?"

Good Lois shook his head, placed the portfolio between his head and his chest, squeezed it very tight, then with his paralysed fingers caught hold of the end of the string; one turn, two, three turns. At last then, the letters. You think so? The good Lois would lift the first with one finger—not that; the next—not that; the third—not that either. . . .

Yet, in truth, the heart was neither more nor less exercised; anxieties were neither more nor less consuming than they are now. In the very air were currents of peace, so to speak, that one inhaled in large draughts, that gave great moral courage and calmness. In our day, our locomotive agitations produce a high fever, followed by a great prostration. Here each day, as it came, brought its own burden, a burden proportionate to human strength.

We had no electric telegraphs, no railroad's delirious rush, fraught with whirlwinds of glad or gloomy tidings, to crush the soul with excess of pressure. The mental springs were not strained, the energies not worn out; the intellect, the nerves, moved freely, because they retained longer their inherent force. With less visible action perhaps, it seems to me that more was accomplished; less dust raised, more work done. What one did, one did with a quiet spirit and a merry heart. One was conscious of that ready, cheerful predisposition for one's task which is the concomitant of perfect moral health. Lois, placid and persevering, was the typical character of those times.

During the three hundred and sixty-five days of the year, Lois, invalid as he was, having to contend with old age, and with the inclemency of a climate which alternately brought to bear upon him blasts from the north-east and snow from the south, gales sufficient to uproot a forest, and a sun worthy of the tropics, he went on his way, equal to his task.

This post, that now-a-days uses up one of our cotemporaries in four or five years, was held for fifteen by Lois, without his being the worse for it.

"Are there still old people in your village?" you ask. Yes, and children too. But not the same; the children of to-day are, I think, less young than we were. If you want spring-tide grace, if you delight in cheerful songs and bright memories, go seek them from the old.

Your father! They were his elders! Your mother! They remember her arrival as a bride in the flower of her beauty. Your grandparents, those whose faces you yourself never knew, still live and move before their eyes. Great-grandpapa's ways;

the very words he had a trick of repeating; his ivory-headed cane, and the passion he got into on one occasion, and the manner in which the house was managed; the pantry, the coachman, the house-keeper; and how, on account of a certain wild freak, the octogenarian aunt—whom you dimly discern in your memory's background—received five good fillips at the hand of her venerable grandmother; the great coach that held ten; the bailiff, the castellan; the ancient social life vanished; all rise once more out of the dust.

Are you weary?

I have a great mind to take you to the Marguerite to Jean-Pierre, one of the old women of our present day.

Jean-Pierre is in his ninetieth year; Marguerite in her eighty-seventh; they have been married sixty-two years.

Their room is a cheerful one; a geranium spreads out on the window-sill; puss rubs her glossy sides against the leg of Jean-Pierre, he meanwhile dozes with his elbows on the table.

The Marguerite is just gone to the Planches. By and bye we will join her there. She has left her black-letter Bible open; her brass spectacles shine in the sun-light.

Jean-Pierre raises his head, looks into vacancy, and asks who goes there. He is blind. He has felt darkness descend upon him without a murmur, for all he loved the daylight well.

Do not go and fancy though that Jean-Pierre is gloomy. Only look at that plump, round face, and forehead free from care. "The Marguerite sees for both," says Jean-Pierre.

"Do you find the day long?"

"Not very; I keep thinking of Paradise, and then of good old times too. All the same; it's a fine thing to see for those who can." Jean-Pierre turns his clouded eyes towards the window: "God Almighty, who reigns above, preserve my Marguerite, and take me first."

"But what would become of Marguerite, all alone?"

"Oh! she'd do well enough. As for me, look you, I'm soft. Just think; since the year ninety-five, that we've been together. When I hear her on the stairs, it's just like sunshine. She scolds me sometimes, does Margaret; she's wicked.* Then I banter her:

'Marguerite, my darling,
Marguerite, my pretty love.'

She laughs, she does. Your worshipful grandfather used to go on so; only your lady grandmother was not much given to joking."

And so, from one reminiscence to another, Jean-Pierre forgets the hours.

When evening comes, Jean-Pierre feels his way to the outside gallery, and seats himself there. His poor eyes no longer see the meadows he has so often mown; the vines he has so often pruned; the forests where, in autumn, he was wont to cut the fir-trees down. But the wind from the mountain blows on him as it did then; he hears the same songs from the passers-by. And when Marguerite's step falls upon his ear, a step still alert in spite of years, Jean-Pierre, with trembling hand, follows the bannister, goes down the first steps, gets quietly scolded for having ventured so far, then hums under his breath:—

"Marguerite, my darling,
Marguerite, my pretty love."

At which Margaret smiles; a robust, energetic, little old woman, with a curt, original way of speech, who cannot suffer any one but herself about her old man.

"They put one out, do those young ones." (The young ones, her sons, will never see forty again.) "They don't know how to do things; they've no notions."

Very early in the morning, the room is put in order. The Bible chapter spelt through; Jean-Pierre settled near the window, puss on one side, his pipe and tobacco-box on the other; Marguerite briskly—though she is a little bent, to be sure—makes her way up to the Planches.

These Planches are an extensive common—formerly covered with wood, under cultivation now—on the slope of the mountain, just below the first pine-trees.

Many a breeze, laden with resinous perfume, wanders there; flowers grow that you do not find in the plain,—the orchis, the heath, the golden broom. The tall grass waves amongst the rocky boulders, the wild bird that loves solitary places starts out of the juniper bushes, with a sharp short note. The mountain seems quite near, the hardly defined paths are almost always untrodden. The character of the spot is wild,—the isolation all but complete; and this is why Marguerite likes it so much. She thinks of the time when she walked as a young girl beneath the oak-wood trees, arms filled with the sheaves she had gleaned. She thinks of the time when, Jean-Pierre at her side, they first turned up their little bit of ground. She stops, she looks over the country; nothing is changed,—nothing there. Then she takes up her spade, and digs hard that she may not cry. She is more soft this Marguerite than Jean-Pierre supposes. Without any help she fills her basket, lifts it on her back, totters a little, steadies herself, and sets out homeward.

This evening the fire will burn brightly in that little room; Jean-Pierre will have his potatoes, will have his coffee, will have his Marguerite. When

* In the idiom of our village *wicked* means lively.

they were younger, these were stouter-hearted indeed. Did they love each other better? Had they the same tender happiness, so akin to tears—so near to heaven?

You who press close together to the hearth which will soon go out, you who join your wasted hands in the same prayer, you whom one flight will bear to the better country, answer me.

March comes and thaws the ground, the tufts of grass in moist spots grow green, there is a tear trembling at the end of every branch; a penetrating odour of sap comes from the branches that are still leafless. A beautiful night; a festival throughout our district.

On the summit of the mountain, on the crest of the rocks, at the foot of the forest, on the brow of the hill, low down in the valley, far off towards the Alps, fires are gleaming—the fires of our Lady.

Were these sparkling sheaves first sown by Ceres

when she wandered on the earth looking for her daughter? I do not know. Indeed it is no affair of mine.

Exquisite this balmy night with breezes wandering at their will, and the sky full of stars. When I lean out of the open window, I see the fires scattered on all sides. Those of our village, lit on the hill, rise high and wide; before them, black against the red glow, flit the shapes of children, their arms full of dead branches. Torches move fantastically along the hill's crest. Distant cries lengthen out till the last waves of sound break against our garden wall. Everywhere the bonfires now brighten, now fade, till at the extreme horizon you see only crimson specks that appear and disappear and appear again, dotting far-off peaks lost in the gloom of night.

Night of illumination, immensity of the skies, star-spangled to your furthest depths, how you thrill those who sigh for eternity!

THE BATTLE OF GILBOA.

BY THE AUTHOR OF "KELAVANE."

THE armies of Achish are pouring from Gath,
From Gaza, and Askelon, low by the shore;
And the people are crush'd in their wine-press of
wrath:

There is ruin behind them, and terror before.

Their triumph the cities of Benjamin fills,
From Dan to Beersheba in sackcloth is clad;
Even Judah and Simeon weep on their hills,
Like the Ammonite valleys of Reuben and
Gad.

And strong in his sorrows, the worst and the last,
Stands the mighty King Saul, like a rock of the
flood,
Towering o'er the dark surge of the host heaving
past,
With the storm on his breast ever breaking in
blood.

All in vain rides young Jonathan, bravest and
best;
In the fore-front of death, rides the loved of the
land;
All in vain o'er the foe, gleams the war-batter'd
crest
Of great Abner, who fights at his master's right
hand.

And the battle rolls on, ever redder each wave
Falling broken, in blood, from the sword of the
King;
But the hand is withheld that is mighty to save,
And still closes the foe, and still reddens the
ring.

In his woe, God-forsaken, and hopeless his host,
In the day of the Lord, when His judgments
befell,

He hath wept o'er the grave where all hope lieth
lost,
With the Ancient of Ramah who loved him so
well.

He hath call'd forth the visions of death from the
tomb,
When his bold heart grew faithless, and feeble
his sword;
But his legions reel back in the shadow of doom,
For the Urim is still in the Ark of the Lord.

And the battle rolls on, and the battle rolls on,
Where the vineyards of Jezreel lie crush'd in
their pride;
Where the streams of Gilboa are black in the sun,
And the blood-fringe of Jordan runs red at its
side.

And as hopeless as fearless, his crown on his brow,
With his host scatter'd far o'er the war-stricken
field,
Stands the wounded old King, with his face to the
foe,
And their spears falling thick on the boss of his
shield.

No longer he hears the brave Jonathan's call,
In the death-front beholds not the plume that he
wore;
Ah! the bravest, the best, the beloved one of all!
He will scatter the foe on Rock Rimmon no more.

Anon, and great Abner, all reeking and red,
With his saddle-girths dripping, and death in
each spring,
Rushes down on the foe, cleaving dead upon dead,
Through the iron-clad phalanx that closed on the
King.

And the battle rolls on, and the battle rolls
on,
Through the blood-mist that hangs o'er the war-
trodden plain,
O'er the merciless riot of slaughter, where none
Hath a thought for the living, a care for the
slain.

"I am wounded full sore," said the King where he
lay,
"But not yet unto death, and the heathen is
nigh :
Press thy sword through my breast, since my sons
are away,
Ere the heathen behold God's anointed one die."

In the silence of death, in the shadow of
night,
Has their glory gone down through the woe of
the land,
In the doom that has broken the sword of their
might,
In the pride of their days, and the strength of
their hand.

Their swords lay all broken, their bows were all
strung,
Where they lay, in their love, round the kingly
old man ;
And their arms in the House of Ashteroth were
hung,
And their bones laid to bleach on the walls of
Beth-shan.

THE BLESSINGS OF THOSE WHO WEEP.

BY THE LATE REV. EDWARD IRVING.*

It is written by the apostle Paul, in the Second Epistle to the Corinthians, that the sorrow of the world worketh death; meaning thereby, that the worldly form of sorrow hath no better effect than to destroy the natural cheerfulness of the spirit, to undermine the health of the body, and hasten the approach of death. To which agree the words of the wise man, when he says, "By sorrow of the heart the spirit is broken; the spirit of man may bear its infirmities, but a wounded spirit, who can bear?" This sorrow of the world, whose end is death, is carefully to be distinguished from that other sorrow whereof the apostle speaketh in the same place, in these words, "There is a godly sorrow which worketh repentance unto salvation not to be repented of;" and which James counteth it all joy to fall under, and which our Lord blesseth, because it shall produce laughter in the end.

What that sorrow is which worketh death, and which is never blessed in the Holy Scriptures,—because truly it is not a blessing, but a curse, the arch-curse and mother-woe of all the earth, "In sorrow shalt thou eat thy bread all the days of thy life until thou go down unto the dust,"—any one may discover who reflecteth upon his own history and experience; for short indeed must have been his life, and happy the lot of his inheritance, if he have not tasted of it in large variety and plentiful abundance. All the preludes of death are a sorrow, be they the diseases of the inward or outward man; all the ways of sin are a sorrow, sweet in the mouth, but in the belly as gall and wormwood. All the faith which we repose in the unstable world endeth in sorrow, when in its fluctuating moods the world forsaketh our trust. All the affections which nature conjoineth to the dear friends and kind kinsmen who are around us, grow up in doubt and mistrust, are continued in fear and trembling; and then, when they have been most firmly and most closely bound together, are sure to be dissolved in grief and great sorrow. So that the natural estate of man is full of sorrow, and every heart of man is full of grief; and, as the wise man hath said, "Man is born unto trouble, as the sparks fly upward."

The brood of sorrow which so thickly infesteth our present state are all the ministers of death. They are the signs of death in our constitution; they are death's harbingers; they are also the

ministers of death, and serve his sovereign mandate. And as Jesus, with allusion to his destruction of death, is called the Prince of life, the quickening spirit, the resurrection and the life, so, in allusion to them, the precursors of death, he is called the chief physician of soul and body, who beareth our griefs and carrieth our sorrows; who came to bind up the broken-hearted, to give the oil of joy for mourning, and the garment of praise for the spirit of heaviness. For all these ailments of body and soul which prefigure death, there is therefore balm in Gilead and a physician there; but without this balm and physician they are not goods, but evils, not blessings, but curses; and the old Stoics did but manifest their proud contempt of all things, even of themselves, when they pronounced that pain was not an evil. It is not an evil, the evil of evils under the sun. As death is the king of terrors, so is sorrow and pain of body or soul the king of evils.

Be it understood, therefore, that our Lord doth not bless these the natural griefs and sorrows of our estate which God cursed at the fall.

While yet we grieve for the goods of the present life abstracted, for our friends spirited away by death, for our hopes defeated of their promise; for our desires unsatisfied, our joys disappointed, our ambition uncrowned, our faith and trust betrayed; for the frustration of any of the delights which life contained; or while yet we writhe with pain and agony under racking disease, or go broken-hearted with affliction, or are poisoned in our spirits by some chronic disorder, and grow melancholy and misanthropical,—so far from viewing the dispensation as any sign of grace or forerunner of blessing, we are to view it as a sign of our worldliness, as a proof of our ignorance or disbelief of the things visible and eternal, as the fruit of sin present in our members, and the absence of salvation, the assurance of death temporal as well as spiritual; and, for all these reasons, a summons to repentance, faith, and new obedience.

It is not until we grieve for these griefs until our griefs have passed into another form, and taken spiritual relations altogether different, that they become a blessing. They must first lift up their complaining voice to God, and seek consolation from his Holy Spirit before they bear any fruit of life. And the seed of death must be taken out of them, and a seed of life implanted in its stead by Him who hath life in himself to give it to whomsoever he pleaseth. Yet, as there is more hope of a fool than of a man proud in his own conceit, so

* I feel very grateful to the family of Mr. Irving for putting this unpublished paper from his early writings at my disposal for insertion in *Good Words*.—EDITOR.

is there more hope of a man under the cloud of worldly affliction, than of a man under the laughing smiles of worldly prosperity. To the one, the stage-curtain of life is dropped, and the scene hath no activity before his eye or interest in his mind, and his inspiration is carried inward upon himself; to the other, the stage-curtain of life is up, and displayeth a busy, joyous scene, wherewith his faculties being engrossed, he hath no time for meditation of himself, or of the things invisible and eternal. Therefore, though these natural griefs have in them no reality of salvation, they have in them a hope of salvation, by demonstrating the necessity of it, and somewhat removing obstruction to it out of the way, as a disease which telleth its presence by racking pain is more likely to be attended to and healed, than one which steals its course through the circulating stream of life, and gives no notice till it hath seized upon a vital part. One shipwreck is worth a thousand sermons to demonstrate the instability of fortune; one death in a family is worth a thousand homilies to prove the transitoriness of earthly blessing; the hiding of our patron's countenance will sooner blanch the cheek of ambition than the tragedy of Wolsey's fall; one falsehood detected will read a better lesson upon truth; one hypocrisy uncovered, one stratagem outwitted, one crime punished in our own person will do more to put the soul to shame and confusion, and prepare it for reason and reflection, for faith and repentance, than many sermons and many prayers. Therefore, inasmuch as these visitations of grief and occasions of tears do disenchant the soul from the world's many charms, and reveal to the heart its own misery, they are good for preparing the way of salvation. But until salvation come and offer itself, and be accepted, and prove the occasion of other and deeper tears, there is no salvation in any form of natural grief, but there is a warning of death and a taste of the bitterness of death. But if, upon the other hand, these natural griefs and troubles of man's estate do alight upon minds of an irritable and ungoverned temper, they act upon them like a rock in the midst of a violent stream, which still more diverteth the onwardness of its course, troubling its purity, and increasing its violence and perturbation. Such men are chafed by disappointment, incensed by opposition, tortured by affliction, distracted by bereavements, and, by a succession of adversities, they are lashed into madness, or, if they retain their senses, they are unfitted for large communion with reasonable men, and must be treated in a gentle and soothing way upon those subjects where their temper hath prevailed against their reason. In these men the sorrow of the world hath already produced a death of those sweet dispositions which alone can inherit

heaven, or, indeed, inherit the earth; and there have arisen in their stead, rage and fury and ungovernable passion which dwell in the regions of the pit, and are ever feeding the worm which dieth not, and the fire which is not quenched. The tears of such men (if indeed they shed any tears, for such men are not accustomed to the melting mood) do signify the commotion which is passing in another region, like the slow and heavy drops which sometimes drop sullenly to the earth, when the lightning and the thunder are agitating in the upper regions of the air. They are signs and accompaniments of an inward storm, but they are no signs of a tender or broken heart; they prove how the demon of discord hath the government and excludeth the prince of peace. Such troubled spirits desire no comfort, and will take none, their only comfort is to have their will and pleasure, which, not obtaining, they are vexed; being resisted, they are grieved; being defeated, they are in anguish and misery. There must be a perception of the inward parts, the strong and stubborn will must subject itself to the will of God, and, being itself governed, must govern the tempers of the mind, before they can be blessed by affliction and grief. There is a calm, indeed, which follows the storm, when the violence of the soul is spent, in which, if you can approach them with a still, small voice, you may do them service; but, oh! what delicacy, what wisdom, what long-endurance, it requireth to deal with intractable men. I would sooner undertake to soothe the pains and passions of a little babe, who understandeth neither words nor smiles, than undertake to bring to reason those fretful spirits who, though they understand both, are, by the evil possessions to which they yield themselves, whirled away out of the hearing of words of counsel, out of the sweet influence of tender and gracious acts. And they mourn and they repent; they see the wounds which they inflicted in their madness, and the wreck which in the tempest of their rage they have made, which is a new misery and a new grief, and the occasion of an inward agitation, so that either outwardly or inwardly they are in war, and their only hope is to remove them from their troubled waters, and give their spirit a resting and a breathing time to recover from the mangled condition into which its own hands have reduced it.

Very different from the tears which are shed over outward goods which have departed, or inward desires which have been disappointed, are those tears which our Lord blesseth, when he saith, Blessed are ye that weep now, for ye shall laugh. Those are the tears of repentance which Peter shed when he went out and wept bitterly; the tears with which Mary Magdalene washed her Lord's feet, wiping them with the hairs of her

head. They are the tears which burst from our hearts when we looked upon him whom we have pierced, and weep as a mother that weepeth for an only son; the tears which Christ wept over Jerusalem, fallen and impenitent, foreseeing its relentless doom; the tears of compassion which he wept over the sorrows of the house of Lazarus; the tears which Paul shed when in the city of Ephesus he went, by night and by day, from house to house, entreating the people to be reconciled unto God. Not the bitter and disappointed mood of Jonah when he was exceedingly displeased and very angry because the Lord had relented of his threatenings against Nineveh, and entreated God, saying, Take, I beseech thee, my life away from me, for it is better for me to die than to live, but the mood of Jeremiah the prophet, when he exclaimed, Is there no balm in Gilead? Is there no physician there? Why then is not the health of the daughter of my people recovered? O that my head were waters, and mine eyes a fountain of tears, that I might weep day and night for the daughters of my people. Not the tears of pride, which come reluctant from the steeled heart, like water dropping from the flinty rock, but the tears of pride humbled and convinced by the power of God, which flow copiously, like the stream which issued from the rock when it had been smitten by the wand of Moses, the messenger of God. Not the tears of natural desire after a worldly good, nor the tears of natural sorrow for a worldly good removed, but the tears of spiritual desire after spiritual good, or the tears of sorrow when God hath hidden his countenance or removed our candlestick out of its former place. This is the godly sorrow which worketh repentance not to be repented of; these are the mourners who shall hereafter laugh.

As the sorrows of the world are but the prelude of death, the hints and notices of everlasting grief, the first-fruits of sin, whose full harvest is reaped in another world, so is there another kind of sorrows, which are, as it were, the pains of a new life conceiving within the soul, and the pangs of a new birth, and the trials of the new creature which hath been born into an uncongenial clime. These sorrows of the spiritual man consist in the giving up of his former idolatries, in the sacrifice of his former desires, in the change of his pursuits, the restraining of his passions, and the subduing of his former self. The seed is not quickened unless it be cast into the earth and rot. Neither is the new man quickened unless the old man be mortified with his affections and lusts. And these affections and lusts, out of whose mortification new affections and desires must spring, are each as due to the soul as a member is to the body, and cost in the dying as much pain as the plucking out of a

right eye or the cutting off of a right hand. O wretched man that I am! who will deliver me from the body of this death? There is a law in my members warring against the law of my mind, and leading me into captivity to the law of sin and death. Who shall tell the inward grief of the soul when it discovereth all its transgressions, and its sin is ever before it, when the waters have come over it, and the great billows of the Lord's indignation hath buried it in despair? Who shall tell the horror of the soul when it hath parted from all its former trusts and refuges, and findeth itself tossed to and fro by the tempest of its remorse, without a ray of hope, when all its firm-built and world-defying timbers break up and yawn, and its glorious bravery is wrecked and wasted, and strewn about in desolation? When the honest man discovereth that he is a deceitful knave before the Lord, and the honourable man that he is a false hypocrite, and the self-righteous man that he offendeth in everything, and in everything cometh short of the glory of God; when the rich man discovers that he is poor, and the happy man that he is miserable, and the man of knowledge that he is blind, and whatever he is, or whatever the world may hold him, he is an abject, miserable wretch in the sight of God—a worm, and no man—a slave of Satan, and a captive in his house of bondage; then it is that rivers of tears flow down the cheek, and that the harp is hung upon the willow. There is grief and great sorrow when the arrow of the Lord hath pierced our heart, and his mighty hand hath laid our glory in the dust; and the weeping which is made at such a season and for such a cause is blessed. In such weeping is the seed of the gospel sown, and through such mortification the harvest groweth up abundantly.

And when the hope cometh by which we are saved through the faith that is in Christ Jesus, though it doth dissipate the gloom, and show us whitherward to steer our course, yet full of trials, of sorrow, and of tears, is our voyage. The Captain of our salvation was made perfect by suffering, and the cloud of witnesses with whom we are surrounded were each tried with sore trial, and resisted unto blood; and though, in our times, the blood of the body be not required in testimony of our faith, the soul hath sore trials to undergo. Even we ourselves, saith Paul, which have the first-fruits of the Spirit, do groan within ourselves, waiting for the adoption, viz., the redemption of the body. Our Lord's life is the type of a Christian's life, with which the life of the world is at war. Its joys are not his joys, and he weepeth in secret over its merry-makings. He riseth early in the morning, like Job, and offereth sacrifice for his sons and his daughters, lest in their last night's amusements they may have sinned, and cursed God

in their hearts. Yea, he hath oft, like David, a house full of rebel children, or a table surrounded with ungodly men. He cannot escape out of the world; and if he could he would not, being drawn to them with bonds of fervent charity, and eager longing after their salvation. And his conscience beareth him witness in the Holy Ghost that he hath great heaviness and continual sorrow in his heart for his brethren, for his kinsmen according to the flesh.

Space would fail me to set forth the occasions which a spiritual man hath for sorrow and tears, with none of which the world is made acquainted by all its tragedies; tears of sorrow for his own sinfulness, and tears of pity for the world's impenitence; tears of sympathy with the members of Christ, and tears of nature for the unremedied distresses of the natural man. The heart of a Christian is very soft, and he is ready to weep with those that weep. The devotion of a Christian doth not, like the heroism of the world, seal his sympathies and dry up the fountain of his tears; and when his high resolutions and unrestrained purposes of self-denial and self-devotion maketh his friends and kindred to weep for the loss of his well-beloved company, while he holdeth on his steadfast course, he is oft constrained to cry out, What, mean ye to weep and to break my heart? for I am ready, not to be bound only, but also to die at Jerusalem, for the name of the Lord Jesus. It is in the softening of the hardened heart, and the melting of the stubborn spirit; in the opening of the flood-gates of sympathy which selfishness had closed; in the life of charity which malice had put to death—of the charity which beareth all things, which is not easily provoked, and which thinketh no evil, which suffereth long, and is kind,—in these soft and tender aspects of the soul consisteth the daily, hourly experience of the renewed life. And many are the tears which it sheddeth secretly, and many are the lamentations which it maketh in its prayers, and manifold its causes of sorrow.

Theirs is the fellowship of Christ's sufferings, out of which cometh the fellowship of his resurrection.

They suffer with him, and they shall also rejoice with him. They are crucified with Christ, yet live, or rather Christ liveth in them. They bear his cross, and they shall wear his crown. They follow him through bad report, and with him they shall be exalted to honour and glory. The same Spirit which wrought mightily in him to raise him from the dead, shall work in them newness of life. They are like Paul sorrowing yet rejoicing, troubled on every side yet not distressed, perplexed but not in despair, persecuted but not forsaken, cast down but not destroyed. They are passing through great tribulation, they are washing their robes and making them white in the blood of the Lamb. And hereafter shall they be before the throne of God, and serve him day and night in his temple; they shall hunger no more, neither thirst any more, neither shall the sun light on them, nor any heat. For the Lamb that is in the midst of the throne shall feed them, and lead them unto living fountains of water, and God shall wipe away all tears from their eyes.

This is the life which awaits those mourners in Zion, in the Jerusalem which is above, and here on earth the preludes of that life are shown. Theirs is humility and meekness and gentleness, to which the Lord hath promised to reveal himself. Theirs is the contrition of heart, with which the Lord hath promised to dwell, and the downcast spirit, which he hath promised to revive. He will not break the bruised reed nor quench the smoking flax, but bring forth judgment unto truth. The Spirit of the Lord God is upon me, to pour the oil of joy into the wounded spirit, to give the garment of praise for the spirit of heaviness, and to comfort all that mourn. To the lowly the lowly Jesus cometh, to the sad in heart the Comforter cometh; theirs is the faith of Christ, who turn from their sins with godly sorrow. And blessed are they that mourn, for they shall be comforted. When the Lord turneth again their captivity they shall laugh, and their mouths shall be filled with singing. Theirs is the sadness of the countenance, by which the heart is made better.

GIFTS.

A PARABLE FROM NATURE. BY MRS. GATTY.

ONE—two—three—four—five; five neatly-raked kitchen-garden beds, four of them side by side, with a pathway between; the fifth a narrow slip, heading the others, and close to the gravel walk, as it was for succession-crops of mustard and cress, which are often wanted in a hurry for breakfast or tea.

Most people have stood by such beds in their own kitchen-gardens on soft spring mornings and

evenings, and looked for the coming up of the seeds which either they or the gardener had sown.

Radishes in one, for instance, and of all three sorts—white-turnip, red-turnip, and long-tailed.

Carrots in another; and this bed had been dug very deep indeed—subsoil digging, as it were; two spades' depth, that the roots might strike freely down.

Onions in another. Beets in the fourth; both

the golden and red varieties: while the narrow slip was half mustard and half cress.

Such was the plan here, however; and here, for a time, all the seeds lay sleeping, as it seemed. For, as the long smooth-raked beds stretched out dark and bare under the stars, they betrayed no symptom of anything going on within.

Nevertheless, there was no sleeping in the case. The little seed-grains were fulfilling the law of their being, each after its kind; the grains, all but their inner germs decaying; the germs swelling and growing, till they rose out of their rotten cradles, and made their way, through their earthen coverlid, to the light of day.

They did not all come up quite together, of course, nor all quite alike. But as to the time, the gardener had made his arrangements so cleverly, that none was very far behind his neighbour. And as to the difference of shape in the first young leaves, what could it signify? It is true the young mustards were round and thick; the cresses oval and pointed; the carrots mere green threads; the onions sharp little blades; while the beets had an odd, staring look. But they all woke up to the same life and enjoyment, and were all greeted with friendly welcome, as they appeared, by the dew, and light, and sunshine, and breezes so necessary to them all, children of one mother, dependent on the same influences to bring them to perfection.

What *could* put comparisons, and envyings, and heart-burnings into their heads, so filling them either with conceit or melancholy misgivings? As if there was but one way of being right or doing right; as if every creature was *not* good after its kind, but must needs be good after somebody else's kind, or not be good at all!

It must have been some strolling half-informed grub, one would think, who had not yet come to his full senses, who started such foolish ideas.

It began with an inquiry at first, for no actual unkindness was meant.

"I find I get deeper and deeper into the soil every day," remarked the carrot. "I shall be I don't know how long, at last. I have been going down regularly, quite straight, for weeks. Then I am tapering off to a long point at the end, in the most beautiful proportions possible. A traveller told me, the other day, this was perfection, and I believe he was right."

(That mischievous vagabond grub, you see!)

"I knew what it was to live near the surface in my young days," he went on; "but never felt solid enjoyment till I struck deeply down, where all is so rich and warm. This is really being firmly established and satisfactory to one's-self, though still progressing, I hope, for I don't intend to limit myself. Pray tell me," added he, good-naturedly enough, "how it fares with all the rest of

you. I should like to know that your roots are as long, and slim, and yellow as mine; doing as well, in fact, and sinking as far down. I wish us to be all perfect alike. Perfection is the great thing to try for."

"When you are sure you are trying in the right way," exclaimed some voices from the neighbouring radish-bed (for the red and white turnips would always talk together). "But if long, slim, yellow roots, striking deep into the earth, are your idea of perfection, I advise you to begin life over again. Dear me! I wish you had consulted us before. Why, we stopped going down long ago, and have been spreading out sideways and all ways, into stout, round, solid balls ever since; close white flesh throughout inside, and not yellow, but red without."

"White, he means," shouted another.

"Red, I call it," repeated the first. "But no matter; certainly not yellow!"

And "Certainly not yellow!" cried they all.

"So," continued the chief speaker, "we are quite concerned to hear you ramble on about growing longer and longer, and strongly advise you to keep your own counsel, and not mention it to any one else. We are friends, you know, and can be trusted; but you really must leave off wasting your powers and energy in the dark inside of the ground, out of everybody's sight and knowledge. Come to the surface, and make the most of it, as we do, and then you'll be a credit to your friends. Never mind what travellers say. They've nothing else to do but walk about and talk, and they tell us we are perfection too. Don't think about them, but about what we tell you, and alter your course at once. Roll yourself up into a firm round ball as fast as you can. You won't find it hard if you once begin. You have only to—"

"Let me put in a word first," interrupted one of the long-tailed radishes in the same bed; "for it is of no use to go out of one extreme into another, which you are on the high road to do if you are disposed to take Mr. Roundhead's advice, who ought to be ashamed, by the way, of forcing his very peculiar views upon his neighbours. Just look at us. We always strike moderately down, so we know it's the right thing to do, and that solid round balls are the most unnatural and useless things in the world. But, on the other hand, my dear friend, we have learnt where to stop, and a great secret it is, but one I fear you know nothing about at present; so the sooner you make yourself acquainted with it the better. There's a limit to everything but folly—even to striking deep into the soil. And as to the soil being better so very deep down, nobody can believe it; for why should it be? The great art is to make the most of what is at hand, as we do. Time enough to go into the

depths when you have used up what is so much easier got at. The man who gathered some of us yesterday, called out, 'These are just right.' So I leave you to judge whether some other people we know of must not be wrong."

"You rather overwhelm me, I own," mused the Carrot; "though it's remarkable you do not agree together. Is it possible, however, that I have been making a great mistake all my life? What lost time to look back upon! Yet a ball; no, no, not a ball! I don't think I could grow into a solid round ball were I to try for ever!"

"Not having tried, how can you tell?" whispered the Turnip-Radish persuasively. "But you never will, if you listen to our poor old-fashioned friend next door, who has been halting between two opinions all his life, will neither make an honest fat lump of it, as I do, nor plunge down and taper with you. But nothing can be done without an effort: certainly no change."

"That is true," murmured the Carrot, rather sadly; "but I am too old for further efforts myself. Mistake or no mistake, my fate is fixed. I am too far down to set up again, that's certain. But some of the young ones may try. Do you hear, dears? Some of you stop short, if you can, and grow out sideways and all ways, into stout, round, solid balls."

"Oh, nonsense about round balls!" cried the long-tailed Radish in disgust; "what will the world come to, if this goes on! Listen to me, youngsters, I beg. Go to a moderate depth, and be content; and if you want something to do, throw out a few fibres for amusement. You're firm enough without them, I know, but the employment will pass away time."

"There are strange delusions abroad just now," remarked the Onions to each other; "do you hear all this talk about shape and way of growth? and everybody in the dark on the subject, though they seem to be quite unconscious of the fact themselves. That fellow chattered about solid balls, as if there was no such thing as growing layer upon layer, and coat over coat, at all."

"Of course the very long yellow gentleman, with his tapering root, is most wrong of the party; but I doubt if Mr. Roundhead is much wiser when he speaks of close white flesh inside, and red, of all ridiculous nonsense, without. Where are their flaky skins, I should like to know? Who is ever to peel them, I wonder? Poor things, I can't think how they got into such ways. How tough and obstinate they must be! I wish we lived nearer. We would teach them a little better than that, and show them what to do."

"I have lived near you long enough," grumbled a deep-red Beet next door; "and you have never taught me; neither shall you, if I can help it. A

pretty instructor you would be, who think it ridiculous to be red! I suppose you can't grow red yourself, and so abuse the colour out of spite. Now I flatter myself I am red inside as well as out, so I suppose I am more ridiculous than the other fellow who contrived to keep himself white within, according to his own account; but I doubt the fact. There, there! it is a folly to be angry; so I say no more, except this: get red as fast as you can. You live in the same soil that I do, and ought to be able."

"Oh, don't call it red," exclaimed the golden variety, who were of a gentle turn of mind; "it is but a pale tint after all, and surely rather amber than red; and perhaps that was what the yellow gentleman meant by the yellow he talked of."

"Perhaps it was; for perhaps he calls red yellow, as you call it amber," answered the other; "anyhow he has rather more sense than our neighbour here, with his layer upon layer, and coat over coat, and flaky skin over all. Think of wasting time in such fiddle-faddle proceedings! Grow a good honest fleshy substance, and have done with it, and let people see you know what life is capable of. I always look at results. It is something to get such a body as I do out of the surrounding soil. That is living to some purpose, I consider. Nobody makes more of their opportunities than I do, I flatter myself, or has more to show for their pains; and a great future must be in store."

"Do you hear them? oh, do you hear them?" whispered the Cress to her neighbour the Mustard (there had been several crops, and this was one of the last). "Do you hear how they all talk together of their growth and their roots, and their size, and colour, and shape? It makes me quite unhappy, for I am doing nothing like that myself. Nothing, nothing, though I live in the same soil! What is to be done? What do you do? Do you grow great white solid balls, or long, yellow tapering roots, or thick red flesh, or layer upon layer, and coat over coat? Some of them talked of just throwing out a few fibres as a mere amusement to pass away time. And this is all I ever do for business. There will never be a great future in store for me. Do speak to me, but whisper what you say, for I shame to be heard or thought of."

"I grow only fibres too," groaned the Mustard in reply; "but I would spread every way and all ways if I could. Downwards and upwards, and side ways and all ways, like the rest. I wish I had never been sown. Better never be sown and grown than sown and grown to such trifling purpose! I am wretched indeed. But there must be injustice somewhere. The soil must give them what it refuses to us."

"Or we are weak and helpless, and cannot take

in what it offers," suggested the Cress. "Alas! that we should have been sown only to be useless and unhappy!"

And they wept the evening through. But they alone were not unhappy. The Carrot had become uneasy, and could follow his natural tastes no longer in comfort, for thinking that he ought to be a solid round ball, white inside, and red without. The Onion had sore misgivings that the Beet might be right after all, and a good honest mass of red flesh be more worth labouring for, than the pale, coat-within-coat growth in which he had indulged. It did seem a waste of trouble, a fiddle-faddle plan of life, he feared. Perhaps he had not gone down far enough into the soil. Some one talked of growing fibres for amusement,—he had certainly not come to that; they were necessary to his support; he couldn't hold fast without them. Other people were more independent than he was, then, perhaps wiser,—alas!

And yet the Beet himself was not quite easy; for talk as he would, what he had called fiddle-faddle seemed ingenious when he thought it over, and he would like to have persuaded himself that he grew layer upon layer too. But it wouldn't do.

Perhaps, in fact, the bold little Turnip-Radishes alone, from their solid, substantial growth, were the only ones free from misgivings, and believed that everybody ought to do as they did themselves.

What a disturbance there was, to be sure! And it got worse and worse, and they called on the winds and fleeting clouds, the sun, and moon, and stars above their heads, to stay their course awhile, and declare who was right and who was wrong; who was using, who abusing his gifts and powers; who was making most, who least, of the life and opportunities they all enjoyed; whose system was the one the rest must all strive to follow,—the one only right.

But they called and asked in vain, till one evening, the clouds which had been gathering over the garden for days began to come down in rain, and sank swiftly into the ground, where it had been needed for long. Whereupon there was a general cry, "Here comes a messenger; now we shall hear!" as if they thought no one could have any business in the world but to settle their disputes!

So out came the old inquiries again:—who was right—who was wrong—who had got hold of the true secret? But the Cress made no inquiry at all, only shook with fright under the rain; for, thought she, the hour of my shame and degradation is come, poor useless creature that I am, I shall never more hold up my head.

As to the Carrot, into whose well-dug bed the root found easiest entrance, and sank deepest, he held forth in most eloquent style upon the whole affair;—how it was started, and what he had said; how much he had once hoped; how much he now feared.

Now, the rain-drops did not care to answer in a hurry; but as they came dropping gently down, they murmured, "Peace, peace, peace!" all over

the beds. And truly they seemed to bring peace with them as they fell, so that a calm sank all around, and then the murmur proceeded:—"Poor little atoms in a boundless kingdom—each one of you bearing a part towards its fulness of perfection, each one of you endowed with gifts and powers especially your own, each one of you good after its kind—how came these cruel misgivings and heart-burnings among you? Are the tops of the mountains wrong because they cannot grow corn like the valleys? Are the valleys wrong because they cannot soar into the skies? Does the brook flow in vain because it cannot spread out like the sea? Is the sea only right because its waters only are salt? Each good after its kind, each bearing a part in the full perfection of the kingdom which is boundless; the plan which is harmony—peace, peace, peace upon all!"

And peace seemed to fall more soothingly than ever upon the ground as the shower continued to descend.

"How much more, then," resumed the murmur, "among you, to whose inner natures gifts and powers are given, each different from each; each good in its kind; each, if rightly carried out, bearing a part in that kingdom, which needs, for its full perfection, that there shall be hills to rise into the skies, valleys to lie low at their feet; some natures to go deep into the soil, others to rejoice on its surface; some to lie lightly upon the earth, as if scarcely claiming a home, others to grasp at it by wide-spread roots, and stretch out branches to the rivers; all good in their kind, all bearing a part towards the full perfecting of that kingdom, whose children are countless as their natures are various; none useless, none in vain.

"Upon one, then, upon all—each wanted, each useful, each good after its kind—peace, peace, peace, peace, peace!"

The murmur subsided to a whisper, the whisper into silence; and by the time the moon-shadows lay upon the garden there was peace everywhere.

Nor was it broken again; for henceforth even the Cress held up her head, she, also, good after her kind.

Only once or twice, that year, when the Carrots were gathered, there came up the strangest growths! thick distorted lumps, that had never struck properly down.

The gardener wondered, and was vexed, for he prided himself on the digging of the carrot-bed. "Anything that had had any sense might have gone down into it," he was sure, he said. And he was not far wrong; but you see the Carrot had had no sense when he began to speculate, and tried to be something he was not intended to be.

Yet the poor clumsy thing was not quite useless after all. For, just as the gardener was about to fling it angrily away, he recollected that the cook might use it for soup, though it could not be served up at table such a shape as it was!

And this was exactly what she did.

MISTRESS AND MAID.**A HOUSEHOLD STORY.**

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

**CHAPTER III.**

THE Christmas holidays ended, and Ascott left for London. It was the greatest household change the Misses Leaf had known for years, and they missed him sorely. Ascott was not exactly a loveable boy, and yet, after the fashion of woman-

kind, his aunts were both fond and proud of him; fond, in their childless old-maidenhood, of any sort of nephew, and proud, unconsciously, that the said nephew was a big fellow, who could look over all their heads, besides being handsome and pleasant-mannered, and though not clever enough to

set the Thames on fire, still sufficiently bright to make them hope that in his future the family star might again rise.

There was something pathetic in these three women's idealization of him—even Selina's, who though quarrelling with him to his face always praised him behind his back—that great, good-looking, lazy lad; who, everybody else saw clearly enough, thought more of his own noble self than of all his aunts put together. The only person he stood in awe of was Mr. Lyon—for whom he always protested unbounded respect and admiration. How far Robert Lyon liked Ascott even Hilary could never quite find out; but he was always very kind to him.

There was one person in the house who, strange to say, did not succumb to the all-dominating youth. From the very first there was a smouldering feud between him and Elizabeth. Whether she overheard, and slowly began to comprehend his mocking gibes about the "South Sea Islander," or whether her sullen and dogged spirit resisted the first attempts the lad made to "put upon her"—as he did upon his aunts, in small daily tyrannies—was never found out; but certainly Ascott, the general favourite, found little favour with the new servant. She never answered when he "hollo'd" for her; she resisted blacking his boots more than once a day; and she obstinately cleared the kitchen fire-place of his "messes," as she ignominiously termed various pots and pans belonging to what he called his "medical studies."

Although the war was passive rather than aggressive, and sometimes a source of private amusement to the aunts, still on the whole it was a relief when the exciting cause of it departed; his new and most gentlemanly portmanteau being carried downstairs by Elizabeth herself, of her own accord, with an air of cheerful alacrity, foreign to her mien for some weeks past, and which even in the midst of the dolorous parting, amused Hilary extremely.

"I think that girl is a character," she said afterwards to Johanna. "Anyhow, she has curiously strong likes and dislikes."

"You may say that, my dear; for she brightens up whenever she looks at you."

"Does she? Oh, that must be because I have most to do with her. It is wonderful how friendly one gets over saucepans and brooms; and what reverence one inspires in the domestic mind when one really knows how to make a bed or a pudding."

"How I wish you had to do neither," sighed Johanna, looking fondly at the bright face and light little figure that was flitting about, putting the schoolroom to rights before the pupils came in.

"Nonsense—I don't wish any such thing. Doing

it makes me not a whit less charming and lovely." She often applied these adjectives to herself, with the most perfect conviction that she was uttering a fiction patent to everybody. "I must be very juvenile also, for I'm certain the fellow-passenger at the station to-day took me for Ascott's sweetheart. When we were saying good-bye, an old gentleman who sat next him was particularly sympathetic, and you should have seen how indignantly Ascott replied, 'It's only *my aunt*!'"

Miss Leaf laughed, and the shadow vanished from her face, as Hilary had meant it should. She only said, caressing her—

"Well, my pet, never mind; I hope you may have a real sweetheart some day."

"I'm in no hurry, thank you, Johanna."

But now was heard the knock after knock of the little boys and girls, and there began that monotonous daily round of school-labour, rising from the simplicities of c, a, t, cat, and d, o, g, dog,—to the sublime heights of Pinnock and Lennie, Télémaque and Latin Delectus. No loftier: Stowbury being well supplied with first-class schools, and having a vague impression that the Misses Leaf, born ladies and not brought up as governesses, were not competent educators except of very small children.

Which was true enough until lately. So Miss Leaf kept contentedly to the c, a, t, cat, and d, o, g, dog, of the little butchers and bakers, as Miss Selina, who taught only sewing, and came into the school-room but little during the day, scornfully termed them. The higher branches, such as they were, she left gradually to Hilary, who, of late, possibly out of sympathy with a friend of hers, had begun to show an actual gift for teaching school.

It is a gift—all will allow; and chiefly those who have it not, amongst whom was poor Johanna Leaf. The admiring envy with which she watched Hilary, moving briskly about from class to class, with a word of praise to one and rebuke to another, keeping every one's attention alive, spurring on the dull, controlling the unruly, and exercising over every member in this little world that influence, at once the strongest and most intangible and inexplicable—personal influence—was only equalled by the way in which, at pauses in the day's work, when it grew dull and monotonous, or when the stupidity of the children ruffled her own quick temper beyond endurance, Hilary watched Johanna.

The time I am telling of is now long ago. The Stowbury children, who were then little boys and girls, are now fathers and mothers—doubtless a large proportion being decent tradesfolk in Stowbury still; though, in this locomotive quarter, many must have drifted off elsewhere—where, Heaven knows! But not a few of them may still call to mind Miss Leaf, who first taught them

their letters—sitting in her corner between the fire and the window, while the blind was drawn down to keep out, first, the light from her own fading eyes, and secondly, the distracting view of green fields and trees from the youthful eyes by her side. They may remember still her dark plain dress and her white apron, on which the primers, torn and dirty, looked half ashamed to lie : and above all, her sweet face and sweeter voice, never heard in anything sharper than that grieved tone which signified their being “naughty children.” They may recall her unwearied patience with the very dulllest and most wayward of them : her unflinching sympathy with every infantile pleasure and pain. And I think they will acknowledge that whether she taught them much or little, in this advancing age it might be thought little—Miss Leaf taught them one thing—to love her ;—which, as Ben Jonson said of the Countess of Pembroke, was in itself a “liberal education.”

Hilary too ! Often when Hilary's younger and more restless spirit chafed against the monotony of her life : when instead of wasting her days in teaching small children, she would have liked to be learning, learning—every day growing wiser and cleverer, and stretching out into that busy, bright active world of which Robert Lyon had told her—then the sight of Johanna's meek face bent over those dirty spelling-books, would at once rebuke and comfort her. She felt, after all, that she would not mind working on for ever, so long as Johanna still sat there.

Nevertheless, that winter seemed to her very long ; especially after Ascott was gone. For Johanna, partly for money, and partly for kindness, had added to her day's work four evenings a week, when a half-educated mother of one of her little pupils came to be taught to write a decent hand, and to keep the accounts of her shop. Upon which, Selina, highly indignant, had taken to spending her evenings in the school-room, interrupting Hilary's solitary studies there by many a lamentation over the peaceful days when they all sat in the kitchen together and kept no servant. For Selina was one of those who never saw the bright side of anything till it had gone by.

“I'm sure I don't know how we are to manage with Elizabeth. That greedy”—

“And growing,” suggested Hilary.

“I say, that greedy girl eats as much as any two of us. And as for her clothes—her mother does not keep her even decent.”

“She would find it difficult upon three pounds a year.”

“Hilary, how dare you contradict me ? I am only stating a plain fact.”

“And I another. But, indeed, I don't want to talk, Selina.”

“You never do, except when you are wished to be silent ; and then your tongue goes like any race-horse.”

“Does it ?—Well, like Gilpin's,

‘It carries weight, it rides a race,

‘Tis for a thousand pound !’

—and I only wish it were. Heigho ! if I could but earn a thousand pounds !”

Selina was too vexed to reply : and for five quiet minutes Hilary bent over her Homer, which Mr. Lyon had taken such pleasure in teaching her, because, he said, she learnt it faster than any of his grammar-school boys. She had forgotten all domestic grievances in a vision of Thetis and the water-nymphs ; and was repeating to herself, first in the sonorous Greek, and then in Pope's small but sweet English, that catalogue of oceanic beauties, ending with

‘Black Janira and Janassa fair,
And Amatheia with her amber hair.’

“Black, did you say ? I'm sure she was as black as a chimney-sweep all to-day. And her pinafore”—

“Her what ? Oh, Elizabeth, you mean”—

“Her pinafore had three rents in it, which she never thinks of mending, though I gave her needles and thread myself a week ago. But she does not know how to use them any more than a baby.”

“Possibly nobody ever taught her.”

“Yes ; she went for a year to the National School, she says, and learnt both marking and sewing.”

“Perhaps she has never practised them since. She could hardly have had time, with all the little Hands to look after, as her mother says she did. All the better for us. It makes her wonderfully patient with our troublesome brats. It was only to-day, when that horrid little Jacky Smith hurt himself so, that I saw Elizabeth take him into the kitchen, wash his face and hands, and cuddle him up and comfort him, quite motherly. Her forte is certainly children.”

“You always find something to say for her.”

“I should be ashamed if I could not find something to say for anybody who is always abused.”

Another pause—and then Selina returned to the charge.

“Have you ever observed, my dear, the extraordinary way she has of fastening, or rather, not fastening her gown behind ? She just hooks it together at the top and at the waist, while between there is a”—

“*Hiatus valde defendus.* O dear me ! what shall I do ! Selina, how can I help it if a girl of fifteen years old is not a paragon of perfection : as of course we all are, if we only could find it out.”

And Hilary, in despair, rose to carry her candle and books into the chilly, but quiet bedroom, bit-

ing her lips the while lest she should be tempted to say something which Selina called "impertinent," which perhaps it was, from a younger sister to an elder. I do not set Hilary up as a perfect character. Through sorrow only do people go on to perfection: and sorrow, in its true meaning, this cherished girl had never known.

But that night, talking to Johanna before they went to sleep—they had always slept together since the time when the elder sister used to walk the room of nights with that puling, motherless infant in her arms—Hilary anxiously started the question of the little servant.

"I am afraid I vexed Selina greatly about her to-night; and yet what can one do? Selina is so very unjust—always expecting impossibilities. She would like to have Elizabeth at once a first-rate cook, a finished housemaid, and an attentive lady's-maid, and all without being taught! She gives her things to do, neither waiting to see if they are comprehended by her, nor showing her how to do them. Of course the girl stands gaping and staring, and does not do them, or does them so badly that she gets a thorough scolding."

"Is she very stupid, do you think?" asked Johanna, in unconscious appeal to her pet's stronger judgment.

"No, I don't. Far from stupid; only very ignorant, and—you would hardly believe it—very nervous. Selina frightens her. She gets on extremely well with me."

"Any one would, my dear. That is," added the conscientious elder sister, still afraid of making the 'child' vain, "any one whom you took pains with. But do you think we ever can make anything out of Elizabeth? Her month ends to-morrow. Shall we let her go?"

"And perhaps get in her place a story-teller—a tale-bearer—even a thief. No, no; let us

'Rather bear the ills we have,

Than fly to others that we know not of;'

and a thief would be worse than even a South-Sea Islander."

"O yes, my dear," said Johanna, with a shiver.

"By the bye, the first step in the civilisation of the Polynesians was in giving them clothes. And I have heard say that crime and rags often go together; that a man unconsciously feels he owes something to himself and society in the way of virtue when he has a clean face and clean shirt, and a decent coat on. Suppose we try the experiment of dressing Elizabeth? How many old gowns have we?"

The number was few. Nothing in the Leaf family was ever cast off till its very last extremity of decay; the talent that

"Gars auld claes look amais at gude's the new" being especially possessed by Hilary. She counted

over her own wardrobe and Johanna's, but found nothing that could be spared.

"Yes, my love, there is one thing. You certainly shall never put on that old brown merino again; though you have laid it so carefully by, as if you meant it to come out as fresh as ever next winter. No, Hilary, you must have a new gown, and you must give Elizabeth your brown merino."

Hilary laughed, and replied not.

Now it might be a pathetic indication of a girl who had very few clothes, but Hilary had a superstitious weakness concerning hers. Every dress had its own peculiar chronicle of the scenes where it had been, the enjoyments she had shared in it. Particular dresses were special memorials of her loves, her pleasures, her little passing pains: as long as a bit remained of the poor old fabric, the sight of it recalled them all.

This brown merino—in which she had sat two whole winters over her Greek and Latin by Robert Lyon's side, which he had once stopped to touch and notice, saying what a pretty colour it was, and how he liked soft-feeling dresses for women—to cut up this old brown merino seemed to hurt her so, she could almost have cried.

Yet what would Johanna think if she refused? And there was Elizabeth absolutely in want of clothes. "I must be growing very wicked," thought poor Hilary.

She lay a good while silent in the dark, while Johanna planned and re-planned—calculating how, even with the addition of an old cape of her own, which was out of the same piece, this hapless gown could be made to fit the gaunt frame of Elizabeth Hand. Her poor kindly brain was in the last extremity of muddle, when Hilary, with a desperate effort, dashed in to the rescue, and soon made all clear, contriving body, skirt, sleeves, and all.

"You have the best head in the world, my love. I don't know what ever I should do without you."

"Luckily, you are never likely to be tried. So give me a kiss; and good-night, Johanna."

I misdoubt many will say I am writing about small, ridiculously small, things. Yet is not the whole of life made up of infinitesimally small things? And in its strange and solemn mosaic, the full pattern of which we never see clearly till looking back on it from far away, dare we say of anything which the hand of Eternal Wisdom has put together, that it is too common or too small?

CHAPTER IV.

WHILE her anxious mistresses were thus talking her over, the servant lay on her humble bed and slept. They knew she did, for they heard her heavy breathing through the thin partition-wall. Whether, as Hilary suggested, she was too ignorant to notice the days of the week or month, or, as Selina

thought, too stupid to care for anything beyond eating, drinking and sleeping, Elizabeth manifested no anxiety about herself or her destiny. She went about her work just as usual; a little quicker and readier, now she was becoming familiarized to it; but she said nothing. She was undoubtedly a girl of silent and undemonstrative nature.

"Sometimes still waters run deep," said Miss Hilary.

"Nevertheless, there are such things as canals," replied Johanna. "When do you mean to have your little talk with her?"

Hilary did not know. She was sitting rather more tired than usual by the school-room fire, the little people having just departed for their Saturday half-holiday. Before clearing off the *débris* which they always left behind, she stood a minute at the window, refreshing her eyes with the green field opposite, and the far-away wood, crowned by a dim white monument, visible in fair weather, on which those bright brown eyes had a trick of lingering, even in the middle of school-hours. For the wood and the hill beyond belonged to a nobleman's "show" estate, five miles off,—the only bit of real landscape beauty that Hilary had ever beheld. There, during the last holidays but one, she, her sisters, her nephew, and, by his own special request, Mr Lyon, had spent a whole long, merry midsummer day. She wondered whether such a day would ever come again!

But spring was coming again, anyhow: the field looked smiling and green, specked here and there with white dots which, she opined, might possibly be daisies. She half wished she was not too old and dignified to dart across the road, leap the sunk fence, and run to see.

"I think, Johanna—Hark, what can that be!"

For at this instant, somebody came tearing down the stairs, opened the front door, and did—exactly what Hilary had just been wishing to do.

"It's Elizabeth, without her bonnet or shawl, with something white flying behind her. How she is dashing across the field! What can she be after? Just look!"

But loud screams from Selina's room, the front one, where she had been lying in bed all morning, quite obliterated the little servant from their minds. The two sisters ran hastily upstairs.

Selina was sitting up, in undisguised terror and agitation.

"Stop her! Hold her! I'm sure she has gone mad. Lock the door—or she'll come back and murder us all."

"Who? Elizabeth! was she here? What has been the matter?"

But it was some time before they could make out anything. At last they gathered that Elizabeth had been waiting upon Miss Selina, putting

vinegar-cloths on her head, and doing various things about the room. "She is very handy when one is ill," even Selina allowed—

"And I assure you, I was talking most kindly to her: about the duties of her position, and how she ought to dress better, and be more civil-behaved, or else she never could expect to keep any place. And she stood in her usual sulky way of listening, never answering a word—with her back to me, staring right out of window. And I had just said, 'Elizabeth, my girl'—indeed, Hilary, I was talking to her in my very kindest way"—

"I've no doubt of it—but do get on!"

"When she suddenly turned round, snatched a clean towel from a chair-back, and another from my head—actually from my very head, Johanna—and out she ran. I called after her, but she took no more notice than if I had been a stone. And she left the door wide open—blowing upon me. Oh, dear! she has given me my death of cold." And Selina broke into piteous complainings.

Her elder sister soothed her as well as she could, while Hilary ran down to the front-door and looked, and inquired everywhere for Elizabeth. She was not to be seen on field or road; and along that quiet terrace, not a soul had even perceived her quit the house.

"It's a very odd thing," said Hilary, returning. "What can have come over the girl? You are sure, Selina, that you said nothing which"—

"Now, I know what you are going to say. You are going to blame me. Whatever happens in this house, you always blame me. And perhaps you're right. Perhaps I am a nuisance—a burden—would be far better dead and buried. I wish I were!"

When Selina took this tack, of course her sisters were silenced. They quieted her a little, and then went down and searched the house all over.

All was in order; at least in as much order as was to be expected the hour before dinner. The bowl of half-peeled potatoes stood on the back-kitchen "sink;" the roast was down before the fire; the knives were ready for cleaning. Evidently Elizabeth's flight had not been premeditated.

"It's all nonsense about her going mad. She has as sound a head as I have," said Hilary to Johanna, who began to look seriously uneasy. "She might have run away in a fit of passion, certainly; and yet that is improbable; her temper is more sullen than furious. And having no lack of common sense, she must know that doing a thing like this is enough to make her lose her place at once."

"Yes," said Johanna, mournfully, "I'm afraid after this she must go."

"Wait and see what she has to say for herself,"

pleaded Hilary. "She will surely be back in two or three minutes."

But she was not, nor even in two or three hours.

Her mistresses' annoyance became displeasure, and that again subsided into serious apprehension. Even Selina ceased talking over and over the incident which gave the sole information to be arrived at; rose, dressed, and came down to the kitchen. There, after a long and anxious consultation, Hilary, observing that "Somebody had better do something," began to prepare the dinner, as in pre-Elizabethan days; but the three ladies' appetites were small.

About three in the afternoon, Hilary, giving utterance to the hidden alarm of all, said—

"I think, sisters, I had better go down as quickly as I can to Mrs. Hand's."

This agreed, she stood consulting with Johanna as to what could possibly be said to the mother in case that unfortunate child had not gone home, when the kitchen door opened, and the culprit appeared.

Not, however, with the least look of a culprit. Hot she was, and breathless; and with her hair down about her ears, and her apron rolled up round her waist, presented a most forlorn and untidy aspect; but her eyes were bright, and her countenance glowing.

She took a towel from under her arm. "There's one on 'em—and you'll get back—the other—when it's washed."

Having blurted out this, she leaned against the wall, trying to recover her breath.

"Elizabeth! Where have you been? How dared you go? Your behaviour is disgraceful—most disgraceful, I say. Johanna, why don't you speak to your servant?" (When, for remissness in reproving others, the elder sister fell herself under reproof, it was always emphatically "*your sister*"—"your nephew"—"*your servant*.")

But, for once, Miss Selina's sharp voice failed to bring the customary sullen look to Elizabeth's face; and when Miss Leaf, in her milder tones, asked where she had been, she answered unhesitatingly—

"I've been down the town."

"Down the town!" the three ladies cried, in one chorus of astonishment.

"I've been as quick as I could, missis. I runned all the way, there and back; but it was a good step, and he was some'at heavy, though he is but a little 'un."

"He! who on earth is *he*?"

"Deary me! I never thought of axing; but his mother lives in Hall Street. Somebody saw me carrying him to the doctor, and went and told her. Oh! he was welly killed, Miss Leaf—the doctor said so; but he'll do now, and you'll get your towel clean washed to-morrow."

While Elizabeth spoke, so incoherently, and with such unwonted energy and excitement, Johanna looked as if she thought her sister's fears were true, and the girl had really gone mad; but Hilary's quicker perceptions jumped at a different conclusion.

"Quiet yourself, Elizabeth," said she, taking a firm hold of her shoulder, and making her sit down, when the rolled-up apron dropped, and showed itself all covered with blood-spots. Selina screamed outright.

Then Elizabeth seemed to become half conscious that she had done something blamable, or was at least a suspected character. Her warmth of manner faded; the sullen cloud of dogged resistance to authority was rising in her poor dirty face, when Hilary, beginning with "Now, we are not going to scold you; but we must hear the reason of this," contrived by adroit questions, and not a few of them, to elicit the whole story.

It appeared that, while standing at Miss Selina's window, Elizabeth had watched three little boys, apparently engaged in a very favourite amusement of little boys in that field, going quickly behind a horse, and pulling out the longest and handsomest hairs in his tail, to make fishing-lines of. She saw the animal give a kick, and two of the boys ran away; the other did not stir. For a minute or so she noticed the black lump lying in the grass; then, with the quick instinct for which nobody had ever given her credit, she guessed what had happened, and did immediately the wisest and only thing possible under the circumstances, namely, to snatch up a towel, run across the field, bind up the child's head as well as she could, and carry it, bleeding and insensible, to the nearest doctor, who lived nearly a mile off.

She did not tell—and they only found it out afterwards—how she had held the boy while under the doctor's hands, the skull being so badly fractured that the frightened mother fainted at the sight: how she had finally carried him home, and left him comfortably settled in bed, his senses returned, and his life saved.

"Ay, my arms do ache above a bit," she said, in answer to Miss Leaf's questions. "He wasn't quite a baby—nigh up on twelve, I reckon; but then he was very small of his age. And he looked just as if he was dead—and he bled so."

Here, just for a second or two, the colour left the big girl's lips, and she trembled a little. Miss Leaf went to the kitchen cupboard, and took out their only bottle of wine—administered in rare doses, exclusively as medicine.

"Drink this, Elizabeth; and then go and wash your face and eat your dinner. We will talk to you by and by."

Elizabeth looked up with a long, wistful stare

of intense surprise, and then added, "Have I done anything wrong, missis?"

"I did not say so. But drink this; and don't talk, child."

She was obeyed. By and by Elizabeth disappeared into the back kitchen, emerged thence with a clean face, hands, and apron, and went about her afternoon business as if nothing had happened.

Her mistresses' threatened "talk" with her never came about. What, indeed, could they say? No doubt the little servant had broken the strict letter of domestic law by running off in that highly eccentric and inconvenient way; but, as Hilary tried to explain by a series of most ingenious ratiocinations, she had fulfilled, in the spirit of it, the very highest law—that of charity. She had also shown prompt courage, decision, practical and prudent forethought, and, above all, entire self-forgetfulness.

"And I should like to know," said Miss Hilary, warming with her subject, "if those are not the very qualities which go to constitute a hero."

"But we don't want a hero; we want a maid-of-all-work."

"I'll tell you what we want, Selina. We want a woman; that is, a girl with the making of a good woman in her. If we can find that, all the rest will follow. For my part, I would rather take this child, rough as she is, but with her truthfulness, conscientiousness, kindness of heart, and evident capability of both self-control and self-devotedness, than the most finished servant we could find. My advice is—keep her."

This settled the matter, since it was a curious fact that the "advice" of the youngest Miss Leaf was, whether they knew it or not, almost equivalent to a family ukase.

When Elizabeth had brought in the tea-things, which she did with especial care, apparently wishing to blot out the memory of the morning's escapade by astonishingly good behaviour for the rest of the day, Miss Leaf called her, and asked if she knew that her month of trial ended this day?

"Yes, ma'am," with the strict formal curtesy, something between that of the old-world family domestic—as her mother might have been to the Miss Elizabeth Something she was named after—and the abrupt "dip" of the modern National school girl; which constituted Elizabeth Hand's sole experience of manners.

"If you had not been absent, I should have gone to speak to your mother to-day. Indeed Miss Hilary was going, when you came in; but it would have been with a very different intention from what we had in the morning. However, that is not likely to happen again."

"Eh?" said Elizabeth, inquiringly.

Miss Leaf hesitated, and looked uneasily at her

two sisters. It was always a trial to her shy nature to find herself the mouthpiece of the family; and this same shyness made it still more difficult to break through the stiff barriers which seemed to rise up between her, a gentlewoman well on in years, and this coarse working-girl. She felt, as she often complained, that with the kindest intentions, she did not quite know how to talk to Elizabeth.

"My sister means," said Hilary, "that as we are not likely to have little boys half-killed in the field every day, she trusts you will not be running away again as you did this morning. She feels sure that you would not do such a thing, putting us all to so great annoyance and uneasiness, for any less cause than such as happened to-day. You promise that?"

"Yes, Miss Hilary."

"Then we quite forgive you as regards ourselves. Nay"—feeling in spite of Selina's warning nudge, that she had hardly been kind enough—"we rather praise than blame you, Elizabeth. And if you like to stay with us and will do your best to improve, we are willing to keep you as our servant."

"Thank you, ma'am. Thank you, Miss Hilary. Yes, I'll stop."

She said no more—but sighed a great sigh, as if her mind were relieved—"so," thought Hilary, "she was not so indifferent to us as we imagined,"—and bustled back into her kitchen.

"Now for the clothing of her," observed Miss Leaf, also looking much relieved that the decision was over. "You know what we agreed upon; and there is certainly no time to be lost. Hilary, my dear, suppose you bring down your brown merino?"

Hilary went without a word.

People who inhabit the same house, eat, sit, and sleep together—loving one another and sympathizing with one another, ever so deeply and dearly—nevertheless inevitably have momentary seasons when the intense solitude in which we all live, and must expect ever to live, at the depth of our being, forces itself painfully upon the heart. Johanna must have had many such seasons when Hilary was a child: Hilary had one now.

She unfolded the old frock, and took out of its pocket, a hiding-place at once little likely to be searched, and harmless if discovered, a poor little memento of that happy midsummer-day—

"Dear Miss Hilary. To-morrow then I shall come. Yours truly, Robert Lyon."

The only scrap of note she had ever received; he always wrote to Johanna; as regularly as ever, or more so, now Ascott was gone; but only to Johanna. She read over the two lines, wondered where she should keep them now, that Johanna might not notice them; and then recoiled, as if the secret were a wrong to that dear sister who loved her so well.

"But nothing makes me love her less; nothing ever could. She thinks me quite happy, as I hope I am; and yet—oh, if I did not miss him so!"

And the aching, aching want which sometimes came over her, began again. Let us not blame her. God made all our human needs. God made love. Not merely affection but actual *love*, the necessity to seek and find out some other being, not another but the complement of one's-self—the "other half," who brings rest and strength for weakness, sympathy in aspiration, and tenderness for tenderness, as no other person ever can. Perhaps, even in marriage, this love is seldom found, and it is possible in all lives to do without it. Johanna had done so. But then she had been young, and was now growing old; and Hilary was only twenty, with a long life before her. Poor child, let us not blame her!

She was not in the least sentimental, her natural disposition inclining her to be more than cheerful, actually gay. She soon recovered herself, and when, a short time after, she stood, scissors in hand, demonstrating how very easy it was to make something out of nothing, her sisters never suspected how very near tears had lately been to those bright eyes, which were always the sunshine of the house.

"You are giving yourself a world of trouble," said Selina. "If I were you, I would just make over the dress to Elizabeth, and let her do what she could with it."

"My dear, I always find I give myself twice the trouble by expecting people to do what they can't do. I have to do it myself afterwards. Prove how a child who can't even handle a needle and thread, is competent to make a gown for herself, and I shall be most happy to secede in her favour."

"Nay," put in the eldest sister, afraid of a collision of words, "Selina is right; if you do not teach Elizabeth to make her own gowns, how can she learn?"

"Johanna, you are the brilliantest of women! and you know you don't like the parlour littered with rags and cuttings. You wish to get rid of me for the evening? Well, I'll go! Hand me the work-basket and the bundle; and I'll give my first lesson in dress-making to our South Sea Islander."

But Fate stood in the way of Miss Hilary's good intentions.

She found Elizabeth not as was her wont, always busy, over the perpetual toil of those who have not yet learned the mysterious art of arrangement and order, nor, as sometimes, hanging sleepily over the kitchen-fire, waiting for bed-time; but actually sitting—sitting down at the table. Her candle was flaring on one side of her; on the other was the schoolroom inkstand, a scrap of waste paper, and a pen. But she was not writing; she sat with her

head on her hands; in an attitude of disconsolate idleness, so absorbed that she seemed not to hear Hilary's approach.

"I did not know you could write, Elizabeth."

"No more I can," was the answer, in the most doleful of voices. "It bea'n't no good. I've forgotten all about it. T' letters wonna join."

"Let me look at them." And Hilary tried to contemplate gravely the scrawled and blotted page, which looked very much as if a large spider had walked into the ink-bottle and then walked out again on a tour of investigation. "What did you want to write?" asked she, suddenly.

Elizabeth blushed violently. "It was the woman, Mrs. Cliffe, t' little lad's mother, you know; she wanted somebody to write to her husband as is at work in Birmingham, and I said I would. I'd learned at the National, but I've forgotten it all. I'm just as Miss Selina says,—I'm good for nowt."

"Come, come, never fret;" for there was a sort of choke in the girl's voice. "There's many a good person who never learnt to write. But I don't see why you should not learn. Shall I teach you?"

Utter amazement, beaming gratitude, succeeded one another, plain as light, in Elizabeth's eyes; but she only said, "Thank you, Miss Hilary."

"Very well. I have brought you an old gown of mine, and was going to show you how to make it up for yourself, but I'll look over your writing instead. Sit down, and let me see what you can do."

In a state of nervous trepidation, pitiful to behold, Elizabeth took the pen. Terrible scratches resulted; blots innumerable; and one fatal deluge of ink, which startled from their seats both mistress and maid, and made Hilary thankful that she had taken off her better gown for a common one, as, with sad thriftiness, the Misses Leaf always did of evenings.

When Elizabeth saw the mischief she had done, her contrition and humility were unbounded.

"No, Miss Hilary, you can't make nothin' of me. I be too stupid. I'll give it up."

"Nonsense!" And the bright, active little lady looked steadily into the heavy face of this undeveloped girl, half child, half woman, until some of her own spirit seemed to be reflected there. Whether the excitement of the morning had roused her, or her mistresses' kindness had touched Elizabeth's heart, and—as in most women—the heart was the key to the intellect; or whether the gradual daily influence of her changed life during the last month had been taking effect, now for the first time to appear,—certain it is that Hilary had never perceived before what an extremely intelligent face it was; what good sense was indicated in the well-shaped head and forehead; what tenderness and feeling in the deep-set grey eyes.

"Nonsense," repeated she. "Never give up anything; I never would. We'll try a different plan, and begin from the beginning, as I do with my little scholars. Wait, while I fetch a copy-book out of the parlour press."

She highly amused her sisters with a description of what she called "her newly-instituted Polynesian Academy;" returned, and set to work to guide the rough, coarse hand through the mysteries of caligraphy.

To say this was an easy task, would not be true. Nature's own laws and limits make the using of faculties, which have been unused for generations, very difficult at first. To suppose that a working man, the son of working men, who applies himself to study, does it with as little trouble as your upper-class children, who have been unconsciously undergoing education ever since the cradle, is a great mistake. All honour, therefore, to those who do attempt, and to ever so small a degree succeed in, the best and surest culture of all, self-culture.

Of this honour Elizabeth deserved her share.

"She is stupid enough," Hilary confessed, after the lesson was over; "but there is a dogged perseverance about the girl which I actually admire. She blots her fingers, her nose, her apron, but she never gives in; and she sticks to the grand principle of one thing at a time. I think she did two whole pages of a's, and really performed them satisfactorily, before she asked to go on to b's. Yes! I believe she will do."

"I hope she will do her work, at any rate," said Selina, breaking into the conversation rather crossly. "I'm sure I don't see the good of wasting time over teaching Elizabeth to write, when there's so much to be done in the house by one and all of us, from Monday morning till Saturday night."

"Ay, that's it," answered Hilary, meditatively. "I don't see how I ever shall get time to teach her, and she is so tired of nights when the work is all done; she'll be dropping asleep with the pen in her hand—I have done it myself before now."

Ay, in those days when, trying so hard to "improve her mind," and make herself a little more equal and companionable to another mind she knew, she had, after her daily house cares and her six hours of school-teaching, attempted at nine P.M. to begin close study on her own account. And though with her strong will she succeeded tolerably, still, as she told Johanna, she could well understand how slow was the "march of intellect" (a phrase which had just then come up) among day-labourers and the like; and how difficult it was for these Mechanics' Institutions, which were now talked so much of, to put any new ideas into the poor tired heads, rendered sluggish and stupid with hard bodily labour.

"Suppose I were to hold my Polynesian Academy on a Sunday?" and she looked inquiringly at her sisters, especially Johanna.

Now the Misses Leaf were old-fashioned country-folk, who lived before the words Sabbatarian and un-Sabbatarian had ever got into the English language. They simply "remembered the Sabbath-day to keep it holy;" they arranged so as to make it for all the household a day of rest; and they went regularly to church once,—sometimes Selina and Hilary went twice. For the intervening hours, their usual custom was to take an afternoon walk in the fields: begun chiefly for Ascott's sake, to keep the lad out of mischief, and put into his mind better thoughts than he was likely to get from his favourite Sunday recreation of sitting on the wall throwing stones. After he left for London, there was Elizabeth to be thought of; and they decided that the best Sabbath duty for the little servant was to go and see her mother. So they gave her every Sunday afternoon free; only requiring that she should be at home punctually after church-time, at eight o'clock. But from thence till bed-time was a blank two hours, which, Hilary had noticed, Elizabeth not unfrequently spent in dozing over the fire.

"And I wonder," said she, giving the end of her long meditation out loud, "whether going to sleep is not as much Sabbath-breaking as learning to write? What do you say, Johanna?"

Johanna, simple, God-fearing woman as she was, to whom faith and love came as natural as the breath she drew, had never perplexed herself with the question. She only smiled acquiescence. But Selina was greatly shocked. Teaching to write on a Sunday! Bringing the week-day work into the day of rest! Doing one's own pleasure on the holy day! She thought it exceedingly wrong. Such a thing had never been heard of in their house. Whatever else might be said of them, the Leafs were always a respectable family as to keeping Sunday. Nobody could say that even Henry—

But here Selina's torrent of words stopped.

When conversation revived, Hilary, who had been at first half annoyed and half amused, resumed her point seriously.

"I might say that writing isn't Elizabeth's week-day work, and that teaching her is not exactly doing my own pleasure; but I won't creep out of the argument by a quibble. The question is, *What* is keeping the Sabbath-day 'holy'?"* I say—and I stick to my opinion—that it is by

* The author of this tale wishes distinctly to state, that she alone must be held responsible for the opinions it expresses. To any earnest, honest Christians who differ from her, she need only say, that to write otherwise than as one religiously and conscientiously believes, is simply impossible.

making it a day of worship—a rest day—a cheerful and happy day—and by doing as much good in it as we can. And therefore I mean to teach Elizabeth on a Sunday."

"She'll never understand it. She'll consider it 'work.'"

"And if she did, work is a more religious thing than idleness. I am sure I often feel that, of the two, I should be less sinful in digging potatoes in my garden, or sitting mending stockings in my parlour, than in keeping Sunday as some people do—going to church genteelly in my best clothes, eating a huge Sunday dinner, and then nodding over a good book, or taking a regular Sunday nap, till bed-time."

"Hush, child," said Johanna, reprovingly; for Hilary's cheeks were red, and her voice angry. She was taking the hot youthful part, which, in its hatred of shams and forms, sometimes leads—and not seldom led poor Hilary—a little too far on the other side. "I think," Miss Leaf added, "that our business is with ourselves, and not with our neighbours. Let us keep the Sabbath according to our conscience. Only, I would take care never to do anything which jarred against my neighbour's feelings. I would, like Paul, 'eat no meat while the world standeth,' rather than 'make my brother to offend.'"

Hilary looked in her sister's sweet, calm face, and the anger died out of her own.

"Shall I give up my academy?" she said, softly.

"No, my love. It is lawful to do good on the Sabbath-day, and teaching a poor ignorant girl to write is an absolute good. Make her understand that, and you need not be afraid of any harm ensuing."

"You never will make her understand," said Selina, sullenly. "She is only a servant."

"Nevertheless, I'll try."

Hilary could not tell how far she succeeded in simplifying to the young servant's comprehension this great question, involving so many points—such as the following of the spirit and the letter, the law of duty and the compulsion of love—which, as she spoke, seemed opening out so widely and awfully, that she herself involuntarily shrank from it, and wondered that poor finite creatures should ever presume to squabble about it at all.

But one thing the girl did understand—her young mistress's kindness. She stood watching the little delicate hand that had so patiently guided hers, and now wrote copy after copy for her future benefit. At last she said—

"You're taking a deal o' trouble wi' a poor wench, and it's very kind in a lady like you."

Miss Hilary was puzzled what answer to make. True enough, it was "kind," and she was "a

lady;" and between her and Mrs. Hand's rough daughter was an unmistakable difference and distinction. That Elizabeth perceived it, was proved by her growing respectfulness of manner—the more respectful, it seemed, the more she herself improved. Yet Hilary could not bear to make her feel more sharply than was unavoidable, the great gulf that lies and ever must lie—not so much between mistress and servant, in their abstract relation—(and yet that is right, for the relation and authority is ordained of God)—but between the educated and the ignorant, the coarse and the refined.

"Well," she said, after a pause of consideration, "you always have it in your power to repay my 'kindness,' as you call it. The cleverer you become, the more useful you will be to me; and the more good you grow, the better I shall like you."

Elizabeth smiled,—that wonderfully bright, sudden smile which seemed to cover over all her plainness of feature.

"Once upon a time," Hilary resumed by and by, "when England was very different from what it is now, English ladies used to have what they call 'bower-women,' whom they took as girls, and brought up in their service; teaching them all sorts of things—cooking, sewing, spinning, singing, and, probably, except that the ladies of that time were very ill-educated themselves, to read and write also. They used to spend part of every day among their bower-women; and as people can only enjoy the company of those with whom they have some sympathies in common, we must conclude that—"

Here Hilary stopped, recollecting she must be discouraging miles above the head of *her* little bower-maiden, and that, perhaps, after all, her theory would be best kept to herself, and only demonstrated practically.

"So, Elizabeth, if I spend a little of my time in teaching you, you must grow up my faithful and attached bower-maiden?"

"I'll grow up anything, Miss Hilary, if it's to please you," was the answer, given with a smothered intensity that quite startled the young mistress.

"I do believe the girl is getting fond of me," said she, half touched, half laughing, to Johanna. "If so, we shall get on. It is just as with our school-children, you know. We have to seize hold of their hearts first, and their heads afterwards. Now, Elizabeth's head may be uncommonly tough, but I do believe she likes me."

Johanna smiled; but she would not for the world have said,—never encouraging the smallest vanity in her child,—that she did not think this circumstance so very remarkable.

MY PHOTOGRAPHIC ALBUM.

I THINK it is about two years since I first heard mention made in a letter from Paris, of a custom newly introduced there, of leaving, instead of an ordinary card, your "counterfeit presentment" photographed on a small scale, at the door of your acquaintance. At the present time there is hardly a drawing-room table in England, upon which you may not see the gay binding and bright clasps of an album, containing a whole series of these *cartes de visite*. Photography occupies a large proportion of our most attractive shop-windows; it is the delight of countless amateurs, the puzzle and provocative of men of science; in one way or other, it is a prominent feature in our modern life.

Like everything else this photographic *furor* has its two sides. Most pleasant to have one's friends conveniently at hand in that pretty volume; but disappointing to have them so often misrepresented there. Pleasant to have so fertile a subject of discussion as a friend's album affords; not always pleasant to be pressed to contribute one's own effigy towards it. By no means pleasant either to have it instantly recognised, however scowling, however smirking, however (we fondly believe) unlike. True, one's well-bred acquaintance may simulate a little uncertainty, but when did the unsophisticated eye of child or servant ever fail to detect the likeness. That grim visage—by the way, how does so small a space find room for every incipient wrinkle—eyes, *nil!* mouth—oh, impossible! The lens was evidently in fault there. As I prepare to put the obnoxious object into the fire, my little nephew bursts in, "That's you, aunt Ann; how jolly!" My maid entreats for it. "It's your living self, ma'am." Well, well! She shall keep it then in some old envelope of her own, but no one else shall. I am either too vain, or not vain enough, to figure in a Photographic Album.

But I dismiss that ruffling personal reminiscence, and return impartially to the subject. I turn over the leaves of my own album; one dear image comes before me after the other. True, this one has not her best look—that not his characteristic attitude. This sweet young face can no more be truly rendered in black and white than could the half-opened bud of the blush moss-rose; these middle-aged features have been robbed of all the beauty of form that years have left, and that other beauty of thought and feeling years have given, is but very dimly hinted here. Yet recalling other faces, put far out of my sight,—faces that smiled upon my childhood, my youth—benign, beloved, whose every line I once knew so well—faces which flash on me sometimes yet in waking hours, and often in dreams, but will never stay when I bid them; what would I not give to have them preserved for me here, even as well as the worst of these, with each familiar detail of dress, each peculiarity, even were it defect, as accurately laid down! So it is with us always! We need a regret to teach us the true value of a possession.

My Photographic Album, when I exhibit it to morning callers—one grand function of such albums being to promote casual conversation—

does not, I must confess, elicit many flattering remarks. There are no proud names in it, no public characters, no beauties rare enough to show through photography—with one exception, not even any grotesque figure. I am aware that strangers receive a general impression of my friends as an exceedingly commonplace set. And yet there is hardly one face in the book of which I could not tell some strange history, certainly not one personality represented there that does not appear to me marked and notable. Perhaps this is only saying in other words that I know all these people intimately. What indeed is there that does not repay an intimate knowledge? It is only a superficial glance that disappoints us. Pass rapidly by that straggling white-dotted growth on the hedge-bank, mere tangle you would say of a common weed; stop, stoop down and gather; hold the tiny sprig close, look at it against the full light, and you will wonder at the symmetry, the delicateness, the dainty finish of the flower.

One of the photographic pictures, however, in my book, no one does turn over without a smile of pleasure. It is that of a child of two or three, a boy, chubby, intelligent, a little defiant, and exquisitely natural, as indeed children's photographs invariably are. You see the picture on a following page, but the engraver could not catch all the delicacy and spirit of the little face. Every mother's eye moistens when I tell her that this child was the only child of his mother, and that he is dead. That is all I can tell in a few passing words. But to me the very sight of the small creature, with its look of resolute babyhood about the dark eyes and pouting mouth, as he sits there nursing his long feather, and wondering what the man opposite him can be playing at; recalls so much of rapture and of agony, and of God's great mercy bringing good out of all, that I should like to dwell upon these reminiscences at greater length than hitherto, and to seek to concentrate your sympathies for a little while on the story of the short life of this Only Child.

No biography should ever begin with its immediate subject. We need some knowledge of the parents to explain the child. Perhaps of the grandparents, the great grand-parents too, for the matter of that. However, in the present case, I will not attempt to carry you back beyond my own school-days, when I was a steady-going girl of thirteen, to whom Minnie Gordon at the age of nine was made over as child—according to the pleasant custom of the place. For some time I was anything but satisfied with the allotment, for Minnie was singularly unmanageable, and did my influence very little credit. The daughter of an Indian officer, her early childhood had been spoiled as only *ayahs* can spoil, and then subjected to the rules and restraints of a methodical English household, governed by two worthy aunts who liked everything in order, and children and dogs in their proper places! They soon found that they could make nothing of their little niece, and were glad to

transfer the responsibility of her education to our school-mistress, who, experienced as she was, found the charge no sinecure. For, though so truth-speaking and affectionate a child as Minnie could hardly be called naughty, she was unreasonable and impracticable. There was no moderation in her likes and dislikes, and often no ground for them that we could discover. Why, for instance, we wondered, should she have so abhorred M. Pecqueux, our dancing-master, dapper, debonnaire, and a general favourite, and attached herself devotedly to our sallow German music-master, irritable as he was? It was the more irrational because Minnie, practise as she might, had really no aptitude for pianoforte playing, whereas she could have danced remarkably well, would, when alone with us girls, bound with a grace, and shuffle her small feet with a rapidity, that would have transported M. Pecqueux, could he but have beheld it. But, alas! at the very first scrape of his violin, at his shrill cry, *Allons, Mesdemoiselles, serrez les reins, rentrez la ceinture!* Minnie was as stiff and hopeless a subject as the poker. And so too with her schoolfellows. Some of the very brightest and pleasantest among them she would positively hate, no one knew why; others she would delight to cling to, associate with, and wait on in her own little way. I was one of those favoured ones.

For several years after this I lost sight of my little school-fellow, till one evening, when we met accidentally at a London party. It was difficult to believe in the transformation of the little Minnie I remembered, into the beautiful creature I then saw. Yet there were the same long black eyes, with their alternate fire and languor, and there was the same lithe supple movement—something graceful indeed, but sudden and peculiar, which reminded me now, as it always used to do, of a wild animal. (Of other girls you would have said that they sat or walked; of Minnie, that she had a tendency to crouch or spring.) The great change I observed was in her complexion. The sallow skin had changed to the rich creamy whiteness so dazzling by candle-light, into which the colour came and went so varyingly that hardly for two moments together did she look quite the same. She was leaning, when I first caught sight of her, on the arm of an intelligent-looking man, apparently some ten or fifteen years older than herself. The moment she discovered me she bounded from him. "Ann, dear old Ann!"—"My little Minnie!" We forgot the crowd around, talking of our school-days. "I am going to be married," she said. "Yes—that is he," she went on, following the direction of my eyes; and then, as if answering some slight expression of wonder in my glance, "He is not so much older than I am—only twelve years. And I like him all the better. Aunts made such a fuss about it. But I would have him." "You love him, Minnie?" "Oh, yes, to be sure. He is so clever. He is a great chemist. At first, I thought he would never care for anything but his books and experiments. But he does. Come and be introduced to him."

There could indeed be no doubt about it. Mr. Trevor did care for the lovely girl. One glance at his earnest eyes as they fastened, fed on her chang-

ing face, showed how deeply and tenderly. But did she care equally for him? To be sure, Minnie always was unaccountable, and so why should I feel any degree of surprise at his being her choice? Perhaps it was only because he stooped a little, because his hair was rather thin on the top of his head, because there was an indefinable approach to the quizzical about the tie of his cravat,—a girl's estimate is too often a mere thing of shreds and patches such as this. But I think it was something in Minnie's own manner that prompted my uneasy doubt. She seemed so thoroughly at home with him, so unconstrained, so careless. Her eyes met his as easily as mine, and all the passionate worship she read there had neither power to arrest the changing colour in her cheek, nor to drive it suddenly back to her heart.

I did not see Minnie again till five years after her marriage. Her husband and she were then living in a charming villa near Richmond. We were not regular correspondents, but she wrote to me every now and then, pretty, unequal letters, a strange medley of eloquence and childishness, very like her own self. I knew therefore that she had suffered a good deal from delicate health, and had more than once been disappointed in her hope of being a mother. At the time I called upon her, that hope was again renewed. Her beauty was a good deal faded, but to me she was more interesting than ever, as she sat there leaning in her arm-chair quietly embroidering the tiny crown-piece of a baby's cap. I inquired for Mr. Trevor. Oh, yes! he was well; he was in his own study—his laboratory; he was always there, indeed. She hardly ever saw him till the evening, and then ten to one he went to sleep. She laughed carelessly, not merrily as she said this. I spoke of Mr. Trevor's increasing celebrity in the scientific world, of the pride she must feel in it. She shrugged one naughty shoulder, just as she used to do when a child at the obnoxious Pecqueux: "Really Ann," she replied, "I don't believe I do care much about it. He is quite taken up with those experiments of his. Horrid games, and long-named things I know nothing about. At first it used to vex me. I don't care now." Then, after a pause, during which I had been premeditating a wholesome suggestion as to the duty of sharing her husband's interests,—*"Oh Ann,"* she burst out; "he is very good and kind, but he does not fill my life. One can do so little for a full-grown busy-minded man; he does not depend upon one,—does not want one even, for hours and hours together. It is the mother's love that seems as if it would consume me. This time, don't you think it *will* be? I pray to God so. Pray too, dear Ann. The doctor says I am going on as well as possible, but it seems too much joy," and she covered the little round of embroidery with kisses. I spoke hopefully and calmly; tried to lead her away from the exciting topic to the charm of her home, the gay garden, the tall trees, the winding river. She smiled very languidly. "One gets used to all that," she said; "one tires of it all so soon, just as I did in old times of those stupid ready-made toys, Aunts thought I might amuse myself with all day long. But a child, Ann! A little, little child, all one's own! I envy the poorest woman I meet who carries a ragged

baby in her arms. I would change lots with her if I might. Surely Ann, you are not going to tell me that this is wrong. Who but God has put this feeling into my heart? Is it not only natural?"

For several years after this interview the circumstances of my life led me away from England, and all intercourse with Mrs. Trevor. But I knew before I left, that the little cap I had seen her so eagerly working had never been worn. And when, after a long interval, I chanced to meet on the Continent with some mutual friends, it was but a melancholy account of her that I heard. She had grown listless,—a little soured they thought, by her repeated disappointments—seemed to care for nothing very much—certainly not for Mr. Trevor. He, for his part, appeared absorbed in his scientific pursuits, in which his wife avowedly took no manner of interest. Her health was delicate, her spirits uncertain. One of these mutual friends—the mother herself of a large family—told me she always contrived to get her little children out of the room when she expected a call from Mrs. Trevor, from an instinctive feeling that the sight of them was a trial to her.

It will therefore be readily imagined that when after a further interval of years, during which I had heard nothing from or of my early friend, my eye fell one day upon the following announcement in the columns of *Galvani*:—"At the Elms, Richmond, the wife of Henry Trevor, of a son;" I rejoiced with no common degree of sympathy. I instantly wrote to congratulate, and received a brief rhapsody in return. And when a few months later the changes and chances of my own life led me back to London, one of the first things I did was to go and see the Trevors. As I walked up the shrubbery that led to the house, my thoughts full of Minnie and her rapture, I encountered Mr. Trevor walking hurriedly along. At first, he had not an idea who I was, but when I gave my name he remembered it quite well. He too was a good deal changed, by the way. He stooped much more; he looked quite an elderly man. I congratulated him with all the fervour I really felt. Was the child well; how did Minnie bear the intensity of her happiness? There was something in Mr. Trevor's tone that made me feel my own pitched too high. The child was a remarkably fine fellow, he said, and Minnie must be stronger than had been supposed, to bear fatigue and loss of sleep so well. He thought things might be better managed, but then he was a perfect ignoramus in such matters. Perhaps all healthy children *did* cry in this way, and turn a house upside down. If I would kindly excuse him he would not return with me just then. I should be most gladly admitted he knew. I went on, and rang at the open door of the pretty house. The screams of an infuriated baby rang through and through it. They overpowered the servant's voice, or took away his self-possession, for in answer to my inquiry whether Mrs. Trevor was at home, he mumbled something perfectly unintelligible. I did not know whether he meant to admit me or not. "Take in my card," I said, a little peremptorily. In a few minutes Minnie's arms were round my neck.

She looked thin, flushed, and anxious, but proud and happy through it all. "Come this way, dear Ann. I can't leave him just now. Dear fellow, he does not like having his cloak and hat put on. He is so intelligent, Ann. We always have this little difficulty when he is going out. This way. We have taken him into his papa's room. Sometimes the electrical machine will amuse him when everything else fails."

I followed Mrs. Trevor, and this is the scene I saw in the laboratory of the scientific man:—

A table covered with manuscripts had been hastily rolled aside (some of them had fallen on the floor). In the large reading-chair was seated the head nurse—a kind old woman, whose notions of the management of infancy one saw at a glance resembled Mrs. Trevor's. On nurse's knee was the small tyrant of the household—a superb baby of six months—sometimes sitting up for a moment, attracted by what was going on, then thrown stiffly back in very convulsions of rage and resistance at every fresh attempt made to tie his feathered hat under his chin. Nurse drummed on the reading-desk, the nursery-maid kept wildly turning the great glass wheel of the electrical machine. Mrs. Trevor was on her knees kissing the little plunging feet, and pouring out the usual incoherent appeals by which mothers and nurses seek to soften the heart of offended babyhood. A large Newfoundland was walking about, sniffing at bottles and tubes in corners of the room. Would darling baby look at his own, own poor mammy? Would a little king let old nurse tie his hat only this once? So they went on all together, glass wheel flashing, sudden pretences of scolding the dog; fond words in abundance; not a hope for any one of them! Their enchantments prevailed till the obnoxious hat was raised, then baby routed them by a renewed roar. I came forward. "Baby," I said, in a very firm, clear voice. The little fellow, arrested by the strange tone, looked up. I fixed my eyes steadily on his. "Baby must be good." His great brown eyes met mine wonderingly. I smiled; he smiled too, through his tears. "I am going to put baby's hat on, and take him out," I went on. "Lord have mercy!" whispered the nurse, the nursery-maid ceasing to turn the wheel in her amazement, as I boldly took the hat and tied it on well under the firm and dimpled double chin, the child making no resistance whatsoever. But I am bound to confess that I spoiled the charm of my achievement to the lookers on, by saying, "You really should not spoil him so." I am not quite sure that any of them quite forgave it me for some time after.

I have given this seeming trivial scene at some length, because it is a type of the manner in which Harry Trevor's infancy was managed. His adoring mother believed it to be bad for the boy to cry, and sought to avert the catastrophe by giving him whatever he wished for. Alas! there is no keeping pace with even a baby's wishes. Content will never come that way, even at six months old. Each day some new device had to be tried. There were times when Mr. Trevor, exasperated beyond bearing by the uproar, would

intrude upon the scene, and try the effects of a loud voice, and a little bluster about a birch-rod. A most miserable failure he made of it! Minnie's tears and reproaches soon drove him back to his own study, half suspecting he must be the unnatural father she and nurse plainly thought him. To this evil of inordinate indulgence was added that of morbid anxiety on Mrs. Trevor's part respecting the child's health. Dr. Worthington, who had ushered the little fellow into the world, was sent for at all hours alike of night and day to mitigate the mother's causeless alarms. God had given her her heart's desire; but looking at her worn and eager face, you could hardly have called Mrs. Trevor a happy woman. Her cup was full to the brim; her hand seemed too feeble to carry the full cup steady.

Years went on, and Harry Trevor was a noble-looking boy of seven. There is no likeness of him at this age; his parents often wished for one, but the day never came when the boy himself wished to sit, and that decided the matter. The photograph from which the engraving is taken, is itself a copy from one of Claudet's, done when he was only three. But at seven his beauty was even more marked than in infancy. When he was in a sunny mood, no one ever passed him by without turning to look again at the bright bewitching face. Strangers invariably pronounced him the most promising child they had ever known,—so frank, so intelligent, so noble. Some of us, however, who were behind the scenes, had gloomy forebodings enough concerning him. His fits of passion were fearful to behold; the tyranny he exercised unbounded. What was to become of him, poor boy, growing up thus?

It was not long after Harry's seventh birthday that Mrs. Trevor took him for the first time to the sea. He had had a little cough—hooping-cough his mother had feared. One day Dr. Worthington, sent for as usual for some quite trifling cause, said to Mrs. Trevor, in the child's presence, "My dear madam, you alarm yourself about this little cough, and Master Harry, on his side, refuses my harmless cough-mixture. Now, I'll prescribe something that will do you both good. Go to the sea. Go to the sea at once. You'll enjoy that, my little man—picking up shells—going out in a boat. Fine fun, I can tell you." And the good man took his departure, little guessing the dismay his half-random speech occasioned the mother's heart. The vision conjured up before the boy's mind was not to be dispelled by the most skilful manœuvres. The little pertinacious spirit was roused to the utmost. There would be no peace for any member of the family till the move was made. Mr. Trevor, foreseeing a few weeks of unwanted quiet, seconded the idea. It was decided that they should go to the Isle of Wight. Mrs. Trevor, who sometimes found the convenience of my comparative power of managing Harry, invited me to accompany them; this I declined, but I promised to follow in a week's time, and to take a lodging near.

I had a letter from Harry before the week was over, written in a fine bold hand, and spelt according to his own phonetic system, from which I gathered that he liked Jack Medway very much,

that he was going to go in a boat with Jack, that Jack went into the sea shrimping, and he and Neptune into the sea too with Jack, that there never was such fun, and, finally, that he meant, when he was a little older, to be a sailor like Jack. Added to this spirited effusion were a few hurried lines from his mother, urging me to come as soon as ever I could, for that neither Nurse nor she could persuade the darling boy not to dabble on the shore all the day long with a rough sailor, wetting his feet through and through, and indeed that she much feared he had caught cold already, for that he certainly looked much paler than usual. To this impression I attached not the slightest value. Arrived at my lodging at Shanklin, my landlady told me she feared there was some trouble at Myrtle Lodge (the house taken by Mrs. Trevor), for that Mr. Burnet, the doctor, had been there twice since the morning. Even this did not alarm me—so used was I to her nervous apprehensions—though I am glad to think that I went at once to my friends. Nurse looked very grave as she met me at the door.

"I don't like the look of the blessed child," she said. "He's more patient than is natural. And I don't think the doctor likes it either."

"What is it, nurse?" I asked, with a presentiment of ill at my own heart.

"The Lord above only knows, ma'am; but it's something uncommon sudden. Master Harry was as lively last night as ever I see him in his life, going on about being a sailor. This morning he got up quite early, to wash some shells Jack Medway had brought him last night, when all of a sudden he gave a sharp scream, that went all through the house. Jane and me, ma'am, heard it in the room above, and went down, all in a flutter, just as we were. There was poor Missus on her knees by him, as white as her night-dress, and Master Harry crying sadly, and bent double, holding his little hands just so. We got him into bed, and put hot flannels to his stomach and his little feet, which were as cold as stone, and we sent for the doctor. I thought Missus would have died, she was that frightened. When the gentleman came he asked what had the child eaten? And sure enough there were some of those horrid crab-apples in his little pocket. There is a tree full of them close to the house, and Missus and I knew he *would* eat them, do all we could. But what frightens me most, ma'am," poor nurse went on, the tears beginning to run down her cheeks, "is the way in which Master Harry took the doctor's stuff, with never a word against it, for all it was so yellow and smelly. I never thought to live to see such a thing as that. But I'm keeping you talking. Please go in, ma'am, and see him; and keep a cheerful face before poor Missus."

I went in. Harry lay in his mother's large bed, his face a little flushed, his lips a little parched, but he seemed no longer in any pain. His mother was sitting on the bed close beside him. The child smiled when he saw me, and seemed pleased, and soon after fell off into a gentle doze.

The next morning found me early there. This time the nursery-girl opened the door for me. Her face all swollen and blistered with tears told me the child was no better, but I did not dare to

speak to her, fearing an explosion of grief that might be heard in the sick-room near. Mrs. Trevor was crouching on the bed close beside her boy. His head and one little arm were thrown wearily across her. Nurse was standing by with a cup of untasted tea. I did not dare look at the mother, but nurse's face was gloomy enough. I went up to the other side of the bed, and said as cheerfully as I could, "How is my dear little Harry to-day?" The child looked at me fixedly, but he did not smile. His skin had the dark flush of fever; his eyes an unearthly beauty. "Take me, oh, do take me out of this bed; I do not like it; I cannot die here." *Die here!* Yes, that was the word. Had his mother heard it? Nurse evidently had not. "Master Harry is lying nicely across his own mamma's knee; he likes that, I am sure." The little sufferer slightly moaned as he raised his listless hand to his mother's face.

Mr. Burnet, when he came, looked very grave. His medicines had not had the result he expected. "If sickness set in," he whispered to me aside, "the case is desperate." Mrs. Trevor's eye did not question mine as I dreaded it might. She was speaking to her boy. "My precious one will like to see kind Dr. Worthington, will he not? I think he will be coming to see us some time to-day." She had sent for him, then. I rejoiced at that. He knew the boy's constitution better than a stranger could. "And papa too; I should like to see papa," was the reply. "Papa shall come, my own Harry. Ann, will you go at once and see to this?" she said, addressing me, but never for an instant looking away from the child. Surely she must guess his danger, I thought; yet if she does, her calmness is nothing less than a miracle. Later this miracle was explained. Mr. Burnet, in the course of his second visit, had impressed upon her the necessity of composure, lest the child, excitable and precocious as he appeared, should become alarmed.

Late that evening Dr. Worthington arrived. Mr. Trevor and he travelled down together. The two medical men had a long consultation. Both agreed, they said, perfectly as to the nature of the case, the propriety of the treatment hitherto. Of the inevitable issue neither spoke to us, though the dreaded sickness *had* set in.

But the little sufferer's patience, the mother's calmness, these were the marvels,—these wrung our hearts with very agonies of tenderness, that almost overpowered our gratitude to God for such unexpected blessings. Mr. Trevor, to whom the boy had comparatively been as nothing, could not command his feelings for ten minutes together. The mother spoke to none of us—never left, never looked away from her child.

The night wore through—a night of much suffering from constant nausea, not from any other pain. But never an impatient word. Whatever we did for him—if but the smoothing of some fold in the coverlet, the drawing up and down of the blind (his mother left us so little that we could do), he thanked us for it with a most touching courtesy. Between his mother and him there were often whispers of endearment exchanged, sometimes longer sentences—generally too low

for us to distinguish; but once we heard the childish voice saying something about Jesus; and in the mother's reply, we caught the word Heaven.

When the dawn came, the dawn of a cloudless July day, the child's face looked more drawn and wan, the eyes more wondrously deep than ever. You felt at once that on the great mysteries of death and immortality that child knew more than you. Yet we none of us spoke of the solemn thoughts that filled our hearts. For my part, I feared to say one word that might break down the courage of the mother. Dr. Worthington himself, indeed, had begged us not to speak to her. "She knows how things stand," he said; "but if not, let God and the child prepare her." The doctor was a wise and a good man, and had himself lost young children.

Very early the morning of that last day, Harry began to repeat a little hymn his nurse had taught him. It ran thus—

"I think when I read that sweet story of old,

When Jesus was here among men,

How he called little children like lambs to his fold,

I should like to have been with them then."

Then he stopped: "I am going to Him," he said. A pause in which each of us heard the beating of his own heart.—*How* would the mother be able to bear it? "I like going to him," the child went on.—"Only," and he stroked his mother's face, "I wish you were coming too. Mammy, read me about those children and Jesus." Old nurse, who always had her Testament in her pocket, rose, and reverently gave it, opened at the familiar place, into the mother's hands. She read out the tender words distinctly, read them twice over, with her own kisses between, "*Took them up in his arms,—laid his hands upon them,—and blessed them.*" A heavenly smile settled on the child's face. The room would have been quite still but for Mr. Trevor's convulsive sobbing. Mr. Burnet led him away. Nurse and I, on our knees at the foot of the bed, fancied that this was one of the short intervals of rest that had before been granted, and that we should again hear the sweet little voice. But Dr. Worthington's eye noted a change. "Hold him firmly," he said to the mother. She pillowed the head softly, she wound her arms round the child's form, as she had done a thousand times, only with a stronger pressure. There might be some struggle to sustain him through before this sleep came?

Ah, well! I dwell at too great length upon the simple story. But were we not blind in our provisions? It was *life* we had feared for this only child—he was so full of energy and will, we had never dreamed that God might rescue him by an early death! Could we have anticipated this, we should have shuddered at the prospect of his impatience, his resistance to treatment during illness; at that of his mother's frenzy of despair. So much for our human judgment. But this child had been given her in mercy as well as taken away. The great craving of Minnie Trevor had been satisfied. She *had* known the proud pangs and joys of motherhood. That crown of woman's nature had struck its thorns, and cast its glory round her brow. Nay, she was a mother still.

Up in heaven, surely very fair, even among those that follow the Lord always, her child lives and waits for her. No need now that considerate friends should hide their little ones from Mrs. Trevor. She loves *all* children dearly for Harry's sake.

And oh, with what a new love she loves *Him* with whom Harry is now! Those days and nights of speechless communion between the

creature's anguish and the Creator's mercy (a communion with which we none of us intermeddled) have left the calm of perfect resignation behind; nay more, they seem to have wrought a conviction that this early departing was "far better." He is *safe* now, the treasure for whom she had trembled so much—in wiser keeping, ay (she can even believe this), in *tenderer* too. Between her husband and herself there is renewed

affection. She loves him for his uncontrollable grief when his boy died, more than ever she loved him for his early devotion to herself. They have separate pursuits still; but if she does not understand, she at least has learned to respect his; and he is full of interest in hers, which are mainly connected with such charitable under-

takings as have for their object the good of little children. Their home is a very quiet one, but it is not dreary. I never go there without a deepened sense that He who gave and took away ordereth all things well!

ANN WARRENDER.

THE USES OF THE MOON.

M. COMTE, while forced to admit that we do derive some benefit from the moon, scouts the idea that there was any anterior design to make it useful to us. His views on the religious aspect are given in the following passage:—"To those who are strangers to the study of the heavenly bodies, although frequently masters of the other parts of natural philosophy, astronomy has still the reputation of being an eminently religious science, as if the famous verse, 'The heavens declare the glory of God,' still preserved all its value. To minds early familiarized with true philosophical astronomy, the heavens declare no other glory than that of Hipparchus, of Kepler, of Newton, and of all those who have aided in establishing their laws. It is, however, certain, as I have shown, that all real science is in radical and necessary opposition to all theology, and this characteristic is more decided in astronomy than anywhere else, just because astronomy is, so to speak, more a science than any other. No other has given more terrible shocks to the doctrine of final causes, generally regarded by the moderns as the indispensable basis of every religious system, although, in reality, it has been the consequence of them. The simple knowledge of the movement of the earth must have destroyed the prime and real foundation of this doctrine, the idea of the universe subordinated to the earth, and consequently to man. Besides, the accurate exploration of our system could not but dispel that blind and unlimited wonder which the general order of nature inspired, by showing, in the most sensible manner, and in various respects, that the elements of this system are *certainly not disposed in the most advantageous manner, and science permits us easily to conceive a happier arrangement.*"

We shall not stop to notice the tone of arrogant assumption in the statement that every philosophic astronomer must be an Atheist. We mean only to advert to the argument here employed to banish a Divine intelligence from the universe. It amounts to this—that, as we can conceive a better arrangement, there could have been no intelligence in the original adjusting of the arrangement. Let us take the moon for illustration. Laplace fancied he could improve on the solar system by placing the moon differently. He endeavours to show that if the purpose of the moon was to give light to the earth, this could be accomplished far more effectually if the moon was so situated that it revolved round the earth in the same time that the earth revolved round the sun. In that case, she would be always full, and her light would be enjoyed every night, instead of only occasionally. The conclusion is,

that she was not ordained to rule the night, seeing that, by a different arrangement, this could be more effectually accomplished. But with all his skill in celestial mechanics, Laplace would not, by the suggested arrangement, improve matters. If the moon's orbit were situated where he proposed, her light would be sixteen times less than at present, and, what is more, the arrangement would not be a stable one. The moon would not only be at first a very dim lamp, but it would be in danger of going out altogether.

Sir David Brewster, in maintaining the habitableness of the moon, questions the doctrine that her use is to give light to the earth; and he does this on the ground that she would give a much better light if her surface was all of a chalky whiteness, and not studded over, as it is, with dark spots. Now, granting that there might be a happier arrangement, if the use of the moon was to give light—granting that it would be better to have a wider orbit, and a more uniform disk, are we to conclude that a use cannot be proved, unless we can show that it is the best possible contrivance for the use intended? Let us take the case of Paley's watch on the heath. Would the inference of design be legitimate, only on the supposition that the watch had the most faultless scapeament, and the most artistic finish? Would not some rude, old crown and verge movement, dropped by some boor as he crossed the common, quite as irresistibly lead to the inference of design? And in dealing with the mechanism of the heavens, the real question at issue is not—Is the intelligent contriver perfect? but, Is there a contriver at all? No doubt, the ultimate aim of the Theist is to prove a perfect intelligence, but the first is to prove that there is an intelligence—that the use necessarily implies a designing mind. He knows that the Atheist must be forced to surrender all, if he admits that mind, in any form, is necessary to account for material laws and arrangements. When it is therefore held that the design of the moon is to give light, or the eye to see, it is not necessary at all to prove that the moon is the best possible lamp, or the eye the best possible lens.

But is the Atheist to be permitted to maintain his position that any given arrangement is imperfect? Are we to concede to Laplace that he can improve the mechanism of the solar system? By no means. We may not be able to prove the absolute perfection of the arrangement, but we can show the probability that the caviller is far more likely to be at fault, than that there should be a defect in the machine. A skilful mechanic may, on ex-

amining the works of a watch, say, without presumption, that the scapement is imperfect, and that he could suggest an improvement; and the reason simply is, that the tools formed by man for useful purposes have their object clearly defined. It is easy to see what the one requirement of a good scapement, for example, is, and there is no presumption in suggesting how this one well-defined object is to be attained in a more satisfactory manner. But the instruments of nature are not like human tools. The extent of their uses cannot be defined. All nature is one great whole; and it would require omniscience itself to say whether any given arrangement is the best possible for the innumerable uses it may subserve. To give light is one use of the moon, but we know not the many other uses it may serve. It is not, however, necessary to discover all these uses in order to maintain the position that it is ordained to give light, and we are not entitled to criticise its efficiency till we know all its functions.

Although we cannot prove the absolute perfection of any contrivance, yet, when increased research invariably discovers new points of excellence, we are warranted to conclude that, did we know all, we would be forced to acknowledge that all is perfect. We see only a few of the spokes of a revolving wheel, and it accords more with the modesty of true science, to ascribe the apparent imperfection to our point of view, than to conclude that the circle is defective. The more we enlarge our view the more complete does the circle become; and it is but the doctrine of inductive philosophy to conclude, that if our vision were entirely unobstructed, the machinery would appear in all its perfection. But Laplace and M. Comte would project their own imperfection on the perfect works of God.

To appreciate the usefulness of the moon as a source of light, we must view man in his least civilized state. The refinements of civilisation have, to a great degree, contracted the usefulness of the moon in this respect. City life, too, is not favourable to a grateful spirit for the service of the moon. In towns lighted by gas, little depends on the state of the moon; but in the country, the moon is consulted in the fixing of all social and religious meetings, and country people in general are able to inform you as to the quarter in which the moon is. This mixing up of the moon with the daily thoughts of the people in rural scenes, shows that her usefulness is fully appreciated.

In savage life, especially in high latitudes, the moon is an ever-present power. When the Red Indian speaks of moons, as measures of time, he speaks in the tone of affection and reverence for the benign luminary that guides his steps through the trackless forest. The Oriental bows to the

sun, but the Red Indian nurtures his grand and impassive nature in the mild beams of the moon. In hunting and trapping, the moon is his ever-faithful ally, and he would as soon think of doubting its use, as he would the use of his spear or his traps.

But the use of the moon is not confined to light-giving. As a mechanical power, the moon is of much service. The sun is the grand source of power on the face of the earth, but still, some little work is left to the moon. To her chiefly is assigned the task of raising the tides of the ocean. The tides are of incalculable benefit to man. In a sanitary point of view, the moon may be regarded as the great scavenger of our globe. Twice every day she flushes, with sea water in abundance, the rivers on which our towns are situated, and keeps them comparatively pure. Again, by her mechanical power, she bears ships on the crest of the tidal wave, deep into the heart of the country, where the centres of commerce are often found. Insignificant streams are thus rendered navigable, and cities brought into immediate connexion with the ocean—the highway of commerce. By the convenience afforded by the moon, London is at the same time, connected with the ocean, and in the heart of the country, where it can be best protected from any invasion. In an island of such limited extent as Great Britain, the rivers must necessarily be small, but the tidal wave compensates for the defect, and gives us the advantages of river navigation. The mechanical power of the tide is made available by means of the tide-mill. The rise and fall of the tide can be utilized as well as the fall of the river. This source of power has not been very generally turned to account, though there is no mechanical difficulty in applying it.

One of the most useful purposes served by the moon is that of a time-ball. When the time-ball falls at Greenwich, all within range of seeing have the opportunity of knowing that it is precisely one o'clock at Greenwich. But its utility would be vastly increased if the mariner far out at sea could also see the signal, for it would at once give him his longitude. He has the means on shipboard of ascertaining the local time, and at sea the clock in the saloon is put right every day at noon. If the ship is sailing westwards, the hands must be put back in proportion to the speed of the ship. The longitude of a ship is simply the difference between her own clock and a clock at Greenwich. If, for example, the ship's clock shows twelve o'clock at the moment the time-ball falls at one o'clock at Greenwich, her longitude is one hour west. The great object, then, is to see the time-ball at Greenwich, or something equivalent to it. The moon admirably serves the purpose. Suppose it is pre-

viously ascertained, by calculation, that the moment the ball falls, the moon, in its progress through the sky, will touch or occult a certain star; then, though the mariner cannot see the ball, it is enough if he can watch the moment when the moon comes in contact with the star. The nautical almanac tells when he may expect the contact, and if he succeeds in observing it, it is as serviceable to him as if he had the time-signal itself. It is not necessary, however, that the moon should actually come in contact with some star. It may happen that the moon is still some little distance from the star at the moment the ball falls, but this serves the purpose equally. If it is known from the almanac, that the moon will be so many degrees from the star when the ball falls, it is only necessary to watch the instant when the moon comes within the precise distance in order to know when it is one o'clock at Greenwich. But there is no need to limit the signal to one o'clock. It is only necessary to know from the almanac the time by the Greenwich clock when the moon will arrive at any point in her track across the heavens, in order to ascertain what the time at Greenwich is. To people living along a line of railway, the trains are so many time-signals. The time-table shows the Greenwich time when the trains should arrive at each station, and if they be regular they serve the purpose of a clock. If a person wishes to know the longitude of the station, he has only to ascertain the local time from a sun-dial, and the difference between this and the railway time gives the longitude. What the railway train is to the landsman, the moon is to the mariner, and while the landsman uses a dial to ascertain the local time, the sailor uses a sextant. The sailor may adopt the obvious plan of carrying a chronometer set to Greenwich time, and which, by comparison with the local time, at once gives him the longitude; but no chronometer can equal the moon as an indicator of time. The captain may forget to wind up the chronometer, some parts of the works may give way, the rate of going may change, and many other accidents may occur to render the chronometer useless; but the moon can ever be relied on. No winding up is needed, no danger of the mainspring of gravitation breaking. She no doubt changes her rate of motion, but the rate of change can be calculated so that her precise position at any moment can be predicted with absolute accuracy.

The moon would be useful to man for the division of time, though it was only monthly periods that she marked off, and though she only met the necessities of savage life; but the usefulness becomes more apparent when she serves to give the minutest divisions of time to meet the increasing necessities of man as he advances in civilisation.

It is this development of adaptation, running parallel with the development of the human intellect and the social advance of the human race, that most clearly indicates the exercise of Divine intelligence. No doubt the illustrations of direct adaptation of the material world to man's physical constitution are striking enough, and it is these that are usually appealed to in support of a Divine intelligence; but the secondary adaptations to man as a moral, intellectual, and social being, are still more striking and convincing. These adaptations, being progressive, also recognise the progressive nature of man and his higher destiny.

It may appear straining the argument too much to speak of the usefulness of the moon in developing poetical sentiment, but we have an aesthetic element in our nature which requires suitable appliances, as much as the functions of digestion and respiration. The material universe, in the midst of which we are placed, is not adapted merely to gross utilitarian purposes. It is equally fitted to cherish refined and lofty sentiment, and when a want of our nature is supplied we have a use. And how useful in this respect is the moon! Volumes might be filled with the poetry of the moon; and yet the theme is ever fresh. The poet and the painter find the subject to be inexhaustible. The aspect of nature in moonlight is so different, that we have, by the gift of the lesser light, virtually two worlds for our abode. The gorgeous sunlit scene gives way, like a dissolving view, to the milder radiance of the moon, and, as by a magic spell, a new scene, with its own characteristic beauty, starts out from nature's canvas. The picturesque effects of moonlight are infinitely varied; but how many are lost simply because we do not look for them with aesthetic fondness. In crossing the Atlantic we had once the opportunity of witnessing the effect produced by a moon-picture which was new to the whole ship's company, and to which we do not remember any allusion in the pages of the poet or the *savant*. The attention of the captain was called to a dark pillar rising from the horizon and terminating in the full moon, which was about thirty degrees above the horizon. It assumed the form of an elongated pyramid, the moon being at the apex. He had, no doubt, seen this hundreds of times before, but he had never really observed it. But now that his attention was called to it, he was filled with wonder at the magnificence of the phenomenon, and the distinct manner in which the pillar stood out in relief from the sky. The officers gathered round the captain, and it was also new to them, as they gazed in admiration. The passengers, who lingered on the deck, swelled the crowd of admirers, and to all the spectacle was perfectly novel. After all were filled with the beauty of the spectacle, the spirit

of philosophy arose, and the captain was appealed to for an explanation. His solution was one characteristic of the sailor—it was a sign of bad weather. This tentative effort at a theory was negated by simply shading the eye from the bright wake of the moon in the sea. The instant this was done the majestic pillar vanished, showing that it was the counterpart of the wake, and merely the effect of contrast. This simple solution did not divest the object of its beauty, and during successive nights the same effect was watched with increased interest, and all tacitly acknowledged that the moon had a use in thus giving a new charm to the ocean scenery, and helping to while away the hours of the long voyage.

The moon has a use, too, in reference to the religious element in man's nature, not merely by furnishing an argument for design, but by directly cherishing the religious spirit. Its adaptation to this purpose is shown in the almost universal adoration paid to this luminary. The idolatry of the heathen is only the perversion of a native instinct of the human heart, and is a testimony to the fact that the object of adoration has a natural tendency, in the pure and enlightened spirit, to lift the heart up to God. When the Psalmist considered the heavens, and contemplated the luminaries in detail, the moon had the first place, as declaring the glory and goodness of God. The moon is the most familiar symbol of God's providence; we feel that she is nearer to us than any other heavenly body, and that her special duty is to wait upon us. She accompanies us like a guardian angel, bearing a lamp before us, in the darkness of the night. She circles round us like the parent bird round the nest of her helpless young. She is the first round in the ladder that leads up to the throne of God—the first link in the chain that binds us to the universe of worlds. The moon is thus specially fitted to be useful in bringing home to us the presence and the providence of God.

It was undoubtedly the feeling that the moon was our nearest neighbour, that led man to ascribe fanciful functions to the moon. While the sun was supposed to preside over the heart, the moon was believed to have supreme power in controlling the brain—the characteristic part of man's organization. Hence, any crisis in mental phenomena was always connected with the phases of the moon, and paroxysms of insanity were long believed to be regulated by the maxima and minima of the moon's illuminated disk. It is strange that such a delusion should have so long clung to the human mind although contradicted by innumerable facts. This is explained by the principle of an anterior bias, and the love of coincidences. The passion of tracing coincidence has its use in prompting to scientific inquiry, but we often find it indulged in for its

own sake. How many examine their barometer daily to see whether it is rising or falling, simply for the pleasure of marking the coincidence between the weather and the indications of the barometer. They may be neither mariners nor sailors, and have no immediate interests at stake. They may have no pretensions to scientific inquiry. And whether their theory is that the barometer influences the weather, or the weather the barometer, the pleasure is still great of tracing a coincidence. So, in regard to the moon, the human mind has derived great pleasure in tracing the coincidence between the moon's phases, and the mental and physical phenomena on the surface of the globe. From the bias of this love of coincidence, the many adverse facts were overlooked, and the few favourable ones were allowed to have more than their due weight. The influence of the moon in insanity is now entirely discredited, but many cling to its influence on the weather. Many who have a half conviction that their belief is a mere superstition, still have a pleasure in speaking of a change of weather at the new or full moon. And there are always a sufficient number of coincidences to give colour to their belief. Almost every different country has its own rules for prognosticating the weather from the phases of the moon; but however different they may be, they all serve equally well to cherish the conviction that there is some real influence. Many scientific researches have been made to settle the point, but no decisive result has been arrived at.

There is no *a priori* reason why the moon should not influence the weather. It is simply a question of fact, and as yet no appreciable effect has been detected. Perhaps the only effect for which there is tolerable probability, is the influence of the full moon in dispelling light fleecy clouds. This is effected by the heat of the moon which is expended in the higher strata of the air—the heat being employed in converting the clouds into invisible vapour.

While science is lessening the influence of the moon in one direction, it is extending it in another. The moon is now found to be a magnet, and to exercise an influence on the magnetic elements of our globe. The oscillations of the barometer are found to be slightly affected by the phases of the moon. The rays of the moon are found to have a chemical influence like those of the sun, and its heat, though insignificant, has at last been measured. These physical effects render it not improbable that the moon may influence the weather and the human constitution, but the precise effects are yet to be discerned. The effects hitherto ascribed to the moon have been shown to be either fanciful, or, when real, produced by other causes. But admitting all this, there is a wide enough margin for the undoubted uses of the moon.

WILLIAM LEITCH.

THE NEWSPAPER.

WHAT should we do without our newspaper? What should we read, think, talk about? What should we wrap our parcels in, or kindle our fires with, if there were no newspapers? The newspaper is the grand climax of our age; steam and electricity are but the Caliban and Ariel to this Prospero. Historians tell of the magnificence and power of mighty empires,—of the wisdom, the achievements, the glory of ancient kings. What were they worth?—they had no newspaper!! Every Muggleton that publishes its daily—every Smith, Brown, or Jones who purchases that same daily for the small charge of one penny—may look with compassionate contempt on the proudest nations—the sublimest monarchs of olden times.

The newspaper, too, like air, or light, or any other of heaven's best gifts to man, is common to all, and is appreciated by all. In meanest lodging-house, in royal hall you find it. From Regent Street to the lonely shingle hut or grass warrie of far Australian wilds—from the Grampians to the Himalayas—from Windermere to Lake Nyassa, it is the milk and honey of life to the children of men. Could we by some magic process behold in succession all the newspaper readers of this day, with all the differences of mood, of circumstance, and of scene belonging to each, our view would be almost as extensive as the world—varied as the human race. The thought flashes on us with almost the force of omniscience. Lo! passing before us the happy fireside group, the solitary grief-worn man, the village politician;—but it is vain to point to a few figures in an endless panorama.

What charm then—what weird power lies in these straight lines of letters, that they should find the way to every house, and stir up a peculiar interest in every heart? They simply record the life and doings of our race. They give rude etchings and photographs of man in all the varying phases of his character—character developed in every possible condition—under every conceivable form of trial; and thus they appeal to our sympathies and desires in every way. The struggles and aims, the fears, ambitions, hopes, cares, passions, crimes and virtues of man, are here set down faithfully in shorthand. The newspaper makes Shakespeares of us all. It furnishes us with an outline—it may be of some fireside tragedy—we can at will fill up the sketch with details of the most romantic interest; the materials are given, we can weave them into a web, hued and patterned as gorgeously as we please. It supplies us with a few bald facts relative to some mysterious occurrence; straightway we are absorbed in the exciting process of completing the imperfect story, our minds pursuing a thousand probabilities, yet still left unfettered in a boundless universe of conjecture. The details of some strange scheme or deed are laid before us—at once all the faculties of the mind are engaged in the work of tracking out the hidden motives; unravelling the complications; developing the secret source or agency; in short,

solving the mystery in whatever form it may present itself. Most people laugh at the countryman who wished a newspaper “wi’ plenty o’ guid murders in’t.” But the “guid murders” doubtless meant those which the utmost ingenuity of concealment had shrouded in thorough mystery; and the desire probably indicated—not a weakness—not an unnatural gloating over the most brutal form of guilt, but the strong, though morbid, working of high quality of mind. True, there is, even beyond the revolting character of these crimes, an atmosphere of horror surrounding them, a lurid hell visibly opening beneath the feet of such sins. Yet however painfully this may affect us, it only strengthens the force of attraction in the mystery, by investing it with the terrible grandeur of the supernatural world. We must probe the darkness. We must detect and drag to the light the passions and motives which thus summed themselves up. The Creator, in His wisdom, has planted a law in our nature which compels us to this work, and in prosecuting it, should we arrive at a satisfactory conclusion, the pleasure, the sense of power and victory which it gives us, is akin to that felt by all great discoverers—by Lord Rosse, for instance, when the nebulae and orbs before unknown shone out in their true forms, full and clear, in the vast regions of space.

The feeling of power evoked by the newspaper is another element of attraction in it; it sets before us all the kingdoms of the world, and all the glory of them; by it we sit in the councils of kings, and take part in those deliberations by which the destinies of nations are controlled; by it we stand in the assemblies of the wise, while genius displays all her dazzling treasures; and by it we can, with the disciples of science, explore, investigate, and acquire new riches of knowledge in every direction where the Creator's own hand has written the exhaustless wonders of his wisdom. All that ingenuity, ambition, and energy can accomplish, it brings to us and makes us in a sense actors and sharers therein; be it those marvellous contrivances which lighten the primal curse, wiping the sweat from the brow of the toiler; or by which seas are bridged, mountains levelled, space annihilated, and all the nations of the world brought within speaking distance of each other; or those weightier and more stirring matters in which the honour and fate of empires are involved. And the sense of power thus wrought within us in entering into all these things is heightened by the fact that we do so without participating in the accompanying cares and fears of the real actors.

The newspaper also ministers abundantly to our love of variety. What an irresistible charm is there, to the unbroken monotony of most lives, in being made intimate with the ever-shifting scenery of the world, all its stir and action, the when and where and how of all things taking place on the face of the earth. And if we become tired of fixing our attention on man and his works, we are here introduced to all the phenomena of nature.

The thunder or avalanche peeling down Alpine gorges; the storm which has lifted the strongest ships in its Titanic arms, and dashed them down on rock-bound coasts in unavailing fragments; the earthquake, the flood, the eclipse, the comet—that wild Arab among stars—are all pictured out, and their peculiarities familiarly handled in the newspaper.

But the newspaper does not confine itself to records or themes such as these. It is not contented with being the world's eye and ear and every other organ of sense; it must also think for us; it reasons, criticises, decides on all manner of subjects; it constitutes itself both judge and jury, sifts the evidence, reviews the pleadings, and acquits or condemns at pleasure; it often rises above judges and juries, amending or reversing their decisions peremptorily. With equal competency it discusses the merits of every question, be it the cleansing of a gutter, or the laws that will revolutionize the world. And its opinions on sanitary regulations, political changes, philanthropic and benevolent schemes, on all movements affecting the vital interests of the State, are received by the great mass of its readers with unquestioning deference. On every point of debate it has an arsenal full of all weapons of offence and defence at command, and by wit, satire, eloquence, pathos, or ridicule, it will bear the brunt of battle, and come off victorious. Oh! Leviathan in the midst of the seas, when in rage thou liftest up thyself, thou art terrible to all the children of pride. "Lay thine hand upon him, remember the battle, do no more." He casts down the mighty from their seats, and abases the proudest mortals upon earth. Dare any one rouse his indignation or kindle the fury of his wrath, he will make him the scorn and mockery of the world, were he the mightiest emperor within its bounds.

Sitting then in this seat of the gods, exercising functions so varied and extensive, daily wielding a power which gives impress and impetus to an incalculable mass of mind,—does this arbiter and ruler among men always exhibit such wisdom, such high pure spirit as become his place and authority? Are his counsels to be followed without hesitation, and his dicta on all points to be received as beyond doubt or denial? If these questions are audacious, their importance justifies audacity. Their importance also forbids the fear of avowing our convictions even when adverse to so mighty a potentate. While, then, we give the newspaper all honour for the true and noble work of enlightenment which it has wrought, and for its leal service in the cause of freedom and progress, we must also aver that it is sometimes of the earth earthy; that its opinions, like those of common mortals, are liable to be marked and made worthless by prejudices and ignorance. It sometimes yields up its Samson strength to the degradation of serving the Philistines. In the ignoble strifes of sects and parties, it has been known to descend to subterfuge and artifice; it has not hesitated to resort to all the tricks of sophistry, and even to the utterance of rash and unfounded assertions, for the purpose of gaining a momentary triumph. This must necessarily have an evil corrupting influence in the social system. Yet seeing it is an influence put forth

only occasionally, in connexion with passing topics, there may be no permanent disease produced by it; only an influenza, or a fever,—prostrating for a time, but to be overcome by a little medicine, or the sure, though sometimes slow reactionary processes of nature. We will gladly balance these evils against the greater benefits conferred by our newspaper. We will accept with all thankfulness these rich harvest stores of intellect, given forth so freely for the growth and sustenance of ever-craving minds, although they contain a due admixture of tares; seeing that sublunary things have all a mixed character, that every life, from that of the lowest fungi to the most blessed amongst mankind, is a prey to some enemy or other. The sunlight is not the less glorious that it often breaks to us through sullen masses of cloud, and is ever haunted and pursued by shadows and darkness.

There is an evil in our newspaper, however; an evil deliberately chosen, and doggedly, nay sometimes boastfully maintained, for which none of its merits can atone, and none of its excuses be held valid, that is, its negation of, if not hostility to, religion. Whatever panacea it may recommend for mankind, religion, which has an antidote for every poison, a balm for every wound, a cure for every malady, is with the newspaper a thing of nought. Whatever it may delight to honour and blazon forth to the admiration of the world, religion, more glorious than morning spread on a thousand hills, is scrupulously hidden from our eyes. Whatever it may set forth and advocate for the purifying, ennobling, and advancement of humanity, religion, a river of life flowing free and full from a Divine fountain-head, for the healing of the nations, is avoided, shrunk from, as if it were that once bloody Nile which rolled its red death-billows through Egypt. That which is most needed in every relation of life, in everything we are called upon to be, to do, or to suffer, that which is grandest, most prominent, most necessary in the course and evolution of human affairs, is taken no account of by our newspaper. Religion, the inspirer of purest ambitions and noblest purposes, which gives stability and efficacy to our generous impulses, which endows the weakest worker with faithfulness and energy; which has been the invincible panoply of warriors, the highest inspiration of painters and poets, and the truest, most enduring wisdom of kings and statesmen; which is the sweetness, the strength, the light, the consolation of life—the one subtle silver harmony threading its way through and overcoming all the discords of time; the mighty gravitating force which binds us to the great central sun of the moral universe, preserving us through all the cycles of human development, and through the awful spaces of eternity, within reach of His vivifying, fructifying, joy-giving influences, preserving us from rushing to utter destruction—this religion is a thing not to be spoken of.

It may be asked, ought the newspaper to undertake, in addition to its other work, the duties of the pulpit? No! But there is a wide enough distinction between a simple steadfast avowal or recognition of the principles and sanctions of religion, and the ignoring of them altogether, to render such a

question unnecessary. It is just such a recognition which is desirable from our newspaper. Look, for instance, at the man who, while working diligently at his calling, busy as the busiest of his neighbours, and taking a due interest in all the affairs of life, can yet impress on all those around him a sense of invisible things, of the powers of the world to come, of the solemn momentous interest eternity has for every one. He does not accomplish this by preaching. No! but only by speaking now and then a quiet opportune word—a word often mighty as a stone from David's sling; by never shrinking when occasion presents itself from giving "a reason of the hope" within him, even though it be in the face of scepticism and scorn; and by an unobtrusive testimony as to the objects of his faith and love. Men of this stamp confer greater benefits on society than we can estimate. They diffuse the fragrance of heaven around them. The fire from God visibly descends on these living sacrifices, and the glory of that fire compels the reverence of all beholders. Now, if our newspaper manifested the same spirit, the same faith and love, in the same unobtrusive way, who could calculate the results? or, rather, could we not as surely anticipate the results as we can the day from the dawn, or the harvest from the seed-time? For while the man has but his own little sphere to work in, our newspaper has the world. The one is like a bird filling its own native grove with melody; the other has the power of

"An angel song,
That bids the heavens be mute."

The man has only occasional and limited opportunities of intercourse with his fellows, but the newspaper is in every house a daily companion and adviser, and is received without suspicion by a class of persons who voluntarily renounce and avoid all religious influences—a class never reached by sermon or tract, for they are not found in churches; and though they may take your tracts with civility, consider them useful only in the way of lighting a cigar or tobacco-pipe; yet who are, nevertheless, thank God! not beyond the reach of conviction and conversion too. Our newspaper at present, by abjuring all notice of religion—thus banishing it, as it were, from the life of mankind, holding it bound within the strong prison walls of silence—only confirms the madness of these persons, ay, and confirms it more thoroughly than all the arguments or sneers of the infidel could do; for these might rouse and alarm, while this, by a seeming endorsement of their conduct, soothes them into a sense of security. On the other hand, by adopting the course indicated, our newspaper would be the most effective means conceivable of reclaiming these persons. By incidental acknowledgments of our obligations to God, by allusions to religious duty rising naturally out of the subjects under notice, it would furnish a powerful protest against their godless lives. At the same time, all its readers would be benefited. The infusion of religious life into the newspaper would act like those strong under-currents in the ocean, which bring the warmth and vitality of the latitudes from whence they come, to shores

and climates that would remain frozen and sterile without such genial influences.

What are the objections, then, which so effectually bind up this power for good? They must be worthy of special consideration. Let us look at them a little, take some gauge of their force and weight, and mark what spirit they are of.

Religion, it has been said, is a thing of creeds and sects, and these creeds and sects at irreconcilable feud with each other; continually belching out the volcanic fires of controversy; their one aim and ambition being to subvert or burn up each other. Were our newspaper to give them scope and utterance, it could only be as a partisan; the possible result being its utter ruin in the fiery depths of the contest. This objection is adopted, and passes current among a great number of readers. Thus and thus only it receives importance, and calls for a clear, unmistakable declaration of the truth. True religion, then, has but one creed, Christ; but one sect, Christians. Christ, the Son of God manifest in the flesh; Christians, the saved by Christ, the followers of Christ. This comprehends the whole elements, sums up all the details of religion; and thus Christians are of one kin, of one blood throughout the world. Their hopes, their desires, their love, their life, are one. True, there are "diversities of gifts," "differences of administrations," "diversities of operations;" but one Lord, one Spirit, one body. All Christians are alike created anew in Christ, and grow up in his image to the stature of perfect men. Here, then, is an impregnable basis of union. Yet as one man is made on the same plan and likeness as another, while each is stamped by the Creator's hand with an individuality, a presence of his own; so in religion, there must be essential unity, while by the very laws of life and being, there is infinite variety of development. And it can be shown that this variety of development is not adverse to unity of purpose; that it does not retard or diminish, but gives additional vigour to the power of united action.

It is quite sufficient for our purpose to have shown the essential oneness of religion, and that whatever differences may arise among her professed disciples, she is responsible only for the zeal, the energy with which she opposes these differences. But we would for a moment give these objectors the full weight and benefit of their argument. It is strife which they deprecate. We ask, then, do men not differ in their views on any other subject? Are there no opposing parties in the state? Is there a single political or social question which is not disputed and wrangled over? Should our newspaper avoid discussing these things because of dissensions?

If this objection cannot be retained, another is immediately put in its place, and this next one, for the sake of contrast possibly, assumes quite a different character. It proceeds thus:—If religion is mixed up with our everyday affairs; if it is paraded in streets and market-places, and jostled about among dirty, greasy crowds, it will be effectually divested of all its sacredness; we shall no longer approach it with holy awe and veneration; in its worn, soiled garments it will become a thing lightly esteemed among mankind; and

being thus dethroned, its high place will be usurped by those insufferable arch twin-traitors, cant and hypocrisy. Does not that sound well? Has it not a well-simulated appearance of humility and reverence? We might fully endorse it if we could only once believe that disregard, neglect, avoidance, were ever meant to guard the holy temple of religion from desecration, or protect her heavenly presence from the impious abuse of the wicked. We might hold these opinions worthy of all honour, if we could only believe that He in whose person religion was incarnated, was supremely wrong in coming to this fallen world, and in mingling with such wretched outcasts of heaven. Is He to be condemned for making known the holiest doctrines of religion, not in churches only, but in the chief places of concourse in the cities, on hillsides, in wildernesses, in ships, in the houses of the people; alike to hardened, hating Pharisee, and to the no less hating because mocking Sadducee? Was He wrong in engaging in common labours, or in taking part in wedding festivities? Was He wrong in making the commonest labours, such as shepherds tending their flocks, farmers husbanding their crops, merchants in pursuit of business, fishermen with their nets, women at their household work, illustrative of the most sacred truths? Was He wrong, in short, in spending His whole life on earth, in mixing up religion with everyday affairs and everyday life? We turn from these questions with the conviction that a false humility may claim nearest kinship to the most arrogant presumption.

Let it be observed, this objection assumes that the position or circumstances in which religion is placed invest her with sacredness, and call forth reverence and awe towards her, while we all know that these are but the necessary accompaniments of her intrinsic qualities. Unless you divest her of her very nature, you cannot place her in a position where she will be less pure, less sacred, less awful in holiness, than she is. To imagine that she cannot live except in an atmosphere of state and ceremony, is an evidence, not of genuine humility

or reverence, but of that dwarfed, paltry, *parvenu* spirit which values externals merely, the badges and insignia, the outer robing and garniture, and quite overlooks the solid worth, the eminent capacities, the native majesty, without which all the ceremonial splendours of the world, are but meaningless mockeries, the toys of fools. Let us know once for all that religion may be invested with as much sanctity, may exhibit as fully its inherent power and dignity by the fire-sides of the people as in stateliest cathedrals, where priests minister in gorgeous vestments, where peerless choirs pour forth all the rolling grandeurs—the magnificent, boundless inspirations of music—where the very lights and shadows are taught to do vassal homage, where all that art and genius can bring to heighten the effect is lavishly expended. Beneath such outward show and pomp hypocrisy may find as free scope, as secure a resting-place, as in the common abodes, the plain unvarnished everyday appearances of men.

But we may safely leave this matter to the decisive tests and renovating processes of time. Time is represented as a mower. The idea is too narrow. He carries the balances and sword of justice. He weighs all things, and whatsoever is found wanting he rejects. He judges all things, and whatsoever is found guilty must perish. He carries also an urn of life, and continually pours out its vivifying waters on the world, and thus the places of those things that are cut down and destroyed, are constantly filled up by higher and better forms of life. Time is but another name for the development of God's providence in the world. We confidently anticipate, then, the coming hour when these objections shall have lost their influence on men's minds; when they shall be counted as worthless as the empty chaff which is tossed about in wintry winds. We confidently anticipate the time when our newspaper shall be not only the champion and inspirer of freedom, progress, right, and justice, but in some measure the beacon, guardian, and guide of immortal souls to a better inheritance.

M. B.

THE CARRIER PIGEON.

SPEED, speed upon thy way!

I send thee on a gentle errand,—fly
And work my bidding ere the parting ray
Fades from the western sky:

The summer woods are dark,
And murmur lovingly, yet pause not thou
That bearest tokens onwards to thine ark
More sure than leaf or bough!

In sunshine bathe thy breast;
Stay not within the swift and glancing rill
To dip thy wing—for thee a sweeter rest
Is waiting, onwards still!

Forth from the casement, there
SHE leans to gaze upon the sky, and now

The evening light lies golden on her hair,
Lies warm on cheek and brow;

She looks unto the west;
It is for thee she watches—thou wilt be
Soon by her hand, her gentle hand caress'd,
How softly, tenderly!

Yet first beneath thy wing
It trembles, while she seeks my letter; well
She knows, ere yet her light touch frees the string,
All that it hath to tell.

And yet the heart would hear
The words it loves the best repeated; fain
To set them to its music soft, nor fear
To weary of the strain;

Like Childhood's ear that drinks
 Some oft-told story, some remembered rhyme,
 It knows each word before it comes, yet thinks
 Them sweeter every time ;

It welcomes them before
 They cross the threshold, as, with greeting soft,
 One flies to meet a foot-fall at the door,
 That cannot come too oft !

Ah ! would that to *her* heart
 She chanced but once to press the folded line,
 Then all the warmth to sudden life would start,
 I breathed on it from mine !

The love, the tenderness,
 That found in words no kindred language, *there*
 Would seek a fond Interpreter to guess
 All they may ne'er declare !

I do but stay thy flight,
 Speed on thy way ! the summer heavens are wide,
 Yet through their broad and untrack'd fields of light
 Thou wilt not need a guide ;

My thoughts before thee fly,
 Thou needest but to follow where they lead ;
 They have *one* way—Ah ! would that with thee, *I*
 Might also follow—speed !

DORA GREENWELL.

At Home in the Scriptures.

A SERIES OF FAMILY READINGS FOR THE SUNDAY EVENINGS OF 1862.

FIRST EVENING—THE FATHER'S CARE.

"Casting all your care upon him; for he careth for you."—1 PET. v. 7.

HERE a command rests on a reason;—a reason is adduced to enforce a command. These two things God hath joined in his own administration; and we should never put them asunder in ours. When orders are issued to intelligent beings, sufficient grounds, implied or expressed, should ever accompany them. As well might you expect to move a rock by means of a well-constructed lever, without a fulcrum on which it can rest, as to influence men permanently and beneficially by mere authority, while you do nothing to satisfy their judgments or win their hearts.

There are no marrowless things among the works of God: wherever he has created one of a pair, there he creates also its complement or helpmate. If he has constituted animal life with the appetite of thirst, he has provided in the material world an abundant supply of water. In like manner, having made man, after his own image, a reasonable being, he supplies the reasoning mind with appropriate food. Why and Wherefore are words of much meaning and of frequent use in human language: they are the external embodiment of an inextinguishable appetite that lives unseen in the soul. He who feeds the young ravens when they cry, does not leave that craving unsatisfied in the spirit of man. Even in the deep things of the Covenant, the method of redemption, he invites us to his council: "Come and let us reason together," is the style of his address, even when the subject in hand is the pardon of sin. If the command "Turn ye, turn ye from your evil ways," is addressed to the "House of Israel" through the tender yet stern prophet of the captivity, the ground of it is immediately added in the melting interrogation, "For why will ye die?" Again, in the New Testament, if Paul and Silas bid the alarmed jailer of Philippi "believe in the Lord Jesus Christ," they instantly supply him with a strong reason for compliance in the short yet great promise, "Thou shalt be saved." Whether or not we be always ready to give to every one that asketh, a reason for the faith which we exercise, the Father of our spirits is ever ready to give a reason for the faith which he demands.

We shall consider first the ground on which the command rests; and next, the command which rests on that ground.

I. THE GROUND on which the command rests: "For he careth for you." Unless we firmly lay hold of this reason, we shall never, in point of fact, obey this injunction that rests upon it. Unless we are convinced that he careth for us, we will not cast our cares upon him. The suspicion, if it lies in our hearts, that he does not care for us, will freeze the filial confidence as soon as it begins to flow. Man's Maker and Redeemer knows what is in man: he knows in particular the dark suspiciousness of himself that hides under the many folds of a hy-

pocritical profession, in the inmost heart of the guilty: he knows this disease of our spirits, and here he has sent forth his word to heal it,—"He careth for you."

We know when a fellow-creature cares for us by certain sure evidences, which when observed by the senses and understanding, produce conviction with all the quickness of an instinct, and all the power of a faith. Glance at some obvious and well-defined examples. On a bright calm evening, a fisherman has gone far out to sea in his tiny boat, intending to toil all night for the next day's bread. Suddenly a great storm comes on, so that his life is not safe at sea; and a great darkness, so that he knows not in what direction lies the land. Abandoning his nets, and setting all the sail that his craft will carry, he would fain head for the harbour, if he knew how. As he sweeps the horizon, and anxiously strains for some land-mark, a feeble twinkling light bursts into view, where a moment before all was darkness: turning the boat's head in that direction, and giving way, he makes for the beacon with all his might, cheered meanwhile by knowing that wife and children who set that lamp in his cottage window, were in the drear hour of midnight with sleepless eyes and beating hearts caring for him. A crew of explorers penetrate far within the Arctic circle in search of other explorers that had gone before them,—gone and not returned. Failing to find the missing men, and yet unwilling to abandon hope, they leave supplies of food, carefully covered with stones, on some prominent head-lands, with the necessary intimations graven for safety on plates of brass. If the original adventurers survive, and on their homeward journey, faint yet pursuing, fall in with these treasures, at once hidden and revealed, the food when found, will seem to those famished men the smaller blessing. The proof which the food supplies, that their country cares for them, is sweeter than the food.

The evidence that God cares for man has been written in two great books—the World and the Bible.

The world, like an Egyptian obelisk, is covered all over with a hieroglyph, which, though unintelligible at first to infant eyes, is easily understood when the key is found. The clouds as they fly, and the rivers as they run, engrave on heaven and on earth the tender lesson, He who made us cares for man. Water in one condition is a heavy fluid, by its weight pressing ever downwards, and by its fluidity always finding its way, so that it becomes a river, and flows into the sea. Water in another state is a light fluid, by its lightness rising into the upper strata of the air, and there carried by currents to the mountain-tops again, that it may feed the springs of infant rivers. Observe how much of wisdom and kindness glances from these natural

laws. By its tendency to alternate between a state in which it flows beneath our feet, and a state in which it hovers high above our heads, water becomes a useful servant to man; if its tendency had been to assume a condition intermediate between these two, it would have become the world's scourge and man's destroyer. But the same lesson is written everywhere on earth and sea and sky. To enumerate the evidences of our Father's care, were to write the history and the laws of nature. Don't permit any one to cheat you out of a rational being's birthright, by a set of phrases about inevitable changeless law. According to law, indeed, all these beautiful and beneficent operations are performed; but law has not performed them. There never was a law in heaven or in earth that did not owe its origin to a lawgiver, and its operation to a presiding executive. A father has provided appropriate food for his child every day without fail, during a period of fifteen years; a foolish child he, if he concludes at the close, that Regularity has fed him all the time, and that he owes no special gratitude to his father. They do equal violence to reason who ascribe all the wise and kind arrangements of Providence to law, ignoring the existence, the personality, and the love of the omniscient Legislator. The poor heathen, notwithstanding the extreme and variegated stupidity exhibited in their efforts to reduce their conceptions to practice, have never wholly put out the eye of man's inborn instinct, to recognise in the bounties of nature the gifts of God. "O Lord, how manifold are thy works! in wisdom hast thou made them all: the earth is full of thy riches: so is this great and wide sea." "Whoso is wise, and will observe these things, even they shall understand the loving-kindness of the Lord" (Ps. civ. cvii.) Man, who walks erect on earth and looks toward the sky, misses the "chief end" of his being, if he hold intercourse only with matter and its laws, neither admiring the wisdom of the Creator, nor reciprocating the eternal Father's love.

But the other book, the Bible, is at once more easily understood by beginners, and charged with deeper mysteries to occupy and exercise the most advanced inquirers. He who knows least may read it with profit: yet he who knows most will find in it ample room and verge enough for the outlay of all his talents.

The man Christ Jesus, God with us, the Saviour of sinners, stands in the expanse of the Scriptures, as the sun stands in the expanse of heaven. The whole Book has been spread out like a firmament, in which the Sun of righteousness might be set; and from that Sun in its midst radiate the rays to Genesis on the one side, and Revelation on the other, which bathe the whole in light. It is Christ crucified, the just for the unjust, that gives meaning to the sacrifices at the beginning of the Bible, and the prophecies at its close, as the sun in the sky gilds with golden light both the eastern and western horizon,—both the morning and the evening of the day. If, therefore, we would know God, in any of the revealed aspects of his character, we must look unto Jesus.

Look accordingly unto Jesus for evidence that the Father of our spirits cares for us. The "un-

speakable gift" should melt the dark suspicion from our hearts. The whole case—both its logic and its love—is given in a nutshell by that great master of sentences, the apostle Paul: "He that spared not his own Son, but delivered him up for us all, how shall he not with him also freely give us all things?" (Rom. viii. 32.) With a narrow distrustful heart suggests in secret that God will grudge any good to you, look unto Jesus, and say to the tempter within you, "Get thee behind me, Satan, for thou savourest not the things that be of God."

But besides looking to the Son as the Father's gift, we should follow the steps, and listen to the words of the man Christ Jesus during his ministry on earth; for there we shall find additional proof of the Divine beneficence. While the Man of sorrows bore his people always on his tender heart, his compassionate grief broke forth, on two occasions, in distinct specific manifestation. Twice, according to the evangelic history, he wept outright;—once at the grave of Lazarus, and again on the brow of Olivet, as he looked on the city that lay below. These things were done, and recorded for our sakes. He never acted as a private person; in every step, and every word, and every action he was the Redeemer of men, the Saviour of the ends of the earth. Those tears that fell from the eyes of Jesus were meant to be the glass in which we should see his heart, and learn the love to men that was glowing, and will glow for ever there. He wept with the sisters of Bethany when they were sad; and for the inhabitants of Jerusalem because they were sinful. He meant, brother, by these acts, to teach you to-day that he grieves with you when you suffer, and for you when you sin.

"And when he was come near, he beheld the city and wept over it" (Luke xix. 41). They did not care for him, but he cared for them. He knew at that moment that those who did think of him in the multitude of the great city's inhabitants were plotting how they might shed his blood. He grieved not for himself but for his enemies. It would have filled his heart with joy to accept and forgive them; but they would not come to him that they might have life. His tears were shed because the men of Jerusalem were rejecting God's mercy, and courting their own doom. Now we shall miss the meaning of these Scriptures unless we understand them as written for ourselves to-day. Reader, these tears were shed in order to melt thy heart, and convince thee that thy soul is precious this hour in the Redeemer's sight. If thou art neglecting it, he is not. "Be of good comfort; rise, he calleth thee."

Listen now to another word of Jesus; for never man spake like this man: hear his question from the cross, "My God, my God, why hast thou forsaken me?" The question is recorded, but the answer is not. Oh, thou loving Sufferer! heaven and earth were dumb when thus interrogated. This agonizing "Why" received no answer then. But we can answer it. We find the answer not in one verse, but in the whole marrow of the Bible. Thy God and our God forsook thee then, thou compassionate Redeemer, because he cared for us. Out of this great mystery comes evidence, keen and bright as the lightning that bursts from the

bosom of a black thunder-cloud—evidence that God our Father has an unspeakable, inconceivable interest in us the sinful children of men. The Father left his well-beloved to suffer, because he was suffering for us. Learn, therefore, from those deeply mysterious words of the Son in the hour of

his agony, that we are objects of interest to God who made us; that our prayer, when it is poured out, falls on open ears; and that when we arise, like the prodigal, and go to the Father, already the Father is on his way to meet us, ready to clasp us to his bosom, and lead us into his happy home.

SECOND EVENING—THE CHILD'S TRUSTFULNESS.

"Casting all your care upon him; for he careth for you."—1 PET. v. 7.

II. CONSIDER now the COMMAND which rests on that strong reason: "Casting all your care upon him."

Two little boys plan and practise mischief together. They are caught in the fact, and led to their respective homes. The messenger who brought them retires, after leaving information of the facts in either household. One of the boys is an orphan, and although he is supplied with food and clothing, his habits and character are abandoned to the chance influences of the street. Regarding the transgression of the day, no question is asked and no punishment inflicted. The other child is summoned at night into his father's presence. He listens to grave reproof, and smarts under the correcting rod. While he writhes under the pain, he counts himself very unfortunate, and envies his lucky companion who has got off with flying colours. Ah, these strokes are precious! They are the fruit of a father's wise love. This child is cared for; and the preciousness of the correction which "he knows not now, he will know hereafter."

It is of great practical use, in this duty, to realize and meditate upon the absolute omniscience and omnipotence of God. You do not add to his burden by casting your cares on him. Suppose a meadow in which a million of daisies open their bosoms all at one time to the sun. On one of these, while it was yet a bud, a little stone has fallen. At once crushed and overshadowed, it still struggles bravely against all odds to expand its petals like the rest. For many days this effort is continued without success. The tiny stone, a mighty rock to the tiny flower, squats on its breast, and will not admit a single sunbeam. At length the flower-stalk, having gathered strength by its constant exertion, acquired force enough to overbalance the weight, and tossed the intruder off. Up sprang the daisy with a bound; and in an instant another floweret was added to the vast multitude which in that meadow drank their fill of sunlight. The sun in heaven was not incommoded by the additional demand. The new comer received into its open cup as many sunbeams as it would have received although no other flower had grown in all the meadow—in all the earth. Thus the sun, finite though it be, helps us to understand the absolute infinitude of its Maker. When an immortal being, long crushed and turned away by a load of sin and sorrow, at length through the power of a new spiritual life, throws off the burden, and opens with a bound to receive a heavenly Father's long-offered but long-rejected love, the Giver is not impoverished by the new demand upon his kindness. Although all his alienated children should

now turn in confiding faith to him, and satiate themselves with his mercy, there would be enough for all, and all would be supplied as easily as one. Although all the inhabitants of the world, a thousand millions, should this day arise and go to the Father, each would receive as much of that Father's love, as if he alone of all fallen creatures had come back reconciled to God.

Nay, more; when we point out that our Father in heaven is not more burdened by receiving the cases of a world-full, than by receiving the cares of one regenerated and trustful man, we tell only one half of the truth. In order to comprehend the other half we must look unto Jesus, for it is through him only that we can rightly know the Father. When many come at his bidding and cast their care on him, so far from increasing his burden, they thereby make it light. There is a grand paradox here which is charged with obvious and glorious truth. When we cast all our care on the Lord, he is relieved from its burden: when we retain it on ourselves, then he feels it lying heavy on his heart. By keeping our weight, we burden him: by laying it on him, we make him light. Jesus was sad when he looked down from the Mount of Olives and wept for Jerusalem. Although they were not casting their burden on the Lord—*because* they were not casting their burden on the Lord, he was crushed by its weight. Had the inhabitants of Jerusalem that day come out with one accord, and cast themselves and their sins confidingly on Jesus, that Man of sorrows would have wiped away his tears—he would have rejoiced with a joy unspeakable and full of glory. Even now while the Redeemer reigns over all, in each sinner who comes and casts himself confidingly on his love, he sees of the travail of his soul, and when he sees of the travail of his soul he is satisfied. "There is joy," says the Scripture, "in the presence of the angels of God over one sinner that repenteth." The angels themselves, doubtless, rejoice over the fact as soon as they know it; it is not, however, one of their number, but One in their presence, who rejoices most, and makes his joy manifest to the ten thousand times ten thousand who minister before him.

Even here, while our immediate object is to enforce practically the duty of casting all our care on him, we must keep our eye steadily on that mighty yet tender motive whereby he is drawing us to himself. He careth for us, we know; but how? The government, or wealthy benevolent citizens in the capital, may care for the clans in the Scottish Hebrides, or the helpless peasants of Connaught, when the staff of their life has been blasted, and a general famine is ravaging the land. A father and mother, now of advanced age, care too

for their first-born son, who has disappointed their hopes, wasted their substance, and is now a dishonoured exile, they know not where. These two cases are different in kind. The famished peasants of a distant province are pitied, but scarcely loved, by the class who exercise authority and possess wealth. The poor, on the one hand, have never inflicted on the rich any specific injury; and, on the other, are not regarded with a personal individual love. The rich men exert themselves to save the lives of human beings; but when the crisis is past they entertain no desire to meet again with the objects of their compassion. They will be happier if they never hear of them again. Not such is the regard of those broken-hearted parents towards their prodigal son. On the one hand he has done them a great specific injury; and on the other, they long after him with a fond inextinguishable love. Their fireside on winter evenings seems not so bright, because he is not one of the circle that surrounds it. While the younger voices of the family are loud and merry, their hearts are sad, and their thoughts are wandering in foreign lands, chasing their lost son in unknown deserts. You could not make them happy by telling them that their boy has food and clothing. Such information would have soothed them, if compassion had been the head and front of their affection, but it does very little to satiate the demand of love. These parents love their son: although they loathe his wickedness, he is still their son. They long to have him in their arms again. If he do not return repentant, they will go down to the grave in sorrow. Now, reader, it is this latter species of affection, in as far as human things may be compared to Divine, wherewith the Lord Jesus regards you and me. It is compassion; but it is more. It is a greater, deeper, closer thing than compassion: it is love.

It is cold comfort merely to be pitied: that is not the comfort which the Son of God gives to the children of men. It is true that he pities; but it is a more tender truth that he loves. It is true that for their sakes he desires that lost sinners should be saved; but it is a higher and more commanding truth that for his own sake he desires to have them redeemed that they may be his own portion for ever. Indeed, the Lord's love to his ransomed people is, in the prophetic Scriptures, compared to the love with which a mother cherishes her infant. That love, we know, has respect to the mother as much as to the child. See how she

clasps it to her bosom when danger is near! Why? In compassion for the infant lest it should be hurt? Nay, verily, but in personal fondness that she may not be deprived of her treasure. So Jesus longs for the lost; so he cherishes the saved.

We have concerned ourselves hitherto, mainly with the exposition and illustration of the principle, believing that when it is clearly understood and firmly grasped, each may easily apply it to the details of his own experience. The injunction is universal, "casting *all* your care on him." There is absolutely no limit to its operation. Cares for time, and for eternity; cares for yourself, and your family; cares for your house at home, and your business abroad; cares for the Church, and for the world—all are included, and all alike. But here the danger lies near the privilege; and therefore the warning should accompany the exhortation. In this matter there is a *must* as well as a *may*. We must cast all our cares on God; and if we do not in simplicity cast all, we do not, in his judgment, cast any.

You pray: you pray to God in the name of Christ; you pray in secret, and with earnestness. Well: and what sort of matters find a place in your petitions? Is your secret prayer in substance, though not in words, only a slice of the larger public prayers that you are accustomed to hear? Ah, it is not true: it is not real. You are separated from your child; a letter, addressed in his well-known handwriting, is left by the postman at your house. You open it eagerly; and, lo! it consists of some pages of a printed book, and no more. The matter in these pages is very good, but you loathe it: what you expected was not a very unexceptionable essay, common to you and all the world, but specific thoughts and things peculiar to your child and you. In secret prayer cast your own affairs on God's care,—your sorrows, joys, hopes, fears, as they lie in your heart at the moment. It is not lawful to pick and choose;—it is not lawful, for example, to give a place in the prayer to your desire for the spread of the gospel, or the cessation of a pestilence, while you keep back an envious dislike of a neighbour that rankles in a dark heart, or the pleasures of some expected vanity that flicker on a light one. How could we dare to put such wicked or trifling things into our prayer? you ask me. That is your own matter, I reply. The things that lie in your heart should go into your prayer; and the things that will not go into it, should not be tolerated in your heart.

THIRD EVENING.

THE FAITH, A REVELATION FROM GOD, SUITED TO A CAPACITY, AND SATISFYING A WANT IN MAN.

"Whom resist, steadfast in the faith."—1 PET. v. 9.

BOTH in the works of God, and in the works of men, wherever a great strain is expected, a great resisting force is prepared.

We observe and admire the tenacity with which sea-weed or sea-shells grasp the rock. Provision is made in nature for resisting the violence of the waters when they are agitated by a storm. The same law may be seen in operation on the dry land.

An oak, especially if it stands alone in an unsheltered position, pushes out roots of amazing strength, and pushes them far; they strike deep into the ground, or spread themselves over the surface, or twist their fibres round the rock, according to the character and capabilities of the soil. In the strength of its roots beneath, the tree makes provision for a conflict with the tem-

pest which its branches must encounter in the sky. These adaptations which abound in nature, are imitated indefinitely by human art. Science nicely calculates the force of the expected strain, and provides an adequate support. This principle lies at the root of all mechanical engineering.

From the vegetable and animal the same principle rises and penetrates also into the spiritual life. The "new creature in Christ" is exposed in this world, to severe trials; and in the economics of "the kingdom of heaven," a force is provided sufficient to meet and overcome them, according to the scriptural promise, "As thy days, so shall thy strength be." "The wicked are like the troubled sea when it cannot rest." This world and its god rage like the sea in a storm; the tender plants of righteousness which grow beneath its tide-mark are rudely tossed and torn. If they be not rooted into the rock, by the skill and might of their Maker, those surging waves will one day wrench them off. Yet these soft, feeble offshoots withstand the tempest, remaining on the spot green and growthful after its fury has been spent. You might have thought as you looked on the foaming, smoking waves, crushing and rasping along the rocky shore, that none of the frail submarine vegetation could survive the conflict; but when a calm succeeds, and the tide retires, you may step down to the water's edge, and see them all still safely moored to the rock on which they first grew. If you have the curiosity to test the tenacity of their grasp, you will probably find that though you may break them through the middle, you cannot tear out their roots.

Behold a specimen of God's wise care! It is thus that he makes the feeble safe in higher kinds of life!

In the short text which stands at the head of this exposition, I see a single stem of submarine vegetation, violently lashing from side to side with the advancing and receding waves; and yet maintaining its place unhurt after the waves have exhausted themselves, and the sea has settled down into a calm. In our examination of this plant so tossed, and yet so triumphant, we must begin at the root, and follow the growth in its natural order upward. The root of the plant lies lowest—lies at the bottom. Begin, not at the beginning of the text, but at the end, and trace it upward, word by word to its issue. See first how the new creature adheres by its root to the Rock of ages; and see last how the new creature, so secured, resists and overcomes all the strain of temptation to which the world and its god can subject a Christian.

1. FAITH.—It is sometimes useful to contemplate the word and the act which it designates in a more general point of view, before taking in the specific characteristics of the Christian system. To think a little about faith, may help us afterwards to attach a more definite idea to the Faith.

When you see the cattle browsing soberly, calmly contented, on the green pasture, you know that no conception of the unseen, of the spiritual, of the future, can have place in their thoughts. There is no to-morrow for them; no right and no wrong; no conscience now; no judgment to come. Their senses are acute, but they have nothing more. With them faith is impossible. They are

as completely incapable of having faith in the unseen or future as of living under the water; for that mixture of habit and instinct which serves them instead is not of the same nature. On the other extreme, although we know little of purely spiritual beings, we may conclude that faith, in the sense that man exercises it, cannot consist with their nature. The objects which we hold by faith, are the objects in which they live and move.

The birds preparing in spring for their young; the fishes making way at the appointed season to the appropriate place for their brood,—these expectations and preparations in irrational creatures are followed by the corresponding facts. If such instinctive longings and preparations should appear in any creature, or class of creatures, and afterwards prove unfounded and abortive, it would be an anomaly in creation, which no naturalist has ever yet observed. From analogy, all but infinite in extent, we know certainly that such a case will never be found.

In the same manner, the instinctive apprehension of a spiritual, unseen, future state, in which himself will be, which is evidently a characteristic of man, is proof that such a state really exists and awaits him. If there were the expectation in nature, and not the realization in fact, it would show some want of truth in the Creator. "God is not a man that he should lie," either in his word, or in his work. God is true, though every man should be a liar. "Hath he spoken, and shall he not make it good?"

Now faith, in its general aspect, is man's apprehension or expectation of God a spirit, and a spiritual eternal state. While we have a side that lies towards things seen and temporal, we have also a side that lies towards things unseen and eternal. Sense is exercised in this direction; faith in that. Faith is the exercise of a human spirit, while it is still confined in the body, towards spiritual things which sense cannot distinguish. There is a faculty in human nature for holding intercourse with the unseen. Faith is that faculty in exercise. We in our guilty fear might desire that there were no future state awaiting us; but we cannot wish our immortality away. The most violent infidelity cannot blot out from a human soul the inherent capacity of faith, or arrest the tendency to exercise it.

2. THE FAITH.—Faith, in general, is human capacity for receiving spiritual things; *the Faith*, in particular, is the revelation of spiritual things which God has made in the gospel of his Son. The one indicates that man may have a faith; the other indicates that Christianity is the faith which God has given him. That tells us that human nature might exist in the kingdom of God, if there were a way; this tells us that the way is Christ. Faith is a constitutional capability in man; *the faith* is an express revelation and gift of God.

The systems of philosophy and superstition which in ancient or modern times have prevailed in the world, show how little man makes of his inherent power to grasp in the unseen, unless the arm of the Lord revealed be the support on which he leans. Blessed are they that hunger, if the promise can be made good that they shall be filled; but hunger is a dreadful thing if the hungerer has

nothing to eat, or only a stone instead of bread. The systems of philosophy, although by their great swelling words they showed the spiritual capacity of human nature, showed that capacity running waste. It was the outstretched arms of a strong Samson, whose eyes had been put out, clutching thin air. They were always vigorously stretching forth their arms and closing their hands, but they never got hold of anything substantial. It might make an observer weep to see the blind giants falling, and convulsively grasping at blue space as they fell. The men of Athens built an altar to the unknown God; there was *Faith* as a human appetite for the spiritual: Paul preached "Jesus and the resurrection,"—"Whom ye ignorantly worship, him declare I unto you;" there is

the Faith, as the way of salvation revealed by God.

All the superstitions, including the one at Rome, which has so often received what seemed a mortal wound, and yet refuses to die, exhibit faith as an appetite in man, missing the bread which God has sent from heaven to satisfy it. Every image and every picture; every payment for masses, and every pilgrimage to a celebrated shrine; every weary hour of bead-counting, and every sleepless night spent on a bed of stone,—is the outstretching of a strong arm for help in the region of the unseen and eternal, and always in vain. The failure springs specifically not from want of force in the effort put forth, but from want of a solid support in the direction to which the effort points.

FOURTH EVENING.

THE FAITH IN EXERCISE, A BELIEVER'S STRENGTH FOR RESISTING AND OVERCOMING TEMPTATION.

"Whom resist, steadfast in the faith."—1 PET. v. 9.

God offers, and his people accept, salvation through Christ. The same term, the Faith, is applied alternately, both to the truth believed, and the belief of the truth. We have spoken of the faith as an object presented to the man; we now proceed to speak of it as an exercise going on *within* him.

3. In the faith.—In the regeneration there is a personal union to Christ. Although the salvation revealed in the Scriptures is great, it is not able to save those who neglect it. It is true that mercy is freely offered to the sinful; but those only who accept it are saved. The lower link of a chain, with all that depends on it, will be supported in safety, not if it be near, but only if it is in the upper link. It is no disparagement to the gospel that it does not carry into heaven those who have lived and died despising it. If those of human kind who do not accept the gospel were saved, the fact would prove that the gospel is useless. The terms are not, Live, believers and unbelievers alike; but, Believe, and live.

While Noah was engaged in building the Ark, probably his neighbours looked in from time to time, to see what he was doing. You may easily conceive that some who possessed a mechanical turn, were interested in the plan and its execution. They might admire the capacity of the vessel, and the strength of its timbers. They might be able to compute the weight which it could carry, and the draught of water which it would require. Yet the Ark and their knowledge of it did not save these men. When the water overflowed their foothold they perished, although they knew all about the Ark. It did not save those who remained out. It was not made for that. It was made for saving only those who were within. The doom that fell on Noah's neighbours argues no defect in the construction of his Ark; they were lost because they delayed or refused to go in.

Such is the redemption that Christ has promised. It does not save everybody. According to the Scriptures, "he is able to save them to the uttermost that come unto God by him" (Heb. vii. 25); but even this most precious promise conveys the

clearest intimation that those who do not come unto God by the Redeemer are not saved. Christ casts out none who come, but he leaves out all who don't. Those who are in the faith will be kept steadfast; but the apostle's words mean—and they express nothing if they do not mean—that those who remain out of the faith are left to fall. It is not the possession of a Bible or the sound of a sermon that will avail: it is the same old call, "Follow thou me;" and the same old answer, "Lord, what wilt thou have me to do?"

4. STEADFAST in the faith.—Faith is the secret in which a Christian's great strength lies; wanting it, he would be weak like another man. For evidence and illustration of the fact see that grand hymn on heroes, the 11th chapter of the Epistle to the Hebrews. Read the story of the Syrophenician woman who clung to the Saviour, and, in spite of every discouragement, refused to let him go: in the end she got all she asked, and a commendation for her constancy from the Lord's own lips, which stands at this day in the firmament of the Scriptures a pole-star to guide the course of perplexed voyagers on the troubled sea of time. Mark that poor diseased woman, as she creeps timidly through the crowd and touches the hem of Christ's garment; and that confirmed paralytic stretching out his withered hand, all its vigour restored, and all its muscles again obedient to his will. All these being in themselves feeble became "steadfast in the faith." By simply believing in the Son of God, they were linked to omnipotence. Now, no longer their own, they became instruments in God's hand—willing instruments on their part, but wielded by his power.

Mark, too, how unsteady were even great and loving disciples of the Lord at the moment when their faith failed. When Peter was sinking in the sea, and denying Christ in Jerusalem, he had for the time let go his hold. As soon as he was left to himself—to his natural courage and impetuosity, he stumbled and ignominiously fell. The disciples in a body, when their Lord required of them to forgive a repenting offender up to seventy times seven, felt the strain too great. Their footing was

not firm enough. They could not stand. But even then, although they had not strength, they at least knew the reason of their own weakness and the means of cure: they cry, accordingly, "Lord, increase our faith."

Faith, both in ancient and modern times, has uprooted many trees and removed many mountains. The history of the Church is a series of its prodigies. The triumphs which it has won in the fires of persecution have been more celebrated; but its triumphs in secret over unrecorded sorrows have been as great, and much more numerous. Many a widow, many an orphan, has stood alone unshaken, "steadfast in the faith," under tempests that tear strong men up by the roots. "He that believeth shall not make haste:" this Scripture quietly intimates, by implication, that in sudden emergencies those who depend on their own strength and wisdom are thrown into a great flutter, while those who habitually walk by faith, knowing that everything is in good hands, are able to possess their souls in patience. The Psalmist's ideal of a just man is,—“He shall not be afraid of evil tidings: his heart is fixed, trusting in the Lord.”

5. "WHOM RESIST, steadfast in the faith." Well may the apostle tell them of the enemy's strength, and encourage them to resist his onset, when he has given them an Almighty arm to lean upon. He tells them plainly in the eighth verse, "Your adversary the devil, as a roaring lion, walketh about seeking whom he may devour." We know where Peter learned both the danger and the deliverance. He speaks from experience here. He is teaching us the lesson which he learned from the Lord: "Simon, Simon, behold, Satan hath desired to have you, that he may sift you as wheat: but I have prayed for thee, that thy faith fail not: and when thou art converted, strengthen thy brethren" (Luke xxii. 31, 32). Poor Peter, when temptation assailed him, was like the chaff which the wind drives away. He had no more power to withstand than the chaff has, when it is borne on the bosom of the blast: and yet he stood. How? By getting his faith made strong through the special intercession of his Saviour. He who knows what is in man determines at a glance the weak point to which a support must be applied. A true diagnosis is the first and greatest part of the physician's art. When the ailment is exactly known, the cure is more easy. Peter was about to fall under pressure. The disciple's weakness was a failing faith: to this point, accordingly, the master's help was applied. His faith was made strong. At the same time, he was instructed to employ his restored strength in helping needy neighbours. True to that trust, Peter, in this epistle, warns the "scattered strangers" of that day, and this, that the enemy is powerful; and that, in order to resist him, we must be "steadfast in the faith." He boldly charges his brethren with the weakness which himself had felt, and tenderly directs them to the source in which himself had found supply.

Indeed, a comparison of the incident in Peter's history, with the corresponding clause in Peter's letter, constitutes one of those incidental and undesigned marks of internal pervading truthfulness, which all intelligent students of the Scriptures greatly appreciate and enjoy.

Believers are made strong at the root, because their branches are in the world, exposed to a strain like that of the tempest which assails the oak, or that of the tide which sweeps over the sea-weed. To make heaven sure at last, is not the only use of faith in the Saviour now; for the struggle of this life, faith is necessary and precious. Hope is the root of holiness; and holiness rests on hope. It is when the church or its members are linked by a life-band to their Omnipotent Head, that the "gates of hell" shall not be able to prevail against them. The conclusion of the whole matter is, "We are more than conquerors through him that loved us."

Observe the consolatory limit that is set upon the Adversary's power. Although the tempter wields the resources of this world as its god,—although this Spiritual Wickedness is incarnate in "the lust of the flesh, and the pride of life,"—he has not power to hurt any little one who has fled for refuge to the hope set before him. Peter personally felt the force of the adversary, when he miserably fell before it; and he is consequently predisposed to magnify the danger. Yet even he, under the ministration of the Spirit, affirms no more than that, "as a roaring lion, he walketh about seeking whom he may devour." No enemy of man, embodied or unembodied, has power to devour whom he will. The worst that all our foes can do is to seek whom they may devour.

Paul's paradox—"When I am weak, then am I strong,"—a many-sided truth, throws an interesting side-light upon our subject. Those who count their own strength sufficient, do not lean for all on Jesus. Caught by sudden currents, when they are out of the faith, they are carried away like withered leaves on a swollen torrent. But those who are conscious of weakness, fondly betake themselves to the Saviour's strength. Their felt emptiness becomes the immediate means of their safety. It is thirst that draws living water from the wells of salvation; it is weakness that grasps Almighty strength; it is emptiness that satisfies itself out of the fulness of the Godhead, as it is treasured up in Christ.

Some living creatures maintain their hold by foot or body on flat surfaces, by a method that seems like magic, and with tenacity that amazes the observer. A fly marching at ease with feet uppermost on a plastered ceiling, and a mollusc sticking to the smooth water-worn surface of a basaltic rock, while the long swell of the Atlantic at every pulse sends a huge white billow, roaring and hissing, and cracking and crunching over it, are objects of wonder to the on-looker. That apparently supernatural solidity is the most natural thing in the world. It is emptiness that imparts so much strength to these feeble creatures. A vacuum, in the one case, within a web foot, and in the other within the shell, is the secret of their power. By dint of that emptiness in itself, the creature quietly and easily clings to the wall or the rock, so making all the strength of the wall or the rock its own. By its emptiness it is held fast; the moment it becomes full it drops off.

Ah! it is the self-emptiness of a humble trustful soul, that makes the Redeemer's strength his own, and so keeps him safe in an evil world!

W. ARNOT.

WHAT IF CHRISTIANITY IS NOT TRUE?

BY THE EDITOR.

Is the Christian religion true or false? In other words, is there really such a person as Jesus Christ, who righteously claims our whole heart, and who will assuredly, now and for ever, redeem from evil and bring to God all who cordially believe in Him and love Him? This is the grand question of fact we have to deal with. Christianity is Christ. As a revelation to us, it is a revelation of our Father through His eternal Son, our Brother and Lord. As a revelation in us, it is a revelation of the Son in our souls, through the Spirit; or supreme love to God and man, in Jesus Christ.

But if there is no such person as Jesus Christ, "whom not having seen we love,"—if the faith of the Christian Church has been faith in a fancy; if our supposed personal knowledge of Jesus has been a delusion;—if the deep devoted love of eighteen centuries, which, from every portion of the Church catholic, has been poured forth like the precious ointment on Jesus Christ, the unseen yet ever-present Saviour, is a mere sentiment, without any real person to draw it forth, receive it, and return it; if all the life, strength, and joy which millions have derived, as they believed, from knowing Christ, has been the result of only a pious fraud practised on themselves,—then, but not till then, is Christianity false! For Christianity, we repeat, is not a mere system of morals or of doctrines, apart from a living Person; but is Jesus for us, Jesus to us, Jesus in us, Jesus ours, and with Him all things, now and for ever!

Christianity is false if there is no such person as Jesus; but to disprove the evidences of Christ's life and power, derived from history and from the experience of the universal Church, is by no means the easy task which some people appear to imagine. We will not presume to assert, that all who oppose what they call Christianity hate Christianity itself. They may be protesting only against a false representation of it; or against false arguments in support of what is true. Such persons may be actually nearer the kingdom of heaven than many who are too indifferent to doubt, and therefore really to believe. But without wishing to pass any judgment upon the motives or standing before God, who alone knows us, of those who, from whatever cause, seem resolved to destroy the only Christianity we know of, we may express our joy in knowing, that up till this moment their attempt has not succeeded! For, in whatever way we may account for it, the fact is undeniable, that Christianity not only survives, but that in no age

of the world's history was it so strongly rooted in the convictions and affections of men, nor did it ever give such promise of filling the whole earth. Millions of Christians are ready solemnly to declare before God that they believe in Jesus Christ; that they trust their own souls to his keeping for time and eternity, and desire nothing better or more earnestly than that those they most dearly love should do the same; and they are willing at any moment to dispense with all they possess on earth, and risk life itself rather than part with Him!

Let us suppose, however, for the sake of argument, that by some process hitherto undiscovered, Christianity, as the religion of supreme love to this living Person, Jesus Christ, shall at last be proved a fiction; that the millennium of infidelity has come,—that the religion taught by Christ and his apostles has become as dead to the world as that of Buddha or Confucius is now to the mind of Europe; that our Christian churches, like the heathen temples of Greece or Rome, remain but as monuments of a superstition long ago exploded by the light of science and philosophy,—that all these supernatural Christian facts and truths, which, like a mighty firmament of stars, now cluster around the name of Jesus, shall have departed as lights from the visible universe,—that Jesus Christ is proclaimed as one who was dead, but is not alive; until even the wailing cry has ceased of the last desponding and disconsolate believer on earth,—“They have taken away my Lord, and I know not where to find him;” and that Christian truth is as silent before the world as Christ himself was when he stood before Herod, and answered him nothing! Well, then, the work is done! The energetic teachers of the propaganda of unbelief have accomplished their long-cherished purpose, and the professors of an earnest and devoted faith in Christ have departed, leaving no memorial behind them except their “curious books,” or their hoary tombstones, which record the old faith in him as the resurrection and the life.

When such a crisis as this has at last arrived, the world will surely pause, and count the fruits of victory. Wise men will then doubtless consider with an earnest spirit what has been gained to humanity by this tremendous revolution, in all those opinions and ideas cherished during so many ages; and the well-wishers of mankind will examine the spoils which the conquerors have ready for enriching the poor and needy as the result

of this triumph over a religion that was clung to by the best and noblest men with a tenacity overcome only when earth was old, and time was well-nigh ending. But may we not now anticipate such a solemn review, by asking those who are wishful to destroy Christianity, what they intend to put in its place when it is gone? If they have anything to give us, let us know what it is. Let us know it, and see if it is better than the old religion; if it is better suited to meet the wants of man in every period and condition of his varied life; if it is likely to do better work on earth, and produce better fruit; if its truth rests on better evidence, and if, in short, it is such a gift from heaven that angels with songs of joy might announce this new peace on earth, and this new message of good-will to man. Such questions, though often asked, have not hitherto received any reply. If there be a something better in store for us than Christianity, the blissful secret has not yet been revealed. Infidelity, often so loud in attacking Christianity, is silent as a god of iron or brass when we ask at its shrine, What wouldst thou have me to be and do, and how live and rejoice as an immortal being? What, then, we again ask, would be lost and gained on both sides after the war, in the event of Christianity being destroyed? We Christians know full well what we would gain and lose! We would gain nothing, but lose everything;—we would lose all which we most love in the universe of God,—all which makes us rejoice in existence,—all which enables us to look at the past, present, and future with perfect peace! In simple and earnest truth we say it, that were it possible to disprove the existence of Jesus Christ as our life here and for ever, we would be, of all men, most miserable.

It is true that, in regard to many an object of affection, it may be said—

“Better to have loved and lost, than never to have loved at all!”

But not so in regard to our love of Jesus Christ! Better never to have seen that glory filling the heavens and earth, and making life a constant thanksgiving and praise, than, after having seen it, to be persuaded by any witchery that it was all a dream—a fiction of the imagination—a ghostly superstition—and that, if we are wise men, we will seek for it no more, but contentedly fall back upon our own being, and live on “without Christ in the world!” And are we in those circumstances to be told that we may still have comfort in “religion without the supernatural,” and rejoice in “the eternal and essential verities of morality!” Only think of it, Christians! The living man, the light and hope of the family, is murdered; but a disciple of pure science and calm philosophy enters it, and tells its agonized members that he has on con-

scientious principles been compelled to help in committing the murder, but that it is folly and ignorance to indulge in such grief, for science has analysed their friend, and preserved in a series of neat phials, which they may easily carry about them, all his constituent elements, his “essentials,” his carbon, his silica, this and that gas—everything whatever which made up all they were accustomed to touch and handle; therefore they may “comfort one another with those words!” And thus would the enemy of Christianity presume to comfort us with his “essentials,” when he has slain our living Lord! Comfort indeed!

“Comfort? comfort scorn’d by devils! this is truth the poet sings,

That a sorrow’s crown of sorrow, is remembering happier things!”

If Christianity then is false, we who believe it have gained nothing, but lost everything, and are “of all men most miserable!”

But what can the unbeliever himself expect to gain by its destruction? “I have nothing to do with consequences,” may be his reply, “but with truth only; let every lie be tested and exposed, whatever may be the real or imaginary gain or loss to myself or others.” Brave words! with which we have the deepest sympathy; for if they are the utterance of a truly sincere heart, they evidence belief, and not unbelief; they assume that there is an order and government in the universe, which is on the side of truth, and that we may therefore, at all hazards, discover what is true, and cling to it in the full assurance of faith, that ultimately the right and true are in harmony with all that is worth loving and worth living for. Amen! we say from our heart. At the same time, it is well to look at some of the consequences which the destruction of Christianity would involve even to him who destroys it. It is obvious, for example, that should it cease to exist to us as a reality, other realities would remain irrespective of our belief. Existence would remain, and it *may* be one as eternal as the life of God; sorrow and suffering would remain, in all their endless forms, to gnaw the heart, darken the world, and cast deep shadows over a life, which must end with that event death, and the passing away of ourselves and of all we have from the memories of mankind as if we had never been; and whither? Worst of all, *sin* must remain—dark, mysterious, and terrible sin! And “obstinate questionings” must remain to disturb and perplex the mind in moments of earnest and silent thought. Men will still ask, What if we are responsible to God for this whole inner and outer life of ours, with its beliefs, purposes, and actions? What if sin and its consequences continue beyond the grave, with no remedy there unless found here? What if there is no possible hap-

pininess but in fellowship of spirit and character with God; and what if this is morally impossible for us to attain without a Saviour and Sanctifier? What, in short, if all the evils which Christianity professes to deliver us from remain as facts in our history, just as diseases remain though the aid of the physician, who reveals their nature, and who offers to cure them, is rejected? or, as a vessel remains a wreck in the midst of the breakers after the life-boat which comes to save the crew is dismissed? or, as the lion remains after the telescope is flung aside which revealed his coming, and revealed also the only place of safety from his attack? For let us but remember what is so obviously true, that Christianity does not create the evils and dangers from which it offers to deliver us, and that these must remain as facts should it be proved a fiction. So far, then, the infidel has gained nothing by the overthrow of our religion. "Except truth!" does he exclaim? Yet we again repeat it, truth in its negative form, only as destroying supposed falsehoods, but not in its positive form as establishing something to rest upon.

Is there any other conceivable gain then which would accrue to the unbeliever by his supposed success? Does he wish, for example, to relieve oppressed souls of some great burden which crushes them? But what alleged truths or doctrine of Christianity, if blotted out to-morrow from the circle of belief, would ease a single soul, while it would unquestionably be an irreparable loss to millions? Would a God be more acceptable, and appear with greater moral beauty, who was different from the God and Father of our Lord Jesus Christ? Would he be more attractive to our hearts if he did not forgive our sins fully and freely, or if forgiveness was not offered through such divine self-sacrifice? Would it be a relief to our moral being to be freed from the privilege or duty of supremely loving Jesus Christ? Would it lighten our hearts to be freed from the burden of having communion with him in prayer? Would we have more security for light, life, strength, holiness, peace, or comfort, if there was no such Person revealed as the Spirit of God, who freely imparts his aid to all? Would it be glad tidings to hear that men were not to be born again, nor to repent, nor to deny themselves, nor to do God's will, but their own? What is there which a good man would gain by the destruction of the Christian religion?

We have one question more to suggest with reference to the duty of an unbeliever towards us as Christians, and it is this, Why should he disturb our faith, or as he might term it, our superstition? If he retorts by asking why we should disturb his unbelief, our answer is ready—because we wish with our whole soul to share with him the

blessings which God our common Father has for him as well as for us; because we truly lament the loss to our brother who refuses the eternal good which he may now enjoy with the whole family of God; because we love our God, and his God and Saviour, and desire our brother to know and to love them too; because it is so unjust, so selfish, so hateful, not to love and obey such a glorious person as Jesus Christ, who knows us, loves us, and has died to gain our hearts! These are some of the reasons, rudely and roughly stated, why we desire, with all our heart, that every man should believe in Jesus Christ. But if any man, for any reason which may be beyond our understanding or sympathy, desires to destroy this faith in all that is most precious to us, then we ask, not in Christ's name,—for it is unnecessary to appeal to him,—but in the name of common sense and common philanthropy, Why he should not only labour to do this, but to do it without apparently any apprehension of the untold misery which he must occasion if he succeed in his attempt? Do not tell us, with a boast, that "the truth must be spoken, come what may!" Be it so; but surely the *kind* of truth which must be spoken must ever regulate the manner in which it is spoken? Again, we bid you to picture to yourselves a person entering a family whose members were rejoicing in the thought of a father's return, and announcing the intelligence of that father's death, with a smile of pity or a sneer of contempt at their ignorant happiness! Imagine such an one professing to be actuated by a mere love of truth! Oh! if the terrible duty has been laid upon any one with a human heart, of announcing to others intelligence which, if true, must leave a blank to them in the world that can never be filled up, what tender sympathy, what genuine sorrow becomes him who breaks the heavy tidings! And such *ought* to be the feelings of every man who, from whatever cause, feels called upon to announce that the Christian religion is false. If he *must* make known that terrible fact to believers in Jesus; if he *must* tell them that the supposed source of all their life and joy has no existence, and that their faith in him is vain, then, we say, let this be done with the solemnity and the sorrow which a true brotherly sympathy would necessarily dictate. If the missionaries of Christianity are warranted in preaching their gospel with joy, the missionaries of an infidelity which professes only to destroy and not build up, should go forth on their dreadful vocation with the feeling of martyrs, and with no other notes of triumph than sounds of lamentation and woe! For if Christianity were false, we would be yet in our sins, all who have fallen asleep in Christ must have perished, and therefore we would be of all men most miserable!

THREE LIVES WORTH KNOWING ABOUT.

In the year 1770, two young men met at the Jesuit School at Landsberg as novices of that Order. They were of the same age, of the same stamp of character, both sprung from the poor, both eager students, they lived in the same house, and became fast friends.

Michael Feneberg was born in February 1751 at Oberdorf in Bavaria. The son of peasant parents, he had few advantages and few opportunities. To his parents' discomfort he declared he must be a student. They had strong objections. The "learned handicraft," as the country-folk phrased it, was uncertain; every other handicraft had a golden floor. It took up time, moreover, and it was so many years before it brought in any return. And then it cost florins upon florins; and at the bare thought of that scandalous waste, all to make a man speak Latin, the honest couple declared against the student. A fire, which left them nothing but their lives, conspired to crush the boy's hopes. But in some way it happened that he became a scholar; was somewhat stupid at his first school, an average pupil at the second, and then rose to be first of his class.

Michael Sailer was born in November 1751, also in Bavaria. His father was a shoemaker, and a devout man in his way. Of his mother nothing is known, but the touching picture in the preface to one of Sailer's books, written forty years after her death. The memory of the slightest detail of her life—the glance of an eye, the touch of a hand, any household work—quickened in him a religious sense, that "no distance of time, or press of sorrows, or even sin itself could weaken." It is the strong expression of a profound feeling that does equal honour to mother and son. The village schoolmaster taught him what he could, and the chaplain grounded him in Latin, until, what with his own application and his teacher's enthusiasm, it was plain he should go to college. His father viewed it hopefully, but always with this conclusion: "From all they tell me about that craft, it is too costly for us." Rieger, the carpenter, was of another opinion. "I am as poor as you," he would say, "and my son is a student in Munich. As for life, neighbour, God gives that, and good men give the rest." It was a sanguine view of the world, and an imperfect theology; but it so far impressed the shoemaker, that when Michael was ten years old, his father took him to Munich. Passing a gamekeeper's on the way, Rieger solemnly adjured his neighbour to buy a brace of snipe, and the other from some whim or impulse obeyed. Arrived at Munich, the snipe and the gracious words of the shoemaker opened the schoolmaster's heart; young Sailer was introduced to a wealthy family, became companion to their son, and obtained board and schooling for more than six years, and a friendship for life. He used to go back with peculiar pleasure to this epoch. When his school-fellow, long after, entertained him at dinner, "next to God and the two snipe," he said, "I owe my entire literary existence to you." For the snipe were never forgotten. He used to say meditatively among his friends, "It was by two

snipe that God made me what I am." His seal was two snipe with the legend, *Under God's guiding*. And when the art-loving King of Bavaria raised him a statue, he ordered two snipe to be carved on the pedestal. In due time the snipe also led him to Landsberg,—a clever, thoughtful, hard-reading student of nineteen; and at Landsberg the two peasants met.

Sailer wrote of Landsberg that it was a paradise. Notwithstanding, in 1773, it was suppressed, with every other Jesuit institution in the country. Probably the Government had no adequate notion of a paradise of Jesuits; probably the student saw in his teachers only kindly, intellectual, genial men, and cared and knew little of a world outside his books; perhaps there is some truth in what he said afterwards: "In the origin of their Order there was much that was divine; in its spread much that was human; in its suppression much that was neither human nor divine." But, being suppressed, even enthusiastic pupils submitted to the new order of things; and the two friends went to study canon law at Ingolstadt.

Ten years have passed, and we catch a glimpse of these friends again. Sailer is professor at the University of Dillengen, reading lectures on pastoral and popular theology, and discoursing on religion. Feneberg is also at Dillengen, professor at the gymnasium. For ten years more the gymnasium prospers; students crowd the University classrooms; Dillengen rises into note; men come to it from remote angles of the kingdom, and even foreigners matriculate; and the professors work with a harmony which has passed into a proverb. There is some power and attractiveness growing silently up within the queer little cloistered place; something that is not in the established routine; some independent interest. Rumours spread about the teaching. The dogmatic positions of the church, it is said, are thrown lightly aside. Christ and Divine love are spoken of more than the canons, and indeed without much regard to canons. Students return home quoting Lavater and Stilling, and deep in the writings of Fénelon and Tauler. They even profess to reverence and believe the Bible, against the free assertions of the philosophers. Dillengen becomes to the ex-Jesuits "a dangerous place;" they warn against it; "a young man may lose his faith there." Hints are thrown out that the professors belong to the *Illuminati*; they are called mystics, and Jansenists, and Protestants; the *Illuminati* themselves league against them; secret influences are brought to bear upon the government; Feneberg is removed from the gymnasium, and Sailer and his friends are crushed out of the University. Feneberg retired to the vicarage of Seeg; Sailer wandered to Munich. "What brings you here?" said his old friend Winkelhofer. "They have dismissed me." "Oh! Then come and rest with me. My room, my table, my bed, my goods, my heart,—all mine is thine."

In this matter the sagacity of the Jesuits did not play them false. They were right in tracing up to Dillengen "a dangerous tendency;" they were

right in fixing on the two friends as its real strength. Sailer and Feneberg were the most eminent men of the place. They were men of the purest and simplest lives, loving, loveable, and blameless. They had rare gifts of teaching; they loved it for its own sake. When Feneberg, in an early curacy, found leisure time hanging on his hands, he set up school in his house, and was, he says himself, "head-master and usher, *rector magnificus*, bedell house-father, and often housemaid;" he composed hymns, and sung them with his pupils; walked, and played gymnastics with them; studied them and studied with them. It was his pleasure, his holiday. One of those fifteen pupils has written how his master shrewdly cured him of ghost-fears, bringing him up to the spectre pretty much as you would a shying horse. And there lingers still another tradition of cure, quaint if not graceful, by which he reconciled two boys who would not speak, setting them down to their porridge with but one spoon between them. Sailer, also, was never so happy as in the professor's chair; and one of the best books he wrote was on education. He knew what was passing in young men's minds; the vague speculative thoughts that rise up, at which they are half proud, half startled; their struggles with the past and with tradition and with all beliefs, through which they often pass by fiery ordeal. By his gentle wisdom he disarmed them of the proud sensitiveness with which they cling to thoughts that oppose them to the rest of the world. By his sympathy he deprived them of that chivalrous despair that has sometimes forced a man on into positive scepticism, because every man's hand was against him. His frankness, mildness, purity won them rapidly over to his confidence; and men of the wildest natures, restless, lawless, defiant minds, were often noticed to yield to him after a single interview. And the two men were not only gifted with singular power over others, but were in the best position to use it. The High School was the feeder of the University; and the boys who were for years under Feneberg, went with minds ready, softened and plastic, to be moulded into men under Sailer. The one prepared the way for the other, and the tendency of both was the same.

Before Feneberg was long at Seeg he had won the hearts of his people; and, successful as he was in the High School, perhaps the pastorate was his proper sphere. One winter evening, however, as he was returning from preaching on the patience of the saints, his horse fell on the slippery forest path, and Feneberg's leg was broken. A clumsy country doctor tried to set it; two stout peasants were ordered to push the bone into its place. A surgeon came at last, and, after tedious waiting, amputation became necessary. "The Lord hath visited me!" was his simple exclamation when his leg was broken. When they told him of the surgical decision his prayer was as simple:—"Lord! Thou givest faith, but mine is very weak, even as this foot. Yea, it is Thou who plantest faith, and causest it to grow. Give me faith. Nature would willingly keep the limb; but not my will, Thine be done." The leg was taken off and buried; a wooden one supplied its place; and henceforth Feneberg signed his letters, "the one-legged vicar," or—for no other

word comes so near the strong idiom—*timber-toes*. There was a deep humour in the man, that came out, as it usually does with quiet natures, in his misfortune. "Dear heart," he would exclaim, "I used to be melancholy when I had two feet. I can say now, a broken leg is good medicine." And many a hymn of Claudius, and other favourite poets, made the sick-room cheery. "Happily," he wrote to Sailer, "the nag was a neighbour's; so the credit of my old nag is saved." Weber in Dillengen used to say, that having been nearly drowned he had got a new idea; and Feneberg chuckled over that meditative professor that the wooden leg gave him new ideas every day. He used to boast of its uses:—"There is the *economical*, for I only need one stocking and one shoe; there is the *social*, for I need go no more to court, for which nature never meant me; there is the *religious*," and so on, counting them up upon his fingers as he lay wearily upon the sofa. As he got better, and his trusty chaplain, Bayr, would take the crutches to show how easily one might walk with them after all,— "Ay, ay," he would laugh, "if you have two sound legs, and go on a pair of crutches besides, no doubt you will go bravely." Nor even when the leg was buried had it performed all its functions. It was dug up some years after, and placed on the study-table, and honoured with an inscription. "Has not the Apostle said," he once appealed to an angry married couple, "that 'a man will no more hate his own wife than his own flesh'?" Why, there is my leg, a dead bone, and yet I love it still, for it is part of my body. And you would hate each other! That leg will plead against you at the last day!" "Perhaps," he addressed the soldiers as they were marching to the wars, "you may have a leg shot off in battle. What matter? Don't you see by me that you can get on in the world with a wooden one?"

But the lesson he was learning most was this: "Oh that I could draw nearer to thee, Lord, and I would cheerfully give thee not one foot but two; yea, my hands and my head!" Up till this time he had been drawing himself nearer by self-denial, patience, diligence, devotional thoughts. His knowledge of the truth was more outward than inward, what it should be and not what it really was in himself; his relation to Christ was still legal, and he had but the dullest sense, and that only at times, of justification by faith; even the Bible, he complained, was to him a book sealed with seven seals. The complaint ceased before his illness left. Instead of dead letters, the words came to him like a living and searching spirit. But in proportion as he felt that, he felt as if he were drawn away from Christ. Sin became to him an awful terror and guilt; it started up among the purest thoughts of his life; it fronted him at every memory; it spoiled his virtues. And this feeling, startling to himself and growing in intensity, threw a darkness over his life. He was restless and peaceless, and day and night he poured out through his tears one cry, *Lord, save me, I perish!*

Meanwhile, Sailer was passing through much the same struggle, but with less of spiritual intensity. From his boyhood, his devotional habit and his intellect had been at war. At Landsberg, at Ingol-

stadt, at Dillengen, he had been a doubter. Under the strong, calm exterior, the wise and patient words, the brilliant and eager lecturer, there lay at times unspeakable anguish, that terrible anguish to a devout temper of intellectual scepticism. "You believe in Christ, because the apostles declare him," it whispered once; "but what if the apostles were deceived and deceiving?" He opened his mind to an Indian missionary. Father Pfab talked with him for hours about his travels, and the country, and the people. After some days, he asked, "Can you believe what I have said? Do you think it is true?" "I do not doubt it for a moment." "But I might have deceived you." "But a man who left his country for the sake of the gospel will not lie, and he will not deceive." "And you believe that of me, and not of the apostles?" It struck home, and Pfab urged it with great skill and power. Yet, what could it do beyond what it did, bring Sailer to his knees for a little, crying out, *My Lord! my God!* Intellectual doubt goes deeper down than the intellect; nor will intellectual clearness cast it out. Unless the heart be settled in Christ, the intellect may go on doubting for ever. Unless the spiritual atmosphere be clear, it matters little what is the character of the intellectual. It is that spiritual kingdom that gives laws to all the rest; they depend upon it, not it upon them. And as long as a man's spiritual relations are uncertain, he is liable to be tormented by the cruellest, and what perhaps his reason would call the foolishlest doubts. Sailer was pacified for a little. But fresh agony returned; fresh and ugly questions leapt up in his soul: they came to him in silence and the night; they haunted him in dreams;—behind that face from which so many took courage, and those clear, earnest words that throbbed in the hearts of his scholars, what darkness and misery!—a death's-head, how cunningly concealed! Nor is Sailer the first to wear the mask, nor does he carry it more bravely than another. Behind, what quiet, placid looks, what courteous and kindly ways, what thought and affection for others, what firm show of energy, what busy or vacant or smiling face,—the agony of the soul may be acted out as a mere every-day matter, the battle of life and death raging within, while the man is counselling a neighbour, or the woman spinning at her wheel.

Now, at this time, Sailer was more than commonly agitated by the tidings of a sudden movement in a distant parish; a movement of a profoundly spiritual character, that was getting talked about with great warmth and suspicion; but that he felt concerned himself, and his deepest and still unsatisfied want, and in which he was an unconscious agent.

Among the students at Dillengen, there had been one too noticeable to be forgotten. Martin Boos had been dropped into the world apparently by mistake. He was the fourteenth child of a small farmer—a "Christmas-child," yet born in so cold a night, that the water in the room froze. An orphan at four, his eldest sister's first thought was how to dispose of him with due regard to economy. Being a sturdy girl, she set him on her shoulders, and started for Augsburg; but, getting tired, she flung him into a corn-field by the way, where he soon cried himself asleep.

However, in the afternoon she returned, laid him at an uncle's door in the city, and went her way. The lonely child managed to grow up in some fashion in this surly uncle's house, saved himself by his scholarship from becoming a shoemaker, and went to Dillengen, where a brilliant, handsome student, he carried off the first honours. Sailer's teaching had more influence than he knew. And when his uncle had celebrated his first mass by giving a three days' shooting-party, he thankfully subsided into a quiet parish priest, cultivating, in thorough Romish fashion, holy affections, and yearning after that calm, mystic relation to Christ that had been pointed out in the lectures. "I lay," he says, "for years together upon the cold ground, though my bed stood near me. I scourged myself till the blood came, and clothed my body with a hair-shirt; I hungered, and gave my bread to the poor; I spent every leisure moment in the precincts of the church; I confessed and communicated every week." He "gave himself an immense deal of trouble to lead a holy life," and was unanimously elected a saint; but the saint was miserable, and cried out, *O wretched man that I am! who shall deliver me?* Going to see a pious old woman on her deathbed, he said wistfully, "Ah! you may well die in peace!" "Why?" "You have lived such a godly life." "What a miserable comforter!" she said, and smiled; "if Christ had not died for me, I should have perished for ever, with all my good works and piety. Trusting in Him, I die at peace." And from this time the light fell in upon his soul; the dying woman had answered his miserable cry. He stayed some months with Feneberg, at Seeg, as voluntary chaplain; with Sailer, was one of those who accompanied the good man on the first Sunday he went out with his wooden leg; then received a curacy at Wiggensbach, near Kempten, and began preaching Christ. "Flames of fire darted from his lips, and the hearts of the people burned like straw." He declared their sins, and when they cried, "What shall we do?" he gave them no answer; "repent?" no answer; "confess?" no answer; "good works?" no answer; until the question was driven deep into their souls, and then they knew how vain was any answer but one—*Christ*.

Moreover he had a terse, original way of putting things, and a power of homely, some may think too homely illustration. One or two examples may be given at hazard. "They are dearer to God that seek something from him than they that seek to bring something to him." "He that says he is pious is certainly not." "The most read their Bibles like cows that stand in the thick grass, and trample the finest flowers and herbs." "People think it a weakness to forgive an insult. Then God would be the weakest in heaven and on earth, for no one in heaven or on earth forgives so much as he." "Death strips us of this world's glory; a boot-jack draws off your boots. Another wears my boots when I am dead, and another wears my glory. It is of little value." "The most learned declare they know nothing, and the most pious that they have nothing; therefore the profoundest learning is in knowing nothing, and the profoundest sanctity in having nothing." "A gentleman passed through to-day, and the people said, 'He

wore the cross of St. Theresa; he must be some great man.' A cross was once a disgrace. Now, the larger the cross, the greater the man."

A preacher of this stamp would make himself be heard anywhere; and it is little wonder that great excitement gathered about the little country chapel in Bavaria. Many found the Saviour when he preached; persons came long journeys to hear so strange and blessed a doctrine; and the chapel was thronged with men and women who had gone about anxious, heavy laden, and hopeless for years. Feneberg heard of it, longed for more than he had yet found, and wrote that he was like Zacchæus, waiting in the tree till Christ should pass by. "Then wait quietly in the tree," Boos wrote back; "Christ will soon enter thy house and thy heart." This was in the autumn of 1796, when Feneberg was bitterly crying for light. In December, Sailer came to him on a visit, much disturbed by the news from Kempten. "Let us send for Boos, and hear it from himself," he said. Boos came, and brought with him some of the awakened, to speak to their own experience.

According to one of Feneberg's poems, his vicarage was

"Lean and ugly, all decaying,
And a haunt of loneliness;"

but it received the guests genially, and a more singular Christmas party has seldom met. There was the vicar himself, with his two curates, Bayr and Siller; Sailer, Boos, and the converts—five Romish ecclesiastics, met to hear about an evangelical revival, begun by the evangelical preaching of one of their number. A peasant girl from Boos' parish whispered him, almost as soon as she saw his old professor, "That man has much that is child-like, and a good heart, but he is still a Scribe and a Pharisee, and must be born again of the Spirit." Boos was startled, and assured her she must be mistaken. But before the evening was over, she said openly before them all, "Sir, you have the baptism of John, but not the baptism of the Spirit and of fire; you have drunk out of the river of grace, but not yet plunged into the sea. You are like Cornelius, and have done and suffered much for the truth, but you have not yet received Christ." There was an awkward pause; no one knew well what to say. But finding Sailer silent, Boos himself urged the truth with great earnestness. Sailer, still silent and much disconcerted, withdrew. He had left the next morning before the house was astir, but one of the peasants said he had met him, and had repeated out of John, *He came unto His own, and His own received Him not; but as many as received Him, to them gave He power to become the sons of God*; and that he had replied, "Good, good;" but his face was troubled, and he rode away. They blamed themselves, fearing they had offended him, and the woman wept; but presently she lifted up her eyes, and said joyfully, "Be comforted: grace has met him on his way. God works wonders with him. The Lord will appear to his heart." She had scarcely spoken, when a messenger came to the door with some lines written by their friend on horseback. "Dearest brethren," they ran, "God has given me an unspeakably quiet mind. I do not doubt that He has

come to me in soft whispers; yea, is already in me. I believe that John baptizes with water, but Christ with the Spirit. Pray, brethren, that we may not fall into temptation. The rest we will give over to God. Farewell." "Blessed be God!" exclaimed the vicar, who had never ceased to pray, *Lord, if thou wilt come to us, come first of all to him*. Before the Christmas party broke up, Feneberg was also filled with joy, and Bayr and Siller received Christ.

Boos returned to Wiggensbach. This awakening spread more widely than ever; and on new year's day 1797, a hot persecution broke out on every side. The "Jesus preachers," as they were called, were hunted from their cures; the converts were mocked, stoned, imprisoned, thrust out of their homes. Boos himself was obliged to flee, and found refuge with Feneberg, but a decree of the Inquisition was issued against them, the vicarage was ransacked in their absence, all their papers were taken, and they themselves brought up in custody.

One of Feneberg's answers throws some light on his position. "Do you know why you have been cited here?" "Yes. Jesus Christ, our Lord and Saviour, has fulfilled to me, a poor sinner, and more than a hundred others, His precious word that He spoke at the Last Supper: *He that loveth me shall be loved of My Father, and I will love him, and will manifest Myself to him*." Union with Christ had been always his dream, but till now he had never known the way. Union with Christ from this time became the distinguishing feature of his preaching and spiritual history. *Christ for us*, and *Christ in us*, were the leading points of Boos' doctrine, and of the movement that began with him. With Feneberg the *Christ for us* sinks somewhat out of sight; his stress and happiness are laid upon the presence of Christ in the heart; this communion, often mystically and dimly expressed, and perhaps at the best somewhat mystically seen, expresses the rest of his quiet life, and explains his contentedness with his Church. Released from his persecutions, and placed at Vöhringen, he continued his faithful ministrations, edified his friends, prayed daily for divine light and knowledge, and died peacefully at sixty-one. The continued suspicion and malice that followed him did not seem to touch his calmness of communion; blindness threatened him, and passed away; his friends were true. It was a gentle, simple life; a fresh, pure, innocent nature. *Nathanael* he was called; he was frank and righteous, unable to utter a compliment or hide the truth; a man of great confidence and childlikeness before God. "If I could not call Thee, *Thou*," he was once heard to pray, "O Father, we could never get on." "It is a fine thing," wrote Sailer, "if you can say a man lived and never lifted up a stone against his neighbour, but it is finer far if you can say also, he took the stones out of the path, that would have caught his neighbour's feet. So did Feneberg, and this his doing was his life."

Boos was driven from place to place. Through the best part of his life he may be recognised in swift and anxious and perilous flight. At last, at Gallneukirchen, in Austria, he seemed to be settled; the scenes of Wiggensbach were repeated on a larger scale; and this time he was accused

at Vienna. "Dear children," said the Emperor, to the peasants who crowded round him on his way through the parish, "your pastor is no teacher of error." It was the impulsive testimony of a man who had a finer spirit than his counsellors, but it did not avail; and Boos had to leave the Austrian shelter, and commence his wandering anew. In 1817, the Prussian Government appointed him Professor in the gymnasium at Düsseldorf; but it was not his gift to teach, and they exchanged it for the living of Sayn on the Rhine. He lived for some years unmolested in this retired and lonely spot, visited by many friends, writing noble letters, guiding and inspiring the movement in his own country, and seeing more clearly the breadth and grandeur and all-important necessity of the truths for which he suffered. He lamented the unfruitfulness of his ministry. "There is scarcely a spot on these hills where I have not flung myself down and wept, and prayed that the Lord would give me again the grace to open my mouth with joy, and to preach his Word to the awakening of the heart." This also was given him, and in 1825 he died.

Sailer lived the longest, and alone reached to any honour. The persecution fell lightest upon him. From 1802 till 1821 he was professor at Landshut and Munich. Besides his old subject, he lectured on morals and homiletics; on liturgies, catechizing, and education; he had a class for the study of the Bible, and was university preacher. It was the most brilliant period of his life. Students came from every part of Germany, and his fame was carried back by them to their own lands; he was called to one university after another, and at last to be archbishop of Cologne. But he refused every offer that would lead him out of his native country, while it was just there that hostile influences were used against him in the most opposite ways. He could be identified with no party, and was hated by each. Napoleon prevented his promotion at one time by assuring the king he was a mere hanger-on to the Roman Court, the Pope refused it at another, because he suspected his attachment to the Church. At last he was appointed Bishop in *partibus*, and died in 1832, as Bishop of Regensburg.

His character was of the same class as Feneberg's, but it exchanged much of his childlike spirit for shrewdness. He was one of the mildest and most tolerant of men, mild to excess. It is told that having preached one morning near Salzburg, the parish clergyman rose up, and said he would preach himself in the afternoon, as Sailer had made the doors of heaven too wide. "You are excellent at bandages," said one of his friends, "but a bad operator." "Very possible," he replied; "in my life I have seen more wounds healed by a good bandage than by the knife." He was humble, patient, easy of access, sweet tempered under every trial, and a tried friend. His religious views wanted the fervour of Feneberg's, and the depth of Boos'. He never thoroughly understood the first of the two propositions, Christ *for us*, but took it up in some purely mystical sense. His unrest returned after the Christmas of '96. Often twelve times in the day he withdrew to give himself up to God, crying, "Lord, I will not let thee

go, until Thou bless me." Doubts hitherto unknown swept over him and crushed his spirit. He found an answer on which he relied to the end, yet it would not have satisfied his friends. He was to look into his heart, and see if the thought of God pleased him more than any other. It was a poor, uncertain tenure of peace; it was the Catholic doctrine still. A feeling that he must do something, give something, bring something, be something, ran through his theology, and weakened it. And as he grew older he seemed to turn more to the Church, abjured "all pseudo-mysticism," submitted himself "with filial piety" to Rome, and apologized for any inadvertent error, anything inconsistent with Romish teaching. Yet his testimony to Boos remains on the other side. "Boos is a spiritual, Catholic Christian. I would rather die than condemn a man possessed of so many extraordinary spiritual gifts, and who has led so many thousands to repentance and faith, for the sake of a few expressions, which, after all, are susceptible of an orthodox meaning. I am now in my sixtieth year, and I would tremble to appear before the judgment-seat of God if I did not loudly confess before my death that this great work of the pious Boos is of God."

There are points of great importance at which the limits of such a paper forbid even a glance. The narrative of the conversions is profoundly interesting, rich in every variety of spiritual incident. The persecutions—on so large a scale that twenty-four priests were at one time involved in them, and a minister of state led the assault—are not without a sad and tragic interest. The awakening presents features of striking resemblance, even in remarkable psychological facts, to the recent revivals in Great Britain and America. As for the entire movement, it may be asked, what became of it? Was there any permanent influence? Beyond the time it would seem scarcely any. Hundreds of the clergy must have come under Sailer's influence, but he founded no school of religious thought; and the explanation will probably be found in this, that his religious views wanted distinctness, that the power he wielded was one of personal character. He met, indeed, a wild young lad at dinner at a friend's house; in an hour's conversation the youth became quiet and thoughtful, soon after he studied for the Church, and died recently as Archbishop of Breslau. In Melchior Diepenbrok, Sailer's influence seems to have exhausted itself—a kind of genial, tolerant prelate, like the well-known J. K. L., but without even Sailer's pietism. At Feneberg's table also there sat a young priest who bore a name honoured now in Protestant Germany and in far mission fields, the only one of the party that left the Romish communion, the venerable Gossner. These two bring down the links into our own generation, and there seems no further link to carry on the chain. Yet, if the story of many hearts in Bavaria were known, it might be found that there is still a spiritual seed there, that the light still shines in dark places, and men and women are walking by faith in the blessed words, *Believe in the Lord Jesus Christ, and thou shalt be saved.*

W. FLEMING STEVENSON.

CAUSES AND REMEDIES OF COLLIERY CALAMITIES.

General View of Colliery Works at the Surface.

Section of a (bratticed) divided Shaft:—*a*, the brattice running down; *a*, *b*, the half for pumping apparatus; *b*, *a*, half for traffic of the pit; *c*, iron cage in two compartments, holding pitmen,—the improved mode of descending; *d*, wood-work, above which is walling.

THE frequency and the fatal character of colliery calamities have attracted to them a deep and painful interest, which is now renewed and intensified by the recent lamentable catastrophe at the Hartley mine in Northumberland. This catastrophe was in no respect more terrible than others which have preceded it in the same district, excepting, perhaps, in the protracted agony of the victims, and the hopes once entertained, but suddenly destroyed, of recovering them to life and to their families. But if not more terrible than others, it was peculiar in its cause, and happened, as it were by an unexpected closing of the door of the mine, as the shaft of a pit may be designated. This mine was entered by a single shaft, of twelve feet diameter. In order to adapt this one opening to the purpose of ventilation, as well as other purposes, the single shaft was made to answer for two shafts, by the erection, for its whole length, of a wooden partition, technically called a "brattice." The effect would be equal to that of dividing a huge chimney by a wooden board running entirely through it. One division would serve as a "downcast," or channel for the air to descend by, and the other for the returning air, after ventilation had been accomplished, to ascend by, and carry off the accompanying impurities of the pit. How pit ventilation is managed in detail, we shall presently attempt to explain.

In the Hartley shaft thus divided, movable carriages, termed "cages," were made to slide up and down upon

four vertical rails, in the manner of an upright railway. These cages contained the men, and tools, and coals, and were worked in the downcast division, while pumping gear operated in the other division, called the "upcast." The pit being very wet, large pumping apparatus was required, and the pumps in use were capable of lifting one hundred and eighty tons of water at each stroke.

The steam-engine affording power to the pumps was close to the pits, and, as in all similar erections of steam-engines for pumping, a huge iron beam projected over the upcast half of the shaft. To this were attached the rods or "spears" which moved the pumps. Every visitor to the north knows the appearance of these gigantic beams, which first plunge down, and then press up the pumping apparatus of the coal-pits. These arms seem to move regularly by a painful effort, and to be groaning under their ceaseless labour night and day. They weigh many tons; but, strange to say, have never broken before. The Hartley beam was the first to fail of the many which have exhausted thousands of gallons of water in this great colliery district.

Top of a shaft:—a, workmen unhooking the coal-baskets; b, the clapper for signals from below; c, iron tub with pitmen descending; d, unloading coals for screening.

The effect of the fracture of the beam was of course to allow the broken portion to fall into and stop up that division of the shaft (the upcast) over which it had hitherto been suspended, and towards which it had continually descended, whenever it worked the pumps. The breakage is not to be accounted for by any apparent defect in the iron of the beam, and some other cause for the accident must be sought. As yet, nothing but conjecture can be offered. Probably one of the pump-rods broke, and caused a stoppage in the action of the pumps, whereby a sudden tension strained the chief rods, which snapped. By this, or some means, the equilibrium of the huge beam was destroyed. The weight of the "spears" and the column of water lifted was about forty tons; and if this were suddenly disconnected from the beam, of course the previous equilibrium, contrived to bear their weight, would be destroyed at once, and the mass of unbalanced metal might have

snapped at the axis. This, indeed, appears to be the solution which the most experienced engineers give of the problem.

It is not perhaps easy for an uninstructed reader to understand how such a fall would block up all access to the miners below, but this will be more intelligible when it is explained that such a fall brought total ruin into the shaft, slackening all the pumping-gear, the brattice, the woodwork, and, to use a common word, jamming the whole together into a densely confused mass. The men who were in the movable cage at the time, either descending or ascending in the other or downcast division, were instantly killed. But it does not follow that the others would have lost their lives, had there only been a second shaft, or another exit from the pit. In this one-shaft system lay the principal cause of the death of the majority. The one door to the mine being barred, there was no further hope unless it could be broken in. And this one entrance was probably not in the most perfect state.

The observations made in some journals at the time render it apparent that this one-shaft system is an exception, and that the Hartley owners are chargeable with guilty negligence. But the truth is, the one-shaft system is prevalent over the entire district in minor collieries,—and the Hartley owners stand only in the common category with others around them. Mines are commenced with single shafts, and other shafts are added when the extent of excavation requires them. Very unwise observations are made respecting remedies when accidents like that under notice occur. Nothing appears easier than to say, "render it legally necessary to have two shafts;" yet few things would be more difficult to enforce. It is extremely doubtful whether any law ought to interfere with modes of mining, and if two shafts were obligatory from the first, many mining enterprises might be shunned or abandoned. Then the expense of a shaft in some circumstances is very considerable. I have descended one single shaft (Monkwearmouth pit) near Sunderland, which was said to have cost £80,000. Of course this is an extreme case.* But when the subject was much discussed some years ago (for it is an old subject of dispute), colliery managers declared the expense rendered two shafts in all cases impracticable. On the other side, it was sought to be shown that a shaft might generally be sunk to a moderate depth for about £10,000. Admit that it could, and then would the Legislature be justified in enforcing such an outlay in every case? If it would, let the law be passed, but such a project probably would be resisted and opposed to the uttermost.

* It appeared in the evidence given at the inquest on the Hartley accident, that the shaft at that pit cost £3600 in sinking. But this shaft was only 600 feet deep, whereas many others are from 1000 to 1500 feet deep. In the Hartley mine, two shafts like the one (though less) could have been sunk for about £4500. But had the *walling*, or brick-lining, been properly continued to the bottom, they would have cost more. The shaft in use was particularly *cost*, as 600 gallons of water had to be pumped up every minute. It is important to notice that the "staple" or mode of communication between the lowest seam and the surface could have been made for £300.

The real and apparently inexcusable fault is the leaving of the underground workings without ample communication with each other. In this very Hartley pit there are three coal-seams, and between the lower and middle one (a distance of 160 feet) there was a communication by means of an elongated narrow passage, up which the men retreated from the lower to the middle seam, where they were at work at the time of the accident. This was suitable enough for the incipient stages of mining; but there does not appear to have been any communication for the 160 feet lying between the middle and the upper seam. Had such a channel existed, it has been affirmed that all the men might have emerged to the surface in a quarter of an hour. On all such topics, however, we require the fullest and fairest information before we attach blame to parties who may be able to exculpate themselves. One thing is manifest in this Hartley catastrophe, namely, that the shaft was so completely shivered and battered, that an immense mass of shale and sand came down from the sides, and to pierce through this speedily was impracticable.

Blame must not be hastily thrown on the Government inspector of the district. His powers are not unlimited, his time is fully occupied, and he may not have inspected this particular pit, seeing that it was not "fiery," or gaseous, and was comparatively a contracted work.

That 205 poor fellows were hurried into eternity by this catastrophe, is acknowledged on all hands to be inexpressibly shocking. Never before has a colliery accident awakened such wide and deep public sympathy. A kind and gentle voice from the throne has spoken words of noble sympathy. The Royal Widow has expressed her compassion for the widows of pitmen. Money is not wanting, and doubtless a goodly sum will in the end be raised from all classes of the community, to succour, as far as money can, the widows and the fatherless. It is a desolate district that Hartley; we remember it well, for there we passed a night after the fatigues of visiting some neighbouring mines. The sea is close by, and one may imagine how solemnly and sorrowfully it now seems to moan for those whose eyes lately beheld it, but shall never more look upon its spreading waters. We hear of shipwrecks, and talk familiarly of the dangers of the sea, but the recent catastrophe has now attracted attention to the dangers of the mine. There are mine-wrecks as well as shipwrecks, nor do the horrors of the latter often exceed those of the former. It might seem strange that while shipwrecks have been the themes of song and sermon, the subject of public inquiry and public report, the deaths and disasters of mines have, until of late years, been so unfrequently noticed, and hidden in a darkness as thick as the mine itself. But this will hardly be strange, when we remember the remoteness of the localities, their isolation from the great centres of congregating humanity, and the fact that until about twenty-two years ago, when the Assistant-Commissioner of the Children's Employment Commission, personally visited and explored the principal British mining districts, not a public inquirer had ever set foot underground. That Commission, or rather

the Reports of the visiting Commissioners, brought a whole underground world to light, and from that time the public eye has been occasionally directed towards the regions of coal and darkness.

Having devoted much time and thought to the subject of accidents in coal-mines, we think a popular explanation of the causes and results of such disasters, derived from our own personal investigations and observations, may be acceptable to the readers of *Good Words*, and enable them to form some well-grounded opinion upon the fatalities which annually destroy about one thousand of our miners. A thousand healthy workmen swept off every year, upon an average, and never below nine hundred, is a calamity only requiring to be known in order to secure the attention of the people to the possibility of considerably diminishing the number. Speaking from a knowledge now extending over some years, of what our coal-miners are, and what the mines are in which they work, while at the same time we have no personal interest in, or expectations from, any mining undertaking, we may be at least regarded as impartial witnesses, and as free from any undue bias towards employers or employed. We have conversed repeatedly and for days together with both parties. We have visited both in their homes and their cottages, and we have endeavoured to form independent opinions on what we have heard and seen.

It may be desirable upon another occasion to describe the exterior of a coal-pit and of the people who work in it; but, for the present purpose, we shall at once introduce our readers to the interior of the mine, and come directly to the dangerous part of pit-life.

To enable those who have never visited a coal-pit, or even inspected a model of one, to form a conception of its form and plan of excavation, we may adopt some plain and merely approximate explanations. A large Newcastle coal-pit, if wrought upon modern principles, is, in fact, an extended piece of *panel-work*, the whole area being divided into quadrangular portions, each of which is termed a panel, and contains an area of from eight to twelve acres. A solid wall of coal, of from forty to fifty yards thick, defines and separates each such division, and through this wall are driven roads and air-courses by which the coal in the panel may be brought forth. Four such panels, being connected together by roads made through the separating walls, would make a complete coal-mine upon the Newcastle system of working. Each panel would be itself crossed and intersected with road-ways and air-passages, and ultimately become an epitome of the whole mine. By thus subdividing the mass of strata into squares, a tolerably regular set of solid pillars and open passages alternate together, and all the passages communicate with one another, and with the great main-ways of the mine which lead directly to and from the shaft. Some idea of the whole may be formed from the plan of a small portion given below, as an illustration of the modes of ventilation. The shaft is, as it were, the eye of the mine, and where there are two shafts, the two eyes of an animated body are represented. They let in all the sunlight which the mine can receive, and they radiate forth all its humanity and meaning.

four vertical rails, in the manner of an upright railway. These cages contained the men, and tools, and coals, and were worked in the downcast division, while pumping gear operated in the other division, called the "upcast." The pit being very wet, large pumping apparatus was required, and the pumps in use were capable of lifting one hundred and eighty tons of water at each stroke.

The steam-engine affording power to the pumps was close to the pits, and, as in all similar erections of steam-engines for pumping, a huge iron beam projected over the upcast half of the shaft. To this were attached the rods or "spears" which moved the pumps. Every visitor to the north knows the appearance of these gigantic beams, which first plunge down, and then press up the pumping apparatus of the coal-pits. These arms seem to move regularly by a painful effort, and to be groaning under their ceaseless labour night and day. They weigh many tons; but, strange to say, have never broken before. The Hartley beam was the first to fail of the many which have exhausted thousands of gallons of water in this great colliery district.

Top of a shaft:—a, workmen unhooking the coal-baskets; b, the clapper for signals from below; c, iron tub with pitmen descending; d, unloading coals for screening.

The effect of the fracture of the beam was of course to allow the broken portion to fall into and stop up that division of the shaft (the upcast) over which it had hitherto been suspended, and towards which it had continually descended, whenever it worked the pumps. The breakage is not to be accounted for by any apparent defect in the iron of the beam, and some other cause for the accident must be sought. As yet, nothing but conjecture can be offered. Probably one of the pump-rods broke, and caused a stoppage in the action of the pumps, whereby a sudden tension strained the chief rods, which snapped. By this, or some means, the equilibrium of the huge beam was destroyed. The weight of the "spears" and the column of water lifted was about forty tons; and if this were suddenly disconnected from the beam, of course the previous equilibrium, contrived to bear their weight, would be destroyed at once, and the mass of unbalanced metal might have

snapped at the axis. This, indeed, appears to be the solution which the most experienced engineers give of the problem.

It is not perhaps easy for an uninstructed reader to understand how such a fall would block up all access to the miners below, but this will be more intelligible when it is explained that such a fall brought total ruin into the shaft, slackening all the pumping-gear, the brattice, the woodwork, and, to use a common word, jamming the whole together into a densely confused mass. The men who were in the movable cage at the time, either descending or ascending in the other or downcast division, were instantly killed. But it does not follow that the others would have lost their lives, had there only been a second shaft, or another exit from the pit. In this one-shaft system lay the principal cause of the death of the majority. The one door to the mine being barred, there was no further hope unless it could be broken in. And this one entrance was probably not in the most perfect state.

The observations made in some journals at the time render it apparent that this one-shaft system is an exception, and that the Hartley owners are chargeable with guilty negligence. But the truth is, the one-shaft system is prevalent over the entire district in minor collieries,—and the Hartley owners stand only in the common category with others around them. Mines are commenced with single shafts, and other shafts are added when the extent of excavation requires them. Very unwise observations are made respecting remedies when accidents like that under notice occur. Nothing appears easier than to say, "render it legally necessary to have two shafts;" yet few things would be more difficult to enforce. It is extremely doubtful whether any law ought to interfere with modes of mining, and if two shafts were obligatory from the first, many mining enterprises might be shunned or abandoned. Then the expense of a shaft in some circumstances is very considerable. I have descended one single shaft (Monkwearmouth pit) near Sunderland, which was said to have cost £80,000. Of course this is an extreme case.* But when the subject was much discussed some years ago (for it is an old subject of dispute), colliery managers declared the expense rendered two shafts in all cases impracticable. On the other side, it was sought to be shown that a shaft might generally be sunk to a moderate depth for about £10,000. Admit that it could, and then would the Legislature be justified in enforcing such an outlay in every case? If it would, let the law be passed, but such a project probably would be resisted and opposed to the uttermost.

* It appeared in the evidence given at the inquest on the Hartley accident, that the shaft at that pit cost £3600 in sinking. But this shaft was only 600 feet deep, whereas many others are from 1000 to 1500 feet deep. In the Hartley mine, two shafts like the one (though less) could have been sunk for about £4500. But had the walling, or brick-lining, been properly continued to the bottom, they would have cost more. The shaft in use was particularly wet, as 600 gallons of water had to be pumped up every minute. It is important to notice that the "staple" or mode of communication between the lowest seam and the surface could have been made for £300.

The real and apparently inexcusable fault is the leaving of the underground workings without ample communication with each other. In this very Hartley pit there are three coal-seams, and between the lower and middle one (a distance of 160 feet) there was a communication by means of an elongated narrow passage, up which the men retreated from the lower to the middle seam, where they were at work at the time of the accident. This was suitable enough for the incipient stages of mining; but there does not appear to have been any communication for the 180 feet lying between the middle and the upper seam. Had such a channel existed, it has been affirmed that all the men might have emerged to the surface in a quarter of an hour. On all such topics, however, we require the fullest and fairest information before we attach blame to parties who may be able to exculpate themselves. One thing is manifest in this Hartley catastrophe, namely, that the shaft was so completely shivered and battered, that an immense mass of shale and sand came down from the sides, and to pierce through this speedily was impracticable.

Blame must not be hastily thrown on the Government inspector of the district. His powers are not unlimited, his time is fully occupied, and he may not have inspected this particular pit, seeing that it was not "fiery," or gaseous, and was comparatively a contracted work.

That 205 poor fellows were hurried into eternity by this catastrophe, is acknowledged on all hands to be inexpressibly shocking. Never before has a colliery accident awakened such wide and deep public sympathy. A kind and gentle voice from the throne has spoken words of noble sympathy. The Royal Widow has expressed her compassion for the widows of pitmen. Money is not wanting, and doubtless a goodly sum will in the end be raised from all classes of the community, to succour, as far as money can, the widows and the fatherless. It is a desolate district that Hartley; we remember it well, for there we passed a night after the fatigues of visiting some neighbouring mines. The sea is close by, and one may imagine how solemnly and sorrowfully it now seems to moan for those whose eyes lately beheld it, but shall never more look upon its spreading waters. We hear of shipwrecks, and talk familiarly of the dangers of the sea, but the recent catastrophe has now attracted attention to the dangers of the mine. There are mine-wrecks as well as shipwrecks, nor do the horrors of the latter often exceed those of the former. It might seem strange that while shipwrecks have been the themes of song and sermon, the subject of public inquiry and public report, the deaths and disasters of mines have, until of late years, been so unfrequently noticed, and hidden in a darkness as thick as the mine itself. But this will hardly be strange, when we remember the remoteness of the localities, their isolation from the great centres of congregating humanity, and the fact that until about twenty-two years ago, when the Assistant-Commissioner of the Children's Employment Commission, personally visited and explored the principal British mining districts, not a public inquirer had ever set foot underground. That Commission, or rather

the Reports of the visiting Commissioners, brought a whole underground world to light, and from that time the public eye has been occasionally directed towards the regions of coal and darkness.

Having devoted much time and thought to the subject of accidents in coal-mines, we think a popular explanation of the causes and results of such disasters, derived from our own personal investigations and observations, may be acceptable to the readers of *Good Words*, and enable them to form some well-grounded opinion upon the fatalities which annually destroy about one thousand of our miners. A thousand healthy workmen swept off every year, upon an average, and never below nine hundred, is a calamity only requiring to be known in order to secure the attention of the people to the possibility of considerably diminishing the number. Speaking from a knowledge now extending over some years, of what our coal-miners are, and what the mines are in which they work, while at the same time we have no personal interest in, or expectations from, any mining undertaking, we may be at least regarded as impartial witnesses, and as free from any undue bias towards employers or employed. We have conversed repeatedly and for days together with both parties. We have visited both in their homes and their cottages, and we have endeavoured to form independent opinions on what we have heard and seen.

It may be desirable upon another occasion to describe the exterior of a coal-pit and of the people who work in it; but, for the present purpose, we shall at once introduce our readers to the interior of the mine, and come directly to the dangerous part of pit-life.

To enable those who have never visited a coal-pit, or even inspected a model of one, to form a conception of its form and plan of excavation, we may adopt some plain and merely approximate explanations. A large Newcastle coal-pit, if wrought upon modern principles, is, in fact, an extended piece of *panel-work*, the whole area being divided into quadrangular portions, each of which is termed a panel, and contains an area of from eight to twelve acres. A solid wall of coal, of from forty to fifty yards thick, defines and separates each such division, and through this wall are driven roads and air-courses by which the coal in the panel may be brought forth. Four such panels, being connected together by roads made through the separating walls, would make a complete coal-mine upon the Newcastle system of working. Each panel would be itself crossed and intersected with road-ways and air-passages, and ultimately become an epitome of the whole mine. By thus subdividing the mass of strata into squares, a tolerably regular set of solid pillars and open passages alternate together, and all the passages communicate with one another, and with the great main-ways of the mine which lead directly to and from the shaft. Some idea of the whole may be formed from the plan of a small portion given below, as an illustration of the modes of ventilation. The shaft is, as it were, the eye of the mine, and where there are two shafts, the two eyes of an animated body are represented. They let in all the sunlight which the mine can receive, and they radiate forth all its humanity and meaning.

If we may take a homely and approximate verbal illustration of such a mine, let us conceive St. Paul's and the Monument of London to represent the two shafts, and ourselves and the streets we traverse the workmen and the interior of the pit. St. Paul's Churchyard and the Monument-yard shall be the busy spaces at the bottom of the shafts; Cheapside shall be the main-way of the pit, and the numerous streets branching off right and left from it—as Bread Street, Queen Street, etc.—may be the side passages. The streets crossing these again give us an idea of the narrow continuous excavations of the smaller dimensions; and if we could make these in both cases regular, we should in both have a system of panel-work. The blocks of houses in the city would be as pillars in the pit, and could we but suddenly let down a thick covering over the roofs, and exclude light and air, we should have the counterpart of a northern coal-pit, even as we have it very nearly upon a foggy November or December day. More than twice or thrice recently we have thought our comparison not inapt as we tramped along Cheapside and by St. Paul's: city and coal-pit were equally dark, equally miry, and equally perilous; for the dangers of the road, arising from omnibuses and careering cabs, are hardly much less in a city mist than the dangers from falls and fire-damp in a coal-pit.

The distance from St. Paul's to the Monument, however, conveys no adequate notion of the extent of a large coal-mine. We ourselves have paced along some four miles underground in direct lines, and some five miles in winding and intersecting passages. Yet, as we have been informed, we had but entered into the far interior, had but trod the suburbs of the vast howling wilderness of pit-waste, had but passed through the great main passages, and a few side passages, leaving miles upon miles of close and damp darkness untrodden. Tracing our progress afterwards upon a colliery map, we have come to understand how little we had explored; and there is one old pit, not many miles from Newcastle, in which, if all the passages had to be passed through by a human being, he would be required to travel more than fifty miles. There is, indeed, a saying current in the North, that the pits at Killingworth have more than a hundred miles of excavation; this, however, we doubt, not from actual knowledge, but from the very magnitude of the space. Remembering how difficult it is to cut through even one mile of solid and dense coal strata, we can hardly credit that any one mine has more than one hundred miles of gallery excavation! In the process of working out the strata for fifty or sixty years, of course vast hollows would be made, and a mile a year would certainly not be an excessive estimate for a very busy mine.

It must be remembered that the whole of these excavations have been, and are being made by human hands. No coal-cutting machinery has yet been brought into operation below the surface, at least to any extent; and we might well be astonished if we could reckon the entire aggregate of coal-mining excavation in the north of England. That it exceeds by much *one thousand miles* we have no doubt. Twenty or thirty of the older and larger

collieries could make up this amount of mileage, and if we should add together all the excavations in the vicinity of the Tyne, the Wear, and the Tees, we should probably be quite safe in assuming the subterranean streets and ways as extending in all over *fifteen hundred miles*; that is, by piecing together every hollow way from first to last, and from Tyne to Tees. Think, then, of these fifteen hundred miles as the handiwork of thousands of human beings who have wrought in darkness, not because they loved the darkness rather than the light, and not because their deeds were evil, but simply because there alone, far from sunbeam and flowers and glittering streams, could they earn their honest wages, and hardly win the bread that should support home and family.

In the counties of Durham, Northumberland, and Cumberland alone there are some thirty or forty thousand of our fellow-creatures dependent upon the wages derived from this kind of work, including all that is associated with it at the surface and around the pit. Each principal colliery is itself a little town or village, around which, as a centre, are gathered all the operators and mechanisms needful for getting and sending the valuable mineral fuel to market. To depict the lives, manners, modes of thought and behaviour of these people at home and in the mine, may be our chosen task on some future occasion. At present we confine our remarks to their subterranean perils.

In every such large excavation as we have described, there is this important difference between what is above ground and what is below ground—the latter demands the air which the former naturally has. When we have shut two or three hundred men and boys seven hundred or a thousand feet underground, and sometimes fourteen or fifteen hundred feet, we have sent them away from the prime necessity of life—pure atmospheric air. The farther they penetrate into the interior of the pit, the farther they recede from their natural support, and unless we can send that after them and to them, all attempts to get coal are hopeless. They must have air, or die. There is a *natural ventilation* produced by the mere communication of two shafts; the air will descend one and ascend the other, or partly descend and ascend both, unless a vacuum is created in one of the two. Yet in all natural ventilation the air will take the shortest course from shaft to shaft, and therefore only ventilate a passage or two of the mine, and even those inefficiently. But the men are distributed over most of the passages, and as the pit enlarges, they proceed to greater and greater distances from the shafts and the main-way or Cheapside of the underground city. No air, of purity or amount, will reach them there, unless compelled to go to them. Then when we come to estimate the quantity of air required by each man, and collectively by the whole number of men in the pit, we have a new element, viz., the explosive gases which exude from the coal in what are termed "*fiery mines*"—that is, those which are particularly subject to explosions. This redoubles the necessity for efficient ventilation. The naturally deleterious state of a limited space in which human beings breathe for some eight or ten hours together is bad enough, but this deleteriousness, increased by the exuda-

tion of gas, renders the place perfectly intolerable. The interior recess of an imperfectly ventilated pit is, as we can testify from painful recollections, one of the most pestiferous places conceivable. No tongue will ever tell what terrible sufferings have been endured in such places in years that are past, before good ventilation was understood and practised. An old pitman here and there can remember something of the oppression of head and heart which accompanied his working hours in darkness; but the old have died off, and the tales of "bad air" have died out with them. Many a "black hole" has held human beings besides that at Calcutta, and many a miner has gone out of the mine and out of the world, with asthma or pulmonary complaints, long before the natural term of his life. It was of no use to complain; upon the old plans good air was not to be had, though good workmen were, and dozens of new men filled up the places of those who did not live out half their days. One aged pitman described to us a state of things some forty years before, that would scarcely be credited if now detailed. The effect, however, of these evils, though now abolished, is visible in the deteriorated physical condition of the present and rising generation of pitmen.

Obviously some mechanical means of increasing the natural ventilation between two open shafts must be devised. In small pits an open iron grate is filled with coal, kindled, and fixed at the bottom of one of the shafts, which is thereby heated, and rarefaction being produced, the colder air below rushes up the heated vacancy. This method will produce a circulation of a thousand feet of air per minute. In all larger pits a furnace of large size takes the place of the small grate, and fulfils all the most important requisites of a ventilating motive power by its rarefying efficiency, its uniform action, and the easy control of which it admits. A broad, glowing, fiery mass of coals is kept ever burning at the bottom of one shaft, which then takes the place of a vast chimney or flue to the furnace, and technically forms the "upcast shaft." The other, or "downcast shaft," then stands as the inlet of all pure air to the mine, while the upcast is the outlet of all that has become impure. Thus the circulation of air in the pit originates in its expansion by heat, and is partly maintained by it, but the air must not be overheated, otherwise it becomes a drag instead of an impelling power, and ceases to perform its full duty.

Still the great difficulty remained of compelling the air to visit every quarter of the mine. Naturally the heat of the furnace would only quicken its attempts to escape by the shortest transit between the two shafts. If the temperature in the upcast shaft be raised to fifty or eighty degrees, by so much is the speed of the air-current accelerated, but not its ventilating and distributive efficacy.

How is this to be secured? How is the air-current to be forced to visit every man in the mine, as if the overseer were going his rounds of inspection? This problem has been practically solved by what may now appear a simple mechanical arrangement, but which for several years remained unknown and unapplied. The arrangement is this:—Air is as ductile as water, and for ventilating pur-

poses can be rendered equally subservient to man's guidance. By erecting milldams and stoppings we can divert a stream from its direct course, and we can in like manner divert air. By placing barriers of brick, stone, or wood in every desirable position in the pit, we can stop the air-current in all such positions, and divert it into others; can compel it to advance first up a portion of the main passage, and then to turn to the right hand or to the left at pleasure. It may turn off at every corner, and go whithersoever man desires; and in this way a single air-current can be taken round the whole pit, be then brought to the upcast shaft, and made to ascend it. The power of the furnace is its secret master, dragging it onward evermore, and making itself the end of the whole aerial journey.

Even with this arrangement and attracting or impelling force, there remained a great practical difficulty. A single air-current soon became too heavy, languid, and overloaded with impurities. It was as sensible to fatigue and laxity of motion towards the end of its work as a human being. The last visited, therefore, were far less refreshed than the first set of the colliers. Those nearest the downcast shaft had the best air, and the remoter men gradually the worst. The remotest of all had a very indifferent and impure supply. The eminent colliery engineer who devised the remedy for this evil, explained it personally to me underground. Nothing could be more beautifully simple when discovered, and nothing more advantageous for respiration to the poor immured miners. The plan is to *split the air*, to divide a single, largely voluminous column of air into two or three smaller currents, and to make each split do the work of the entire column under previous arrangements. The original column can be divided as easily as water, merely by erecting a longitudinal division of wood-work or wall-work in the centre of a passage. The air impinging upon the edge of this wall splits itself into two currents. Place a carving-fork on your table, and conceive of the single column as first represented by the handle and its continuation. Then conceive of the split current, as represented by the two prongs of the fork, and you have an idea of the principle. But the nearest representation upon the surface of the earth, is that of an irrigated meadow, where the stream is seen to flow into every little channel cut out for it, and speedily to fill up the whole. Just so is the coal-pit aired in every part, and the air-currents may be split into as many subdivisions as are necessary. Commonly three or four splits will answer all demands, and by this method the whole pit may be benefited with almost simultaneous ventilation, and allowance being made for unequal depths, irregular lengths of air-courses and other inequalities, we can approximate to a simple relation between the quantity of coal consumed in the furnace, and the quantity of air passing through the mine and up the shaft. It is, however, found in the larger mines, that the effective results are small in proportion to the motive power employed; and the furnace power measured by the consumption of coal, by the heat imparted to the upcast shaft, or by the pressure of the air current upon the stoppings and wooden doors, is equal to the production of aerial currents three or four times as swift as those now generally

obtained. About 100,000 cubic feet of air are now passed every minute through the largest northern mines, such as Hetton. From this maximum downwards, the amounts of air poured down vary in accordance with the demand of each mine. The annexed illustration may serve to show how the currents of air circulate in a portion of a coal-mine, in accordance with the arrangements just explained. The dark portions of this ground-plan of the pit,

represent the solid pillars left for support, and the long passages *a, b, c, d*, show the waggon-ways and galleries in the long direction, while the short transverse passages are the means of communication between the long galleries. All these longitudinal and transverse passages are presumed to have free inter-communication, the only obstacles being the partial stoppages set up for directing or diverting the current of ventilating air.

In the illustration, dotted lines represent such stoppages, and these are here employed arbitrarily in order to explain the different devices. In the first long passage, *a*, no stopping is shown in the length, and therefore the air, signified by arrows, rushes straight onward to the end. In the second long passage, *b*, a dotted line runs along to *e*, where there is a full stopping, and where, therefore, the arrows turn round the dotted line, and show the air-current (which had been split by the partition or dotted line into two currents) returning to *b*. In the passage *c*, the same kind of longitudinal division, or dotted line, is carried as far as *f*, and there the split current of air turns round towards *c*. But at *f* there is a door, which, when shut, drives the air round the dotted line, and when open permits the air to rush onward to *g*. Such doors are frequent in pits, and answer the purpose of allowing the transit of coal or waggons and men, and of driving back the in-rushing air immediately afterwards, and making it go back towards *c*. In the fourth passage, *d*, a longitudinal division is erected for the whole length, and therefore causes the divided current to start from *d*, and when it arrives at *h* to turn round and come back to *d*. As there are no stoppages in the transverse passages on its left, a portion of air runs up those passages, and would go on but for the stoppages (dotted lines) at their ends.

It will now be manifest how a large pit (which is but a multiplication of such portions as that here annexed) may be thoroughly ventilated in every

part by the device of stoppages and doors, and other longitudinal and transverse obstacles. In the ventilation of an extensive mine, the regulation of the air-currents and their splits is a complicated business, but the principle is the same in every case; wherever there is no line drawn, the air-current will rush on; wherever there is a stopping it will take the speediest course away from such stopping.

The division of a single shaft by a longitudinal "brattice" has a similar object. It does not split the air-current, but it makes one air-passage perform the part of two.

A larger amount of air than the average is necessary for fiery pits. A "fiery pit," in mining language, is one peculiarly liable to explosions of the fiery gases. Of the inflammable gases which infest mines, the most prevalent and the most dangerous is light carburetted hydrogen. Look at the thousands of gas-lights illuminating any civic street at night, and remember that every one of those glimmering, artificially conducted stars, is an illustration of the fearful fires that slumber in coal-seams. Those gas-lights are chemically heavy carburetted hydrogen gas; the fire-damp of coal mines is of a kindred nature, but light instead of heavy.* A fiery coal-

* Carburetted hydrogen is in modern chemical language a *hydro-carbon*, a term used to denote those bodies which consist of carbon and hydrogen only. When ordinary coals are distilled at very high temperatures, as in the production of gas, a certain order of hydro-carbons is produced; when distilled at a low heat, they yield other and fluid hydro-carbons.

pit therefore is a kind of natural gasometer, and as the exposure of a naked light causes an explosion underground, so we have its analogue on the surface in the explosions which have frequently occurred by introducing a lighted candle into cellars and rooms where street gas has escaped. Some years ago, the windows were blown out, and the walls shattered, in the lower part of a house in Albany Street, Regent's Park. This was merely a house explosion instead of a coal-pit explosion, from a like cause, the chemical difference of the gases being of no popular moment.

The precise condition in which fire-damp exists in the coal itself has never been scientifically determined. It is, however, known to exist therein in a high state of tension. Some seams, and those commonly the best for household consumption, contain it in large quantities. The old Wallsend pit, now closed, was a terribly fiery one. A good coking and brightly burning coal is such, partly in consequence of its fiery character. Hence it happens that the fiery seams are the most wrought, and that particular pits have a succession of explosions in them. In the history of these calamities it will be found that they do not originate promiscuously in mining districts, but almost always in mines already distinguished by previous disaster. This fact, not generally known, has an important bearing upon the possible cures of these calamities.

The quantity of fire-damp exuding from fiery seams is unequal and inconstant. It may be small with a high barometer, and with careful management; it will probably be large with a low barometer and carelessness in working. When the atmosphere presses heavily upon the coal-seam, it will serve the more securely to imprison the gas; when the atmosphere presses less heavily, the gas has more chance of escape. The most serious cases are those in which the imprisoned gas dislodges a loosened block of coal or stone from its place, and then rushes suddenly and overflowing into the pit, fouling all the passages, and loading the air-currents with its volume. It has been known in this way to spread over a large space in five minutes, and in ten or fifteen minutes to derange the ventilation for a considerable distance. In any such condition the introduction of a flame for one second produces an explosion co-extensive with the gaseous derangement. All human beings who are within this area will be subjected to burning and death at the first or perhaps the second blast. A few charred lumps, very like a mass of charcoal, will be all that remains of them. Some few may escape singed or scorched in one or more limbs. We have talked with men thus marked or maimed, and shuddered to hear their accounts of their narrow escapes from the raging flame.

The gaseous coal must and will be wrought. Thousands have wrought it at the expense of their lives, and thousands of charred corpses have been committed to graves in the northern churchyards, or even yet sleep unrecovered from the recesses of the exploded pits. To diminish, and if possible

prevent, these numerous and dreadful deaths, Sir Humphry Davy invented his miners' safety-lamp, commonly called the Davy-lamp. Its precise principle belongs to the refinements of science, but its operation may be easily understood. It consists of an oil-lamp, enclosed in a cylinder of very fine wire-gauze, of which the apertures should be 480 in number to a square inch of surface. In such case the flame of the oil-lamp will not pass through the wire-gauze, though the light will, and thus a moderate illumination and ordinary safety are combined in a portable lamp. It was never declared to be *absolutely safe* under all contingencies—though vulgarly supposed to be so—but it was presented to the miners as a help, a partial remedy for a dreadful danger. The cases where it will prove insufficient are manifest. A fall from the roof may break the gauze, or an extraordinary outburst of fire-damp may fill the interior of the lamp with a fierce flame which will speedily melt the wires; but for ordinary circumstances, and with fair usage, it is now generally accepted as a sufficient friend in need. It has been greatly improved by subsequent additions and modifications, and the latest lamps are admirable instruments, reasonably safe, and invaluable companions in the depths of coaly darkness. It should be universally known that although the original Davy-lamp is not infallible, yet it is safe in *ordinary mining*, and that if a nearer approach to absolute infallibility is required, it may be obtained in one or more of the improved mining-lamps employed abroad and at home, particularly in the lamps of Mueseler, Glover, Mackworth, and some others.

Taking all the causes of accidents into consideration, we entertain a firm conviction that it would be possible to reduce the annual average of deaths by colliery accidents to nearly one-half their present amount. In one district an extensive colliery development has taken place without any additional increase of deaths. That explosions will occasionally happen is but too probable, owing to the enormous and irrepressible eruptions of fire-damp which sometimes burst forth from roof and floor of coal strata; but that explosions may be rather exceptional, than evils of regular recurrence in one or other fiery mine, most practical men are ready to admit. Competent, unbiassed, and systematic inspection, having authority to enforce the adoption of well-founded rules and precautions, would save hundreds of lives every year, and even the sparing of one hundred lives annually would warrant all the precautionary measures we should demand.

Let public opinion be brought to bear upon this melancholy but most momentous topic. To take a fair estimate in round numbers, think of from at least thirty to forty thousand lives having been lost in Britain during the present century, in peaceful labour, in imparting warmth at home, and sustaining commerce abroad; and then we may be disposed seriously to reflect how far we are, as a great, humane, and Christian nation, guiltless of the past, how far responsible for the future.

J. R. LEITCHILL.

A CAST IN THE WAGGON.

A CAST IN THE WAGGON.

BY SARAH TYTLER, AUTHOR OF "PAPERS FOR THOUGHTFUL GIRLS."

CHAPTER I.—DULCIE'S START IN THE WAGGON,
AND HER COMPANY.

OLD and young were clamouring hoarsely and shrilly by daybreak one September morning round a little girl, one of a cloth-worker's numerous family. She had been rather a tender lass, and change of air was thought good for her full growth. Though she was still small, she was close on her one-and-twenty years, and her friends held it was high time for her to see the world. It was seeing the world to go with a late mayor's daughter, an orphan and an heiress, who had been visiting the cloth-worker's family, and would have Dulcie to live with her for a while in her neighbouring town as a friend and companion.

Mind these worthy warm-hearted relatives of Dulcie's had no idea of her returning to her parent's nest in a hurry, though the two towns Fairfax and Redwater were within a day's journey by waggon of each other. Dulcie would see the world, and stay in her new abode in the next country town, or lose her character for dignity and spirit; and girls were fain to be thought discreet and decided a hundred years ago or so. She might as lief marry as not, when she was away on her travels. Girls married then with far less trouble than they accomplished such a journey. They ran down to Richmond and married on a Saturday, to save a talk and a show; they walked out of the opera where Handel might be performing, and observant gentlemen took the cue, followed on their heels, and had the knot tied by a priest waiting in the house opposite the first chair stand. Indeed, they contracted the alliances so unceremoniously, that they went to Queen Caroline's, or the princesses' drawing-room, without either themselves or the world appearing quite sure whether they were maids or wives. Dear! dear! what did come of these foolish impulsive matches? Did they fulfil the time out of mind adage, "Happy's the wooing that's not long a doing?" or was it that other old proverb, "Marry in haste, and repent at leisure?"—which was the truth?

It is a pity that you should see Dulcie, for the first time, in tears. Dulcie, who only cried on great occasions, in great sorrow or great joy—not above half-a-dozen times in her life. Dulcie, whom the small-pox could not spoil, with her pretty forehead, cat's eyes, and fine chin. Does that description give you an idea of Dulcie?—Dulcie Cowper, not yet madam, but any day she liked Mistress Dulcie? It seems expressive. An undersized, slight-made girl, with a little face so clearly,

so very clearly cut, but round in all its lines as yet; an intelligent face, an enthusiastic face, a face that could be very shrewd and practical, and, at the same time, a face that could be lavishly generous. The chief merit of her figure lay in this particular, that she "bridled" well. Yes, it is true, we have almost forgotten the old accomplishment of "bridling" the head up and the chin in, especially where the pliant knees bent in the low curtsey. Dulcie "bridled" as she prattled to perfection. She had light brown hair, of the tint of a squirrel's fur, and the smoothness of a mouse's coat, though it was twisted and twirled into a kind of soft willowy curls when she was in high dress. Ah! no wonder that Kit Cowper, the cloth-worker, groaned to see that bright face pass from his nine-pin alley; but it was the way of the world, or rather the will of Providence to the cloth-worker, that the child should fulfil her destiny—so Dulcie was launched on the sea of life, as far as Redwater, to push her fortune.

No wonder Dulcie was liked by Clarissa Gage. Clarissa was two years younger than Dulcie, but she was half-a-dozen years older in knowledge of the world, and therefore fell in love with Dulcie for the sake of variety. Clarissa had the bones of a noble woman under her pedantry and affectation; she was a peg above Dulcie in station, and a vast deal before her in the world's estimation. She was indeed "a fortune;" and you err egregiously if you suppose a fortune was not properly valued a hundred years ago. Men went mad for fair faces and glib tongues, but solidly and sensibly married fortunes, according to all the old news-prints. But Clarissa was also a beauty, far more of a regular beauty than Dulcie, with one of those inconceivably dazzling complexions that blushed on like a June rose to old age, and a stately height and presence for her years; and then she had dark brown curls of the deep brown of mountain waters, with the ripple of the same, which hung down in a wreath of tendrils on the bend of the neck behind. With all her gifts Mistress Clary had the crowning bounty which does not always accompany so many inferior endowments: she had sense under her airs, and she was good enough to like Dulcie instinctively, and to think how nice it would be to have Dulcie with her and Mrs. Cambridge in their formal brick house, with the stone coping and balcony, at Redwater. Besides, credit to her womanhood, Clarissa did reflect what a fine thing it would be for Dulcie Cowper getting up in years, really getting up in years, however young in spirit, to have the variety

and the additional chance of establishing herself in life. Certainly, Redwater was a town of more consideration than Fairfax, and had its occasional assemblies and performances of strolling players; and Clarissa, in right of her father's family, visited the vicar and the squire, and could carry Dulcie along with her, since the child's manners were quite genteel, and her clothes perfectly presentable.

It was a harmonious arrangement, to which not only Clarissa, but Mrs. Cambridge was agreed. Mrs. Cambridge was one of those worthy, useful persons, whom nobody in those strangely plain but decidedly aristocratic days—not even Clarissa and Dulcie, though they sat with her, ate with her, hugged her when they wanted to coax her, ever thought or spoke of otherwise than “Cambridge, a good sort of woman in her own way.” The only temporary drawback to the contentment of the party was the shower of tears which fell at Dulcie's forcible separation from her relatives. It was forcible in the end; all the blessings had been given in the house—don't sneer, they did her no harm—no harm, but a vast deal of good; and only the kisses and tears were finished off in the street.

After all this introduction, it is painful to describe how the company travelled. It was in a stage waggon! But they could not help it. We never stated that they were out and out quality, and it was not all the quality who could travel in four coaches and six, with twelve horsemen riding attendance, and an unpaid escort of butchers, bakers, and apothecaries, whipping and spurring part of the way for the custom. What could the poor Commons do? There were not stage coaches in every quarter of the great roads; and really if they pocketed their gentility, the huge brown waggons were of the two extinct conveyances, the roomier, airier, safer both from overturns and highwaymen. The seats were soft, the space was ample, and the three unprotected females were considered in a manner incognito, which was about as modest a style as they could travel in. Of course they were not in their flowered silks, their lustrings, their mantuas. We are assured every respectable woman travelled then in a habit and hat, and no more thought of hoops than of hair powder. The only peculiarity was that beneath their hats they wore mob-caps, tied soberly under the chin, and red or blue handkerchiefs knotted over the hat, which gave them the air of Welsh market-women, or marvellously clean and tidy gipsies. Clarissa was spelling out the words in *Pharamond*—a French classic; Dulcie was looking disconsolately straight before her through their sole outlet, the bow at the end of the waggon, which completed as pretty and fresh a circle of common and corn-field, with crimson patches of

wood and the blue sky above, as one might wish to see. Occasionally the crack of a sportsman's gun was heard to the right or left, followed by a pheasant or a string of partridges darting across the opening of the canvas car; but as yet no claimant had solicited the privilege and honour of sharing the waggon and the view with our fair travellers.

CHAPTER II.—TWO LADS SEEK A CAST IN THE WAGGON.

“HULLO, Joe! we want a lift,” cries a brisk voice, and the couple of great steeds—they might have been Flanders mares, or Clydesdale horses, so powerful were they over the shoulders, so mighty in the flanks—almost swerved out of their direct line and their decorum. Two fellows suddenly started up from a couch, where they had lain at length on a hay-stack, slid down the height, crashed over an intervening bit of waste land, and arrested the waggoner in his smock-frock and clouted shoes.

“Get in, Will, and take possession. Ha! hum! here are ladies: where will we stow our feet? I declare that Will is on their skirts already, with more green slime than is carried on the breast of a pond. I believe he thinks them baggage—lay figures, as they've turned aside their heads. Gentle-folks, for a wager! duchesses in disguise! I must make up to them, anyhow. Ladies, at your service; I humbly beg your pardon for having so much as thought of incommoding you, but indeed I was not aware of your presence. Come, Will, tumble out again instantly, and do not let us be so rude as to plague the ladies.”

Poor Will! very stiff and tired, stared about him, disturbed and discomfited, and prepared to perform the behest of his more energetic companion.

Dulcie did a little of her “bridling,” but said never a word; Clarissa lifted her large, rather languishing eyes, let them fall again on her mittens, and remained dumb. They speak before they were spoken to! Not they; they knew better. At the same time, when Will stumbled as he alighted on his weary feet, they were guilty of an inclination to titter, though the accident was excusable, and the point of the joke small.

“You are very polite, sirs,” protested Cambridge, making round eyes, and reddening and blowing at being constituted the mouthpiece of the party on any interest save that of victuals. “I vow it is very pretty behaviour; but as it is a public carriage, I don't think we are at liberty to deprive Joe of his money, and you, sirs, of your seats. What say you, Mistress Clary?”

“I decline to give an opinion,” answered Clarissa with great dignity; in which she broke down a

little by adding hastily, in half audible accents, "Be quiet, Dulcie!" for Dulcie's risible faculties had been excited in a lively degree. She had been crying so lately that there was a hysterical turn in her mirth, and having once given way to it she could not restrain herself, but was making all sorts of ridiculous faces and spasms in her throat without effect. You see, these were two ordinary, happy young girls; and the stiff starch of their manners and pretensions only brought out in a stronger light, and with a broader contrast, their youthful frolicsomeness.

"I think, sirs, you may come in—that is, if you keep your distance," Mrs. Cambridge decided, with solemn reservation; and with a multitude of apologies and thanks the two young men, more considerate and courteous in their forward and backward fashion than many a fine gentleman of the time, clambered up, and coiled themselves into corners, leaving a respectful void between them and the original occupants of the waggon.

Tranquillity settled down on the travellers—a tranquillity only broken by the drowsy rumble of the waggon-wheels, and the perennial whistle of the stooping, grizzled waggoner. Dulcie was just thinking that they might have been Turks, they were so silent, when Mrs. Cambridge stirred the still atmosphere by the inquiry,—

"Pray, sirs, have you happened to fall in with any stubble chickens in your walk;—I think you said you had been walking whereabouts?" affording Clarissa an opportunity of complaining afterwards, in the retirement of the little inn's private room, that these young fellows would judge them a set of gluttons or farmers' daughters abroad for a holiday, aping gentlewomen, instead of being duchesses in disguise.

Although the girls never lifted their eyes, yet, by a magic only known to such philosophers, they had taken as complete an inventory of the young men, beginning at their wardrobes, as if they had looked at them coolly from head to foot for a whole half-hour. They were aware that the fellows were in plain suits, though one of them was not without the air of being fine on occasions. Their coats were cloth, not brocade or velvet; their ruffles were cambric, not lace; their shoe-buckles were only silver; their hats were trimmed with braid, and neither with gold nor silver edging. They were not my lords; they were not in regimentals; they did not rap out oaths; they had not the university air; they showed no parson's bands; they were not plain country bumpkins,—what were they?

After all, it was scarcely worth inquiry whether the new-comers belonged to law or physic; for the young women in their pride and petulance felt bound not to consider the investigation worth the

trouble. The lad who was the leader, and who was unquestionably of gentle enough nurture, was a plain little fellow, sallow and homely-featured, although a good-natured person might suppose from his smiling sagacity that in animated conversation it would be quite possible to forget his face in his countenance. The other was ruddy, with a face as sharply cut as a girl's, and delicate features not fitting his long limbs—clearly he was no better than a nincompoop. Yes, the girls were perfectly justifiable in whispering as the waggon stopped to bait at the "Nine Miles House," and they got out to bait also,—

"What a pair!"

"Such a fright, the little fellow, Clary!"

"Such a goose, the tall fellow, Dulcie!"

It is a sad truth that foolish young women will judge by the exterior, leap at conclusions, and be guilty of rude and cruel remarks.

"Nor make a scruple to expose

Your bandy leg and crooked nose."

What would come of it if the silly, sensitive hearts were in earnest, or if they did not reserve to themselves the indefeasible right of changing their opinions?

At the "Nine Miles House" the wayfarers rested, either in the sanded parlour, or the common kitchen of the ale-house. Mrs. Clarissa and her party had the sanded parlour for themselves; the young men, with their cramped legs, stumbled into the fitch-hung kitchen, the more entertaining room of the two, and had plates of beans and bacon, and a toast, and a tankard; for the day was in September, and the wind was already bracing both to body and appetite. Mrs. Clarissa carried her private stores, and Cambridge laid out her slices of roasts and broils, plates of buns and comfits, and cruets with white wines; but when did a heroine remain in a sanded parlour in an inn, when she could stroll over the country and lose her way, and get run at by wild cattle, and stared at by naughty gentlemen? Clary was not so mean-spirited, though she was physically lazier than Dulcie; she was mentally wild to scamper across the stubble fields (where Cambridge expected chickens to roam in flocks), and to wander, book in hand, by yon brook with the bewitching pollards.

Dulcie could not accompany her. Dulcie being a practical woman, a needle in innocent sharpness, had peeped about the waggon to inspect their luggage, and had found to her horror that one of her boxes had burst its fastenings—that very box with her respected mother's watered tabby, and her one lace head on the place of honour on the top. So she and Cambridge had an earnest consultation on the accident, which resulted in their proceeding to tuck up their skirts, empty the receptacle with the greatest care and tenderness, and repack it

with such skill that a rope would replace its rent hinges. Dulcie was not for walking.

Clarissa was thus forced to saunter alone, and after she had got to the brook and the pollards, she sat down, and leant her arms on the bars of an old farm gate. Soon tiring of looking about her, staring at the minnows and the late orange colts-foot and white wild ranunculus, and the straw-coloured willow leaves dropping into the water, she took out of her pocket that little brown French classic *Pharamond*, and started again to accompany the French story-teller, advancing on the very tallest of stilts that story-teller ever mounted. It was a wonder truly that Clary on her mossy bank, and by her rustic stile, had not preferred the voices of the winds and the waters, the last boom of the beetle, the last screech of the martin, the last loud laugh of the field-workers borne over a hedge or two on the breeze, to the click and patter of these absurd Frenchmen's tongues.

At last Clarissa bethought her of the hour, sprang up, carefully put away her volume—volumes and verses were precious then—and began to pick her steps homewards. Ah! there had been a wretch of a man looking at her—actually drawing her in his portfolio—the ugly fellow in the waggon. Thank goodness he could not have recognised her as his fellow-traveller; he had copied the old farm-gate from the other side, and he could only have got a glimpse of her figure through the bars with not so much as the crown of her hat above them. He had only put her in faithfully by a line or two, and three dots, and he did not observe her now as she passed behind him and scanned his performance ere she scampered off. But what a risk she had run of having her likeness taken without her knowledge or consent, and carried about the country by a walking gentleman!

It was quite an adventure; yet how could Clary think so when an earthquake and a whole town burnt to ashes were nothing in her French novels; but still true to the instinct of personality which causes us to think a mole-hill, in reference to our dear selves, a world more momentous and interesting than a mountain in reference to a princess of the blood-royal—stately Clarissa flew off like a lapwing to tell Dulcie that she had just had such an escape, and hit on such a discovery—she had found out all about the two fellows; they were a couple of painters. Marry! it was a marvel to see the one so hearty, and the other so rosy. Doubtless they did not have an odd penny in their purse between them.

Clarissa came too late; she encountered Dulcie running out to meet her, all alive with the same news, only gathered in a more orthodox manner. The fair, soft lad, whom they had reckoned a nincompoop, had shaken himself up in his com-

panion's absence, and had offered his landlady a drawing for his share of the dinner, "if you will score the value off the bill." And the landlady had repeated the story to Cambridge and Dulcie when she showed the picture to them, and expressed her conviction that the lad was far gone in the spleen—he seemed always in a brown study; too quiet-like for a lad. She should have no peace in her mind about him if she were any way related to him. Bless her heart! he would sell another for something much less than a crown.

Dulcie had actually been chaffing with the painter, all in a glow for one of those wonderful groups of luscious peaches, mellow pears, July flowers, and striped balsamine, singing birds and fluttering insects, full of extravagant beauty. In the business, too, Dulcie had been by far the more overcome of the two. The painter roused to a job, had not cheated her; on the contrary, he had been as usual a conscientious spendthrift of his powers. He had conducted the negotiation in the plainest, manliest spirit, looking the eager girl in the face with his blue eyes, and receiving her crown-piece in his hand, which was nobler than his face, inasmuch as it was seamed with the action of his paints and tools, without a notion of anything unbecoming or degrading.

The brother painter shook his head when he returned, and found what Will had been about in his absence.

"Man, man, didn't I bargain that I was to pay for your company, and haven't I put you in the worst bed, and allowed you the burnt meat and the sodden bread, and the valise to carry twice as often as I took it myself, to satisfy your plaguy scruples; and you could go and scurvily steal a march upon me the moment you were out of my sight! But," brightening immeasurably, and bowing low, "you have certainly contrived what I had not the face to attempt—an introduction to the ladies, although, no doubt, it was very simply done, and you are a very modest man, as I do not need to tell them. Ladies, I am Sam Winnington, son of the late gallant Captain Winnington, though I should not call him so; and this is Will Locke, the vagrant child of an excellent man, engaged, I believe, in the bookselling and stationery trade. We are painters, if it please you, on a tour in search of sketches and commissions. I beg to assure you, that I do portraits on a great scale as well as a small, and Will sometimes does lions in the jungle, besides larks in a tuft of grass."

Cambridge was more posed than ever by the fresh advance included in this merry speech; but the girls were quite of another mind, and took the matter forthwith into their own hands, as is usual with the class, and bore down caution and experience, particularly when it proceeded from their

housekeeper. They liked the young man's congenial sense and spirit, they secretly hankered after his vivacity, they were, with their dear woman's romance, all afire in three minutes about pictures, gods and goddesses, historic scenes, and even scratches in Indian ink. A true woman and a painter are hand and glove on a moment's warning in any age. Cambridge could but drop naturally into the background, and regard the constant puzzle.

"How girls can talk with fellows!"

The chance companions were once more packed into the waggon, pleasantly mixed together this time, and away they trundled yet many weary miles by the sunset and the light of the moon. The boughs in the horses' collars dangled brown, Cambridge and the waggoner nodded drowsily, but, divine privilege of youth, the spirits of the lads and lasses only freshened as the long day waned and they neared the goal. They were *dramatis personæ* on a moving stage, jesting like country folks going to a fair. Even Will Locke was roused and lively as he answered Dulcie's pertinacious, pertinent questions about the animal and vegetable life he loved so well; while Dulcie, furtively remembering the landlady's suggestion, wondered, kind heart, if she could use the freedom to mention to him that ground ivy was all but infallible in early stages of the spleen, and turnip broth might be relied on to check every incipient cough. Clarissa was coquettish, Sam Winnington was gallant. With all the girls' mock heroism, and all their arrogance and precision, trust me, girls and lads formed a free and friendly company in the end.

CHAPTER III.—REDWATER HOSPITALITY.

CLARISSA and Dulcie did do the young men service in their calling. They said it would be a shame not to help two such likely fellows (you know they had undauntedly settled them a fright and a goose in the morning), they were assured they were industrious and worthy, they would give bail for their honesty. So they spoke right and left to the few influential families who were at Redwater of the two young painters, who had come by good luck with them in the waggon, had put up at the Rod and Fly, and were waiting for commissions. Had the Warrens or the Lorimers not heard of them? They would come bound they were a couple of geniuses, from their conversation.

The old world grinned, and said to the girls' faces that the lasses had better not be too zealous for the lads; let them manage their own business—they were generally fit for that, and something more into the bargain. Uncle Barnet would not care to have his niece Clary fling away herself and

her tidy fortune on a walking gentleman, though he were a genius.

The result was that Dulcie "bridled" in a twister of wounded faith and anger. Clarissa was superb and scornful. She ordered a full-length portrait, and fixed the hour for the sitting within the week. Dulcie set off alone with Master Will Locke—Dulcie, who knew no more of Redwater than he should have done, if his wits had not been woolgathering—to find the meadow which was beginning to purple over with the meadow saffron.

But for all the town's people laughed at Mrs. Clary's and Mrs. Dulcie's flights, they never dreamt of them as unbecoming, or containing a bit of harm. Fine girls like Clary and Dulcie, especially an accomplished girl like Clary, who could read French and do Japan, besides working to a wish in cross-stitch, and tent-sketch, were not persons to be slighted. The inhabitants saw for themselves that the painters had coats which were not out at elbows, and tongues, one of which was always wagging, and the other generally at rest, but which never said a word fairly out of joint. They needed no further introduction; the gentlemen called for the young men, the ladies curtsied to them in the bar of the Rod and Fly, in the church-porch, in the common shop, and began conversations with them while they were chaffering at the same counter for the same red ribbons to tie up the men and the women's hair alike; and they felt that their manners were vastly polite and gracious,—an opinion which was not far from the truth.

The Vicar lent the painters books. The Mayor invited them to supper. The nearest Justice, who was a family man, with a notable wife, had them to a domestic party, where they heard a little girl repeat a fable, and saw the little coach which the justice had presented to his son and heir, then in long clothes, in which he was to be drawn along the smooth oak-boarded passages of the paternal mansion as soon as he could sit upright.

Lastly, Clarissa Gage, under the sufficient guardianship of Cambridge, treated the strangers to a real piece of sport—a hop on the washing-green, under her mulberry-tree, which commenced at four o'clock in the afternoon, and ended with dusk and the bats, and a gipsy fire, and roasting groats and potatoes in the hot ashes, in imitation of the freakish oyster suppers which Clary had attended in town.

Clary took care to have her six couples well assorted, and not to be severed till the merry-making was over; she did not mind uniting herself to Master Sam Winnington, and Dulcie to Master Will Locke—mind! the arrangement was a courteous compliment to the chief guests, and it

gave continual point to the entertainment. The company took a hilarious pleasure in associating the four two-and-two, commenting openly on the distribution: "Mistress Clary is mighty condescending to this jackanapes." "Mistress Dulcie and t'other form a genteel pair."

To be sure the two young men heard the remarks, which they might have taken as broad hints, and the girls heard them too, uttered as they were without disguise; but so healthy were our ancestors, that nobody was put out—not even soft, mooning Will Locke. Nothing came of it that evening, unless a way Dulcie had of pressing her red lips together, throwing back her little brown head, shaking out the powder from her curls, and shaking down the curls themselves, with a gleeful laugh, which appeared to turn her own "bridling" into derision; and a high assertion of Clary's that she was determined never to wed a man beneath the rank of a county member or a peer. Now, really, after Clary had danced fifteen dances, and was about to dance other five, without stopping, with a portrait painter, of her own free will, this was drawing a longish and very unnecessary bow. But then Sam Winnington did not take it amiss or contradict her. He said she was right, and he had no doubt she would keep her word, and there was a quick, half-comic, half-serious gleam from the depths of his grey eyes which made Clarissa Gage look more bashful and lovelier than any man had ever yet beheld her. Pity the member or the peer could not have been that man!

Imagine the party after Mrs. Cambridge had provided them with some of her favourite chickens, and more substantial Dutch beef, with wet fruit and dry, cold Rhenish and sugar, and mulled wine against the dew and the damp feet, collecting merrily round the smoky fire, with little jets of flame shooting up and flashing out on the six couples! Sam Winnington in his silk stockings and points neatly trussed at the knee, was on all fours poking the blue and red potatoes into the glowing holes. Another man with rough waggishness suddenly stirred the fire with an oak branch, and sent a shower of sparks like rockets into the dark blue sky, but so near that it caused the women to recoil screaming and hiding their faces on convenient shoulders, and lodged half-a-dozen instruments of ignition and combustion in Sam Winnington's hair, singeing it and scorching his ears. Had Sam the painter not been the best-natured and most politic fellow in the world, he would have dragged the aggressor by the collar or the cuff over the smoking, crackling wood, and made the ladies shriek more simultaneously and in greater earnest.

There was the strange ruddy light now on this face, now on that, on Will Locke's as he overturned a shovel of groats at Dulcie's feet, and on

Dulcie's as she was so eager to cover his blunder, that she quite forgot the circumstances of the case, and never came to herself till she had burnt all the five tips of her rosy fingers catching the miller's pearls. Then Will Locke was so sorry, stroked the fingers so daintily, hung upon Cambridge so beseechingly, imploring her to prepare a cool mash for Mistress Dulcie's finger-points, the moment they were all gone—that Dulcie could have cried for his tenderness of heart, and quickness and keenness of remorse.

Conjure up the whole fourteen—the Vicar and Cambridge of the number, when the fire had sunk white in ashes, when they could scarcely see each other's faces, and only guess each other's garments, having a round at "Puss in the corner," running here and rushing there, seizing this shoulder-knot, holding tight like a child by that skirt, drawing up, pulling back, whirling round all blowsy, all panting, all faint with fun and laughter, and the roguish familiarity which yet thought no evil. Very romping, was it not? very hoydenish? yes, certainly. Very improper? by no means. It was practised by dignitaries of the Church, still more classic than the Vicar scuttling and ducking after Cambridge (you never saw the like), and by the pink and pride of English womanhood.

Redwater was hospitable to these painter lads, as we understand hospitality, unquestioningly, ungrudgingly hospitable; but it was more than hospitable to them, it was profitable to them in a pecuniary sense, without which great test of its merits they could not long have tarried within its bounds. They were neither fools nor hypocrites to pretend to be clean indifferent to the main chance.

The Vicar fancied a likeness of himself in his surplice, which his parishioners might buy and engrave if they had a mind to preserve his lineaments when he was no longer among them. The Justice took a notion to have his big girls and his little girls, his boy and nurse, his wife, and himself as the sheltering stem of the whole young growth, in one canvas. Only grant, O Justice! that the doors be wide enough to admit the treasure, and we will not quarrel with the quantity of diamonds on your wife's stomach.

But the great achievement was Sam Winnington's picture of Clarissa, "not as a crazy Kate this time," she told him saucily, "but myself in my hair and brocade, to show what a grand lady I can be." Thus Clarissa dressed herself out in one of those magnificent toilettes all in the autumn mornings, and sat there hours in state, for the sole benefit of posterity, unless Sam Winnington was to reap a passing advantage by the process. Clarissa in her brocade, with the stiff body and the skirt standing on end, her neckerchief drawn through the straps of her boddice, her bouquet pinned "French

fashion" on her side; surely that picture was a masterpiece. So speaking was the copy of her deep brown hair, her soft proud cheek, the wave of her ripe red lips, that a tame white pigeon accustomed to sit on her shoulder flew into the window right at the canvas, and, striking against the hard, flat surface, fell fluttering and cooing in consternation to the ground. If that was not an acknowledgment of the limner's fidelity, what could be?

Clary, in person, played my lady very well, reclining in her father's great chair. Clary's hall was roomy enough; it had its space for Sam Winnington's easel as well as Clary's harpsichord, and, what was more useful, her spinning-wheel, besides closets and cupboards without number. Sam Winnington entertained Clarissa; he was famous in years to come for keeping his sitters in good-humour. He told her of the academy and the president's parties, the public gardens and the wild beast shows; how the princesses had their trains borne as they crossed the park. He asked her what quality in herself she valued the most; and owned that he was hugely indebted to his coolness. When his colours were not drying fast enough, he read her a page or two of grand heroic reading from Pope's *Homer* about Agamemnon and Achilles, Helen and Andromache; when she tired of that he was back again to the sparkling gossip of the town, for he was a brilliant fellow, with a clear intellect and a fine taste; and he had soon stored up and arranged elegantly on the shelves of his memory all the knowledge that was current, and a little more besides.

When he was gone, Clary would meditate what powers of conversation he had, and consider rather glumly how she would miss the portrait painter when he migrated to his native air, the town; how dull Redwater would be; how another face would soon supplant hers on his canvas! He had shown her others in his portfolio quite as blooming and dignified, though he had tumbled them carelessly over, and so he would treat hers when another's was fresh before him. Clary would be restless and cross at her own suppositions: for where is the use of being a beauty and a wit if one must submit to be either forgotten or beaten, even by a portrait painter?

In the meantime, the Vicar also wanted a *fac-simile* of his hay-field, as it looked when the hay-makers were among the tedded grass, the Dutch clover, the red sorrel, or under the Redwater ash-trees, to present him with a pleasant spectacle within, now that the bleak autumn was coming on, and there would be nothing without but soaked or battered ground, dark skies, muddy or snowy ways. The Mayor desired a pig-sty, with the most charming litter of little black and white pigs, as

nice as guinea-pigs, and their considerably coarser grunting mamma, done to hand. He was a jolly, prosaic man, Master Mayor, very proud of his pro-saicness, as you rarely see a real man of his poetry: he maintained, though Mrs. Mayor nearly swooned at the idea, that he would sooner have a pig-sty than a batch of heroes: perhaps the heroes of Master Mayor's day had sometimes wallowed in the mire to suggest the comparison. And Clarissa Gage would have her bower done—her clematis bower before the leaves were brown and shrivelled, and there only remained the loving spindle-shanked stems clinging faithfully to the half-rotten framework which they could no longer clothe with verdure.

What a bower Will Locke made of Clary's bower! as unique as Sam Winnington's portrait of Clary herself. It was not the literal bower, it would not have suited Master Mayor or the Justice, though it might have had a charm for the Vicar. We will go with the Vicar; although he also had his bombast, and, when elevated by company and cheer, denominated Cambridge a goddess, and raised in the poor woman's breast expectations never to be realized. We don't altogether approve, but we like that wonderful bit of work. There never were such deep damask roses as hung over the trellis, there never were such flaming sun-flowers, or pure white lilies as looked in at the sides. Squirrels don't frequent garden bowers unless they are tamed and chained by the leg. Our robin redbreasts are in the fields in summer, and do not perch on boughs opposite speckled thrushes when they can get abundance of worms and flies among the barley. We have not little green lizards at large in England; the only one ever seen at Redwater was in the apothecary's bottle—still what a bower that is! What a blushing, fluttering bower, trilling with song, glancing and glowing with the bronze mail of beetles and the softened glory of purple emperors! What a thing it was to examine; how you could look in and discover afresh, and dwell for five minutes at a time on that hollow petal of a flower steeped in honey, on that mote of a ladybird crawling to its couch of olive moss.

Dulcie was speechless with admiration before this vision of Clarissa's bower. Heigho! it was an enchanted bower to Dulcie as it was to Will Locke. It was veritably alive to him, and he could tell her the secrets of that life. What perfume the rose was shedding! he smelt it about his palette. What hour of the clock the half-closed sun-flower was striking, whence the robin and the thrush had come, what bean fields they had flown over, what cottage doors they had passed, of what the lizard was dreaming in south or east as he turned over on his slimy side—all were plain to him.

Ostensibly Dulcie was taking lessons from Will

Locke in flower-painting, for Dulcie had a delicate hand and a just eye for colours, and the sweetest, natural fondness for this simple, common, beautiful world. And Will Locke was a patient, indulgent teacher. He was the queerest mixture of gentleness and stubbornness, shyness and confidence, reserve and candour. He claimed little from other people, he exacted a great deal from himself. He was the most retiring lad in society, backward and out of place; he was free with Dulcie as a girl of her own stamp could be. He had the most unhesitating faith in his own ability, he relied on it as on an inspiration, he talked of it to Dulcie, he impressed it upon her until he infected her with his own credulity, until she believed him to be one of the greatest painters under the sun. She credited his strangest imagination, and that quiet lad had the fancy of a prince of dreamers.

In the end Dulcie was humble and almost awed in Will Locke's presence. Now here comes the sign of Dulcie's innate beauty of character. Had Dulcie been a commonplace, coarse girl, she would have been wearied, aggrieved, fairly disgusted by Will Locke in three days. But Dulcie was brimful of reverence, she was generous to the ends of her hair, she liked to feel her heart in her mouth with admiration.

The truth of the matter was, Dulcie would have been fain to lift up Will Locke's pencil as they pretend Cæsar served Titian, to clean his palette, gather flowers for him, busk them into a nosegay, preserve them in pure water, and never steal the meanest for her own use, as another woman would never pluck a blossom from a votive wreath, or lift a bud from a garland laid before an altar. Will Locke was her saint, Dulcie was quite ready to be absorbed in his beams. Well for her if they did not scorch her, poor little moth!

Oh! Dulcie, Dulcie, your friends could not have thought it of you,—not even Clary, tolerably misled on her own account, would have believed you serious in your enamourment, though you had gone down on your knees and sworn it to them. It was nothing but the obliging humour of Mistress Dulcie and the single-heartedness of the youth; still even in this mild view of the case, if their friends had paid proper attention to them, they

would have counselled Dulcie to abide more securely by her chair covers, and my simple man to stick more closely to his card or his ivory, his hedges or his hurdles.

Sometimes, late as the season was, Will Locke and Dulcie went out picking their steps in search of plants and animals, and it was fortunate for Dulcie that she could pull her mohair gown through her pocket-holes, and tuck her mob-cap under her chin beneath her hat, for occasionally the boisterous wind lifted that trifling appendage right into the air, and deposited it over a wall or a fence, and Will Locke was not half so quick as Dulcie in tracing the region of its flight, neither was he so active, however willing, in recovering the truant. Why, Dulcie found his own hat for him, and put it on his head to boot one day. He had deposited his hat on a stone, that he might the better look in the face a dripping rock, shaded with plumes of fern and tufts of grass, and formed into mosaic by tiny sprays of geranium faded into crimson and gold. It was a characteristic of Will that while he was so fanciful in his interpretation, the smallest, commonest text sufficed him. The strolls of these short autumn days were never barren of interest and advantage to him. The man carried his treasures within himself; he only needed the slightest touch-stone from the outside world to draw them out. A field mouse's nest was nearly as good to him as an eagle's eyrie, an ox-eyed daisy as a white rose, a red hemp nettle as a fox-glove. He put down his hat and stood contemplating the bit of rock, until every morsel of leaf told him its tale, and then proceeded to fill his pockets and hands with what the poorest country boy would have deemed the veriest weeds; and at last he would have faced round, and marched home, unconscious that his fair hair, bleached like a child's, was undefended from a pitiless shower impending over his head. Dulcie lingered dutifully behind, picked up that three-cornered hat timidly, called his attention to his negligence, and while he stooped with the greatest ease in life, and she bashfully turned her eyes another way, finally clapped the covering on his crown, as a mother bonnets her child.

(The remainder in next Part.)

RUNG INTO HEAVEN.

I.

ONE moonlit Yuletide, long ago :
When all the land was wrapt in snow,
The merry bells rang to and fro.

II.

Snow ribbed the tower from base to vane ;
Bright shone the little belfry pane :
The bells rang on with might and main.

III.

Three children stood beside a door,
Counting the bells,—one, two, three, four ;
Catching the flakes that downward pour.

IV.

The parson, hurrying, homeward goes ;
Calls them the fairest three he knows—
Stout Alan, Frank, and little Rose.

V.

"Now let us climb the steeple-stair,
And see the bells a-swinging there,"
Said Alan: Frank thought he would dare.

VI.

But little Rosie dropped a tear:
"If we must see the bells so near,
I think that I shall die for fear."

VII.

Straightway it chanced the leader bade
Rest in the belfry; all obeyed:
And every bell was deftly stayed;

VIII.

The slouching ringers lounge at ease:
Nor any sound came on the breeze
But whispers in snow-muffled trees.

IX.

And now the little children dare
Unseen, unheard, to climb the stair,
And gaze on all the marvels there;

X.

Where, as if bound by wizard's spell,
Yawned roofward every wide-mouthed bell,
On stays of iron balanced well.

XI.

And ever as the moonlight streams
They see dark wheels and massy beams,
Like dens of torture in our dreams.

XII.

Not long their little heads were strained
Within the door, with courage feigned,
When all the terror was unchained.

XIII.

Unknowing, the stout ringing men
Rose to the ropes, and whirled amain
The grim, dark-waisted bells again.

XIV.

Ten thousand clamours seem to rise
And struggle outward to the skies;
The swift wheels daze the children's eyes.

XV.

Alan and Frank, though trembling, bore
The horror of that deafening roar:
But little Rose dropped on the floor.

XVI.

Down the dark staircase Alan gropes,
He yet may be in time, he hopes:
He stands before the dancing ropes.

XVII.

The ringers ceased and stared. He said,
"My little sister Rose is dead:
The bells have killed her overhead."

XVIII.

They found her on the belfry floor:
She spoke and moved not any more:
One gentle sigh and all was o'er.

XIX.

But, lo! when now the little maid
In everlasting rest was laid,
And the good parson, sorrowing, prayed,—

XX.

Soft sounds of bells the valley fill,
And reach the churchyard on the hill;
So very distant, calm, and still.

XXI.

"These are the sweet and distant bells
Of Heaven; she sits by springing wells
Of joy, and to an angel tells

XXII.

"Her little tale of life, and sings
Half-folded in that seraph's wings,
And rapt on all his golden strings."

XXIII.

These things they whispered soft and low:
Then laid the tender corpse below
The hallowed turf, and turned to go.

XXIV.

Thenceforward, if in children's sight
Across a storm-cloud dark as night
The gilded vane may glimmer bright,

XXV.

"'Tis Rosie's ghost!" the children cry,
And hold their listening heads awry
To hear the bells beyond the sky,

XXVI.

Where Rose's little soul is blest,
By holy angels' arms caressed:
Rung through wild snows to heavenly rest.

HORACE MOULE.

CONCERNING ATMOSPHERES : WITH SOME THOUGHTS ON CURRENTS.

I AM not going to write an essay on Ventilation, important as that subject unquestionably is ; nor am I about to enter into any discussion of the various elements of which the air we breathe is made up. I am aware, indeed, that for the maintenance of animal and intellectual energy in their best state, it is expedient that the atmosphere should contain a certain amount of ozone ; but what ozone is I do not know, and neither, I believe, does any one else. And on the matter of material currents, whether ocean currents, atmospheric currents, or river currents, I am not competent to afford the scientific reader much information. I know, indeed, as most people know, that it is well for Britain that the warm Gulf Stream sets upon our shores. I read in the newspapers how bottles thrown into the sea turn up in distant and surprising places. I am aware that the Trade Winds blow steadily from west to east. And I have sat tranquilly, and looked intently at the onward flow of streams ; from the slow and smooth canal-like river that silently steals on through the rich level English landscape, to the wild Highland torrent that tears down its rocky bed, in white foam and thunder.

But what I wish, my reader, that you and I should do at present, is to take a large view of the case, not needing any special knowledge of physical science. Let us remember just this, that the atmosphere in which we live is something that touches and affects us at every inch of our superficies, and at every moment of our life. It is not to say merely that we breathe it ; but that it exerts upon every part of us, inner and outer, an influence which never ceases, and which, though possibly not much marked at the time, produces in the long-run a very great and decided effect. You draw in the air from ague-laden fens, and you do not find anything very particular in each breath you draw. But breathe *that*, and live in *that*, for a few weeks or months, and see what will come to you. Or you go in the autumn, weak and weary with the season's work and worry, jaded and nervous, to the seaside, and the bracing atmosphere in a little while insensibly does its work ; your limbs grow strong and active again, and your mind grows energetic and hopeful. And you have doubtless felt for yourself how the heavy, smoky air of a large city makes you dull and stupid, and how the sparkling draughts you draw in of the keen, unbreathed air of the mountains, exhilarate and nerve anew. And as for currents, without going into details, we know this general fact : If you cast a floating thing upon a current, it will insensibly go along with the current. There may not be a stronger or a more perceptible push at one moment than at another ; but there is an influence which in the main is unceasing, and there is a general drifting away. Slowly, slowly, the log cast into the sea, out in the middle of the Atlantic, comes eastward, week by week, till it is thrown somewhere on the outer

coast of Ireland or of the Hebrides. And when the thing cast upon the current is more energetic than a log, still the current affects it none the less really. The Mississippi steamer breasts that great turbid stream, and makes way against it ; but it makes way slowly. Let the engines cease to work, and the steamer drifts as the log drifted. Or let the engines work as before, and the vessel's head be turned down the stream ; and then, going with the current, its speed is doubled.

Now, the atmosphere I mean in this essay is the atmosphere in which the soul lives and breathes ; and the currents, those which carry along the moral and spiritual nature to developments better or worse. Shall we say it, for the most part to worse ? In this world, in a moral sense, we generally drift towards evil, if we drift at all. You must warp up the stream if you would advance towards good. It seems to be God's purpose that anything good must be attained by effort : if you slothfully go with the current, it will be only to ill.

I am not able, just now, to give you a definition of either moral atmospheres or moral currents which satisfies me. You will gradually see my meaning, if you do not see it yet. Let it be said, generally, that to follow inclination within, or to yield to the vague influence of the things and people around you, is to drift with the moral current. And sensitively to feel the moral influences amid which you live—the moral influences arising from external nature, or from the dwelling in which you live, or from the people with whom you associate, or from the books, and newspapers, and magazines, and reviews you read—is to feel the moral atmosphere. And a very great part of the influence which moulds human character, and decides human destiny, is of this vague, yet pervading kind. A tree, I am told, draws the chief part of its nourishment from the air : very much more than it draws from the earth through its roots. The tree must have roots, or it would not live or grow at all : yet the multitude of leaves draw in *that* by which it mainly lives and grows. And it seems to me to be so with human beings. We must be morally rooted and grounded, as it were, by direct education, and by directly getting principles fixed in our minds. But after this is done, we mainly take our tone from the moral atmosphere. We are mainly affected by moral currents ; and just as really when we strive against them as when we yield to them.

I am sure you know that a great many of the things we read—books, periodicals, and the like,—affect us not so much by the ideas they convey, as by the general atmosphere with which they surround us. If you read, week by week, a clever, polished, cynical, heartless publication, it will do you harm insensibly. It will mould and colour your ways of thinking and feeling much more than you would think. You like its talent, you know : but you disapprove, sometimes very keenly, its general

character and tone; and you think you are so on your guard against these, inwardly protesting against them each time you feel them, that no effect will be produced by them upon you. You are mistaken in thinking so. You breathe and live in a moral atmosphere, which is quite sure to tell on you. You are cast on a current; and it needs constant pulling against it to keep you from drifting with it. And your moral nature is not (so to speak) ever on the stretch with the oars; ever in an attitude of resistance to the malaria. Yes, that clever, heartless, cynical paper will leave its impress on you by degrees. And on the other side, you know that the influence of writings which are not obtrusively instructive, may sink gently into our nature and do us much good. There is not much formal teaching in them; but as you read them, you feel you are breathing a general healthy atmosphere; you are aware of a quiet but decided and powerful current, setting steadily towards what is good, and magnanimous, and true.

No doubt, friendly reader, you feel that what I have said is true. In talking to people, in living in places, in reading books, you feel the atmosphere; you are aware of the current. I do not speak to people whose moral nature is callous as the hide of the rhinoceros; and who never feel the moral atmosphere at all. You might endeavour to prick a rhinoceros with a pin for some time, without awaking any sensation in that animal. And there are human beings who, it is quite evident from their conversation and their doings on various occasions, are as little sensitive to the moral atmosphere, and the laws and proprieties which arise out of it, as the rhinoceros is to the very bluntest pin. They are not aware of any influence weaker than a physical push: as you remember the man who would take no hint less marked than a kicking. But you know, my friend, that in talking to different people, you insensibly take your tone from them; and you talk in a way accommodated to the particular case. There are people to whom, unawares, and without purpose premeditated, you find yourself talking in a loud, lively manner, which is far from your usual one. There are others to whom you insensibly speak in a quiet, thoughtful way. And you cannot help this; it is just that you feel the atmosphere, and yield to it. It is as when you go out on a crisp frosty day; and without any special intention to that effect, find yourself walking smartly and briskly along. But if it be a still, sunshiny October afternoon, amid the brown and golden woods, you will unconsciously accommodate yourself to the surroundings: you will (if there be no special call for haste) walk pensively and slow. Now, some may unjustly fancy, as they remark how different your demeanour is in the society of different people, that you are an impostor,—a hypocrite,—not to say a humbug; that you are falsely assuming a manner foreign to your own, that you may suit the different people with whom you converse. It is not so. There is no design in what you do. You are not desiring to please the loud man by assuming a loud manner, reflecting his; as I have heard of some one who was regarded as having paid a delicate but effective compliment to a great man who wore a very odd waistcoat, by presenting himself in the presence of

the great man, clad in a waistcoat exactly like his own. There is nothing of that kind; nothing insincere; nothing flunkeyish. It is only that you have a sensitive nature, which feels the atmosphere in which it is placed for the time. You know how mercury in frost feels the cold, and shrinks; it cannot help it. Then in warm weather it expands by the necessity of its nature. It always appeared to me in my childhood, that Dr. Watts effectually justifies the most offensive deportment on the part of dogs, by suggesting that it is their Maker's intention that they should exhibit such a deportment. There is a passage, not much known, in a lyric by that poet, which runs to the effect: "Let dogs delight to bark and bite, for God has made them so." If the fact be admitted, the principle is sound; but as judicious discipline can greatly diminish the tendency of these animals to bark and bite, I doubt whether the words of Dr. Watts are to be construed in their full meaning. But there can be no question that mercury, which is a substance not accessible to moral considerations, deserves neither blame nor praise for expanding and shrinking according to its nature. And while I admit that any doings of human beings, partaking of a moral element, are (in the main) so under the control of the will, that the human beings may justly be held responsible for them, I hold that this sensitiveness to the moral atmosphere is very much a matter of original constitution, and that the man who feels it may fairly plead that his Maker "made him so." And very many people—shall we say the most exquisitely constituted of the race?—discern the moral atmosphere which surrounds some men, by a delicate and unerring intuition. There are men who bring with them a frosty atmosphere; there are men who bring a sunshiny. You know people whose stiffness of manner freezes up the frankest and most genial. You know there are people to whom you would no more think of talking of the things which interest you most, than you would think of talking to a horse; or, let us say, to a donkey. Do you suppose that I should show my marked copy of *In Memoriam* to either my friend Dr. Log, or my friend Mr. Snarling?

I daresay some of my readers, going to see an acquaintance, have walked into his study, and found themselves, physically, in a choky, confined, hot-house atmosphere. And on entering into conversation with the man in the study, they have found, morally, the same thing repeated. The moral atmosphere was just the physical over again. You remember the morbid views, the uncharitable judgments, the despondency of tone. And I think your inward exclamation was, Oh, for fresh air, physically and morally! And, indeed, I can hardly believe that sound and healthy judgments are ever come to, or that manly and truthful thoughts are produced, except when the physical atmosphere is pure and healthful. I would not attach much importance to the vote, upon some grave matter of principle, which is come to by an excited mob of even educated men, at four o'clock in the morning, in an atmosphere so thoroughly pestilential that it might knock a man down. And there are houses, on entering which you feel directly the peculiar moral atmosphere. It is oppressive. It catches

your throat; it gets into your lungs; it (morally) puts a bad taste into your mouth. There are dwellings which, even in a physical sense, seem never to have fresh air thoroughly admitted; never to have the lurking malaria that hangs in corners and about window-curtains thoroughly cleared out, and the pure fresh air of heaven let in to fill every inch of space. There are more dwellings where this is so in a moral sense. You enter such a dwelling; you talk to the people in it. You at once feel oppressed. You feel stupid; worse than that, you feel sore and cantankerous. You feel you are growing low-minded. Anything like magnanimity or generosity goes out of you. You listen to wretched sneers against everything that is good or elevating. You find a series of wretched little doings and misdoings dwelt upon with weary iteration and bitter exaggeration. You hear base motives suggested as having really prompted the best people you know to their best doings. Did you ever spend an evening in the society of a cynical, sneering man, with some measure of talent and energy? You remember how you heard anything noble or disinterested laughed at; how you heard selfish motives ascribed to everybody; how some degrading association was linked with everything pure and excellent. Did you not feel deteriorated by that evening? Did you not feel that (morally) you were breathing the atmosphere of a sewer or a pigsty? And even when the atmosphere was not so bad as that, you have known the houses of really excellent folk, which were pervaded by such a stiffness, such an unnatural repression of all natural feeling, such a sense of constraint of soul, that when you fairly got out of the house at last, you would have liked to express your relief, and to give way to your pent-up energies, by wildly dancing on the pavement before the door like a Red Indian. And, indeed, you might very probably have done so, but for the dread of the police; and for the fear that, even through the dark, you might be discerned by the eyes of Mrs. Grundy.

Some people are so energetic and so much in earnest, that they diffuse about them an atmosphere which is keenly felt by most men. And it often happens that you are very much affected by the moral influence of people, from almost all whose opinions you differ. I have no doubt that human beings who differ from Dr. Arnold and Mr. Hughes on almost every point of belief, have been greatly influenced, and influenced for the better, by these good men. There is something in the atmosphere that breathes from both of them that tends to higher and purer ways of thinking and feeling; that tends to make you act more constantly from principle, and to make you feel the solemnity of this life. And without supposing any special good-fortune in the case of the reader, I may take for granted that you have known two or three persons whose presence you felt like a constant rebuke to anything mean or wrong in thought or deed, and like a constant stimulus to things good and worthy. You have known people, in the atmosphere of whose influence the evil in your nature seemed cowed and abashed. It seemed to die out like a nettle in frost; that clear, brisk, healthy atmosphere seemed to kill it. And you may have known men, after reading whose pages, or listening

to whose talk, you felt more of kindly charity towards all your brethren in the helplessness and sinfulness of humanity. Of course, to diffuse a powerful influence, whether towards evil or good, a man must possess great force and earnestness of character. Ordinary mortals are like the chameleon, which takes something of the colour of any strong-coloured object it is placed near. They take their tone very much from the more energetic folk with whom they are placed in contact. I daresay you have known a man who powerfully influences for good the whole circle of men that surrounds him. Such a one must have a vast stock of vital and moral energy. Most people are like the electric eel, very much exhausted after having given forth their influence. A few are like an electric battery, of resources so vast that it can be pouring out its energy without cease. There are certain physical characteristics which often, though not always, go with this moral characteristic. It is generally found in connexion with a loud, manly voice, a burly figure, a very frank address. Not always, indeed; there have been puny, shrinking, silent men, who mightily swayed their fellow-men, whether to evil or to good. But in the presence of the stronger physical nature, you feel something tending to make you feel cheerful, hopeful, energetic. I have known men who seemed always surrounded by a healthy, bracing atmosphere. When with such, I defy you to feel down-hearted, or desponding, or slothful. They put new energy, hopefulness, and life into you. Yes, my reader, perhaps you have found it for yourself, that to gain the friendship of even one energetic, thoughtful, good man, may suffice to give a new and healthier tone to your whole life. Yes, the influence of such a one may insensibly reach through all you think, feel, and do; as the material atmosphere pervades all material things. And such an influence may be exerted either through a fiery energy, or by an undefinable, gentle fascination. I believe that most men felt the first of these, who knew much of Dr. Chalmers. I believe that many have felt the second of these, in their intercourse with Dr. Newman or Mr. Jowett. Possibly, we might classify mankind under two divisions: the little band whose pith or whose fascination is such that they give the tone, good or bad; that they diffuse the atmosphere: and the larger host, whose soul is receptive rather than diffusive; the great multitude of human beings who take the tone, feel the atmosphere, and go with the current. It is probable that a third class ought to be added, including those who never felt anything, particularly, at all.

When you first enter a new moral atmosphere, you feel it very keenly. But you grow less sensitive to it daily, as you become accustomed to it. It may be producing its moral effect as really; but you are not so much aware of its presence. Did you ever go to a place new to you, of very unusual and striking aspect; and did you wonder if people there live just as they do in the commonplace scenes amid which you live? Let me confess that I cannot look at the pictures of the quaint old towns of Belgium, without vaguely asking myself that question. In a lesser degree, the fancy steals in, even as one walks the streets of Oxford or

Chester. You feel how fresh and marked an atmosphere you breathe, in a visit of a few days' length to either town. But of course, if you live in the strangest place for a long time, you will find that life there is very much what life is elsewhere. I have often thought that I should like to do my in-door work in a room whose window opened upon the sea; so close to the sea that looking out you might have the waves lapping on the rock fifteen feet below you; and that when you threw the window up, the salt breeze might come into the chamber, a little feverish perhaps with several toiling hours. Surely, I think, some influence from the scene would mingle itself with all that one's mind would there produce. And it would be curious to look out, before going to bed, far over the level surface in the moonlight: to see the spectral sails passing in the distance; and to hear the never-ceasing sound, old as Creation. I do not know that the reader will sympathize with me; but I should like very much to live for a week or two at the Eddystone Lighthouse. There would be a delightful sense of quiet. There would be no worry. There would be plenty of time to think. It would be absolutely certain that the door-bell would never ring. And though there would be but limited space for exercise, there would unquestionably be the freshest and purest of air. No doubt if the wind rose at evening, you might through the night feel the lighthouse vibrate with the blow of the waves: but you could recall all you had read of the magnificent engineering of Smeaton; and feel no more than the slight sense of danger which adds a zest. I am aware that in a little while one would get accustomed to the whole mode of life. The flavour of all things goes with custom. When you go back to the seaside, how salt the breeze tastes, which you never remarked while you were living there! And sometimes, looking back, you will wish you could revive the freshness and vividness of first impressions.

We have been thinking of the atmosphere diffused by books and by persons: let it be said that the thing about a book which affects your mind and character most, is not its views or arguments: it is its atmosphere. And it is so also with persons. It is not what people expressly advise you that really sways you; it is the general influence that breathes from all their life. A book may, for instance, set out sound religious views; but in such a hard cold way that the book will repel from religion. That is to say, the arguments may push one way, and the atmosphere the opposite way: and the atmosphere will neutralize the arguments and something more. And you will find people, too, whose advices and counsels are good; who often counsel their children or their friends to duty, and to earnestness in religion; but who neutralize and reverse the bearing of all these good counsels by the entire tone of their life. The words of some people say, Choose the good part, Give your soul to your Saviour, Ask for the blessed Spirit's guidance and influence day by day; but their atmosphere says, Anything for money,—for social standing,—for spitefulness,—for general unpleasantness. You will find various Pharisees now-a-

days who loudly exclaim, "God be merciful to me a sinner!" but woe betide you if you venture to hint to such that anything they can do is wrong!

Let me say, that you may read and you may hear religious instruction, which without asserting anything expressly wrong, still deteriorates you. It lowers you; you are the worse for it. There is an undefinable, but strongly-felt lack of the Christian spirit about it. Its views are mainly right; but somehow its atmosphere is wrong. I do not say this is any narrow spirit: it is not against one party of religionists more than another that I should bring this charge. Perhaps the teaching which is soundest in doctrine, is sometimes the most useless, through its want of the true Christian life; or through merely giving you the metaphysics of Christianity, without any real bringing of the vital truths of Christianity home to the heart, and to the actual case of those to whom they are told. I have read a book—a polished, scholarly tale, the leading character in which was a clergyman—but in reading the book you felt a strong smack of heathenism. I do not mean the savage, cannibal heathenism which still exists in the islands of the South Pacific; but the polished heathenism which was many centuries since in Greece and Rome. The clergyman was sound in dogma, I daresay, if you had asked him for a confession of his faith; but his Christianity was an outside garment, while his whole nature was saturated with the old literature and mythology of that ancient day. Then you may find a book, a religious book, containing nothing on which you could well put your finger as wrong: yet you were left with a general impression of scepticism. That was the atmosphere. The views and arguments are as the solid ground: but you touch the solid ground but at a single point;—the circumambient ether is all around you, and within you. I have read pages setting out somewhat sad and discouraging views; yet as you turned the pages, you were aware of a general atmosphere of hopefulness and energy. And I have listened to what might have made pages, if it had been printed (pages which assuredly I should not have read), setting out the sublimest and most glorious hopes of humanity, in a way so dreary, dull, wearisome, and stupid, that the atmosphere was most depressing. You felt as though you were environed by a damp, thick fog.

It would be an endless task to reckon up the moral atmospheres in which human beings live; or even the moral atmospheres which you yourself, my friend, have breathed. But there are some that one remembers vividly; they did not come often enough, or continue long enough, to lose their freshness. Such is the atmosphere which surrounds all operations relating to the sale and purchase of horses. You remember how, when you went to buy one of those noble animals, you found yourself surrounded by a new and strongly-flavoured phase of life. Was there not a general atmosphere as of swindling? You were surprised to hear lies, the grossest, told, even though they were sure to be instantly detected. You felt that your ignorance and capacity of being cheated were being gauged with great skill. It is a singular thing, indeed, that one of the most useful and

beautiful of God's creatures should diffuse around him a most unhealthy moral atmosphere. You may have remarked that the noble steed is not merely surrounded by an ether filled with falsehoods; but that a less irritating, though still remarkable, ingredient, mingles with it, like ozone—it is the element of slang. I have remarked this with great interest, and mused much on it without succeeding in satisfactorily accounting for it. Why is it that to say a horse is a good horse should stamp you as a green hand; but that to say the animal is no bad nag, or a fairish style of hack, should convey the idea that you know various things? And wherefore should it be, that a shallow nature should be indicated by your saying you were willing to pay fifty pounds for the horse, while untold depth and craft shall be held to be implied by the statement that your tether was half a hundred?

A very disagreeable atmosphere, diffused by various persons, is that of suspicion. Some one has done you a kind turn, and your heart warms to the doer of it. But Mr. Snarling comes in; and you tell him, in hearty tones, of the kind turn, and of your warm feeling towards the man that did it. Mr. Snarling doubts; hints; insinuates; suggests a deep and traitorous design under that kind act; perhaps succeeds in chilling or souring your warm feeling; till, on the withdrawal of the unhealthy atmosphere, your better nature gets the upperhand again. And when next you meet the kind, open face of the friend who did you the kind turn, your heart smites you as you think what a wicked, suspicious creature you were while within the baleful atmosphere of Snarling. You have seen, I daresay, very shallow and empty individuals, who fancied that it made them look deep and knowing, to say that beggars, for the most part, live in great luxury, and have money in the bank. That may be so in rare cases; but I know that the want of the poor is often very real. It comes, doubtless, in some measure, from their own sin or improvidence; and as, of course, you and I never do wrong, let us throw a very large stone at the poor creature who is starving to-day, because she took a full meal of bread and butter and tea four days since. I have heard a man, with great depth of look, state that a certain cripple known to me could walk quite well. I asked the man for his authority. He had none, but vague suspicion. I told the man, with some acerbity (which I do not at all regret), that I knew the poor man well, and that I knew he was as crippled as he seemed. It looks knowing to declare of some poor starved creature that he is more rogue than fool. Whenever you hear that said, my reader, always ask what is the precise charge intended to be conveyed, and ask the ground on which the charge is made. In most cases you will get no answer to the second question; in very many no intelligible answer to the first. It would be a pleasant world to live in, if the people who dwell in it were such as they are represented by several persons known to me. I remember an outspoken old Scotch lady, to whom I was offering some Christian comfort after a great loss. I remember how she said, with a look as if she meant it, "If I did not believe all that, I should take a knife and cut my throat!" It was an

honest confession of her faith, though made in unusually energetic terms. And I might say for myself, if I had not some faith in my race, it would be better to be off to the wilderness at once, or, like Timon, to the desolate shore. The wants of beggars, even of the least deserving, are, for the most part, very real. As for their luxuries, they are generally tea and buttered toast. Sometimes fried ham may also be found. Poor creatures! These things are the only enjoyments they have; and I, for one, am not ready with my anathema maranatha. I have known very suspicious and uncharitable persons who were extremely fat; doubtless they lived entirely on parched peas. And all the sufferings of the poor are not shame, paraded to the end of obtaining pence. I look back now, over a good many years, to the time when I was a youth at college. I remember coming home one night, between eleven and twelve o'clock, along a quiet street in a certain great city. I remember two poor girls standing in the shelter of the wall of a house, leaning against the wall, from the drenching rain. Neither noticed me. I see yet the deadly white face of one,—the haggard, sick look, as she crouched by the wall, and leant on the other's shoulder, as if just recovering from a faint. I hear yet the anxious, despairing voice with which the other said to her, "Are you better now?" The words were not spoken at me, or spoken for the ear of any passer-by. All this was on the dark midnight street, amid the drenching rain. It was a little thing; but it brought home to one the suffering that is quietly undergone in thousands of places over Europe each day and night.

Probably you have known people, who were placed in a sphere where the atmosphere, moral and physical, was awfully depressing. They did their work poorly enough; and many blamed them severely. For myself, I was inclined to wonder that they did so well. Who could be a good preacher in certain churches of which I have known? I think there are few men more sensitive to the moral atmosphere than the preacher. There are churches in which there is a hearty atmosphere; others, in which there is a chilly atmosphere; others, with a bitter, narrow-minded, Pharisaic; others, with an atmosphere which combines the pragmatic, critical, and self-sufficient, with the densely stupid. But passing from this, I say that most men, even of those who do their work in life decently well, have only energy enough to do well if you give them a fair chance. And many have not a fair chance: some have no chance at all. There are human beings set in a moral atmosphere in which moral energy and alacrity could no more exist than physical life in the choke-damp of the mine. Be thankful, my friend, if you are placed in a fairly healthful atmosphere. You are doing fairly in it; but in a different one, you might have pined and died. You are leading a quiet Christian life, free from great sin or shame. Well, be thankful; but do not be conceited: above all, do not be uncharitable to those for whom the race and the warfare have been too much.

I have said that it is the more energetic of the race that diffuse a moral atmosphere; the ordinary members of the race feel it. The energetic

give the tone ; the ordinary take it. There are minds whose nature is to give out ; and minds whose nature is to take in. But most men have energy enough, if rightly directed, to affect the air somewhat ; and though the moral ingredient they yield may not be much in quantity, it may be able to supply just the precious ozone. Let us try to be like the sunshiny member of the family, who has the inestimable art to make all duty seem pleasant ; all self-denial and exertion, easy and desirable ; even disappointment not so blank and crushing ; who is like a bracing, crisp, frosty atmosphere throughout the home, without a suspicion of the element that chills and pinches. You have known people within whose influence you felt cheerful, amiable, hopeful, equal to anything ! Oh, for that blessed power, and for God's grace to exercise it rightly ! I do not know a more enviable gift than the energy to sway others to good ; to diffuse around us an atmosphere of cheerfulness, piety, truthfulness, generosity, magnanimity. It is not a matter of great talent ; not entirely a matter of great energy ; but rather of earnestness and honesty,—and of that quiet, constant energy, which is like soft rain gently penetrating the soil. It is rather a grace than a gift ; and we all know where all grace is to be had freely for the asking.

You see, my reader, I have spoken of atmospheres and currents together. For every moral atmosphere is of the nature of a moral current. As you breathe the atmosphere, you feel that there is an active force in it : that you are beginning to drift away. It is not merely a present sense of something, that comes over you ; but you know that it sets you floating onward to something beyond your present feeling. The more frequent tendency of a moral atmosphere is to assimilate your moral nature to itself. Perhaps all atmospheres, if you live in them long enough, tend to this. But there are some atmospheres which, just at first, are so very disagreeable, that their effect is repellent ; they tend to make you wish to be just as different from themselves as you can. But the refined person, at first revolted by a rude and coarse atmosphere, will, in years, grow subdued to it ; and the pure young soul, shocked and disgusted at the first approach of gross sin, comes at last to bear it and to exceed it. Yes, the ultimate tendency of all moral atmospheres upon all ordinary people, is to assimilate them to the element in which they live. Let men breathe any atmosphere long enough, and this will follow ; save in the case of an exceptional man here and there. It is a very bad thing for a young person to be much among thoroughly worldly people, or among mere money-making people. Let us not cry down money ; it is a great and powerful thing. You remember, it was not money, but the over love of money, that was "the root of all evil." But it is most unhappy to live among those from whose entire ways of thinking and talking you get the general impression, that money is the first and best thing ; and that the

great end of life is to obtain it ; and that almost any means may be resorted to for that end. All this is not said in so many words, but it pervades you unseen ; you breathe it like an unwholesome malaria. You take it in, not merely at every breath, but at every pore. And the result of years of this is, that the warm-hearted, generous youth grows into the sordid, heartless old man ; and that the enthusiastic young Christian is sometimes debased into a very chilly, lifeless, and worldly middle age.

And now, before I end, let me say this. There is a certain blessed influence which can mingle itself with every moral atmosphere that a human being can honestly breathe ; and which can make every such atmosphere healthful. You know what I mean. It is the influence of that Holy Spirit, whose presence the Redeemer said was more valuable and profitable than even his own ; and who is promised without reservation to all who heartily ask His presence. And you know, too, that we have a sure promise, that if we build on the right foundation, the current of our whole life will tend towards what is happy and good. There may be a little eddy backwards here and there, and sometimes what seems a pause, but it is in the direction of these things that the whole current sets ; it is towards these that "all things work together." I firmly believe that the natural tendency of all moral currents, apart from God's grace, is downwards. Apart from *that*, we shall always grow worse : with it, we shall always grow better. Believe me, my reader, when I say, that if all your life and all your lot be not hallowed by the presence in all of the Blessed Spirit, you may be sure that you are breathing a moral atmosphere which wants just the precious ozone that is needful to true health and life. And if you have not, penitently and humbly, confided your soul to the Saviour, you may know that you are drifting with a current which is certainly bearing you on towards all that is evil and all that is woful. It is sad to see the poor little pale and sickly children of some dark, stifling close in a large city ; poor little things who never breathed the free country air ; who are living in an unwholesome atmosphere within doors and without, in which they are pining, and growing up weak and nerveless : but it is more sad to see the immortal soul stunted, emaciated, and distorted, through the unhealthy moral air it breathes. It must have been a miserable sight, the little boat with the man in it asleep, drifting smoothly and swiftly along, beyond human reach, towards the tremendous cataract : but it is more miserable, if we saw it rightly, to see a human soul, in spiritual sleep, drifting day by day towards the fearful plunge into final woe. Let us pray, my reader, for both of us ; that God would be with us by His Spirit, and keep us in all ways that we go : that in all our life we may breathe the Atmosphere of His presence ; and by the Current of all our life be brought nearer to Himself !

A. K. H. B.

MISTRESS AND MAID.

A HOUSEHOLD STORY.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

CHAPTER V.

A HOUSEHOLD exclusively composed of women has its advantages and its disadvantages. It is apt to become somewhat narrow in judgment, morbid in feeling, absorbed in petty interests, and bounding its vision of outside things to the small horizon

III-11

which it sees from its own fireside. But, on the other hand, by this fireside often abides a settled peace and purity, a long-suffering, generous forbearance, and an enduring affectionateness, which the other sex can hardly comprehend or credit. Men will not believe what is nevertheless the truth, that we

can "stand alone" much better than they can: that we can do without them far easier, and with less deterioration of character, than they can do without us; that we are better able to provide for ourselves interests, duties, and pleasures; in short, strange as it may appear, that we have more real self-sustaining independence than they.

Of course, that the true life, the highest life, is that of man and woman united, no one will be insane enough to deny; I am speaking of the substitute for it, which poor humanity has so often to fall back upon, and make the best of; a better best very frequently than what appears best in the eyes of the world. In truth, many a troubled, care-ridden, wealthy family, torn with dissensions, or frozen up in splendid formalities, might have envied that quiet, humble, maiden household of the Misses Leaf, where their only trial was poverty, and their only grief the one which they knew the worst of, and had met patiently for many a year,—poor Selina's "way."

I doubt not it was good for Elizabeth Hand that her first place—the home in which she received her first impressions—was this feminine establishment, simple and regular, in which was neither waste nor disorder allowed. Good, too, that while her mistresses' narrow means restricted her in many things enjoyed by servants in richer families, their interests, equally narrow, caused to be concentrated upon herself a double measure of thought and care. She became absolutely "one of the family," sharing in all its concerns. From its small and few carnal luxuries, such as the cake, fruit, or pot of preserve—votive offerings from pupils' parents, up to the newspaper and the borrowed book, nothing was either literally or metaphorically "locked up" from Elizabeth.

This grand question of locking-up had been discussed in full conclave the day after her month of probation ended; the sisters taking opposite sides, as might have been expected. Selina was for the immediate introduction of a locksmith and a key-basket.

"While she was only on trial, it did not so much signify; besides, if it did, we had only buttons on the press-doors; but now she is our regular servant, we ought to institute a regular system of authority. How can she respect a family that never locks up anything?"

"How can we respect a servant from whom we lock up everything?"

"Respect a servant! What do you mean, Hilary?"

"I mean, that if I did not respect a servant, I would be very sorry to keep her one day in any house of mine."

"Wait till you've a house of your own to keep, Miss," said Selina crossly. "I never heard

such nonsense. Is that the way you mean to behave to Elizabeth? leave everything open to her—clothes, books, money; trust her with all your secrets; treat her as your most particular friend?"

"A girl of fifteen would be rather an inconvenient particular friend! and I have happily few secrets to trust her with. But if I could not trust her with our coffee, tea, sugar, and so on, and bring her up from the very first in the habit of being trusted, I would recommend her being sent away to-morrow."

"Very fine talking; and what do you say, Johanna?—if that is not an unnecessary question, after Hilary has given her opinion."

"I think," replied the elder sister, taking no notice of the long familiar innuendo, "that in this case Hilary is right. How people ought to manage in great houses, I cannot say; but in our small house, it will be easier and better not to alter our simple ways. Trusting the girl—if she is a good girl—will only make her the more trustworthy; if she is bad, we shall the sooner find it out and let her go."

But Elizabeth did not go. A year passed; two years; her wages were raised, and with them her domestic position. From a "girl" she was converted into a regular servant; her pinafores gave place to grown-up gowns and aprons, and her rough head, at Miss Selina's incessant instance, was concealed by a cap,—caps being considered by that lady as the proper and indispensable badge of servant-hood.

To say that during her transition state, or even now that she had reached the cap era, Elizabeth gave her mistresses no trouble, would be stating a self-evident improbability. What young lass under seventeen, of any rank, does not cause plenty of trouble to her natural guardians? Who can "put an old head on young shoulders?" or expect from girls at the most unformed and unsatisfactory period of life that complete moral and mental discipline, that unflinching self-control, that perfection of temper, and everything else,—which, of course, all mistresses always have?

I am obliged to confess that Elizabeth had a few—nay, not a few—most obstinate faults; that no child tries its parents, no pupil its school-teachers, more than she tried her three mistresses at intervals. She was often thoughtless and careless, brusque in her manner, slovenly in her dress; sometimes she was downright "bad," filled full—as some of her elders and betters are, at all ages—with absolute naughtiness; when she would sulk for hours and days together, and make the whole family uncomfortable, as many a servant can make many a family, small as that of the Misses Leaf.

But still they never lost what Hilary termed

their "respect" for Elizabeth; they never found her out in a lie, a meanness, or an act of deception or dishonesty. They took her faults as we must take the surface-faults of all connected with us,—patiently rather than resentfully, seeking to correct rather than to punish. And though there were difficult elements in the household, such as there being three mistresses to be obeyed, the youngest mistress a thought too lax, and the second one undoubtedly too severe, still no girl could live with these high-principled, much-enduring women, without being impressed with two things, which the serving class are slowest to understand,—the dignity of poverty, and the beauty of that which is the only effectual law to bring out good and restrain evil—the law of loving-kindness.

Two fracas, however, must be chronicled, for, after both, the girl's dismissal hung on a thread. The first was when Mrs. Cliffe, mother of Tommy Cliffe, who was nearly killed in the field, being discovered to be an ill sort of woman, and in the habit of borrowing from Elizabeth stray shillings, which were never returned, was forbidden the house; Elizabeth resented it so fiercely, that she sulked for a whole week afterwards.

The other, and still more dangerous crisis in Elizabeth's destiny, was when a volume of Scott's novels, having been missing for some days, was found hidden in her bed; and she lying awake reading it, was thus ignominiously discovered at eleven P.M. by Miss Selina, in consequence of the gleam of candle-light from under her door.

It was true, neither of these errors were actual moral crimes. Hilary even roused a volley of sharp words upon herself, by declaring they had their source in actual virtues; that a girl who would stint herself of shillings, and hold resolutely to any liking she had, even if unworthy, had a creditable amount of both self-denial and fidelity in her disposition. Also, that a tired-out maid-of-all-work, who was kept awake of nights by her ardent appreciation of the "Heart of Mid-Lothian," must possess a degree of both intellectual and moral capacity, which deserved cultivation rather than blame. And though this surreptitious pursuit of literature under difficulties could not of course be allowed, I grieve to say that Miss Hilary took every opportunity of not only giving the young servant books to read, but of talking to her about them. And also that a large proportion of these books were—to Miss Selina's unmitigated horror—absolutely fiction! stories, novels, even poetry—books that Hilary liked herself—books that had built up in her her own passionate dream of life; wherein all the women were faithful, tender, heroic, self-devoted; and all the men were—something not unlike Robert Lyon.

Did she do harm? Was it, as Selina and even Johanna said sometimes, "dangerous" thus to put before Elizabeth a standard of ideal perfection, a Quixotic notion of life—life in its full purpose, power, and beauty—such as otherwise never could have crossed the mind of this poor working girl, born of parents who, though respectable and worthy, were in no respect higher than the common working-class? I will not argue the point: I am not making Elizabeth a text for a sermon; I am simply writing her story.

One thing was certain, that by degrees the young woman's faults lessened; even that worst of them, the unmistakable bad temper, not aggressive, but obstinately sullen, which made her and Miss Selina sometimes not on speaking terms for a week together. But she simply "sulked;" she never grumbled or was pert; and she did her work just as usual,—with a kind of dogged struggle not only against the superior powers, but against something within herself, much harder to fight with.

"She makes me feel more sorry for her than angry with her," Miss Leaf would sometimes say, coming out of the kitchen with that grieved face, which was the chief sign of displeasure her sweet nature ever betrayed. "She will have up-hill work through life, like us all, and more than many of us, poor child!"

But gradually Elizabeth, too, copying involuntarily the rest of the family, learned to put up with Miss Selina; who, on her part, kept a sort of armed neutrality. And once, when a short but sharp illness of Johanna's shook the household from its even tenor, startled everybody out of their little tempers, and made them cling together and work together in a sort of fear-stricken union against one common grief, Selina allowed that they might have gone farther and fared worse, on the day they engaged Elizabeth.

After this illness of his aunt, Ascott came home. It was his first visit since he had gone to London; Mr. Ascott, he said, objected to holidays. But now, from some unexplained feeling, Johanna in her convalescence longed after the boy,—no longer a boy, however, but nearly twenty, and looking fully his age. How proud his aunts were to march him up the town, and hear everybody's congratulations on his good looks and polished manners! It was the old story—old as the hills! I do not pretend to invent anything new. Women, especially maiden aunts, will repeat the tale to the end of time, so long as they have youths belonging to them on whom to expend their natural tendency to clinging fondness, and ignorant, innocent hero-worship. The Misses Leaf, ay, even Selina, whose irritation against the provoking boy was quite mollified by the elegant young man, were no wiser than their neighbours.

But there was one person in the household who still obstinately refused to bow the knee to Ascott. Whether it was, as psychologists might explain, some instinctive polarity in their natures; or whether, having once conceived a prejudice, Elizabeth held on to it like grim death;—still there was the same unspoken antagonism between them. The young fellow took little notice of her, except to observe, “that she hadn’t grown any handsomer;” but Elizabeth watched him with a keen severity that overlooked nothing, and resisted, with a passive pertinacity that was quite irresistible, all his encroachments on the family habits, all the little self-pleasing ways which Ascott had been so used to of old, that neither he nor his aunts apparently recognised them as selfish.

“I canna bear to see him” (“cannot,” suggested her mistress, who not seeing any reason why Elizabeth should not speak the Queen’s English as well as herself, had instituted *h’s*, and stopped a few more glaring provincialisms). “I cannot bear to see him, Miss Hilary, lolling on the arm-chair, when Missis looks so tired and pale, and sitting up o’ nights, burning double fires, and going upstairs at last with his boots on, waking everybody. I dunnot like it, I say.”

“You forget; Mr. Ascott has his studies. He must work for his next examination.”

“Why doesn’t he get up of a morning, then, instead of lying in bed, and keeping the breakfast about till ten? Why can’t he do his learning by daylight? Daylight’s cheaper than mould candles, and a deal better for the eyes.”

Hilary was puzzled. A truth was a truth, and to try and make it out otherwise, even for the dignity of the family, was something from which her honest nature revolted. Besides, the sharp-sighted servant would be the first to detect the inconsistency of one law of right for the parlour and another for the kitchen. So she took refuge in silence, and in the apple-pudding she was making.

But she resolved to seize the first opportunity of giving Ascott, by way of novelty, the severest lecture that tongue of aunt could bestow. And this chance occurred the same afternoon, when the other two aunts had gone out to tea, to a house which Ascott voted “slow,” and declined going to. She remained to make tea for him, and in the meantime took him for a constitutional up and down the public walks hard by.

Ascott listened at first very good-humouredly; once or twice calling her “a dear little prig,” in his patronizing way,—he was rather fond of patronizing his aunt Hilary. But when she seriously spoke of his duties, as no longer a boy but a man, who ought now to assume the true manly right of thinking for, and taking care of, other people,

especially his aunts, Ascott began to flush up angrily.

“Now—stop that, Aunt Hilary; I’ll not have you coming Mr. Lyon over me.”

“What do you mean?”

For of late Ascott had said very little about Mr. Lyon,—not half so much as Mr. Lyon, in his steadily persistent letters to Miss Leaf, told her about her nephew Ascott.

“I mean, that I’ll not be preached to like that by a woman. It’s bad enough to have to stand it from a man; but then Lyon’s a real sharp fellow, who knows the world, which women don’t, Aunt Hilary. Besides, he coaches me in my Latin and Greek; so I let him pitch into me now and then. But I won’t let *you*; so just stop it, will you.”

Something new in Ascott’s tone—speaking more of the resentful fierceness of the man than the pettishness of the boy, frightened his little aunt, and silenced her. By and by, she took comfort from the reflection that, as the lad had in his anger betrayed, he had beside him in London a monitor whose preaching would be so much wiser and more effectual than her own, that she determined to say no more.

The rare hearing of Mr. Lyon’s name—for, time and absence having produced their natural effect, except when his letters came, he was seldom talked about now—set Hilary thinking.

“Do you go to see him often?” she said at last.

“Who?—Mr. Lyon?” And Ascott, delighted to escape into a fresh subject, became quite cheerful and communicative. “Oh, bless you! he wouldn’t care for my going to him. He lives in a two-pair back, only one room, ‘which serves him for kitchen and parlour and all;’ dines at a cook-shop for ninepence a day, and makes his own porridge night and morning. He told me so once, for he isn’t a bit ashamed of it. But he must be precious hard-up sometimes. However, as he contrives to keep a decent coat on his back, and pay his classes at the University, and carry off the very best honours going there, nobody asks any questions. That’s the good of London, Aunt Hilary,” said the young fellow, drawing himself up with great wisdom. “Only look like a gentleman, behave yourself as such, and nobody asks any questions.”

“Yes,” acquiesced vaguely Aunt Hilary. And then her mind wandered yearningly to the solitary student in the two-pair back. He might labour and suffer; he might be ill; he might die,—equally solitary, and “nobody would ask any questions.” This phase of London life let a new light in upon her mind. The letters to Johanna had been chiefly filled with whatever he thought would interest them. With his characteristic Scotch reserve, he had said very little about himself, except in the

last, wherein he mentioned that he had "done pretty well" at college this term, and meant to "go in for more work" immediately.

What this work entailed—how much more toil—how much more poverty—Hilary knew not. Perhaps even his successes, which Ascott went on to talk of, had less place in her thoughts than the picture of the face she knew, sharpened with illness, wasted with hard work and solitary care.

"And I cannot help him—I cannot help him!" was her bitter cry; until, passing from the dream-land of fancy, the womanly nature asserted itself. She thought if it had been, or if it were to be, her blessed lot to be chosen by Robert Lyon, how she would take care of him! what an utter slave she would be to him! How no penury would frighten her, no household cares oppress or humble her, if done for him and for his comfort. To her brave heart no battle of life seemed too long or too sore, if only it were fought for him and at his side. And as the early-falling leaves were blown in gusts across her path, and the misty autumn night began to close in, nature herself seemed to plead in unison with the craving of her heart, which sighed that youth and summer last not always; and that, "be it ever so humble," as the song says, there is no place so bright and beautiful as the fireside of a love-ful home.

While the aunt and nephew were strolling thus, thinking of very different things, their own fire, newly lit—Ascott liked a fire—was blazing away in solitary glory, for the benefit of all passers-by. At length one—a gentleman—stopped at the gate, and looked in, then took a turn to the end of the terrace, and stood gazing in once more. The solitude of the room apparently troubled him; twice his hand was on the latch before he opened it, and knocked at the front-door.

Elizabeth appeared, which seemed to surprise him.

"Is Miss Leaf at home?"

"No, sir."

"Is she well? Are all the family well?" and he stepped right into the passage, with the freedom of a familiar foot.

("I should ha' slammed the door in his face," was Elizabeth's comment afterwards; "only, you see, Miss Hilary, he looked a real gentleman.")

The stranger and she mutually examined one another.

"I think I have heard of you," said he, smiling. "You are Miss Leaf's servant—Elizabeth Hand."

"Yes, sir," still grimly, and with a determined grasp of the door-handle.

"If your mistresses are likely to be home soon, will you allow me to wait for them? I am an old friend of theirs. My name is Lyon."

Now Elizabeth was far too much one of the

family not to have heard of such a person. And his knowing her was a tolerable proof of his identity; besides, unconsciously, the girl was influenced by that look and mien of true gentlemanhood, as courteous to the poor maid-of-all-work as he would have been to any duchess born; and by that bright, sudden smile, which came like sunshine over his face, and like sunshine warmed and opened the heart of every one that met it.

It opened that of Elizabeth. She relaxed her Cerberus keeping of the door, and even went so far as to inform him that Miss Leaf and Miss Selina were out to tea, but Miss Hilary and Mr. Ascott would be at home shortly. He was welcome to wait in the parlour if he liked.

Afterwards, seized with mingled curiosity and misgiving, she made various errands to go in and look at him; but she had not courage to address him, and he never spoke to her. He sat by the window, gazing out into the gloaming. Except just turning his head at her entrance, she did not think he had once stirred the whole time.

Elizabeth went back to her kitchen, and stood listening for her young mistress's familiar knock. Mr. Lyon seemed to have listened too, for before she could reach it, the door was already opened.

There was a warm greeting—to her great relief: for she knew she had broken the domestic laws in admitting a stranger unawares,—and then Elizabeth heard them all three go into the parlour, where they remained talking, without ringing for either tea or candles, a full quarter of an hour.

Miss Hilary at last came out: but much to Elizabeth's surprise, went straight up into her bedroom, without entering the kitchen at all.

It was some minutes more before she descended; and then, after giving her orders for tea, and seeing that all was arranged with special neatness, she stood absently by the kitchen fire. Elizabeth noticed how wonderfully bright her eyes were, and what a soft happy smile she had. She noticed it, because she had never seen Miss Hilary look exactly like that before; and she never did again.

"Don't you be troubling yourself with waiting about here," she said; and her mistress seemed to start at being spoken to. "I'll get the tea all right, Miss Hilary. Please go back into the parlour."

Hilary went in.

CHAPTER VI.

ELIZABETH got tea ready with unwonted diligence, and considerable excitement. Any visitor was a rare occurrence in this very quiet family; but a gentleman visitor—a young gentleman too—was a remarkable fact, arousing both interest and curiosity. For in the latter quality this girl of seventeen could scarcely be expected to be deficient

—and as to the former, she had so completely identified herself with the family she served, that all their concerns were her concerns also. Her acute comments on their few guests, and on their little scholars, sometimes amused Hilary as much as her criticisms on the books she read. But as neither were ever put forward intrusively or impertinently, she let them pass, and only laughed over them with Johanna in private.

In speaking of these said books, and the questions they led to, it was not likely but that mistress and maid—one aged twenty-two, and the other seventeen—should occasionally light upon a subject rather interesting to women of their ages, though not commonly discussed between mistresses and maids. Nevertheless, when it did come in the way, Miss Hilary never shirked it, but talked it out, frankly and freely, as she would to any other person.

“The girl has feelings and notions on the matter, like all other girls, I suppose,” reasoned she to herself: “so it is important that her notions should be kept clear, and her feelings right. It may do her some good, and save her from much harm.”

And so it befel that Elizabeth Hand, whose blunt ways, unlovely person, and temperament so oddly nervous and reserved, kept her from attracting any “sweetheart” of her own class, had unconsciously imbibed her mistress’s theory of love. Love, pure and simple, the very deepest and highest, sweetest and most solemn thing in life: to be believed in devoutly until it came, and when it did come, to be held to, firmly, faithfully, with a single-minded, settled constancy, till death. A creed, quite impossible, many will say, in this ordinary world, and most dangerous to be put into the head of a poor servant. Yet a woman is but a woman, be she maid-servant or queen; and if, from queens to maid-servants, girls were taught thus to think of love, there might be a few more “broken” hearts perhaps, but there would certainly be fewer wicked hearts;—far fewer corrupted lives of men, and degraded lives of women; far fewer unholy marriages, and desolated, dreary, homeless homes.

Elizabeth, having cleared away her tea-things, stood listening to the voices in the parlour, and pondering.

She had sometimes wondered in her own mind that no knight ever came to carry off her charming princess—her admired and beloved Miss Hilary. Miss Hilary, on her part, seemed totally indifferent to the youth at Stowbury: who indeed were, Elizabeth allowed, quite unworthy her regard. The only suitable lover for her young mistress must be somebody exceedingly grand and noble—a compound of the best heroes of Shakspeare, Scott, Fenimore Cooper, Maria Edgeworth, and Harriet Martineau. When this strange gentleman

appeared—in ordinary coat and hat, or rather Glengarry bonnet, neither particularly handsome nor particularly tall; yet whose coming had evidently given Miss Hilary so much pleasure, and who, once or twice while waiting at tea, Elizabeth fancied she had seen looking at Miss Hilary as nobody ever looked before,—when Mr. Robert Lyon appeared on the horizon, the faithful “bower-maiden” was a good deal disappointed.

She had expected something better; at all events, something different. Her first brilliant castle in the air fell, poor lass! but she quickly built it up again, and, with the vivid imagination of her age, she mapped out the whole future, ending by a vision of Miss Hilary, all in white, sweeping down the Terrace in a carriage and pair—to fortune and happiness; leaving herself, though with a sore want at her heart, and a great longing to follow, to devote the remainder of her natural life to Miss Johanna.

“Her couldna do without somebody to see to her,—and Miss Selina do worrit her so,” muttered Elizabeth, in the excitement of this Alnaschar vision relapsing into her old provincialisms. “So, even if Miss Hilary axes me to come, I’ll stop, I reckon. Ay, I’ll stop wi’ Miss Leaf.”

This valorous determination taken, the poor maid-servant’s dream was broken by the opening of the parlour door, and an outcry of Ascott’s for his coat and gloves, he having to fetch his aunts home at nine o’clock, Mr. Lyon accompanying him. And as they all stood together at the front door, Elizabeth overheard Mr. Lyon say something about what a beautiful night it was.

“It would do you no harm, Miss Hilary; will you walk with us?”

“If you like.”

Hilary went up-stairs for her bonnet and shawl; but when, a minute or two after, Elizabeth followed her with a candle, she found her standing in the centre of the room, all in the dark, her face white, and her hands trembling.

“Thank you, thank you!” she said, mechanically, as Elizabeth folded and fastened her shawl for her,—and descended immediately. Elizabeth watched her take, not Ascott’s arm, but Mr. Lyon’s, and walk down the Terrace in the starlight.

“Some’at’s wrong. I’d like to know who’s been a-vexin’ of her,” thought fiercely the young servant.

No, nobody had been “a-vexing” her mistress. There was nobody to blame; only there had happened to Hilary one of those things which strike like a sword through a young and happy heart, taking all the life and youth out of it.

Robert Lyon had, half-an-hour ago, told her—and she had had to hear it as a piece of simple news, to which she had only to say, “Indeed!”—that

to-day and to-morrow were his two last days at Stowbury—almost his last in England. Within a week he was to sail for India.

There had befallen him what most people would have considered a piece of rare good fortune. At the London University, a fellow-student, whom he had been gratuitously "coaching" in Hindostanee, fell ill, and was "thrown upon his hands," as he briefly defined services which must have been great, since they had resulted in this end. The young man's father—a Liverpool and Bombay merchant—made him an offer to go out there, to their house, at a rising salary of 300 rupees a month for three years; after the third year to become a junior partner, remaining at Bombay in that capacity for two years more.

This he told to Hilary and Ascott in almost as few words as I have here put it,—for brevity seemed a refuge to him. It was also to one of them. But Ascott asked so many questions that his aunt needed to ask none. She only listened, and tried to take all in, and understand it, that is, in a consecutive, intelligent, business shape, without feeling it. She dared not let herself feel it, not for a second, till they were out, arm-in-arm, under the quiet winter stars. Then she heard his voice asking her,—

"So you think I was right?"

"Right?" she echoed mechanically.

"I mean, in accepting that sudden chance, and changing my whole plan of life. I did not do it—believe me—without a motive."

What motive? she would once hesitatingly have asked,—now she could not.

Robert Lyon continued speaking, distinctly and yet in an under-tone, that though Ascott was walking a few yards off, Hilary felt was meant for her alone to hear.

"The change is, you perceive, from the life of a student to that of a man of business. I do not deny that I preferred the first. Once upon a time to be a Fellow in a college, or a professor, or the like, was my utmost aim; and I would have half killed myself to attain it. Now—I think differently."

He paused, but did not seem to require an answer, and it did not come.

"I want, not to be rich, but to get a decent competence, and to get it as soon as I can. I want not to ruin my health with incessant study. I have already injured it a good deal."

"Have you been ill? You never said so."

"Oh, no, it was hardly worth while. And I knew an active life would soon set me right again. No fear! there's life in the old dog yet. He does not wish to die. But," Mr. Lyon pursued, "I have had a 'sair fecht' the last year or two. I would not go through it again, nor see any one

dear to me go through it. It is over, but it has left its scars. Strange! I have been poor all my life, yet I never till now felt an actual terror of poverty."

Hilary shrank within herself, less even at the words than at something in their tone—something hard, nay fierce: something at once despairing and aggressive.

"It is strange," she said; "such a terror is not like you. I feel none: I cannot even understand it."

"No, I knew you could not," he muttered; and was silent.

So was Hilary. A vague trouble came over her. Could it be that he, Robert Lyon, had been seized with the 'auri sacra fames,' which he had so often inveighed against and despised? that his long battle with poverty had caused in him such an overweening desire for riches, that to obtain them he would sacrifice everything else, exile himself to a far country for years, selling his very life and soul for gold?

Such a thought of him was so terrible—that is, would have been were it tenable—that Hilary for an instant felt herself shiver all over. The next she spoke out—in justice to him she forced herself to speak out—all her honest soul.

"I do believe that this going abroad to make a fortune, which young men so delight in, is often a most fatal mistake. They give up far more than they gain—country, home, health. I think a man has no right to sell his life any more than his soul, for so many thousands a year."

Robert Lyon smiled—"No, and I am not selling mine. With my temperate habits I have as good a chance of health at Bombay as in London—perhaps better. And the years I must be absent I would have been absent almost as much from you—I mean they would have been spent in work as engrossing and as hard. They will soon pass, and then I shall come home rich—rich—Do you think I am growing mercenary?"

"No."

"Tell me what you do think about me."

"I—cannot quite understand."

"And I cannot make you understand. Perhaps I will, some day when I come back again. Till then, you must trust me, Hilary."

It happens occasionally, in moments of all but intolerable pain, that some small thing, a word, a look, a touch of a hand, lets in such a gleam of peace, that nothing ever extinguishes the light of it: it burns on for years and years, sometimes clear, sometimes obscured, but as ineffaceable from life and memory as a star from its place in the heavens. Such, both then, and through the lonely years to come, were those five words, "You must trust me, Hilary."

She did; and in the perfectness of that trust her own separate identity, with all its consciousness of pain, seemed annihilated: she did not think of herself at all, only of him, and with him, and for him. So for the time being, she lost all sense of personal suffering, and their walk that night was as cheerful and happy as if they were to walk together for weeks and months and years, in undivided confidence and content, instead of its being the last—the very last.

Some one has said that all lovers have soon or late to learn to be only friends: happiest and safest are those in whom the friendship is the foundation—always firm and ready to fall back upon, long after the fascination of passion dies. It may take a little from the romance of these two, if I own that Robert Lyon talked to Hilary not a word about love, and a good deal about pure business; telling her all his affairs and arrangements, and giving her as clear an idea of his future life as it was possible to do within the limits of one brief half-hour.

Then casting a glance round, and seeing that Ascott was quite out of ear-shot, he said with that tender fall of the voice that felt, as some poet hath it—

“Like a still embrace,”—

“Now, tell me as much as you can about yourself.”

At first there seemed nothing to tell; but gradually he drew from Hilary a good deal. Johanna's feeble health, which caused her continuing to teach to be very unadvisable; and the gradual diminishing of the school—from what cause they could not account—which made it very doubtful whether some change would not soon or late be necessary.

What this change should be, she and Mr. Lyon discussed a little; as far as in the utterly indefinite position of affairs was possible. Also, from some other questions of his, she spoke to him about another dread which had lurked in her mind, and yet to which she could give no tangible shape—about Ascott. He could not remove it, he did not attempt; but he soothed it a little, advising with her as to the best way of managing the wilful lad. His strong, clear sense, just judgment, and, above all, a certain unspoken sense of union, as if all that concerned her and hers he took naturally upon himself as his own, gave Hilary such comfort, that even on this night, with a full consciousness of all that was to follow, she was happy—nay, she had not been so happy for years. Perhaps (let the truth be told, the glorious truth of true love, that its recognition, spoken or silent, constitutes the only perfect joy of life, that of two made one), perhaps she had never been so really happy since she was born.

The last thing he did was to make her give him an assurance that in any and all difficulty she would apply to him.

“To me, and to no one else, remember. No one but myself must help you. And I will, so long as I am alive. Do you believe this?”

She looked up at him by the lamp-light, and said, “I do.”

“And you promise?”

“Yes.”

Then they loosed arms, and Hilary knew that they should never walk together again till—when and how?

Returning, of course he walked with Miss Leaf; and throughout the next day, a terribly wet Sunday, spent by them entirely in the little parlour, they had not a minute of special or private talk together. He did not seem to wish it,—indeed almost avoided it.

Thus slipped away the strange, still day,—a Sunday never to be forgotten. At night, after prayers were over, Mr. Lyon rose suddenly, saying he must leave them now; he was obliged to start from Stowbury at daybreak.

“Shall we not see you again?” asked Johanna.

“No. This will be my last Sunday in England. Good-bye!”

He turned excessively pale, shook hands silently with them all—Hilary last—and almost before they recognised the fact, he was gone.

With him departed, not all Hilary's peace or faith or courage of heart, for to all who love truly, while the best beloved lives, and lives worthily, no parting is hopeless and no grief overwhelming; but all the brightness of her youth, all the sense of joy that young people have in loving, and in being beloved again,—in fond meetings and fonder partings, in endless walks and talks, in sweet kisses and clinging arms. Such happiness was not for her: when she saw it the lot of others, she said to herself, sometimes with a natural sharp sting of pain, but oftener with a solemn acquiescence,—“It is the will of God; it is the will of God.”

Johanna, too, who would have given her life almost to bring some colour back to the white face of her darling, of whom she asked no questions, and who never complained nor confessed anything, many and many a night when Hilary either lay awake by her side, or tossed and moaned in her sleep, till the elder sister took her in her arms like a baby,—Johanna, too, said to herself, “This is the will of God.”

I have told thus much in detail the brief, sad story of Hilary's youth, to show how impossible it was that Elizabeth Hand could live in the house with these two women, without being strongly influenced by them, as every person—especially

every woman—influences, for good or for evil, every other person connected with her, or dependent upon her.

Elizabeth was a girl of close observation and keen perception. Besides, to most people, whether or not their sympathy be universal, so far as the individual is concerned, any deep affection generally lends eyes, tact, and delicacy.

Thus when on the Monday morning at breakfast Miss Selina observed, "What a fine day Mr. Lyon was having for his journey; what a lucky fellow he was; how he would be sure to make a fortune, and if so, she wondered whether they should ever see or hear anything of him again,"—Elizabeth, from the glimpse she caught of Miss Hilary's face, and from the quiet way in which Miss Leaf merely answered, "Time will show;" and began talking to Selina about some other subject,—Elizabeth resolved never in any way to make the smallest allusion to Mr. Robert Lyon. Something had happened, she did not know what; and it was not her business to find out; the family affairs, so far as she was trusted with them, were warmly her own, but into the family secrets she had no right to pry.

Yet, long after Miss Selina had ceased to "wonder" about him, or even to name him—his presence or absence did not touch her personally, and she was always the centre of her own small world of interest—the little maid-servant kept in her mind, and pondered over at odd times, every possible solution of the mystery of this gentleman's sudden visit; of the long wet Sunday when he sat all day talking with her mistresses in the parlour; of the evening prayer, when Miss Leaf had twice to stop, her voice faltered so; and of the night when, long after all the others had gone to bed, Elizabeth, coming suddenly into the parlour, had found Miss Hilary sitting alone over the embers of the fire, with the saddest, saddest look!

so that the girl had softly shut the door again without ever speaking to "Missis."

Elizabeth did more; which, strange as it may appear, a servant who is supposed to know nothing of anything that has happened, can often do better than a member of the family, who knows everything, and this knowledge is sometimes the most irritating consciousness a sufferer has. She followed her young mistress with a steady watchfulness, so quiet and silent that Hilary never found it out,—saved her every little household care, gave her every little household treat. Not much to do, and less to be chronicled; but the way in which she did it was all.

During the long dull winter days, to come in and find the parlour-fire always bright, the hearth clean swept, and the room tidy; never to enter the kitchen without the servant's face clearing up into a smile; when her restless irritability made her forget things, and grow quite vexed in the search after them, to see that somehow her shoes were never misplaced, and her gloves always came to hand in some mysterious manner,—these trifles, in her first heavy days of darkness, soothed Hilary more than words could tell.

And the sight of Miss Hilary going about the house and schoolroom as usual, with that poor white face of hers; nay, gradually bringing to the family fireside, as usual, her harmless little joke, and her merry laugh at it and herself,—who shall say what lessons may not have been taught by this to the humble servant, dropping deep-sown into her heart, to germinate and fructify, as her future life's needs required?

It might have been so—God knows! He alone can know, who, through what (to us) seem the infinite littlenesses of our mortal existence, is educating us into the infinite greatness of His and our immortality.

THE EYE—ITS STRUCTURE AND POWERS.

ALTHOUGH every part of the human frame has been fashioned by the same Divine hand, and exhibits the most marvellous and beneficent adaptations for the use of man, the human eye stands pre-eminent above them all as the light of the body, and the organ by which we become acquainted with the minutest and the nearest, the largest and the most remote of the Creator's works.

Of the five "Gateways of Knowledge" by which we acquire all our information respecting the external world, the sense of *Sight* is the most important, whether we regard it in the structure of its organs, the value of its lessons, or the extent of its range. The organs of *Touch* and *Taste* have no wider range than the surface of the tissues which compose them. With the sense of *Smell* we can take cognizance only at a short distance of the offensive odour or of the grateful perfume. The organ of *Hearing* is the centre of a wider, though still a narrow, sphere. The sound of the troubled ocean, and of the gale which chafes it, the howl of the waving forest, or of the life which it shelters, and the peals of the thunder-storm, are all heard, indeed, from afar; but the eye carries us to the very limits of our planet-home,—to the mountain or ocean horizon, where the blue ether, with its drapery of clouds, bounds its unassisted view. Within this magic circle it revels amid the glories of nature and the grandeur of art; it lingers amid the beauties of lake and sea, of glade and forest, of cloud-capt towers and gorgeous palaces, and weeps, perchance, over the crowded haunts of life, and labour, and crime. Nor has it less delight when it returns to the domestic hearth, and surveys its household gods, and receives looks of love from the inmates of its happy home.

But though the blue firmament, with its "greater and its lesser lights," is the boundary of unassisted vision, the genius of man has disclosed to the human eye regions far beyond it, and given it powers of research denied to the other organs of sensation. With the *Telescope* it explores the universe of stars, insulating its own planetary system,—surveying, and measuring, and weighing the worlds which compose it, and desecrating amid their mountains and valleys the seats of life perchance more noble than its own. With the same guide it pierces into the sidereal heavens, discovering new suns and systems of worlds,—penetrating the depths of space, and receiving the last and feeblest ray which glimmers from the very boundary of creation.

Nor is the gateway of light less attractive when it leads us into the microscopic world, and displays to us the functions and organizations of atomic

life, and the elementary structures of the larger creations around us. The gateway of sound is impervious to the cry of that life which we crush beneath our feet, and to the joyous utterances of the living myriads which sport in the sunbeam. The senses of taste and smell teach us nothing respecting the animalcular kingdom, and could the human hand by its touch deal with the invisible organism, it would fail to disclose either its form or its functions. The sight alone pierces into the dwellings of the animalcular community,—expands the material atom into a world, lays open the prolific cells of vegetable and animal organization, and displays to the admiring observer the structure of those wonderful tissues which cover the seats of intellectual and animal life.

It is not difficult, for the poet has done it, to describe the state of our own world, or of the universe, were "the sun extinguished, the stars to wander darkling in the eternal space," and "the icy earth to swing blind and blackening in the moonless air;" but it is difficult to comprehend the condition of a world inhabited by a sightless population, or revolving in a medium through which no ray can pass. Were our nectar and ambrosia tasteless, and no perfume breathed from plant or flower, hunger and thirst would still be assuaged, and the lily and the rose would delight the eye. Were the chords of the lyre struck in vain, and the voice which soothes or alarms us mute for ever, the harmony of colour would replace, however imperfectly, the harmony of sounds, and the expression of the human face would still utter, however inarticulately, the language of reproof or of love. Without the ear man could have held communication and interchanged his labour with his fellow, however distant he might be. Though the rattle of the iron wheel were inaudible, and the watchman deaf to the shriek of the steam-pipe, the coloured beacon would guide him in his flight, and the pilot might conduct his ship round the globe, though he hears not the howl of the gale which shatters his rigging, nor the roar of waters which threaten to engulf him.

It would be more difficult still to imagine the condition of a world in space impervious to light, or with inhabitants insensible to its impressions. In "a world without a sun," the poet might well exclaim, "O what were man!" Ignorant of the form and size of his own planet, and of the worlds around it, he might, like the Proteus of the subterranean waters, or the mole working in the dark, subsist on the spontaneous productions of the soil, gathering the seed which he did not sow, and plucking the fruit which he did not plant; but his

gustenance would have been more precarious than that of the world of instinct as it now exists under his dominion. With the cunning of his fingers, the grasp of his hand, the power of his arm, and the vigour of his intellect, man might have sheltered himself from the elements even within walls of stone, and defended himself against enemies rational and irrational, and equally helpless with himself. His dwellings might have been grouped into cities, his cities into communities, and his communities into nations. His Reason would have given him some knowledge of the great first cause; and though he had neither sun, nor moon, nor stars to represent the beneficence which surrounded him, he might have deified the most gifted of the community who had pierced deepest into the darkness around, or whose genius or industry had procured new powers or new luxuries to their race. But whatever might have been his advance either in material or intellectual progress, the useful arts would have been slowly developed, and his highest pleasure would have been derived from the luxuries of music, and the productions which administer to the senses of Taste and Smell.

The superiority of the sense of light, and its value as a source of moral and physical enjoyment being thus established, we shall now proceed to give a popular account of the organ by which it carries on its operations, and of the processes by which the mind takes cognizance of its pictures on its retina, gives an external locality to the objects they represent, and in a state of health or disease, gives us visions of the past or foreshadows of the future.

The human eye, and that of all other animals, has always been regarded as the most beautiful, as well as the most important portion of their corporeal frame. In man it occupies a commanding position in the region of intellect, and its shape, and size, and colour are all made to harmonize with the other features by whose ever-varying expression we give utterance to the conceptions of the mind and the emotions of the heart. Over this noble combination the eye predominates, but its form, and colour, and movements, are its only fascination. In itself it has no expression. It neither smiles nor weeps. It opens its curtains in joy. It looks upwards in devotion, and downwards in sorrow, and sideways in research. It closes its windows in sunshine, and opens them in twilight, and in the depth of joy or of grief, it is bathed from the fountains around it; but in all these conditions it derives its expression from the casket in which it is incased, and the drapery in which it is clothed. But though the eye is dependent upon other forms for its smiles and its frowns, it exercises over them a despotic sway, appropriating their peculiar expressions, and concentrating them on the foe whom it fears or the friend whom it loves.

In order to give some idea of the exquisite mechanism of this organ, and of its singular adaptation to the various purposes which it subserves, we have given in the figure at the end (Fig. 8) a very fine representation of it in section according to the most recent anatomical dissection.* The figure is a section, from before backwards, through the eyeball of a child at birth, magnified fifteen times in diameter. The ball of the eye, which in the adult is about nine-tenths of an inch in diameter, is formed by a very dense, tough, and opaque white fibrous membrane *n* called the *sclerotic coat*, the blood-vessels of which are seen in the diagram. Into the front of the eyeball thus formed is inserted a circular transparent portion like a very small watch-glass, joining the white sclerotic coat at the points *r*, *n*, and forming its anterior part. This portion is called the *cornea*, which, together with the *sclerotic coat*, forms the eyeball, the cornea being, as it were, the window of the spherical chamber. It is nearly half an inch in diameter, and consists of three adhering layers,—the conjunctival membrane, which is the outer one; the proper cornea, which is the middle one and the thickest; and the membrane of Descemet. The proper cornea is fibrous, and exceedingly tough. Within the *cornea*, and in contact with the membrane of Descemet, is the aqueous chamber *r*, containing the *aqueous humour*, which consists of water and a little albumen. Above and below *r* will be seen a section of the *Iris*, which is a flat, or slightly convex, circular membrane, dividing the interior of the eyeball into two very unequal parts, called the *anterior* and *posterior* chambers. The iris has an opening in its centre, shown on the right-hand side of *r*, which contracts, in strong light, from about one-fourth of an inch, which is its width in ordinary light, to one-eighth of an inch, or even less, and expands again when the light is diminished. This membrane has a different colour in different eyes, and the pupil always appears as a black or dark spot in its centre, unless in some particular position of the observer, when a red light may be seen in the interior of the eye, like that which is more easily observed in cats or other animals. On the whole posterior surface of the iris is a layer of cells called the *uvea*, densely filled with a black pigment, and on its anterior surface there is another layer of roundish cells considerably flattened. The colour of the iris in *blue* eyes is produced solely by the black pigment seen through the iris; but in *black*, *brown* and *yellowish-brown* eyes, the colour is produced by a special pigment irregularly distributed through the iris. The anterior chamber of the eye contains

* This drawing by Dr. Löwig is taken from Reichert's *Studien des Physiologischen Instituts zu Breslau*, Leipzig, 1853.

only the aqueous humour, but the posterior chamber contains the *crystalline lens* *LL*, and the *vitreous* humour *LEDEL*. This humour resembles the white of an egg, and contains much albumen. It occupies, as the figure shows, a large part of the eyeball, keeping it in a distended state, and resisting pressure, like a bladder containing water. The humour or fluid is contained in a capsule or bag divided into several compartments, as shown by the curved lines. There is reason to believe that these compartments are subdivided into cells which communicate with one another by a small opening, and it is quite certain that these cells contain transparent filaments which float in them, and form themselves into knots which appear as black spots, called *muscae volitantes*, and which are often a source of unnecessary alarm to persons with the soundest eyes. An able French writer, M. Vallée, on very slight experimental grounds, supposes that the vitreous humour is not homogeneous, but diminishes in density from the crystalline lens to the back of the humour at *D*. The vitreous humour is enveloped by the hyaloid membrane, an extremely fine transparent pellicle, about 0.002 of a line in thickness.

The *crystalline lens* is a piece of mechanism of singular beauty, and is the principal agent in giving us a distinct picture of external objects. When seen in the eye, or even when taken out of it, immediately after death, it is as pure and transparent as a drop of water, and like a lens of glass, it does not show the slightest appearance of being composed of numerous parts, each singularly formed, and all as singularly arranged. It is suspended in a transparent capsule or bag, fixed at its margin to the sclerotic coat, and consists of numerous concentric laminae, like the coats of an onion, several of which are shown in the figure. These laminae are composed of innumerable fibres of equal length, tapering to both ends. In the human lens these are from 0.0025 to 0.005 of a line broad, and from 0.0009 to 0.0014 thick, and are delicate tubes containing a clear albuminous fluid. The sides of these tubes are ragged, like the teeth of a fine saw, so that the teeth of one fibre enter into the spaces between the teeth of the adjacent fibres, and bind them together. These fibres or tubes are so combined that the centre of the lens is more dense than the outer parts, the density gradually diminishing outwards. The mode in which the fibres are arranged, and their structure, is less distinctly seen in the human lens than in that of quadrupeds and fishes, and therefore we shall describe their structure and arrangement in these animals.

The structure and arrangement of the fibres in a lens is well seen in that of a cod-fish, which is a spherical ball about four-tenths of an inch in diameter. When boiled it is perfectly white, and when

the soft parts are removed, the inner laminae are transparent, and may be separated by the point of a knife, and examined by the microscope. In this fish, and in the turbot, haddock, herring, and many other fishes, and in birds, the fibres are arranged like the meridians in a globe terminating in two opposite poles, an arrangement which renders it necessary that each fibre should be thickest at the equator, and taper to a point at the poles. This arrangement is shown in Fig. 1.

If these fibres were round like wires, they could not be packed into laminae, and if their sides were smooth they could not adhere so as to form a film or plate. They are therefore flat, and have teeth like those of a wheel or rack, by which one fibre, *amnb*, is joined to *bpgc*, the one next to it. This is shown in the annexed figure (Fig. 2).

A very curious and instructive experiment may be made by separating one of the laminae from the lens when dry, and looking through it at a small bright flame. On each side of the white flame we shall see three or more coloured flames, the distance of which, from the white flame and from one another, is inversely proportional to the breadth of the fibre, that is, it is smallest with broad fibres, and greatest with small fibres. The coloured images will therefore separate from one another, when the part of the laminae through which we look is near the pole. The same coloured spectra may be seen by reflection from the surface of the laminae, and hence we have been able to trace the fibres to their terminations in poles or lines, by observing the separation of the coloured images. This line or row of coloured images is always perpendicular to the length of the fibres; but if the light is bright enough, we may observe other and more distant coloured images, the line joining which is parallel to the fibres. These fainter spectra are produced by the parallel edges of the teeth, and, what is important, we can measure the breadth of the fibres and the breadth of the teeth, by measuring the angular distance of these coloured images. In this manner the following estimate has been made of the number of fibres and teeth in the lens of a cod, four-tenths of an inch in diameter :—

FIG. 2.

Fibres in each lamina,	2,500
Teeth in each fibre,	12,500
Teeth in each lamina,	31,250,000
Fibres in the lens,	5,000,000
Teeth in the lens,	62,500,000,000

That is, the lens of a small cod contains five millions of fibres, and sixty-two thousand five hundred millions of teeth, forming a sphere as clear and pure as a drop of water!

In the lenses of other animals, the fibres are differently arranged. In the *salmon*, *shark*, *skate*, *porpoise*, *alligator*, and many other fish, and in the *hare*, *rabbit*, and some *serpents*, the fibres are arranged as in Fig. 3, where the fibres are shown as inserted in a line which is horizontal on the front of the lens, but vertical on the back of the lens. The consequence of this is that the fibres in passing from the horizontal line (which consists of what is called *two septa*, one on each side of the centre) to the vertical line, must have the curvilinear form shown in Fig. 4.

FIG. 4.

In some fishes the lens has *two septa* on one side, as in Fig. 3, and *one pole* on the other side, as in Fig. 1.

In the lenses of almost all quadrupeds, the *horse*, the *lion*, the *tiger*, etc., there are *three septa*, as shown in Fig. 5, but the three on the other surface are not parallel to those in the figure, but bisect the angles of 120° which they form.

FIG. 5.

In some fishes the lens has *three septa* on one side, and *two* on the other. In the *whale* there are *four septa* at right angles to one another, and in the *elephant* there are *nine*, namely, *three central ones*, and *two* at the extremity of each of the *three*.

Such is the structure of the crystalline lens, a piece of mechanism of which the genius of man cannot produce the rudest imitation. We have said that it is denser at the centre than at the margin, the density gradually diminishing outwards. This property, which was necessary in order to

make it give a more perfect image, and which art cannot impress upon its productions, shows itself when the human lens is examined in polarized light, by four quadrants of polarized light separated by a black cross, as shown in the central part of Fig. 6. This light has a particular character, which has been found to be *positive* when the density increases inwards, and *negative* when it decreases inwards. In the human lens, and in others where there is only one series of these quadrants, it is positive; but in examining the lenses of horses, and several other quadrupeds, we have found *three series* of luminous quadrants,* separated by a black cross, indicating in the clearest manner that the central part of the lens has its density diminishing outwards, the next portion its density increasing outwards, and the other portion diminishing outwards! The cause of a structure so strange and unlike what science could have anticipated, has not even been conjectured by philosophers. This remarkable structure is shown in Fig. 6, where the rings marked + have their density *increasing inwards*, and the ring marked — its density *diminishing inwards*.

FIG. 6.

Another curious property of the lenses of several animals, and perhaps of all, is, that when they are kept in distilled water, the rings or quadrants of polarized light change their form and even their colour, as if the lens was assuming a new and more complex structure. After a certain time, the lens bursts from the breaking of the capsule or bag which encloses it. The distilled water had been absorbed in such a quantity as at first to stretch and then tear the capsule, and the effect of its expansion was to give it a polarizing structure, which modified the polarizing structure of the lens itself. This experiment is of some practical value, as it shows that the disease of *soft cataract* in the human eye may be produced by the lens absorbing too much water, from an excess of water in the aqueous humour, and that *dry cataract* may be produced by the lens not receiving a proper supply of water, in consequence of the aqueous humour containing too much albumen.

The crystalline lens, thus marvellously constructed, is capable of forming distinct and perfect images of external objects upon any membrane fitted to receive them. This membrane is called the *retina*, and is shown in Fig. 8, at the back of the vitreous humour, as formed by several rings

* In the lens of a cow fifteen years old, we found *four series*, two positive and two negative, alternating with each other.

of different degrees of brightness. Till recently, it was regarded by optical writers, and even by anatomists, as a single membrane, like a sheet of white paper, or a surface of ground glass, which, in the Camera Obscura, receives and shows the images of external objects, either when we look at the paper or the ground glass; but, as we shall presently see, it is a compound membrane, consisting of several strata variously formed. One stratum of it, however, receives the images of external objects, and transmits the sensation to the brain by means of the *optic nerves* *D O*, of which the retina is an expansion. The truth of this may be shown by paring away, till it is exceedingly thin and transparent, the sclerotic coat of a fish or a quadruped. When the eye is thus prepared, an inverted image of external objects will be seen distinctly painted on the retina. That the optic nerve conveys a view of this picture to the brain, is proved by the fact, that blindness is produced by any injury done to that nerve.

In order to give an idea of this singular membrane, we have represented in Fig. 7, a section of it, near the entrance of the optic nerve, as magnified 170 times, according to the observations of H. Müller and Kolliker, published in Ecker's *Icones Physiologicae*.

The retina is a delicate and perfectly transparent membrane, varying in thickness from 0.06 to 0.10 of a line. It consists of five layers. No. 1 is the *first*, or bacillar layer, or the layer of rods and cones, or Jacob's membrane, consisting of "strongly-reflecting bodies, cylindrical and conical in form." The layer varies from 0.028 to 0.036 of a line. Every rod is a cylinder, 0.0008 of a line broad. Nos. 2, 3, and 4, forming the *second*, are the outer granular, the intermediate granular, and the inner granular layer. The granules are

FIG. 7.

round or oval bodies, reflecting the light strongly, and from 0.002 to 0.004 of a line in diameter. The *third* layer shown at 5, is a layer of grey cerebral substance, terminating interiorly in a layer of nerve cells at 6, and extending between the granular layers and the fibres of the optic nerve. The *fourth* layer, No. 7, is the expansion of the optic nerve or "optic bundles," the Müllerian fibres "forming their laminae between the optic bundles." The *fifth* layer is the limiting membrane.

The yellow or golden-yellow spot is an elliptical part of the retina, 1.44 long, and 0.36 of a line broad, and from 1.0 to 1.2 of a line from the centre of the entrance of the optic nerve at *D*, Fig. 8. In the middle of it is a colourless depressed spot, the *foramen centrale*, from 0.08 to 0.10 in diameter.

On the outside of the retina, in contact with the layer No. 1. in Fig. 7, is the *choroid coat*, which is a layer of hexagonal cells, 0.006 to 0.008 of a line in diameter, and 0.004 thick, "disposed in the manner of a mosaic," and containing a black pigment, which lines the whole inner surface of the choroid membrane. In the eye of Albinos the black pigment is absent, so that the hexagonal cells are perfectly pale.

When we look at the retina in front, in a dead eye, or in a living eye, which may be done by an ingenious instrument called an *ophthalmoscope*, we observe the small hole in it, about one-fortieth of an inch in diameter, called the *foramen centrale*, directly opposite the pupil *R*, and a little to one side of this, a slight elevation at *D*, where the optic nerve enters the eye. These two circular portions have peculiar properties. The *first*, which is found only in the eye of man, monkeys, and some lizards, is the spot of distinct vision, the vision being less distinct on every other part of the retina. The *second*, though sensible to light, does not give us the vision of any object whose image falls upon it. This is shown by two curious experiments easily made. Lay down a small speck of white paper upon a green or any dark cloth, and three or four inches from a narrow strip of paper two or three inches long. Look steadily at the white speck for a little while, and the white strip of paper, seen obliquely or indirectly, will disappear and reappear, the eye being unable to keep up a sustained vision of it. The white speck seen distinctly will never disappear in ordinary light; but if it is so faintly illuminated as to be hardly visible, it will disappear and reappear like the strip of paper seen obliquely. This inability of the eye to maintain a continuous vision of faintly illuminated objects is often alarming in the dark to the timid and the credulous, and has frequently been the cause of a particular class of apparitions which are seen at night by the young and the ignorant. The experiment is more curious when we use a luminous object. If we place two candles at the distance of a few inches, and look distinctly and steadily for some time at the right-hand candle, the left-hand candle will not disappear, but will expand into a mass of nebulous light, the centre of which is *blue*, surrounded with a ring of *yellow* light, the candle seen distinctly suffering no change.

But though the eye cannot see objects distinctly by indirect vision, it sees faint objects *more easily* than when they are seen directly or distinctly. Astronomers have found that when they desire to see a faint star, such as one of the satellites of Saturn, they can discover it by looking away from the place where they know it to be. When the eye is turned full upon the star, it disappears.

We have already stated that an *inverted* image of every external object is painted on the retina. How an object is seen *erect* by means of an *inverted* picture of it, is a problem that has often puzzled even grave philosophers. Considering the mind as placed behind the retina, and looking at the inverted pictures, some writers have believed that children see all things inverted, and that they learn to see them erect by comparing what they see with what they touch. Other writers, equally ignorant of the true law of vision, suppose that the inverted picture is made erect by some change which takes place at the entrance of the optic nerve into the brain. The truth is, that in place of its being necessary to convert, by any mechanism, the *inverted* image into an *erect* one, an inverted image is absolutely required, in order to obtain an erect one by the laws of vision.

In order to understand this by means of an experiment which anybody may make, let us suppose a man placed opposite a window, in the shutter of which there is a small hole. An inverted picture of the man will be formed on a sheet of paper held one or two feet behind it. The picture is inverted because the rays from the man's *head*, moving in straight lines, as light does, fall on the *lower* part of the paper, and the rays from his *feet* on the *upper* part of the paper. If the hole is a little larger than a pin hole, this inverted picture will be very distinct, though faint; and if the man is dressed in a white dress, strongly illuminated by the sun, a photograph might be taken of him, by receiving the image upon a proper sensitive ground.

Let us now suppose that when the eyelids, *FC*, *FC*, Fig. 8, are opened, an inverted picture of a man is formed upon the spherical retina, *EDE*. The rays which paint it fall in different directions on the retina, but it is a law of vision, called the *law of visible direction*, and one determined experimentally, that whatever be the direction of a ray falling upon the retina at any point, it gives us the sensation of vision in the direction of a line perpendicular to the retina at that point. As the rays, therefore, which proceed from the *head* of the man fall upon the *lower* part of the spherical retina, below *D*, and as a line perpendicular to that part passes upwards through the pupil *r*, it must show us the man's head *above* a horizontal line; and as the rays which proceed from the *feet* of a man fall upon the *upper* part of the spherical retina, above *D*, and as a perpendicular to that part passes downwards through the pupil *r*, it must show us the man's feet *below* a horizontal line. The inverted image, therefore, of the man upon a spherical retina *EDE*, must necessarily give us the view of a man in an erect position. We know that the sensation is carried to the brain by the optic nerve acting as the wire of a telegraph,

but we are entirely ignorant of the process by which the mind takes cognizance of the sensation thus conveyed. A very singular proof that an impression from any object upon the lower part of the retina gives us the upward vision of that object, that is, shows us the object in the direction of a line perpendicular to the lower part of the retina, we accidentally obtained in the following manner:—In opening the seal of a letter, a small part of the wax, with a fine specular reflecting surface flew off from the wax, and lodged itself in the upper eyelid to the right hand of *r*, Fig. 8. This piece of wax reflected the candle and other objects upon the table down upon the bottom of the eye, between *D* and *F*. The consequence of this was, that the candle and these objects were actually seen *above the head of the observer!*

Several difficult questions will be made plain by considering all objects as delineated by points like a stippled engraving. Every point will have its image on the retina. Those in the upper part of the object will have their image on the lower part of the retina; and those in the lower part of the object will have their image in the upper part of the retina. The direction, therefore, in which we see any point with our eye will be that of a line drawn from the point of the retina, through the centre of curvature of that membrane.

Physiologists, or optical writers, have found great difficulty in understanding how we see objects single with two eyes. If we look at a candle with one eye, we see it single. If we open the other, and either squint, or press it a little to a side with the finger, we see two candles, but if we cease squinting, or withdraw the finger, the one image will move towards the other, and cover it, so that a single image is formed by the one eye placing its image of the candle exactly upon the image of the candle formed by the other. Hence it follows that if we had a hundred eyes, the hundred images which they form would be seen when the muscles of the different eyes place all the images which are of the same size exactly above one another.

The superior and inferior recti muscles by which the eye is turned upwards and down, are shown surrounding the sclerotic coat *EDE*, into which they are inserted, and cut off at *c*, *c*. The other recti muscles, which turn the eye from right to left, and from left to right, are not shown in the figure on account of its being a vertical section.

Our limits will not permit us to say much of the eyes of animals. The eyes of quadrupeds are, generally speaking, similar in structure to that of man. In the larger herbivorous animals, such as the elephant and the rhinoceros, the eyes are small; while in the carnivorous races, the eye is larger, in order to have better vision in twilight

or at night, by the admission of a greater quantity of light through the pupil. But while beasts of prey are thus enabled to pursue their victims, the animals which they pursue are endowed with powers of vision, which enable them to descry their enemies at a distance, and escape from danger. The eyes of the smaller animals are exceedingly minute; but whatever be the size of the eye, whether that of the elephant or of a mouse, all ob-

jects are seen by them of exactly the same size. The image on the retina of the mouse is, no doubt, smaller than that on the retina of the elephant, but when they are transferred to an external locality by the law of visible direction, their magnitude is the same.

Perfect insects are endowed with eyes of a very remarkable kind. Each eye consists of a great number of separate cylinders, or, rather, hexa-

FIG. 8.

gonal tubes, which are finely shown in the grey dragon-fly. Each of these tubes has its outer end convex, and its inner end concave, so that it is a meniscus lens, which converges the rays through a pupil, behind which is a tube containing a viscid humour, which carries the rays to form an image on the retina behind it. The rays passing along each hexagon are prevented from interfering with one another, so that each tube forms an image on

the retina of a separate part of the object. The great number of hexagons, or separate eyes, render unnecessary the muscular apparatus which is given to other animals for moving their eyes, and extending the sphere of vision.

In another article we propose to give an account of some remarkable properties of the eye, and of certain abnormal phenomena of vision, such as colour-blindness, spectral illusions, etc.

DAVID BREWSTER.

A YEAR OF THE SLAVERY QUESTION IN THE UNITED STATES (1859-60).

By J. M. LUDLOW.

THE great question of the day, for the once United States of America, is visibly whether or not the slaves are to be emancipated? The difficulties of such emancipation are confessedly, and have always been known to be, enormous. Many of our public instructors, from the *Times* downwards, so insist upon those difficulties, set them forth in such detail, with such relish, as to lead many of their readers to the conclusion that they are well-nigh insuperable. But there is another question, which our said public instructors do not dwell upon,—whether it is possible *not* to emancipate? Whether the difficulty and danger of perpetuating slavery are not greater than those of abolishing it?

To solve this question with any accuracy, let us put aside the consideration of the present war, taking for the purpose a volume, the record of a period closing nearly a twelvemonth before Secession,—the 27th Annual Report of the American Anti-Slavery Society, for the year ending May 1, 1860, entitled, “The Anti-slavery History of the John Brown Year.” A one-sided authority, I shall be told. Certainly; so one-sided that it has not eyes to see what tells against itself in its own statements. Do we not all know these cases, in which the speaker tells everything without reserve, because he sees everything from the point of view of his own prejudices, and cannot conceive that any one else should see from any other? My readers shall judge for themselves whether such is or is not here the case.

The first thing which the volume in question (or any of its fellows) clearly shows, is that for many years prior to Secession there was in the Free States of the American Union an organized conspiracy against one branch at least of the supreme law of the land. The Constitution, and the laws to be made in pursuance thereof, are declared by it to be that supreme law. The Constitution enacts that persons “held to service in one state” and “escaping into another” (i.e., fugitive slaves), “shall be delivered up on claim of the party to whom such service or labour may be due.” The Fugitive Slave Law (1850) afforded means of rendering this provision effectual. But it is patent that any attempt to put this law into execution at the North was always liable to open resistance. On the 27th April 1859, a fugitive from Virginia, twice arrested, at Troy, New York, and again on the other side of the river, at West Troy, was twice rescued by a crowd, numbering many of the “most respectable citizens” of the town, “lawyers, editors, public men, and private individuals.” In October 1859, a fugitive from Missouri was similarly arrested at Ottawa, Illinois, by a crowd, “including some of the best and most respectable people of the place.” The rescuers might be punished, but their conduct was always sure to be openly countenanced, sometimes in high quarters, often by the population at large. In the Supreme Court of Ohio, on the trial of “the Oberlin rescuers,” two of the five judges held the Fugitive

Slave Law to be unconstitutional; and eventually the prisoners, all but one or two, who underwent a trifling term of imprisonment, were released, and received splendid ovations, in which professors, judges, etc., took part.

Rescuing fugitives when arrested, however lawless, is yet in some sort a defensive proceeding. But it is equally patent that an organization exists, termed “the Underground Railway,” for facilitating the escape of slaves. In June 1859, the *Detroit Advertiser* (Michigan) declared that “the Underground Railway was never before doing so flourishing a business,” mentioning the landing in Canada, in the course of a week or so, of ninety-four fugitives in four parties, one of seventy at once. From Troy (New York) in or about October,—in February 1860, from Albany (New York), from Newcastle (Pennsylvania), came similar news. The name of the “superintendent”—Stephen Myers—is published without concealment. Officers of the Federal Government played into his hands. At Utica (New York), a fugitive “called on a United States deputy-marshal, for assistance in journeying northwards, and he actually sent the guilty, ungrateful chattel to a well-known agent of the Underground Railroad.”

All this took place under the Presidency of Mr. Buchanan,—elected as the candidate of the Southern party, and who endeavoured to fasten slavery on Kansas even after senators from the slave states themselves admitted that the attempt was hopeless. But the men even of his own party kicked party principles overboard for the sake of aiding the conspiracy. “One gentleman who is ranked among the high-toned conservative democrats—a sustainer of the Fugitive Slave Law, the Nebraska Bill, and the Pierce and Buchanan administrations, on principle—is regularly called on for his subscription, when funds are needed. His sober and invariable reply is this:—‘Give money to help a fugitive slave to escape? not a cent! it’s illegal, and against the compromises of the Constitution! send him back to Virginia! send him back—and here’s a V (five-dollar note) to help pay the expenses of sending him back to his master.’ It is impossible to help laughing over the dry humour of this story. Yet think of the utter corruption of public morality on the subject of slavery which is implied in such a device to do what a man visibly deems right under the cloak of what he visibly feels to be wrong.

But this organized conspiracy is not simply, as that of any gang of thieves or coiners, one *against* the law,—one which proves the law by the breach, as much as obedience does by the observance of its provisions. It is one which in some cases seeks the colour of law for its proceedings, in others sets itself distinctly *above* the law, absolutely denying its validity. To the former type of feeling belongs the action of those who would nullify the Fugitive Slave Law by state legislation. In New Hampshire, in Massachusetts, New York, Ohio, “Personal Liberty” Bills declaring that no person in

the state should be treated as property, and inflicting penalties on any who should arrest, imprison, or carry out of the state any person on the ground that he or she owed similar labour as a slave, or other measures to defeat the Fugitive Slave Law, were pressed upon the respective Legislatures; passing in New Hampshire to a second reading, but eventually postponed.

Even such a course, however violative of the Constitution, was held superfluous by a more advanced section. The doctrine held by a class of "Radical Abolitionists" is, "that man cannot annul the law of God; that therefore, slavery being an immorality, no law to authorize it can bind the conscience; that wicked statutes should be disobeyed." Carrying these principles into action, little communities were formed in four separate counties of the border slave state of Kentucky, in avowed opposition to the local law as respects slavery. True, the doctrine of this particular set of "Radical Abolitionists" involves non-resistance, teaching that the "unrighteous penalties" of wicked statutes are to be "meekly borne, if rulers are unjust enough to execute them." But who would expect that the principle of the paramount unlawfulness of slavery, once admitted, will draw to itself in indissoluble union that of non-resistance? Who would not rather expect that its primary, general result would be, on the contrary, that of deeming that the evil was one which justified and called for the use of force for its extirpation?

Accordingly, instances are openly recorded of rescues of slaves by force. "A placard, announcing that a woman in Missouri was soon to be sold at auction, to go south, fell under the eye of a man in Kansas, who resolved to rescue her. With a pair of horses, a covered carriage, and two or three trusty companions, he hastened to the master's house; went in alone, and found him sitting, and the woman standing near. Pointing a cocked pistol at the master's head, he kept him sitting, while the woman, at his suggestion, took from her mistress's closet a shawl and shoes for herself, and blankets for her two children, and got, with the children, into the waggon. He then retired backward, keeping his pistol in steady aim till he reached the carriage, when he drove rapidly off across the Kansas line."

Again:—"Half-a-dozen slave-hunters from Missouri, pursued a fugitive into Kansas. At a tavern, on their journey, some Free-State men met them, bringing the fugitive; introduced him to his master, and, his hat and coat being shabby and fagged, invited the master to exchange with him, which he cheerfully did, and was then persuaded to lend him money enough to defray his expenses to Canada, and also to furnish him his horse, to lessen the fatigues of the journey. They then parted; the coloured man went north, and the slave-holder and his friends back to their homes."

Here, again, it is impossible to help laughing over the dry humour of the latter narrative especially, with all that one feels to be implied in it. But it is evident that the anti-slavery conspiracy has in such instances come to be directed, not only against slave-property, but against property itself as connected with slavery. The slave-owner is,

in plain English, robbed of shawl, shoes, blankets, hat, coat, money, horse; and the robbers glory in the tale.

No blood was shed in either of the above two instances. But it was otherwise in that undertaking which constitutes for the period the leading result of the principles in question, John Brown's attempt on Harper's Ferry. This, as is well known, was an endeavour by force of arms to set free a large number of slaves in Virginia. It took place on October 16, 1859; but long before this, a "provisional constitution" has been adopted, which distinctly contemplated slave insurrection, military officers appointed, arms and munitions of war collected. A little after ten one Sunday night, with twenty-one followers, sixteen white and five coloured, Brown took possession of an armoury, not even belonging to the particular slave state (Virginia) in which it was situate, but to the Federal Government, thereby plainly levying war against the United States themselves. Watchmen were taken prisoners, telegraph wires cut, rails torn up. A detachment sent to the house of a slave-owner four miles off, made him prisoner, took his carriages and horses, and whatever arms were found, and proclaimed liberty to his slaves; taking other prisoners on their return, and freeing more slaves. A railway train was stopped for some hours, and a porter who refused to obey the order to stop, shot at and mortally wounded. As day dawned, workmen coming to the arsenal, and all who appeared in the streets, were arrested. Shortly after day-break resistance was experienced; a Virginian citizen was killed by Brown's men, two of his own men were killed or mortally wounded. About noon the place began to be regularly invested by a force of citizens and militia, afterwards joined by United States marines, with two pieces of artillery; and after a conflict which lasted till the Tuesday, costing the lives of some five on the side of the assailants (including the mayor of the town, who had ventured unarmed within the range of fire), and of almost all the besieged, the engine-house, where four of them, with some rescued slaves who took no part in the fight, still held out, was stormed. The remainder of the band, with some who had been sent on detachment, were taken prisoners, and after trial, not, as might have been expected, for treason before the United States Court, but for murder before that of the state of Virginia, were hung.

Thus the anti-slavery conspiracy, in the year 1859-60, looked at in a legal point of view,—besides being a legal offence in itself, and involving other legal offences of minor character,—had for results, in certain cases, the offences of (legal) robbery, burglary, murder, and treason. What made the danger of this organized conspiracy greatest was, that it took its origin mainly, not in self-interest, but in a moral principle. There is no evidence, for the most part not even a probability, that in any of the instances quoted the violators of the law sought any personal advantage from what they did. The act of the "Radical Abolitionists," with their no-resistance principles, in settling here and there in Kentucky, was one of sheer self-sacrifice. As to John Brown's attempt, it is impossible to conceive of anything more utterly unselfish. Set

aside the fact of the undertaking being against law, and the whole compass of history contains nothing more beautiful than the spirit which breathes throughout it. The "Provisional Constitution" is from the first designed to hold both freemen and insurgent slaves who should join the expedition "under such strict control as to restrain them from every act of wanton or vindictive violence, all waste or needless destruction of life and property, all indignity or unnecessary severity to prisoners, and all immoral practices." After the final decision for action, Brown has "one thing" to press on his companions' minds. "You all know how dear life is to you, and how dear your lives are to your families; and in remembering that, consider that the lives of others are as dear to them as yours are to you; do not, therefore, take the life of any one, if you can possibly avoid it; but" (he adds in true Cromwellian fashion) "if it is necessary to take life in order to save your own, then make sure work of it." The latter part of the counsel was the only one he did not himself act up to. Even after stopping the train, he allowed it to pass on, "only," as he said, "to spare the feelings of those passengers and their families, and to allay the apprehensions that you had got here, in your vicinity, a band of men who had no regard for life and property, nor any feelings of humanity." He could easily have escaped; he ought, according to his original plan, to have retreated to the mountains. "But I had thirty odd prisoners, whose wives and daughters were in tears for their safety, and I felt for them. Besides, I wanted to allay the fears of those who believed we came here to burn and kill." During all his trial, his one anxiety was to make these words good by evidence. His instructions to his counsel were: "We gave to numerous prisoners perfect liberty; get all their names. We allowed numerous other prisoners to visit their families, to quiet their fears; get all their names. We allowed the conductor to pass his train over the bridge with all his passengers, I myself crossing the bridge with him, and assuring all the passengers of their perfect safety; get that conductor's name, and the names of the passengers, so far as may be. We treated all our prisoners with the utmost kindness and humanity; get all their names, so far as may be. Our orders, from the first and throughout, were, that no unarmed person should be injured, under any circumstances whatever; prove that by all the prisoners. We committed no destruction or waste of property; prove that." And his prisoners did prove accordingly, one, that he had "no personal fear of Brown or of his men during his confinement,"—that "Brown promised safety to all descriptions of property, except slave property;" another, that "he did not appear to have any malicious feeling;" another, that he "honestly endeavoured to protect his hostages, and wished to make peace more for their sake than for his own safety," etc. In his speech after condemnation, one passage in particular shows fully the spirit of the man:—

"I see a book kissed, which I suppose to be the Bible, or at least the New Testament, which teaches me that all things whatsoever I would that men should do to me, I should do even so to

them. It teaches me further to remember them that are in bonds as bound with them. I endeavoured to act up to that instruction. I say I am yet too young to understand that God is any respecter of persons. I believe that to have interfered as I have done, as I have always freely admitted I have done, in behalf of His despised poor, is not wrong, but right. Now, if it is deemed necessary that I should forfeit my life for the furtherance of the ends of justice, and mingle my blood further with the blood of my children, and with the blood of millions in this slave-country, whose rights are disregarded by wicked, cruel, and unjust enactments, I say let it be done."

Brown's comrades, white or coloured, showed the same spirit as himself. "If I am dying for freedom," said Copeland (a coloured man), "I could not die for a better cause. I had rather die than be a slave." Cooke, a white man, was prepared to die in such a cause, and thought he had done nothing to regret, so far as principle was concerned. "If I had 10,000 lives," wrote Hazlett, another white, the day before his death, "I would willingly lay them all down for the same cause. My death will do more good than if I had lived."

After the first conviction in the trials for the Harper's Ferry attempt, "barns, stacks, and other property to a large amount, belonging to several of the jurors," were burnt. Nearly 3000 soldiers, cannon loaded with grape-shot, the railroad taken possession of for military purposes, a threat of martial law, such were some of the preparations which were deemed requisite for the day of John Brown's execution. An actual panic prevailed indeed far and wide at the South.

We have now seen what a state of things had been produced by slavery at the North. There is only one word to describe it,—that which is used in John Brown's provisional constitution,—war. Slavery he there declared to be a "most barbarous and unprovoked war, by one portion of the citizens against another, the only conditions of which are perpetual imprisonment and servitude, or absolute extermination." Whether the term be correctly applied by them to slavery or not, there can be no doubt that it was in a war against it that the Abolitionists were engaged, and that by the laws of war John Brown and his companions alone deemed themselves bound, and alone sought to be justified. I repeat it, in 1859-60, abolitionism meant already, in the minds of many at least of its adherents, civil war.

Let us now turn to the other side of the question.

If the law of the United States for the recovery of fugitive slaves be express, if its penalties for impeding such recovery be positive, there exists a far larger body of legislation for the prevention of the African slave-trade, sanctioned by far severer penalties, since this is expressly declared to be piracy. But not only is the feeling largely spread at the South that all laws against the slave-trade ought to be repealed—not only did Mr. A. H. Stephens of Georgia, now the President of the Southern Confederacy, addressing his constituents in July 1859, tell them that "it is useless to wage war about abstract rights, or to quarrel and accuse each other of unsoundness, unless we get mere

Africans,"—not only was the law declaring the slave-trade piracy denounced as unconstitutional by conventions and the press, but that law was practically, constantly, and openly violated. The *Mississippian*, copying an announcement that several cargoes of Africans had been landed in the South, headed it, "Speed the Pirates," and invoked "prosperous gales" to "speed the honest pirates in their noble mission to augment the supply of Southern labour; and to obey the injunction to feed the hungry and clothe the naked." In July and August 1859, according to the *New York Herald* (a Southern organ at the North), "large cargoes of imported 'savages' had been lately landed on the coast of Florida;" there were said to exist "depôts of 'savages' in over twenty large cities or towns at the South;" a "trustworthy informant" had seen altogether, in Charleston, Memphis, and Columbus, "about 900 imported blacks;" it had been "notorious throughout Georgia and Alabama . . . that quite a fleet of slaves was expected to land cargoes within a month or two, in one of the Florida inlets;" "a person interested, whose name is known throughout the Union," had boasted "that twelve vessels would discharge their living freight upon our shores within ninety days from the 1st of June last, and had estimated the number of cargoes successfully transported into the interior, within eighteen months, at between sixty and seventy, by which more than 15,000 native Africans must have been added to the slave population of the South." In Texas, the sale of "400 likely African negroes, lately landed upon the coast," was advertised in a newspaper (14th May 1859). Farther inland, the sale and purchase of such, in smaller numbers, was equally referred to in the public prints. The *Memphis Observer* (Tennessee) quoted the prices paid for "three of the six native Africans . . . part of the cargo of the yacht 'Wanderer.'" The United States marshal in Florida was perfectly cognisant of the landing of a cargo of 600, but had no means of preventing it. In those cases where the law was still obeyed, it was only under protest. In indicting some alleged slave-traders, the grand jury of Savannah "unhesitatingly" advocated "the repeal of all laws . . . which directly or indirectly condemn the institution of slavery, or those who have inherited or maintain it."

Beside the 15,000 Africans thus added in eighteen months to the slave population of the South, the few hundreds of slaves yearly abstracted from their masters, by the Underground Railway or otherwise, were but a drop to a bucket. Beside the open piracy which, in defiance of the law, landed cargoes of Africans by hundreds at a time, the petty *émeutes* which brave fine and imprisonment for the sake of a rescue were but as a ripple to a storm-wave. The true parallels to individual cases of forced enfranchisement or rescue were to be found in the abundant instances of kidnapping, often of whites. A slave girl in New Orleans (May 1859) claimed and gained her pardon on the ground that she was white and free-born, and had been kidnapped from Arkansas about two years before. In Abbeville, Alabama (August), a "poor white" woman and her child, from Georgia,

were set free. A scoundrel, named Wilson, had fallen ill at the grandmother's house, decoyed the daughter away, and sold her to a "Rev. John Guilford," then returned, decoyed away her brother of fifteen, and sold him likewise. It is not stated whether the lad was rescued from bondage, like his poor dishonoured sister. The kidnappings of coloured men in free states were of course far more frequent. The instances of such in Illinois were "absolutely too numerous to mention." Sometimes they were effected by force, in others by fraud. In one case the victim was captured "after a chase of about eighteen miles, during which he was several times fired upon." Another was "dragged from his home at night." A forged bill of sale, by a father, of his children, was used in another case, but was defeated by the exhibition of free papers given them. On the 2d March 1859, four men went to the house of a free coloured man in Pennsylvania, pretending they had come to take him before a magistrate on a charge of robbery. Confident in his innocence, and recognising two of them as his neighbours, he went with them. They took him to a carriage in the woods, drew pistols, and compelling him to silence, took him to Baltimore, and lodged him in a slave-pen, where fortunately he was recognised and released. In the county of Delaware "negro stealing and selling out of the state" was said to be extensively carried on. At a single session, "indictments were found against two men for imprisoning a free negro, with intent to kidnap, and against one man for kidnapping and assisting to kidnap."

Cases of kidnapping from free states were likely at least to be heard of; much less so those of free coloured men arrested and thrown into slavery while passing through slave states,—including notoriously the district of Columbia, seat of the Congress. Torture, such as "a scourge of sheet-iron jagged with sharp points," is alleged to have been practised in such cases, to make the prisoners confess to being slaves.

It may be said that such kidnappings as I have mentioned, however atrocious, are only individual crimes, which do not touch the validity of the law itself which they violate. But the treatment by the South, especially after the John Brown attempt, of all whom it could suspect of favouring Northern views, shows an utter disregard of law. "We regard," said a Georgian newspaper, "every man in our midst an enemy to the institutions of the South, who does not boldly declare that he believes African slavery to be a social, moral, and political blessing. Any person holding other than these sentiments, whether born at the South or North, is unsound, and should be requested to leave the country." Faith in slavery is thus erected into a creed, absolutely obligatory on all the inhabitants of the South.

Instances in which this creed appears to have been enforced by the mildest means are those in which agents of Northern houses at the South, business men on their way thither, were compelled to return. When a book-agent, arrested in Alabama, while soliciting subscriptions for a *Life of Christ*, published at the North, was marched off by the military, a teacher of music, nine years a resident in Georgia and Alabama, who had always

spoken in favour of slavery, because he refused to head the march with his flute, on the ground that the book-agent had not deserved expulsion, received a written warning to leave the state immediately, under penalty of tar and feathers, and by advice of his wife, a Southern woman, started before daylight for the North, "abandoning a thriving business."

So much for threats. Let us come to actions. Among the mildest of these I may reckon the wrecking, by a mob in Newport, Kentucky, of the offices of the *Free South*, the press and printing materials of which, to the value of about 3000 dollars, were thrown into the Ohio river. What is remarkable about this case is the legal upshot of it. The victim appealed to law, and true bills were found against many of the rioters. But the State attorney argued that the *Free Press* constituted a nuisance which the citizens had a right to abate. The judge decided accordingly, and the indictment was quashed. In Amherst county, Virginia, one Nuchols, who was ducked for using seditious language, was bold enough to procure a warrant for the arrest of the offenders; "but instead of its being executed, the magistrate who issued it narrowly escaped a ducking himself."

Power, a young Irish stone-cutter at Columbia, South Carolina, for saying that slavery "caused a white labourer at the South to be looked upon as an inferior and degraded man," was, by order of the vigilance committee to the police, arrested, locked up for three days in a cell, then taken before the mayor, when the treasonable words were proved, sent back to prison for six days, then taken out again, dragged about through the streets and State-house yard (where he had been at work) through the mud and puddles, in the presence of thousands, including members of the Legislature; then marched three miles out of the city, and after receiving thirty-nine lashes, covered to the waist with tar and feathers, thrust without shirt or coat into the negro-car on the railroad, and sent to Charleston, the engineer at every station whistling a mob together to insult him, whilst a citizen of Charleston who gave him a cup of coffee and a biscuit was threatened with vengeance by the mob. At Charleston he was again put in prison for a week, but was more kindly treated, although the mob repeatedly threatened to wrest him out of the jail, until finally he was shipped off to New York.

A Northern man, "supposed to be an agent of some Abolition Aid Society or Underground Railway," was arrested by a mob in Pulaski county, Virginia, and, "one of the most influential and worthy citizens of the county acting as judge, jury, and executioner," was hung by the neck till nearly dead, then taken down, and when restored enough hung again, and so on, five times over, in memory of John Brown and his four chief companions. He was then sent off, under warning, "that if ever caught in Virginia again, he would have to take the sixth and fatal leap."

In all the foregoing cases (and in various others which might be quoted), some pretext, however baseless, connecting them with slavery, is observable. But this was by no means necessary. A Maine lumber brig, the "B. G. Chaloner," was loading on the Statilla river, in December 1859. Mr.

Morrissey, a wealthy planter, invited the captain and his wife and the mate to take their Christmas dinner with him. The crew rowed them to Mr. Morrissey's landing-place, about five miles from the plantation, and remained behind at the house of an acquaintance of the captain's. Six armed men, headed by one David Brown, came to the house, professedly to take them to jail. The sailors, conscious of their innocence, went with them. They were taken to the wood, tied to a tree, and a negro was made to give three of them fifty lashes each, and the fourth and strongest, one hundred, after which they were sent back to their vessel. On the return of the captain and his party the next day, they were stopped in like manner, and each of the men received also fifty lashes, the captain's wife, on her interceding, being told to "stop her crying," or she would be served in like manner. Here the only ground assigned for the act was that the men were Northerners.

Observe that the outrages recorded constitute but a mere fraction of those actually committed. "Dead men tell no tales," and probably the worst of all have remained secret. Of the large scale upon which many were committed, of which we have yet no details, let the following serve as an indication:—"A despatch from New Orleans, on the 13th September 1859, says that 'the planters residing in the parish of Lafayette, in this state, having been seriously annoyed by outside persons tampering with their slaves, formed a vigilance committee a few days since, and expelled a large number of obnoxious persons from the parish, after administering to them a severe punishment.'" Let the reader decide for himself what slave-owners are likely to mean by "severe punishment." After cases like the above, the mere violation of the mails, the stoppage and burning of newspapers and other documents supposed to be tinged with abolitionism, cannot arrest our attention.

The general aim of the South was, moreover, to extirpate coloured freedom. An attempt to procure an act for the enslavement or expulsion of the free coloured men failed indeed in the border slave states of Maryland, Kentucky, and in Tennessee. Such an act was passed in North Carolina (a state which Mr. Olmsted, nevertheless, observes to be more liberal than its neighbours towards the negro), failed to become law in Florida only for want of the Governor's signature, in Mississippi through the vote of the senate, was much called for in Alabama. An act was passed in Georgia enacting perpetual slavery for a second conviction of a free negro for vagrancy, idleness, or profligacy. Louisiana had enacted penalties of imprisonment with hard labour for all free coloured persons not natives of the state who should fail to leave it on five days' notice, craftily supplementing the act by another for encouraging voluntary enslavement. Tennessee enacted heavy fines on railway authorities and conductors who should allow free negroes to travel except under the care of white citizens, vouching for their character in a bond for 1000 dollars. Arkansas had already passed an expulsive or enslavement act, which took effect on the 1st January 1860. Missouri tried to pass one for prospective enslavement, which failed through the Governor's veto.

Thus, if at the North we find a party which, on the subject of slavery, deliberately sets itself above the law, and deems itself justified in violating it, at the South we meet with the far graver spectacle of well nigh a whole people in full possession of a legislation in agreement with its own sentiments, or, at all events, of the political power required to shape it into such agreement, but quite without respect for the provisions of the law, always greedy for greater severities than it may happen for the time being to allow, lawless for sheer lawlessness' sake. Whilst the abolitionism of the North appeals from the law to a higher law, the South, in all that touches its "peculiar institution," deems a mere selfish interest a sufficient ground for barbarism, such as a wild Tartar of the steppes would be ashamed of.

All this lawlessness, at North or South, be it observed, centres round the fact of slavery. But wherever a source of lawlessness is opened at any point by legislation, that source is sure to overflow in all manner of offences. And when, as in the case of American slavery, the source of lawlessness is one not local or occasional in its operation, but intermingled with the whole polity of the country, with the whole life of nearly one-half of its citizens, there comes a time when it becomes a matter of national life and death to leave that source open any longer.

This was visibly the case at the time I am speaking of. The slave-owners insisted, not only on maintaining, but on extending slavery. "The South," said Mr. Singleton of Mississippi in Congress, "have made up their minds to sustain slavery. We don't intend to be prescribed by present limits; and it will not be in the power of the North to coerce the 3,000,000 of freemen at the South, with guns in their hands, and prevent their going into the surrounding territories. Gentlemen must remember that a gallant son of the South, Jefferson Davis, led our forces into Mexico, and, thank God, he still lives, perhaps to lead a Southern army." In other words, the South was determined that the source of lawlessness should have new channels opened to it on all sides.

Now there are only three ways in which such a state of things could be put an end to:—1. Suppression of the Anti-Slavery Movement; 2. Secession; 3. Suppression of Slavery.

The first was hopeless, for after wielding almost without interruption for some thirty years the whole powers of the Union, and playing fast and loose whenever convenient with the Constitution, the pro-slavery party had been obliged to give up the attempt to put down the anti-slavery movement, and to adopt the next means, Secession.

That experiment we now see in progress. But in principle it is already a failure. I do not here use the word "principle" in any moral sense. No one who believes in a righteous Judge and Ruler of the world, can believe also that a polity which deprives the bulk of the labouring population of the most sacred rights of human nature, the rights of marriage, of fatherhood, of self-improvement, of the free use of God's Word—which legally prostitutes the female to her master (since the slave code does not acknowledge as an offence any violence done by the master to the

honour of his slave), is capable of success. But I say that the political principle, in virtue of which secession took place, as set forth in the above-quoted speech of Mr. Singleton's,—that of the extension of slavery to the yet uncolonized territories of the American Union,—has gone to wreck already. In spite of a few surprises of posts at the first, the territories have mainly gone with the Federal Government. Utah, deemed at first disaffected to the North, has applied for admission into the Union. Colorado, Nevada, New Mexico, have each furnished their contingent of troops to the Federal army. In New Mexico, for some years past the dearest hope of the South,—New Mexico, the proximate slave state, into which slaves were introduced by subscription for the very purpose of declaring slavery perpetual within it, the frontier forts have been retaken by the Federal commander, who deemed the country so secure behind him that he was proceeding thence farther south to Arizona, excepting the "Indian territory" the last remaining land in debate between the contending parties throughout the territories.

The South is thus hemmed round, except upon one foreign frontier, by soil free or destined to freedom, as by a wall of fire. It cannot (as a slave state) extend itself except by foreign conquest. It cannot avoid foreign conquest except by re-opening the slave-trade. It cannot re-open the slave-trade without discontenting whatever portion of the slave-breeding states still adhere to it, exciting the jealousy of all states whose tropical colonies have passed under the *régime* of free labour, and rendering itself a nuisance to the world. If once let alone by the North, it may no doubt subsist for some time upon an open slave-trade, as is the case already in the Spanish islands. But that will be a new principle of political existence, adopted in consequence of the failure of the present one.

Meanwhile, its territory, instead of being, as was originally hoped, co-extensive with the legal area of slave soil, has fallen far short of it. Delaware, Maryland, the district of Columbia, Western Virginia, almost all Kentucky and Missouri (to say nothing of Eastern Tennessee, or of the lodgments of Federal troops in North Carolina, Georgia, South Carolina, Florida, Louisiana) are gone. Supposing the contest to terminate at the present moment, the frontier of the projected Confederacy has been driven, on almost every point, many miles farther south, and has become, for the most part, a mere geographical line, powerless to oppose any physical barrier to the exit of those whom the South may want to keep in, to the entrance of those whom it may want to keep out. With such a frontier, it would have to face the vicinity of a nation already in rapid process of constituting itself on directly opposite principles to its own, and which would then openly and legally carry out the process. If, with the legislative and judicial power of the Union in its favour, it had to secede from that Union for fear of the anti-slavery feeling; what will it do when legislation and Supreme Court are remodelled? How powerful the restraint of law upon the anti-slavery propensities of the North has been till now; any one can judge by the struggles made hitherto to carry on the war without infringing upon the privileges, at least of

loyal slave-owners. Suppose the weight of the law thrown on the other side, what will not be the strength of those propensities? The South could tar-and-feather and drive out Northerners, as we have seen, with impunity. Will it venture to do so when every such expulsion will be a *casus belli*? But if they were too dangerous to be suffered to remain while there was a Union, how much more dangerous will they be when there is none? Is the South, then, prepared to make itself a Paraguay or a Japan to the North? Is it ready to lay waste a whole broad strip of frontier-line, in order to keep out the unclean thing—freedom? Is the great water-highway of the Mississippi to be closed against Northern commerce, because that unclean thing might be carried under its flag? Are the Cumberland, the Tennessee, and other streams, to flow unavailable for Southern trade itself, because, having their outlet in free waters, they might carry down to them and away chattels, seeking to be men,—or lest the contagious atmosphere of the Ohio should ascend their course? Such remedies are the only conceivable ones, if the South would remain true to slavery. But is there a sane man who believes them to be possible? Can two peoples of the same speech, in the main of the same blood, bound together by so many ties of history, politics, religion, literature, geography, and trade, remain thus isolated from each other? Can the great West permanently submit to be deprived of the Mississippi as an outlet? to say nothing of the numerous rivers farther west, less familiar to us in name, which, having their source in the centre of the continent, debouch into the Gulf of Mexico?

American secession, therefore, on the ground of slavery, is doomed to failure. I do not say when—whether in months or years. I do not say that it will take place by force of arms from the North. I leave on one side the foreign relations of the Confederacy,—the probabilities, every day greater, of its being by degrees permanently excluded from the cotton-market and other sources of supply. I do not dwell upon the ravage by the Southerners of their own coasts, the destruction by them of their own corn, their own cotton, the recommendations by various of their newspapers to cultivate no more cotton, the fall in the value of slaves which such steps imply, the social changes which must follow from them; nor yet upon that rapidly increasing dearth of comforts and necessities which has reduced one Virginian newspaper to be printed on brown paper, stopped the publication of another, the consequent application, noticed by President Davis, of the population to manufactures, and the series of equally vast changes which must flow from these causes also. I say simply that the slave republic, surrounded already, permeated as it must be, in spite of itself, by freedom, will be as the fabled scorpion in the midst of the living embers, doomed to self-destruction.

For the only real solution to the difficulty lies in the abolition of slavery. Only by rooting out that which, even under a nominal union, set the whole South against the North, and much of the North against the South; which, in a state of separation, must be a chronic cause of international war,—can South and North co-exist peaceably once more, if not as one, then as two separate States. In

spite of the Constitution, in spite of itself, the North is even now carrying out that abolition. That the slaves are not, as a mass, disposed for insurrection—for active co-operation with the invader—is evident. That they are quite ready to escape from slavery, was proved eleven years ago, by the very demand for a fugitive slave law; is proved now by the cumbering masses of “contrabands” which hang about every advance and lodgment of Federal troops. Suppose every Federal soldier removed to-morrow from Hatteras, and Beaufort, and Key West, and Ship Island, the recollection of their visit will not be lost. The most brutalized of black field-hands will have seen things which will have brought out in him twice as much of the man as ever woke up before. Let a few years more elapse, and another war occur, and other expeditions be sent down from the North, this time with a clearer purpose and a more certain tone, and they will be no longer for the slave population strange visitors, but the eagerly-looked for deliverers and avengers.

The one means which the South would have to avert forcible emancipation—to set itself right with history, with mankind, and with God—would be, as has been recently suggested by a French writer, to undertake the work of emancipation itself. In doing so, it would only be returning to the policy of its ancestors, that of the illustrious group of Virginian Presidents who for so many years ruled the youthful years of the Great Republic. As late as 1831, emancipation was discussed in the Virginia Legislature. Most of the early anti-slavery societies comprised or were formed of slave-holders. If the South persists in its wicked pro-slavery policy, emancipation must sooner or later be effected forcibly by the North. Tremendous as may be the difficulty of doing so, it is less tremendous than the difficulty of perpetual non-intercourse, and the danger of perpetual warfare with the South, which are the only substitutes for it. But I am inclined to think the question is likely to settle itself to a great extent. President Lincoln and Congress may talk about purchasing territory for the settlement of enfranchised Africans; but the simple fact is, that the Africans won't go, and no machinery in modern times that I am aware of has ever been found sufficient to carry away four or five millions of men at once, against their will, from one country to another. There is certainly not one negro too many in the Southern States for the proper cultivation of the soil and the development of its resources: the climate suits the coloured population; their home is there; they want simply to be left where they are. Emancipate them, and so far from their leaving the South, there will, on the contrary, be a rush thither from the North of its whole free coloured population, including men of very high character, capacity, and attainments, and whose average education is actually higher already than that of the whites at the South—the proportion of children attending school amongst the Northern free-coloured men being one-ninth, against one-tenth amongst the Southern whites; a population, consequently, admirably fitted to lead and train the newly enfranchised.

Over a large extent of seaboard at least, emancipa-

tion is being already practically effected. The most energetic part of the white population is at the war; of their families whom they left behind, most of the wealthiest have fled into the interior; those who remain, awed by the proximity, or the rumoured approach, of the men of the North, are utterly powerless to coerce the coloured population. Not near Beaufort alone, but throughout a large portion of South Carolina, I am assured that the slaves are actually in possession of their master's houses and plantations; and the reason why they do not rise, is simply that they have nothing to gain by rising. They have no reason for particular sympathy with the North as yet, since it can only talk of transporting them as a reward for their assistance; whilst North and South are cutting each other's throats, "their strength is to sit still." They are not idle; 3000 of them, as we have heard lately, are employed at wages by one contractor, gathering cotton in the sea-islands.

Whether the North desire it or no, therefore, Emancipation will work itself out, through every bloody struggle that may take place between Federals and Confederates. The sooner it is completed, the better will it be for all parties. It has been hinted already that the Confederate commissioners offered, in exchange for immediate recognition, the emancipation of all slaves to be born after a given date. I do not believe that they were authorized to make such an offer. I do not believe, considering the character of the body which they represent, founded as it is on the negation of the very principle of national unity, that the offer, if made, could be trusted. But the rumour itself shows what is in the bottom of men's minds,—the secret instinct which tells them that a revolution, accomplished for the very purpose of extending slavery, must end in the emancipation of the slave.

LOVE IN DEATH.

[A woman perished in a snow-storm while passing over the Green Mountains in Vermont; she had an infant with her, who was found alive and well in the morning, carefully wrapped in the mother's clothing.]

On the death-darkened air,
Through the wild storm, amid the drifting snows,
A voice of murmured soothing blent with prayer,
Solemn in trustful tenderness, arose.

A mother's spirit in its parting clung
Unto her child—a mother's soul was stirred
Through all its depths—a mother's fondness hung,
And trembled on each faint and faltering word
Of blessing and farewell; and, as the bird
Plucks the soft plumage from its downy breast
To shield its young, and cowers with quivering wing
More closely o'er them, to her side she prest
Her babe, and strove, with warmth and sheltering
To frame within her clasping arms a nest:
"Sleep! oh, my baby, sleep! the night draws on.
Sleep once again on thy poor mother's breast;
Ere yet the morning dawns I shall be gone,
And thou no more wilt know such place of rest;

Colder and yet more cold,
Dark with the storm the wild winds round us sweep,

Yet still above thy slumber, as of old,
Thy mother watches. Sleep, thou dear one, sleep!
Closer and closer still

Nestle unto me, darling, safe from harm;
Cold, cold, is all without, and deathly chill,
Only the heart—thy mother's heart—is warm.

"Yet there it will be cold,—

Yes, even there, my child! and, oh, how soon.
The snow drifts thickly round us—fold by fold
Around the sinking form, the weary feet
That may no longer bear us o'er the wild,
Silent and swift, a wreathed winding-sheet
Is closely drawn: but not for thee, my child!
No, not for thee! my parting soul hath striven
With Him, the merciful—unto this hour,
Unto its love, its anguish, hath been given
A spirit of prevailing and of power;—
And I have borne it from thee! To his breast
Death folds me close as I fold thee to mine;
Cold kisses are upon my cheek—to rest,

To sleep they woo me, soft and deep as thine:
A heavy mist steals on—I feel my breath
Drawn slowly from me; yet my love shall keep
Its watch above thee still, and thou shalt sleep,
Sleep safely, sweetly, in the arms of DEATH,
And wake to life once more! Kind eyes shall weep,
And kindly hearts be troubled, when they see
The sweet unconscious smiling of thy face;
For thou wilt smile, and bear no thought of me.

Too young art thou for grief,
Too young for Love, my child, for Memory!
Yet not less fond the last, the lingering kiss,
Yet not less fervent from the heart the prayer;
Because I know thou wilt not, darling, miss
Thy mother in her fondness, in her care!

"But he will think of me—
Thy Father. Thou wilt grow up by his side,
And ever bring the thought of her that died
Lonely, but loving, blessing him and thee.

The flower, the flower may fall
When it hath shielded in its folded breast
The bud of promise, loveliest,
Most dear of all.

And he will not be lone
In sorrow or in joy. Thy voice shall fill
The silence of his soul with many a tone
That once was mine, and whisper to him still
Of things long past, and I shall look at him
Through thy sweet eyes—young, loving eyes, that
shine

In light and tenderness when these are dim,
Shall answer his with smiles that once were mine.

Sleep, dearest! in the night
Of death thy mother's arms around thee twine
More closely, that her spirit in its flight,
May send a message of its love on thine.

"The snows will melt away,
And green leaves rustle light o'er hill and plain;
Through the sweet scent of hidden waters stirred,
And the clear shining after summer rain,

The blade will spring ; then on strong wing the
bird
Will rise to the blue heaven, ascending slow ;
The fisher will go forth upon the lake,
The hunter to the forest with his bow ;
But far beyond the flight
Of Indian arrow, far beyond the ken
Of mountain eagle in his soaring might,

I shall have passed, returning not again :
These ancient Hills shall wake
Like giants from their slumber at the breath
Of Spring, and from their lofty summits shake
The icy chains of stillness and of death ;
But not till they shall hear
A sound, and move in trembling from their place,
Not till the mountains and the rocks in fear

Shall flee, and leave where they have been no trace,
May I arise. O Saviour ! earth and heaven
Shall pass, but Thou endurest. Unto Thee
I yield my spirit ; Father, bless thou me !
Bless with Thy love the child that Thou hast
given !"

And in that prayer her fervent spirit pass'd.
The deep night fell, the keen and hurrying blast
Sang her wild dirge ; the straining clasp grew cold,
Yet pressed the little one with rigid hold
Still to her heart ; when morning came the child
Woke peaceful in its mother's arms and smiled.

DORA GREENWELL.

At Home in the Scriptures.

A SERIES OF FAMILY READINGS FOR THE SUNDAY EVENINGS OF MARCH.

FIRST EVENING.—SOBERNESS.

"I am not mad."—ACTS XXVI. 25.

LONG, long ago, a native Egyptian, whose cottage stood near one of the slave settlements, might have observed a family of the captive Hebrew race bringing a lamb to the house one night, and after mysteriously sprinkling the door-posts with its blood, assembling to eat it in a strange and inexplicable fashion, with their loins girt, and sandals on their feet, and each holding a staff in his hand, as if the poor bond brickmakers had any liberty to plan or execute a journey. The people are mad, thinks the Egyptian, as he quietly eyes from his own door their eccentric and unintelligible movements. Not so thought he at next morning's dawn, as he bent o'er the bed on which his first-born lay a corpse, and heard in the distance the marching music of the emancipated Hebrews as they gathered to the rendezvous. No: those poor Hebrews were not mad when they sacrificed and ate their first passover: and he who thought them mad at night, observes and owns their wisdom in the morning.

The valley of the lower Jordan was a rich plain, studded with thriving cities, when Lot looked down upon it from the brow of the neighbouring hill, and chose it for his home. A lucky man was he. All his expectations were fulfilled. Soon he became a chief citizen of the chief city. His sons were rising men; and his daughters were introduced into the best society. His house was one of the most substantial in the city, and his agricultural wealth enabled him to maintain it on a scale of princely hospitality. One day three angels came to this prosperous man, on an errand from their Master. They advised him to abandon all, and flee with his family to the mountains. As he lingered, not absolutely refusing obedience, but unable to make up his mind to the costly sacrifice, they laid hold of his hand and hurried him away. Are not the angels mad to tear a prosperous and respectable man so rudely from so warm a berth; and is not he mad himself for consenting to go? When Lot paused, panting for breath, half way up the hill-side, and saw the smoke covering the doomed cities as with the pall of death, he well knew that the words which warned him away to a refuge in the rock were words of truth and soberness.

In a high latitude on the southern ocean, far from the track of the world's commerce, a noble ship, well found and well manned, is spreading her sails to the breeze and bounding lightly through the waves, her rough exploring work completed, and her head turned homeward at last. All suddenly the whole ship's company congregate astern; some hasty words are spoken; the nearest boats are lowered; with only a bit of bread for their next meal, and not a scrap of clothing except what they wore, they hurry over the ship's sides, stow themselves away in the boats, and cut adrift

on an unfrequented sea. The men are mad, are they not? No; for a smouldering fire deep in the ship's hold beyond their reach, has wormed its way to the magazine, and it is but a reckoning of minutes to the time when the ship will be blown into a thousand fragments. The men are wise men. "Skin for skin; yea, all that a man hath will he give for his life." They have given away all that they had for their life; and they have made a good bargain. Had you been there, you would have applauded their counsel, and joined in their act.

A few years ago, in the United States of America, a young woman of taste and genius burst into sudden and great celebrity as a brilliant writer in the periodical literature of the day. After a youth of constant and oppressive struggle she found herself at length an object of admiration and envy throughout her native land. The world was all before her; the ball was at her foot. Fanny Foster's troubles were over, and her fortune made. She has reached the throne at last, and may now sit as a queen in the highest circles of American society.

The fashionable world had no sooner recognised and accepted their favourite, than rumours began to spread, muffled at first, but anon breaking out in clear tones and distinct articulation, that their chosen heroine had consented to become the wife of Judson, now far advanced in life, and to plunge with him into the darkest heart of heathendom, there to burn her life-lamp down to the socket learning a barbarous language, taming a cruel race, and contending with a pestilential climate,—all that she might make known the love of Jesus to an uncivilized and idolatrous nation. To Burmah she went; did and bore her Saviour's will there till life could hold out no longer; and then came home to die. "The woman is mad," rang from end to end of America, echoing and re-echoing through the marts of trade and the salons of fashion,— "the woman is mad." Herself caught the word and the thought, and like the liberated Hebrews in the wilderness, consecrated what she had borrowed from the Egyptians to the service of the Lord. She wrote and published an essay on "The Madness of the Missionary Enterprise," in which she effectively turned the money-making and pleasure-loving world of her own people upside down. The missionary cleared herself and her cause, leaving the imputation of madness lying on the other side.

As long as there are persons in the world who seek first the kingdom of God and his righteousness, and other persons living close at hand who seek that kingdom in the second place, and in subordination to the claims of gain or fashion, there must necessarily be a strongly-marked opposition of sentiment between the two classes. They can-

not both be right. Wherever convictions are keenly felt, and the consequent conduct is distinctly outlined, both parties will observe the difference, and each will frame his own judgment regarding it. Where the principles and conduct of two persons are opposite in regard to the chief aim of life, each must necessarily think his neighbour in the wrong. If two are sleeping in one bed, and if one arise at midnight and flee to the fields from a conviction that the house is tottering to its fall, while the other though wide awake lies still in bed, the one who remains at ease within the house thinks his companion a fool for his pains. And he must think so. If he did not think so, he could not lie still another moment. For him only two alternatives are possible; either he must think that the man who fled is a fool, or he must arise and flee too with all his might. As long as he lies there he cannot afford to admit a belief of his neighbour's wisdom, for to admit that neighbour's wisdom is to convict himself of suicidal madness. Accordingly, he holds fast by his creed that the other man is a fool; and the moment that creed fails him, he arises and flees too for his life.

Poor Festus could not think,—could not speak otherwise to Paul,—unless, like the jailor of Philippi, he had on the instant become a Christian, and made profession of his faith. The subject was obviously the greatest; the case had been clearly stated; this story of a divine Saviour, the just giving himself for the unjust, is either true or false. If it is true, Paul is right; but if Paul is right,

Festus is wrong. Not being prepared to confess this, and yield to its consequences, he took the only other alternative that remained. Festus, knowing well that on this point,—the turning point of an immortal for all eternity,—where two hold opposite opinions, there must be madness somewhere, determined to throw the imputation from himself. Festus said, "Thou art mad, Paul." Paul replied, "I am not mad, Festus;" and the two men parted, perhaps never to meet again on earth.

What then? Is it another case in which two men entertain different opinions, and in which each may safely hold his own? Alas! it cannot be. One of the two is mad, and in his madness throws himself away. Paul is sober; Festus is the fool.

To make perishing treasures the true centre to which the soul gravitates, and round which the life revolves, while the things that pertain to eternity are left to follow as they may in a secondary place, is abnormal and mischievous. The wrench is as fatal as would be the revolution in the material universe, if the sun, by external violence, were compelled to move round the earth, or the earth to move round the moon. In the practical question which every one must once in his life decide for himself,—the question whether he shall be his own master, or accept with all his heart and soul the gospel of salvation by Jesus Christ,—there are only two sides. One side is right and safe; the other side is wrong and ruinous. "O send out thy light and thy truth; let them lead me."

SECOND EVENING.—THE UPPER CLASSES.

"Most noble Festus."—ACTS XXVI. 25.

SIXTY years since, a certain attached domestic, presuming on the privilege that was frequently in those days tacitly accorded to his class, roundly reproved his master, a great Scottish proprietor, for the sin of profane swearing. Although no record remains of the argument, it is evident that John had taken a leaf out of the great Apostle's book, and besides speaking of righteousness and temperance, had given a broad hint about the "judgment to come;" for the laird feeling that he had not a leg to stand on, cut the matter short by the remark, "It has pleased Providence to place our family in a superior position in this world, and I trust he will do the same in the next." This is a real case; but it is an extreme, and perhaps we may add, at least in our own day, a rare one. On the other side there are, not here and there one, but everywhere many, who wear coronets and pray. In this respect the lines of our generation have fallen in a pleasant place. For present privilege we should "thank God," and for future prospects "take courage." But between the two extremes of evil and good, of gross stolid earthliness, and humble, intelligent, strong faith, in the upper ten thousand of British society, how many diversities in constitutional character and external circumstances! How wide is the field, how difficult the culture, and how vast the product, if it were made fruitful over all its breadth!

It was an outstanding feature of Paul's character to appreciate correctly another man's difficulties, and to sympathize tenderly with those whose position magnified the offence of the cross. There is strength, no doubt, in this preacher, but there is sensibility too. He cannot be weak; but neither is it in him to be rude. "Most noble Festus," said he. Oh, I love the great missionary for that word. I think I hear his voice thrilling as he utters it. Right well he knew that, other things being equal, it was harder for the Roman governor than for a meaner man to obey the gospel, and cast in his lot with the Christians. He will not flatter the august stranger; he will not suggest that the elevated and refined may have a private door opened to admit them into heaven, and so escape the humiliation of going in by the same gate with the vulgar throng. This missionary is faithful, but he is never harsh. He makes allowance for every one's temptations, and becomes all things to all men, that he may gain some. In the polite respectful address of the Christian apostle to the Roman magistrate lies a principle that is permanent, precious, practical. Let us endeavour to understand and apply it.

We speak of the aristocracy here in no narrow or technical sense. The subject concerns the whole human race, and bears directly on their eternal destiny. We speak at present of the

uppermost strata of human society, whether birth, wealth, energy, intellect, or learning may have been the more immediate cause of their elevation. We speak of those who stand highest among men, without pausing to inquire what has raised them. Now, while it is true of all this upper class, that they need the salvation of Christ, and get the offer of it on precisely the same terms as those who stand on a lower platform, it is also true that, over and above the temptations common to all men, some temptations peculiar to themselves stand in the way of the highest, increasing the difficulty of accepting the gospel. They are the wisest missionaries, and the best successors of the apostles who own this peculiarity, and make allowance for it in their methods.

One of our Lord's sayings, in reference to the species of aristocracy which is constituted by wealth, may throw light across our whole theme: "Then said Jesus unto his disciples, Verily I say unto you, That a rich man shall hardly enter into the kingdom of heaven. And again I say unto you, It is easier for a camel to go through the eye of a needle, than for a rich man to enter into the kingdom of God" (Matt. xix. 23, 24). Of this wonderful word it is generally one side, and that the harsher that men take to themselves, or present to their neighbours. Would that we could enter into the tender spirit of the Lord Jesus when he uttered this pungent warning! Assuming that the needle's eye represents the low narrow door through the wall of a fortified city by the side of the principal gate, for use by night or in time of war when the great entrance must be shut,—you have here a passage from danger into safety, not impracticable in its own nature, but impracticable in point of fact to a camel, because of its own huge bulk. The foe is pursuing, the fortress is near, a gate stands open, but this low door-way through the wall cannot be enlarged, and if the fugitive who seeks an entrance carry a high head by nature, how shall he be saved? Thus the elevation of the highest class makes their entrance into Christ's kingdom more difficult. Of this difficulty Jesus speaks with tenderness. Let all his servants in this matter follow his steps. "Most noble Festus," said the preacher, observing that the habitual dignity of the Roman and the official hauteur of the governor were holding high the head of a poor sinful creature, and hindering him from bowing before the Cross of Christ;—Most noble Festus, respectfully and politely said that fervent, eloquent Jew, doing what in him lay to gratify the great man's feelings, and so get the lost man saved.

From the style of the Apostle's address at this critical moment, two lessons flow; or rather in it one lesson shines, sending out its light—beams in two opposite directions, and teaching wisdom to two opposite classes of men.

For ardent Christians of every rank, and especially Christians of humble station and moderate attainments, there lies a lesson here. If you are true disciples, none will dispute the patent of your nobility. If you are born again, you are high-born, how low soever your place may be in the registers of earth. But that is not the point in

hand at present. Beware of presuming upon your place and your privilege. Be conscious of your defects, and meek in your deportment. Be all things to all men, that you may gain some. In particular, beware of throwing a stumbling-block in the way of the noble, the rich, or the refined, by any species of rudeness. Take care lest you mistake vulgarity for faithfulness, and your own ignorance for the simplicity that is in Christ. You have been reconciled unto God through the death of his Son; you have joy and peace in believing: well; there are some men near you who have not yet submitted to the gospel. They stand high, some on wealth, some on birth, some on intellect: in these matters they stand higher than ever you stood. That elevation makes it harder for them to bow down and go in by the strait gate. Had you stood on an equal height, perhaps you would not have been within the gate to-day. Be tender, careful, watchful, prayerful, regarding them. What if they should turn away from Christ because of some rude incrustations of character that they saw in you, and mistook for veritable features of the gospel which you profess! Think of their peculiar difficulties; do not make them greater; take some of them out of the way if you can. He that winneth souls is wise; ay, and he must be wise that would win souls.

For the "most noble" of every class there lies a lesson here. We frankly own that there are nobles among men. We address the chiefs of our tribe as Paul addressed the Roman governor of Judæa, and in good faith we give to each the title of respect which is his due. Sirs, you cherish a high sense of honour, and hold in abomination every mean sneaking thing wherever it may appear; you have by education and habit cultivated a refined taste, and everything rude grates upon your nerves, like rusty iron rubbing on your flesh. You have exercised your understanding, and cannot pay any deference to mere assertion, when it is backed by no proof. These attributes you possess and exercise. We appreciate their worth, and extend to you our cordial sympathy in regard to them. Well, and what follows? Great and good though these attainments be, what is a man profited if he gain them all, and a whole world besides, if he lose his own soul? These are very good, but "one thing is needful;" and it is by sitting like Mary at the feet of Jesus that any man can attain that needful thing. Strive to enter by the strait gate into the kingdom, for your attainments, though in themselves good, may be so worn that they shall greatly increase the difficulty of the process.

Finally, beware of allowing the rudeness and other defects of those who are or seem to be Christians, to scare you away from Christ. It may be true that some are hypocrites altogether, and some who are really Christians retain many repulsive faults; but oh, my most noble brother, it will be no consolation to you if you are not forgiven, renewed, and saved, that you are able to convict professing Christians of many faults. You are not asked to believe in Christians, but to believe in Christ.

THIRD EVENING.—ABOUT HATING.

"But this thou hast, that thou hatest the deeds of the Nicolaitanes, which I also hate."—REV. II. 6.

THE feature of character described in this verse is given with unequivocal marks of approval. Immediately after the administration of a sharp reproof for recent backsliding, it is set down as a redeeming quality of the Church at Ephesus, that they hated the deeds of the Nicolaitanes. This interesting clause of a divine message addressed to those ancient Christians, suggests three distinct but closely allied themes:—

1. 'About hating in general: "this thou hast, that thou hatest."

2. About the particular object which the Christians at Ephesus hated: "The deeds of the Nicolaitanes."

3. About the heart-harmony between Christ and the Ephesian Church, in that they both hated the same thing; "which I also hate."

I. Hating in general: this thou hast, that thou hatest. Hate! We must not weakly startle at the word. It is a shallow, childish prejudice to shrink from the name and the thing which it signifies, as if it were all and only evil. To hate is a very necessary and very useful thing in this world. The Lord Jesus hated; and we must hate too, if we expect to be like him now, and see him as he is at last.

We must not run away with the notion that those who love are good, and those who hate are bad. The haters are as good as the lovers:—No, that is not the state of the question. There is not one set of people who love, and another set of people who hate: the same persons do both, and all persons do both in a greater or less degree.

Farther, these two emotions hang for their life on each other. You cannot love—at least in this world of commingled good and evil—without also hating; and you cannot hate without also loving. Setting aside the various intermediate shades of light and dark in colour, and assuming only the extremes of black and white in order to render the illustration more distinct, you cannot paint a white figure without a black ground to relieve it; and you cannot paint a black figure without a white ground to relieve it. In like manner, while good and evil in point of fact remain mingled in human life, your love must lean on a background of hatred, and your hatred must lean on a background of love. Either emotion is impalpable and unreal, unless its opposite stand behind it. Suppose a thief is prowling round a dwelling, and watching for an opportunity of stealing or forcing his way in; the man then and there loves and longs for the darkness, but at the same time, and necessarily by the laws of his being, he also hates the light, and from the bottom of his heart wishes it were away. On the other hand, suppose a ship's crew in a storm at midnight,—Paul and his fellow-passengers in the Mediterranean, for example,—hanging by creaking cables, within hearing of the breakers on an unknown shore, they love and long for the day; they love it with a gnawing, burning love, unknown to us who sleep on soft beds till the sun be high.

But mark; they loathe the darkness as much as they love the dawn.

They who expect heaven while they do not hate sin, in themselves as well as in their neighbours, do but idly dream of impossibilities. They who fondly imagine that God loves a great deal but hates none, dream deeply, dangerously, daringly. The heathen made many gods, but those who hold fast the Scriptures as the symbol of their faith, and refuse to believe in a divine anger, err as widely on the other side. They make less than one;—they make half a god, and then worship their own workmanship. Their god loves very much, but he cannot hate. It would be vulgar and unphilosophic to admit that God could hate. Did he not frame and furnish this beautiful world? Has he not scattered marks of fatherly tenderness over heaven and earth and sea? Thus by a few questions they demonstrate their case. But suppose we should give an affirmative answer to all these questions, and to ten thousand more of similar import,—what then? You have not proved your own case; you have proved mine. The more of this heavenly light you throw upon the exposed side of your picture, the deeper grows the darkness of the side which lies in shade. It may be said of a moral as well as a material being, if he has not two sides, he has not one that is living and true. In the sufferings which sin even now inflicts, both in material ruin and spiritual terror in the conscience, evidence that God hates is written on his own world, as clearly as evidence that he loves.

No hate, no love.

The relation between God our Redeemer, and his ransomed people is frequently, in the Scriptures, both of the Old and New Testaments, compared to the closest of all earthly relations, the marriage bond. Take it up in that form and try thereby the present question. A wife has treacherously departed from her husband. She had been treated with justice and tenderness; but she became weary of a pure peaceful home, and wantonly followed other lovers. After a long time she became weary also in her wickedness, and returned to her husband's house. So far from humbly confessing her offence, and pleading on her knees for pardon, she held her head aloft, and boldly brought the companions of her guilt into her former home. The injured husband permits her and them to go in and out without punishment, without reproof. He shows her the same kindness as at the first; no rebuke ever drops from his lips, no frown ever gathers on his brow. Now, what is your opinion of that husband? Is he a man after your own heart, because he manifests no hatred? Ah! he shows no hatred, because he has no love!

In such a case love cannot be exhibited,—love cannot be, unless a hearty hate of evil lie beneath, as the foundation on which it may lean. In this respect man was made, and notwithstanding the fall continues to exist, in the image of God. His moral being, like his living body, consists of two sides. As well might you expect his right side to

live and move wanting the left, as expect any love worthy of the name to glow in his heart, if he is destitute of the faculty of hating. To be all love, in such a world as this, is equivalent to having no love. Love and hatred are not separate, independent characteristics, the first belonging to one man, and the second to another: they are twin attributes of the same spirit. To love the holy and to loathe the vile are not distinct acts of even the same man; they are rather the two sides of one sublime emotion,—the upper and the under edges

of a character formed anew by the Spirit's ministry, after the image of God. The upper side lies bathed in the light of heaven, and the under side is thrown into the shade. They are not equally lovely to look upon, but they are equally necessary as constituent elements in the new man. The exercise of the one is pleasant, the exercise of the other is painful; but the mixture of the two in just proportions, like the union of sweet and acid to the palate, makes life not a dull insipid passing of time, but a vivid, balanced, joyful activity.

FOURTH EVENING.—WHAT WE SHOULD HATE.

"Deeds of the Nicolaitanes."—REV. II. 6.

II. THE particular object which the Christians at Ephesus hated, was "the deeds of the Nicolaitanes." I do not certainly know who and what these Nicolaitanes were; and I do not greatly care. It is enough for us that their creed was erroneous, and their life impure. It is the express testimony of the Lord that the men of Ephesus who held the truth in those troubled times, hated the deeds of that ancient sect.

Mark here a distinction of first-rate importance in regard to the whole question of hating and loving, both in its speculative and practical aspects. The evil deeds of the heretics, and not the heretics themselves, were the direct objects of displeasure. The turning-point between the right and the wrong lies here. To hate the evil deeds of a neighbour is lawful, is needful, is like Christ; but to hate that neighbour is sin. The Christians of that famous Asiatic city, it seems, had their senses exercised to discern between good and evil in this important matter in those ancient times; for the Spirit speaketh expressly, and speaks with commendation of the fact, that they hated the deeds of the Nicolaitanes. If the hate had fallen promiscuously on the evil men and their evil deeds, it would not have been approved. They had been led by the Spirit in the truth, for the truth at this point of a man's path is not easily discerned, and even when discerned, is not easily kept. Oh, how hard it is to hate the evil deeds, and yet love the evil-doer! It seems as difficult as the task which, according to the Swiss patriot story, was imposed by the tyrant on William Tell—to cleave with his arrow from a distant spot an apple balanced on the bare head of his own boy, and yet not hurt the child. A keen eye is needed and a steady hand, to love persons and hate sins, while sins and persons lie so near each other in the world.

The emotions of hate and love, moreover, not only flow from the same heart, but they often flow together in one commingling stream, as colour-rays and heat-rays together constitute the sun-beam. God's work is perfect in both worlds. While the different rays travel in company, and to human eyes seem one, the colour-ray produces one effect and the heat-ray another, when they fall in unison upon a flower. So, in wisdom infinite our covenant God, while his love and anger flow out together, smites the sin with his anger and at the same time bathes the sinner in his love. "Thou

wast a God that forgavest them, though thou took'st vengeance of their inventions" (Psalm xcix. 8).

In the 15th verse of the same chapter a feature of the Church in Pergamos is recorded which extends our view at this point, and enables us to take a more comprehensive grasp of the subject. "So hast thou also them that hold the doctrine of the Nicolaitanes, which thing I hate." The "doctrine" of these sectaries was evil, it seems, as well as their deeds. We learned first that the fruit was bad, and now we discover that the tree is corrupt in its root. It is a common but mischievous error to suppose that, in matters of religion, it is of small moment what a man's opinions may be provided his life is good. There are, indeed, many subjects on which different men may entertain different opinions and yet be equally honest, equally safe. There are some subjects on which a man may hold one opinion to-day and another to-morrow, and revert on the third day to his original belief, and be none the worse a man on account of his vibrations. But these are subjects which are in their own nature of subordinate importance; some questions of politics, or philosophy, or human history, that are obscure in themselves, or of trifling value in their results upon conscience or life. When the question regards sin and holiness, the way of pardon and renewing, the person and sacrifice of Christ, our heart's state now, and our destiny when life is done,—doctrines are all-important for good or evil.

Doctrines are the roots from which the life grows. If the root be corrupt, the fruit cannot be wholesome. The Lord hates indeed the poisonous fruit of a wicked life; but he sees beneath the surface, and hates also the corrupt root from which that wickedness springs.

How far the Christians of Ephesus understood and condemned the false creed of the Nicolaitanes we cannot tell. It is possible that they may not have known precisely what were the doctrines of the sect, for it seems not to have sprung up at all in their own church or their own city. But one thing is clear: the conduct of the sectaries was open to the inspection of all, and the Ephesians were capable of forming their own judgment regarding it. As the life of those men was contrary to the Scriptures, and dishonouring to the Gospel, they heartily hated it.

When doctrines manifestly contrary to the truth

of the Gospel are openly professed, we may be able to form our own judgment regarding them, each for the guidance of his own conduct, and under responsibility to God. It is our duty to hate all untruth, in as far forth as we know it to be untruth; but inasmuch as opinions in their essence are unseen thoughts that struggle and flutter within a soul, they lie in that form beyond our reach. In all cases of difficulty we must fall back on the general rule which the facts recorded in this chapter seem to suggest, that deeds fall under our cognizance, doctrines and deeds both under God's. Let us hate all evil acts, by whomsoever they may be performed, and leave secret thoughts between the thinking man and the judging God.

But while we vindicate the duty of hating evil, we ought also to warn our readers, that though the path affords firm footing to those who keep it, the path itself is narrow, and dreadful pitfalls yawn on either side. Hating is not an operation that may be rashly and lightly performed, even when it is a wicked thing against which your displeasure is directed. William Tell clave the apple and left the child unhurt; but a clumsier archer would have missed the apple and killed the boy. Let those who hate evil watch and pray that they enter not

into temptation. If the act comes often, and comes easily, you have good cause to suspect yourself and pause. It may be hatred of a neighbour, disguised as zeal for righteousness: it may be an unclean spirit possessing you, assuming the form of an angel of light.

If on examination you see cause to doubt the purity of your own anger, and so fear to let it flow upon your neighbour's sin, lest it should guiltily strike against your neighbour, there is still no necessity for allowing this vigorous and useful emotion to lie dormant for want of exercise. I can direct you to a multitude of evil deeds, sufficient to occupy and absorb all the righteous wrath that may be generated in your heart, where there is absolutely no danger of spilling any of it illegitimately upon the person of a brother. Make your own sins the target for exercising yourself in the grace of hating evil. If it is dangerous to strike a brother's misdeeds with this sharp sword, you may safely smite your own. Here, self-love in nature will defend the person, and all the anger will fall upon the deeds. Strike home; crucify the flesh with its affections and lusts; wage an internecine war against those enemies within you, which war against your soul.

FIFTH EVENING.

CHRIST AND CHRISTIANS HATE THE SAME THING.

"Which I also hate."—REV. II. 6.

III. THE heart harmony between Christ and Christians, inasmuch as both hate the same things: "Which I also hate."

Men have been spiritually dislocated by the fall, and they know not what ails them. They do not believe that all their bones are out of joint. Their locks have been shorn while they slept, and they think that all is well. They will arise and shake themselves; alas! their great strength has departed, and their eyes are out. Humanity is out of harmony with God, and is not aware of its loss.

A small slender wheel has been formed for acting with a great and powerful one. It has been set in, and set agoing. The great wheel goes into it, touches it gently at every point, and moves it quickly, sweetly round. But in process of time, in some great convulsion, the small wheel starts out. Being near the great wheel, and yet not in it, the small one is racked, and bruised, and broken all over.

When the broken wheel is renewed, and brought back and fixed, if you insert one tooth in its place, you insert all. They were made for each other; and therefore harmony restored at one point is harmony restored at every point. This is the thing we need;—to get into harmony again with God. For this end the Son of God came into the world. Remaining one with the Father, he became one with us. Laying his hand upon both, he takes the enmity away, and heals the breach. He removes guilt from the conscience, and doom from the judgment-book. We love him because he first loved us. Found in him, we are at peace with God, and rejoice in the hope of eternal life. This love which God has shown to sinners in the gift of his Son,

begets a returning love in every heart that receives it. Again the reconciled and renewed attain the place and exercise the spirit of sons and daughters; again the prodigal walks about without uneasiness through the mansions of his Father's house; again the new heart is in harmony with the Holy One, loving what he loves, and hating what he hates.

Suppose in a family one little child with a morbid appetite for all manner of poisonous things, and an instinctive loathing of wholesome food. The poison which he loves, but which would destroy him, his father will not permit him to taste; the food that would nourish him his father supplies in abundance, but the wayward child puts it away from his lips with every mark of aversion. The life of that child is a life of misery; his short span of existence is little more than a sickly passage to the grave. As long as the father's judgment and the child's tastes remain as they are, the two forces are in continual conflict. There can be no peace until they are harmonized. But the father's judgment cannot change, for it is truth: the harmony must be sought by an operation on the other side. There cannot be any change for the better until the child's taste is changed. If a sheer reversal of his evil instincts could be effected, all might yet be well; but no partial remedy is capable of meeting the case, or even of palliating its symptoms. The world in this little one must be inexorably turned upside down ere he can be saved. He must be, as it were, created again; he must become a new creature. When he loathes the poison which his father forbids, and loves the food which his father supplies; then he will be happy and healthful, but not till then.

It is thus that sin and misery go together in the lot of men. With wonderful precision and transparency of language, the Scripture declares: "To be carnally minded is death; but to be spiritually minded is life and peace: because the carnal mind is enmity against God; for it is not subject to the law of God, neither indeed can be. So then they that are in the flesh cannot please God" (Rom. viii. 6-8). As long as the tastes of the human spirit are instinctively opposed to the character and law of God, so long will the creature, by every movement that it makes, break and bruise itself against Omnipotence. No confession that the alienated may make in fear—no profession of religion that the alienated may make in hypocrisy—can administer the slightest real relief. A man cannot by a word or a wish reverse all the likings and dislikings of his nature. Oh, brother! if you once fairly hated what the Holiest hates, the victory were already won; for then you would also love what he loves. If the prodigal's whole moral being were brought to beat again in unison with the Father's heart, his life would be new from the root, and what remains of earth would be like heaven begun. "Create in me a clean heart, O God, and renew a right spirit within me." He who desires it, has already begun to get it. The cry for a new heart is the crying of a new heart, already begun to quiver in the suppliant's breast. "Ask and ye shall receive." The Lord, says the Scripture, loves a cheerful giver; and that which he loves in his creatures he is in himself. He loves a cheerful giver, because he is a cheerful giver.

When the two wheels that had been driven asunder by a shock are interserted again at one place, they fall into each other at all places. To be reconciled to God through the Mediator is to be one with him on all sides and in all things.

Love and hate live and grow together in the heart. When they wax, they wax together; when they wane, they wane together;—I mean real love of good and real hate of evil. If you increase in love of good, you will also, and by the same act, increase in the loathing of evil; if you learn to loathe sin more, you have also at the same moment learnt to rejoice more heartily in holiness. Might we not find here a specific for that very common complaint among the spiritually earnest, "I am not sufficiently sorry for my sin?"

You see the shadow of the heavens in a lake. But the heavens that look out of that placid water do not seem very deep. The shadow of heaven is shallow; because the heaven which is shadowed there is low. Look up and see these clouds that fill the canopy; they are bending down as if they would touch your head. When this low cloudy

heaven has passed away, and you see in the zenith streaks here and there of fleecy vapour lying still at a dizzy height; when beyond them the blue opens up, and seems to the eye an embodied visible Infinite,—look now into the lake and tell what sight you see; the heaven shadowed in the water is deep like eternity now!

Precisely so; when your joy in the Redeemer's love does not rise high, your grief over the sins that crucify him does not sink very deep. Hate of evil in yourself is shallow, because love to him that bought you is low. Ah, when the heaven over me grows high, the shadow of it under me will grow deep. When I learn more by looking unto Jesus, what he has done for me, I shall grieve more over the plagues of my own heart, and the sins of an unbelieving world.

It is a very bold figure that Paul employs, when, in order to manifest the fervour of his affections for certain Philippian converts, he exclaims, "How greatly I long after you all in the bowels of Jesus Christ!" But although the language is metaphorical, the sense is not obscure. He is in the regeneration spiritually one with Christ as a member in the living body, and the compassion which he felt for the brethren seemed Christ's love throbbing in his heart. It is in this way that Christians may attain a humble, pure, thorough-going hatred of sin in themselves and others. "Christ in you the hope of glory" is one form of Scriptural phraseology; and we may safely frame another on the same key: Christ in you the hate of evil. When his love of holiness glows in our hearts, we shall inherit and exercise also his hatred of sin. When on these cardinal points of character we become like the Lord, we shall be like him in all the circumference of our life. And if we be like him here, we shall be with him soon.

But does some reader, secretly unwilling to be shut up to the necessity of a change so complete, still murmur, God is gracious, and hate of every kind is contrary to his nature? Well; take it all your own way. God does not hate, you say; but he loves. Yes, he loves, more than any tongue can tell. He loves as a Father loves. He loves his children. What has he done for them? He has done for them all things well; and among others has prepared a place for them,—a house of many mansions. Well; but the wicked,—where are they? In the many mansions too? Then where is God's love for his own children? If the same house is the home for good and bad alike, what is the worth of that house as a home for me? If it is heaven, the unholy are not in it; if the unholy are in it, it is not heaven.

W. ARNOT.

SUNDAY.

BY THE EDITOR.

It is not my object in this paper to discuss what is termed "The Sabbath question." I leave all the arguments which have been adduced in so many treatises and tracts to prove its divine origin, whether derived from the Decalogue, from apostolic example, or from any other source, to exercise their legitimate influence.

There are, however, certain undisputed facts connected with this very remarkable day which force themselves on our notice.

It cannot, for example, be denied that one day in seven is more or less marked throughout universal Christendom by rest from bodily labour, and by social worship. We who are alive did not certainly originate this day, with its peculiar customs, but found it among the other days of the week when capable of distinguishing one day from another. Our Christian ancestors did the same during the last eighteen centuries, back to the glorious morning when Christ rose from the dead. It is equally certain, moreover, that the Church of God, from the days of Moses until the coming of Christ, had a similar custom of keeping one day in seven holy; for these words were "written by the finger of God," and were embodied in the institution of the Sabbath: "Remember the Sabbath-day, to keep it holy. Six days shalt thou labour, and do all thy work: but the seventh day is the Sabbath of the Lord thy God: in it thou shalt not do any work, thou, nor thy son, nor thy daughter, thy man-servant, nor thy maid-servant, nor thy cattle, nor thy stranger that is within thy gates: for in six days the Lord made heaven and earth, the sea, and all that in them is, and rested the seventh day: wherefore the Lord blessed the Sabbath-day, and hallowed it."

Considering these undisputed facts, the question naturally arises, Whether there is any valid reason for our now abrogating such a day as this which has floated down on the stream of the Church along so many teeming centuries? Or, to put our question in another form, Whether this institution is not so manifestly adapted in its spirit to meet the wants of man's whole being, as to commend itself to conscience in the sight of God as a most precious boon to be received with thanksgiving and preserved with care?

Let me briefly notice some of those adaptations of the Sabbath to our wants as men.

The Christian Sabbath, as a day of rest from bodily labour, is suited to meet the wants of man's *physical* being. This fact of rest from labour upon one day of the week is a very remark-

able one, especially in an industrious, busy, money-making, commercial country, where "time is gold." Some invisible power, then, lays an arrest upon busy traffic. The noisy Exchange is silent; the rich warehouses are shut; the crowded mart is quiet as a churchyard; the wharfs along the harbour are deserted; and something has more or less changed the whole aspect of the active world. I once lived in an elevated part of Glasgow overlooking the Clyde, and was much impressed by the contrast presented between the early morn of working days and the day of sacred rest. Shortly before the hour of labour struck, everything was still as during the silent watches of the night, except the birds whose chirping was heard from the stunted shrubberies, as they gathered their morning meal. But no sooner did six o'clock strike, than suddenly, as if so many batteries were opened on a fortress, or a great army began to move, the swinging hammers were heard thundering out of the dusky atmosphere that hovered over the river, and one knew that boilers and steam-engines were being fashioned for the proud navy of Britain, or for the merchant navy of the world. A roar of carts and waggons poured along the streets, and the city, like a waking giant, began to stir for another day of toil. But on Sunday morning, the birds sang on, and the silence was unbroken until the bells rang for worship, and then the streets were crowded by thousands of men and women in their best attire proceeding to the house of God; and when worship began in God's temple of the church within, all was silent as before in the world without, while the sun's rays were no longer, as on other days, clouded by dark smoke hanging like a funeral pall over the city, but poured down their uninterrupted glory on street and square, as on rural field and hamlet, and all looked pure and glad some on the day of the Lord!

If, according to the judgment of God, this day was needed for the Jew when on his wilderness journey, and while pasturing his flocks amidst the valleys of Sinai, or when settled in the rich land of Palestine, surely it is at least as equally required by the toiling and over-wrought millions in our busy cities and towns, by the labourer in our fields, and by the mechanic in London, Glasgow, or Birmingham, as much as by those who once worked in Jericho, Nazareth, or Jerusalem!* God who cares for every living thing, so considered the necessities of

* Some time ago I had occasion to make inquiries in Paris as to the practical working of Co-operative Societies. I found their members highly intelligent, and both morally

the beasts that perish, as that, in the days of Moses, he added this as one of the reasons for appointing the Sabbath, "that thine ox and thine ass may have rest as well as thee." But has He, I ask, changed in his benevolent wishes towards those dumb sharers of our toil, or have their burdens been so much lightened in our day as to make a day of rest for them unnecessary?

It is impossible to estimate the blessed effect produced upon a nation's health and happiness when, on the return of each Sunday, millions are thus set free from toil; when the ledger is closed on the desk; when the hammer rests upon the anvil, and the wheel in the factory; when the mine sends forth its crowds into the light and glory of this new-born day; and when men can rest their wearied frames, or tread the green earth or hoary mountain and breathe the fresh air, and look calmly upon the blue sky overhead, or listen to the sounding stream or beating sea-wave; and when the very dumb cattle partake of the universal blessing, though as unconscious as many of their masters of the loving Hand which has bestowed it. On this day that Saviour, who was himself so often wearied, who as a man knows what is in man, and who sympathizeth with his every want, seems yet to address all his brethren with the gracious invitation, "Come here, and rest a while."

The Christian Sabbath is adapted to man's *social wants*. This is seen more especially in the case of those who are compelled to labour in the sweat of their brow during the other six days of the week. The want of social intercourse among the members of a working man's family is a great trial, and entails upon them greater loss of good and happiness than is generally thought of. The early morning (for many months in the year long before break of day) summons each to his or her scene of toil, and scatters them in different directions. One goes to the field, another to the factory;

and socially far superior to anything I had expected to find among the working classes in that great capital. Their testimony, which came out incidentally in conversation, regarding labour upon Sunday, is worth recording. It was to the following effect: "We used to work on Sunday, but we found it too much for our strength, and that we could produce the same results, in the long-run, by abstaining from work, or at all events doing very little on the first day of the week." These men, let me add, were professed Deists. They had rejected Popery, as represented by the priesthood, with contempt, but had as yet found nothing better. They did not possess a Bible; yet they seemed to me, from their whole spirit and character, to be the most likely men of all I had met in France to receive the truth, if rightly presented to them. Their testimony as to the Sunday is of some value, from its being unbiassed by any "religious" system.

one to build as a mason, another to work as a mechanic. In very many cases their meals are taken with them, or taken to them, so that there is no meeting till late at night, and then all are wearied and longing for early rest to prepare for the early start, in order to pursue the same round of incessant toil. It not unfrequently happens that the nature of their employment obliges some of the family to be absent all the week until Saturday evening. Neither are these necessities of labour confined to what are termed the lower classes, but, in a greater or less degree, are rigidly imposed upon men of every trade and profession. The tendency of this state of things is to make the hard-wrought "strangers at their own firesides," and thus weaken the ties between parents and children, brothers and sisters, and hinder the growth of those tender, social affections among near kindred which soften the heart, and are a constant sunshine in our lives. The day of rest is therefore an unspeakable blessing, as re-uniting the scattered members of the household, when the distracting cares of the week are, to some extent, banished, its heavy burdens laid aside, and when, in the peace and quiet of home, its members can cultivate the religion of domestic love. Many other opportunities are also afforded by the Sunday rest for cultivating the social affections. This, for example, is almost the only day when the working man can visit a sick or aged neighbour, who is confined to his home, and to whom the journey from the bed to the large arm-chair beside the fire is fatiguing. The kind personal inquiry; the brotherly intercourse of good-will and sympathy; the news conveyed from the outer world to the invalid about the doings of mutual friends; and often, too, the reading of what may refresh the soul of the pained, the weary, and the solitary one;—all this kind intercourse does good to the hearts of both, and is blessed to him who gives, and to him who receives.

The Christian Sabbath is calculated to meet the wants of man's *intellectual being*. It is a great means of educating all who avail themselves of its peculiar exercises. In Protestant countries especially, a vast amount of instruction is given upon this day from the pulpit to assembled thousands. For, after making full allowance for what is called "bad preaching,"—the "dry," the "dull," the "prosy," the "uninteresting," the "mystical," or the "unintelligible," there still remains an incalculable amount of good preaching on every Lord's day, which cannot but aid in moulding and strengthening the mental, as well as the moral faculties of the hearers. No subject of human study presents such a range and inexhaustible variety of mighty thoughts, fitted to stir our whole being to its lowest depths, and to affect the imagination, the in-

telleet, the affections and conscience, as the revelation of God's will to man. The Bible, with its condensed history of the human race, of nations, of cities, and of the Christian Church, with its truthful biographies of remarkable men and women, its sublime poetry, far-seeing prophecies, pure moral precepts, and glorious doctrines,—above all, with its life and history of Jesus Christ, furnishes the grandest conceivable topics for public instruction; and these, when combined with their practical application to our ever-changing circumstances, give an advantage to the pulpit, above every other existing institution, as a means of educating the masses. One of our greatest gains from the Reformation is this preaching of the Word to the people. To this must be added the reading of useful books at home on Sundays: for we have no hesitation in saying, that more pages are read on this day tending to enlighten the mind, purify the heart, and elevate the spirit of man, than during all the other days of the week put together! This is assuredly the case among the middle and working classes. Sunday is, in truth, almost the only day in which thousands can open a book at all, so engrossed are they with the demands of labour for their daily bread. Neither must we overlook, as a means of educating the people, the amount of teaching given upon this day by parents to their children—the most impressive of all—and by tens of thousands of ministers, missionaries, and Sunday-school teachers, to millions of children from among the poor and the outcast, who are wholly dependent upon this instrumentality for any knowledge they possess of their duties to God or man. To accomplish such ends, it is absolutely necessary that there shall be a day consecrated to rest and worship.

But the Christian Sabbath is most of all loved by the Christian Church as an institution which is peculiarly adapted to meet the *wants of man's spiritual nature*. The physical rest which it secures is to be valued, not for its own sake only, but chiefly as affording the time necessarily required for so cultivating our spirit that we may obtain true rest for our whole being in God. Let us never forget the glorious truth, that man, who was made by God after his own image, is made *for* God, and must be renewed after that image: in the words of the Catechism of the Church of Scotland, "Man's chief end is to glorify God, and to enjoy him for ever." The Sunday rest thus becomes a witness of the spiritual "rest that remains for the people of God," and an invitation to all on whom the day dawns to enter into this rest *now*. The great fundamental fact of Christianity, our Lord's resurrection from the dead, of which this day is the standing memorial, is to us an

assurance that our living Head has "entered into his rest" in the full enjoyment of God; and also that he, the resurrection and the life, has obtained for us that living Spirit through whom he rose, that he might dwell in us, and so enable us to rise to newness of life, and share with him his own rest in the knowledge and love of our Father and his Father. Would that men heard the sermon which is so eloquently preached by the very silence of every day of the Lord, from this blessed text, "Come to me, all ye who labour and are heavy laden, and I will give you rest!" This holy day is accordingly recognised by the whole Christian Church as one hallowed for social worship. It is very true that the Christian esteems it to be his duty and privilege to worship in private, to enter into his closet, and there to pray to his Father who seeth in secret; but it is also Christ's will that individual Christians should "assemble themselves together" as members of the holy brotherhood of the Christian Church; that in their corporate and social capacity they should worship, and together confess their common faith, express their common joy in knowing God by the singing of psalms and hymns of praise, and pour out their prayers, intercessions, and thanksgivings for themselves and for all men.

This characteristic feature of the first day of the week is one of the most remarkable in the history of the world. In mountain recesses, in rural hamlets, in hoary cathedrals and humble chapels, in ships far off on the sea, in the distant wilderness settlement, amidst the most civilized nations and amongst the rudest barbarians, wherever the Christian community exists, there, as a rule, is found Christian worship upon this day. From the snows of Labrador in the north to the Coral Islands in the south, from the plains of India in the east, across Africa and Europe, and on to the rocky mountains of the far west, when the sun ushers in this day of the Lord, it ushers in a day of worship for all ranks and conditions of men. On this day tens of thousands of Christian ministers read from the Bible, and offer up prayer in the midst of millions who gather around them, listening to their words or joining in their devotions, while angels bear the mighty hallelujah chorus of praise rising from the earth to the throne of God. It is not too much to say, that without the Sunday, the Church of Christ could not as a visible society exist on earth.

But our thus claiming one day as "holy" does not surely involve the condemnation of the other days of the week as profane. Nor do the peculiar duties which specially become us on Sunday imply that our week-day work is worldly in the sense of its being "irreligious." "Six days shalt thou labour" is as much God's command as that on the seventh we

should rest and worship. He who works as a Christian on Monday, is fulfilling the end of his being as well as when he worships as a Christian on Sunday. Jesus Christ was God's own Son, with whom he was as well pleased in the workshop of Nazareth when engaged at his trade, as in the synagogue of Nazareth when he expounded the Scriptures. But it by no means follows that every man who works six days is necessarily actuated by any sense whatever of his responsibility to God, any more than the animal who pursues its prey to satisfy its own cravings, or those of its young, for food. Nay, more, the tendency of severe and constant daily toil is to engross the thoughts with the transitory only—to withdraw them from the invisible God—to make men forget their high calling as immortal beings—to make them seek their life only "in the abundance of the things which they possess," and to "lay up treasure for themselves" without being "rich toward God." Now, it is just in order to dignify labour, to transform it into real "worship," to accept it as God's will, and to perform it as in his sight; in one word, to bring the spirit of the Sunday into every day of the week, that we feel the immense and paramount importance of not bringing the work of every day of the week into the Sunday. It is in perfect harmony with this view that a holy day of rest seems to have been appointed for man's good before the fall as well as after it. For Adam was made for labour, "to keep the garden and dress it," and hence he too, as a man, required a special day to be set apart for the cultivation of his spiritual being, and for enjoying more undisturbed communion with his God.

After this very brief review of the Christian Sabbath, I am the more emboldened to ask again every man who loves his Father in heaven and his brethren on earth, and who wishes to increase in the love of both through Jesus Christ, what conceivable motive could induce him to wish this day either abrogated, or altered in its spirit and design? Let any one endeavour to realize, if he can, the good which has been accomplished in the sight of God and in the souls of men on this holy day during the last 3000 years—the triumphs which the truth of God has won—the advances which his kingdom has made—the light, strength, comfort, and peace, which the Church has obtained from its holy services, and then say whether it could have originated in any other mind than that of the holy, and loving, and wise God, who knew the wants of man, whom he made to glorify Him, and to enjoy Him for ever! One thing is certain, that the Christian Church will never part with so precious a boon. So long as a church exists on earth, her ministers and members will rest from labour, and assemble for worship on the Christian Sabbath—until the Sabbaths of earth end in the enjoyment of the social, intellectual, and spiritual rest of the Church of the redeemed in glory.

There is much about the Christian Sabbath which I have left unsaid for want of space. But I cannot conclude this article without replying to some questions, and noticing certain observations regarding the Sunday, which have been from time to time addressed to me, both as a minister and as

an editor, by known and unknown correspondents.

"What rules can be laid down for keeping the Sabbath holy?" None, I reply, beyond what are necessarily suggested by good common sense, and honest Christian principle. He who really sympathizes with the good which God designs to bestow on this day, will have no difficulty in obtaining it. But if he dislikes the good he will dislike the day, and then rules would be as useless to him as spectacles to the blind.

"The Lord's day is a weariness to me." Very possibly it is. So also may be the Bible, and prayer, and public worship, and everything which makes a demand upon conscience, and is thought to come to you from the living God, and interfere with your own self-will. But no blame to those heaven-sent privileges, but only to the spirit that does not relish them.

"What advice can you give as to Sunday reading?" One thing is clear, that any rule which applies to reading applies equally to talking. Whatever we may converse about, we may read about. Let both be in harmony with the chief end of the day, which is to make us more Christian men.

"What say you about cabs, railways, travelling, etc.?" I say this: do to others as you would have them do to you. Lay no burdens upon other men to which you would not submit if in like circumstances they were laid upon yourself by them. Love to your neighbour will solve this difficulty in so far as your own personal acts are concerned.

"What restrictions would you lay on children?" None, except those with which they can, as well principled children, sympathize. "When I was a child," said Paul, "I spake as a child, I thought as a child." Do not lay the burdens of men on such shoulders. Let all your teaching tend to make the Sunday helpful to their growth, not as strong men but as children in Christ. Beware of training them to hypocrisy by making them false and unreal, to hatred of religion and of Sunday by moroseness and severity, or to self-indulgence and unprincipled selfishness, by unchecked self-will. Good sense and sympathy will supply the rules.

"I hate a Scotch Sabbath." Only? yet possibly you never saw one, and are but repeating what I must call a stereotyped myth upon this subject. If you did see one, I hardly know what any Christian man can see in it to hate. I have seen the keeping of the Sabbath, east and west, and in most parts of Christendom, and I do not think Scotland has any cause to be ashamed of her Sundays, but to thank God for them. We have, no doubt, weaknesses and evils mingled with our strength and our good. So have "religious people" south, as well as north, of the Tweed. I am free also to confess that when men, for example, needing air and exercise, are condemned for enjoying both on this day; when "not working" is pushed to the extent of not drawing water from a well, nor shaving (!), and the like absurdities; or when we deny ourselves the good of instrumental sacred music, in public and private worship on Sunday, we certainly lay ourselves open to rebuke as being both Judaical and Pharisaical. But it would be a miserable reform to fly from such ex-

tremes to the thoughtlessness, the dissipation, the mere amusements, and utter worldliness of a Continental Sabbath. Nay more, the error, arising from false judgment, which induces a Scotchman of the extreme school, or an Englishman either, to make the Lord's day one of formal dulness and senseless punctilios, is less blameworthy than the error of religious indifference, which induces thousands to make the Sunday a holiday, but not a *holy* day, and to mark it only by idleness and excitement, without any thoughts of even religious worship. But instead of exposing the evils of any country, let Christians in every country strive together by their example to keep the Sabbath in a right spirit, as the day specially designed for

the good of *man*—the *whole* man—soul, spirit, and body.

One word more. The working classes ought, above all, to value and to preserve this blessed day. To them it is especially precious as securing for them the physical rest they so much require; as helping them to enjoy those social blessings which the necessities of labour tend to deprive them of; as providing for them information and instruction which the hard work of other days render it almost impossible for them to obtain; and, above all, as affording them an opportunity of assembling in the House of God, and realizing their position and dignity as children of God, brothers of Jesus Christ, members of His church, and heirs of immortality.

SHORT PAPERS.

BY ARCHBISHOP WHATELY.

I.—OF HOPE AND FEAR.

ARE men disposed to overrate or underrate their own good luck? Adam Smith says the former; and he adduces lotteries, mining-schemes, fisheries, and many such things, in which men are aware that the *total* losses exceed the gains. An eminent political economist says the contrary, and adduces insurances, in which a person knowingly pays more than the amount of the risk, for the sake of being secured from loss; for the insurers receive as much as compensates the risk, besides a profit, and the tax to Government is as much more. It may be doubted, however, whether, in many cases, a man does pay more than the risk is practically worth to him. A risk may, by fair computation, be £50 per annum; and to be insured for it I may pay £100, not from overrating my own risk, but because the £100 per annum may be but a very trifling deduction from my enjoyments, while the loss might involve total ruin. £100 is, no doubt, the $\frac{1}{200}$ th part of £20,000; but it does not follow that the evil of losing £100 is $\frac{1}{200}$ th of that of losing £20,000, or anything near it.

To explain the whole matter I should adopt the language of the Craniologists, though not so as to imply the least shadow of truth in their speculations concerning the brain. They say there is an organ of Hope, and another of Cautiousness or Apprehensiveness; the former excited by, and dwelling on, bright prospects of futurity; the other, dangers and anticipated evils. This language does not exactly correspond with the ordinary; but I think it is more precise. In common discourse Hope and Fear are always understood to imply each other; i.e., any diminution of the confident anticipation of good is called Fear; as the lover fears he may lose his mistress, and when he is free from this fear, it is called, not Hope, but Confi-

dence. So also apprehension of evil is called Despair, when there is no limitation of it, i.e., no hope of escape. But it is plain, first, that Hope and Fear cannot, *both* of them at least, be mere negations or limitations of each other, else they would be like the two cats which ate each other all but the tails, or Duncan's horses, which are not recorded even to have left the tails. (*Vide* Macbeth.) There must be such a thing as a cheering anticipation of positive good; and I think it is a very different sensation from the mere abatement of a dread of positive evil. So also, *vice versa*. Then, some persons have more, they say, of the one organ, others, of the other. But how is it with the generality? Those in whom Hope predominates will overrate their own good luck, and those who stake the best part of their property in mining and such speculations, are plainly of the number. Hope says, you will make your fortune; Cautiousness, you will lose your fortune. Now, if the latter be in itself the more likely, it is plain that such as do take their chance are dazzled by the bright pictures drawn by a predominant Hope. On the other hand, the case of insurance does not prove that the insurers must have a predominant cautiousness; because in this case Cautiousness is left to *act alone*, without having the antagonist-muscle of Hope to counteract it. Suppose I have a richly-freighted ship at sea: Cautiousness says, it may be lost; you had better insure; Hope does not forbid this; for though she may be drawing splendid pictures of the wealth coming in this ship, insuring does not destroy this wealth, only a small portion of it. Whereas in the other case, Hope not only draws a splendid picture of the wealth to be drawn from the mine, but requires that we should shut our ears against our Cautiousness, if we would realize the picture: the gain cannot be had but by running the risk.

On the other hand, it must be admitted that some lottery-speculations, etc., do not imply a predominance of Hope; for where the outlay is very inconsiderable (to him who makes it), and the possible gain great, we have the converse of the case of insuring. *Hope* is here acting without an antagonist-muscle; she says, Venture! and Cautionness has in such a case little to say against it. All this is quite independent of any speculations about the brain.

II.—INFLUENCE.

WHAT is the proper meaning of *Influence*? Originally, it certainly was used to denote some subtle mysterious agent *flowing in* upon some person or thing, something in the way that we conceive of an electric current, etc. Since, its meaning has been greatly extended; but still, we do not extend it to *every* cause. As we should never speak of the *influence* of a stream carrying a man off, or of men who drag him to prison by physical force, so, neither should we speak of a man's being "*influenced*" by the demonstrations of Euclid. But in moral concerns we do speak of his being influenced by *arguments*; though we should oftener speak—and should consider ourselves as speaking more strictly—of the influence of various *passions*. But we always use the word, I think, in those cases to which our ancestors *confined* it, viz.: when we speak of one man having gained an *influence* over another of which no account can be given: when he sways him independently of the amount of love, fear, respect, etc., felt, and beyond what can be referred to his reason, or to regard for his interest, or to any intelligible motive. I think there must be a certain mesmeric power possessed by some people in reference to some others. Some can thus influence one, or a few; some, a great many; and some, none at all.

Mr. Phillips, my schoolmaster, had a wonderful influence over his boys; and it was this that has long since led me to speculate on the subject. He was not at all above par in point of ability; nor was he thought so by the boys. He was, though not contemptible in point of learning, far from eminent. He was not skilful in conveying knowledge; and in speaking to the boys, his style was laboured, stiff, pedantic, and such as often to excite ridicule. His kindness of character would account for his being greatly beloved, and his indomitable firmness, for his being feared. But the unaccountable thing was the power that he had over the minds of the most dissimilar characters. He brought them to think with him, and to feel with him; to honour whatever he honoured, and to regard as contemptible whatever he despised. Had he been a man of superior judgment, he might have done wonders. But he was like a

child intrusted with a magician's wand. He used his influence sometimes very foolishly, and seldom in the way to produce the most important and best results.

His son-in-law, Parsons, for a time assisted in the school. In good judgment, in scholarship, and in skill as a teacher, he was vastly superior; and if Mr. Phillips would have consented to act in conformity to his wishes,—to be the steam-engine of the carriage, and let Parsons be the driver, it might have been made such a school as was seldom seen. But Mr. Phillips was quite unconscious of his own inferiority of judgment, and was self-confident and utterly obstinate. He never would take any advice from any one. And Parsons not liking to be a mere agent to follow the directions implicitly of a man of inferior qualifications, left him, and set up a school of his own. It was a good and successful one; but with all his high moral and intellectual qualifications, he never came near Phillips in the *influence* he exercised over the minds of the boys.

I have heard Hinds (who was at Phillips') remark—as one proof of the unaccountable character of that influence—that any one who (seeing him succeed so well, in this or that) attempted to *imitate* him, was sure to fail. It was as if any one seeing you lift up a piece of iron with a magnet, should exactly copy your action, only employing an *unmagnetic* bar, to all appearance perfectly similar.

I myself never had, in the strict sense of the word, any influence at all with any one. Whenever I have induced any one to think or to act in any way, it has always been by some *intelligible* process; either by his seeing the force of the reasons given, or (which is not at all less of a logical process) by his thinking that I was to be trusted for knowledge or judgment on such and such points, on which he had good reason for so trusting me. I may perhaps have convinced some persons who have been themselves influential; but I have never had any *direct* influence; that is, I have never produced any effect that could not be *clearly accounted for*.

I remember a very early occasion of the subject having been brought before my mind; a subject on which I have often reflected at various times since. When I was about thirteen, the boys at my school had a fancy for playing at soldiers, hoops being the representatives of horses; and they performed beautifully many of the evolutions of cavalry. The colonel of the regiment was a very stupid boy, and I don't think any one thought him otherwise: but they obeyed all his commands with readiness. I, who acted as major, had to instruct him, *in the presence of the boys*, what to do and to say; and when he had had it beat into his dull

brain, he repeated the *very words* they had heard me dictate to him, and all went on well. But if either of us was absent, nothing could be done. When I was away, the boys were indeed as ready

as ever to obey him; but he was utterly at a loss to give a word of command. If he was absent, none of the boys would mind the word of command from my mouth, and all fell into confusion!

PICTURES IN THE FIRE.

OLD Winter blows, and whistles hard
To keep his fingers warm; while I
Shut out the cold night, frosty-starred,
Bleak earth and bitter sky;
And to the Fireplace nestle nigher,
And gaze on pictures in the Fire.

It has a soft, blithe, murmuring glow,
As if it crooned a cradle-song;
Yet whispers of some awful woe
Are on each flaming tongue
That may have licked up human life,
Quick, ruddy as a murderer's knife!

I see the Dead Men underground,
Just as they found them rank on rank;
Old Mothers—Young Wives—red-eyed round
The Corpses brought to bank;
I see the mournful phantoms flit
From out the mouth of Hartley Pit;

And that poor Widow above the rest
So eminent in Suffering's crown,
Who wearing sorrow's loftiest crest
Is bowed the lowliest down;
Poor Widow with her Coffins seven,
Look down on Her, dear God in Heaven!

I hear that crash with sinking heart—
Eternity has broken through!
I see him play His Hero part,
That leader-tried and true,
Who faithful stood to his last breath
And fell betwixt them and their death.

I see the strong man's agony,
That seeks to rend his ghastly shroud;
The touch of solemn radiance
That kindles in the cloud;
The trust that earned a nobler doom
Than such a death in such a tomb;

The valour that invisibly
Lifted the bosom like a targe;
The hidden forces that did lie
Ready for Life's last charge!
And all the bravery brave in vain,
And all the majesty of pain:

Visions of the old Home that flash
With all the mind's last mortal power;
The tears that burn their way to wash
A soul white in an hour,
When thoughts of God go deeper than
The Devil at His utmost can.

I hear the poor faint heart's low cry
That sickens at the sight of Doom;
The prayer of those that feel it nigh,
And groping through the gloom!
They cower together hand-in-hand,
At the dark door of the dark land.

Ghostly and far-away life seems
To one returning from a swoond;
And sharp the sorrow comes in dreams
When we are helpless bound;
But deathliest swoons, or ghastliest nights,
Have no such sounds, or spirit-sights.

The waiting human world is near,
Yet farther off than Heaven for them
Who bow the doomed head, to bear
Death's cruel diadem,
With farewell words of solemn cheer
And love for those who cannot hear:
Old heads with hair like spray above
A tossed and troubled sea of life;
Young hearts, just kissed to the quick by Love,
That leave a one-day wife!
O pathos of a hopeless fate!
O pain of those left desolate!

'Tis brave to die in Battle's flash,
For the dear country we adore—
Struck breathless 'mid the glorious crash,
When banners wave before
The fading eyes, and at the ears
We are caught by following Victory's cheers!

And sailor-blood that on the waves
Can feel the Mother's heaving breast—
True sailor-blood no wailing craves
Over its place of rest,
When souls first taste eternity
In those last kisses of the Sea:

And Death oft comes with kind release
To win a smile from those who lie
Where they may feel the blessed breeze,
And look up at the sky,
And drink in, with their latest sigh,
A little air for strength to die:
But, 'tis a fearful thing to be
Instantly buried alive, fast-bound
In cold arms of eternity
That clasp the breathing round,
And hold them, though their Comrades call
And dig with efforts useless all.

A tear for those who, in that night,
Went down so unavailing;
A cheer for those who fought our fight,
And missed the victory!
Peace to the good true hearts that gave
A moral glory to that grave!

We know not how amid the gloom
Some jewel of the just outshone;
With precious sparkle lit the tomb
And led the hopeless on
To hope, and showed the only way
To find God's hand and reach his day.

We know not how in that quick hour
 Some poor uncultured human clod
 May have put forth its one sweet flower,
 Acceptable to God;
 Or how the touch of Death revealed
 Some inner beauty life concealed:

We know not how the Dove of peace
 Came brooding on the fluttering breast,
 To make the fond life-yearnings cease,
 And fold them up for rest:
 And into shining shape the soul
 Burst, like the flame from out the coal:

We only know the watchfires burned
 Long in their eyes for human aid,
 And failed, and that to God they turned,
 And all together prayed,
 And that the deepest Mine may be,
 For Prayer, God's whispering Gallery!

That Christ still hangs upon the tree
 To smile beneath His thorns, and say
 "This night, Soul, thou shalt sup with me,"
 In His old loving way:
 And suffering men get back to God
 By that same path the Saviour trod.

Deep, dark the deathly River is,
 But on before still walketh Christ!
 His Brightness over that abyss
 Is moving in the mist.
 If they who pass the Bridge of Dread
 Look up, He goeth overhead.

Dear God, be very pitiful
 To these poor toiling slaves of men:
 Be gracious if their hearts be dull
 With darkness of their den.
 'Tis hard for flowers of heaven to grow
 Down where the earth-flowers cannot blow!

Their lives are as the candle-snuff,
 Black in the midst of its own light!
 Let hard hands plead for spirits rough—
 They work so much in night.
 Be merciful, they breathe their breath
 So close to danger, pain, and death.

The love-mist in a Father's eye
 Will rise, and soften much that's rude
 In his poor Children—magnify
 The least faint gleam of good!
 O find some place for human worth
 In Heaven, when it has failed on Earth.

GERALD MASSEY.

A CAST IN THE WAGGON.

BY SARAH TYTLER, AUTHOR OF "PAPERS FOR THOUGHTFUL GIRLS."

CHAPTER IV.—OTHER CASTS FOLLOWING THE CAST
IN THE WAGGON.

CLARY and Dulcie were slightly censured for their officiousness in the affairs of these painter fellows; but it is in the nature of women not to take well with contradiction: it is in the nature of good women to fly furiously in the face of whatever crosses their generosity, or thwarts their magnanimity.

The crisis came about in this way: Will Locke had finished his work long before Sam; not that Will was more industrious, but he had not got half the commissions at half the price, and that was about the usual division of labour between them. The two men were born to it. Sam's art took the lucrative shape of portrait-painting; Will's, the side of flower and fruit and landscape painting, which was vilely unremunerative then; and allegorical painting, which no one will be at the pains to understand, or, what is more to the purpose, to buy in this enlightened nineteenth century. Sam, who was thriving already, fell in love with Clariissa Gage, with her six thousand pounds' fortune: there was no premeditation, or expediency, or cunning in the matter; it was the luck of the man. But Will Locke could never have done it: he, who could never make a clear subsistence for himself, must attach himself to a penniless, cheery, quick little girl like Dulcie; and where he could not well maintain one, must provide for two at the lowest estimate. Will Locke was going, and there was no talk of his return; Dulcie was helping him to put up his sketches with her orderly, ready, and respectful hands.

"When we are parted for good, I shall miss you," he said, simply.

Her tender heart throbbed with gratitude, but she only answered,—

"Are we to be parted for good? Will you never come back to Redwater?"

"I cannot come back like Sam," he affirmed, sadly, not bitterly; "I am not a rising man, Dulcie, though I may paint for ages."

A bright thought struck Dulcie, softening and warming her girlish face, till it was like one of those faces which look out of Fra Angelico's pictures, and express what we are fond of talking about—adoration and beneficence.

"Could I paint for the potteries, Master Locke?" For, in his noble thriftless way, he had initiated her into some of the very secrets of his tinting,

and Dulcie was made bold by the feats she had achieved.

"What should set you labouring on paltry porringers?—you are provided with your bit and sup, Mistress Dulcie."

"I thought it might be fine to help a great painter like you," confessed the gentle lass; very gently, with reluctance and pain, for it was wrong by compulsion from her maidenliness.

"Do you think so? I love you for thinking it," he said directly: but he would never have done so, brave as he was in his fantasies, without her drawing him on.

However, after that speech, there was no further talk of their parting for good: indeed, Dulcie would do her part, and slave at these "mugs and pigs" to any extent; and all for a look at his painting before he quitted the easel of nights,—a walk, hanging upon his arm, up Primrose Hill,—a seat by his side on the Sundays in the city church where he worshipped. Dulcie did not care to trouble her friends at home with the matter: instead, she had a proud vision of surprising them with a sight of—her husband. "They would be for waiting till they could spare money to buy me more clothes, or perhaps a chest of drawers; they could not afford it: no more could Will find means to fly up and down the country. Father dear will be pleased to see him so temperate: he cannot drink more than a glass of orange-wine, or a sip of cherry brandy; he says it makes his head ache: he prefers the clear, cold water, or at most a dish of chocolate. Mother may jeer at him as unmanly: she has a fine spirit, mother, and she may think I might have done better; but mother has grown a little mercenary, and forgotten that she was once young herself, and would have liked to have served a great genius with such a loving heart and such blue eyes as Will's. Ah! the girls will all envy me, when they get a glance from Will's blue eyes: and let them, for he is too good a fellow to look at anybody but his poor ordinary silly wife, and if he did, the odds are that he would not see them; could not tell whether their hair were black or red. Ah me! I am not sure whether Will always sees me—poor me—and not one of his angels from paradise."

But Dulcie did mean to tell Clary, to ask her what she would advise her to wear for her wedding-gown, and whether she and Sam Winnington would be best maid and best man. But Clary put her foot through the plan neatly. Clary was in

one of her vapourish moods when she inquired one night, "Is Will Locke coming down again, Dulcie?" Oh! what ever is he seeking here? What more can we do for him? Nobody wants any more sheep or goats (were they sheep or goats, Dulcie?), or strawberries or currants, unless as mutton, and kid, and preserves. And, Dulcie, you must not stand in your own light, girl, and throw away any more notice upon him; it is wasting your time, and the word of him may keep away others. A match with him would be purely preposterous; even Sam Winnington, who is a great deal more of a scamp, my dear, treats him as a sublime simpleton."

What induced Clary to attempt to lock the stable after the steed was stolen? What drove her off all of a sudden on this dreadfully candid and prudent tack? She only knew. Possibly it was to ease her own troubled conscience; but with Sam Winnington constantly dangling about her skirts, and receiving sufficient encouragement too, it was hard for Dulcie to bear. She was in a fine passion; she would not tell Clary, after that round of advice; no, not a word. How did she know what Clary would do next? Perhaps forbid Will the house, when he came back from London with the licence, lock her into a room, and write an evil report to her friends? No, Dulcie could keep her own counsel: she was sorry to live in Clary's house, and eat the bread of deceit, but she would not risk Will's happiness as well as her own.

Will Locke reappeared on the scene within a fortnight. The lad did not tell Dulcie, though, that he had walked the most of the way, and that he had rendered himself footsore, in order to be able to count out Dulcie's modest expenses up to town, and perhaps a month's housekeeping beforehand: for that was the extent of his outlook. Will Locke appointed the Vicar to meet him and a young woman in Redwater Church, the very morning after his return: there was no use in delay, except to melt down the first money he had hoarded; and Will and Dulcie were like two children, eager to have the business over and done with, and not to do again by the same parties. The Vicar was quite accustomed to these sudden calls, and he submitted to them with a little groan. He did not know who the young woman might be, and he did not care: it might be Mrs. Cambridge, it might be Mistress Clarissa herself, it might be the still-room maid, or the barmaid at the "Rod and Fly;" it was all one to him. As for the young painter fellow, the quiet lads were as likely to slip into these scrapes as the rattles; indeed, the chances were rather against them: the Vicar was inclined to cry, "Catch Mr. Sam Winnington in such a corner." But the Vicar was in no way responsible for a youth who was not even his own parishioner; he was not accountable for

his not having worldly goods, wherewith to endow the young woman whom he was to lead to the altar. Oddly enough, though worldly goods are undoubtedly introduced into the service, there are no accompanying awkward questions: such as, "What are your worldly goods, M.?" or, "Have you any worldly goods, M.?" The Vicar did not care at all, except for his incipient yawns, and his disordered appetite: he was a rebuke to gossips.

When the hour came, Dulcie was distressed: not about wrong-doing,—for the girl had no more idea that she was doing wrong than you have when you write a letter on your own responsibility, and at your own dictation; not at the absence of friends, for in Dulcie's day friends were considered very much in the way on such occasions. Indeed, the best accredited and most popular couples would take a start away from their companions and acquaintances, and ride ten miles or so to be married privately, and so escape all ceremony. Dulcie was troubled by the want of a wedding-gown: yes, a wedding-gown, whether it is to wear well or not, is to a woman what a wig is to a barrister, what a uniform is to a soldier. Dulcie's had no existence, not even in a snip; no one could call a half-worn sacque a wedding-gown, and not even her mother's tabby could be brought out, for fear of observation. Only think! a scoured silk: how could Dulcie "bridle" becomingly in a scoured silk? There was a certain appropriateness in its shabbiness with regard to one who had done with the vanities of this world: but a scoured silk beside bridal blushes!—alas, poor Dulcie!

In every other respect, there appears something touching as well as humorous in that primitive marriage-party on the grey October morning, with the autumn sunbeams, silver not golden, faintly brightening the yellowing vine, over the sexton's house, and the orange and grey lichens, the only ornaments outside the solid old church, with its low, heavy Saxon arches. The Vicar bowed with ceremony, and with a dignified and deliberate air, as he recognised Mistress Dulcie; the old clerk and his wrinkled wife stumbled into an apprehension that it was Mistress Clarissa Gage's friend who was to have the knot tied all by herself so early: but it was nothing to them either; nothing in comparison with the Christmas dole. The lad and lass so trustful, so isolated, making such a tremendous venture, deserved to have the cheery sunshine on their lot, if only for their faith and firmness.

When it was over, Dulcie plucked Will's sleeve, to turn him into the vestry. One must be the guide if not the other, and "it's main often the woman," the old clerk would tell you, with a toothless grin.

Then Dulcie went with Will straight to the "Rod and Fly;" for such was the established rule. These occurrences were so frequent, that they had their etiquette cut out for them. From the "Rod and Fly," Will and Dulcie sent the coolest and most composed, the most perfectly reasonable and polite of messages, to say they had got married together that morning, and that Mistress Cambridge need not have the trouble of keeping breakfast for Mistress Dulcie. A separate apology was sent from Dulcie for not having procured the water-cresses which she was to have sought for Cambridge. Further, Mr. and Mrs. Will Locke would expect all of their friends who approved of the step they had taken, to come to the "Rod and Fly," and offer their congratulations and drink their healths, that morning without fail; as the young couple had to start by the very waggon in which they had first set eyes on each other. "Think of that, Will!" Dulcie had exclaimed, breathlessly, as if she was calling his notice to a natural phenomenon. They had now to ask and receive Dulcie's parents' blessing before they began housekeeping, in Will's lodgings in London, on the merits of a month's prices with future orders and outwork from the potteries. Oh! these old easy beginnings! What have we gained by complicating them?

Will Locke and Dulcie had cast the die, and on the first brush of the affair, their friends at Red-water took it as ill as possible: Clarissa was hysterical,—Sam Winnington was as sulky as a bear. If this treatment were to be regarded as a foreshadowing of what the behaviour of the authorities at Fairfax would prove, then the actors in the little drama might shake in their shoes. But Will Locke placidly stood the storm they had brewed, only remembering in years to come some words which Dulcie did not retain for a sun-down. Dulcie was now affronted and hurt, now steady as a stepping-stone and erect as a sweet pea, when either of the two assailants dared to blame Will, or to imply that he should have refrained from this mischief. Why, what could Will have done? What could she have done without him? She was not ashamed to ask that, the moment they reflected upon Will Locke, though she had not borne his name an hour. Oh! child, child!

Notwithstanding, it was very trying to Dulcie when Clary protested that she never would have believed that Dulcie could have stolen such a march upon her; never. Dulcie to deceive her! Dulcie to betray her! Poor Clary! Whom could she turn to for affection and integrity, in the days that might remain to her in this wicked world? She had walked all along the street with its four or five windows in every gable, turned to the thoroughfare,—her handkerchief at her eyes, while the whole

town was up, and each window full. She was so spent now, with her exertions and her righteous indignation, that she sat fanning herself in the bar; for Will and Dulcie could not even afford a private room to receive their wedding company so summarily assembled. Never was such a business, in Clary's opinion; not that she had not often heard of its like,—but to happen to a kind, silly, credulous pair, such as Dulcie and Will Locke! Clary sat fanning herself, and casting knots on her pocket-handkerchief, and glancing quickly at Sam Winnington's gloomy, dogged face, so different from the little man's wonted bland, animated countenance. What on earth could make Sam Winnington take the wilful deed so much to heart? Hear him rating Will, whom he had been used to patronize in a careless, gracious style, but upon whom he now turned in strong resentment. These reproaches were not unprovoked, but they were surely out of bounds; and their matter and manner rankled in the breasts of both these men many a day after they had crossed the Rubicon, and travelled far into the country on whose borders they were still pressing.

"You have disgraced yourself and me, sir! You have gone far to ruin the two of us! People will credit us of the same stock: a pair of needy and reckless adventurers!"

"Master Winnington, I was willing: I could do what I liked with myself without your leave; and I suppose Will Locke was equally independent," fired up Dulcie.

"We'll never be mistaken for the same grain, Sam Winnington," declared Will Locke, with something like disdain. "I always knew we were clean different; and the real substance of the wood will come out more and more distinctly, now that the mere bark is rubbed off."

Clary was mollified at last; she kissed and sobbed over Dulcie, wished her joy sincerely, half promised to visit her in town, and slipped a posy ring from her own hand to the bride's, on the very finger where Will Locke had the face to put the marriage-ring which wedded a comely, sprightly, affectionate young woman to struggles and disappointments, and a mad contest between spirit and matter. But Sam Winnington would not so much as shake hands with Will; though he did not bear any malice against Dulcie, and would have kissed her fingers if she would have allowed it: and the young men, erstwhile comrades, looked so glumly and grimly at each other, that it was a universal relief when the great waggon drew up at the inn door.

Dulcie, in another character now, and that before the fall of the russet leaves—half ashamed but very proud, the little goose! of the quick transformation—stepped into the waggon; the

same boxes were piled beside her; Will leapt in after her, and away they rolled. There was nothing more for Dulcie to do but to wave her hand to Clary and Cambridge, and the women of the inn (already fathoms deep in her interest), and to think that she was a married woman, and had young Will Locke the great painter in his chrysalis state, to look after.

But why was Sam Winnington so irate? He had never looked sweet on Dulcie for half a second. Was it not rather that a blundering dreamer like Will Locke had anticipated him, marred his tactics, and fatally injured his scientific game? Sam came dropping down upon Redwater whenever he could find leisure, when the snow was on the ground, or when the peaches were plump and juicy, for the next two or three years. If he had not been coming on finely in his profession, heightening his charges five guineas at a time, and if Clary had not possessed that nice six thousand pounds' fortune, they would have done off the matter in a trice, like Will Locke and Dulcie Cowper. Poor Sam! poor Clary!—what an expenditure of hours and days and emotions, they contrived for themselves! They were often wretched! and they shook each other's faith: it is doubtful if they ever quite recovered it. They were so low occasionally that it must have been dreadfully difficult for them to get up again; they were so bitter that how they became altogether sweet once more, without any lingering remains of the acrid flavour in their mouths, is scarcely to be imagined. They were good and true in their inmost hearts; but it does appear that some of the tricks of which they were guilty left them less honest human creatures. There was a strong dash of satire in Sam's fun afterwards; there was a sharpness in Clary's temper, and a despotism in her dignity. To be sure, Clary always liked Sam's irony a thousand times better than another man's charity, and Sam ever thought Clary's impatient, imperious ways far before the cooing of any turtle-dove in the wood; but that was only an indication that the real metal was there, not that it was not smirched and corroded with rust.

The first effect of Will and Dulcie's exploit was extremely prejudicial to the second case on the books. Uncle Barnet, a flourishing London barrister, a man with strong lines about his mouth, a wart on his forehead, and great laced flaps at his coat pockets, and who was supposed to be vehemently irresistible in the courts, hurried down to Redwater on purpose to overhaul Clary. What sort of doings were those she presided over in her maiden house at Redwater? Not the runaway marriage of a companion; that occurred every day in the most polite circles; Clary could not fairly be called to account for such a trifle; be-

sides, a girl without a penny might do as she chose. But there was something a vast deal more scandalous lurking in the background: there was word of another fellow of the same kidney buzzing about Clary—Clary with her six thousand pounds' fortune, her Uncle Barnet, her youth, her handsome person, her what not? Now, as sure as Uncle Barnet's name was Barnet, as he wore a wig, as there was justice in the country, he would have the law of the fellow. Don't tell him the man was advancing rapidly in his profession. What was a painter's profession?—or the son of a gallant Captain Winnington? If a gallant Captain Winnington could be nothing more than gallant, he did not deserve the name; it was a piece of fudge to cheat foolish women with. Yes; he would have the law of the fellow if he buzzed about his niece; he would have the law of Clary if she encouraged him.

What could Clary do? She had been taught to look up to Uncle Barnet; she had seen polite society under his wife's wing; she had obeyed him at once as her Mentor and her Mæcenas,—as her father and prime-minister. She cried and kissed his hand, and promised not to forget her position, and to be a good girl; and as she was not engaged to Sam Winnington, and did not know for certain that he would return to Redwater for the grass-mowing or the hop-gathering, she thought she might be free to promise also that she would not see him again with her will. Of course she meant to keep her word if she might; but there are two at a bargain making: and observe, she said, "with her will;" she made no reference to Sam Winnington's pleasure. And yet, arrogant as Clary could be on her worst side, she had found her own intentions and purposes knocked down by Sam Winnington's determinations before now.

When Sam Winnington did come down next, Clary had such honour and spirit, that she ordered the door to be shut in his face; but then she cried far more bitterly than she had done to Uncle Barnet, in the same hall where Sam had painted her and jested with her; and somehow her affliction reached Sam's ears, living in a little place like Redwater at the "Rod and Fly" for several days on end.

At last another spice entered into the dish; another puppet appeared on the boards, and increased the disorder of the former puppets. The county member did turn up. Clary was a prophet: he came on a visit to his cousin the Justice, and was struck with tall, red and white, and large-eyed Clary; he furbished up an introduction, and offered her the most marked attention.

Mrs. Clarissa was in ecstasy, so her gossips declared, and so she almost persuaded herself, even after she had certain drawbacks to her pleasure, and certain cares intruding upon her exultation;

after she was again harassed and pestered with the inconvenient resuscitation of that incorrigible little plain, vain portrait painter, Sam Winnington. He was plain,—he had not the county member's Roman nose, and he was vain—Clary had already mimicked the fling of his cravat, and the wave of his white hands. Clever, smart fellows, like Sam Winnington, are generally parcel coxcombs. Oh, Sam! in order to serve your own turn now, where be your purple shadows, your creamy whites, your marvellous reading of people's characters, and writing of the same on their faces, their backs, their very hands and feet, which should leave the world your delighted debtor long after it had forgotten you member's mighty services?

Clarissa had never danced so many dances with one evening's partner as with the smitten member, at the assembly given on the spur of the moment in his honour, whereat Sam Winnington, standing with his hat under his arm, leaning against the carved door, was an observant spectator. He was not sullen as when Will Locke and Dulcie tumbled headlong into the pit of matrimony; he was smiling and civil;—but his lips were white and his eyes sunken, as if the energetic young painter did not sleep of nights.

Clary was not sincere; she gave that infatuated, tolerably heavy, red-faced, fox-hunting member, own cousin to the Justice, every reason to suppose that she would lend him the most favourable ear, when he chose to pay her his addresses, and then afforded him the amplest provocation to cry, "Caprice—thy name is woman." She had just sung "Tantivy" to him after supper, when she sailed up to Sam Winnington, and addressed him demurely,—

"I have come to wish you good-night, sir."

"And I to wish you farewell, madam."

"Farewell is a hard word, Master Winnington," returned Clary, with a great tide of colour rushing into her face, and a gasp as for breath, and tracing figures nervously on the floor with her little shoe and its brave paste-buckle.

"It shall be said though, and that without further delay, unless three very different words be put in its place."

"Sir, you are tyrannous," protested Clary, in a tremulous voice.

"No, Mrs. Clarissa, I have had too good cause to know who has been the tyrant in this business," declared Sam Winnington, speaking out roundly, as a woman loves to hear a man, though it be to her own condemnation. "You have used me cruelly, Clarissa Gage; you have abused my faith, wasted the best years of my life, and deceived my affections."

"What were the three words, sir?" asked Clary, faint and low.

"'Yours, Sam Winnington;' or else, 'Farewell, Clarissa Gage!'"

"Yours, Sam Winnington."

He caught her so sharp up by the arm at that sentence, that some persons said Mistress Clarissa had staggered and was about to swoon; others, that the vulgar fellow of a painter had behaved like a brute, pulled her to his side as she was marching past him, and accused her of perjury before the whole ball-room. Bold men were apt at that time to seize aggravating women (especially if they were the wives of their bosoms) by the hairs of their heads, so that a trifling rudeness was little thought of. The county member, however, pricked up his long ears, flushed, fiercely stamped to the particular corner, and had a constable in his eye to arrest the beggarly offender; but before he could get at the disputants, he had the mortification to see them retreat amicably into a side room, and the next thing announced to him was, that Mistress Clarissa had vanished home, before anybody could get rightly at the bottom of the mystery.

Very fortunately, the county member ascertained the following day, before he had compromised his pride another hair's-breadth, that the fickle damsel had accepted the painter's escort the previous evening, and had admitted the painter at an incredibly early hour the subsequent morning. After such indiscretion, the great man would have nothing more to say to Mistress Clarissa, but departed in great dudgeon, and would never so much as set his foot within Redwater again; not even at the following election.

Uncle Barnet was forced to come round and acknowledge, with a very bad grace, that legislation in heiresses' marriages—in any marriage—is out of the question. No man knew how a marriage would turn out; you might as well pledge yourself for the weather next morning: certainly there were signs for the wise; but were weather almanacs deceptive institutions or were they not? The innocent old theory of marriages being made in heaven was the best. Clary was not such a mighty catch after all: a six thousand pounds' fortune was not inexhaustible, and the county member might never have come the length of asking its owner's price. People did talk of a foolish engagement in his youth to one of his yeomen's daughters, and of a wealthy old aunt who ruled the roast; though her well-grown nephew, not being returned for a rotten burgh, voted with dignity for so many thousands of his fellow-subjects in the Commons. Uncle Barnet, with a peculiarly wry face, did reluctantly what he did not often advise his clients to do, unless under desperate premises—he compromised.

Clary was made a wife in the height of summer, with all the rites and ceremonies of the church, with

all the damasks, and laces, and leadings by the tips of the fingers, and lavishings of larkspurs, lupins, and tiger-lilies proper for the occasion, which Dulcie had lost. Nay, the supper came off at the very "Rod and Fly," with the tap open to the roaring, jubilant public; a score of healths were drunk upstairs with all the honours, the bride and bridegroom being king and queen of the company: even Uncle Barnet owned that Sam Winnington was very complaisant; rather exceeded in complacency, he supplemented scornfully: but surely Sam might mend that fault with others in the bright days to come. It is only the modern English who act Hamlet *minus* the Prince of Denmark; sitting at the bridal feast without bride or bridegroom.

They say hearts are often caught on the rebound, and if all ill-treated suitors spoke out warmly yet sternly like Sam Winnington, and did not merely fence about and either sneer or whine, more young fools might be saved, even when at touch and go with their folly, after the merciful fate of Clary, and to the benefit of themselves and of society.

CHAPTER V.—DULCIE AND WILL AT HOME IN ST. MARTIN'S LANE.

WHILE Sam and Clarissa were fighting the battles of vanity and the affections down in the southern shire in quite a rural district, among mills and ash-trees, and houses with gardens and garden bowers, William and Dulcie were combating real flesh-and-blood woes—woes that would not so much set your teeth on edge, as soften and melt your tough, dry heart—among the brick and mortar of London. These several years were not light sunshiny years to the young couple. It is of no use saying that a man may prosper if he will, and that he has only to cultivate potatoes and cabbages in place of jessamine and passion-flowers; no use making examples of Sir Joshua and Vandyke, and telling triumphantly that they knew their business and did it simply—only pretending to get a livelihood and satisfy the public to the best of their ability, but ending in becoming great painters. One man's meat is another man's poison; one man's duty is not his neighbour's. When shall we apprehend or apply that little axiom? The Duchess of Portland killed three thousand snails in order that she might complete the shell-work for which she received so much credit; Dulcie would not have put her foot voluntarily on a single snail for a pension.

It was Will Locke's fate to vibrate between drudgery and dreaming; always tending more inevitably towards the latter, and lapsing into more distant, absorbing trances, till he became more and more fantastic and unearthly, with his

thin light hair, his half-transparent cheek, and his strained eyes. To prophesy on cardboard and canvas, in flower and figure, with monster and star, crescent and triangle, in emerald green and ruby red and sea blue, in dyes that, like those of the Bassani, resembled the clear shining of a handful of jewels, which he seemed to have brought also from another region—to prophesy in high art, to be half pitied, half derided, and to starve: was that Will Locke's duty?

Will thought so, in the most artless, unblemished, unswerving style; and he was a devout fellow as well as a gifted, bowed to revelation, and read nature's secrets well before he forsook her for Heaven, or rather Hades. He devoted himself to the sacrifice: he did not grudge his lust of the eye, his lust of the flesh, his pride of life: he devoted Dulcie, not without pangs; he devoted his little sickly children pining and dying in St. Martin's Lane. He must follow his calling, he must fulfil his destiny.

Dulcie was not quite such an enthusiast: she did love, honour, and obey Will Locke, but she was sometimes almost mad to see him such a wreck. It had been a seen evil, and she had looked down into the gulf; but she had missed the depths: never seen its gloomy, dark, dreary nooks, poor lass! in her youthful boldness and lavishness; and our little feminine Curtius in the scoured silk, with the powdered brown curls, had not merely to penetrate them in one plunge, she had to descend, stumbling and groping her way, and starting back at the sense of confinement, the damp and the darkness. Who will blame her that she sometimes turned her head and looked back, and stretched up her arms from the desert to the flesh-pots of Egypt? She would have borne anything for her husband; and she did work marvels: learned to engrave for him, coloured constantly with her light, pliant fingers, and drew and painted from old fresh memories those articles of stoneware for the potteries. She clothed herself in the cheapest and most lasting of printed linen saques and mob caps, and hoods and aprons, fed herself and him and the children on morsels well nigh miraculously, and even swallowed down the sight of Clary in her cut velvet and her own coach, whose panel Sam Winnington himself had not thought it beneath him to touch up for Clary's delectation and glory. If Will would only have tarried longer about his flowers and bees, and groves and rattlesnakes; if he had even stopped short at faces like those of Socrates, Cæsar, Cleopatra, Fair Rosamond—what people could understand with help—and not slid off faster and more fatally into that dim delirium of good and evil, angels and archangels, the devil of temptation and the goblin of the flesh, the red fiend of war, and the pale spirit of peace! And

poor Dulcie had scarcely clothes for her back, or meat for her board, and no respite for her withering children. But Dulcie could have forgiven the infatuation which she shared; and would have been pleased, at least resigned, if Will had not stood so far aloof from his kind,—if he would have suffered her to receive the assistance which she could have procured for herself and him. Women are rarely the rebels in these cases; they are meeker, the most high-spirited of them; they are truer in the main; they can separate between begging from a stranger and asking aid of a brother; they can endure to give a father, a sister, an old friend, the privilege which they would have used kindly themselves. Dulcie knew there was a great deal of goodness beneath Clary's pride, and that she was entitled to be allowed credit for constancy and tenderness, though she wore cut velvet, and point lace instead of "Brussels heads." Dulcie was sure that if they would but make the appeal all would come right; the stiffness would melt, the old friendliness and sympathy would be at work for her and Will forthwith: and Clary and Sam Winnington had patronage and influence and grand friends, besides guineas coming in to them in heaps. But Dulcie dared not: the difference originating at Will and Dulcie's marriage had ended in alienation. Dulcie thought that Sam Winnington would have bridged it over at one time, if Will would have made any sign of meeting his overtures, or acknowledged Sam's talents and fortune: nay, even if Will had refrained from betraying his churlish doubts of Sam's perfect deserts.

But no, this Will would not deign to do. The gentle, patient painter, contented with his own estimation of his endowments, and resigned to be mis-judged and neglected by the world, had his own indomitable doggedness. He would never flatter the world's low taste for commonplace, and its miserable short-sightedness; he would never pay homage to Sam Winnington which he did not deserve—a man very far from his equal—a mere clever portrait-painter, little better than a skilled stone-mason. Thus Sam Winnington and Will Locke took to flushing when each other's names were mentioned,—sitting bolt upright and declining to comment on each other's works, or else dismissing each other's efforts in a few supremely contemptuous words. Certainly the poor man rejected the rich not one whit less decidedly than the rich man rejected the poor, and the Mordecais have always the best of it. If we and our neighbours will pick out each other's eyes, commend us to the part of brave little Jack, rather than that of the belligerent Giant, even when they are only eyeing each other previous to sitting down to the ominous banquet.

But this was a difficulty to Dulcie, as it is to

most women. No one thinks of men's never showing a malign influence in this world; it is only good women who are expected to prove angels outright here below. But it does seem that there is something more touching in their having to stifle lawful instincts, and in their being forced to oppose and overcome unlawful passions, covetousness, jealousy, wrath, "hatred, malice, and all uncharitableness."

Dulcie, with the sharpness of her little face, divested of all its counterbalancing roundness—a keen, worn little face since it had smiled so confusedly but generously out of the scurvy silk in the church at Redwater—was a sweet-looking woman under her care-laden air. Some women retain sweetness under nought but skin and bone; they will not pinch into meanness and spite; they have still faith and charity. Though their chins are acute peaks, their cheek-bones fleshless, and their foreheads unnaturally developed, they are sweet, giving women still; they have the expression, "We give, we give," though their laps are vacant, their hands empty, and little beyond bread and water, a bite of the scraggy neck of mutton, or a mouthful of parsnip tea, crosses their lips. One would not wonder though Dulcie afforded more vivid glimpses of *il Beata's* angels after the contour of her face was completely spoilt.

You can fancy the family room in St. Martin's Lane, some five or six years after Will Locke and Dulcie became one, with its strange litter of acids and aquafortis, graving tools and steel plates. Will and Dulcie might have been some of the abounding false coiners, had it not been for the colours, the canvas, and the vessels from the potteries, all huddled together without attention to effect; but not without order, for they were too busy people to be able to afford to be purely disorderly; Will at the table facing the light, and Dulcie catching it on her stool. They could not have had the curtain less scant, for the daylight was precious to them; they had not space for more furniture than might have sufficed a poor tradesman or better sort of mechanic; only there were traces of gentle birth and breeding in the casts, the prints and portfolios, the Dutch clock, and the great hulk of a state-bed hung with the perpetual dusky yellow damask, which served as a nursery for the poor listless little children. Well for them, yet, alas for Dulcie! there were never more than two living at a time. On that platform, too still to incur any danger of toppling over its steep sides, and breaking their dangling little necks, sat the pale-faced children, playing with their father's sketches and their mother's broken bits of porcelain, on which she tried over her old patterns.

Presently Dulcie looked after the sops, and surreptitiously awarded Will the Benjamin's portion,

and Will ate it absently with the only appetite there ; though he, too, was a consumptive-looking man—a good deal more so than when he attracted the pity of the good wife at the “Nine Miles Inn.” Then Dulcie crooned to the children of the milk-porridge she would give them next night, and sang to them as she lulled them to sleep, her old breezy, bountiful English songs, “Young Roger came tapping at Dolly’s window,” and “I met my lad at the garden gate,” and brushed their faces into laughter with the primroses and hyacinths she had bought for Will in Covent Garden Market. Will asked to see them in the spring twilight, and described the banks where they grew, with some revival of his early lore, and added a tale of the fairies who made them their round tables and galleries, which caused the eldest child (the only one who walked with Dulcie in his little coat to the church where he was christened) to open his heavy eyes, and clap his hot hands, and cry, “More, father, more.” Will and Dulcie looked gladly into each other’s eyes at his animation, and boasted what a stamping, thundering man he would yet live to be—that midge, that sprite, with Dulcie’s small skeleton bones, and Will’s dry, lustreless, fair hair !

Anon while Dulcie was still rocking one of these weary children moaning in its sleep, Will must needs strike a light to resume his beloved labours ; but first he directed his candle to his canvas, and called on Dulcie to contemplate and comprehend, while he murmured and raved to her of the group of fallen men and women crouching in the den,—of the wind of horror raising their hair,—of the dawn of hope bursting in the eastern sky, and high above them the fiendish crew, and the captains of the Blessed still swaying to and fro in the burdened air, and striking deadly blows for supremacy. And Dulcie, open-eyed and open-mouthed as of old, looked at the captives, as if listening to the strife that was to come, and well-nigh heard the thunder of the captains and the shouting, while her eye was always eagerly pointed to that pearly streak which was to herald the one long, cool, calm, bright day of humanity. No wonder Dulcie was as demented as Will, and thought it would be a very little matter though the milk-porridge were sour on the morrow, or if the carrier did not come with the price in his pocket for these sweet pots, and bowls, and pipkins : she believed her poor babies were well at rest from the impending dust, and din, and danger ; and smiled deep, quiet smiles at Clary—poor Clary, with her cut velvet, her coach, and her black boy. Verily Will and Dulcie could afford to refer not only pleasantly but mercifully to Sam Winnington and Clary that night.

“It is contemptible to lose sight of the sublimity of life even to enjoy perfect ease and happiness.”

That is a very grand saying ; but oh, dear ! we are poor creatures ; and though Dulcie is an infinitely nobler being now than then, the tears are fit to start into our eyes when we remember the little brown head which “bridled finely,” the little feet which pranced lightly, and the little tongue which wagged, free from care, in the stage waggon on the country road yon clear September day.

CHAPTER VI.—SAM AND CLARISSA IN COMPANY IN LEICESTER SQUARE.

SAM and Clarissa were worshipful people now ; people whom Uncle Barnet no longer invited to his second-rate parties, whom Uncle Barnet was really proud to visit in their own home : for Sam Winnington was a discerning mortal ; he had a faculty for discovering genius, especially that work-a-day genius which is in rising men ; and he certainly had bird-lime wherewith he could fix their feet under his hospitable table. The best of the sages and wits of the day were to be met in Sam Winnington’s house ; the best of the sages and wits of the day thought Clary a fine woman, though a little lofty, and Sam a good fellow, an honest chum, a delightful companion, and at the same time the prince of portrait-painters. What an eye he had ! what a touch ! How much perception of individual character, and at the same time, what sober judgment and elegant taste to preserve his sitters ladies and gentlemen, as well as men and women ! Cavillers would have it, the ladies and gentlemen, like Sam’s condescension at his wedding-feast, overtopped the mark ; but it was erring on the safe side. Who would not sink the man in the gentleman ? After all, perhaps the sages and wits were not altogether disinterested : almost every one of them filled Sam Winnington’s famous sitter’s chair, and depended on Sam’s tasteful pencil handing down their precious noses and chins to posterity.

Sam and Clary were going abroad, in that coach, which had made Dulcie Locke look longingly after it, and ponder what it would be for one of her frail children to have “a ride” on the box as far as Kensington. They were bound for the house of one of the lordly patrons of art and letters. They were bound for my Lord Burlington’s, or the Earl of Mulgrave’s, or Sir William Beechey’s ; to a destination where they were a couple of mark and distinction, to be received with the utmost consideration. Sam reared smartly his round but not ill-proportioned person in his rich brocade coat, and Clary towered in the corner with her white throat, and her filmy ivory-coloured laces. There they were on their arrival handed out by Clary’s own black boy ; lit up the flight of stairs into the portico by the attentive linkmen

(though it was so early), escorted on the staircase by more plush and cockades; received at the door of the great drawing-room with the most courteous of bows and curtsies, and the most friendly of hand-pressures from the noble owners of the mansion, who were creditably desirous of descending to future generations as liberal and enlightened members of the quality; then finding their way to the tea-room, or the crowded card-tables, or the settees, or the favourite lounge right under the candelabra, they were equals among the notables, and no small notables either.

We won't see many more distinguished men and women than the members of the set who frequented the old London tea-parties; and Sam Winnington and Clary were in it and of it, while Will Locke and Dulcie were poverty-stricken and alone with their bantlings in the garret in St. Martin's Lane. What becomes of the doctrine of happiness being equally divided in this world, as so many comfortable persons love to opine? Possibly we don't stand up for it; or we may have our loophole, by which we may let ourselves out and drag it in. Was that illustrious voyage all plain sailing? Sam Winnington used to draw a long sigh, and lay back his head and close his eyes in his coach, after the rout was over. He was not conscious of acting; he was not acting, and one might dare another, if that other were not a cynic, to say that the motive was unworthy. He wanted to put his sitters on a good footing with themselves; he wanted to put the world on a good footing with itself: it was the man's nature. He did not go very far down: he was not without his piques, and like other good-natured men—like Will Locke, for that matter—when he was once offended he was apt to be vindictive; but he was buoyant, and that little man must have had a great fund of charity about him somewhere to be drawn upon at first sight. Still this popularity was no joke. Besides, there were other rubs: a handsome, clever fellow, but brusque and headlong as any clown, was presuming to find fault with Sam's draperies, and the flattered Sam was knitting his eyebrows, even while he smiled broadly and argued volubly in his own defence. Again, Sam heard that "the Irish bully and beggar" Barry, was at his old trick of disdaining private pictures and the trade of limning common men and women; and though Barry was forced to wear a baize coat and cook his own steak, Sam could not be independent of his magniloquent applause. The keen love of approbation in the little man, which was at the bottom of his suavity, was galled by the least condemnation of his work and credit; he was too manly to enact the old man and the ass, but successful Sam Winnington was about as soon pricked as a man who wears

a fold of silk on his breast instead of the old plate armour.

And Clary, she had heard some of the conversation which had worried her Sam, though he would not allow it to her; the little man was game, only he would be up at six o'clock the next morning, carefully studying and finishing off these draperies; and he would commit the glaring inconsistency, for which he could have bitten his tongue out the next moment—he, the cool, pleasant, prosperous man—of cutting Barry short in a professional discussion, and snarling at him viciously, to the edification of the students. Clary had her own aggravations: with all her airs Clary was not a match for the indomitable, unhesitating, brazen (with a golden brazenness) women of fashion. Poor Clary had been the beauty at Redwater: she had been the heiress, the most modish woman, the best informed woman there; and here, in this world of London, to which Sam had got her an introduction as well as the county member or the peer could have done, she was a nobody; scarcely to be detected among the host of ordinary fine women, except by Sam's reflected glory. This was a doubtful boon: this was an unsatisfactory rise in the social scale. Then Clary had nobody beyond Sam to look to, and hope and pray for: she had not even sickly children to nurse, like Dulcie. Sam would only live to future generations in his paintings. Ah, well! it was fortunate that Sam was a man of genius.

You may believe, for all the grand company, the coach, the cut velvet, the laces, and the black boy, that this world was but a mighty sorry, uneasy place to Sam and Clarissa as they rolled home over the pavement, while Will and Dulcie slept with little betwixt them and the stars.

CHAPTER VII.—STRIPS SOME OF THE THORNS FROM THE HEDGE AND THE GARDEN ROSES.

WILL LOCKE lay dying. One would have thought, from his tranquillity, confidence, and love of work, even along with his spare diet, that he would have lived long; but dreamland cannot be a healthy region for a man in the body to inhabit; at least, Will was going where his visions would be as nought to the realities. Will Locke lay dying; the most peaceful, the happiest fellow, as he had been all his life; babbling of the pictures he would paint in another region, as if he were conscious that he had painted already, in a former age, when he who ran could read them—those wild groups—without a key. It seemed, too, that the poor fellow's spiritual life, apart from his artist career, took sounder, cheerier substance and form, as the other life grew dimmer and wilder. There is an old, old story of God's goodness to each wandering child of man, that when he holds up his

fettered, bleeding hands to Him, and rises up and goes to Him at last by the simpler, better way, the only true way, the Father sees him and has compassion, and ruins and falls on his neck, and kisses him. Dulcie was almost reconciled to let Will go; for he would be more at home in the spirit-world than here, and she had seen sore trouble herself—trouble which taught her to acquiesce in the earthly end of all, when there were a Father and a Friend seen glimmeringly but hopefully beyond the gulf. Dulcie moved about, with her child holding by her skirts, resigned and helpful in her sorrow.

The most clouded faces in the old room in St. Martin's Lane—with its old litter, so grievous to-day, of brushes, and colours, and graving tools, and wild pictures which the painter would never touch more—were those of Sam Winnington and Clary. Will had bidden Sam and Clary be sent for to his deathbed; and, offended as they had been, and widely severed as they were now, they rose and came trembling to obey the summons; Sam with the stain of paint on his hand, Clary with her dormouse hanging behind her. Clary gave one look, put her handkerchief quickly to her eyes, and then turned and softly covered the tools, lifted the boiling pot to the side of the grate, and took Dulcie's fretful, wondering child in her lap; not a fine lady now, but a woman in distress. Sam stood immovable and uncertain, with a man's awkwardness, but a face working with suppressed emotion.

Will felt no restraint; he sat up in his faded coat with his cravat open to give him air, and turning his wan face with its dark shadow towards Sam Winnington in his velvet coat, with a diamond-ring sparkling on his splashed hand, and his colour which had grown rosy of late years, heightened with emotion, addressed his old friend.

"I wanted to see you, Sam; I had something on my mind, and I could not depart with full satisfaction without saying it to you; I have done you wrong."

Sam raised his head, startled, and stared at the sick man: poor Will Locke! were his wits utterly gone? they had always been somewhat to seek: though he had been a wonderful fellow, too, in his own way,—wonderful at flowers, and birds, and beasts, if he had but been content with them.

"I called you a mere portrait-painter, Sam," continued the dying man; "I refused to acknowledge your inspiration, and I knew better: I saw that to you was granted the discernment to read the human face and the soul behind it, as to me it was given to hold converse with nature and the subtle essence of good and evil. Most painters before you have painted masks; but yours are the clothings of immortals: and your flesh is wonderful,

Sam—how you have perfected it! And it is not true what they tell you of your draperies: you are the only man alive who can render them picturesque and not absurd, refined and not stunted. You were ever a man in all your inches, Sam, though they were not many; but you were always ready to mend your height with a handy sycamore tree. You were a genteel fellow, too, from the beginning, and would no more do a dirty action when you had only silver coins to jingle in your pockets, than now when they are stuffed with gold mouldores."

"Oh, Will, Will!" cried Sam, desperately bowing his head; "I have done little for you."

"Man!" cried Will, with a kingly incredulity, "what could you do for me? I wanted nothing. I was withdrawn somewhat from my proper field, to mould and colour for daily bread; but Dulcie saved me many a wasted hour, and I could occupy the period of a mechanical job in conceiving—no, in marshalling my visions. Mine was a different, an altogether higher line than yours, Sam; you will forgive me if I have told you too abruptly," and the poverty-stricken painter, at his last gasp, looked deprecatingly at his old honoured associate.

But he was too far gone for ceremony; he was too near release for pain. He had even shaken hands with the few family cares he was capable of experiencing, he had commended Dulcie to Sam Winnington without a single doubt. He felt, like Gainsborough, that they were all going to heaven, and Vandyke was in the company. Where was the room for misunderstanding now? Here was the end of strife, and the conclusion of the whole matter. Without a blush he could openly declare his conviction of his superiority as a painter (as a man he was as lowly a sinner as ever trusted with a little child's trust to divine grace), and without remonstrance or protest the successful man might hear it. Some other sentences Will spoke before his parting breath; and when his hearers heard him murmuring the word "garment," they fancied he still raved of his calling—or to the end. But his mind had turned and taken refuge in another calling, and it was in reference to it that he quoted the fragment of a verse, "And besought him that they might touch if it were but the border of his garment; and as many as touched him were made whole." "Sam, have you put forth your hand?"

Thus Will Locke departed, rejoicing; and Dulcie, a thin forlorn widow woman in the crowd, talked with a lingering echo of his elevation, of her Will's being beyond lamentation, of herself and her boy's being well off with their faith in the future, with the husband and father's good name and merited reputation, which would surely find his memory out in this world yet—Dulcie had a proud, constant presentiment in the recesses of her woman's

heart. She had no material possessions save a few of his gorgeous, gruesome, hieroglyphical pictures, and what she had borrowed or inherited of his lower cunning in tinting, a more marketable commodity in the present mind of society.

Dulcie disposed of Will's paintings, reluctantly, to an astonishing amount; astonishing, unless you take into account the fact that his companions and contemporaries were not so sure that he was a mere madman now that he had gone from their ranks; and that they wished to atone for their dislike to his vagaries by preserving some relics of the curious handling, the grotesque imagination, the delicate taste, and the finely accurate knowledge of vegetable and animal forms which had passed away.

Then Dulcie went back in the waggon to her old friends at Fairfax, and, by so doing, probably saved her sole remaining child. Dulcie did not know whether to be glad or sorry when she found that Will's boy had no more of his father's genius than might have been derived from her own quick talents, and neat and nice fingers; and which would not be thrown away on mingling dyes, and designing warps and woofs, any more than Dulcie's in painting for the potteries. And she was comforted: not in the sense of marrying again—oh, dear, no! she cherished the memory of her Will as a sacred thing, and through all her returning plumpness and rosianness—for she was still a young woman—never forgot the honour she had borne in being a great painter's wife and companion for half a dozen years. Perhaps, good as she was, she grew rather to brandish this credit in the faces of the cloth-workers and their wives; to speak a little bigly of the galleries and the Academy, of chiaro-scuro and perspective, of which the poor ignoramus knew nothing; to be obstinate on her dignity, and stand out on her gentility far before that of the attorneys' and the doctors' wives;—and all this though she had been, as you may remember, the least assuming of girls, the least exacting of wives. But women have many sides to their nature, and are puzzles: puzzles in their virtues as in their vices; and if Dulcie were ever guilty of ostentation, you have not to dive deep to discover that it was out of respect to her Will—to her great, simple, single-hearted painter.

No, Will Locke's was not a wrecked life, wrecked on the rocks of adversity, any more than Sam Winnington's was stranded on the sand-banks of prosperity. The one did a little to mellow the other before the scenes closed, and Will Locke was less obliged to Sam Winnington than Sam to Will in the end. Will's nature and career were scarcely within the scope of Sam's genial, material philosophy; but the thought of them grew to cross Sam's mind often during his long work-hours: and good painters' hours are mostly stoutly, steadily, indefatigably long. He pondered them even when he was jesting playfully with the affable aristocrat under his pencil; he spoke of them often to Clary when he was sketching at her work-table of an evening; and she, knitting beside him, would stop her work and respond freely on the generous Dulcie she had brought with her from Fairfax, and the fair absent lad, whom his forward fellow had pushed into the waggon; and all the while the tears like pearls hailing down her cheeks. Then Sam would rise, and, with his hands behind his back, go and look at that lush, yet delicate picture of the Redwater Bower which he had got routed out, framed, and hung in Clary's drawing-room. He would contemplate it for many minutes at a study, and he would repeat the study scores and scores of times with always the same result—the conviction of the ease and security resulting from spiritualizing matter, and the difficulty and hopelessness of materializing spirit. And after these long looks into the past, Sam would be more forbearing in pronouncing his verdicts on his brethren, worsted in the effort to express what was inherent in their minds; would not decide quite so dogmatically, that all a man had to do was to be sound and diligent, and keep himself far apart from high-flown rubbish, like a commonsense, sober-minded Englishman. And Sam came to be less feverishly anxious about his own monopoly of public esteem; less nettled at art-criticism; perhaps less vivacious in his talents and well-doing, but more manly and serene in his triumph, as Will Locke had been quite manly and serene in his failure.

Will Locke's life and death, so devoid of pomp and renown, might be beyond lamentation, after all.

COLLIERS IN THEIR HOMES AND AT THEIR WORK.

IN a preceding article I have endeavoured to render some of the chief causes of fatal accidents in coal-mines generally intelligible, and to hint at the sources of prevention. I now proceed to treat of the colliers as a singular and little-known body of men, and to take note of them as I have seen them both at home and at work.

It is a question which our sociologists may discuss and solve to their own satisfaction, how it happened that so numerous and remarkable a class of labourers could have settled, grown, intermarried, increased, lived long or briefly, and died, without the recognition of their usually inquisitive fellow-countrymen? Antiquarian research acquaints us with allusions to coal itself in early periods; and we have incidental historical allusions to coal-mining at Newcastle from the fourteenth century; but in all the notices of coal which I have discovered, I have never met with a single allusion to the colliers. The mineral we can trace, the men who got it are as though they had never breathed: no word that they spoke, no deed of darkness they did, no suffering they endured, no rough humour they displayed, have ever engaged an author's pen; and they have gone down by thousands to their unmarked graves, alike unknown and unknown.

Xenophon composed a whole treatise upon ten thousand Greeks, and surely some modern writer might make a whole volume out of the thirty-eight or forty thousand pit-people of the north of England. How much more readily of the one hundred and fifty thousand colliers (or more) who are dispersed in subterranean districts throughout the kingdom! It would, indeed, be a mining instead of a military history, and a record of advances and retreats underground instead of above; but we may be sure that though great events do not come to pass in the coal counties, many most curious incidents could be recorded from the lives, habits, and customs of all those odd, rough, remote, and often humorous men and women and young persons; and, as I have shown in my previous paper, Death has been as busy there in the midst of peace, as elsewhere during the dominion of war. Here are thousands of men and lads who are now extracting sixteen millions of tons of coals from the depths beneath them. They are sending to the surface every year materials enough to build a small pyramid, or to cover one of the ample garden spaces of a large London square, or, when kindled, to warm and light three or four great cities; and have the men who do this, in the confines of darkness and in the regions of silence, no worthy annals? There is, doubtless, a rich mine of curiosities in the midst of those abundant mines of coal. Men and women are there, and the human heart is ever the same, whether in the crowded haunts of a populous town, or a thousand or fifteen hundred feet underground, or in low-roofed pitmen's cottages, lying far away in the unvisited tracts of coal counties.

Trusting that I have awakened some interest in the reader for the mass of his fellow-creatures and

fellow-countrymen alluded to, I shall propose to him to accompany me in imagination to the scene of mining labour in the North. Of which pit village to make choice is the only question; for you may select one of twenty or thirty; and as they are all pretty much alike, there seems no determining motive towards any one in particular. It will be as well, however, first of all to repair to Wallsend, a name as well known in every parlour and kitchen of the United Kingdom as any other of any district or country in Britain.

Jumping into a Shields railway carriage, we find ourselves in a brief space of time at Wallsend. Quitting the railway station, we proceed along a coal, black, and bemired track towards the colliery. Being an old and long-worked mine, its outworks and attached buildings are begrimed with the coal-dust of many years of gainful mining. Men of short stature cross our path, and glance at us askance with peering eyes. What can persons of our cloth and style want here? Certain it is at one glance that we are neither "Fitters," nor "Viewers," nor medical men. Perhaps the pitmen set us down as methodist parsons; and it is well if so honourable a distinction is allotted to us. There was a time when no such person as a methodist parson would have been permitted to pass unmolested through a file of pitmen.

In an old colliery like this one, we cannot see the true style of a genuine and unmixed pit village, as the old cottages, broken and battered, were patched up into abodes for the colliers; and not being originally designed for such tenants, they exhibit no specific adaptations to them. To see a pure and simple pit colony, we must go either higher up or lower down the country. Let us go higher up, to Cramlington and Seghill, and thence to Seaton Delaval. How shall we journey thitherwards, seeing that we have no carriage, and there is no public conveyance? Only one way offers itself; it is rather rough, and not a little perilous; but we must avail ourselves of it, and put on a courageous appearance. It is, in other terms, the train of coal-waggons which runs from Cramlington Colliery, down four miles beyond us. Permission being obtained, let us mount to the edge, and descend into the hollow of this empty coal-waggon. Are you safely in? Then make yourself as comfortable as you may on the iron bottom of the wagon, without seat, or holdfast, or anything to keep you from what medical men call "utter prostration."

Yonder is Cramlington village, and yonder again Seghill, and just above, Seaton Delaval,—all being good specimens of the kind of colony we are in search of. We are approaching a pit village, and soon we shall be in its main street. From this one judge of all. You see that the cottages are built in long rows, and consist of two or three classes. The first-class cottages contain two rooms on the ground floor; the second, one ground-floor room and a loft above. Sometimes the houses are arranged in double lines on the sides of a square, leaving a waste and dreary vacancy in the

middle. In some of them, a series of small extra little houses is added to the side, in the fashion of a "lean-to," and these make the whole buildings appear larger than they really are. Commonly, however, they are built in pairs as well as in rows, and the front doors of the houses face each other. The space between each two rows of back-doors contains one long central ash-heap and dunghill, and this forms the play-ground for the children. A coal-heap and a pigsty are the side ornaments of nearly every door, while each block or row of houses possesses a large oven, which is common to the entire occupants of that series of cottages. Opposite to the doors on either side of every row, small detached buildings are seen, with a roof sloping only one way, and these form the pantries and larders for the provisions of the industrious tenants.

Such dwellings as these can afford but scanty and insufficient accommodation for large families; the most spacious of them containing but two good habitable rooms, and the other being mere lofts under bare tiles. The two-roomed buildings fall to the lot of only about one-third of the mining population. The villages belong in general to the owners of the collieries, and are erected (when modern) by contract, to meet the notions of the coal-owner, rather than the necessities of the colliers. When a pitman ventures to marry another pitman's daughter, and both are joined in the bands of matrimony, the owner of the houses sends the new-married couple to one of the back or lean-to houses above described. Only when a little family appears do the happy pair obtain promotion to a larger room and an attic. The lads, however, grow up, and go down the pit to work, and the lasses can stand at the wash-tub. Then another promotion takes place to the largest class of dwellings. Families composed exclusively of females, or old and childless couples, go back in the scale, and often, perforce, make way for the thriving and working family, who once looked up to them, and return to a single room and attic, or a mere "lean-to." The capacity for work, and the numbers who will and can work, are the master's tests for tenantry. Hence it happens that more than half the pit-people live each family in a room, a condition which tends to anything but comfort, cleanliness, or high-toned morality.

Just in proportion to the newness of the erections, is their character for comfort and space. Go over to Seaton Delaval, and you will find sets of spacious and really convenient cottages, such as even methodist parsons, as we were supposed to be, might inhabit, when turned off as "supernumeraries." But the majority of the older pit-villages are really unsightly and unsavoury. On a wet day, a stream of black water pours down the lanes, and by reason of the absence of efficient sanitary arrangements, the effluvia arising out of the pluvial disturbances and deluges, assail the visitor with anything but spicy gales. Neglected gardens and fields, subdivided into cultivable patches, lie all around. Pigsties abound, and every half-green thing succeeds in becoming half-green only by dint of a vegetative perseverance which is but illiberally rewarded.

Inside of the houses, however, things are not so

bad. In truth, in the best and most spacious cottages, there is a remarkable contrast between the without and the within. In nearly all such, the furniture is of a very superior order. The bedsteads are pretty sure to be of mahogany. In the larger tenements, a rather imposing four-poster stands in the front room, with white or gay furniture, and a quilted coverlet. In the same room, a large chest of drawers, also of mahogany, well polished, fills up no small portion of the vacant space. Conspicuously admonitory of the flight of time is a tall, old-fashioned eight-day clock, in good case. This usually stands by the side of the grand four-poster, as if to warn the somnolent couple of the swift passage of time during sleep. All the other available spaces are filled with chairs, china, bright brass candlesticks, and chimney-ornaments. Every one of these items, from the four-poster to the flat candlestick, is kept scrupulously clean, at least once a week, if the housewife have any proper pride in the dignity of a pit family. Let us complete this sketch of an interior, by noting, that on the top of a little side-table, or on the window-seat, is frequently found a folio or quarto Bible, covered, it may be, with green baize or Holland, and flanked by a "Wesley's Hymns" and a "Life of the Reverend John Wesley." If you are permitted to examine the contents of the little shelf, high up on the wall, you may find specimens of the mental ailment of the younger folks, in the shape, not of a Life of Wesley, but probably a "Life of Jack Sheppard;" and a poetry book, not Wesley's Hymns, but "The Little Warbler," or the "North-Country Song-book."

In one or two houses amongst all this village you shall find a class of books you would have little expected. Here, in this neatly furnished cottage, if you step in, lives Peter Joblyn, and his delight is in mathematics, in proof whereof there lie upon the window-seat Emerson's *Mechanics*, Maclaurin's *Algebra*, Simpson's *Fluxions*, and sundry other works of the same class, which Peter has purchased as the fruits of many a visit to Newcastle on holidays. The townsfolk may despise these books as being out of date; and if we study mathematics at all, we procure our Hind's *Algebra*, or Whewell's *Mechanics*, or De Morgan's *Differential Calculus*. But what we cast off the remote pitmen greedily secure; and it is well known that no class of books are so saleable on the street-side boards of Newcastle on market-days as cheap mathematical books. The volumes that may be purchased for a shilling at a London stall will be appraised at double or treble that sum to a northern pitman. We were once introduced to a washed mechanic in his cottage, who, after his underground labour, was refreshing himself with that most arid of all literary aridities, Simpson's *Fluxions*, and we found that his progress therein was by no means despicable.

As to the literature of the mass of these mining labourers it is just what might be expected, common, cheap, entertaining, harrowing, and sometimes unholy. Only we must say that we have noticed fewer objectionable publications among them than in the houses of other orders of our working population. We have found even such serious and useful works as the *Lives of the Reformers*,

Adam Smith's *Wealth of Nations*, and Hume and Smollett's *History of England*, while the cheap serials of the day, such as *Chambers's Journal*, and several penny and twopenny weeklies, are as welcome to the workers in coal as to the workers in cotton, and iron, and steel.

While we are thus wandering from cottage to cottage the day wears on apace, and some of the hewers and other work-people will be returning from the pit to their homes. Let us go forth to meet them, and accompany them to their own doors, for by this means we shall note the pitman as we cannot otherwise observe him. Here are a little knot of hewers coming across the field. Observe how the outward man distinguishes the pitman born and bred, from every other operative you will meet. Diminutive in stature, disproportionate in figure, rather protruding in the chest, having arms rather oddly suspended, and legs sometimes a little bowed, his *toutensemble* is such as you cannot match. Nor is his countenance less decidedly distinctive than his general figure; his cheeks are rather hollow, his cheek-bones rather high; his forehead low, and his brow overhanging. You may occasionally find an agricultural labourer, or blacksmith, or carpenter, or engineer, to whom the familiar term "jolly" might be applied, but I never saw a jolly pitman; and a signboard bearing such a superscription would seem to be rather solemnly satirical than true and natural. The northern pitman is a working man *sui generis*. He was not, indeed, originally made for his work, but his work was made for him, and has now made him what you see him. He is not to be despised because he is undersized, nor to be smiled at for any of his physical distinctions. The high probability is, that if you and I had derived our present existence from mining ancestors, and laboured by candle and lamp light, and in constrained positions, for six hours a day, for twenty or thirty years, we should present a similar configuration, and display similar outward characteristics.

The pitmen of the north of England collieries differ in this respect from those of other coal-mining districts. They are principally hereditary pitmen, almost cradled in collieries, and finding the highway of their lives chiefly in the mainway of the mine. In other coal counties the labourers have been drawn from the refuse of society; and though there are now many colliers of laudable lives, and sometimes of religious habits, yet any visitor to numerous coal-mines in our land will be impressed with the wide difference between the northern and the midland pitman, between the skilful and practised hewer of Durham and Northumberland and the rougher, ruder, and inferior coal-getter of Staffordshire, and parts of Wales, and also some parts of Scotland.

While old folks in general are disposed to say, "The former days were better than these," the old pit-people are apt to affirm just the contrary. It would now be difficult to put in all the colours which would be necessary to display the full flush and glow of old colliery life, in its rough hilarity and joyous lawlessness. The men who could describe it have nearly all died off, or are rapidly dwindling away. I have met with a few who, in strong and unpolished verbiage, narrated what

they had suffered in boyhood, as well as what they delighted in when young men. The latter, indeed, may be inferred from a verse or two by one who knew what he sung from his own observation. The words are put into the mouth of a pitman, who is describing, in *pit patois*, his youthful habits and holiday attire when he went a-courting:—

"I now began te corl maw hair
(For corls and tails were all the go),
Te clean maw een wi' greater care,
And smarten up frae top te toe.

"Maw shinin' coat o' glossy blue,
Lapelled, and lined wi' breet shalloon;
Maw posy jacket,* a' bran new,
Just figured like maw mother's goon.

"Maw breeks o' bony velveteen,
Maw stockins' clock'd a' up the leg,
Maw nice lang-gaiter'd shoon se clean,
And buckles real tyuth-an-egg †—

"Ga' me the shape and air o' yen
O' rather bettermer condition,
And gar'd the jades a' goin' agyen—
A glance from me war quite sufficien."

Perhaps it is hardly gallant to confine our retrospective glance to the males. Let us then listen for a verse or two to the strangely bedizened youthful collier of former days while he depicts also the *tournure* and attire of his fair charmer. The second verse might, perhaps, be appropriate even now-a-days.

• "At church o' Sundays, smartly drest,
She often gar' wor hearts a warmin',
For nowt could stand her length o' wyest,
And all her woman's ways were charmin'.

"Her twilted pettitik se fine,
From side te side a fathom stretchin';
A' stich'd d' wi' mony a fancied line,
Wad stan' itsel', and was bewitchin'—

"Her high-heel'd shoon, with buckles breet—
Her head-gear a' in fearful order—
Her topping' pinn'd and padded neat—
Her lappets and her three-ply border;—

"Just set my heart a pitty pat,
And put me in a fearful swither;
But when her 'Robin Gray' she gat,
She carried heart and a' thegither.

"Aw then could had ne langer out,
And Sall's consent was blythely granted,
But yit aw wasn't free frae doubt,
As still there was the awd boy's wanted."

The "awd boy" must be besieged and wheedled into a consent, so the dubious and hesitating youth seeks him out, and finds that

"Awd Jack was dozin' in his chair,
His stockin's lying o'er his knee;
His wig hung up with greetest care,
His neet-cap thrawn on all aglee."

The wooer manages to explain the state of his heart, and

"The awd folks lik'd my tyel, aw fand,
And Sall, aw's sure, thowt it a topper;
But when aw said, if they stood need,
Aw'd share wi' them the hinmost copper,

* *Posy*, i.e., ornamented with figures of flowers.

† *Tutenague*, a white metallic compound.

‡ A fashionable bonnet of the time, so named.

"Wi' hearts, poor things, it now was clear,
Ower full by far, owt much te say,
They wip'd away the fallin' tear,
And wish'd us mony a happy day.

"The day was won, maw fears were dune,
The happiest man o' Wear or Tyne;
Wi' pleasure aw was ower the mune,
Aw else was caff and sand to mine."

It will be readily imagined that the old sports amongst such men partook of their own rough and rollicking character. I have been told sad tales of degrading delight in cock-fighting, dog-fighting, and donkey-racing, amongst the former generation of colliers. These were the pursuits of some, while others betook themselves to quoits and bowls, the

latter being played with huge stone-balls on the roads, and increased zest was imparted to the game if any stray traveller happened to be driving in gig or carriage along the road. Instantly the heaviest balls were balanced in hand, and poised so as to be hurled with fearful violence at the poor horses' feet, when within bowling distance. Loud was the laugh if horse, or rider, or driver, were disabled or dismounted, and away flew every bowler into a convenient hiding-place. Law and justice were in vain threatened to such reprobates. Where could the constable catch them? If he came in the day-time they were all away down the pit. If he sought to identify them when they came up, every one was black, and safely disguised.

FIG. 1.—The bottom of the shaft and entrance to the interior, with Working Colliers.

Ministers of religion were almost afraid to attempt to preach and settle amongst such people. They were, therefore, to all intents and purposes, heathen colonies in the midst of a Christian country. The Methodists determined to make their way even here, and when they determine they are seldom daunted. After many vain efforts they succeeded in getting a footing in one or two villages, and having impressed a few with their tenets, and infected them with their zeal, their future career was easy to be predicted. Some of the pitmen began to be local preachers, and then they laboured most diligently amongst their fellow-workmen. Unmoved by scorn, undeterred by stone bowls aimed at them as they travelled the roads, undaunted by opposition and persecution, they perse-

vered, increased, and multiplied, and erected chapels here and there, in highroads and corners. And now rude lads began to grow respectful, pitmen attentive, and their wives dutiful; their children became frequenters of the Sunday-school, and soon odd costumes, public-house brawls, domestic disqui- tudes, rude sports, and riotous living, all became less and less, and gradually disappeared. Now you may spend as quiet and profitable a Sunday in some pit-villages as in manufacturing towns, and though you may not fervently admire the local brother's eloquence or refinement of thought in the pulpit, still he suits the congregation, and they would probably pronounce your favourite preacher very dry and unsavoury.

"This chap ben't worth naught; he couldn't

hold a Davy (miner's lamp) to our Peter Joblyn," was the verdict of a pit-auditor after he had listened to a highly-cultivated clergyman. And it is true enough that Peter Joblyn would do more good at Cramlington than even a Robert Hall, or a John Foster, or a Thomas Chalmers. We ought not to quit this topic without naming John Reay of

with Christian gratitude by the humble labourers at the celebrated pit on the banks of the Tyne.

Evening ablutions and changes of garments being now completed, we may as well visit one or two of the colliers' cottages. Yonder lives Richard Fenwick, whom I have seen at work down the pit; he is a decent shrewd fellow, in his way; and we

No. 2.—Outside of Pit.

No. 3.—Engine House.

No. 4.—Trap-door, Trapper, and Putter.

No. 5.—Putters or pushers of coal-waggons.

No. 6.—Hewer of a thin seam of coal.

No. 7.—"Hurrying" or propelling coals.

Wallsend, one of the truest benefactors of the pit-folk at that colliery. A mere subordinate officer in the colliery counting-house, he has laboured abundantly at Sunday-school and chapel, and has abundantly prospered with his pious helpmate. We have enjoyed an hour or two's conversation at his cottage, and his name will long be remembered

will step in, and have a word or two with him. This is the door; let us turn the handle gently, and address him courteously.

"Good evening, Dick; how do you find yourself after your day's work? Well employed at your tea and dinner table, both in one. I am glad to see you have a hearty appetite."

"Ah, Maister L., is that you, sir? Walk in, tak' a chair now. Get up, lad, and let the gemman have a seat. There, Maister, sit thee down; and, Tom, bring t'other mon a chair. Now, mon, sit thee down, and be just what you are at home."

"Go on with your meal, Dick; we will wait. Don't talk to us yet awhile—work to eat, and eat to work—that is pit-life, I know."

"Ah! Mrs. Fenwick, how do you do? I hope the children are all well?"

In such free and courteous style of interlocution, we may spend an hour here and pick up much pit-lore. See, the kind housewife is handing to us a piece of her culinary triumph. "Wilt thee tak' a bit of singin' hinnie, Maister, and t'other mon too?"

Now the "singing honey" is always a sore trial to my weakly and student-like digestion. Take a bit if you can swallow it, it would half kill me, though it is nothing but a rich dough cake, kneaded up with abundant fat, and baked on a girdle or gridiron, whereupon, in course of baking, the fat exudes with a *singing* or simmering noise, from which its title is derived. A good "singing hinnie" is to a pitman a treat which nothing can excel, and to prepare one for his meal after work, is the proof of a good, kind, and attentive wife. It seems so churlish to refuse it, that I have once or twice bit off a fragment from an offered slice. Dyspeptic martyrdom has been the result, but possibly you may fare and feel better after it than I did.

Now, let us take leave of Mr. and Mrs. Fenwick, and the seven little Fenwicks, one above another, some aspiring to, or rather descending to promotion in the pit, and others—the girls—learning how to darn and sew, and knead singing-honey—in the not improbable event of their becoming the industrious wives of neighbouring sons of colliers. You see clearly enough, as we pass the other cottages, that the evening amusements are going forward. Sundry men of mature years are lounging about the lanes, or digging potatoes in the patches of garden-ground, or dropping into the public-house at the sign of the "Colliers' House of Call," or, being more seriously inclined, are wending their way to Salem and Ebenezer. At the latter is a love-feast this evening, and there pallid pitmen will recount remarkable experiences. A few are sitting at the doors, poring over newspapers, or, better still, Emerson's *Mechanics*. One or two musically-minded men are practising on the flute or scraping on the violoncello; and down yonder lane some unmusically-minded lads are mismanaging a horn or trumpet, and maltreating a dog or donkey. There, at that corner, youths are playing pitch-and-toss, boys are bending over marbles, and everywhere mothers are pouring out deluges of soap-suds, maidens are sewing and looking askance at lads, while a select company of juvenile athletes and pugilists are disporting themselves in rougher and more boisterous modes.

Soon the shades of evening thicken into night, and become black as coal itself. Nine o'clock arrives, and is struck out leisurely and wheezingly by many an upright clock—upright yet rather asthmatic. Now fiddles and flutes begin to sound very inharmoniously, famous songs and favourite

psalms and tunes die away in broken snatches; fists are unclosed, fights are ended, disputes are settled; "Experiences" in Ebenezer have been narrated and improved upon; lads have lounged indoors, and boys have pocketed their marbles; persecuted dogs and belaboured donkeys have regained freedom; men have studied newspapers and books till study has become a weariness of the flesh, and small print has grown dim before cleverest readers; wives and daughters have washed up their things, bedded little babes and boys, darned stockings and finished village scandal;—one day's work and one evening's amusements have come to a quiet end, and shortly all doors are closed, many lights are extinguished, and finally, only one or two glimmer in remote casements. Walk down Quality Row or Shiney Row awhile after, and you hear nothing but snorings and low grumbings. You have only the watchful stars to guide your uncertain steps past dust-heaps, and puddles, and big stones and pit-falls. Should you tumble down, no exclamation of yours will disturb the deep slumbers of the pitmen. Nothing short of an earthquake can awaken them before the caller goes his accustomed round in the early dawn. They are sleeping the sleep of hard and honest labour, of men who have no nerves, no dreams of ambition, no fears, and few desires beyond those of the day.

What strange sound is that disturbing our slumbers so untimely! Is it a human voice? Is the house on fire, or the pit exploded, or have the French landed on the coast? None of these; but the Caller is going his rounds, or "calling his course" in the village; the labourers are to be roused at dawn, or before it, and as we have engaged to accompany them, it behoves us also to be up betimes. Four o'clock! well, that is early indeed, and it is not yet light. Yet, what does that matter to men who will descend to darkness? We will not be late, we are up, we are ready, the door is opened, and we stand in the open darkness of the night, seeing nothing but a feeble glimmer or two in cottage windows, hearing nothing but the retreating footsteps and the now distinct voice of the Caller.

We make for the pit in company with Dick Fenwick, who now joins us. The shortest way lies across the village and over the fields. As we proceed, our little party is increased by one and another of the hewers who emerge from narrow doors, and pace with hasty step and grave mien to the place of work. How they seem to steal upon us out of the surrounding darkness! Augmented from time to time by one and another in flannel jackets, with bags of *bait* (provisions), and picks and spades upon their shoulders, and frequently pipes in their mouths, our once little company has now become a long file of stragglers, and words of mutual recognition are passing from lip to lip. You are known as my friend, and as I have been so long in the neighbourhood, and have descended so many pits, I am now almost regarded as one of the fraternity.

Here we are at the pit's mouth, "the bank," as the pitmen call it; and while the cage is on its way upwards, for us to descend again by it, we may as well glance around us. We have ascended an eminence, and now stand upon the "pit-heap,"

an old and constantly increasing mound of small coal, waste, shale, and general pit-refuse. The illustration No. 2 shows how the colliery works rise from or upon it. Those long, dusky, black-boarded sheds beyond us cover the screens through which all the coals pass, and from which comes all the "Screened Wallsend," so comfortable and profitable in kitchen and parlour. All those wheels and pulleys above us are connected with the winding-machinery of the mine, and indicate by their revolutions when work is proceeding, and coals are coming up or men going down.

Step round this way, and take a look at the old engine-house (see Illustration, No. 3). Observe the beam of the pumping-apparatus, half emerging from an aperture at the top of the house. Listen for a moment to that long-drawn sound, something between that of a powerful suction of air and a heavy yet measured plunge. That is a stroke of the pumping-gear,—a lifting and lowering of the piston of the steam-engine,—one elevation and outpouring of water from nether "feeders" or springs, that supply five or six hundred gallons of never-failing water every minute, without cessation and without diminution. Look curiously but cautiously at the men who have now formed a tolerable throng "on bank." There is the "banksman," a sort of colliery Chancellor of the Exchequer, who keeps account of all the incomings and outgoings of the pit. You can no more escape him than you can the income-tax gatherer, for he has a lynx eye and a long arm. Further off are knots of lads and small boys, who are approaching to be ready for later but yet longer work than their seniors. We might have a word or two with them, but for that rapping sound,—a signal which comes from the clapper just above, and intimates from the bottom of the shaft that coals are coming up; for some of the men have already preceded us, and performed work. Up comes the "cage," and you see that it is an iron framework having two compartments, working on conducting-rods, and forming, in fact, a kind of vertical railway-carriage (see illustration in previous Article). Now the banksman drags out the coal-laden waggons, and signifies that we may enter the cage, and take their place. This time it will be a cage-load of men, and the warning words are shouted down the shaft, in a drawing voice, "Men a' coming down."

In we get, and off we go. This is a most unromantic mode of reaching the depths, for here are we "cabined, cribbed, confined" in a dirty iron frame. The old method of descending by the basket was far the more interesting and exciting, and that by which I have descended not a few times. In the basket you could oscillate, and run the risk of an upset, or a collision with another basket, or a bang against the shaft. In this cage you are safe, and yet, perhaps, if iron be constantly deteriorating in these shafts, not too safe. One day a link may be severed, and the cage become a coffin at the bottom of the shaft. It is designed to hang midway, but use has led to fears of its inefficiency.

Three or four minutes have sufficed to let us down in the world as much as twelve hundred and fifty feet. We are now at the bottom of the shaft,

and stepping out upon the floor of the mine, we are sadly perplexed by the darkness,—having eyes but seeing not, and hands, but nothing visible to handle. Groping our way to a prostrate log or stump, we sit still for five minutes, get accustomed to the darkness, find things queer beginning to grow out of it, and feel ourselves less queer than we were five minutes ago. Now for an underground tour. Let us get up, and go on like men who fear nothing, where fearless men have gone before them. Equipped for the interior, and preceded by an inferior officer of the mine, who knows its ways and windings as well as you know those of your own street, we may advance courageously, especially along the mainway, which is to the pit what the High Street is to a town. Mark how amply this long passage is excavated, and how well supported by wood-work, brick-work, or stone-work. No railway tunnel is more completely finished, nor is this pit tunnel so unpleasant as those of the railways when filled with smoke from locomotives. The illustration, No. 1, indicates the mainway in perspective.

We soon meet with the *drivers*, or boys who conduct the laden tubs of coals on long low waggons (rolleys), which are drawn by horses and ponies. The equine race down here have the best of it, for the warm and equable temperature of the mine, the tolerably level run of the roads, and the regular feeds, combine to give them sleek coats, and to insure them a good condition. Horses, then (and mice), are sure to thrive well in these regions; not, indeed, that the boys who drive the beasts do not also thrive well. Their occupation is not unhealthy; they are in perpetual motion in the best-aired parts of the pit, and they sing snatches of characteristic songs as they lash out their short whips, and jump up to or down from their uneasy narrow seats at the head of the coal-tubs. They have neither the lot nor the fate of Phaeton, for they see little of the sun, and their horses never run away; yet they must needs be as cautious as though they were driving the chariot of the sun, since in their falls, though they reach the earth in a second, their maimings and thumps and bruises are neither few nor slight.

But here is a strong wooden door; is there no thoroughfare, and must we go back? Not at all. Stand here one moment, and listen to the low whistling of the ventilating current of air as it sweeps up to this door and impinges upon it. When this noise is audible and continuous, the ventilation is good; for, as the pitmen say, "the doors are singing."

You knock at the door; it is opened by at present invisible agency, as though we had only to cry, "Open, Sesame." Pass on, but notice that the moment the door is open the whistling ceases, because the air-current has gone on unhindered, as we hope to do in a minute. But who opened this door? Yonder, in the dark corner behind it, sits the opener and shutter, in the shape of a little boy of from ten to twelve years of age, well known as the "trapper" (opener of a trap-door) in all the collieries. There he sits ten or twelve hours immersed in darkness, and obeying the calls and knocks of all passengers (see Illustration, No. 4). The waggon-pushers are sometimes rather

hard upon him, as he will piteously deplore; but his work is easy, though his confinement is long. I have met with trappers of from seven to nine years of age in several pits; but, happily, the Act of Parliament which followed upon the revelations of the Children's Employment Commission excludes from coal-mines children under ten, and women altogether, at least from underground labour. They can and do evade the Act, by assuming male attire; but I believe the instances of female subterranean degradation are now very few, and it is enough that they are illegal.

Who and what are those rough, screeching, shouting, and objugating black lads whom we now encounter in this dim, rather foul and steaming passage? Stand aside, I pray, in this little hollow in the wall, or you may be crushed, for these rough lads neither see you nor care for you. Beware as they pass, for Juggernautism under a coal-wagon would indeed be an inglorious end. These are the *putters* or pushers of coal; the foremost lad (see illustration, No. 5) is dragging the load, and his companions behind are pushing it. This labour is terribly severe, but nothing in severity to what it was when the roads were much inferior, and the tramways unknown. Then, it must have been nearly the worst and most exhausting labour to which white people were accustomed. Now it is hard enough, yet not apparently of such a kind that the wonderfully pliant human frame cannot adapt itself to it. Such a record, however, of complaints, and fatigues, and pains of back, and limbs, and head, and occasional serious injuries, I never met with, as I obtained from *vivâ voce* examinations of dozen after dozen of these youths. I should be disposed to believe that there are in this northern coal-field about 8000 putters and boys engaged in the kind of labour we have now witnessed. I will not revert to the juvenile slavery of former years; it would only harrow the feelings, and it is now only a thing of pit history. Yet none but those who have heard its details, and seen the sort of places in which it was endured, when the ground of the pit passages was not laid with metallic plates, can enter into the putter's feelings who gratefully sing:—

"God bless the man in peace and plenty
That first invented metal plates!
Draw out his years to five times twenty,
Then slide him through the heavenly gates.
For if the human frame te spare
Frae toil and pain ayont conceivin!
Hae ought to de wi' gettin' there,
Aw think he mun gan strite te heeven."

Now for the main body of pit workmen—the original getters of all the coal we have met with in numerous trains. These men, I believe, now number in the mines of the great northern coal-field no less than from thirteen to fourteen thousand, and possibly fifteen thousand. Their labour is of the severest kind, but they work at it only for about six or eight hours "at a spell;" and it would be impossible to do and endure more. They are amongst the first men in the pit, at three or four in the early morning, and the first out of it. Their workshops are in the innermost recesses of the mine, at the several "faces" or hewing-places of the coal. Step up to this "face" and watch them at work, as

best you may, in an atmosphere heavy with half vitiated air, thick with coal dust, and dark with darkness visible—made visible by two or three consumptive candles, stuck heedlessly above; or, where there is fire-damp, by two or three wire-gauzed, light-giving, Davy lamps. See how yonder mansquats down, almost frog-like in his attitude, lifts his short pick and drives it straight before him into the seam of coal. He is "nicking out" a line in which to insert a wedge or two, and will then nick out others underneath, so that when the wedges are all driven hard in, the coal is fractured, and easily detached by additional blows. The hardness of the work varies as the hardness of the seam, and the strangeness of the posture with the thickness of the seam. Turn with me into another facing of coal, where the seam is thin, and there you behold the hewer absolutely lying upon his back, supporting his head upon blocks of coal, and using his pick with the utmost constraint, and within the narrowest limits, while he is in constant danger of burying himself in small coal. (See Illustration No. 6). We say nothing about clothing in such places and positions, or rather, the lack of it. Our own sensations at this moment prompt us to divest ourselves of all superfluous vestments. But such attitudes as that just represented are exceptional, and become necessary only in working the thin seams. Still, even under favourable circumstances, hewing is trying and exhausting work; and while you watch the hewers in their constrained positions, you will conjecture how their odd configuration becomes fixed and hereditary. As you see them bathed in perspiration, you understand why they never look "jolly;" and as you yourself inhale coal-dust and cough, and breathe with difficulty, you will know to what may be traced the colliers' "black-spit" and pulmonary diseases. I am sure, from what I saw of the principal Newcastle and Durham mines (particularly the newer ones), that much is done to diminish these evils, yet much that is injurious remains unremedied, and probably is not easily remediable. When, however, the mine visitor inspects collieries in certain inferior and much ruder coal-fields, he will no longer be inclined to discredit the testimonies of local medical men, who have frequently testified that the diseases of colliers are distinctly referable to their work and their working places; that an old collier—unless prematurely old—is a rarity; that fifty years of life bring incipient old age, and that added to this, heart diseases and ruptures (caused by over muscular exertion) are not uncommon affections. The illustration No. 7 shows the mode of "hurrying" or propelling in an inferior district, and will indicate the likelihood of over-exertion. Good pay, good feeding, tolerably regular employment, and plenty of free fuel, with other occasional advantages, are some compensation for these evils. I speak on these subjects cautiously, because many exaggerated statements have been put forth for party purposes; and while I have endeavoured to depict the hardships and toils and trials of life in the pits, I do not forget that it has alleviations which are wanting in the lot of other labourers, especially in the two counties of which I more especially write.

J. R. LEITCHILD.

WHAT A WORKING MAN SAID THE OTHER DAY AT THE OPENING OF A DISSENTING SCHOOL IN HERTFORDSHIRE.

REPORTED BY HIMSELF IN A LETTER TO A FRIEND.

So, my dear friend, you really wish to know what it was I said, or stammered out, at the opening of our new School-room, in this remote village of a southern shire. Well, it's very good and kind of you, at your metropolitan height, to take an interest in us lower mortals whom you know to be only poor Dissenters. I will tell you what I said, for I took good care to have it all written down beforehand, like Ebenezer Elliot, who, when he once rose to address a meeting, held his speech in his hand. Some one in the audience mockingly exclaimed, "See, he's going to read his speech;" whereupon Elliot replied, "Yes; do you think I am such a fool as you are, to come here and not know what I am going to say?" This then was my little speech, reported on good authority—my own.

"The only thing," I said, "that I have to urge for standing up here out of my place, is because it has so often happened that in trying to say a word to others something has come unexpectedly to myself. The truth is, I never feel to know anything until I have tried to write upon the subject. Whilst writing, or in thinking, the light will perhaps break in, and you see at least how little you know, which is what you possibly did not suspect before you came to impart it. I imagine that it will be the wisest man after all who, at the end of his life, will look back and think he has been the greatest fool. This was not so very far from Solomon's conclusion, you know.

"I shall not say much; but as we have built our new School-room, and as I own a brick or two in it, I shall say a word or two just to represent my brick or two! Our meeting to-night is partly a crowing-match over what has been done. You have heard some lusty crows,"—[I meant crow a cheerful sound, not a black bird; such a pun would have been fowl-play indeed!—"after which mine will be a very small one, not bigger than that of a bantam-cock." [Of course, I had written this before the meeting took place, and it hit the mark right in the middle.] "But we may be pardoned for crowing on such an occasion. The four bare white walls of a Dissenting Chapel or School-room are not much to be proud of as a matter of art; but, as an illustration of self-helpfulness on the part of a few people who could only club together the mites of poverty, they may be something to look on with a proud pleasure, which culminates in a feeling of humble gratitude and thankfulness. We did not go to the State, and ask it to build us

a room, and supply our needs. We set to with a will, and did it ourselves. Therefore, if our building when reared represents exceeding poverty in its barrenness, it is likewise a tiny monument of independence. It symbolises a heave of the same free heart that has had many a larger and grander expression. We may look upon it and say, 'A poor thing, Sir, but our own.' You have often heard of the oldest inhabitant. It is not often that he is to be found. But the oldest 'Sunday-scholar' in this village is here to-night." [This is poor old —. You should hear his aged heart crowing, and see his toothless mouth going whenever we sing the tune "Nativity!" It's better than many a sermon.] "It is now fifty years ago since he went to the first Dissenting Sabbath-school in this place. There were only two or three scholars then, and he is now the last living one;—the last old leaf fluttering on the bough that he has lived to see stir with sap and put forth new buds, which we hope to see crowned with goodly fruit for many a year to come. I think you will agree with me that it is interesting for him to be present to-night to see the opening of our School-room.

"The education given in a Dissenting Sabbath-school, is not in itself much, yet it is often the poor man's all, and in its results it has often been rich in blessings. We have had men in our times, whose earliest education was obtained in this way. And these men have become able to use the English language in such a way as to move the world, and make men of the highest attainments acknowledge their power." [Here I told them the story of the Brothers Bethune, as an illustration of the pursuit of knowledge under difficulties. How the hard-wrought heroic youths sat down in the gloomy cabin, which was lighted by a single pane of glass, and studied their one or two books, and wrote their tales of Scottish peasant life; trying to get poetry even out of the hardest and most wretched lot.]

"The first great thing in all education is to learn to read. You can neither estimate nor over-estimate the power and possibility of that! Learning to read will throw open to the poorest the portals of the whole rich, wonderful world of books. By the aid of this magic *sesame*, a poor hard-working boy or girl can overstep the narrow boundaries of their daily life and limited lot, forget the four bare walls, the thin winter garment, and the stinted meal, the purse-proud man's contumely, the 'splash

of newly-mounted pride.' In our common everyday world, the world of a poor man's life, and in almost every village, except the one we live in, we may see human nature wearing its shabbier aspects. Persons who belong to different ranks in life, or who only go to different places of worship, often seem to take a delight in showing the worst side of themselves to one another. I suppose it is because in small places, and their populations, there is a greater self-consciousness and sense of personal importance developed. Of course, it must be very hard to be humble when exalted to the height of some local pinnacle, with every eye of the village universe fixed on you! Little places have an especial tendency to foster human nature's littlenesses. I believe it to be a demonstrable fact, that in all villages, except ours, most of the boots may be found to be worn out first at the toes, on account of the wearers each walking as much as possible on tip-toe, trying to look taller than everybody else. And only just observe how silk will sneer as it passes poor cotton! How the mould candles are always trying to put out the sixteen dips! and pig-iron looks down upon tenpenny nails! This is all changed in book-world. There you may walk and talk with the kings and queens of thought on a perfect equality. They do not ask you how much money you possess, what was the cost of your clothing, or what is the size of the house you dwell in. They only want you to bring an understanding heart, seeing eye, and listening ear, and they will make you perfectly at home, giving you a royal welcome there. At home with David the king, sitting on his throne in his gorgeous palace, who can say the very things you want to hear, because he was once a shepherd-boy, and saw and felt what poor men still see and feel. At home with Solomon in that magnificent Temple, like some vast shape of beauty, taking life in Music, and all aglow with precious stones, metals, and colours, for the glory of God! At home with Milton, as he sits telling the marvels that he sees, since God had closed his outer sight. At home with Shakespeare, in whose mind we may see, as in some magic crystal, the many-moving forms of mirrored humanity! At home with Newton—the Shakespeare of astronomy—ranging the starry spaces at will, and reading the laws of the Creator for us! At home with Hugh Miller, piercing the mysteries under our feet, as Newton revealed them overhead! And the little door into this large wealthy world may be very small: just as the little dark door which opens all eternity may be only wide enough to let a narrow coffin through, so the door into this great and lovely world may be none other than our small School-room door! All its treasures may be thrown open to us sooner or later on condition that we have learned to read. Should

the reading of Sunday scholars be limited in after life, there still remains one thing, which is an education in itself. I mean the reading of the Bible. If it were possible to look at that book apart from its divine revelation, it would still be the choice and flower of all books, and have no match in this world. No singer, for example, has since produced the equal of David's Psalms. The reading of this book in childhood lays the best possible foundation for the mind to build on in after life. This is as true in an intellectual as in a spiritual sense. Shakespeare owed some of his proudest thoughts and most pathetic things to his acquaintanceship with the Bible. It leaves impressions that colour the whole life, and never pass away. Take, for instance, its narratives, which constitute the religion of childhood—these become a part of every child's mental life, and mix with all his thoughts and feelings. Do not fancy that these Bible stories are in any case merely the history of one person or one people. They are so filled with humanity and so natural that they come home to all of us. They are eternally true, and their meaning is for every land and tongue. Some of us may think that many things we there read of are not done now-a-days,—that God works no miracles for us! No waking now and finding an Eve at our side, in some lovely garden of God! No prophet's mantle falling out of heaven! No hand-writing in fiery characters on the wall! No walking the seven-fold heated furnace unsinged! No talking with God on Sinai! No Mount of Transfiguration to ascend! No manna raining down from heaven! No lands flowing with milk and honey! No miracles now-a-days. Yet all these things are true, and are being for ever repeated in that inner world of man's life, where the spirit's sight has been unsealed, to open which spirit's sight these things were once done in the outer world, and seen by human eyes! The old tales are for ever new. Humanity is continually repeating the ancient wonders. God never ceases working his miracles for us as well as for the Jews, only we do not all of us recognise the miracles when they do occur, just as the Jews did not recognise the Saviour when he appeared. It is so difficult for us to identify the immortal in its mortal dress. The deaf ear and dim eye are so fatal to the miraculous!

"You think, perhaps, there is no garden of Eden now! Why, every child that has lain in its mother's arms, been nursed on a fond mother's bosom, and looked up in the loving face with its dawning consciousness opening in the mother's sun of a smile, has been in Eden. And all who have ever loved and been beloved worthily, have woke up and found their Eve beside them—beautiful enough to make them almost feel *beside* themselves. Or, to range into the higher meanings, no

one has ever felt a changed heart and purified soul, but what has some time or other been up the Mount of Transfiguration, and as the tears fell like veils from the vision, it was seen that they were walking in lofty company, and felt how good it was to be there. Or take that story of Joseph's brethren, selling him into bondage to get rid of him, and his rising up to save them in their time of dire need, and I will show you something very like it on a national scale now taking place in Russia. The Emperors of Russia have been long accustomed to send some of the noblest and best Russians to Siberia to get rid of them—the flower of the family, as Joseph was—and now we are told that those who were sent into slavery are giving life and freedom back in the shape of ideas and opinions that are being sown broadcast over the whole Russian empire. Then that coming up out of Egypt has a perfect exemplification in that Italian nation, which has lately passed through the Red Sea of much tribulation, and which, we trust, is not doomed to wander in the wilderness for forty years. Or look for a moment at that great tragedy of Job's trial, the pathos of his many sorrows, the load of his sufferings, the heaping up of this world's injustices on the bare bowed head of the man who had been the justest of judges—'broken the jaws of the wicked, and plucked the spoil out of his teeth,' he who was the friend of the poor, and had made the widow's heart to sing for joy—that is not merely the story of something which happened once in this world, never to occur again. That drama is a mirror of humanity. It will be repeated again and again in this theatre of earth, with God, angels, and men, for spectators. The trial may oftentimes be on hidden stages of life, and find no record in the books we print. But there it will be wrestled through and wrought out. The bruised spirit will be as sorely tried. It will be just as much crushed down with the burden of its sorrows and sins. False friends will gather round; it will be urged to curse God and die. The upright man will be bowed down to the dust with his calamity. He will not be able to speak, because of the greatness of his grief. He will be deserted by those whom he most loved. He will grope in the darkness of his perplexity like a blind man, as he tries to seize hold on the skirts of death. There will also be the same triumph of trust in God. He had sent him the good, why should he not send him the evil? And there will be the same cry of final victory, 'I know that my Redeemer liveth.' And there will be many another Book of Job lived, if not written, in this life, to be published in the next world. So is it of all those Bible stories, they are true once and for ever, from the eternal to the eternal. So long as this world endures, there will be Daniels flung into

the lions' den, and Jonahs cast out to the whale, martyrs that walk the furnace, and Pauls that have to fight with the wild beasts at Ephesus. And there will be the same God working his miracles for them. I suppose that few of us could look back upon our past lives without distinctly seeing the finger of Providence interposed and working in some miraculous way or other.

"Let us turn from the Old Testament to the New.

I think that all of us sooner or later must come to the conclusion that Christianity was and still is the great want of the world. Christ's life is just what we want to get into our individual, literary, artistic, and national life. Here have we been nibbling at Christianity for 1800 years, and how little of it have we yet assimilated! Christ came to tell us that all men are brothers, but how many people are there that actually believe in that doctrine? Or, to try another text, 'Love thy neighbour as thyself.' Apply that to the shopkeepers along any of our streets, and I doubt not that the mental attitude assumed by most of them will be that of the right forefinger applied softly to the right side of the nose. Again, Christ said, 'Blessed are the meek, for they shall inherit the earth.' You would scarcely think so to see the pride with which certain people tread the pavement, as though it was pride, not meekness, that was the natural heir. The fact is, so many people do not believe in Christianity more than once a week. They look upon it as a suit for Sundays, and all the week they wear their worldliness. Perhaps they have a just suspicion that their sort of Christianity might not stand the wear and tear of six days' work, and so they treat it tenderly, and lay it up in lavender. Christianity is so often looked upon as a thing apart from business, and every-day life, and human intercourse. Let any one try and work out some literal application of Christ's teachings,—for example, 'He that hath two coats,' etc. Who believes that doctrine? Who dares to practise it? I once heard Charles Kingsley preach it in its startling literality, but no sooner was his sermon ended than the incumbent of the church rose and denounced it altogether. He could not be held responsible for such incorrect and unrespectable preaching. Poor Oliver Goldsmith also enunciated it in his own eloquent Irish way, for, as we are told, he, on one ever-memorable occasion, gave away his only pair of breeches and his last shirt, so that when his friends found him he was sitting naked among the feathers of his bed, having cut a hole in the ticking, and let himself in. But then the world has laughed at him ever since. We look upon that doctrine, together with many other kindred ones, as figures of speech. The Hebrews, as you know, were such a very figurative people. Such, however, was not the meaning of Christ's

life and teaching. There was nothing merely figurative in that life of suffering and death of agony. It was all a solemn, literal, and tremendous earnest. Even so they are literally true now and for ever, and cannot be whittled or refined away. These are as true as anything in those Old Testament narratives, which we saw had continual application and reproduction in the life of humanity. All this, and an unutterable deal more, may be got out of the Bible often, perhaps most surely, by the simplest reading of it. And that Bible may be learned to be read in the poorest Sunday-school by the poorest child. Not that I am speaking, mind you, in favour of limiting a child to the reading of the Bible, for I welcome all pure knowledge, and would have it all free as the air to the poorest. It is not for nothing that God has given us intellectual powers. We are all of us responsible for the loan and interest of an immortal soul. You remember the parable of the ten talents, which shows us plainly enough that your talents are to be put to use, and gain usury for the lender. They must be kept well rubbed with work if they are to shine brightly in their heavenly setting. I do not believe with those people who seem to think that it will be all as one a thousand years hence, whether we cultivate our minds in this life or not, and that it matters nothing how small our knowledge may be. All is good if turned to a right account, and the acquirements of this life may enlarge our spiritual capacities for another! Christ himself very emphatically tells us that the kingdom of heaven is according to what you have done with your talents in this world. We may look upon our present life as the ground-floor of existence. Hell, the dark place under ground. Heaven is overhead. But remember that Christ says, 'In my Father's house are many mansions.' There are different degrees of the life above; different chambers overhead in the house of Heaven. I dare say most of us will be very very glad if we can at least secure a place in some humble corner of heaven; but still, if by cultivating those faculties which God has given us, we can climb a little higher in glory, we are bound so to do. We know how it is in this life. The eye sees what it brings with it, the power of seeing according to the life of the spirit which looks through it. Different persons look with different eyes upon a fine sunset, or starry midnight. And I cannot help thinking that, to some extent, our power of seeing and appreciating the hidden things of the next life will depend on the exercise and growth of our faculties in this. Therefore I say, educate all you can in all worthy ways. But to come back, in conclusion, to our new School, as an illustration how the spirit may cling to something we may have loved in this life, permit me to refer to a beautiful legend told in Danish poetry. An angel has just been down to this world to accompany the soul of a little girl up to heaven. As they are going back, the child notices that the angel bears a rose-tree in one of its hands, and asks the meaning of it. The angel tells her that there was lately a poor boy in the city they have just left, who lay for a long time

dying, and that rose was very dear to him through all his illness. It brought him the first news of spring, and it filled the close sick-room with its fresh, young fragrance. He loved it next best to his mother. He is now taking this darling rose up to heaven to plant it there. The spirit of the child looks up in the angel's face and asks—

'How know'st thou this, Bright Power!'

Then splendidly he smiled!

'Should I not know my flower!

I was that sickly child.'

I think there may be angels now in heaven, and glorified spirits, going to and fro on their missions of mercy, to whom the memory of a Sabbath-school may be as dear as was that angel's rose. And I think they will still wish to help to carry on the good work, and they may be rejoicing to-night over the little building behind us, because it is to be a link betwixt the angels in heaven and the souls of many little children on earth—my own little ones, I trust, among the rest."

You ask me also, my dear friend, for a copy of the trifle which I wrote in verse for the poor children to sing. I may say that it was composed for music which had been originally written to Tennyson's "Riflemen, form!" this will account for the peculiar shape of it. They sang it with great gusto, and with an especial twinkle of appreciation when they came to the line, "Money is round and rolls away." I suppose, however difficult it may be to get money, they find an equal difficulty in keeping it.

GOING HOME.

When He was with us, our Saviour said,

Suffer the children to come unto me;

Still we see Him, with hands outspread,

Waiting to gather us round His knee.

Come! come! come with us, come!

We are going Home; going Home!

Come with us, come with us, come with us, come.

Though here we are poorest of God's poor,

Toiling for bread from day to day;

Laid up in Heaven a treasure is sure,

While Money is round and rolls away.

Come! come! come with us, come!

We are going Home; going Home!

Come with us, come with us, come with us, come.

We tread the path the Saviour trod,

Facing the thorns as best we may,

Through sorrow and suffering up to God;

He shall wipe all tears away.

Come! come! come with us, come!

We are going Home; going Home!

Come with us, come with us, come with us, come.

Christ the cold death-river bath crossed,

Making the blackness bright for us;

There shall we meet our Loved and Lost

Bringing the robes of white for us.

Come! come! come with us, come!

We are going Home; going Home!

Come with us! come with us! come with us, come.

MISTRESS AND MAID.

A HOUSEHOLD STORY.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

**CHAPTER VII.**

AUTUMN soon lapsed into winter; Christmas came and went, bringing, not Ascott, as they hoped and he had promised, but a very serious evil in the shape of sundry bills of his, which, he confessed in a most piteous letter to his Aunt Hilary, were

111-15

absolutely unpayable out of his godfather's allowance. They were not large; or would not have seemed so to rich people; and they were for no more blamable luxuries than horse-hire, and a dinner or two to friends out in the country—but they looked serious to a household which rarely

was more than five pounds beforehand with the world.

He had begged Aunt Hilary to keep his secret—but that was evidently impossible; so on the day the school-accounts were being written out and sent in, and their amount anxiously reckoned, she laid before her sisters the lad's letter, full of penitence and promises:—

"I will be careful—I will indeed—if you will help me this once, dear Aunt Hilary; and don't think too ill of me. I have done nothing wicked. And you don't know London—you don't know, with a lot of young fellows about one, how very hard it is to say No."

At that unlucky postscript the Misses Leaf sorrowfully exchanged looks. Little the lad thought about it—but these few words were the very sharpest pang Ascott had ever given to his aunts.

"What's bred in the bone will come out in the flesh." "Like father like son." "The sins of the parents shall be visited on the children." So runs many a proverb; so confirms the unerring decree of a just God, who would not be a just God did He allow Himself to break His own righteous laws for the government of the universe; did He falsify the requirements of His own holy and pure being, by permitting any other wages for sin than death. And though, through His mercy, sin forsaken escapes sin's penalty, and every human being has it in his power to modify, if not to conquer, any hereditary moral as well as physical disease, thereby avoiding the doom and alleviating the curse,—still the original law remains in force, and ought to remain, an example and a warning. As true as that every individual sin which a man commits breeds multitudes more, is it that every individual sinner may transmit his own peculiar type of weakness or wickedness to a whole race, disappearing in one generation, reappearing in another, exactly the same as physical peculiarities do, requiring the utmost caution of education to counteract the terrible tendencies of nature—the "something in the blood" which is so difficult to eradicate; which may even make the third and fourth generations execrate the memory of him or her who was its origin.

The long life-curse of Henry Leaf the elder, and Henry Leaf the younger—had been, the women of the family well knew—that they were men "who couldn't say No." So keenly were the three sisters alive to this fault—it could hardly be called a crime, and yet in its consequences it was so—so sickening the terror of it which their own wretched experience had implanted in their minds, that during Ascott's childhood and youth, his very fractiousness and roughness, his little selfishness, and his persistence in his own will against theirs,

had been hailed by his aunts as a good omen that he would grow up "so unlike his poor father."

If the two unhappy Henry Leafs—father and son—could have come out of their graves that night, and beheld these three women—daughters and sisters—sitting with Ascott's letter on the table, planning how the household's small expenses could be contracted, its still smaller luxuries relinquished, in order that the boy might honourably pay for pleasures he might so easily have done without! If they could have seen the weight of apprehension which then sank like a stone on these long-tried hearts, never to be afterwards quite removed, lightened sometimes, but always—however Ascott might promise and amend—always there! On such a discovery, surely, these two "poor ghosts" would have fled away moaning, wishing they had died childless, or that during their mortal lives any amount of self-restraint and self-compulsion had purged from their natures the accursed thing—the sin which had worked itself out in sorrow upon every one belonging to them, years after their own heads were laid in the quiet dust.

"We must do it," was the conclusion the Misses Leaf unanimously came to—even Selina; who, with all her faults, had a fair share of good feeling and of that close clinging to kindred which is found in fallen households, or households whom the sacred bond of common poverty has drawn together in a way that large, well-to-do home circles can never quite understand. "We must not let the boy remain in debt; it would be such a disgrace to the family."

"It is not the remaining in debt, but the incurring of it, which is the real disgrace to Ascott and the family."

"Hush, Hilary," said Johanna, pointing to the opening door; but it was too late.

Elizabeth, coming suddenly in,—or else the ladies had been so engrossed with their conversation, that they had not noticed her,—had evidently heard every word of the last sentence. Her conscious face showed it; more especially the bright scarlet which covered both her cheeks when Miss Leaf said "Hush!" She stood, apparently irresolute as to whether she should run away again; and then her native honesty got the upper hand, and she advanced into the room.

"If you please, missis, I didn't mean to—but I've heard—"

"What have you heard—that is, how much?"

"Just what Miss Hilary said. Don't be afraid. I shan't tell. I never chatter about the family. Mother told me not."

"You owe a great deal, Elizabeth, to your good mother. Now go away."

"And another time," said Miss Selina, "knock at the door."

This was Elizabeth's first initiation into what many a servant has to share—the secret burden of the family. After that day, though they did not actually confide in her, her mistresses used no effort to conceal that they had cares; that the domestic economies must, this winter, be especially studied; there must be no extra fires, no candles left burning to waste; and, once a week or so, a few butterless breakfasts or meatless dinners must be partaken of cheerfully, in both parlour and kitchen. The Misses Leaf never stinted their servant in anything in which they did not stint themselves.

Strange to say, in spite of Miss Selina's prophecies, the girl's respectful conduct did not abate; on the contrary, it seemed to increase. The nearer she was lifted to her mistresses' level the more her mind grew, so that she could better understand her mistresses' cares, and the deeper became her consciousness of the only thing which gives one human being any real authority over another—personal character.

Therefore, though the family means were narrowed, and the family luxuries few, Elizabeth cheerfully put up with all; she even felt a sort of pride in wasting nothing and in making the best of everything, as the others did. Perhaps, it may be said, she was an exceptional servant; and yet I would not do her class the wrong to believe so—I would rather believe that there are many such among it; many good, honest, faithful girls, who only need good mistresses unto whom to be honest and faithful, and they would be no less so than Elizabeth Hand.

The months went by—heavy and anxious months; for the school gradually dwindled away, and Ascott's letter—now almost the only connexion his aunts had with the outer world, for poverty necessarily diminished even their small Stowbury society—became more and more unsatisfactory; and the want of information in them was not supplied by those other letters, which had once kept Johanna's heart easy concerning the boy.

Mr. Lyon had written once before sailing, nay, after sailing, for he had sent it home by the pilot from the English Channel: then there was, of course, silence. October, November, December, January, February, March—how often did Hilary count the months, and wonder how soon a letter could come, whether a letter ever would come again! And sometimes—the sharp present stinging her with its small daily pains, the future looking dark before her and them all—she felt so forlorn, so forsaken, that but for a certain tiny well-spring of hope, which rarely dries up till long after three-and-twenty, she could have sat down and sighed, “My good days are done.”

Rich people break their hearts much sooner than poor people; that is, they more easily get into that

morbid state which is glorified by the term, “a broken heart.” Poor people cannot afford it. Their constant labour “physics pain.” Their few and narrow pleasures seldom pall. Holy poverty! black as its dark side is, it has its bright side too, that is, when it is honest, fearless, free from selfishness, wastefulnesses, and bickerings; above all, free from the terror of debt.

“We'll starve—we'll go into the workhouse rather than we'll go into debt!” cried Hilary once, in a passion of tears, when she was in sore want of a shawl, and Selina urged her to get it, and wait till she could pay for it. “Yes;—the workhouse! It would be less shame to be honourably indebted to the laws of the land than to be meanly indebted, under false pretences, to any individual in it.”

And when, in payment for some accidental lessons, she got next month enough money to buy a shawl, and a bonnet too—nay, by great ingenuity, another bonnet for Johanna—Hilary could have danced and sung,—sung, in the gladness and relief of her heart, the glorious euthanasia of poverty.

But these things happened only occasionally; the daily life was hard still, ay, very hard, even though at last came the letter from “foreign parts,” and following it, at regular intervals, other letters. They were full of facts rather than feelings,—simple, straightforward; worth little as literary compositions; schoolmaster and learned man as he was, there was nothing literary or poetical about Mr. Lyon; but what he wrote was like what he spoke, the accurate reflection of his own clear original mind and honest tender heart.

His letters gave none the less comfort because, nominally, they were addressed to Johanna. This might have been from some crotchet of over-reserve, or delicacy, or honour—the same which made him part from her for years, with no other word than, “You must trust me, Hilary;” but whatever it was she respected it, and she did trust him. And whether Johanna answered his letters or not, month by month they unfailingly came, keeping her completely informed of all his proceedings, and letting out, as epistles written from over the seas often do, much more of himself and his character than he was probably aware he betrayed.

And Hilary, whose sole experience of mankind had been the scarcely remembered father, the too well remembered brother, and the anxiously watched nephew, thanked God that there seemed to be one man in the world whom a woman could lean her heart upon, and not feel the support break like a reed beneath her—one man whom she could entirely believe in, and safely and sacredly trust.

CHAPTER VIII.

Time slipped by. Robert Lyon had been away more than three years. But in the monotonous

life of the three sisters at Stowbury nothing was changed:—except, perhaps, Elizabeth, who had grown quite a woman; might have passed almost for thirty; so solidly old-fashioned were her figure and her manners.

Ascott Leaf had finished his walking the hospitals and his examinations, and was now fitted to commence practice for himself. His godfather had still continued his allowance, though once or twice, when he came down to Stowbury, he had asked his aunts to help him in some small debts—the last time in one a little more serious; when, after some sad and sore consultation, it had been resolved to tell him he must contrive to live within his own allowance. For they were poorer than they used to be; many more schools had arisen in the town, and theirs had dwindled away. It was becoming a source of serious anxiety whether they could possibly make ends meet; and when, the next Christmas, Ascott sent them a five-pound note—an actual five-pound note, together with a fond, grateful letter that was worth it all—the aunts were deeply thankful, and very happy.

But still the school declined. One night they were speculating upon the causes of this, and Hilary was declaring, in a half jocular, half earnest way, that it must be because a prophet is never a prophet in his own country.

"The Stowbury people will never believe how clever I am. Only, it is a useless sort of cleverness, I fear. Greek, Latin, and mathematics are no good to infants under seven, such as Stowbury persists in sending to us."

"They think I am only fit to teach little children—and perhaps it is true," said Miss Leaf.

"I wish you had not to teach at all. I wish I was a daily governess—I might be, and earn enough to keep the whole family; only, not here."

"I wonder," said Johanna thoughtfully, "if we shall have to make a change."

"A change!" It almost pained the elder sister to see how the younger brightened up at the word. "Where to—London? Oh, I have so longed to go and live in London! But I thought you would not like it, Johanna."

That was true. Miss Leaf, whom feeble health had made prematurely old, would willingly have ended her days in the familiar town;—but Hilary was young and strong. Johanna called to mind the days when she too had felt that rest was only another name for dulness; and when the most difficult thing possible to her was what seemed now so easy—to sit down and endure.

Besides, unlike herself, Hilary had her life all before her. It might be a happy life, safe in a good man's tender keeping: those unflinching letters from India seemed to prophesy that it would. But no one could say. Miss Leaf's own experience had

not led her to place much faith in either men or happiness.

Still, whatever Hilary's future might be, it would likely be a very different one from that quiet, colourless life of hers. And as she looked at her young sister, with the twilight glow on her face—they were taking an evening stroll up and down the terrace—Johanna hoped and prayed it might be so. Her own lot seemed easy enough for herself; but for Hilary—she would like to see Hilary something better than a poor schoolmistress at Stowbury.

No more was said at that time, but Johanna had the deep, still, Mary-like nature, which "kept" things, and "pondered them in her heart;" so that when the subject came up again she was able to meet it with that sweet calmness which was her especial characteristic—the unruffled peace of a soul which no worldly storms could disturb overmuch, for it had long since cast anchor in the world unseen.

The chance which revived the question of the Great Metropolitan Hegira, as Hilary called it, was a letter from Mr. Ascott, as follows:—

"MISS LEAF.

"MADAM,—I shall be obliged by your informing me if it is your wish, as it seems to be your nephew's, that instead of returning to Stowbury, he should settle in London as a surgeon and general practitioner?

"His education complete, I consider that I have done my duty by him: but I may assist him occasionally still, unless he turns out—as his father did before him—a young man who prefers being helped to helping himself, in which case I shall have nothing more to do with him.—I remain, Madam, your obedient servant, PETER ASCOTT."

The sisters read this letter, passing it round the table, none of them apparently liking to be the first to comment upon it. At length Hilary said—

"I think that reference to poor Henry is perfectly brutal."

"And yet he was very kind to Henry. And if it had not been for his common sense in sending poor little Ascott and the nurse down to Stowbury, the baby might have died. But you don't remember anything of that time, my dear," said Johanna, sighing.

"He has been kind enough, though he has done it in such a patronizing way," observed Selina. "I suppose that's the real reason of his doing it. He thinks it fine to patronize us, and show kindness to our family; he, the stout, bullet-headed grocer's boy, who used to sit and stare at us all church-time."

"At you, you mean. Wasn't he called your beau?" said Hilary, mischievously, upon which Selina drew herself up in great indignation.

And then they fell to talking of that anxious question—Ascott's future. A little they reproached themselves that they had left the lad so long in London—so long out of the influence that might have counteracted the evil, sharply hinted in his god-father's letter. But once away—to lure him back to their poor home was impossible.

"Suppose we were to go to him," suggested Hilary.

The poor and friendless possess one great advantage—they have nobody to ask advice of; nobody to whom it matters much what they do or where they go. The family mind has but to make itself up, and act accordingly. Thus within an hour or two of the receipt of Mr. Ascott's letter, Hilary went into the kitchen, and told Elizabeth that as soon as her work was done, Miss Leaf wished to have a little talk with her.

"Eh! what's wrong? Has Miss Selina been a-grumbling at me?"

Elizabeth was in one of her bad humours, which, though of course they never ought to have, servants do have as well as their superiors. Hilary perceived this, by the way she threw the coals on, and tossed the chairs about. But to-day her heart was full of far more serious cares than Elizabeth's ill-temper. She replied composedly—

"I have not heard that either of my sisters is displeased with you. What they want to talk to you about is for your own good. We are thinking of making a great change. We intend leaving Stowbury, and going to live in London."

"Going to live in London!"

Now, quick as her tact and observation were—her heart taught her these things—Elizabeth's head was a thorough Saxon one, slow to receive impressions. It was a family saying, that nothing was so hard as to put a new idea into Elizabeth, except to get it out again.

For this reason Hilary preferred paving the way quietly, before startling her with the sudden intelligence of their contemplated change.

"Well, what do you say to the plan?" asked she, good-humouredly.

"I dunnot like it at all," was the brief gruff answer of Elizabeth Hand.

Now it was one of Miss Hilary's doctrines, that no human being is good for much unless he or she has what is called "a will of one's own." Perhaps this, like many another creed, was with her the result of circumstances. But she held it firmly. With that exaggerated one-sidedness of feeling which any bitter family or personal experience is sure to leave behind—a strong will was her first attraction to everybody. It had been so in the case of Robert Lyon: and not less in Elizabeth's.

But this quality has its inconveniences. When the maid began sweeping up her hearth with a

noisy angry gesture, the mistress did the wisest and most dignified thing a mistress could do under the circumstances, and which she knew was the sharpest rebuke she could administer to the sensitive Elizabeth—she immediately quitted the kitchen.

For an hour after, the parlour-bell did not ring; and though it was washing-day, no Miss Hilary appeared to help in folding up the clothes. Elizabeth, subdued and wretched, waited till she could wait no longer; then knocked at the door, and asked humbly if she should bring in supper.

The extreme kindness of the answer—to the effect that she must come in, as they wanted to speak to her, crushed the lingering fragments of ill-humour out of the girl.

"Miss Hilary has told you our future plans, Elizabeth; now we wish to have a little talk with you about yours."

"Eh?"

"We conclude you will not wish to go with us to London; and it would be hardly advisable you should. You can get higher wages now than any we can afford to give you; indeed, we have more than once thought of telling you so, and offering you your choice of trying for a better place."

"You're very kind," was the answer, stolid rather than grateful.

"No; I think we are merely honest. We should never think of keeping a girl upon lower wages than she was worth. Hitherto, however, the arrangement has been quite fair—you know, Elizabeth, you have given us a deal of trouble in the teaching of you." And Miss Leaf smiled, half sadly, as if this, the first of the coming changes, hurt her more than she liked to express. "Come, my girl," she added, "you needn't look so serious. We are not in the least vexed with you; we shall be very sorry to lose you, and we will give you the best of characters when you leave."

"I dunnot—mean—to leave."

Elizabeth threw out the words like pellets, in a choked fashion, and disappeared suddenly from the parlour.

"Who would have thought it!" exclaimed Selina; "I declare the girl was crying."

No mistake about that; though when, a few minutes after, Miss Hilary entered the kitchen, Elizabeth tried in a hurried, shame-faced way to hide her tears by being very busy over something. Her mistress took no notice, but began, as usual on washing-days, to assist in various domestic matters, in the midst of which she said quietly—

"And so, Elizabeth, you would really like to go to London?"

"No! I shouldn't like it at all; never said I should. But if you go, I shall go too; though Missis is so ready to get shut o' me."

"It was for your own good, you know."

"You always said it was for a girl's good to stop in one place; and if you think I'm going to another—I aren't, that's all."

Rude as the form of the speech was—almost the first rude speech that Elizabeth had ever made to Miss Hilary, and which under other circumstances she would have felt bound severely to reprove, the mistress passed it over. That which lay beneath it, the sharpness of wounded love, touched her heart. She felt that for all the girl's rough manner, it would have been hard to go into her London kitchen, and meet a strange London face, instead of that fond homely one of Elizabeth's.

Still, she thought it right to explain to her, that London life might have many difficulties, that, for the present at least, her wages could not be raised, and the family might at first be in even more straitened circumstances than they were at Stowbury.

"Only at first, though, for I hope to find plenty of pupils. And by and by our nephew will get into practice."

"Is it on account of him you're going, Miss Hilary?"

"Chiefly."

Elizabeth gave a grunt, which said as plainly as words could say, "I thought so," and relapsed into what she, no doubt, believed to be virtuous indignation, but which, as it was testified against the wrong parties, was open to the less favourable interpretation of ill-humour—a small injustice not uncommon with us all.

I do not pretend to paint this young woman as a perfect character. She had her fierce dislikes, as well as her strong fidelities; her faults within and without, which had to be struggled with—as all of us have to struggle to the very end of our days. Oftentimes not till the battle is nigh over—sometimes not till it is quite over—does God give us the victory.

Without more discussion on either side, it was agreed that Elizabeth should accompany her mistresses. Even Mrs. Hand seemed to be pleased thereat, her only doubt being lest her daughter should meet and be led astray by that bad woman Mrs. Cliffe, Tommy Cliffe's mother—who was reported to have gone to London. But Miss Hilary explained that this meeting was about as probable as the rencontre of two needles in a hay-rick; and besides, Elizabeth was not the sort of girl to be easily "led astray" by anybody.

"No, no; her's a good wench, though I says it," replied the mother, who was too hard worked to have much sentiment to spare. "I wish the little 'uns may take pattern by our Elizabeth. You'll send her home, maybe, in two or three years' time, to let us have a look at her?"

Miss Hilary promised, and then took her way back through the familiar old town—so soon to be familiar no more—thinking anxiously, in spite of herself, upon those two or three years, and what they might bring.

It happened to be a notable day—that sunshiny 28th of June—when the little, round-cheeked damsel, who is a grandmother now, had the crown of three kingdoms first set upon her youthful head; and Stowbury, like every other town in the land, was a perfect bower of green arches, garlands, banners; white-covered tables were spread in the open air, down almost every street, where poor men dined, or poor women drank tea; and everybody was out and abroad, looking at or sharing in the holiday-making, wild with merriment, and brimming over with passionate loyalty to the Maiden Queen.

That day is now twenty-four years ago; but all those who remember it must own there never has been a day like it, when, all over the country, every man's heart throbbed with chivalrous devotion, every woman's with womanly tenderness, towards this one royal girl, who—God bless her!—has lived to retain and deserve it all.

Hilary called for, and protected through the crowd, the little, timid, widow lady who had taken off the Misses Leaf's hands their house and furniture, and whom they had made very happy—as the poor often can make those still poorer than themselves—by refusing to accept anything for the "good-will" of the school. Then she was fetched by Elizabeth, who had been given a whole afternoon's holiday; and mistress and maid went together home, watching the last of the festivities, the chattering groups that still lingered in the twilight streets, and listening to the merry notes of the "Triumph" which came down through the lighted windows of the Town Hall, where the open-air tea-drinkers had adjourned to dance country dances, by civic permission, and in perfectly respectable jollity.

"I wonder," said Hilary—while, despite some natural regret, her spirit stretched itself out eagerly from the narrowness of the place where she was born into the great, wide world; the world where so many grand things were thought and written and done; the world Robert Lyon had so long fought with, and was fighting bravely still—"I wonder, Elizabeth, what sort of place London is, and what our life will be in it?"

Elizabeth said nothing. For the moment her face seemed to catch the reflected glow of her mistress's, and then it settled down into that look of mingled resistance and resolution which was habitual to her. For the life that was to be, which neither knew—oh, if they had known!—she also was prepared.

CHAPTER IX.

THE day of the Grand Hegira came.

"I remember," said Miss Leaf, as they rumbled for the last time through the empty morning streets of poor old Stowbury, "I remember my grandmother telling me that when my grandfather was courting her, and she out of coquetry refused him, he set off on horseback to London, and she was so wretched to think of all the dangers he ran on the journey, and in London itself, that she never rested till she got him back, and then immediately married him."

"No such catastrophe is likely to happen to any of us, except perhaps to Elizabeth," said Miss Hilary, trying to get up a little feeble mirth, anything to pass away the time and lessen the pain of parting, which was almost too much for Johanna. "What do you say? Do you mean to get married in London, Elizabeth?"

But Elizabeth could make no answer, even to kind Miss Hilary. They had not imagined she felt the leaving her native place so much. She had watched intently the last glimpse of Stowbury church tower, and now sat with reddened eyes, staring blankly out of the carriage window—

"Silent as a stone."

Once or twice a large slow tear gathered on each of her eyes, but it was shaken off angrily from the high cheek-bones, and never settled into absolute crying. They thought it best to take no notice of her. Only, when reaching the new small station, where the "resonant steam-eagles" were, for the first time, beheld by the innocent Stowbury ladies, there arose a discussion as to the manner of travelling. Miss Leaf said decidedly—"Second-class,—and then we can keep Elizabeth with us." Upon which Elizabeth's mouth melted into something between a quiver and a smile.

Soon it was all over, and the little household was compressed into the humble second-class carriage, cheerless and cushionless, whirling through indefinite England in a way that confounded all their geography and topography. Gradually as the day darkened into heavy chilly July rain, the scarcely kept-up spirits of the four passengers began to sink. Johanna grew very white and worn, Selina became, to use Ascott's phrase, "as cross as two sticks," and even Hilary, turning her eyes from the grey sodden-looking landscape without, could find no spot of comfort to rest on within the carriage, except that round rosy face of Elizabeth Hand's.

Whether it was from the spirit of contradiction existing in most such natures, which, especially in youth, are more strong than sweet, or from a better feeling, the fact was noticeable, that when every one else's spirits went down Elizabeth's went up.

Nothing could bring her out of a "grumpy" fit so satisfactorily as her mistresses' falling into one. When Miss Selina now began to fidget hither and thither, each tone of her fretful voice seeming to go through her elder sister's every nerve, till even Hilary said, impatiently, "Oh, Selina, can't you be quiet?" then Elizabeth rose from her depth of gloomy discontent up to the surface immediately.

She was only a servant; but Nature bestows that strange vague thing that we term "force of character" independently of position. Hilary often remembered afterwards how much more comfortable the end of the journey was than she had expected—how Johanna lay at ease, with her feet on Elizabeth's lap, wrapped in Elizabeth's best woollen shawl; and how, when Selina's whole attention was turned to an ingenious contrivance with a towel and fork and Elizabeth's basket, for stopping the rain out of the carriage-roof—she became far less disagreeable, and even a little proud of her own cleverness. And so there was a temporary lull in Hilary's cares, and she could sit quiet, with her eyes fixed on the rainy landscape, which she did not see, and her thoughts wandering towards that unknown place and unknown life into which they were sweeping, as we all sweep, ignorantly, unresistingly, almost unconsciously, into new destinies. Hilary, for the first time, began to doubt of theirs. Anxious as she had been to go to London, and wise as the proceeding appeared, now that the die was cast and the cable cut, the old simple peaceful life at Stowbury grew strangely dear.

"I wonder if we shall ever go back again, or what is to happen to us before we do go back," she thought, and turned, with a half-defined fear, towards her eldest sister, who looked so old and fragile beside that sturdy healthy servant-girl;—"Elizabeth!" and Elizabeth, rubbing Miss Leaf's feet, started at the unwonted sharpness of Miss Hilary's tone—"there; I'll do that for my sister. Go and look out of the window at London."

For the great smoky cloud which began to rise in the rainy horizon was indeed London. Soon through the thickening nebula of houses they converged to what was then the nucleus of all railway travelling, the Euston Terminus, and were hustled on to the platform, and jostled helplessly to and fro—these poor country ladies! Anxiously they scanned the crowd of strange faces for the one only face they knew in the great metropolis—which did not appear.

"It is very strange—very wrong of Ascott. Hilary, you surely told him the hour correctly? For once, at least, he might have been in time."

So chafed Miss Selina, while Elizabeth, who, by some miraculous effort of intuitive genius, had succeeded in collecting the luggage, was now engaged in defending it from all comers, especially

porters, and making of it a comfortable seat for Miss Leaf.

"Nay, have patience, Selina. We will give him just five minutes more, Hilary."

And Johanna sat down, with her sweet, calm, long-suffering face turned upwards to that younger one, which was, as youth is apt to be, hot, and worried, and angry. And so they waited till the terminus was almost deserted, and the last cab had driven off, when, suddenly, dashing up the station-yard out of another, came Ascott.

He was so sorry, so very sorry, downright grieved, at having kept his aunts waiting. But his watch was wrong—some fellows at dinner detained him—the train was before its time surely. In fact, his aunts never quite made out what the excuse was; but they looked into his bright handsome face, and their wrath melted like clouds before the sun. He was so gentlemanly, so well dressed—much better dressed than even at Stowbury—and he seemed so unfeignedly glad to see them. He handed them all into the cab—even Elizabeth, though whispering meanwhile to his Aunt Hilary, "What on earth did you bring her for?"—and then was just going to leap on to the box himself, when he stopped to ask "Where he should tell cabby to drive to?"

"Where to?" repeated his aunts in undisguised astonishment. They had never thought of anything but of being taken home at once by their boy.

"You see," Ascott said, in a little confusion, "you wouldn't be comfortable with me. A young fellow's lodgings are not like a house of one's own, and, besides——"

"Besides, when a young fellow is ashamed of his old aunts, he can easily find reasons."

"Hush, Selina," interposed Miss Leaf. "My dear boy, your old aunts would never let you inconvenience yourself for them. Take us to an inn for the night, and to-morrow we will find lodgings for ourselves."

Ascott looked greatly relieved.

"And you are not vexed with me, Aunt Johanna?" said he, with something of his old childish tone of compunction, as he saw—he could not help seeing—the utter weariness which Johanna tried so hard to hide.

"No, my dear, not vexed. Only I wish we had known this a little sooner, that we might have made arrangements. Now, where shall we go?"

Ascott mentioned a dozen hotels, but they found he only knew them by name. At last Miss Leaf remembered one, which her father used to go to, on his frequent journeys to London, and whence, indeed, he had been brought home to die. And though all the recollections about it were sad enough, still it felt less strange than the rest, in

this dreariness of London. So she proposed going to the "Old Bell," Holborn.

"A capital place!" exclaimed Ascott eagerly. "And I'll take and settle you there; and we'll order supper, and make a jolly night of it. All right! Drive on, cabby!"

He jumped on the box, and then looked in mischievously, flourishing his lit cigar, and shaking his long hair—his aunt Selina's two great abominations—right in her indignant face: but withal looking so merry and good-tempered, that she shortly softened into a smile.

"How handsome the boy is growing!"

"Yes," said Johanna, with a slight sigh; "and, did you notice? how exceedingly like his——"

The sentence was left unfinished. Alas! if every young man, who believes his faults and follies injure himself alone, could feel what it must be, years afterwards, to have his nearest kindred shrink from saying, as the saddest, most ominous thing they could say of his son, that the lad is growing "so like his father!"

It might have been—they assured each other that it was—only the incessant roll, roll of the street sounds below their windows which kept the Misses Leaf awake half the night of this their first night in London. And when they sat down to breakfast—having waited an hour vainly for their nephew—it might have been only the gloom of the little parlour which cast a slight shadow over them all. Still, the shadow was there.

It deepened, despite the sunshiny morning into which the last night's rain had brightened, till Holborn Bars looked cheerful, and Holborn pavement actually clean, so that, as Elizabeth said, "you might eat your dinner off it," which was the one only thing she condescended to approve in London. She had sat all evening mute in her corner, for Miss Leaf would not send her away into the *terra incognita* of a London hotel. Ascott, at first considerably annoyed at the presence of what he called a "skeleton at the feast," had afterwards got over it, and run on with a mixture of childish glee and mannish pomposity about his plans and intentions—how he meant to take a house, he thought, in one of the squares, or a street leading out of them; how he would put up the biggest of brass plates, with "Mr. Leaf, surgeon," and soon get an extensive practice, and have all his aunts to live with him. And his aunts had smiled and listened, forgetting all about the silent figure in the corner, who perhaps had gone to sleep, or had also listened.

"Elizabeth, come and look out at London."

So she and Miss Hilary whiled away another heavy three-quarters of an hour in watching and commenting on the incessantly shifting crowd which swept past Holborn Bars. Miss Selina

sometimes looked out too, but more often sat fidgeting and wondering why Ascott did not come; while Miss Leaf, who never fidgeted, became gradually more and more silent. Her eyes were fixed on the door, with an expression which, if Hilary could have remembered so far back, would have been to her something, not painfully new, but still more painfully old—a look branded into her face by many an hour's anxious listening for the footstep that never came, or only came to bring distress. It was the ineffaceable token of that long, long struggle between affection and conscience, pity and scarcely repressible contempt, which, for more than one generation, had been the appointed burden of this family—at least, the women of it—till sometimes it seemed to hang over them almost like a fate.

About noon, Miss Leaf proposed calling for the hotel bill. Its length so alarmed the country ladies, that Hilary suggested not staying to dine, but going immediately in search of lodgings.

"What, without a gentleman! Impossible! I always understood ladies could go nowhere in London without a gentleman!"

"We shall come very ill off then, Selina. But anyhow, I mean to try. You know the region where, we have heard, lodgings are cheapest and best—that is, best for us. It cannot be far from here. Suppose I start at once?"

"What, alone?" cried Johanna, anxiously.

"No, dear. I'll take the map with me, and Elizabeth. She is not afraid."

Elizabeth smiled, and rose, with that air of dogged devotedness with which she would have prepared to follow Miss Hilary to the North Pole, if necessary. So, after a few minutes of arguing with Selina, who did not press her point overmuch, since she herself had not to commit the impropriety of the expedition. After a few minutes more of hopeless lingering about—till even Miss Leaf said they had better wait no longer—mistress and maid took a farewell nearly as pathetic as if they had been in reality Arctic voyagers, and plunged right into the dusty glare and hurrying crowd of the "sunny side" of Holborn in July.

A strange sensation, and yet there was something exhilarating in it. The intense solitude that there is in a London crowd, these country girls—for Miss Hilary herself was no more than a girl—could not as yet realize. They only felt the life of it; stirring, active, incessantly moving life—even though it was of a kind that they knew as little of it as the crowd did of them. Nothing struck Hilary more than the self-absorbed look of passers-by; each so busy on his own affairs, that, in spite of Selina's alarm, for all notice taken of them, they might as well be walking among the cows and horses in Stowbury field.

Poor old Stowbury! They felt how far away they were from it, when a ragged, dirty, vicious-looking girl offered them a moss rose-bud for "one penny, only one penny," which Elizabeth, lagging behind, bought, and found it only a broken-off bud stuck on to a bit of wire.

"That's London ways, I suppose," said she, severely, and became so misanthropic that she would hardly vouchsafe a glance to the handsome square they turned into, and merely observed of the tall houses, taller than any Hilary had ever seen, that she "wouldn't fancy running up and down them stairs."

But Hilary was cheerful in spite of all. She was glad to be in this region, which, theoretically, she knew by heart—glad to find herself in the body, where in the spirit she had come so many a time. The mere consciousness of this seemed to refresh her. She thought she would be much happier in London; that in the long years to come that must be borne, it would be good for her to have something to do as well as to hope for; something to fight with as well as to endure. Now more than ever came pulsing in and out of her memory a line once repeated in her hearing, with an observation of how "true" it was. And though originally it was applied by a man to a woman, and she smiled sometimes to think how "unfeminine" some people—Selina, for instance—would consider her turning it the other way; still she did so. She believed, that, for woman as for man, that is the purest and noblest love which is the most self-existent, most independent of love returned, and which can say, each to the other, equally on both sides, that the whole solemn purpose of life is, under God's service,

"If not to win, to feel more worthy thee."

Such thoughts made her step firmer and her heart lighter, so that she hardly noticed the distance they must have walked, till the close London air began to oppress her, and the smooth glaring London pavements made her Stowbury feet ache sorely.

"Are you tired, Elizabeth? Well, we'll rest soon. There must be lodgings near here. Only I can't quite make out—"

As Miss Hilary looked up to the name of the street, the maid noticed what a glow came into her mistress's face, pale and tired as it was. Just then a church clock struck the quarter-hour.

"That must be St. Pancras. And this—yes, this is Burton Street, Burton Crescent."

"I'm sure missis wouldn't like to live there," observed Elizabeth, eyeing uneasily the gloomy *rez-de-chaussée*, familiar to many a generation of struggling respectability, where, in the decadence of the season, every second house bore the announcement, "Apartments furnished."

"No," Miss Hilary replied, absently. Yet she continued to walk up and down, the whole length of the street; then passed out into the dreary, deserted-looking Crescent, where the trees were already beginning to fade; not, however, into the bright autumn tint of country woods, but into a premature withering, ugly and sad to behold.

"I am glad he is not here—glad, glad!" thought Hilary, as she realized the unutterable dreariness of those years, when Robert Lyon lived and studied in his garret from month's end to month's end—these few dusty trees being the sole memento of the green country life in which he had been brought up, and which she knew he so passionately loved. Now, she could understand that "calenture" which he had sometimes jestingly alluded to as coming upon him at times, when he felt literally sick for the sight of a green field or a hedge full of birds. She wondered whether the same feeling would ever come upon her, in this strange desert of London, the vastness of which grew upon her every hour.

She was glad he was away; yes, heart-glad! And yet, if, this minute, she could only have seen him coming round the Crescent, have met his smile, and the firm, warm clasp of his hand—

For an instant there rose up in her one of those wild, rebellious outcries against fate, when to have to waste years of this brief life of ours in the sort of semi-existence that living is, apart from the treasure of the heart and delight of the eyes, seems so cruelly, cruelly hard!

"Miss Hilary."

She started, and "put herself under lock and key" immediately.

"Miss Hilary; you do look so tired!"

"Do I? Then we will go and sit down in this baker's shop, and get rested and fed. We cannot afford to wear ourselves out, you know. We have a great deal to do to-day."

More indeed than she calculated, for they walked up one street and down another, investigating at least twenty lodgings before any appeared which seemed fit for them. Yet some place must be found where Johanna's poor, tired head could rest that night. At last, completely exhausted, with that oppressive exhaustion which seems to crush mind as well as body after a day's wandering in London, Hilary's courage began to ebb. Oh for an arm to lean on, a voice to listen for, a brave heart to come to her side, saying, "Do not be afraid, there are two of us!" And she yearned, with an absolutely sick yearning such as only a woman who now and then feels the utter helplessness of her womanhood, can know, for the only arm she cared to lean on, the only voice dear enough to bring her comfort, the only heart that she felt she could trust.

Poor Hilary! And yet why pity her? To her three alternatives could but happen: were Robert Lyon true to her, she would be his, entirely and devotedly, to the end of her days; did he forsake her, she would forgive him; should he die, she would be faithful to him eternally. Love of this kind may know anguish, but not the sort of anguish that lesser and weaker loves do. If it is certain of nothing else, it can always be certain of itself.

"Its will is strong:

It suffers; but it cannot suffer long."

And even in its utmost pangs is an underlying peace which often approaches to absolute joy.

Hilary roused herself, and bent her mind steadily on lodgings till she discovered one, from the parlour of which you could see the trees of Burton Crescent, and hear the sound of Saint Pancras clock.

"I think we may do here—at least for a while," said she cheerfully; and then Elizabeth heard her inquiring if an extra bedroom could be had if necessary.

There was only one small attic. "Ascott never could put up with that," said Hilary, half to herself. Then suddenly—"I think I will go and see Ascott before I decide. Elizabeth, will you go with me, or remain here?"

"I'll go with you, if you please, Miss Hilary." ("If you please," sounded not unlike "if I please," and Elizabeth had gloomed over a little.) "Is Mr. Ascott to live with us!"

"I suppose so."

No more words were interchanged till they reached Gower Street, when Miss Hilary observed, with evident surprise, what a handsome street it was.

"I must have made some mistake. Still we will find out Mr. Ascott's number, and inquire."

No, there was no mistake. Mr. Ascott Leaf had lodged there for three months, but had given up his rooms that very morning.

"Where had he gone to?"

The servant—a London lodging-house servant all over—didn't know; but she fetched the landlady, who was after the same pattern of the dozen London landladies with whom Hilary had that day made acquaintance, only a little more Cockney, smirking, dirty, and tawdriy fine.

"Yes, Mr. Leaf had gone, and he hadn't left no address. Young college gentlemen often found it convenient to leave no address. P'raps he would, if he'd known there would be a young lady a calling to see him."

"I am Mr. Leaf's aunt," said Hilary, turning as hot as fire.

"Oh, in-deed," was the answer, with civil incredulousness.

But the woman was sharp of perception—as often-cheated London landladies learn to be. After looking keenly at mistress and maid, she changed her tone; nay, even launched out into praises of her late lodger: what a pleasant gentleman he was; what good company he kept, and how he had promised to recommend her apartments to his friends.

"And as for the little some'at of rent, Miss—tell him it makes no matter, he can pay me when he likes. If he don't call soon, p'raps I might make bold to send his trunk and his books over to Mr. Ascott's of—dear me, I forget the number and the square—

Hilary unsuspectingly supplied both.

"Yes, that's it—the old gen'lman as Mr. Leaf went to dine with every other Sunday, a very rich old gentleman, who, he says, is to leave him all his money. Maybe a relation of yours, Miss?"

"No," said Hilary; and adding something about the landlady's hearing from Mr. Leaf very soon, she hurried out of the house, Elizabeth following.

"Won't you be tired if you walk so fast, Miss Hilary?"

Hilary stopped, choking. Helplessly she looked up and down the forlorn, wide, glaring, dusty street; now sinking into the dull shadow of a London afternoon.

"Let us go home!" And at the word a sob burst out—just one passionate pent-up sob. No more. She could not afford to waste strength in crying.

"As you say, Elizabeth, I am getting tired; and that will not do. Let me see; something must be decided." And she stood still, passing her hand over her hot brow and eyes. "I will go back and take the lodgings, leave you there to make all comfortable, and then fetch my sisters from the hotel. But stay first, I have forgotten something."

She returned to the house in Gower Street, and wrote on one of her cards an address—the only permanent address she could think of—that of the city broker who was in the habit of paying them their yearly income of £50.

"If any creditors inquire for Mr. Leaf, give them this. His friends may always hear of him at the London University."

"Thank you, ma'am," replied the now civil landlady. "Indeed, I wasn't afraid of the young gentleman giving us the slip. For though he was careless in his bills, he was every inch the gentleman. And I wouldn't object to take him in again. Or p'raps you yourself, ma'am, might be a-wanting rooms."

"No, I thank you. Good morning." And Hilary hurried away.

Not a word did she say to Elizabeth, or Elizabeth to her, till they got into the dull, dingy parlour—henceforth to be their sole apology for "home:" and then she only talked about domestic arrangements: talked fast and eagerly, and tried to escape the affectionate eyes which she knew were so sharp and keen. Only to escape them—not to blind them; she had long ago found out that Elizabeth was too quick-witted for that, especially in anything that concerned "the family." She felt convinced the girl had heard every syllable that passed at Ascott's lodgings; that she knew all that was to be known, and guessed what was to be feared, as well as Hilary herself.

"Elizabeth"—she hesitated long, and doubted whether she should say the thing, before she did say it—"remember we are all strangers in London, and family matters are best kept within the family. Do not mention either in writing home, or to anybody hereabout—about—"

She could not name Ascott; she felt so horribly ashamed.

A DAY IN THE WOODS OF JAMAICA.

It is now nearly sixteen years since I came to the end of that delightful sojourn in the forests of Jamaica, which passed so swiftly, and which now seems like a midsummer night's dream; but often and often I say to myself, as I muse upon the past, and recall the beauteous scenes,—How I should delight to transport myself in a moment, as by an electric telegraph, to the summit of Bluefields Peak, or to the sombre glooms of Rotherwood, or to the sunny glades of the Kepp, and spend just one long day in re-exploring there! I shall never see them again in this body, for those sweet ties that advertisers strangely call "encumbrances" have clustered round me, and grey hairs are peeping out of my head and beard, and mere locomotion has not the charm that it once had; but I sometimes think that, when the Lord Jesus, bringing in the times of restitution of all things, shall clothe this sin-

pressed globe with far more than pristine glory and loveliness, and I have put on the resurrection body, fashioned in his likeness, to whose incorruptible, immortal powers time and space will be as nothing, one of the myriad joys reserved for me may be the looking again upon those gorgeous scenes of beauty, which, even as I have already seen them, are so little marred by the sin of man, and retain so much of Paradise,—the mountain-woods of glorious Jamaica.

There may be a few of the numerous readers of this magazine, to whom it will not be disagreeable to accompany me in imagination, while I tax memory, and try to paint, in poor and feeble words, a few of the features and objects that would vividly strike a stranger's fancy, who had never before been out of Europe.

It is our first visit, then, to a tropical land. The

ship that brought us hither, has cast anchor in a bay formed by the coral reef, on which the Wrasses and Parrot-fishes, glittering in green and azure and scarlet, are playing and nibbling, and the little butterfly-like Chetodons, banded with black on golden-yellow, are shooting to and fro. As we sit in the stern-sheets of the gig in which we are pulled ashore, the brilliantly transparent water reveals these and multitudes of other things enjoying themselves beneath us. Those noble Cassides and Conch shells, which are the ornaments of our sideboards at home, are seen gliding on the sand; great purple urchins with enormously long spines, and others with curiously broad flattened pegs of alternate colours; sponges, of forms imitative of umbrellas, and cups, and goblets, and trees, from the size of a dining-table downward; gorgeous sea-slugs crawling on the grass-wrack; madrepores and corals clothed with their bright-hued anemones; snatches and glimpses of these and hundreds of other strange creatures, nourished in the steaming sea beneath a vertical sun, we catch, as the boat shoots rapidly over the glassy wave; and now her keel gently grates upon the glistening beach of coral sand, and we are ashore on Jamaica, the gem of the Caribbean Sea.

The great south road here skirts the shore; and at this little wayside inn we procure horses and a negro attendant for our mountain excursion; for we cannot walk far in this climate with enjoyment. While the steeds are saddling, we stretch ourselves on the sand under the shadow of this sea-grape, whose round, shield-like leaves are veined with richest crimson, and whose long racemes of purple berries tempt the eye and the palate, and admire the tufts of white lilies, having the fragrance of carnations, whose bulbs delight to be washed by the wavelets of the sea.

We are mounted; and now let us rapidly get over the lowland slopes, to reach the loftier regions as early in the day as possible. The sun has not yet risen; and there is a dewy freshness in the air, as the dying land-wind of the night comes off in intermitting breathings, bringing the perfume of ten thousand flowers. Here, between cliffs of limestone, where creepers festoon the rock, and the noble trumpet-blossoms of the *Portlandia*, snowy-white, and each eight inches long, hang down from the clustering foliage, out of every fissure,—we make our way up a steeply rising track. The cliffs on either hand soon begin to recede, and we emerge on a road between pastures of Guinea-grass, whose brightness never withers under the driest seasons. Orange-trees line the road, loaded with their golden fruit; and sops and custard-apples, and luscious naseberries and guavas, are scattered over the fields. Birds have awaked: the petchary, earlier than the yard-cock, long ago piped from the fronds of the tall cocoa-palm; and yonder we see one continuing his simple song with unabated energy, opening ever and anon, as he shifts from twig to twig, the bright golden coronet upon his head. Ha! he is not doing that for nothing. It is the expression of excitement. He has ceased to sing; watch him! A large beetle is crawling near; which is in the act of spreading its wing-sheaths for flight. Off it sails on drony wing! the petchary instantly makes sail too; catches the heavy prey, and bearing it in

triumph to his watch-post, beats it to pieces with his strong hooked beak, and swallows it.

Sweetly from the tangled woods of yonder hill issue the mellow notes, soft and broken, of the merle; you would think it your own familiar blackbird, by the note, and would scarcely be undeceived by a sight of the bird itself; but it is a species peculiar to us. What we here call blackbirds are larger birds, allied to the cuckoo; impudent, clamorous, sociable creatures, with a noisy, intrusive cry, like "Going away! going away! going away!" as they sail along on short, heavy wing, and long, balancing tail, close to the ground. There! we hear of a flock of them now; and yonder they are in the cattle-pasture, blackening the ground. They are cutting the droppings through and through, searching for maggots and worms; and for this purpose they are provided with a very deep, knife-like ridge on their beaks, which serves them as a ploughshare. See, too! on the backs of the patient kine, and clustering around their feet, are other sable attendants; sable they look from hence, but if we were close, we should find them adorned with the richest steely purple and blue-green reflections. With what business-like earnestness each searches among the hair of the cow he has selected to patronize, digging for bots and ticks; or walks round and round, with the ivory-white eye turned up, scrutinizing the grazing beast beneath, and now and then springing upward to seize the insect prey. Away goes one, the boat-shaped tail folded on itself, with a sharp metallic cry, which reminds you of the smittings of a smith upon his anvil. From this sound, we call the familiar bird the Tinkling.

As we proceed we hear the low sweet cooings of hundreds of doves of various species coming from the woods. These sounds are eminently characteristic of the early day, in these wooded slopes. The loud and vehement call of the white-winged turtle-dove, "*Two bits for two!*" is pertinaciously uttered; or now and again exchanged for its stammering cry of eight notes, of which the last is protracted with a moaning fall. The pea-dove shows its plump form of purplish-fawn colour, and its large melting gazelle-eye, on the road before us, dusting itself almost under our horse's feet, or sits in the shadow of the groves, and coos, "*Sary coat true-blue!*" And ground-doves, no larger than sparrows, congregate in small flocks on the pasture-lands, searching for seeds of grass and weeds, and shout "*Meho! meho!*" or a loud and hollow "*Whoop!*"

The birds have their proper regions. We are attaining a considerable elevation, and are passing by a narrow path through a dense copse of small trees—bastard-cedar and logwood, with fiddlewood and mahogany, much interlaced with briars and twiners. Here we see the beautiful and gentle whitebelly dove walking to and fro in the green-wood shade, picking up fruit-seeds; its light-coloured plumage rendering it conspicuous; while from all sides the mournful sobbing notes of this species resound.

"The negroes delight to ascribe imaginary words to the voices of birds, and indeed for the cooings of many of the pigeons, this requires no great stretch of imagination. The beautiful whitebelly

complains all day, in the sunshine as well as the storm.—'Rain, come, wet me through!' each syllable uttered with a sobbing separateness, and the last prolonged with such a melancholy fall, as if the poor bird were in the extremity of suffering. But it is the note of health, of joy, of love; the utterance of exuberant animal happiness; a portion of that universal song wherewith 'everything that hath breath may praise the Lord.' The plumage, as usual in this family, is very soft and smooth; the expression of the countenance most engagingly meek and gentle. And it is a gentle bird. I have taken one into my hand, when just caught in a springe, full grown and in its native wildness; and it has nestled comfortably down, and permitted its pretty head and neck to be stroked, without an effort to escape, without a flutter of its wings."

A short turn of the path brings us out of the wood upon an open plateau, whence the eye commands a noble view of the coast for many a league, and of the silvery Caribbean Sea stretching away to a far-distant horizon. The sun is just rising out of a bank of refulgent clouds, and shedding a transparent glory, a sort of veil of golden gauze, on every object within reach of his ray. Hundreds of winged songsters tune their throats to welcome his beam; the glittering lizards peep forth, and bask in the crevices of the rocks; and bright-winged butterflies leap into activity, and dance over the blushing flowers.

How gorgeous is sunrise, when viewed from a commanding elevation in the tropics! And perhaps under no circumstances is it more beautiful than when seen from the verdant mountains of an island, where the emergence of the orb from the glittering ocean can be commanded, while the immediate surroundings are those of the forest and the peak, where the effects of the slanting sunlight on the varied foreground, the green and brown trunks of the columnar trees, the broad masses of foliage, and the gloomy recesses between; the many-coloured rocks breaking out, with their festoons of verdure; the gay insects and birds and flowers,—give fine contrasts and harmonies; and where the crowns of the loftier hills, the pointed peaks, lighting up with sudden purple and gold, give an imperial magnificence to the prospect.

Look at this ancient silk-cotton tree! what a fine object is it, illumined in the morning sun! The enormous perpendicular spurs stand out like radiating walls from the huge trunk, looking almost as white as marble in the bright light, and throwing the recesses into dark shadow. Trace up the vast pillar-like trunk! the eye wanders up a hundred feet before it detects a branch to break the uniformity of its column; there the huge boughs spread horizontally, each one a vast tree for bulk and extent. What an aspect of strength in those contorted and gnarled limbs! How far away they carry the umbrageous canopy of foliage! And see, too, what a microcosm is such a tree as this! The hoary trunk is studded at intervals with tufts of parasitic plants of the pine-apple tribe; these are called wild-pines; they do not bear eatable fruit, but their blossoms are often of great splendour. There is one now in flower: from a tuft of rigid arching leaves, which form sheathing cylinders at the base, springs a fine spike of closely-set flowers,

of the richest purple and crimson dyes. Another kind has the sheathing leaves more compactly overlapping in a sort of herring-bone or zig-zag fashion, whence projects a longer, looser, and more branched raceme of scarlet and yellow blossoms. There are many not now in flower, for they vary in their season of blooming, but the leaves show that they differ in species, though they possess a general family resemblance. One sort, common enough, is not at all ornamental. The negroes call it "old man's beard;" the stems are very long, and as slender as wire, which form great ragged pendulous tufts of a dull hoary grey hue.

And there, in the forks of the huge limbs, grow enormous matted masses of various vegetation, too remote from our eyes to be identified in detail; but we discern branches of orchideous blooms hanging in the air; and feathery ferns arching out their elegant tracery; and creepers running along the boughs, and what look like tussocks of wiry grass at intervals, but which are small tiny-flowered orchids, and long, long ends of green twine hanging many yards in length, now looped up in a loose bight, now swinging in the wind in mid-air, now almost touching the earth, and dividing at their extremities into three or four smaller threads.

Here we leave our steeds, and penetrate these lofty woods. How solemnly still is the air! A subdued green light, like that of an ancient cathedral, is diffused, to which our eyes are scarcely yet accustomed. The huge old trunks look like the pillars of the Gothic fane, and from far up in the groined roof come dancing beams of bright light, green and yellow and crimson, where the sun's ray falls on a single leaf or flower, that remind one of the stained glass of lofty windows. The butterflies are gaily flitting about the margin of the forest; for they are children of the sun; the flowers too are there; the shrubs are tall and close-leaved, and covered with varied blossom; but neither insects nor flowers venture far within the gloom of these primeval woods, save here and there, where openings in the leafy roof admit the bright sunbeams, and make a little parterre on the floor. But delicately cut Lycopodiums of the tenderest green creep over the ground, like a soft Turkey carpet, thrown over everything; gnarled roots, outcrops of rugged stone, fallen trunks and branches, the trophies of the hurricane,—all are overspread with this verdant cloth which softens all the angles, permitting the general outlines to appear, but concealing the roughnesses.

Ferns, too, delight in this softened light, and they are here by myriads. Here at the base of a giant fig-tree, is a noble crown of the golden *Phlebodium*, with its elegantly pinnate fronds arching widely over our heads; beautiful are its thick twisted rhizomes, covered with golden hair that glistens with satiny lustre, and the delicately fine rootlets, as slender as thread, that cling to the grey roots of the tree, crossing and re-crossing, and meandering over them like a spider's web. In the crevices of the rocks are tufts of lovely light-green maiden-hair; some more minutely delicate than our own Devonshire species; others with noble trapezoidal pinnae of large size, which gracefully diminish in regular graduation to the tip of the pointed frond.

And here are ferns which are altogether strange to an European eye. Climbing ferns, whose slender scaly stems, something like the body of a snake, run up the lofty trees, clinging to the bark, fringed throughout their irregular windings with small rigid fronds, like the oval leaves of a cranberry or myrtle.

Stranger still than these are the noble tree-ferns. Here we approach a part of the humid forest where these forms are characteristic. Slender stems, as straight as an arrow, thirty feet high, but no thicker than a man's thigh, covered with the diamond-shaped scars of old fallen leaves, set in regular diagonal arrangement, bear at their summit a gracefully swelling crown of leaf-bases, so compact and so regular as to resemble the elegantly fluted knob of a cast-iron pillar, which narrows again before it expands into a wide umbrella of finely-cut foliage, each frond a fac-simile of one of our familiar lady-ferns, or shield-ferns, or brakes, immensely developed. Other kinds, of somewhat inferior altitude, but of equal expanse, are beset with formidable spines on the upper part of the stem, while the lower part is wholly encased in a coating of wiry rootlets, black, interlaced, and ever wet with the condensed moisture of these humid woods.

Yes, everything here is saturated with moisture. The air has a warm steamy feel, like that of a wash-house; you cannot, indeed, see the clouds of vapour, because there is no surrounding cold air to condense it, but you feel it, and breathe it,—soft, clammy, heavy. The mosses and lycopodiums, when trodden on, are like soaked sponges; streamlets trickle down the rough trunks, and the great hollow leaves of the arums and caladiums hold water in their hollows, not only in silvery globules, but in cupfuls, clear and sparkling. The sheathing bases of the wild pines that grow everywhere upon these tree-stems are reservoirs of water, in whose genial depths the great painted tree-toads lie all day bathing their naked limbs, and from whence they utter those startling shrieks, or moaning, gurgling objurgations, which by night terrify the superstitious vulgar with visions of the dreaded Duppy.

We cannot proceed far into the heart of the woods without a special provision of hatchets or machettes to hew for ourselves a passage; for the twisted lianes, like cords and cables, stretch from tree to tree, interlacing and forming treacherous loops and nooses; and many of these are so terribly spinous that they cannot be touched with impunity. Fallen trees lie in every direction, presenting thickets of branches; or the trunks are so decayed, that when you have climbed on one to get over, it gives way beneath your feet, and lets you suddenly down into a grave of saturated rotten wood. The duck-ants, or termites, have built their great earthy nests, like barrels, here and there, and you are in perpetual peril of treading on their galleries, and bringing an army of ferocious biting insects upon you; or you sit down to wipe your perspiring brows, and in an instant are covered with a host of great coromantee ants, more furious than lions, the nip of whose immense jaws is enough to throw a man into a fever.

We are not yet at the top of this mountain-

range. Let us return to our horses, and go higher yet. Cool, delightfully cool, as contrasted with the parched plains, are these elevated regions, and very pleasant is a ride up this narrow bridle-path, turning and winding to ease the ascent. Now we break out on a new view of the silvery ocean sparkling under a vertical sun; now we obtain a magnificent glance over the mountain-forest, and over successive ranges of hills, range beyond range, far into the interior. Now, again, the prospect is bounded to a few yards, on one side an almost perpendicular limestone cliff, covered with gorgeous-flowered twiners, and gay with butterflies and gilded beetles, with prickly aloes, and dwarf fan-palms growing in the crevices, and on the lower side a wilderness of bush, with here and there the broad flag-like leaves of a banana, or the glorious pyramid of pink blossom of a mountain-pride breaking the uniformity, or the slender stem of a cabbage-palm lifting its shining crown loftily above the mass. Now the forest boughs are meeting over our heads, shutting out the sky, and making a grateful greenwood shade; and now we are passing along one of those pleasant bamboo walks that are so characteristic of the steep mountain roads in this island. These have been planted by man, for the preservation of the roads which are scarped out of the rocky face of the hill. The gradual disintegration of the exterior edge of the road from external causes, such as the weather, and the wear of travelling, would soon destroy its level, and necessitate the cutting of it afresh. To prevent this, it is found sufficient to lay down lengths of green bamboo just below the edge of the road, along the mountain-side, and cover them with earth. These germinate at every joint, roots strike into the earth, binding it firmly, and a rampart of young shoots springs up, which, increasing every year in number and size, effectually prevent the crumbling away of the edge, and by throwing their feathery arches over the road, form beautiful green avenues, under whose grateful shadow the traveller may journey for miles, and scarcely feel the toil of the steep ascent.

Here, where the calcareous rock recedes from the perpendicular and forms a steep slope, allowing the growth of trees, though the ground is covered with irregular blocks of broken stone, elegant species of shelled mollusca, snails, and similar creatures, abound. A limestone region is essential to the abundance of these animals, because it enters so largely into the composition of their shells. As we ride by, we see the beautiful shells, many of them of porcellanous polish, and exquisitely painted in bands and stripes of colour, or most delicately sculptured,—clinging to the leaves of the trees; and if we were to turn over the loose stones we should find them in wonderful variety and number, sheltered from the heat of the sun in those cool and moist retreats; for, as with our own homely kinds, night is the appointed season of their activity.

Yonder floats by a flock of parrots with a most abominable combination of harsh screams. It is the yellow-bill, intent on a new feeding-ground. Like an immense Indian shawl spread in the air, the compact flock speeds by, all on the same level, but undulating; as each bird presents a plumage

of golden green, with azure wings, and scarlet tail-webs,—the sunbeams playing over the array of colours has a charming effect. There the bright cloud settles on a cordia-tree, whose profuse scarlet berries give a ruddy hue to it even at this distance; but which are destined to a speedy dissolution in those greedy gizzards. Silent as death are the squalling birds, now that they are on the food-tree, and if we had not seen them alight, we should not suspect their existence there.

Our steeds are wearied with the six hours' ascent, and here we attain our utmost elevation. Leaving them to regale themselves on the juicy bread-nut leaves which faithful Sambo will pluck for them, and leaving him to enjoy the siesta which he will then gladly take

—"patule recubans sub tegmine fagi,"

or whatever he may consider as the proper equivalent of the classic *fagus*, we will make our way into a sweet glade, so solemn, so still, so lonely, so cool, so bowery, so delightful to every sense, that you will confess it is worth the half-day's ride to have visited it.

It is a narrow ferny lane, shut in by blossoming bushes, with the forest trees growing a few yards back, and screening us with their towering foliage from all but a gleam or two of quivering sunlight. The noble, reed-like leaves of the Indian-shot throw up their scarlet spikes, and bunches of fantastic orchids are drooping from almost every tree. Here is the fragrant *Epidendrum*, filling the atmosphere with the perfume of its curious white blossoms, which are, too, very pretty, the lip shaped like a deep spoon, and its waxy whiteness picked out within in crimson lines. See too that compact mass of rich violet bloom, that projects from a tuft of leathery leaves low down on the trunk of that small lancewood: it is the *Ionopsis*, a lovely orchid that affects these dense woods. There also the *Lycaste* that bears the name of Lady Barrington, whose waxen flowers of creamy white stand out from the plexus of winding roots below the bulb, is seen abundantly on the low trees, hardly aspiring to rise above the ground: while the beauteous crimson *Broughtonia*, one of the most charming of all our orchids, frequently seats itself among the boughs of some lofty fig or *Santa Maria*, some eighty or a hundred feet above the spectator.

I called this lane lonely. Nay; for it is populous with gay life. One of the very loveliest of birds, not of Jamaica only, but of the whole world, makes this secluded spot his most chosen resort. Look along the avenue! Why, within a score yards, there are a dozen humming-birds in sight at the same moment; and what humming-birds! They are all of the same species—the very gem of our ornithology, *Polytmus*, the long-tailed. Brighter-coloured kinds you may find in Bolivia or Peru; but for elegance of form, combined with tasteful beauty, I think our little friends here can seldom be excelled. As they flit to and fro, visit the flowers, disappear within the shadowy woods, shoot again into the sunlight, hang on

invisible wings over a blossom, probe it for the nectar, cling to its corolla with the tiny purple feet, dart out after a gnat, dash at a rival in the air, whirl round and round in playful combat, return to the flowers, suck and suck again, they give us ample opportunity to approach them, and mark their beauty, their vivacity, and their minuteness. The velvet-black hood, the golden back, the lengthened pair of sable streamers behind, the long coral beak, and, above all, the gorget of the most lustrous emerald radiance, changing to black by the slightest alteration, then flashing back the gemmeous light again—how lovely are these! And the beauteous little creature is so fearlessly familiar, confident, perhaps, in its locomotive powers, that we may come close up to it, as it sucks, without alarming it.

Did you mark that long solemn note? There! another! and another!—each just two notes below its predecessor; each sustained like the notes of a psalm, clear and sweet as the sounds of a flute. There sings one of the most eminent of our woodland vocalists, the Solitaire, rarely heard except in the loneliness of these high elevations. The Spaniards used to say it chants the *Miserere*. So sweet, so solemn, so unearthly are the notes, recurring at measured intervals, and uttered by an almost invariably invisible performer, that the mind is remarkably impressed; and it would require little tendency to superstition to induce the belief, in a stranger who heard it for the first time in these majestic solitudes, that he had heard the voice of an angel.

But evening is drawing on apace: the sun is fast declining, and we must leave these charming scenes. Let us begin to descend. Evening merges quickly into night in these latitudes.

The blue and the bald-pate doves are flying over our heads in little parties, each kind seeking the frequented roosting-tree; the jabbering crow flits along with its strange guttural talk; the great potoo hoots from yonder stump; the white owl shrieks in the sky. Now the loud harsh screams of the *aramus* pierce the wood, coming down from the stony hill-side; the cracked voice of the gecko proceeds from the hollow tree; and the shrill metallic note of some tree-frog, singularly sharp and penetrating, rises from every part of the woods below us.

The night-blowing cactus is opening its large and beautiful disk of petals like a sun, and its fragrance is almost overpowering. The perfume of a thousand other flowers is now brought out by the falling dew; and large dusky moths are hurrying to and fro to enjoy their nectar. And now, queen of night, the moon arises; and scores of wakeful mocking-birds salute her beam, and begin their rich and varied notes, which are to fill the night with music. Fireflies are shooting through the glooms, making lines of ruddy or green light, or glowing like torches as they sit upon the dewy leaves.

We are again on the shore. Beauteous Jamaica, good-night!

PHILIP HENRY GOSSE.

TIME AND ITS MEASUREMENT.

TIME, which we can neither see, nor feel; smell, taste, or hear; which enters not in directly at any one of the five gateways of knowledge; which has to human perception neither beginning nor end, but spreads abroad on every side, past, present, and future, to an indefinite extent;—time yet produces its effects on all created things, and to man is more valuable than gold, yea than much fine gold.

In itself an essence, an attribute of the Deity, and with Him only infinite; with man how finite! To-day he is, flourishing as the flower of the field; to-morrow he is cut down, and his place knoweth him no more.

Yet God knoweth him, and the same Omniscient Being, who allows not a hair of his head to fall to the ground without caring for it, can so look into that little space of time which he gave man upon earth, that it is magnified before Him into infinite infinity of moments; and the journal of each one of those little moments of time, whether laden with good or evil, in thought or deed, and whatsoever can contribute to show how that soul acquitted itself when in the flesh, is duly recorded, and shall never be forgotten.

There is thus an infinity in time, in whichever direction we look at it. On the grand scale, we can pass beyond the petty length of years this world of ours may have lasted, but recoil in confusion on attempting to comprehend within our human mind's grasp, the idea of that mighty God who has existed from before all things; and are appalled in contemplating a future for-ever-and-ever, with an eternity of glory or pain depending on a short sublunary trial only, and a Heavenly mediation decided on before the world began.

On the small scale, again, time divides and subdivides continually, and is none the less perfect. Savage man, neither has power to penetrate into Nature's mystery of the infinity of moments that are in reality coiled up within an ordinary, so-called, moment of time; nor again, to raise his mind to the contemplation of those grand agglomerations of moments, which form epochs and ages of ages. Yet his rise in the social scale, and still more his realization of being formed in the likeness of his Maker, is inextricably wound up with his advance in the knowledge of both the one and the other; yea, and blessed be God Almighty, who has so framed us, the world we inhabit, and the universe which surrounds us, that, utterly unapproachable as the constitution of time may be, yet precisely in proportion as man does struggle to acquire an acquaintance with it, either on the large or small scale, so does his comprehension of it

increase, together with his capacity to appreciate and utilize it to the utmost. As with virtue, so with a knowledge of time, to a certain extent, merely to wish for more is to have it.

FIRST STEPS IN MEASURING TIME.

We are Divinely allowed to know something of time, first by its lapse; and that, as indicated by the regular changes or repetitions gone through by some of the glorious works of creation. No man can be so obtuse as not to recognise the alternation of day and night; and the most primitive races of men have ever looked to each successive day as undeniably a new step of time.

But day following day in equal glory would soon confuse the reckoning and dull the admiration of even the warmest-hearted savage; so there we immediately find the extraordinary under-current which pervades even apparent uniformity in nature, and the continually-increasing helps which are everywhere to be found in creation by those who diligently seek after them; for, no two following days, even under a cloudless sky, are precisely alike; and though their difference be so small as not to be at once perceptible to unassisted observation, yet the accumulated effects of many days are soon unmistakable. Hence, starting with the period of the sun bursting forth in warmth and vigour in spring, passing on through the noontide plenitude of summer-heat, the decreasing light of autumn, and the darkness and cold of winter, to spring again,—as perceptible a cycle of change is obtained as that of day, or from sunrise to sunrise again; and with the advantage of summing up for us, without any possibility of error, 365 of those shorter periods, and carrying them without further tax in men's memory.

The year and the day are thus soon attained to by primitive man; the former being as large a space of time, and the latter as small, as he generally cares to use; and if the one be rather too numerous a multiple of the other for all his purposes, the gentle moon is ever at hand, with its period of twenty-eight days only, to serve as the scale by which to measure intermediate portions of time.

STEPS OF ACCUMULATION.

Not long did the more inquiring nations of men rest contented with these three first natural cycles for distinguishing the passage of time, and defining the day, the month, and the year; for, captivated by the infinity belonging to grandeur, they perpetually aimed at discovering larger cycles still. Thus it was, that both Egyptians and Greeks before the

birth of Christ, had ascertained an apparent movement of the stars, with reference to the pole of the sky and the path of the sun, since called the precession of the equinoxes, and completing its round in a space of time not less than 25,000 years.

This conclusion, reasoned out from the observation of only a very small portion of the whole

revolution, though mysterious to all, and doubted by some of the ancients, yet had the useful effect of enlarging their conceptions of great portions of time, and teaching them something of the wondrous structure of the heavens. It has also been not only fully confirmed by modern observation, and traced by mathematicians to its more imme-

Three seconds before One o'Clock P.M. at the Half-Moon Battery of the Castle of Edinburgh.

mediate acting mechanical cause, but the whole heavens are found to be filled with similar "pendulums of eternity," as they have been called; for not a planet revolves about the sun, nor even the sun itself as a star amongst the stars, but it has besides that one comparatively quick or periodical movement of revolution, a series of exceedingly slow or "secular" changes in the manner, shape, and posi-

tion of its path of revolution; which changes are for ever oscillating backwards and forwards between certain limits, just as regularly as the vibrations of an ordinary pendulum, but in periods of thousands upon thousands of years; and with a sensibility to perturbing influences from unknown realms of space.

Eminent success in discovery had thus attended

man's earliest efforts to appreciate the grandeur of agglomeration, yet with the undoubted result of showing at every step, that there is a further amount still of that God-like order of the infinity, beyond all which he has yet reached or may reach ; and capable of altering the precise value of whatever he has yet deduced as to the periods of the longer cyclical movements of planets, sun, or stars. Whence it comes, in fact, that after all his daring flights into the depths of the starry universe, and amongst cycles of most exalted order, man is obliged to fall back on the simple and short rotation of the earth on its own axis,—or the primitive unit of all men, the day,—as the most invariable phenomenon he has access to in nature, and the only fully understandable and trustworthy measure of true time.

The conclusion seems strange, yet is reasonable, for the rotation of the earth upon its axis is exposed to none of the same causes of slow disturbance which affect its movements of translation in space, and indeed the similar movements of all other spheres ; and though even the direction of the axis may alter, yet the time of rotation of the whole mass around that line, or the length of a day, remains sensibly the same from age to age, and will remain the same for any period that human science can well look through. It forms also a species of middle unit amongst all the various units of time ; or, the point from which, extending in one direction, we continually accumulate, and look to grand astronomical cycles, for verification of long periods and multiples of days ; but, extending in the other, we continually subdivide, and having no astronomical cycle smaller than the day, must then recur to other natural phenomena, or even to artificial devices for assisting our general impressions.

STEPS OF SUBDIVISION.

Now the methods and qualities of mind that can be employed for subdividing the day, are so perfectly different from those for multiplying it,—that there is hardly any more striking characteristic of the old Greek civilisation than its signal want of all those methods, theoretical and practical, for subdividing time, which have become quite a second nature now with every man, woman, and child of the Anglo-Saxon cultivated age.

That the possession of the one quality of mind does not necessarily entail the other, is abundantly shown by the fact, that the best astronomer amongst the Greeks could not indicate the occurrence of any daily phenomenon nearer than about a quarter of an hour. That was his smallest appreciable or certain subdivision of the day ; yet he had risen to a conception of that grand and silent movement of all the host of heaven, the precession of the equinoxes. Amongst ourselves we have, on the contrary, met with an eloquent member of the British House of Commons, who had never heard, or if he had heard, did not remember anything whatever of the precession of the equinoxes, and of that slow motion which will in 12,000 years carry the pole of rotation of the nocturnal sky far away from its present polar star,—yet he had in his pocket a watch distinguishing seconds, and true perhaps at the instant to within half a dozen of such very small instants of time.

Let us not, however, think disparagingly or lightly of the Greeks ; they worked a work in their day of the highest importance to man ; for, living in an early epoch before the full revelation of God, the first and most constant effort of all their better philosophy ever was, to seek to know the greatness of God ; and they sought him as diligently as mere unassisted men can do, in everything that was grand and glorious in heaven or on earth, and speculated with all the subtlety of their finely-tempered metaphysical minds on the nature of His mighty attributes.

But we live in different times, and under a different dispensation. God himself taking pity on the blind gropings and the failings of men, has since then revealed Himself in the Scriptures, and by the teaching of his Son. There we may at once learn far more of all the highest attributes of Divinity, than the mere mind of man would in thousands of years have found out for itself. The highest aim of the Greek philosophy was, therefore, transcended in an instant by the teaching of Scripture ; a knowledge of the infinite of accumulation was accomplished for us ; and from that epoch we have been left free to employ all the inventive and inquiring faculties of our minds in the other direction of scientific aim, on Natural, rather than Moral, Philosophy ; and on the hitherto unexplored infinite of subdivision. There, in that department, possibilities are opened up to us which elsewhere would be vain to aspire after. We cannot, if we would, live lives of a thousand years ; nay, we cannot add one year to our span : we cannot accumulate for ourselves anything of time ; but we can learn to subdivide it ; and if we come to perceive and savingly feel that there are really two moments of time where we believed that there was only one before, that is a virtual extension of our life, a bettering of our existence, a step, though an infinitely small one, in the direction which God has intended us to tread, in trying to imitate and acquire, by his grace, some approach to his boundless power over time as over all other things.

Of himself, and simply as born into the world, how weak the senses of man ! surpassed in each and every one of them by many a lower animal ! But then he has a mind given to him, and a desire implanted therein, ever to strive after improving those natural gifts ; and, as regards the sense of seeing, what an exaltation of it has he not been permitted to effect !

With others of his senses, however, man is still vastly below many of the animals in delicacy and power of appreciation ; and in nothing, perhaps, is he so deficient, compared with some, as in the capacity for appreciating small subdivisions of time. This is a faculty which seems continually to sharpen, the smaller the organized beings ; for with them, the voluntary and involuntary muscles all act more quickly ; and at last, with the minutest forms of life yet discovered, whether vegetable or animal, they go through all their stages of life, from birth to maturity, death, and decay in a portion of time which is to us a mere moment, to them a whole existence.

It is astonishing what lessons we might thus learn from the lower and smaller of created things, as to the importance and power of short intervals

of time. Such lessons, too, may still be learned, and savingly; though, before the full advantage of them can be drawn forth, some means must be possessed of making up for the necessary irregularity of their occurrence, and the comparative rather than absolute features in their indications. So that what man first and chiefly needs under our present heading, is, to supplement his one and only constant natural unit of time by a series of smaller units, which shall rival the original one in regularity, and form a secure groundwork for the correct education of his faculties, as well as the exact correlation of all his other phenomena of observation.

Hence the mere attainment in mediæval times of nearly equal hours, for the first rude subdivision of the day and night into twelve parts each, was something gained in the right direction. This, however, though apparently so simple now, the Greeks, as a people, never reached; for, beginning their hours with sunrise, they assumed twelve of them always to measure the interval to sunset, whether in summer or winter, i.e., in long or short days, and short or long nights. This was a sad stumbling-stone in the way of their advancing further in the subdivision of time; and a stumbling-stone which the Christianized Saxon mind, when the day of its civilisation presently came on, did not allow long to remain; for by removing the beginning of their reckoning of every twelve hours to mid-day and midnight, they at once cut off all disturbing effect of the greater or less seasonal duration of daylight, as depending on the position of the sun north or south of the equator, and on the latitude of the particular place of observation.

Still, these were only *apparent* solar days; and they slightly vary, equally for the whole earth, at different periods of the year. Such days, therefore, would still make slightly unequal hours from month to month, were it not for the theoretical contrivance called "the equation of time," to reduce the variable motion of the apparent sun to the uniform motion of a mean or imaginary sun, with the earth moving about it in a circular, not an elliptical orbit. Hence these results, our ordinary or "mean solar" time, whose hours are perfectly equal all the year through; with such solar time, therefore, and such alone, can be used those incomparable inventions of Christian Europe, clocks and watches, to mark off its admirably equal hours, and subdivide these further into equal minutes, and these further still, whenever required, into equal seconds.

Now large public clocks are, and have long been, a favourite decoration for Christian churches, as opposed to heathen temples; and they are appropriate, showing, as they do, the passage of time, and how man inevitably draws nearer to his latter end. But they have not yet all the impressiveness which they might be endued with, and in a great measure from their usually exhibiting only hour and minute hands; hands which necessarily move so slowly, that the indolent man looking up, and, seeing them apparently stationary, thinks time itself is also sluggish, and that he, the idler, may take another doze without loss of anything for which his soul need care. Yet hold before

such a man a common sand-glass, even of ancient and imperfect construction, and its visible momentary running away of the grains of sand, will perchance strike suddenly on that man's conscience, and convict him of the gift of God which he is allowing to pass from him for ever unused, unappreciated, and even unheeded. More, still, would a long and conspicuous seconds' hand, attached to each church clock, and moving through a large and visible angle,—recall the dreamer to his work, and the idler to the activity which God made him fully capable of, and intends to test his performances by on the awful judgment-day.

"He that is faithful in that which is least, is faithful also in much," is a text which has already been admirably enlarged on in this publication; and has been well illustrated as indicating, "attend faithfully to the least things, which compose the much, and fear not the result." And again, "*take no heed for the morrow*, but take great heed of each day as it dawns upon you, and each hour of the day as it comes round;" yea too, and take great heed, likewise, to every minute of every hour, and every second of every minute; but then, as a practical aid to these being so improved, let the leaders of the people ordain, that the public time-pieces of every Christian church be made to show forth each little second of immortal time, clearly, impressively, unmistakeably.

All this can, and in a Christian country should, be done, as a help to the best interests of the people, and a furtherance of that distinction which is already so manifest between a Pagan-Greek and a Christian-Saxon civilisation. A mere sparing, too, of the expense of carving stocks and stones, and repeating the vain adornments of Corinthian pillars, would generally enable this more ethereal addition to be made at once to every modern church.

Then, however, may arise a question, amongst the souls most anxious to be directed aright, "Granted that a clock shall show the stream of its mechanical imitation of seconds of time running visibly off before every man's eyes,—but what if the seconds it shows at any instant be not the true ones! if they do not coincide with the one and only absolute measure of invaluable time which God has placed it in the opportunity of man to refer to?"

Ay, that is indeed an important question; and one which can never be too frequently asked in connexion with any of the works of mortal man. By all means, therefore, let us consider it here.

ACCURACY OF SUBDIVISION.

That some things there are fully possible to man, but others again where he can never hope to reach perfection, a clock or a watch most abundantly demonstrates. On the face, for instance, there may be twelve divisions called hours; and while one hand is passing from one of these so-marked hours to another, a certain other hand may pass before sixty divisions called minutes; and while this latter hand is passing before one of these minute divisions, a certain other hand still may be contrived so as to pass before yet other sixty divisions called seconds. All this can be accomplished absolutely and perfectly; and it may make the machine by name a clock or a watch, but that is not time; it

is merely a mechanical arrangement, which is so arranged, and has not even any necessary similarity to the time of Heaven.

But if these hands are set in motion, auto-mechanically, and with the intention that the spaces from division to division in the several circles shall be passed over by their respective hands, always in equal lengths of time; and that these lengths of time shall correspond to equivalent subdivisions of the equal natural day,—then there immediately comes into view the difficult and exalted nature of the whole task attempted. For then, it is time itself which is endeavoured to be exhibited; and time is divine and infinite, while clock-work is human and finite.

Clock-work moves by jerks and at intervals; but no man ever yet, even with the aid of a powerful microscope, saw any intervals in the current of time; or could pretend that he had at last caught sight, through ever so much magnifying, of its final molecules and constituent particles.

Dependent chiefly on this infinite capacity for refinement and precision it is, that no matter how nearly a second, or a minute, or an hour, may be performed by a clock, to the proportionate subdivision of the day which these names are intended to represent, there always will be a something of difference really existing; a difference apparent at once to a more perfect existency; and to us becoming evident in the end, upon the continued accumulation of the error, with every repetition of the indicated cycle of time. Age after age have the clock-makers of the Christian world addressed themselves to their really high and solemn task; most often, too, in a spirit of full appreciation of its meaning; endeavouring to attain by the pendulum, or the balance-wheel, to regulate the motion of their chronometers so as to show truly to men the passage of undying time. But never have they laboured in this cause, without infallibly coming to this conclusion, that whatever success they may have attained beyond what their forefathers happily reached, they were still infinitely distant from perfect success; and that as high as is heaven above the earth, so is the nature of time above the power of man. He may be always advancing in his knowledge of it, and so far well; but the end is not of this world, and cannot be attained here. No matter, therefore, what may be the construction of any actual clock or watch, or who amongst skilful horologists was the maker; it has only to be compared with the progress of time in the heavens, and if its error is not apparent in one hour, it will be in a day; or if not in one day, it will be in a week, even to very ordinary observation; but an accurate observer will discover it much sooner.

"My watch goes perfectly," says some countryman, who has never compared its going with anything but his own imperfect senses of the passage of time. "My watch is right," says another, who, on comparing it with some special signal of the true time, finds it within a minute or so of what it should be; for a minute is the smallest quantity of time his watch professes to show, and he is not yet aware that there exist smaller intervals definitely measurable.

Yet not only are there such things as seconds, but it is quite possible in the present state of our civilisation, for those who will take the trouble, to be as certain about a second, as others are about a minute; and to find a second a considerable interval, capable of being divided many times.

The first practical step whereby to gain this end, is, to procure one of the better class of pendulum clocks, usually known to the trade as regulators; clocks with compensation pendulums to insure as much uniformity of going as possible; and a short, sharp tick at every second, that the act of going may be clearly caught by the ear.

The next step to the same end, is to compare the indication of such a clock with the heavens; and ascertain thereby both the amount of error at any instant, and the rate at which that error is accumulating. Such a mode of observing, too, is the only manner in which these things can be really ascertained; for although one man in civilized life may look at another's watch, and he at another's still, and he at all the public clocks of a great city, it is only lengthening a chain of error, and a chain without attachment at the further end; unless, indeed, the last timepiece referred to, should have been compared by some one with the sky. Much better therefore that the first man of the series, or he with the seconds striking clock, should have made the inestimable comparison.

Now the only true way in principle, and decidedly the most efficient in practice, is, to refer the clock hands to the shortest and most uniform of all astronomical cycles, viz., the rotation of the earth on its axis; and this phenomenon is defined by the interval in which a distant star is seen twice on the meridian of the same place—(not by the sun coming twice to the meridian, for that would include besides the axial rotation, part of the effect of our earth's revolution in its orbit, a movement which is variable in quantity at different seasons of the year; attaining to 61' 9.9" in December, but only to 57' 11.5" in June).

Hence, then, every astronomer, anxious for the most correct knowledge of time, begins by observing the stars; and from them obtaining sidereal, not solar, time. To this end he is furnished usually with an optical construction, called a transit-instrument, and consisting of a telescope so mounted as to move on a horizontal axis, and in the plane of the meridian. Thereby it shows each and every star, when pointed to the height at which such star comes on to the meridian, exactly at the moment of its crossing that important circle in the sky. As seen in the telescope's field of view, this motion of crossing is, by high magnifying power, made to appear exceedingly rapid, the star then moving through a sensible space in every second of time; and the observation consists in noting the *audible* whole second, and *visible* fraction of a second, at which the star passes each of several fixed lines placed in the focus of the telescope.

By next taking the mean of all these observed instants of the star's passage at the several wires, and applying small corrections for errors of adjustment of the telescope, the true instant of sidereal time may be determined from such an observation with ease to a tenth of a second; and by observ-

ing several stars throughout the night, the state of the clock with reference to the heavens can be ascertained with certainty to one or two hundredths of a second. And when this is done for any length of time, and day by day, it is found invariably that the clock is never going exactly; and though perhaps for several weeks, or even months of very favourable circumstances, never altering its whole amount of error by more than half-a-dozen seconds,—yet it is during that period, sometimes gaining and sometimes losing, and which of the two it is doing at any particular instant can only be absolutely ascertained by stellar observation. Hence, as correct time is the very first starting-point in every modern astronomical operation, each astronomer keeps up both by night and by day—for his telescopes enable him to see the principal stars by day with comparative ease, if the sky be clear—an unceasing series of observations for time.

Having thus then obtained the state of his sidereal clock with precision, the astronomer can from that, according to certain well-known formulae, compute the mean solar time at the place, or its equivalent in the time of any leading meridian, as that of Greenwich; and then afford the particular community in the midst of which he lives, and in terms of the sort of time useful to them, the advantage of the last and most accurate result which he has drawn from the heavens.

The usual manner of exhibiting such result, has hitherto been, to have another clock adjusted to go as nearly as possible to such "Greenwich Mean Time;" and then affix to the case of it each day, a note of its then observed and calculated error. Latterly, however, the improved plan has been adopted in the principal observatories, of applying minute accelerating or retarding influences during given intervals, to such mean-time clock's pendulum; so that, if on comparison being made with the sidereal, the mean-time clock is found to be, say two-tenths of a second fast or slow,—the accelerating or retarding influence is brought to bear, for as many minutes as, by trial, are found just sufficient to remove the error; and this principle of correction is so delicate, that a hundredth of a second, fast or slow, in the time which the clock's seconds'-hand shows, can be removed or added with both facility and certainty. With the same accuracy, can the clock going to mean time, be compared with the other going to sidereal time, by the method of "coincidence of beats;" or noticing when the second of one clock, going about four minutes a day faster than the other, just catches up a second's beat of the other, and then passes it; a circumstance that takes place about every six minutes. And with the same accuracy, as already described above, are the transits of the stars observed for correcting the primitive or sidereal clock. This, therefore, completes the chain, together with the trusty suspension thereof; and gives us in the Mean-time corrected clock of each modern observatory, the closest approach that has ever yet been made, to a true and accurate exhibition of the time of Nature.

PUBLICATION OF EXACT RESULTS.

When once an important result has been arrived at, through much watching and labour on the part

of one set of men in particular, its immediate and accurate publication for the benefit of the whole community is evidently most desirable.

Hence it came, that the Royal Observatory of Greenwich long ago led the way, and others have since followed its lead, in causing the seconds' hand of their respective daily, and most carefully corrected Mean-time clocks, at the instant of striking the second's tick of the 60th second which defines one o'clock, P.M., each day, to complete an electric circuit, and thereby pull an outside trigger. Whereupon, a large wooden or metal ball, which had previously been raised by hand to the top of a tall and conspicuous mast,—is suddenly caused to fall; and by such fall present to all the surrounding country a sharp and visible indication of the latest astronomical determination of true time.

This so-called "Time-Ball" signal was first inaugurated for the peculiar service of seamen, who need special accuracy in those timepieces with which the longitude of their ships on a voyage has to be ascertained. But of late years, without the system having become at all less useful or necessary to the sailor, it has acquired more appreciation with the community at large; from a growing sense on their part, both of the importance and sacredness of time itself, and from an earnest desire in every thing to enjoy truth rather than error.

Rather indeed with this, than with the sole navigation view, would it seem, that the citizens of Edinburgh recently combined, with some assistance from Government, to establish an *audible* signal of the true time; or, a "Time-Gun," in addition to, and supplementation of, the "Time-Ball," already existing in their city. This work, too, they have accomplished with a degree of accuracy and a completeness of effect in its daily performances, through now nearly ten months, which prove satisfactorily that another step in that important scale for man to tread in, viz., accuracy of subdivision of time, has been truly gained.

The Edinburgh Time-Gun signal, plainly described, consists of a large iron cannon, in the Half-Moon Battery at the Castle; which cannon, having been duly loaded and primed by the soldiers of the Royal Artillery, some time between twelve and one o'clock, is fired off precisely at that latter hour, by an electric influence from the corrected Mean-time clock of the Royal Observatory, at a distance of three-quarters of a mile.

The action of the electricity in producing this effect, is indirect; for, from the Observatory clock, it passes through a long line of open-air wire, not to the *gun*, but to another clock close to the *gun*; and with the effect of keeping the rate of going of that clock always coincident with the one in the Observatory, and making it, in fact, a sort of local reproduction of all the other's indications, second for second. This method has the advantage that, in the first place, it gives the soldiers at the *gun* an accurate clock to look to, for the purpose of learning therefrom precisely how the time is progressing, and how their preparations ought to be made; and, in the next place, it enables the trigger, or firing-piece of the *gun* (in this case a "friction-fuse") not only to be pulled by the mechanical action of the clock, a surer sort of force,

under all weathers, than anything electrical, but it enables the pull to be commenced a short fraction of a second *before* one o'clock; whence it comes, that the slight retardation on absolute instantaneity which the train of processes for firing the gun would otherwise have entailed, is completely eliminated. So completely, indeed, that the actual final flash of the exploding gun in the Castle, is found, at every examination that has yet been made, to occur absolutely coincidently with the tick of the sixtieth second of the corrected mean-time clock in the Royal Observatory.

The scene which enacts itself at the Castle each day, just before and at the gun-fire, is worth anyone's while to climb that steep Plutonic rock to see. About ten minutes before one o'clock, the Master Gunner of the Royal Artillery, with his men armed with handspikes, rolls back the heavy gun from its embrasure, and rams in a full charge of powder. The gun is then returned to its former position, and accurately centred as to a definite distance and direction from the clock; after which it is left stationary, with all its dormant power and immense stability of weight. Next, at about two minutes before one o'clock, a chain from a trigger inside the clock is drawn forth, and hooked on to the ring of a friction-fuse placed in the gun's touch-hole, the inside trigger being thereby placed at full cock.

Master gunner and gunners, and every one about on the battery, now draw back, and leave the gun and clock together side by side, apparently for better or for worse. There is the gun, just as represented in our engraving, peering out of the embrasure over the town below, in all its ominous blackness of strength; and there is the delicate white-cased clock by its side, with its fairy-like seconds'-hand lightly yet swiftly treading from one second's stroke to another, in ceaseless, unwearying activity.

When at length the fifty-ninth minute is passed, and the last round of the seconds'-hand has commenced, then come trouble and anxiety to those around, developed in a looking again and again at the gun, and the chain, and the trigger. Are they all correctly placed? Each is glanced at in turn, from one side and from the other, is found correct, and then the seconds'-hand is looked to again. Why, it has hardly come to the seventh second of the sixty yet! Has it been standing still? No indeed! it has, on the contrary, been pacing its seconds as swiftly as ever, but the force of anxiety in the human mind had magnified those few seconds by all the thought and mistrust, the hopes and the longings, the glances of doubt, or the looks of congratulation which it indulged in, and the fear of being tried and found wanting in the end.

The journal of these final seconds of the clock, in truth, would be long to write; and we must rather leave the reader to experience it all in his own proper person. A long interval, therefore, has elapsed—but now, the time approaches, and is even at hand, for only see, the fifty-ninth second has struck its little tick;—yet why such an awful interval of suspense before the thin, blue hand flies on from that division to the sixtieth! It seems an age; the hand sticks there, and we

make sure that something has gone wrong, that something was neglected which might have been looked to in time; but in a moment, and before we seem quite prepared for it, a flashing of moving bars in the lower part of the clock-case takes place, the trigger has been pulled, and the gun exploded; then a great roar peals out to the whole country, simultaneously with, but utterly drowning, the faint small tick of the sixtieth second at last.

At the same instant the ground quakes, the heavy weight of metal of the huge gun leaps backward in recoil; the battery itself is enveloped in the suddenly evolved cloud of white smoke; and the voice of the gun, instantaneously pronounced at the place, peals journeying on, on, over palace and cottage, over hill and valley, in widening circles of travelling sound, announcing alike to those who are without and those who are within, to those who are prepared and those who are not prepared at all, that another day is gone.

But the smoke of the explosion blows away again almost as soon as it was formed; and, behold, there is the gun once more perfectly quiescent; the distant Time-ball on the Nelson Monument, which was to be seen mounted up to the very top of its tall mast just the instant before the fire, is now down at the bottom again, and ensconced there as quietly as if it had never left that place of rest; and the seconds'-hand of the trusty gun-clock is beginning to step round another of its light-some journeys. Just beginning, or at the second second only! why,—what a world of effects must have been, and were indeed, crowded into those two little seconds of fugitive time!

That useful clock-companion of the gun!—how faithful and true, through summer and winter, in rain, sunshine, and snow! The very stones and cyclopean masonry of the great battery crumble and slowly break under the daily effect of the fire; but still steps round and round that thin, weak seconds'-hand of the sensitive clock, without cessation, and without experiencing harm. And why? It is supported from moment to moment by an unseen influence which comes from without, electricity pulsing from the distant astronomical clock, and arriving for ever fresh and for ever new. Type of the faithful servant who lives with God ever present to his soul, and trusts through all the storms and quakings of the world, not so much to the material strength that was years ago implanted in the arm of flesh, as to the hallowed exercise of daily prayer.

Then the doors of the clock on the battery are locked up, and its face is hid from view until a similar hour on the approaching day, for it is employed solely as an adjunct to the Time-gun. Yet though so shortly seen, that interesting time-piece must have sufficiently demonstrated to all who beheld it, how, and by what means, each one of the public clocks of the Christian churches of a great city may now be caused, above and beyond all their present indications, to show forth the stream of never-ending time, with such visible seconds' strokes as should convict the consciences of many; and with a degree of truth according to nature, such as the world at large has never yet participated in.

C. PIAZZI SMYTH.

KING SIGURD, THE CRUSADER.

A NORSE SAGA.

BY THE AUTHOR OF "THE MARTYRDOM OF KELAVANE."

THE minster bells from morning light
With solemn sweetness rang ;
The trumpet-call of every knight,
Gave forth its brazen clang.

And friend with friend, stood hand in hand,
And foes were friends, that day,
When young King Sigurd left the land,
With the knights of Norroway.

And maid and wife, as dear as life,
All beautiful and true,
Stood weeping there, like roses rare,
All drooping wet with dew :

And many a silent prayer was prayed,
And many a heart was sore,
For love of wife, and love of maid,
And fears of Nevermore.

And through the crowd, whose shouts were loud,
While women wept with ruth,
Came the King, the young Crusader,
In the beauty of his youth.

Scarce a dozen suns their summer light,
Upon his cheek had shed ;
And his yellow hair was golden bright,
As the crown upon his head.

He passed the loveliest of the land,
The pride of many a hall,
And little maiden Hinda's hand,
He kissed before them all.

"I'm nameless but for Magnus' line,
Unknown but for my crown,
I'll wed thee when its gold doth shine,
In the light of my renown,"

He said, and then with all his men,
He sail'd through Agg'hrus' Bay,
And King Sigurd the Crusader,
Was the King of Norroway.

There's manhood in the mountain land,
There's freedom on the sea—
The might of heart that must command—
The hearts that must be free.

And southward where the summers smile,
Their gilded galleys dance,
They feasted long in England's isle,
And fought the knights of France.

Where'er the Red-cross Banner led
Against the Moors of Spain,
Along the van the Sea-kings' blade
Shower'd round its ruddy rain.

The iron tide of war they turn'd
At Cintra and Seville ;
And many a Moorish widow mourn'd
The fair-hair'd Norseman's steel.

As down the Scareberg's trembling void,
Sweep ice-bound floods of snow ;
As rolls the Maelstrom's deadly tide,
From Mosky to Mercoe ;

So broke then war o'er land and sea,
Where Paynim foe was found ;
And the Corsairs of brown Barbary
They drove through Norfa's* Sound.

Red roll'd the wave o'er many a grave,
On Formentura's shore,
With freedom to the Christian slave
Who pull'd the pirate's oar ;

And green Minorca's captives free,
Round young King Sigurd cling ;
And Roger, Earl of Sicily,
He crown'd and made a king.

In many a tongue the praise was sung,
In many a minstrel's lay,
Of King Sigurd the Crusader,
And the Knights of Norroway.

When first in holy Palestine,
Their pilgrim feet they set,
They knelt and kissed that land divine
Which God's own blood had wet ;

They rode like men for war arrayed,
These northern Sea-kings all ;
And all their way King Baldwin spread,
With purple and with pall.

"Such pomp our state but seldom brooks ;
Our arms are all our store ;
But look ye as your leader looks,—
Look ever on before !"

And thus they trod where'er they rode,
O'er royal robes, that lay
Like dust beneath King Sigurd's feet,
And the Knights of Norroway.

King Baldwin sought with treasure brought
To try their strength once more ;
They look'd as though they saw it not—
Look'd ever on before.

"Your gold give to yon pilgrim band,"
The young King Sigurd said ;
"He wants not wealth by sea or land
Who wears the Norseman's blade."

Then came they where stood miadens fair
In richest raiment dress'd,
Whose loveliness, King Baldwin sware,
Would thaw Pope Sergius' breast.

"See, over them, Jerusalem,
All desolate this day,"
Said King Sigurd, the Crusader,
To the Knights of Norroway.

* The Straits of Gibraltar, so called from the first Scandinavian seaman who passed them.

"See, over them, Jerusalem,
And far, and farther o'er,
Where maid and wife, as dear as life,
Are waiting on the shore !

"Let truth betide the Sea-king's bride,
Whose breast is like the foam ;
The maids of all the world beside
Are not like those at home."

He raised his crown from off his head,
But turn'd he not his eye ;
As beauteous as a beauteous maid,
As stately pass'd he by.

"These men are men," said Baldwin, then,
"Are kings from head to heel,
To death, to life, to love and strife,
As true as ice-brook steel ;

"And blest the clime o'er all the earth,
The land where'er it be,
The mothers all who gave them birth,
These Norsemen of the sea !

And long and well, as minstrels tell,
They fought the Paynim foe,
And Acre's rock-built ramparts fell,
Before the Norsemen's blow.

On Sidon's walls their banner flew
Above the Crescent Star,
And every man the Sea-king knew
Who led the Christian war.

The Red Cross shone on Askelon,
And foremost in the fray
Was the King, the young Crusader,
With the Knights of Norrway.

And many a tongue the praises sung
Of Sigurd and his band;
And the fame of grey old Norrway
Grew great in every land.

Yet many a silent prayer was prayed,
And many a heart was sore,
With love of wife, and love of maid,—
The looked-for evermore.

And sweetly sang the summer gales,
When westward went their prow,
And gaily shone their silken sails
Round stormy Lindesnoe.

Their praise was sung, the bells were rung,
And hearts were full and free,

And maid and wife, as dear as life,
Were waiting by the sea.

Through smiles and tears, and loving cheers,
And trumpet notes of fame,
Came King Sigurd, the Crusader,—
Like a conqueror he came.

There stood the noblest of the land,
The pride of many a hall,
But lovely lady Hinda's hand
He kissed before them all.

He said, while in her downcast eyes
The tears of rapture glow,
And in her blush of sweet surprise
The flowers of beauty blow,—

"If we come back with fame as fair
As we have kept our truth,
Then I may claim right well to wear
The blossoms of thy youth.

"My knights have won the world's renown
In many a deadly day;
But the light that gilds King Sigurd's crown,
Is the love of Norrway."

At Home in the Scriptures.

A SERIES OF FAMILY READINGS FOR THE SUNDAY EVENINGS OF APRIL.

FIRST EVENING.—DEVOTION BEFORE BENEFICENCE.

"Now, when Jesus was in Bethany, in the house of Simon the leper, there came unto him a woman having an alabaster-box of very precious ointment, and poured it on his head, as he sat at meat."—MATT. XXVI. 6, 7.

IN its own place and time, it is both interesting and instructive to examine in detail the circumstances of this significant incident. At present, however, we shall not plunge into historical and topographical inquiries regarding Bethany and the customs of its ancient inhabitants. Our aim is to extract from the history the spiritual truth which it embodies, and to apply that truth to our own circumstances and our own times. This will occupy all the space at our disposal, and therefore no farther notice will be taken of the facts, than is absolutely necessary in order to reach the doctrines.

To the natural historian, the shell which held the kernel while it grew, is as instructive as the kernel itself; but to a hungry man, bent upon a meal, the shell presents no attraction; his thoughts about it and his intercourse with it, extend no farther than to make an opening in its side, whereby he may reach the food which it contains. Without the external history we could not have obtained the spiritual lesson, as without the husk which holds it until the harvest, we could not enjoy the grain; but when the outward frame has served its purpose, we can afford to set it aside, while we live upon the fruit which it bore. Blessed are they that hunger, for a portion of the bread of life lies here.

Jesus, at first the friend of one family in Bethany, had by this time become an object of interest to all the inhabitants of the town. For him

and his followers a feast was provided. Probably the house of Lazarus did not afford accommodation sufficient for the entertainment. For this or some other cause, it was arranged that the guests should be entertained on that occasion by Simon the leper, who probably occupied a more spacious mansion, and possessed ampler means. Some have suggested that Simon may have been the husband of Martha. This supposition, though not necessary, will, if adopted, agree with all the circumstances of the narrative. Probably in the society of that small Jewish town, the line was not so sharply drawn, as it is with us, between those who had a right to sit at table, and those who served. All parties seem to have felt very much at home in Simon's house. Martha had volunteered to give aid in serving, for which she had an obvious talent and taste. Lazarus, as was seemly, took his place among the guests: and Mary, perhaps not inquiring whether she was expected to bear a hand with the servants, or take her seat at table, entirely overlooked both the post of honour and the place of toil,—absorbed and occupied with other things.

While the feast proceeded, she came in and poured the contents of a box of very precious ointment on the head and feet of Jesus. The odour filled the whole house. The value of the ointment was well understood by the company. They were accustomed to see it used sparingly and in very minute quantities by those who could afford to purchase it. To pour out the whole at once, and

upon one person, seemed to them an act of extravagance. They might have heard of such an expenditure at the banquets of the rich, but they had never seen such profusion in their own circle. Some of the disciples, instigated by the traitor Judas (John xii. 4), openly complained of this expenditure as a waste of money which might have been employed in buying bread for the poor. Thereupon the Master gently corrected their mistake, and unequivocally sanctioned, by an express approval, the act which they had ventured to condemn.

The two subjects of perennial and universal interest involved in the facts are, supreme and lavish devotion to the Saviour on the one hand, and practical beneficence to needy man on the other. These are singled out and set in the light by Mary's silent act, the disciples' murmuring objection, and the judicial decision of the Lord. The woman's expensive adoration seemed to the half-instructed and prejudiced disciples *Devotion without Beneficence*; with short-sighted wisdom they proposed as a rival method, *Beneficence instead of Devotion*: as a permanent judgment on the case for instruction to his followers in all times, the Lord commended *Devotion and Beneficence*.

DEVOTION, as exemplified in this woman's self-forgetful and fervid act. Her heart was simple and true. She was full of love. She did not observe,—probably she did not know, the ordinary rules of the world. She did not think of them, and did not know that she was transgressing them. Her eye was not open in that direction at all. Her whole soul looked another way. The spring within her heart swelled and burst and gushed out, making a channel where it did not find one. She was not a woman that sat down to study her acts and attitudes. She did not consider beforehand, What will this one say of me? and, How shall I please that one? Like one who in the darkness carries a light, she sees nobody, and is herself seen by all—seen in her own transparent simplicity. She followed Christ not only in preference to all other things, but almost to the neglect of all other things. We do not present even this most attractive feminine character as in all matters a model to be followed. In giving to different persons different constitutional peculiarities, the Author of our being indicates that he does not intend to make his people all one dead level, any more than the earth on which they dwell. There are diversities of operation in the same Spirit's work. Diversities, and in some sense even contrasts, secure harmony and completeness in the general effect.

Mary's religion was not a set of opinions carefully treasured up, or a round of observances scrupulously practised. It was a flame burning in her heart which must needs have vent, and which found its way out by the nearest opening. She did not know how other people would act in the same circumstances, and did not care. She was an original, without intending to be one: indeed, they who intend to be original seldom succeed. She simply yielded to the impulse that laboured in her breast. It was pure and true. Her instinct was unerring, for it was the instinct of the new creature, framed after the moral image of Christ. Now she sits silent at the feet of Jesus, drinking

in the word of life, all forgetful that a dinner must be provided, and the credit of the house maintained; now she opens her box of ointment, and pours it out in honour of the Lord, thinking neither of its great price, nor the displeasure which the lavish outlay would excite in hearts that were narrower than her own. In these acts she gratified the strongest appetite of her being. She was satisfied, and asked nothing more.

You may observe that Mary makes no reply to the reflections that are thrown out against her. She permitted her sister and the disciples to say what they pleased. Nor was there any sullenness in her silence. She had neither talent nor inclination for debate. She was not careful to answer her accusers, because she was otherwise occupied. Probably she scarcely observed what they said: one thing filled her, and, as it were, blinded her to all else,—let her alone, let her lavish honour on the Lord, the Restorer of her brother's life, the Redeemer of her own. She is sustained by an express acceptance of her gift, and an emphatic commendation of her conduct. He who receives the homage, knows the heart that offers it. He knew who touched him, and why she touched him. It was sweet to the sinner saved to honour thus the Lord that bought her; and sweet to the divine Redeemer to receive the fresh glow of gratitude from the heart of a saved one. When ten lepers were cleansed by his word, and one only returned to render thanks for his deliverance, the Good Physician plaintively inquired, "Where are the nine?" When those whom he has healed return to praise him, he does not reckon it a trouble to receive the offering. They were the nine that remained absent, not the one that came back, who troubled the Master that day. It was the same in the case of Mary; it is the same in our case. The offerings of ardent hearts that have tasted his mercy are in all times and all places acceptable to the Lord.

The devotion of this disciple we have seen, did not assume a pre-arranged or appointed form. Rules did not stimulate or guide her affection: it made a rule for itself. When the spring first issues from the ground, it has no prepared channel in which it may flow; by flowing it makes a channel for itself. So sprang love to Christ in that disciple's heart. The love did not lie still until a method for its expression should be found out and prescribed; it burst forth and took a course that such streams had not been wont to follow, to the amazement and consternation of some true but trammelled men.

She had been forgiven, and forgiven much; for, although she was a member of that unblemished house in Bethany which Jesus and the twelve loved to make their resting-place, and altogether distinct from the "woman that was a sinner" who (Luke vii. 37) in similar circumstances expressed her gratitude in a similar way, Mary needed and obtained a great pardon for great sin. She was bought with a price, and counted herself not her own. Her own former righteousness she disowned as filthy rags, and stood indebted to her Saviour for a complete redemption. The animating principle of her conduct, although it did not lie in her way to generalize and express it, was, "We love him, because he first loved us." In this, the

soul of her devotion, every sinner saved follows Mary's footsteps; but it is by no means necessary to clothe our devotion in the body which hers wore that day. The outpouring of precious ointment was the garb, suddenly snatched up, which a woman's love put on in the town of Bethany while Jesus was present in the body long, long ago: that garb is antiquated now, but the love which it clothed "liveth and abideth for ever." That same love glows to-day in the heart of every true disciple, and the loving spirit easily incarnates itself in a body of tangible conduct, honouring to God and profitable to men.

In this history we do not see Mary going forth to find out the naked that she may clothe them, and the hungry that she may feed them. All that is shown here is her deep, strong, outbursting love to the Lord her Redeemer. This is not the whole of the Christian life; but it is of that life the first and chief element.

When you see a great spring bursting from a cleft in the mountain-side in the interior of a continent, you know that it will find or make a channel for itself all the way to the ocean. Henceforth it will flow in that channel, as a river, refreshing every weary thing upon its banks. Thus when a human heart, touched by the forgiving love of Jesus, opens in returning love to him, that love

finds for itself a channel on the surface of the earth, and among the habitations of men. Love to the Redeemer cannot lie hid in the breast of a redeemed man; it will and must break forth, a blessing to every needy creature that lies within its reach. Such was Mary's love; but only the opened spring was, in the first instance, visible, and those of the disciples who stood near, not yet fully enlightened and enlarged, and set on the wrong scent by the cunning covetousness of Judas, denounced it as a costly and useless display. They did not see the stream of beneficence actually flowing through Mary's life, for the remainder of that life, being in the future, lay beyond their view; and they rashly concluded that no such stream would flow. Ah, foolish men! desiring to make sure that a river should follow the wanderers all the way through a dreary wilderness, they attempted to seal up the well's eye in the smitten rock at Horeb, whence the living water was already gushing forth. They will yet learn, when delivered from the leading-strings of the earthly-minded Judas, and placed under the teaching of their Lord,—they will yet learn and confess that to quench spiritual devotion to Christ in a believer's heart, is not the best way for getting hearty effective work done in behalf of a needy world.

SECOND EVENING.—BENEFICENCE INSTEAD OF DEVOTION.

"But when his disciples saw it, they had indignation, saying, To what purpose is this waste? For this ointment might have been sold for much, and given to the poor."—MATT. XXVI. 8, 9.

BENEFICENCE instead of DEVOTION—a proposal basely suggested by Judas, and ignorantly adopted by the rest of the disciples.

How rudely the act or word of a neighbour grates against your feelings, if it is violently incongruous with your own spirit at the time! If you and your friend are engaged in conversation, sober and sad, on some great calamity that has recently alighted on the land, and if a third person suddenly break in upon the colloquy with loud, uproarious mirth, the intrusion shocks you, not so much by anything absolutely evil in itself, as by its want of harmony with the mood in which at the moment you happen to be. "As vinegar upon nitre, so is he that singeth songs to a heavy heart" (Prov. xxv. 20). This is eminently true in the religious affections. Whether the incongruity lies between the spiritual and the worldly, or between the more cool and the more ardent of true believers, the discrepancy is keenly and mutually felt. David's ardour, when he laid aside the king, and threw himself body and soul into the popular rejoicings before the returning ark, appeared to his haughty and unimpassioned wife, as she watched him from a window, a shocking impropriety altogether unbecoming the dignity of a king. Many a warm-hearted, single-eyed disciple of Jesus has been denounced as a fanatic by mere formalists, or admonished as extravagant by true Christians, who were constitutionally cool in their tempers and languid in their emotions. Nor should it be, on the other hand, either denied or concealed that ardent Christians have sometimes, by their own improprieties, invited reproof. To err is human; and in no case

are all the errors found on one side of truth's straight dividing line. In the meantime, however, we speak here mainly of the errors that lie on one side, for the double reason that they are in themselves the more dangerous, and that to them the lesson of the text is expressly directed.

In the Word of the Lord we find the warning, and address it affectionately to every reader,—Beware of blaming any Christian for the supposed excess of his devotional ardour, because it glows more warmly than your own. We have no right to compress within our approved moulds the bursting emotion of a soul that is bought with a price, and "weary with holding in." It may be quite true that we feel a jar,—that the words and ways of that young and eager convert are not in harmony with our judgment and our taste; but, to say the least, it may admit of question whether the cause of the incongruity be that he is above or that we are below the standard of zeal proper to the redeemed of the Lord. Whenever any extravagance occurs in the name of religious fervour, by all means let sober Christians gently reprove or firmly repress it. In a time of great and miscellaneous development of religious forces like the present, it is lawful, perhaps we should say expedient, to watch carefully, not only deeds and doctrines, but the times, measures, and forms of expressed devotion; but much depends on the attitude of the watcher. If he lie in wait for errors in the path of his neighbour, he will probably mark as vices some things which are already marked as virtues in the Master's book. If, hopeful and liberal, he rejoice in the good that is going, and faithfully

rebuken the evil that may occasionally mingle with it, he will serve his generation well. The times are not stagnant; a broad stream of blessing is flowing through the Church. We do not affirm that its whole volume is absolutely pure; but the dry chaff and withered leaves that here and there float upon its bosom disfigure its surface rather than pollute its mass. Rash and short-sighted are those who, at first sight of these excrescences, rush into the river's bed and strive to stop it bodily.

We do not deny the existence of excesses in the spiritual life of the Church; but we believe that, in this country at least, for one who transgresses the bounds of propriety in the manifestation of zeal for Christ, ten lie freezing below zero in the spiritual thermometer. For one simple Mary, with her heart melting and overflowing into abnormal and lavish devotion, there are twelve disciples, not to mention traitors, who are more notable for maintaining the conventional proprieties of earth, than for catching the fire of heaven.

In this case, true disciples were found sneering at an expression of devotion which their Master appreciated and approved. What happened in those ancient times may happen again in ours. We must be jealous over ourselves with a godly jealousy, lest we should be found loathing a sacrifice that the Lord loves. It was the interested, dishonest suggestion of Judas that led the eleven on that occasion into an error of judgment. Evil communications corrupt good manners. Sometimes one who has not the spirit of Christ at all, obtains a place and influence among Christians which he does not deserve. It is by wiles like these that the adversary obtains an advantage over us. The Lord on one occasion, addressing Peter, said, Get thee behind me, Satan. That word is full of warning. Peter at that time was a true disciple. His heart trusted in the Saviour, and his name was written in the book of life. This case shows that the tempter succeeds in partially perverting the judgment, even after the heart has conclusively submitted to another Lord. Genuine Christians caught and carried away for the time by the spirit of the world, do more harm than the profane. Judas desires to put down Mary's ardour, as a piece of mischievous fanaticism; but he will succeed better in his object if he can persuade simpler and better men to adopt his cry. Be wise as serpents and harmless as doves. Judge righteous judgment.

Perhaps the multitude may shout their hosannas more loudly than melodiously: perhaps the children may cast their palm-branches in Christ's path with more energy than discretion. What then? If that cry be a hosanna to the Son of David, and those branches be true emblems of his victory, he who looketh on the heart receives and loves the offerings. Let us beware lest we should condemn what our Master approved. With Mary's ardent offering, and the mistake of the twelve regarding it, and the Lord's decision on the case, all before me, I must be very sure of my ground ere I venture to denounce as waste the most lavish oblation which a saved sinner in the first gush of her gratitude may bring to the Lord. One who has never known any method of conveying water to dwelling-houses except the old way of carrying it

in a pitcher from the well, would be greatly amazed if he should witness a main bursting on the streets of Glasgow. He would be unable to comprehend why the water should of its own accord rise so exultingly towards heaven, and spread itself so tumultuously around. Yet the water has acted strictly according to rule. The height of the fountain regulates the pressure, and produces that grand, lofty, joyous leap. Of that love which struggles in a forgiven sinner's breast, the fountain-head is in heaven. None but he who feels it, knows how great the pressure is. Make allowance for sudden outbursts, high upheavals, wide outspreadings, when a child of wrath has been by an act of mercy made a child of God.

When Judas, and those who for the time partook of his spirit, had condemned the woman's devotion as a useless and wasteful enthusiasm, they proposed material alms-giving in its stead. The precious ointment which Mary had poured out might have been sold at a high price, and the proceeds given to the poor. Judas, who had been prying into the treasure and calculating its value, is able to name the precise sum which it would have brought in the market. Had the traitor obtained the money, it would never have reached the poor; in the hands of the mistaken disciples, it would, indeed, have been employed in clothing the naked and feeding the hungry; but it would have been a foolish effort to stimulate the flow of the stream, by sealing up the fountain.

This species of opposition to warm-hearted, open handed devotion may still be found in the world,—may still be found in the Church. A demand of alms to the poor is still one of the forms of betraying Christ. Why spend so much money in sending Bibles and missionaries to the heathen abroad, while multitudes of your own countrymen at home have neither food nor clothing? Men have thought themselves very wise while they thrust with this weapon against the missionary spirit and the missionary work: they knew not from whom they borrowed the spear they were stabbing with. There are exceptions on both sides—there are niggardly Christians, and liberal unbelievers, and yet the exceptions do not destroy the double rule, that ardent disciples of Christ are the best benefactors of men; and the best benefactors of men are the true disciples of Christ.

We gladly acknowledge that the sore is healing apace in our day. Fifty years ago the complaint "To what purpose is this waste?" prevailed much more than it does now. It has been gradually giving way for many years. Think of the period when the Government, supported by the influential classes, refused to allow a Christian missionary to plant his foot on the soil of India; when the pioneers of the gospel in that land were obliged to settle on a spot that belonged to a foreign power, and send the word of life by stealth and stratagem across the line into the forbidden territory of Britain. Compare that day with this, and you will discover abundant cause to thank God and take courage.

The National Association for the Promotion of Social Science has held a series of annual meetings in some of the chief cities of the empire. It is a secular, and not a religious society. Its

main object is the mental and material amelioration of the commonwealth. The science which it studies is political economy, and not revealed religion. In short, its aim is precisely that which Judas and his dupes proposed to themselves when they complained that through Mary's inconsiderate devotion, three hundred pence of possible hard cash had been thrown away, and desired that all such outpourings should henceforth be authoritatively intercepted, that the process might be deposited in their hands as the raw material of practical charity. The object is similar to that of the ancient Galilean economists; but the methods are thoroughly diverse. In particular, the enlightened students of social science who hold their annual assemblies in our great cities, never attempt to enlarge the stream of substantial physical improvement, by diminishing or stopping the parallel stream of religious effort and contribution. While all were zealous for economic amelioration, not one

ever proposed material beneficence instead of spiritual religion. With all the zeal for good works which the association displayed, no whisper derogatory of Christian faith was ever uttered. Religion and economics were openly and articulately joined together by many in the association, and none ever evinced any disposition to put them asunder.

On both sides an advance has been effected. Neither has Beneficence been pitted against Devotion, nor Devotion against Beneficence in our day so much as in former times. If philanthropists do not now treat spiritual religion as an obstacle in their path, neither do religious men dissociate work from worship so much as some of our forefathers were inclined to do. On both sides there is a tendency to union.

Worship and work, both in highest degree, meet in Christ: in Christians, heart-devotion and hand-work should unite and co-operate like body and soul.

THIRD EVENING.—DEVOTION AND BENEFICENCE.

"When Jesus understood it, he said unto them, Why trouble ye the woman? for she hath wrought a good work upon me. For ye have the poor always with you; but me ye have not always."—
MATT. XXVI. 10, 11.

DEVOTION and beneficence, ignorantly or wickedly divorced by men, are joined in perpetual wedlock by the Lord. He condemns alike the worship that lacks the charity, and the charity that supersedes the worship. He intimates that spiritual devotion to himself must bear fruit in substantial kindness to the poor; and that kindness to the poor is the legitimate fruit of devotion to himself. "When Jesus understood it, he said, Why trouble ye the woman?" The servants blamed; the Master commended her. Distinctly and emphatically he accepted her costly anointing, and secured that the woman who had so honoured him should herself be honoured in all generations.

Observe carefully the two facts announced in the eleventh verse, and the relation which they bear to each other. The two facts are, that Christ shall be removed from his people's sight, and that the poor shall remain amongst them. In the company that assembled at Simon's house in Bethany, opinions differed as to the proper destination of the costly offerings which Christians under the new dispensation were disposed to make. Christ and the poor were set up as rival recipients. One without discussing the theory, solved the question practically, by pouring out her richest treasure in honour of the Lord; others thought such offerings should be reserved as alms to the poor. Now, while the Lord unequivocally expressed his approval of the woman's deed, and his disapproval of the murmuring which it provoked among the twelve, he also intimated that this rivalry, in the form which it had then assumed, would not survive to distract the minds of believers, or disturb the peace of the Church. Of the two actual recipients, then, within reach, one would soon be removed. He will depart, and the poor will stay. There need not be any more doubts or disputes among Christians on that subject. He asserted his right to receive the offerings; but immediately thereafter he departed, leaving the poor his heirs.

His own explanation of his own procedure is given elsewhere, "It is expedient for you that I go away." For the sake of his own people, he remained on the earth till his ministry was done and his sacrifice offered; and then, for the sake of his own people, he ascended into heaven. He who came into the world in order to pay the price of their redemption, returned to heaven, that he might prepare for them a place. Although it was profitable for Mary to pour out her ointment on her Saviour's head, it would not have been profitable that she and all living believers should continue to do the same thing all their days. He remained in the church at first, in order that the spring might be opened by the power of his own love; but when it was set a-flowing he retired, that the stream might seek the only other available channel, and so refresh the needy as it flowed across the wide wilderness of time.

We may learn the expediency of his personal departure, by considering the probable consequences of his stay. If after his resurrection the Redeemer had remained bodily and visibly present with his people, a great part of his own plan would have been thereby frustrated. The devotion of the saved, centres in either case in the Saviour. But, as it is, the true disciples worship him in spirit wherever their dwelling may be, and whatever their occupation. Communion with Christ neither impedes a Christian's labour, nor drags him from his home. On the contrary, if he had remained on earth, visible as he was to the company in Bethany, Christians, in body as well as spirit, would have gravitated to the spot. The warm-hearted disciples from every land would have bent their steps to the place where they might behold their Saviour, bearing, in some form, a precious ointment, that they might pour it on his head.

Suppose, in such a case, that he had continued to tarry at Jerusalem, then, as far as we are able to judge, missionary zeal must have been strangled

in the birth, and no missionary work ever done. It would seem profane to imagine that he would dwell on the earth, unless his presence were a blessing. But who in that case would go forth from Jerusalem, and carry the message of mercy to the ends of the earth? Those who loved the Saviour most would remain closest by his side; but these are precisely the kind of people that are needed and fitted to do mission work among all nations and in all climes.

If his presence were a bodily presence, two of his own words would seem to be inconsistent with each other. He said to his disciples, "Lo, I am with you alway," and "Go ye into all the world, and preach the gospel to every creature;" and these two words he spoke on the same occasion, in the same breath. But if he should come to dwell bodily on the earth, while yet there is mission work to be done on it, he could not address both these words to his disciples. He might say to some, "I am with you," and to others, "Go ye into all the world;" but those who should be with him could not also go into all the world, and those who should go to all the world could not also be with him. It seems, therefore, inconsistent with the divine plan and the intimations of Scripture, to expect that the Lord will take up his abode visibly on earth until the mission work is done. Under the ministry of the Spirit the gospel must be preached and the nations won: then the Lord will come to reign.

He goes away, therefore; but he leaves the poor behind. Ah! we grievously mistake him if we suppose that, by approving of Mary's sacrifice, he means to throw cold water on the proposal to help the poor! To Christ still, in spirit, Christians bring their precious ointment: on his head they pour it still; but it is not wasted: into the lap of the poor every drop of it falls. He has placed the poor right beneath that open perennial stream as the authorized receivers of the boon. In this sense work is worship, and worship is work. Love to Christ is the animating soul of practical beneficence, and beneficence to men is the body which love to an absent Lord will put on.

The two constitute a pair, like hunger and food, and a multitude of similar relations which God has instituted in both his kingdoms. There is nothing halting in either department of his work. If he should ever see meet to extinguish hunger in animated beings, you may expect that the fields will cease to produce a supply of food; or if the Governor of the world should take away the food, you may expect the hunger to cease. Christ points to the poor, and charges us to bestow on them what we owe to himself. He does not say that we do not owe him costly offerings; he intimates that we do owe them, for he pronounced Mary's act a reasonable service. Had he repudiated that devotion, he would thereby have cut off beneficence at its springs. He asserts his right to receive the offerings, and instantly departs beyond the offerer's reach. In the very act of departing, however, he intimates that he constitutes the poor his receivers. We may assume, then, that when he returns there will be no more poor; that when there are no more any poor, he will return. Here is a method by which we may hasten the coming of the Lord. He remains absent that he may not by his visible

presence intercept the gifts which the poor still need. By his advent, ministry, and sacrifice, he opened the fountain of self-sacrificing love to himself in the hearts of believers, through all time; then, by his absence, he directs the stream into that long, broad, deep, empty channel—the wants, temporal and spiritual, of a sinful world. When, through the flow of that river, the desert has all become a garden, I suppose there will not be any longer, on this side, a cause for the continued absence of the Lord. Thus work is worship; for successful work on earth will bring the Lord from heaven.

This beautiful binary constellation which we have been contemplating in the heavens may be seen clearly reflected on the surface of those waters which softly circulate on the earth. We have pointed out as scriptural truths two doctrines that hold by each other, and revolve round each other, like certain twin stars that the telescope has revealed in the depth of space. The Saviour's redeeming love opens the hearts of believing men, and draws forth the whole volume of their affections upwards towards himself; the richly laden love thus drawn out and upward, falls again in blessings into the bosoms of the poor, placed underneath for the purpose of receiving them. These twin truths shine forth from this portion of the Scripture like stars in the sky; and as stars in the sky are reflected in the bosom of the placid water, those doctrines are visibly reduplicated in the processes of Nature.

The earth scorched by the sun of summer—the dry thirsty land, is like the poor; and like the poor, too, it is always with us; year by year continually we see it suffering, and sympathize with its distress. It is water that this withered world wants: water is the alms which will relieve the poverty of the land, and heal its pain. But how shall the needy creature obtain the supply of its need? How shall the dry land get the water for which it thirsts? In some portions of the globe's surface, there is a wide expanse of scorched ground, and on other portions, vast, deep exhaustless stores of water; but how shall a sufficient quantity from the abundant stores of water be brought and given to the needy ground? This is precisely the spot where the difficulty lies in the moral and economic departments. There is wealth enough in the world to satisfy the wants of all its inhabitants, as there is water enough in the ocean to saturate all the dry land. But the problem in both departments is how to draw from this abundance the means of supplying that defect. The gravity of the water keeps it lying in its bed, and leaves the land in barrenness: the selfishness of human hearts holds fast the riches in the treasures of the rich, while the poor are starving. Thus, if left to themselves, with no higher law intervening, both spheres would exhibit the spectacle of plethoric wealth, a burden to itself for want of outlets, with haggard poverty lying helpless by its side. In nature, a remedy has been provided. It is gentle in its movements, mighty in the force which it exerts, and completely successful in its results. The sun by his heat draws from the reservoirs of water a plentiful supply—draws it up to heaven. Unseen, unfelt, it rises like incense; and when in this form it has been raised to heaven, it is discharged, and

sent in showers to the earth. Ah! it could not have been brought from the sea to the land, although the sea had plenty, and the land was in great need. It was only by being first drawn up to heaven that it could be poured upon earth.

See reflected in that glass the process by which God provides for the poor out of the stores of those who possess abundance. The love of the risen Saviour is shed abroad upon the hearts of his people, like sunbeams on the sea. Secretly drawn by that mysterious power, their hearts open and pour their treasures forth. These treasures so drawn forth cannot ascend bodily to Christ upon his throne, any more than the waters evaporated from the sea by the sun's heat can rise all the way

to the sun. It was not intended that the waters which are drawn by the sun should travel to the sun. The use of the sun's attraction is only to draw the waters up far enough to fall upon the ground. Thus it is also with the present power of Christ's love upon the hearts of Christians. Our goodness reacheth not unto him. He does not need our gifts. He demands them nevertheless, and draws them from us; but it is to let them drop into the needy's lap. The devotion, that rises like incense in love to the Lord, descends in substantial beneficence to men as the waters distilled from the sea, and drawn in vapour to the sky, are spread in refreshing showers over the thirsty land.

FOURTH EVENING.—THE FACE OF A FRIEND.

"So we went toward Rome. And from thence, when the brethren heard of us, they came to meet us as far as Appii Forum, and The Three Taverns; whom when Paul saw, he thanked God, and took courage."—ACTS XXVIII. 14, 15.

THAT village called the Three Taverns, on the way between Puteoli and Rome, was a bright spot in Paul's chequered life-course. It supplied him with one sunny memory for the remainder of his days. There light rose in the darkness. From heaven, he knew, the light came down, although he saw it shining out of human faces. Indeed, most of the heavenly light that we get comes to us in a second-hand way by reflection; and a human countenance is the best of all reflectors. Those brethren who came from Imperial Rome to meet the prisoner were the first glad sight that Paul had seen for many days. Arrested in the midst of his work, and condemned to waste his days in a prison, he had willingly pleaded his own cause before Felix and Festus; but when he found that they selfishly perverted judgment, or lightly trifled with his life, he had formally carried the case by appeal to the supreme tribunal of the Empire. Carried as a prisoner from Cesarea to Rome, he had encountered many perils in the deep, and doubtless dreaded that still greater perils might await him on the land. A Jew brought prisoner to Rome, under the accusation of having publicly set above Cesar another king, one Jesus, had no cause to congratulate himself upon his prospects. The past was dark; the future darker: when, lo, a procession turning suddenly round a corner, heaves in sight, and quickly approaches. Their countenances and costume seem Jewish, but a gentleness not Jewish beams in the faces of the strangers. They approach the group of guarded convicts, and inquire whether Saul of Tarsus, otherwise called Paul the apostle of Christ, were among them. This is the man, they would soon be told, and forthwith they sprang forward and embraced him as a brother. Upon inquiry, he discovers that these men are Christians, and that some of them were in Christ before himself. That disciple, tossed so long upon troubled waters, was doubtless glad when he saw the followers of the Lord coming out to receive him into their hearts and homes. From that time forward, we may be assured, Paul never forgot the Appii Forum and the Three Taverns, where the sight of brethren re-

buked his desponding heart, and revived within it again the flame of blessed hope.

Notice the event which stirred the pilgrim's heart, and the specific emotions which it kindled there.

1. The event was simply the sight of Christian brethren who had come from Rome to meet him. This kindness shown to him for Christ's sake made him both thankful and hopeful. Two things are necessary thus to set a man on fire. There must be a state of preparation in his own heart; and there must then be the contact of love embodied in a brother. There must be first the dry fuel heaped up, and next the spark thrown in. Either alone would have produced no conflagration. The burning spark could not kindle water-soaked wood; nor would the most combustible materials rise into a flame, if no fire were brought into contact with them. Paul had passed through a very peculiar experience. On the way toward Rome, between Puteoli and the Three Taverns, his heart was dull, low, despondent, but it was susceptible. The perils of the deep, the providential deliverance at Malta, the landing for the first time in Italy, the march toward Rome, where a people of strange gods and strange tongue held in their hands the world's destiny and his own;—all these had made the man silent and hopeless, but tenderly alive to new impulses. At the critical moment, fellow-disciples, members like himself of Christ's mystical body, burst into view, and showered their love upon him. This unexpected apparition lighted the train, and set his whole being up in a blaze. Then his double inquiry was, What thanks shall I render to God, and what service shall I do for men?

The members became to Paul in Italy what the Head had been to the Eleven in the depth of their desolation at Jerusalem. When, after the crucifixion, those poor bereaved Galileans were cowering in a lock-fast room for fear of the persecutors, their Saviour suddenly appeared among them: "then were the disciples glad, when they saw the Lord." Now that the Head is exalted, he employs their fellow-servants to comfort mourners in Zion. The

sight of a true disciple often makes a true disciple glad. While Christ alone is the Saviour of both, they hold up each other's drooping hands, and strengthen each other's feeble knees. The fountain of consolation is on high; but its treasures are distributed through earthen vessels. It is generally from the little vessel close at hand that we draw our supply; but we know who has charged it, and kept it full.

Although I be, through faith, in union with Christ, as a branch is in the vine, I need the sympathy and the company of my fellow-Christians. For want of a band of brothers coming out to meet him, an ancient servant of God, equal, perhaps, in heroism of character to Paul himself, was left destitute of thankfulness and courage at a grand crisis of his course. Elijah was in character and history not unlike the great apostle of the Gentiles. He was cast out of his country by a cruel persecution, and compelled to wander a solitary exile in a strange land. Elijah, in the wilderness of Beersheba, was like Paul in Italy. As Jezebel sought the prophet's life, the Jewish priesthood sought the life of the apostle. But in that wilderness, Elijah neither gave thanks to God for past mercies, nor took courage for future work. He fretted peevishly against God's appointments, and in faintness of heart endeavoured to escape from a struggle which he considered hopeless. He sat down under a juniper-tree, and desired to die there. He said, "It is enough: now, O Lord, take away my life." That took all the spirit out of the great and good man. He had faith in God, and why did he not bear up against accumulating misfortunes? He failed for want of company. In the hour of his extremity, he obtained no human sympathy; he saw no brother's face. No brethren came forth into the wilderness of Beersheba to meet Elijah, and therefore, great and good man though he was, he could neither thank God nor take courage. He felt himself alone. "The children of Israel have forsaken thy covenant, thrown down thine altars, and slain thy prophets with the sword; and I, even I only, am left." How pathetically he dwells upon his solitude: "I, even I only!" This was the decisive stroke. It is a dreadful thing for a man to be alone. God knows our frame and our need. He did not upbraid Elijah for his frailty. It is instructive to observe what means the Lord adopted then to heal the fretfulness, and nerve again the arm of his servant. It is not, I am the Almighty God; I am thy everlasting portion. Elijah knew all that; and yet in the hour of need his heart melted and became as water. His Maker and Redeemer knew the ailment, and prescribed the cure. What saith the answer of God unto him? "I have reserved to myself seven thousand men who have not bowed the knee to the image of Baal." The balm for Elijah's wounded spirit is the assurance that he is not alone. Henceforth we hear no more of a petulant request to be released from a hopeless enterprise. In the strength of that assurance the prophet rose and prosecuted his sublime ministry.

The same watchful Father saw Paul in Italy—a stranger in a strange land, counting himself a solitary witness, and sinking into despair at the thought. A suitable remedy was provided and applied in time. How simple the cure is, and yet

how effectual! When he came to Appii Forum, certain brethren came to meet him. As soon as they came in sight, the apostle's despondency fled like darkness before the dawn. Let us learn not only where our strength lies, but also how our hope and courage come. If we are alone, or think we are alone—which, as to its effect on the spirit, is the same thing,—although we possess Elijah's massive strength of character, we shall certainly faint and fail; we shall have neither a heart to thank God, nor a hand to help the world.

2. The emotions which the meeting stirred in the apostle's heart were Gratitude and Courage. Omitting the first, not as being unimportant, but as being easily understood, we request attention for a moment to the second. Mark well what this true, bold man took at Appii Forum: it was not Comfort, but Courage. He was made glad, not by an expectation that he should henceforth have no battle to fight, but by an expectation that he would be able to fight and win the battle.

The distinction between these two states of mind is practically important. In some respects they are like each other, and therefore there is greater risk of taking the spurious for the genuine. The element of cheerfulness is common to both. The one is selfishly cheerful in the prospect of ignoble ease: the other is patriotically cheerful in the prospect of successful labour. Comfort does not look forward at all, but makes a soft nest for itself on the spot, and lies down there to sleep. Despondency looks forward, but sees a lion in the path, and lies down to weep because it cannot overcome the foe. Courage looks forward, and sees the lion too, but believes him vincible, and joyfully girds himself for the combat. This last is the true Christian spirit; the other two are different species of counterfeits. Comfort seeks ease by declining the combat: Courage expects advancement through victory. This (called Virtue) is precisely the quality which Peter exhorts the good soldiers of Jesus Christ to add to their faith. In ancient times, and in human affairs it ranked highest, and was understood to include within itself all the circle of virtues: in the kingdom of God also it is set in a high place, and valued at a great price.

The Christian course is in Scripture compared both to a warfare and a merchandise. In human affairs both soldiers and merchants fondly cherish the hope of *retiring*. In the toils of war and of traffic, the prospect of retiring becomes a sort of dim pole-star, shining through the night, and partially cheering the voyagers. But it seldom becomes more solid than a shadow. The pursuer, after a hard chase, at last puts forth his hand to grasp the prize, and lo, it is nothing. Some of the saddest chapters of human history might be written on this subject. Men have supported themselves in a life-long toil by the hope of a rich and honourable retreat; and the retreat, when they reached it, tormented them awhile, and then killed them outright. From the Christian's warfare there is no release. He must die in harness. The happiest condition possible in this life is a condition of benevolent effort; and time's labour must continue until it break into Eternal Rest.

W. ARNOT.

MISSIONS IN THE NINETEENTH CENTURY.

BY THE EDITOR.

At this season of "May Meetings," when the results of missionary labour at home and abroad during the past year are reported by all our great English societies, and when missionaries from every part of the globe, and of "every kindred and tongue" tell "what things the Lord hath wrought," it may be both interesting and profitable to our readers to glance at the revival of the Protestant Church, and its missions during the present century.

The beginning of the nineteenth century marks an epoch of revival in the Protestant Church. It would be going beyond the limits prescribed by our subject to consider the causes of that remarkable reaction into indifference of life, or of positive error in doctrine, which followed more or less rapidly the stirring period of the Reformation. Such tides, indeed, in the affairs of men,—now rushing with irresistible waves to the utmost limit of the land; then receding and leaving behind but a few pools to mark where the waters once had been; and again, after a longer or a shorter interval, advancing with a deep flood over the old ground,—are among the most striking phenomena in history.

The last century witnessed the Protestant Church at its lowest ebb. We thankfully acknowledge that God did not leave himself without holy men as living witnesses in every branch of that Church. And we record, with deepest gratitude, how, more than in any other country, he preserved in our own country both individual and congregational life, with orthodox standards of faith. Still, taken as a whole, the Protestant Church was in a dead state throughout the world; while, during the same period, infidelity was never more rampant, never more allied with philosophy, politics, science, and literature. It was the age of the acute Hume and learned Gibbon; of the ribald Paine, and of the master of Europe, Voltaire; with a host of *literati* who were beginning to make merry, in the hope that God's prophets were at last to be destroyed from the earth. Rationalism triumphed in all the Continental churches. Puritanism in England became deeply tainted with Unitarianism. The descendants of the Pilgrim Fathers had, to a large extent, embraced the same creed in America. The Established Churches in England and Scotland, though preserving their confessions, and having very many living men in the ministry, suffered, nevertheless, from that wintry cold which had frozen the waves of the great Reformation sea, and which was adding chill to chill. The French Revolution marked the darkest hour of this time; yet it was, the hour which preceded the dawn.

III—17

It was the culminating point of the infidelity of kings, priests, and people;—the visible expression and embodiment of the mind of France, long tutored by falsehood and impiety,—it was Satan let loose on earth, that all might see and wonder at the Beast! That Revolution inscribed lessons in letters of blood for the Church and for the nations of the world to learn. Christians accordingly clung nearer to their Saviour amidst the dreadful storm which shook and destroyed every other resting-place, and were drawn to the throne of mercy and grace, thereby becoming stronger in faith and more zealous in life. The indifferent were roused to earnest thought by the solemn events which were taking place around them. Speculative infidels even, became alarmed at the practical results of their theories. Mere worldly politicians trembled at the spectacle of unprincipled millions wielding power that affected the destinies of Europe, and recognised the necessity of religion to save the State at least, if not to save the soul. Men of property, from the owner of a few acres to the merchant prince, and from no higher motive than the love of their possessions, acknowledged that religion was the best guarantee for their preservation. In countless ways did this upheaving of society operate in the same direction with those deeper forces which were beginning to stir the churches of Britain, and to quicken them into new life.

The history of Europe during the first part of the present century, is a history written in blood. It is one of war in all its desolating horrors, and also in all its glorious achievements and victories in the cause of European liberty and national independence. Never was war so universal. It raged in every part of the earth. For years, the Peninsula was a great battle-field. Belgium and the plains of Germany were saturated with blood. Allied hosts conquered France. Armies crossed the Alps and ravaged Italy, and were buried beneath the snows of Russia. The contest was waged from the Baltic to the Bosphorus. The old battle-fields of Greece, Egypt, Palestine, Asia Minor, Persia, and the Crimea, were again disturbed. War swept the peninsula of India to the confines of Cashmere. It penetrated beyond the walls of China, and visited the islands of the Eastern Archipelago; touched the coasts of Arabia, and swept round Africa, from the Cape to Algiers. It marched through the length and breadth of the great Western Continent, from the St. Lawrence to the Mississippi, and from Central to Southern America. Every kingdom

experienced its horrors *but our own*; every capital was entered by the enemy *but our own*! During all this terrible period, our Sabbath services were never broken by the cry of battle. The dreadful hurricane raged without, but never for a single hour disturbed the peace of our beloved island-home. No revolution from within destroyed our institutions, and no power from without prevented us from improving them. The builders of our spiritual temples did not require to hold the sword. Our victories, with their days of national thanksgiving, and our anxieties, with their days of national fasting, tended to deepen a sense of religion in every heart. Men of God, in rapid succession, rose in all the churches. A pious laity began to take the lead in advancing the cause of evangelism. In Parliament there was one man, who, by the purity of his private life, the noble consistency, uncompromising honesty, and unwearied philanthropy of his public career, along with his faithful published testimony for the truth as it is in Christ, did more, directly and indirectly, than any other of his day for the revival of true religion, especially among the influential classes of our land,—that man was William Wilberforce.

But without dwelling upon the fact of the great revival which has occurred in the Protestant Church during the present century, let us notice one of its more prominent results. We mean the increased activity manifested by all its branches in advancing the Redeemer's kingdom.

At the commencement of this century, the whole Protestant missionary staff throughout the world amounted to ten societies only. Of these, however, two only had really entered the mission-field with any degree of vigour,—viz., the Society for the Propagation of the Gospel in Foreign parts; and, above all, the Society of the Moravian Brethren. The Wesleyan, Baptist, London, and Church Missionary Societies, though nominally in existence, had hardly commenced their operations. There were, besides the above, two small societies on the Continent; two in Scotland; and not one in all America! How stands the case now? The Protestant Church, instead of ten, has fifty-one societies; the great majority of which have each more labourers, and a greater income, than all the societies together of the Protestant Church previous to 1800!

If the last sixty years be divided into three equal periods, nine societies belong to the first, fifteen to the second, and twenty-four to the third.

The following facts, collected from statistics of the great missionary societies up to 1861, will afford—as far as mere dry figures can do—a general idea of the present strength of the mission army of the Protestant Church, with some of its results:—

There are now 22 missionary societies in Great Britain; 14 in North America; and 15 on the Continent of Europe; in all, 51. These employ, in round numbers, 12,000 agents, including ordained missionaries, (probably 2000) teachers, catechists, etc.; occupy 1200 stations; have 335,000 communicants from heathendom; 252,000 scholars; 460 student straining for the ministry; and are supported by an income of £360,000 per annum.

The greatest results have been attained by England. Connected with her great societies, there are nearly 7000 agents, 630 stations, 210,000 communicants, 208,000 scholars, with an annual income of £510,000.*

But in order to enable our readers still more clearly to realize the advance which the Church has made during the last half century, let us consider the progress of one of those societies, and take as an illustration the Church Missionary Society. It was founded a few months before 1800. Its income in 1802, was £356. It now amounts to £104,273. In 1804, it had one station abroad, two ordained European missionaries, but no native assistants. It has now 148 stations, 258 ordained clergymen (many of whom have studied in the English Universities), a large staff of native clergy, with 2034 other agents, most of

* One or two facts in connexion with missionary effort may interest our readers:—

Mr. Müller of Bristol supports, in connexion with his famous orphanage, 22 foreign and 80 home missionaries.

The Moravian Missionary Society has sent, since 1732, 2000 missionaries, of whom 643 have died in mission service; 9 on mission journeys; 13 on the voyage out or home; 22 by shipwreck; and 12 were murdered.

Gossner of Berlin alone originated and conducted a mission which has sent out 141 missionaries. Pastor Harms of Hermannsburg has also, by his own efforts, built a mission ship, and has sent out 150 missionaries, of whom 100 are colonists, and proposes to send 24 every two years.

Ten years ago there was little or no fruit among the *Kohls* of India. There are now 30,000 receiving Christ.

In India there are 500 missionaries. In Tinnevely above 70,000 Christians.

The American Board alone has sent out in fifty years 900 missionaries (500 being native) and 400 teachers; 55,000 have been received into church membership, and 175,000 children passed through their schools.

America contributes £180,000 to foreign missions, and 2000 agents.

The Presbyterian churches of the world have come late into the field, but they contribute about 900 agents, and 230 ordained missionaries, with an income of about £110,000.

One of the oldest Protestant missionary societies in existence (though now confined to home operations), is the Society in connexion with the Church of Scotland, "for promoting Christian Knowledge." It supported Brainerd and the Elliots more than a century ago.

whom are natives. In 1810, it had 35 male, and 13 female scholars in its schools; it has now 31,000 scholars. In 1816, the good Mr. Bickersteth had the privilege of receiving its first converts, amounting to six only, into the communion of the Church. Its communicants now number about 21,000.

Let us, however, examine the missionary labours of the Protestant Church during this century, from another point of view. Take the map of the world, look over its continents and islands, and contrast their condition, as to the means of grace, in 1800 and 1862.

In 1800, the only missions east of the Cape of Good Hope were in India. These were confined to the Baptist Mission, protected in the Danish settlement of Serampore; and the missions in Tanjore, in southern India. The former was begun by Carey and Thomas (in 1793), who were joined by a few brethren in 1799. The first convert they made was in 1800. The latter mission had existed since 1705, and numbered about nine labourers at the commencement of the century.*

Of the East India Company's chaplains, Claudius Buchanan alone had the courage to advocate in India the missionary cause; and his sermon preached upon the subject in 1800, in Calcutta, was then generally deemed a bold and daring step. Hindustan was closed by the East India Company against the missionaries of the Christian Church. China, too, seemed hermetically sealed against the gospel. The Jesuit mission had failed. Christianity was proscribed by an imperial edict. Protestant missions had not commenced. The language of the nation, like its walls, seemed to forbid all access to the missionary. In Africa there were but few missionaries, and these had lately arrived at the Cape.† In the black midnight which

brooded over that miserable land, the cry of tortured slaves alone was heard. New Zealand, Australia, and the scattered islands of the Southern Seas, had not yet been visited by one herald of the gospel. A solitary beacon gleaming on the ocean from the missionary ship, "Duff," had indeed been seen, but not yet welcomed by the savages of Tahiti. The mission was abandoned in 1809, and not a convert left behind! No Protestant missionary had preached to those Indian tribes beyond the Colonies, who wandered over the interminable plains which stretch from Behring's Straits to Cape Horn. Mahometan states were all shut against the gospel; and to forsake the Crescent for the Cross, was to die. In this thick darkness which covered heathendom, the only light to be seen—except in India—was in the far north, shed by the self-denying Moravians,—a light which streamed like a beautiful aurora over the wintry snow and ice-bound coasts of Greenland. To this gloomy picture we must add the indifference of the Protestant Church to God's ancient people. No society then existed for their conversion; and of them it might indeed be said, "This is Israel whom no man seeketh after!"

How changed is the aspect of the world now! There is hardly a spot upon earth (if we except those enslaved by Popery) where the Protestant missionary may not preach the gospel without the fear of persecution. The door of the world has been thrown open, and the world's Lord and Master commands and invites his servants to enter, and, in his name, to take possession of the nations. Since 1812, India, chiefly through the exertions of Mr. Wilberforce,‡ has been made accessible to the missionaries of every Church. Christian schools and chapels have been multiplied; colleges have been instituted; thousands

* The first Protestant missionary who visited India, was Ziegenbalg, who was sent out by the Halle-Danish Missionary Society in 1705, to Tranquebar. He was joined by Plutschow in 1719. The mission was then adopted by the Society for the Propagation of the Gospel. Grundler followed in 1720, and Schultze in 1727. The mission, in 1736, had four stations, one being in Madras; 24 native assistants; and 3517 baptized members! The great Schwartz laboured in, and extended the mission from 1749 till 1798. According to Dr. Carey, 40,000 had been converted to Christianity during the last century through this mission. Dr. Claudius Buchanan reckons the number as high as 80,000!

† The first missionary to South Africa was George Schmidt, sent by the Moravian Brethren in 1736. He laboured alone with some success till 1743, when he was compelled by the Dutch East India Company to return to Europe. The mission was resumed in 1792, when three additional missionaries sailed for the Cape. A few others joined them in 1798. At the beginning of the century, the converts amounted to 304. The illustrious Dr. Vanderkemp, along with three other mis-

sionaries, were sent to South Africa by the London Missionary Society in 1799. The only attempts made to Christianize Western Africa previous to 1800 were by the Moravians in Guinea, in 1737; but all the missionaries, 11 in number, dying, the attempt was abandoned; and by the Scottish Missionary Society in 1797, who sent thither six missionaries. One (Greig) was murdered, another (Brunton) returned and went to Tartary; the rest, we believe, went to other spheres of labour. The Church Missionary Society entered upon this field in 1801.

‡ In 1812, we find from Mr. Wilberforce's *Life* (vol. iv. p. 10), how he was "busily engaged in reading, thinking, consulting, and persuading," on the renewal of the East India Company's Charter. He was fully alive to the importance of the crisis with reference to the interests of Christianity. He thus writes to his friend, Mr. Butterworth—"I have been long looking forward to the period of the renewal of the East India Company's Charter as to a great era, when I hoped that it would please God to enable the friends of Christianity to be the instruments of wiping away

have been converted to Christ; and tens of thousands instructed in Christianity. The cruelties of heathenism have been immensely lessened; infanticide prohibited; Sutteeism abolished; all Government support withdrawn from idolatry; and the Hindu law of inheritance has been altered to protect the native convert; while a new era seems to be heralded by the fact that a native Christian Rajah has himself established a mission among his people.

All the islands in the Eastern Archipelago are now accessible to the missionary; most of them have been visited. Ceylon has flourishing congregations and schools; Madagascar has had her martyrs, and has still her indomitable confessors.

China, with its teeming millions, has also been opened to the gospel. The way had been marvelously prepared by Dr. Morrison, who as early as 1807 had commenced the study of the language which he lived to master. Accordingly, when the conquests of Britain had obtained admission for, and secured protection to the missionaries as well as to the merchants of all nations, the previous indefatigable labours of Morrison had provided, for the immediate use of the Church of Christ, a dictionary of the language, and a translation of the Word of God. The Christian religion is tolerated by law since 1844, and may be professed freely by the natives! The gospel is now advancing in that thickly-peopled land of patience and industry, and native preachers are already proclaiming to their countrymen the tidings of salvation.

Africa has witnessed changes still more wonderful. The abolition of the British slave-trade in 1807, and of slavery in the British dominions in 1834, have removed immense barriers in the way of the gospel. The whole coasts of Africa are being girdled with the light of truth. It has penetrated throughout the south, where the French *

what I have long thought, next to the slave-trade, the foulest blot on the moral character of our countrymen—the suffering our fellow-subjects (nay, they even stand toward us in the closer relation of our tenants) in the East Indies to remain, without any effort on our part to enlighten and reform them, under the grossest, the darkest, and most depraving system of idolatrous superstition that almost ever existed on earth.” The deepest anxiety was felt by all Christians for the issue of the debate. “I heard afterwards,” he writes, “that many good men were praying for us all night.” These prayers and efforts were crowned with success; and Mr. Wilberforce, when communicating the joyful news to his wife, writes—“Blessed be God! we carried our question triumphantly, about three or later this morning!”

* The missions of the French Protestant Church are situated inland from Port Natal, and along the River Caledon from its junction with the Orange River. It has gathered upwards of 2000 Bechuanas into regular church fellowship.

and German Protestant Churches labour side by side with those of Britain to civilize the degraded Bushman, the low Hottentot, and warlike Kaffir. The chapel in Sierra Leone, built from the planks of condemned slavers, and containing 1000 worshippers, is a type of the blessings brought through Christianity to injured Africa.

Abyssinia has also been visited with every prospect of success.

And how glorious has been the triumph of the gospel throughout the whole Pacific! In 1837, Williams was able to address royalty in these noble words—“It must impart joy to every benevolent mind to know, that by the efforts of British Christians upwards of *three hundred thousand* of deplorably ignorant and savage barbarians, inhabiting the beautiful islands of the Pacific, have been delivered from a dark, debasing, and sanguinary idolatry, and are now enjoying the civilizing influence, the domestic happiness, and the spiritual blessings which Christianity imparts. In the island of Raratonga, which I *discovered* in 1823, there are upwards of 3000 children under Christian instruction daily; not a vestige of idolatry remains;† their language has been reduced to a system, and the Scriptures, with other books, have been translated. But this is only one of nearly a hundred islands to which similar blessings have been conveyed.” Tens of thousands of souls more have been added to this number since these words were written! In no part of heathendom has the gospel produced, in so short a time, such wonderful fruit as in Polynesia. The labours and sacrifices of the converted natives are more striking than in any other missions. Many islands have been converted solely by means of a native agency, and are superintended by native preachers only. Let us take the Sandwich Islands as illustrating what has been accomplished *for* the natives, and *by* them. The American Mission was commenced in 1824. These islands have been converted long ago to Christianity, so that not a vestige of idolatry remains, and not only do they support their own clergy and schools, but have their own Bible and Foreign Missionary Society. They raise for these objects about £4000 per annum, and support six missionaries to the heathen islands around them. The communicants in the islands amount to upwards of 25,000, and the children who attend the common schools to a still greater number.

If we turn our eye to the great Western Continent, we see the gospel preached to its wandering Indian tribes; while the condition of Mexico and of California affords every prospect of the rapid extension of truth through kingdoms long benighted.

† The first *idc* which a catechist from Raratonga, who visited London in 1848, ever beheld, was in the Museum of the London Missionary Society.

Mahometan countries have also been opened to the missionary. Through the influence of Lord Aberdeen and Sir Stratford Canning, the Sultan was induced in 1844 to give religious toleration to his subjects; so that now, for the first time, a Mussulman may change his faith without incurring punishment. Several societies labour in Algiers, Egypt, Palestine, Asia Minor, Greece, and Constantinople. The Euphrates is being dried up. The Mahometan power is tottering, and ready to fall! When it dies and is buried, who will wear mourning at its funeral?

And how strange is the meeting between the distant East and West, the distant past and near present, visible in the fact, that it is missionaries from America who now unveil to the dwellers in the land of the Chaldees, and to the wanderers among the mountains which shadow the birth-place of the human race, that blessed faith and hope which dwelt in Abram, as he journeyed at the dawn of history from that old land, and which has returned thither again in Christian men imbued with Abram's faith, after having accompanied civilisation around the globe? God's blessing has signally attended the American mission among the Nestorians. The revival of religion in their schools and churches has been great and glorious.

To all these facts we must add the labours of the Church during the last sixty years in the salvation of *Israel*. Much, very much, has been accomplished, in spite of immense difficulties, by upwards of twenty-six societies; and it has been computed that no fewer than 8000 have, during the above period, been added to the Church of Christ.

May we not exclaim, What hath God wrought! Yet how can any statistics carry to our hearts a sense of what has been done for immortal souls by the gospel during this eventful period? What homes have been made happy by it; what families united in the bonds of love; what sick-beds soothed; what dying beds cheered; what minds illumined, and what hearts filled with joy unspeakable, and full of glory!

The British and Foreign Bible Society may be adduced as forming the most remarkable illustration of the progress made during the present century, in leavening the world with the Word of God. Previous to its formation, in 1804, there was not one society in existence, whose sole object was the distribution of the Bible in all lands. There are now upwards of 50 principal and 9000 auxiliary Bible Societies. In 1804, the Bible was accessible to only 200 millions of men. Now it exists in tongues spoken by 600 millions. The London Bible Society alone sends forth annually upwards of 1,787,000 copies. During the last sixty years it has issued 39,315,226 Bibles, in 163 different lan-

guages, and in 143 translations never before printed. Its receipts for 1862 amount to £168,443.*

It surely cannot fail to fill the heart of every Christian with deepest thankfulness, to contemplate the glorious achievements of the last sixty years, in circulating the Word of God. The Church, like the angel seen in prophetic vision, has been flying with the everlasting gospel to every nation, and kindred, and tongue, and people. It has given the Bible to the inhabitants of the old lands of Egypt, Ethiopia, Arabia, Palestine, Asia Minor, and Persia; to the indomitable Circassian; the mountaineers of Afghanistan; to tribes of India speaking thirty-two different languages or dialects; to the inhabitants of Burmah, Assam, and Siam; to the islanders of Madagascar and Ceylon; to the Malays and Javanese of the eastern seas; to the millions of China, and the wandering Kalmuck beyond her great wall; to the brave New Zealander; to the teeming inhabitants of the island groups which are scattered over the Southern Pacific; to the African races, from the Cape to Sierra Leone; to the Esquimaux and Greenlanders, within the Arctic circle; and to the Indian tribes of North America. All are now furnished with a translation of that wonderful volume, which, with the light of the universal living Spirit of God, at once reveals to man, in every age and clime, his lost and miserable condition, and tells him of a remedy that is adapted to meet every want of his being,—to redeem him, by a moral power it alone can afford, from all sin and misery, and to bring him into the glorious fellowship of the holiness, the blessedness, and joy of Jesus Christ, and all the family of God in earth and heaven!

But the labours of the TRACT SOCIETIES, during the last sixty years, also deserve our attention.

Foremost in this great work has been the Religious Tract Society of London. That Society was formed in 1799. During the first year of its operations, ending in May 1800, it had issued 200,000 tracts. What is its present working power? Its annual income from sales, and benevolent contributions (£12,500), is £95,000. Its annual distribution of tracts, including handbills, from the London Depository is, in English 20,870,074, and in Foreign languages 537,729,

* The American Bible Society circulates upwards of 600,000 copies of the Word of God annually, at home and abroad. Besides assisting in publishing translations issued by other Societies, it has been at the sole expense of publishing the Armenio-Turkish, and Modern Syriac New Testament; the entire Bible for the Burmese, and also for the Sandwich Islands; the Ojibbeway New Testament; the Gospels, or some portion of the Bible, into the languages of the Sioux, Mohawk, Seneca, and Cherokee Indians.

making an annual total of 21,407,803. It publishes tracts in 117 different languages. Taking into account the circulation of affiliated societies, the total probable *annual* distribution of tracts, British and Foreign, in connexion with the Religious Tract Society, amounts to 28,500,000.*

What a mighty agency has this been for the dissemination of religious truth! How extensive the influence, how grand the immortality, which the printing-press, employed with such evangelic Christian zeal, secures to the labours of men of God! Their holy words, which, without such an agency as this, could have reached a few minds only, and in some limited spot of earth, now circulate like the air of heaven over the wide world; they enter every dwelling, and are on the tongue of every tribe. An old minister, nearly two hundred years ago, was brought before a cruel and bloodthirsty judge, who said to him, before sending him to prison, "Richard, thou art an old rogue, and deservest the halter." Yet this same Richard has never ceased to preach from that day till this; and every year now, he addresses millions in every land. Richard Baxter's *Call to the Unconverted* has been eminently blessed for the conversion of sinners, and his *Saint's Rest* has been equally blessed for the consolation of believers. The same judge seized a tinker, who would not stick to his soldering and hammering, but would make known everywhere the grace of God, and what great things God had done for him. Twelve years he lay in jail; and there, having nothing to disturb him, he fell to dreaming. That dream was afterwards printed, and has gone through more editions than any other uninspired volume. John Bunyan's *Pilgrim's Progress* has travelled through all lands, and its victories over Apollyon have been more than can be numbered.

* Several religious bodies in the United States maintain Tract or "Publication" Societies. But the "American Tract Society" (founded 1825) is the largest and most influential in the United States, and has a catholic constitution similar to our own Tract Society. It is supported by more than 700 auxiliary societies, those in Boston, Philadelphia, and New York, being large and efficient. We may add that its circulation is not confined to the United States, but extends to Mexico, Central and South America, and to those districts in the East and Asia Minor, where the American missionaries are labouring. It has issued upwards of 200,000,000 of publications since its commencement.

And now let us ask, What shall be the history of the Church during the rest of this century? Without attempting with a profane hand to uncover what God has concealed, it is surely a comfort to be able to take our stand on the immovable rock of his promises to Christ, and to rejoice in the assurance, that, sooner or later, his name must be glorious in all the earth!

But when? Is it too much to assert, that before the end of the present century, the gospel shall have been preached to all nations, the Bible translated into all tongues, and the last visible idol on earth cast down amidst the triumphant songs of the Church of Christ? We might expect this blessing judging only from the past, and the constantly increasing ratio with which society advances. Yet, as revolutions in the physical world anticipate in a single night the slow progress of ordinary causes, so, for aught we know, may God, by some evolution of His Providence, make one year do the work of many. There is doubtless a tendency towards "catholic humanity;" but God has decreed most righteously, that there is but one bond of union which can permanently unite humanity, and that is Jesus Christ the Son of God and Son of man!

But while we do anticipate the most glorious results ever attained by the human race during the next forty years, we anticipate, also, from the signs of the times, a desperate conflict of opposing *systems*, both of truth and error. It is not a little remarkable, that never before was there such a *life* and strength in *every* system as at this moment. Protestantism, Popery, Infidelity, and even Judaism,† were never so alive; and *never were alive together* before. Does this not look like a coming struggle?‡ But we know what the glorious end will be!

† It is only within twenty-five years that *preaching* has become common in all their synagogues, while, during the same period, ten periodicals have been started by the Jews, in different parts of the world, in defence of Judaism, in some form or other.

‡ In a conversation which we had with Neander in 1848 (immediately before the continental revolutions), he said, "I believe we are entering a period of unprecedented warfare, which will issue in the increased glory and purity of the Church. The light and darkness will every year be more and more separated; the one becoming more bright, the other more densely dark."

WHAT SENT ME TO SEA.

ON THE "MARIA," April 1862.

DEAR MR. EDITOR,—You are kind enough to ask me to let you know something more of my sailor-life. Unluckily I am a poor fist at the pen, and have no skill in the spinning of yarns, but I shall try, from time to time, to give the readers of *Good Words* a taste of salt water. Just now I may as well tell you how I became a seaman. As it was all through Uncle Ben the Old Quarter-master, this letter will have a great deal more to do with him than with me; but I have no doubt of its being all the better for the present purpose.

My father and mother's family originally belonged to London, but after my father's death my mother removed to the neighbourhood of Chester, where she went shares in a little farm with a sister of hers, whose husband was also dead. 'Tis as pleasant a neighbourhood as you could wish to live in, so be it one had sufficient to rig a comfortable berth on shore, and keep all hands going, without getting into the shopkeeper's books, or falling foul of your landsharks or lawyers. Only I never could fancy trudging about all day over thirty acres of brick-dust after a set of lubberly ploughmen, or keeping the log of a dairy, with nothing before you but to square your accounts at the year's end, and begin again. A sailor has his hardships, but then he's always looking forward; even a foremast-man feels like a prince as he goes round the craft in harbour, squinting at their different rig, and fighting shy of officers, till he thinks whether he'll go to India, or China, or the West Indies, or to some country he hasn't seen. Then, if a boy with some schooling enters apprentice, and works on steadily, he has the chance of commanding a vessel; and I don't think any one would wish better than to walk his own quarter-deck, and look aloft at the rigging taut and trim,—canvas touching the wind and never lifting, from course to royal—with her three masts in a line—and steering across the ocean without any one to tell him the way, while all the time no one is his master but God, who rules the winds and the waters!

However, I'm a-head of my story. We lived about seven miles out of the town of Chester, quite in the country, with no more than two or three other houses beside us, though all round about you could see farm-houses, and cottages, and little villages across the fields and the river, enough to make all Chester over again, and as different from the town as a channel-fleet standing into port is from the shipping in the docks. Our own house was an old-fashioned, queer-built sort of a place, half timbers and half stones; there wasn't one of the windows on a line with another, and the chimneys were as high as the "Maria's" lower masts. It stands at the end of an old green-garden, full of large gean-trees, which lies between it and the market-road; with an orchard besides, and

a little paddock to one hand, and a carpenter's wood-yard at the other, where the piles of planks shaking in a windy day would remind you of a ship's bulk-heads straining at night in a stiff breeze. All before the door, under the trees, you see the flat green corn-fields, sprinkled with red flowers in summer, and the meadows full of sleek cows; and over them the spire of the church in the distance, where we used to walk all together of a Sunday. I think I see my good little mother, my old aunt, and the two girls, sitting out at tea there in the garden before the door, as they were the evening I came home last, after being three years away! I have the old place before me now, and how my mother shrieked and dropped her best china teapot, which was always used on Sundays, and my aunt ran to open the gate, and how my sisters screamed and ran for my brother Ben, who was on the other side of the wall, in the carpenter's garden, palling cherries for the carpenter's pretty daughter.

We had a happy enough time of it when we were boys there in the country, however dull it seems to me to be when one grows up. For my part, I'm sure I don't know how I ever learnt to read at all, so fond was I of pretending to help with the field-work, or anything else, instead of going to school. We would slip out with the hay-people or the reapers at six in the morning, and work all day in a broiling sun, take our dinner with them in the field, and come home in the evening as if we had been doing nothing wrong; and my mother never had the heart to scold us for it.

However, our prime spree was when we got leave to go along with the market-carts into Chester on market-day, when the cheeses made on the farm, or some of the orchard fruit, were sent in to be sold. I well remember the delight of my first liberty-day on shore in Bombay, after a six months' voyage, with half-a-dozen rupees in my pocket; everything I saw in the streets like part of a tale in a book; and how we ordered a dinner fit for kings with our first wages, and smoked half a box of cigars under the verandah, while we looked at the strange figures passing below. But after all, one wearied of the thing on a second trial, and it wasn't equal to the feelings with which we boys drove into Chester of a fine summer morning, with good-natured Dick, the farm-servant, who let us manage as we chose. The whole day was before us, the streets full of people, and everything that wasn't wonderful was funny. A curious, Dutch-built sort of an old town is Chester, as everybody knows; I have often been puzzled since to think what kind of sea-going craft people knocked off in those days; although I fancy the sea left them much less to their own taste than the shore did. Such narrow, little crooked streets you have, with the upper part of the houses over the foot-passengers' heads, and every now and then a dark entry into a court, or a crooked stair, or an outside wooden gallery. And there we sat, on the top of

one of the carts, crushing through the crowd, and swaying about as the pile of cheeses and baskets shook, or waiting stock-still when we could not get forward. We enjoyed seeing the old women chaffer about the price of eggs, and now and then one of us would chuck an orchard apple slyly into their laps, or catch hold of the tops

of their umbrellas, which they had put up to keep them from the sun.

It was one of these times that we first saw our old Uncle Ben, or rather an uncle of my mother's, who had gone to sea when she was a girl, and he not much older; and she had only seen him twice or thrice afterwards. We had often heard our

"He and I built a whole fleet of ships of every rig, from a frigate to a cutter, over at the carpenter's."

aunt and her talk of him; there was a huge shell on the parlour mantelpiece, which he had brought from the West Indies. Inside it was as beautiful pink as a rose-leaf, and when you put it to your ear it roared like the sea in a stormy night on a lee-shore. I used to view that shell with great

awe, as a sort of magical thing; and I fancied that it always told what kind of weather there was then far out at sea, and that when there was a ship lost one would hear in it the distant cries of drowning sailors. It was the only nautical affair in the house, except a portrait of Uncle Ben him-

self, done by a Chinese-man in Macao; a rum customer the fellow had made him too, for his money. The face yellow, with long pig's eyes, and black hair smoothed and curled on each side like a woman's; although underneath there was a pair of whiskers fit for "Blackbeard" the pirate, and a ferocious grin about the mouth, just such as I suppose the Chinese-man thought he saw there. This noble tar had plainly a quid stowed away in his one cheek, it was such a size; but he looked as if he was putting his tongue in it too, and the rascally chopstick had tried his best skill at a streak of 'bacco juice, which my uncle, I fancy, had drawn across his own figure-head with the back of his hand. The two of them together, no doubt, agreed about not forgetting the pig-tail, which shied over the shoulder from the back of his head down to the bottom of his shirt, and was tied with a blue ribbon as long as an Admiral's pennant. So I thought that I should know my Uncle Ben if I met him anywhere between this and Behring's Straits.

Well, one day we were in Chester with the carts at market; the man Dick had put up the horses at the tavern where we got our bread and beer, and my brother and I were standing under the archway of the yard, listening to a man and a woman with a bundle of ballads, singing opposite each other in the middle of the street. Just then we heard the horn of the mail-coach as it came round a corner into the town, and brought up at the door of the head-inn close by. Soon after, one of the 'ostlers, a crony of Dick's, ran over and said there was an old fellow at the "Stag's Head," asking for his missus.

"He's nothing else but a savidge sailor, Dick," says the 'ostler; "nobody can make nothing of him. He's got a box with him, though, as big as a corn-chest, and a great bundle of sacks and ropes, all stinking of pitch and tar; so means to make himself at 'ome someweres. You'd better put in your hanimal again, and get 'em into your cart off our steps."

Dick grumbled at not having had his dinner first, but he yoked the old mare again, and took the cart round to the "Stag's Head."

"I'll tell you what, Bill," said my brother Benny to me, as we stood looking out with our mouths open, like young ducks before a shower, "for a hundred pounds, that's Uncle Ben come back to see mother and aunt and all of us!"

"No! you don't say so, Ben!" said I, starting. "Well, if it is, I'll cut off home this moment, and let them know beforehand."

"No, you shan't, though," says Ben, who was older than I, and every now and then tried to come captain over me, which sometimes was the occasion of a battle, when there was anybody to egg me on. "No, you shan't; we'll surprise 'em."

I, however, was half afraid of facing old Uncle Ben so suddenly, as I had come to think of him as a sort of Wandering Jew, who had been everywhere, and never died. I made a bolt to run off for home, when Ben caught hold of me, and we were pulling each other's hair, and tumbling about the yard, when somebody caught hold of me by the stern of the breeches, and hoisted me right in the air, while Ben was shoved into a heap of straw. A voice as loud as a bull's shouted out beside us—

"Hollo! you precious young rascals, is this the way you welcome your old uncle?"

As soon as I was on my legs, I turned round, and saw a tall, stout, oldish man, a little bent, with a dark, rough, hard-cut face, and long ringlets of grey hair coming down to his whiskers, who stood looking at us both with a comical sort of a grin. He had on a low glazed hat, as bright as japan, with a name in front in gilt letters, an old, long blue coat with yellow anchor-buttons, and wide canvas-trousers, with gilt buckles in his shoes. When he held out his one hand to me, I noticed there was nothing at the end of the other sleeve but a steel hook, which my brother Ben seemed afraid would catch hold of him, for he wouldn't come nearer.

"Come, my boys," said the old man-o'-war's-man, "give us a slipper, now you've made out my rig; you see I've only *one* myself, so I mean no favour betwixt ye! What's your names?"

"Ben and Bill, sir," answered my brother.

"'Bless'd, then, if niece Sal hasn't made me stand Sammy for a name without axing by your leave! Well, my boy, I answers to the same hail; I'm your Uncle Ben. I s'pose you've heard of me?"

"Often, Uncle Ben," said he. "We've your picture at home, but I shouldn't have known you by it."

"Oh," said Uncle Ben, "but that's twenty years ago! I warn't in nothing like this here rig, neither; but, at the time it was done, the whole mess said it was as like as one cat-head is to another, saying that the old chow-chow clapped on too much of his Chinese yellow; which, I don't doubt, he meant in kindness for an extra dollar or so."

As soon as we had exchanged reckonings a little with our stranger grand-uncle, and told him about the family, he took us into the tavern, and treated us all to as jolly a blow-out as the house could furnish.

"Now," said Uncle Ben to the ploughman Dick, "get your wheel-consarn under weigh, and let's make sail for this here farm. We'll have our first bowl of grog there, boys; and I'll not smoke my first pipe on shore till your mother fills it for me. Bless you, Bill, I recollect her a little girl in the old house in Watling Street, younger than you are, when I was about the age of Ben there. We were at the same school, and although I was her uncle, little Sally used to help me with my accounts. You two fellows, big enough to stow a mizen-royal, you make her an old woman to what she was when I saw her last."

All the way as we went along, sitting in the cart, out of the town and through the country-road in a bright summer's afternoon, it was curious to us to see the old tar's delight with everything. Before this his whole acquaintance with the land had lain in sea-port towns or great cities, except now and then a short cruise on shore in some foreign country. He had been at sea from a mere lad, and had just left a frigate three years on the African station. So you may think how we laughed at having to tell our old uncle the commonest things about the country, and seeing how he appeared to take as much pleasure in the sight

of fields, and trees, and gardens as if they were dropped from the moon. I remember, too, that once or twice I wondered to find his remarks made me notice something strange and beautiful in what I had seen every day since I was a child. When we got out of the highway into a rough field-road through the long clover-hay, the old fellow grew anxious to get a sight of the house, although we were so deep in the low fields that you might have thought there wasn't one within ten miles. Uncle Ben stood up on the top of his old chest, and looked round as bewildered as a greenhorn coming on deck to his first morning-watch, out of sight of land.

"Well, boys," said he, "bless'd if this bea'n't to me summut like the captain's gig in a Bahama swell, always below the horizon: I see nothing but the tops of fences and corn-fields. I don't doubt you've taken the bearings, messmate," to Dick, who was driving; "but I'd like to know how's her head, and whereaway lies this said port."

Honest Dick, however, didn't know what he meant, and the old quartermaster of the "Minerva" asked him to heave-to, and let him down the side.

"Come away, boys," said Uncle Ben to us, "let's start a-head; if it's only for the curiosity of the thing. I must have a look-out off the royal-yard of that there tree, which wouldn't have made a bad spar for our frigate."

We were quite ready to climb up after him, but the old man was at the top before us, and we soon heard him hailing out from aloft, "Sail-ho! my lads!—is that the craft? White paint from bends to gunnel—double tier of ports—and rigged with smoking funnels, as long as in one of your new-fangled 'steamers'!"

We knew it must be our own house he saw from the place; and Uncle Ben gave three cheers at the sight of Old Mallow Farm, with the cows gathered behind the dairy for milking, and the pond at the end of the carpenter's house, covered with ducks and geese washing themselves. The fine evening sunshine came all over the two gardens; and the tops of the trees, and the piles of crossed planks in the wood-yard, looked as if they were dipped in real gold. There was a market-cart full of neighbours stopping on the road at the carpenter's gate, to hold a palaver with him and his wife; and their little girl, with our two little sisters, were sitting on the wall, while our mother and aunt looked over it from their own garden.

A little while after we were all sitting in the little parlour at home, with the tea-things on the table, and the window open to let in the sweet summer air of the garden; while the old sailor, as happy as possible between his two nieces on the sofa, with the rest of us about his knees, was busy with them overhauling the slack of all that had happened since they saw each other. What we younger ones wanted was to hear something about the sea, and how Uncle Ben had lost his arm.

"All in good time, boys," said he; "please God, I'll spin you the whole yarn out before we part company; but not this bout. If you were as salt as I am, from full forty years' cruising, you'd be glad for one night to wash your mouths in sweet water, and eat nothing but *soft tack*. A grain of brine jist now, or a snift of tar, would be the death of me. Well, you see, Sally dear, and Niece

Barbara, I must give you the rights of the matter; how I come to turn up now all standing, after you might ha' thought I'd lost the number of my mess, and gone to the bottom. 'Xcuse my manners, though, nieces, and let little Ben, there, fill me a pipe of negrohead out of the chest, so as you doesn't object to the smoke. It's the genuine sort, that would make a man who smoked it tell you his mind in spite of himself, and wouldn't disagree with a sucking child. And harkee, Bill, boy, you'll find a pair of East Ingee shawls, and a box of shells under my sailing gear; hand them out of their berth for your mother and Aunt Barbara."

Ben filled one of the long clay-pipes we had bought in Chester, and while we—all but my mother, who was thanking Uncle Ben for minding us—were overhauling the curiosities, he lighted it and had his smoke. The light clouds went out at the parlour-window, and hung in the air alongside till you couldn't see the garden; so I suppose the old man wasn't looking at it, but meditating on what he had been going to say. At last my mother put her head on his shoulder, and said, "Tell us now, then, Uncle; I'm listening. Children, do keep the shells and things to yourselves, and let aunt hear what Uncle Benjamin was saying!"

"Ay, ay," said he, turning round gravely; and then with a cheerful smile,—"Well, girls, well, I was just overhauling that same; and it's wonderful in how short a time one looks up the whole log it's taken such a many years chalking down! You, Sally now, by the church-books you're but five year younger than myself, yet you're a perfect girl to me. You've your children there; if they make you old one way, they make you younger another; while here am I—fifty-three I made myself last birthday, by the old Bible in my chest—older than my father was when he died, and he was seventy-one. You've no idee, Niece Barbara, how hard work and weather both wears a man down at sea; one day to windward on tops'l-yard, hauling out an earing with a wet skin, the blast cutting you like a knife; t' other, sweating at an oar, with the water as calm and hot as the glass on a skylight. But most 'specially, it's the having nothing to look to, no one to think of, that brings a sailor sooner to grey hairs and weariness. At the voyage end, he must ship again and in anchors, for what use is he of ashore? The sea's made him, and it must e'en take him."

"Well, I liked the service, and was well treated, as a steady hand, and ready for any work. I liked the freedom and the venturesomeness; although I own, Sally, dear, if there was one thing that haunted me, it was the thought of you and your Tom sitting at the fire in that same little bright room, as you were when I seed you a year after your marriage. Oftentimes it hove up in a dream, like a sail out of the sea, and seemed to draw nearer, when, behold you, 'All hands' 'd be sung out down the hatchway; or else I'd beat about and about it for a whole watch; an' most of all, when we wor at our noisiest, or doing our worst, the thought would come strongest."

"How's ever, I forgot that, when I seed you a widow, and knew you'd your own troubles. I thought on you often aftertimes, sittin' lone and dreary in the town; so I fancied myself in a

better berth where I was, knocked about in an old jackass frigate, chasing schooners that could sail round her, an' now and then overhauling a scuttled prize, or landing a cargo of greasy niggers. Even if I was getting crazy-timbered, like the old 'Minerva' herself, why, there was the blue seas as fresh as ever to keep us shaking; an' sometime or other we'd go quietly down, and be done with it. I'd the conning of her wheel in the starboard watch, and somehow felt a concern in the old craft that made up to me for the want of such with any kith or kin of mortal creatures. In a light wind, or a breeze astern, she yawed like a jackass, as she was, and with a head-wind, she kicked like one; but under double-reefed tops'ls she carried a small enough wheel, and wore well; so you may just think I had a kindness for the jade, not to speak of shipmates I had weathered it with so long. Well, one hot afternoon watch we were standing off the mouth of Old Calabar river in the tail of a light breeze, the three tops'ls just lifting, and the land well down, with only a thin haze over where it lay. I was leaning against the hammock-nettings, abaft the larboard fore-chains, keeping a lazy eye on the horizon to seaward, which was broken with the heat, so as you could hardly know water from sky. The water alongside was as blue as blue could be, you'd ha' thought it scarce broke under the cutwater at the bows. I don't know how it was, our being so long out, on salt junk and rotten water—or whether some'at was wrong about the upper-works—but just then a sort o' megrim come over me at sight of the sea. My head swam with the slow blue wash of it, in the middle of the white haze; I thought of all the poor fellows I'd heard tell of that fancied the waves a green field, and saw their little birth-town in the clouds, and so jumped o'erboard. I'd 'a' given a month's grog for a stiff breeze off-shore, an' a sail on the lee-bow in chase; or to put my mouth to a runnin' stream in the grass, and drink myself under-water, as I've seen an old queer stone-faced chap do the whole year round at a town-well. It wasn't long after, neither, when the man aloft sings out, 'Sail-ho!' and sure enough there was the three masts and hull of a ship to windward, hove high into the air with the heat, and cut through by the haze, so that you could see her portline and her royals plain, long before her larger canvas. It turned out to be the sloop-o'-war that relieved the 'Minerva' off the station, and bringing letters for the ship's company. There was one of 'em for me, Sally, which you'd sent afloat two years afore, from this here farm, when you settled in it; and here it 'ad been boxing the compass in chase of me. I s'pose by this time you've forgotten what you said in that 'ere letter; but, bless your kind heart, I've got it by memory as well as I know the ship's ropes. You said how you'd seen an old shipmate at Greenwich as told you I was in the 'Minerva,' and how you was hearing the wind roar through the trees the last night, but in the morn'ing, when you wrote, it was quite calm, and the fields so green out of the window. Only the sight of the shell above the fire-place made you put it to your ear, and the sound was so loud you 'most thought you heard the sea, till you took the notion of writing to me. You told me, Sal, you mind, what a difference there was 'twixt London an' the

country; so quiet it was, that it brought back your young thoughts, and so happy you felt stepping out into the garden of a morning, looking at the cows feeding in the green grass over the hedge; and you gave me a day's log of what you did at the farm, as reg'lar as an Indiaman's in the trades, to 'muse me like, you said, in a watch below. As soon as I overhauled it, the whole mess was waiting to hear the letter, and I'd got to read it out from one end to another twice running. You should ha' seen their faces, Sal, while they listened, every one half over his hammock, to hear. Not a man but praised you to the masthead, Sally, dear, and wished he had a wife that could fist such a screed; and an old foretop-man said it'd be a mighty good berth to lay up in for life. At the time I said nothing, but I was thinking of every word you'd written as if it was a drop of dew off a green leaf; something about a sort of new life, or a world I'd never heard of before, unless it was long ago when I didn't mind it. I couldn't think anybody else had a notion what them little words about trees, and grass, and growing gardens, and meadows, stood for; and I thought so the more when we came into port, and saw every one spend his earnings like a fool, and get drunk for weeks, and then ship again for a long voyage. When we reefed topsails in the morning-watch, I leant over the yard, and felt as sick as a boy; only it was at *thought* of the sea, and all concerned with it. The sea itself got to me all of a sudden like a great, unnat'ral, hate'f'l, livin' thing, as all my life long had kept me box-hauling and beating about, out o' sight of some blessed river-mouth that ran right out of the very sky. I couldn't believe I'd ever get quit of it, for I don't think as I ever noticed before what a force was in every heave of the waves, or what a deepness was under 'em: till at last the old frigate was tumbling home-bound before a strong sou'-wester.

"When we were paid off at Spithead, an' I'd got my traps ashore at Plymouth-point, I turns in to snooze out the three watches for once; but three shipmates hauled me out at eight bells of the middle watch, to drink success to the cruise on shore. So the first thing next day, I hired a donkey, and went over to the Reach, in sight of Spithead and the sea, just to give the old brine-tub a parting hail. The spring-tide was coming in full, and a seventy-four and a frigate standing out under all sail, an' everything looked so brisk and fresh in the offing, while the beach behind, and the town was so dirty-like and smoky, that a sort of terror came over me at the idee of being wiled out once more. So I gave a long look at the craft and the sea-line, an', thinks I, it's don't signify, old salt-and-blue, here I am out of your law; mother 'arth shall have my bones yet, an' not need a shot to sink them. It's my last sight of blue water; I'll never more hear the ripple alongside in the hammock, nor hand canvas on a yard. I own it seemed melancholy-like, as if I'd remembered every messmate and shipmate I ever sailed with. The tide had almost floated the beast off ground as he stood, and, when we wore round to make the port again, I could ha' fancied the sea was coming after me, hand-over-hand, it broke with such a splash under the creature's counter. There it was, too, looking through the end of every street in the town, like

some great eye watching you; an' I didn't feel easy in my mind till the coach I got aboard of dropped it under the hills, and we bearing right away into the green land.

"How'sever, girls, I must just ball up this here long yarn I've been spinning, and pay out no more cable, if I'm to ride at anchor with a clear hause. I'd some thoughts of gettin' a sort of a jury-berth rigged for myself, in some out-o'-way place, and living like one o' them old hermits I've heerd called anchoryites, because they were moored head and stern in a wilderness. But I know how it 'ud be; in a fortnight's time I'd be cutting cable, and off to sea in the first ship, if it were only the one as would soonest go down. After all I thought about the green leaves, an' o' the smeli of the earth, I do believe, Sally, lass, I had a longing all the while far more for a kind heart or two, and some pleasant faces to pass the life-lines around, ere letting slip. So here I be, the old hulk you see me, Sal, come athwart you to ask you to let me moor alongside till I break up. Why, 'aess you, I didn't need that squeeze o' the hand to show you'll not leave me adrift. I've seen it all along by your looks, both of you. But you can't tell how this here quietness, with the look of the garden outside, and the bird singing in the bushes, comes right into the heart when it's been weary. It's a'most as I could feel the very harbour-waters of life lipping up between you and me, when all the time before, one's been aloft sailing on the face of trouble and loneliness."

So old Uncle Ben was settled down to live with us; and as he had saved prize-money, and got an out-pension for his lost arm, he was comfortably enough off, and would have his share in the keeping up of the house. For a good while, I remember, he took up every little job about the place that was least like what he had been used to afloat, as if he wanted to forget all connected with the sea; and it was queer enough to see him early of a morning in the garden hoeing cabbages, or digging ground, in an old blue jacket and well-scrubbed canvas-trousers, and a large straw hat. After breakfast and dinner you would see him smoking a long pipe under the large plane-tree at the end of the house, with an eye on the chimney-can aloft, to notice the wind. Then he had what he called his quarter-deck walk with my mother or Aunt Barbara before the door, and at every turn he would wait till his companion was ready to go back again. Every night, when we were going to bed, we would hear him pacing backwards and forwards outside, six steps and round again, in a walk behind the kitchen, where he could get a free prospect, and see what sort of weather it was to be. If there was much wind, or a bright moonlight night, after a while, old Ben was sure to keep one hour of the middle watch, walking there; and many's the long talk I've had with him, when I was a boy, in these watches. I would slip out of bed quietly, and down stairs with one of his old pilot-coats on, to hear a story from him; and there we'd walk, he with his pipe, and I listening to a yarn about the war, the slave-trade, a cutting-out, or a chase, while the wind roared in the trees, and the planks in the carpenter's wood-yard rattled and creaked again. There he was in

his element, and I caught a sort of strange wild notion of what he was speaking about, and something of a spirit of the sea, which seemed to be what I had longed for years before. But this was all on the sly from my mother, poor dear woman; and for Uncle Ben's part, I believe the good old man fancied he was warning me against the sea, which he was aware my mother hated. I never knew a man who loved the sea from the bottom of his heart, with all its hardships and stirring perils, as he did; the whole story about his being wearied and longing for the land was, I fancy, a sudden whim he took into his head after a three years' cruise. In a few months he got restless, knocked off his little jobs, and, between his long spells at the pipe, the only thing which seemed to give him any satisfaction was telling stories about the sea to every one whom he could get hold of, doing anything which could remind him of it, or reading books of old voyages. He and I built a whole fleet of ships of every rig, from a frigate to a cutter, over at the carpenter's; which we floated on the pond when we had cleared it of ducks; and in six months' time I knew every rope, sail, and evolution, almost as well as I do now, and could box the compass like a pilot's boy.

Some rough November night, when we were all sitting round the fire, with the shutters shut, and could hear the storm getting up by degrees in the distance, till it burst along the garden-lane against our windows, and then howled away into the trees, I've heard my mother say, with a shiver, looking at the old man, "God be with those at sea tonight, Uncle! what a blessing to have a roof to cover us!" One time, Uncle Ben had been listening for more than an hour to the sound, without almost speaking, only sitting up to light his pipe again; his face had kindled at the moment, and he seemed just as if he was going to start on his feet, but at my mother's words his features fell, he looked grave and half ashamed, shook his head, and said, "Ay, ay, Sally, no doubt, no doubt;" after which he began puffing away tremendously at his pipe. "Uncle Ben," said I, pulling him by the coat, "what'd they be doing now? when would they take in the topsails?"

"Why, bless you, boy," said he, gruffly, "you needn't ave asked that. I know as well as if I seed it this moment; there's a thousand craft now under their three double-reefed-tops'ls, and fore and main-stays'ls, safer on the open sea than we are sitting here; ay, and drier too, for the watch to the lee of the long-boat. A mere stiffish sou'-wester, Bill, lad. But Sal, dear, didn't I ax you to let me clap on a couple of backstays to that 'ere long chimney amidships, before the rough weather? I shouldn't wonder if we have it a gale from the nor'east before long, an' then you're as sure of carrying it away as if you set the 'Minerva's' new mizen-tops' upon it."

This notion of the old sailor's, who would fain have made the farm-house look as like a ship as possible on any pretext, might have been as well carried out; for, a year or two after, the tall chimney did fall, and went down through the slates to the kitchen-floor, though happily nobody was hurt. However, at present, it only took him into the wake of an old yarn

about a captain who went mad, and would set the more sail the harder it blew, until the three to-gallant-masts went all at once, and the captain wounded two of the lieutenants with his pistols, before he could be secured, and the canvas taken in. Then he told us a stranger tale of a passenger on board of an Indiaman he was in, who had been hidden at Gravesend by the captain for a great bribe, when he was escaping from England; the bad weather they had, till in an awful storm his conscience made him so terrified, that he let out such things, that the men said he was a Jonah, and four of them took him out of his berth at night, and hove him overboard secretly; but none of the four ever saw land again. Old Ben, however, contrived to throw into all these stories such a spice of life and reality, as showed he secretly delighted in the remembrance. You would have thought you heard the wind roar, and the waves washing up, and saw the very ropes and canvas. It was evident he and I looked at the whole thing from another side than the rest who listened, like a rough sea at sunrise, all bright one way, all dark another: and for my part, I understood most of the niceties of the matter, on account of our frequent conversations together, and our building so many models.

My mother drew in her breath with a long sigh, looking round at us all; and, "Dear, dear," said Aunt Barbara, "to think that men can be so foolish as to trust themselves on the wild ocean! And what's it all for, I wonder, that they can't be well at home?"

"Why, niece, you don't think, I s'pose, when you take your tea and sugar night and morning, and put on your gown, how all them matters, and many more, has cost men thousands of miles of salt-water ploughing, and lying out over and over again on the slant yards while you're asleep, and the wheel never wanting a hand. Where'd you be if some fellows didn't take a fancy to the sea?"

"Ah, that's true, Uncle Benjamin," said the old lady; "so it is! 'Tis all for the best, I daresay, except indeed the world were of one piece."

"Bless'd if I think that would be a change for the better," said Uncle Ben, with his eyes sparkling up; "the world'd rot in no time, it would; or else you'd have a desert instead, no man could pass over. You can't make the old blue sea common, thank God! nor wearisome; nor lay it down with them railways as I hear is being started all over this country. It'll last them out, for a fair track to hearts-of-oak that can't abide the dry doings of your hard-an'-fast folk ashore. To tell the truth, I'm ashamed, myself, of lying like an old log here, while I think I see the 'Minerva' driving the white dust across her forefoot, and shaking out her tops'ls again in a night like this!"

"Uncle, Uncle Ben!" exclaimed my mother, seriously; "I know it's only a spark of your old feelings, but you don't think how you may excite little Bill there's mind, young as he is. I noticed the foolish boy look so just now, and I'm afraid he's got too fond of sailing ships lately."

The old man looked as guilty as I did, and after a little he said—"Bill, d'ye hear your mother, boy; it's a dog's life, lad, it's a dog's life, so it is; and don't you go for to think of it because I'm

open and aboveboard with ye. And the worst of it is, that the sea's a sort o' taste a man never gets out of his mouth: you may break him of drinking or cards, but *that's* a thought he'll no more get get quit of till he dies, than that there shell can lose the sound of it without being broken to shivers. Why, when I lie awake of a night here, my mind seems too wide for me; as if every thousand miles I've gone over, and every broad look-out from the masthead, rough or calm, black or bright, had grown into me; and every little paltry thing I've done in the daytime, and every separate stone or tree, looks swallowed up like in my thoughts. But don't think, Sal, dear, that I'm discontented living with ye. No, I've seen and felt here, at your hearth-stone, something I know well is better far than aught from here to the Pacific; only it can't be made my own altogether. I look on, and I don't feel as if I'd begun at the beginning with you, all fair and ship-shape; somehow I think now an' then of what might ha' been. The anchor's down and holds, Sal, but with too much scope of cable to feel it, 'cept when that same restlessness begins to heave me off; we'll bring her up to the ground by little and little."

Well, for a while after this again, Old Ben did seem to make up his mind to a life on shore, out of sight of blue water. He would even wander out into the fields, when the spring came round, with the two little girls, and take pleasure for hours in watching them build child's houses, and seeing how the green things had grown since the day before. He enjoyed his pipe as much as ever, but I don't think he spoke so often about the sea, or told so many yarns, so that sometimes you would have thought he had forgotten it. Once, indeed, there came two fellows dressed like regular tars to the door begging, with a pass which said they had been shipwrecked. Uncle Ben was overjoyed at the thought of talking to men who had been at sea; he had them in, and treated them to some grog and pipes. They didn't seem to like the knowing cut of the old man's jib, though; when he asked the ships they had been in, and the ports they sailed to, and they named one, he was down upon them: not a ship but he knew something about her, and could cross-haul them somewhere or other. He smoked their cant sea-phrases after a little, though it was plain how slow the real sailor was to believe a rogue could be found passing himself off for true-blue. However, when he did discover it, you would have laughed at the quick time the two Liverpool dock-lubbers took to get out of the house, and away from the old man's indignation. Latterly, too, our next neighbour the carpenter got to be a crony of his; they would sit together in the carpenter's porch talking for two or three hours on end of an evening; and it was good to see the carpenter's respectful, simple way of listening to his companion, as he explained how to get up jury-masts, or gave examples of the merits of different kinds of timber for a weatherly spar.

But the second winter after Old Ben came to us he didn't stand well; he appeared to fail a good deal, and the east wind always gave him a sharp cough. He was more than ever with my mother, of whom he was exceedingly fond, as well as of

my sisters ; and of a Sunday evening he would ask one of them to read out of the Bible some of the chapters where the sea is mentioned. Sometimes it was about Noah in the ark, or Jonah in the ship of Tarshish, or the Psalm about "them who go down to the sea in ships." Then there was Jesus Christ and his disciples in the boat, and the storm that turned into a calm at His bidding ; and the apostle Paul, who was cast away on an island ; and I've sometimes been struck since at remembering what a whole Bible in itself there was in these choice pieces of his, which the old man came to know so well that he would set the little girl right if she made a mistake in her reading aloud. He took an odd pleasure also in hearing the service for the dead at sea, if it was done deep and solemn ; many was the real scene, he said, it brought up to him when he had heard it. There was one part in the Revelation, I recollect, though, which he had never fallen upon, till once my mother picked it out, and bade little Mary read it. It was in the summer-time, such a clear, still night that we could hear the church clock outside of the village striking nine, through a lane in the wood between, while we listened to the chapter ; and the quietness of the whole country round seemed to slip in afterwards at the open window. The words were these, "And the sea gave up the dead which were in it ;" and a verse or two on, "And I saw a new heaven and a new earth ; for the first heaven and the first earth were passed away ; and there was no more sea."

"Eh, Mary !" said Uncle Ben, waiting to see if it was the end of a verse, "what's that ? Are you sure it's down in the book ? Take a turn there, my dear, and read it again,—slower."

Little Mary went over the same words again, but Uncle Ben would look himself, to be sure it was in the Bible.

"Well," said he, "it's logged down there in black and white, with a royal arms outside of the whole, to show there's nothing smuggled aboard ; so it must be true. Only I'd not ha' believed it on the chaplain's oath, and I don't think there was one man or officer in the 'Minerva' that wouldn't have laughed at the notion of an 'arth and sky without a sea ! Belay there, Mary, will you, for to-night, and let's think over it, for it's a matter I don't all at once see the bearings of."

The pipe old Ben smoked that night was a long one, and more silent than common ; and I've no doubt he was turning over the question seriously, and pondering how to settle it, till he turned in.

It was not long after this that he confided to me, little by little, what had been gradually coming more and more into his mind for months, although he was ashamed to tell it straightforward to my mother and aunt.

"Bill, my boy," said he at last, "it's no use keeping off an' on no longer about what I've got at heart. I'm getting old, I think, fast, and I'm afraid it won't do just to ship again for a three months' voyage or so, out o' sight of land. I've got too soft already to heave up anchor, and p'raps I'd find myself too soon thinking of the green grass and your mother's hearthside, for a bare look-out to windward. It's a fancy, Bill, boy, it's a fancy, but one that won't bear th'arting

no longer. I tell you what, I must see the old blue ocean once more, and smell the sea-breeze. It's all very well talking about the comforts o' land, and such like, but I couldn't die happy without a sight of that same uncomfortable, dreary, homeless world, as they calls it, that I passed my life on. An' so it is, a world in itself, Bill, nothing like aught here. And harkee, Bill, I've a notion you'd like to have a squint at it for once too ; but mind, it's for good and all : you must take a long pull and be done, when you're at it, an' then come home and mind your schooling ; for I know your mother's set her heart against the thought of your going to sea, and I can't say I'd like you to go myself, takin' all things together. So I'll tell you how it's to be done, Bill, boy. I've got it into my head, and no make-believe, either, as how a spell of what they call sea-bathing 'd do me good for them aches I had in the winter. Just you keep a stopper on your jaw, now, and you'll see you and I'll have our first and last look of the broad ocean ere a fortnight's gone."

The old man managed it just as he had said, and in a short time he and I went off together by ourselves to stay a week or two at a little fishing village on the westmost point of Cheshire coast ; for Uncle Ben took care not to come in sight of it anywhere short of a full prospect of the main ocean. It was dark when we got there, so that we saw nothing but some lights on the pier where the boats were coming in with fish, and we heard the heavy wash of the tide among the stakes and shingle, with a long glimmer of dull light in the sky of the cloudy autumn night, above the black distance. Although we lived not very far off from salt water, it was the first time in my life I was to see it, so I was quite excited at the thought, and all the old sailor's yarns and nautical ideas thronged on my mind, as if I was going to realize them ; but notwithstanding, I slept sound with weariness. Old Ben came to my little bed next morning and woke me, and I saw by his fresh, cheerful look that he had been out for some time already. I dressed myself in a minute, and ran out ; but at the first step the whole scene rushed upon me like a vision. I fairly started at the sight of such a breadth of water, going so far out into the clear sky ; and at the dark keen colour of the whole, with the deep green waves which rolled in and out, breaking white about the pier, and the breezy blue far off. My eyes blinked for a moment, and then I looked again for a long while without speaking, until I burst out at last, "Oh, Uncle Ben !"

"Glorious enough, isn't it, boy !" said he, and the old man stood by me with tears in his eyes, I think ; and neither of us said anything more that first time. But we went down low upon the long wet sands, till the ebb-tide sprayed at our feet, and I supposed it was coming in. A large fishing-boat with its red sail, which was running in for the pier, seemed to be level with our heads, as if the water stood above the land, and two large craft near the horizon, leaning over with the wind in the midst of a blue haze to the south-west, were seen to melt into it together in their white canvas.

All the dreams and wishes I had ever had of future life, and wild, free wandering, when I was sitting over my slate in school, or tired of a day's

idleness at home, they came back upon me while we were staying here. Two or three times I said to Uncle Ben, "I'll be a sailor, let my mother or anybody say what they will," and though I can't deny the difference of the reality from these green fancies, I haven't repented choosing the sea yet. It suits my temper, and, taking one thing with another, I like the life and the change, and prefer it a thousand times to any shore-going business I know of. As for the old man, it's too long to tell you how happy he was that fortnight,—dipping in the surge of the tide like a child in a bath, spinning long yarns with the old fishermen at night, and taking me a short cruise now and then in a spare cable. At the end he got dull again; but I remember what he said the last night, as he stood looking out to the horizon, the tide making fast at our feet—

"Bill," said he, heaving a long sigh, "I think I've gone far to fathom that 'ere verse in the Bible about there being no more sea. I recollect, when I was on it, I used sometimes to think of a happy after-life—when we die, you know—as somehow like the best o' things ashore; a pleasant land, with rivers and fields, trees and fruit, and no more hard work, nor keeping watch, nor rough weather. But I'm glad to have been took away from it, and to have tried the good o' these matters, an' to think pleasantly of the sea again. An' glad I am to have had one more look at it, just this fashion, if it was for nothing else but this, that now I think far more solemn like, an' deeper, of the life to come than I did. I've a notion it ought to look to all of us while we're in this life some'at like the sea; a thing we don't, none of us, after all, understand the nature of; only that it's full of God's power to work the bitter blood out of us, and there's many a wonder, and many a beautiful sight there, they don't dream of ashore. The dead don't seem to me to rot there, nor to be in this world at all, but to have gone right into the hand of the Almighty. But I don't say, Bill, my boy, as that there future life mayn't be on the other side of it altogether different; just as if in the other world there wasn't no more storms, nor hard schooling, nor separation, nor ignorance of what's to be. And so, perhaps, after all, what's said about it in the Bible may be what's called a figger!"

Next day we left the place for home; and I think the old man was satisfied, and took kindlier

again to his quiet ways. Everything about the place, and everybody in the house, appeared to be viewed fondly by him, as if he connected them with the notion of home. He talked often of the sea still, sometimes by way of a yarn, but oftener in a quiet, serious mood, like a region full of things he revered, and solemn events that had happened to him; till I daresay it became little more than a strange thought in his mind, which always returned most when he meditated on his end. Indeed, it was only about two years after this that old Uncle Ben got suddenly much weaker, and failed in his memory almost altogether; and shortly after he died, holding my mother by the hand, as if he remembered no one but her. It left a blank in the house at Mallow Farm which was not easily filled up. They kept up the hammock he had slung in his little bedroom for months, and I had it rigged again when I came home, and slept in it. At the village, too, they still remember Old Ben, how he used to step up the churchyard to service in his best canvas, as white as snow, and his blue coat with the anchor-buttons; and how he smoothed down his hair solemnly with his single hand at the church-door behind my mother. The landlord of the tavern changed his signboard from a waggoner with a mug of beer, to the "Old Tar" smoking his pipe on the sea-shore in a tremendous gale, with a wreck in the offing; for Uncle Ben had often invited him over on the Saturday night, he having been a soldier and served abroad. You may see the old man's mark to this day in a tall old beech-tree with its branches on one side cut into steps, which he used to call his foremast; as he went aloft on it regularly every sunset to have a look-out from the masthead. It stands at the end of his little walk behind the house; and many a time I've paced it myself to and fro, with my feet in the very marks of his footsteps, and thinking of his thoughts, as well as of all that's happened to myself since the nights he and I took our fox's-le turns there.

You may be surprised at my pretending to give you the old man's words so closely, but the fact is, the substance of them sunk deeply into my mind at the time. Besides, I knew his way so well, and loved him so well, that I could not help telling his story very much after his own fashion.

WILLIAM HANBARD.

WARDIE—SPRING-TIME.

View of Edinburgh from Wardie.

IN the exuberance of hope and life—
 When one is played on like an instrument
 By passion, and plain faces are divine,
 When one is richer in an evening star
 Than cities in their gold—far more than Spring
 We love the pensiveness of Autumn air,
 The songless fields, the flush of withering woods.
 For, as a prince may in his splendours sigh
 Because the splendours are his common wear,
 Youth pines within the sameness of delight;
 And the all-trying spirit un-content
 With aught than can be fully known, beguiles
 Itself with melancholy images,
 Sits down at gloomy banquets, broods o'er graves,
 Tries unknown sorrow's edge as curiously
 (And not without a strange prophetic thrill)
 As one might try a sword's, and makes itself
 Epicurean of fantastic grief.

But when the blood chills and the years go by,
 As we resemble Autumn more, the more
 We love the resurrection-time of Spring.
 And Spring is now around me. Snowdrops come,
 Sad sweet memorials of a man I loved.
 The crocus gleams along the garden walk,
 And from the tree-top sings the speckled thrush;
 Within the flying sunlights, twinkling troops
 Of chaffinches jerk here and there; beneath
 The shrubbery the blackbird runs, then flits
 With chattering cry, and at the ploughman's heel
 Within the red-drawn furrow stalks the rook.

This morning when the stormy front of March
 Is masked with June, and has as sweet a breath,

And sparrows fly with straws, and in the elms
 Rooks flap and caw, then stream off to the fields,
 And thence returning caw and flap again,
 I gaze, in idle pleasantness of mood,
 Far down, upon the harbour and the sea,
 The smoking steamer half-way 'cross the Firth
 Shrank to a beetle's size, the dark-brown sails
 Of scattered fishing-boats, and still beyond,
 Seen dimly through a veil of tender haze,
 The coast of Fife endorsed with ancient towns—
 As quaint and strange to-day, as when the Queen,
 Whose smile aye glittered on a headsman's axe,
 Beheld them from her tower of Holyrood
 And sighed for fruitful France, or turning, cowered
 At the dark shadow, Bothwell, at her side.

Behind, the wondrous City stretches dim
 With castle, spire, and column, from the line
 Of wavy Pentland, to the pillared range
 That keeps in memory the men who fell
 In the great war that closed at Waterloo.
 How white the pillars gleam against the hill
 While the spring sunlight flashes by!—and now
 As grey as all the rest! The wondrous Town,
 That keeps not Summer, when the Summer comes,
 Without her gates, but takes it to her heart!
 The mighty shadow of the Castle falls
 At noon athwart deep gardens; roses blow
 And fade in hearing of the chariot-wheel.
 High-lifted Capital that look'st abroad,
 With the great couchant Lion at thy side,
 O'er fertile plains embossed with woods and towns,
 O'er silent Leith's smoke-huddled spires and masts,
 O'er unlinked Forth, slow wandering with her isles

View of the Fife Coast from Wardie.

To Ocean's azure, spreading faint and wide,
O'er which the morning comes : if but thy spires
Were dipped in deeper sunshine, tenderer shade,—
Through bluer heaven rolled a brighter sun—
The traveller would call thee peer of Rome,
Or white-towered Florence on the mountain side.

Thou wear'st the glory of a sunken sun :
Thy wealth is sepulchres and noble names :
Burns trod thy pavements with his ploughman's
 stoop
And his black flaming eyes. Scott dwelt in thee,
The homeliest featured of the demigods,
Apollo, with a deep Northumbrian burr ;
And Jeffrey, with his sharp-cut critic face ;
And Lockhart, with his antique Roman taste,
And scorn whose touch, like the Torpedo, burned ;
And Wilson, wasteful of his splendid gifts
As hill-side of its streams in thunder-rain ;
And Chalmers, with those heavy slumberous lids
Veiling a prophet's eyes ; and Miller too,
Towering granitic among smooth-rubbed men,—
Of all that noble race but one remains,
Aytoun, with silver bugle at his side
That rang through all the gorges of romance—
Alas ! that 'tis so seldom at his lip !

Thou saw'st the Prince, for whom three nations
 weep,
The latest. How he looked and spoke that day
Will be remembered long. The land's esteem
He coldly wore, but with the shock of death
Esteem burst into love. Too late ! too late !
He cannot know it now. He loved thee too :

And never since the news of Flodden came
Heard'st thou a heavier message. Ah, that day
When flags were lowered, and boomed the solemn
 guns,
And in the streets men whispered "The poor
 Queen !"

The place is fair : but when the year hath grown
From snowdrops to the dusk auricula,
And skyey spaces scribbled o'er with boughs
Are banks of murmuring foliage, chestnut flowered,
Far fairer. Then, as in the Summer past,
From the red village underneath the hill,
When the long daylight closes, in the hush
Comes the pathetic mirth of children's games :
Or sweet clear treble, as two lines of girls
Advance and then retire, singing the while
Snatches of some old ballad sore decayed,
And crumbling to no meaning with sheer age.
A childish drama watched by labouring men
In shirt-sleeves smoking at the open door,
With a strange softness stirring at their hearts.
Then when the darkness comes and voices cease,
The long-ranged brick-kilns glow, the mighty mole
Breaks out, like Aaron's rod, in buds of fire ;
And with a startling suddenness the light
That, like a glow-worm, slumbers on Inchkeith,
Glares out, then to a glow-worm shrinks again.
The sea is dark, but on the darker coast
Beyond, the ancient towns Queen Mary knew
Glitter like swarms of fire-flies here and there.
Come, Summer, from the south, and grow apace
From flower to flower until thy prime is reached,
Then linger, linger, linger o'er the rose !

ALEXANDER SMITH.

CONCERNING BEGINNINGS AND ENDS.

EVERYTHING in this world has a Beginning and an End.

After writing that sentence, which (as you see) sets forth a great general principle, I stopped for some time, to consider whether it holds always true. As one grows older, one grows always more cautious as to general principles. My young friend, when you are arguing any question with an acute opponent, you should, as a rule, never assent to any general principle which he may state. He may ask you, with an indignant air, Don't you admit that two and two make four? Let your answer be, No, I admit nothing, till I see how it touches the matter which concerns us at present. You do not know what may be involved in the admission sought; or what may follow from it. The most innocent-looking general principle may lead to the most appalling consequences. The general principle which appears most unquestionably true, may prove glaringly false in some very ordinary case. You should request time for consideration before you admit any axiom in morals, metaphysics, or politics: or you should ask your adversary what he means to build upon it, before you can say either yes or no to it. Do as the Scotch judges do when a difficult case has been argued before them. I discover from the newspapers that they are wont to say, that they will take such a case to *avizandum*: which I suppose (no one ever told me) means that they must think twice, or even oftener, before deciding a matter like *that*.

I have taken the general principle, already stated, to *avizandum*. It seems all right. But I remember, in thinking of it, at how great advantage a judge is placed, in trying to come to a sound decision. Very clever and well-informed men state the arguments on either side. And all the judge has to do, is to say which arguments seem to him the strongest. He has no fear that any have been overlooked. But a human being, weighing a general principle, must act as counsel on each side, as well as judge. He must call up before his mind, all that is to be said for and against it; as well as say whether the weightiest reasons make for or against. And he may quite overlook some important reason, on one side or other. He may quite forget something so obvious and familiar, that a child might have remembered it. Or he may fail to discern that some consideration which mainly decides his judgment, is open to a fatal objection, which every one can see is fatal the instant it is stated. Was it not Sir Isaac Newton, who had a pet cat and kitten? And did

not these animals annoy him while busy in his study, by frequently expressing their desire to be let out and in? The happy thought struck him, that he might save himself the trouble of often rising to open his study door for their passage, by providing a way that should always be practicable for their exit or entrance. And accordingly the great man cut in his door, a large hole for the cat to go out and in; and a small hole for the kitten. He failed to remember, what the stupidest bumpkin would have remembered, that the large hole through which the cat passed, might be made use of by the kitten too. And the illustrious philosopher discerned the error into which he had fallen, and the fatal objection to the principle on which he had acted, only when taught it by the logic of facts. Having provided the holes already mentioned, he waited with pride to see the creatures pass through them for the first time. And as they arose from the rug before the fire, where they had been lying, and evinced a disposition to roam to other scenes, the great mind stopped in some sublime calculation: the pen was laid down: and all but the greatest man watched them intently. They approached the door; and discerned the provision made for their comfort. The cat went through the door by the large hole provided for her; and instantly the kitten followed her THROUGH THE SAME HOLE! How the great man must have felt his error! There was no resisting the objection to the course he had pursued, that was brought forward by the act of the kitten. And it appears almost certain that if Newton, before committing himself by action, had argued the case: if he had stated the arguments in favour of the two holes; and if he had heard the housemaid on the other side; the error would have been averted. But then Newton had not the advantage which the Chancellor has; he had not the matter argued before him. He argued the matter on either side, for himself: and he overlooked a very obvious and irrefragable consideration.

You and I, my reader, have many a time done what was perfectly analogous to the doing of Sir Isaac Newton. We have formed opinions and expressed them: and we have done things, thinking we were doing wisely and right: just because we forgot something so plain that you would have said no mortal could forget it,—something which showed that the opinion was idiotic, and the doing that of a fool. You know, more particularly, how men who have committed great crimes, such as murder, seem by some infatuation to have been

able to discern only the one obvious reason that seemed to make the commission of that crime a thing tending to their advantage; and to have been incapable of looking just a handbreadth farther on, so as to see the fatal, crushing objection to the course they took;—the absolute ruin and destruction that must of necessity follow. And the opinion of many men upon any subject, may often be likened to a table which the art of the upholsterer has fashioned to stand upon a single leg. They hold the opinion for just one reason; and that reason an unsound one. Give that reason a blow with the fatal, unanswerable objection; down comes the opinion: even as down would come the table, whose single leg was knocked away.

I am well aware that the severe critic who has read the lines which have been written, may feel disposed to accuse the writer of a disposition to wander from his path. A great deal of what has been said, is as when you take a look over the stile at a footpath running away from the beaten highway you are to traverse; and end by getting over the stile, and walking a little way along the footpath: intending, no doubt, ultimately to return to the beaten highway, and to plod steadily along it. All this discussion of general principles ought to have been despatched in a line or two, analogous to the glance over the stile. But let the critic take into account the fact, that since the writer last sat down to write an essay, he has written a great many serious pages, which it cost hard work to write, and in which nothing in the nature of an intellectual frisk could be permitted. And thus it is, that with a great sense of relief, he finds himself writing a page, whereon he may mildly disport himself; casting logical and other trammels aside; and enjoying a little mental recreation. And now, going back from the path, and getting over the stile, we are in the highway again. We turned out of the highway, you remember, at the point where it was said, that EVERYTHING IN THIS WORLD HAS A BEGINNING AND AN END: and that, upon reflection, it seemed that the general principle might be accepted as true. No doubt, in our early days, we have heard sermons which we thought would never end; yet ultimately, and after the expiration of long time, they did. And even those things within our recollection, which seem as exceptions to the great principle, are probably exceptions rather in appearance than in reality. I remember, indeed, an aged clergyman whom in my youth I occasionally heard preach; who always began the first sentence of his sermon, but who never ended it; at least not till the close of the sermon: and no human being could know when that sentence ended, or say at what point (if any point in particular) it ceased to

be. Still even that first sentence of each discourse of that good man, came to a close somehow. It stopped, if it was not finished: because the sermon stopped. So you see that even that indefinite sentence can hardly be regarded as an exception to the rule that all things in this world have a beginning and an end.

And now, my friend, having laid down the broad principle with which this dissertation sets out; let me proceed to say, that it is one of the greatest blessings of this life, as well as one of the saddest things in this life, that there are such things as beginnings and ends.

We cannot bear a very long, uniform look-out. You may remember the pleasantly-told story of Miss Jane Taylor, of a certain clock. The pendulum of that clock began to calculate how often it would have to swing backwards and forwards in the week and the month to come: then, looking still farther into futurity, it calculated, by a pretty hard exercise of mental arithmetic, how often it would have to swing in a year. And it got so frightened at the awful prospect, that it determined at once to stop. There was something crushing in that long look-out. It was killing, to take in at once that unvaried way; on, and on, and on. The pendulum forgot the blessed fact of beginnings and ends: forgot that to our feeling there are beginnings and ends even in the duration, the expanse, the employment, which in fact is most unvarying. It is an unspeakable blessing that we can stop, and start again, in everything: and that we can fancy we do so, even when we do not. The pendulum was not afraid of a hundred beats, or of a thousand: but the prospect of millions terrified it. Yet millions are just an aggregate of many hundreds: and the pendulum could without fatigue do the hundred; and then set off again upon another hundred, and do that without fatigue. The journey, that crushes us down when we contemplate it as one long weary thing, can be borne when we divide it into stages. And one great lesson of practical wisdom is to train ourselves to mentally divide everything into stages: in short, to cling habitually to the invaluable doctrine and fact, of beginnings and ends.

There was a poor cabman at Paris who committed suicide, not long ago. He left behind him a letter, explaining his reasons for the miserable deed. His letter expressed no violent feeling: spoke of no great blow that had befallen him. It said that he ended his life, because he was "weary of doing the same things over and over again every day." The poor man's mind was doubtless unhinged. Yet you see what he did; and how he nursed his insanity. He looked too far ahead. He saw all life as one expanse. He forgot that life is broken into many stages: that it is made up of beginnings

and endings. He could not bring himself, for the time, to see it so. Each separate day he might have stood : but a thousand days held in prospect at once, beat him. It was as the bundle of rods was so impossible to break, though each single rod might easily enough be broken. It was the fallacy, which tells so heavily upon most public speakers : that you stand in great awe of a crowd of a thousand or two thousand men, each of whom individually would inspire you with no awe at all.

Now, my readers, I know perfectly well that you have all known a feeling of weariness and almost of despair arise, when you looked far forward, and saw the long weary way that seemed to stretch on and on before you in life. I believe that it is not so much what we are actually enduring at the time, that prompts the cry, "Now I can bear this no longer !" as some sudden vivid glimpse of all this, lasting on, and on, and on. There are few lives in which it is not expedient to "take short views : " few minds that without weariness and depression can take in at one view any very great part of their life at once. Sometimes there comes on us the poor Frenchman's feeling : Here is this same round over, and over, and over : the occupations of each day are a circle, and we are just going round and round it, like a horse in a mill. To-morrow will be like to-day : and then to-morrow ; and the day after that : and so on, on, on. The feeling is a morbid one ; and a wrong one : but it is a common one. A little of the sea in a tumbler is colourless : but a vast deal of the sea, seen in its ocean bed, is green. With life the case is reversed. In the commonplace course of life, the path we are actually treading may look rather green,—green, I mean, like the cheerful verdure of grass : but if you take in too great a prospect, the whole tract is apt to take the aspect of a desert waste, with only a green spot here and there. You will not add to the cheerfulness and hopefulness of man or of child, by drilling into him : This morning you will do such and such things : and all day such other things : and in the evening such other things : then you will sleep. To-morrow morning you will rise : and then the same things over and over : and so, on, on. I have known a malignant person who enjoyed the work of presenting to others such disheartening views of life. Let me, my reader, counsel the opposite course. Let us not look too far on. Let us not look at life as one unvaried expanse : although we may justly do so. Let us discipline our minds to look at life as a series of beginnings and ends. It is a succession of stages : and we shall think of one stage at a time. "Sufficient unto the day is the evil thereof." Most people can bear one day's evil : the thing that breaks men down, is the trying to bear, on one day, the evil of two days, twenty days, a hundred days. We can bear

a day of pain : followed by a night of pain : and that again by a day of pain : and thus onward. But we can bear each day and night of pain, only by taking each by itself. We can break each rod : but not the bundle. And the sufferer, in real great suffering, turns to the wall in blank despair, when he looks too far on : and takes in a uniform dreary expanse of suffering, unrelieved by the blessed relief of even fanciful beginnings and ends.

I remember a poor woman whom I used often to visit and pray with, in my first parish. She died of cancer : and the excruciating disease took eight months to run its course, after having reached the point at which the pain became almost intolerable. In all that long time, the poor woman told me that she was never aware that she had slept : it seemed to her that the time never came in which she ceased to be conscious of agony. Her sufferings formed an unbroken duration, undivided by beginnings and ends. She was a good Christian woman : and had a blessed hope in another world. But I can never cease to remember her despairing face, as she seemed to look onward to weeks of agony, always growing worse and worse, till it should wear her down to her grave.

The power and habit of taking comprehensive views, is not in every case a desirable thing. It is well for us that we should look at our work in life in its parts, rather than as a whole. Of course you understand what I mean. I am far from saying that we ought not oftentimes to consider what is the drift and bearing of all our life, and of all we are doing in it. I mean that to avoid a fatiguing and disheartening result, we should, for certain purposes, look not at the entire chain, but at each successive link of it. Of course, we know each link will be succeeded by the next : but let us think of them one at a time. Let us be thankful for Saturday night, and let us enjoy it : and let us hold at arm's length the intruding thought of Monday morning, when the shoulder must be put to the collar again. No doubt, in the work of life, every end is also a beginning. We rest for a little, perhaps only in thought and feeling ; and then we go at our work again. But it is a convenient thing, and it helps to carry us on in our way, to mark out a number of successive ends, and thus to divide our journey into successive stages. It is well for us that when we start, we cannot see how far we have to go. We should give up all effort in despair, if from the beginning we held in view all the interminable length of way, whose length we shall hardly feel when we are wiled away along it gradually, step by step. It has always appeared to me extremely bad policy in any preacher, who desires to keep up the interest of his congregation, to announce at the beginning of the sermon, that in the first place he will do so and so ; and in the

second place such another thing; and in the third place something else; and finally close with some practical remarks. I can say for myself, that whenever I hear any preacher say anything like that, an instant feeling of irksomeness and weariness possesses me. You cannot help thinking of the long tiresome way that is to be got over, before happily reaching the end. You check off each head of the sermon as it closes: but your relief at thinking it is done, is dashed by the thought of what a deal more is yet to come. No: the skilful preacher will not thus map out his subject, telling his hearers so exactly what a long way they have to go. He will wile them along, step by step. He will never let them have a long out-look. Let each head of discourse be announced as it is arrived at. People can bear one at a time, who would break down in the simultaneous prospect of three, not to say of seven or eight. And then, when the sermon is nearly done, you may, in a sentence, give a connected view of all you have said: and your skill will be shown if people think to themselves, what a long way they have been brought without the least sense of weariness. I lately heard a sermon, which was divided into seven heads. If the preacher had named them all at the beginning, the congregation would have ceased to listen: or would have listened under the oppressive thought of what a vast deal awaited them before they would be free. But each head was announced just as it was arrived at: the congregation was wiled along insensibly: and the sermon was listened to with breathless attention from the first sentence to the last.

Let it be so with life, and the work of life. It would crush down any man's resolution, if he saw in one glance the whole enormous bulk of labour, which he will get through in a lifetime: without feeling it so very much at each successive stage. It is well to break up our journey into separate portions: to take it bit by bit: to set ourselves a number of successive ends: even though we know that we are practising a sort of deception on ourselves; and that when the end we have immediately in view is reached, our work will be just as far from being done, as ever. Your little boy has before him the mighty task of his education. You do not tell the little thing at once, the whole extent of toil that is included in *that*. No: you fix on a small part of the work that is to be done: you show the little man *that* as his first end. *That* is the first thing to be done; and then we shall see what is to come next. And yet you know, and the little child knows just as well, that after he has conquered that tremendous alphabet, he must just begin again with something else; that by a hundred steps, each set out at first as an end to be attained; and each indeed an end, but likewise a beginning; he must mount from his first little book

onwards and upwards into the fields of knowledge and learning. Let us, if we are wise men, hold by the grand principle of STEP BY STEP: let us be thankful that God, knowing that weariness is a thing that must be felt at intervals by the minds and bodies of all his creatures, has appointed that they shall live in a world of Beginnings and Ends. Yes: we can stand a day at a time: but if we forget the law of beginnings and ends, we shall come to be bearing the weight of a hundred days together. And *that* will crush the strongest.

Many people, of an anxious temperament, are like the pendulum already mentioned. The pendulum looked ahead to the incalculable multitude of ticks, forgetting that there would always be a moment to tick in. And you can easily see that many human beings plod heavily and dully through their work in life, because instead of giving their mind mainly to the present tick, they are thinking of the innumerable ticks that are coming. You know quite well that the work of life is done by most animals that have to work, in a dull spiritless way. Few go through their work in a cheerful, lively way. Even inferior animals are coming to imitate their rational fellow-creatures. The other day, I was driving in a cab along a certain broad and ugly highway, which unites Athens with the Piræus. I overtook and passed various drays, drawn by fine large horses. I carefully remarked the expression of the countenance of each successive horse. All of them had a very gloomy and melancholy look. They seemed as though they were enduring. They could stand it; and that was all. And I thought, here is an example of the way in which this world mainly goes on. It goes on: it gets through: but not cheerfully. You could know, even if you had no better means of knowing, that there is something wrong. And the working bees of the human race, do, for the most part, go through their work like the dull, down-looking horse. The horses were plump and sleek: they were plainly well fed and well groomed: yet their expression was sorrowful, or at least apathetic. It would have struck you less, to have seen that dull look on the face of some poor, half-starved screw. And you know that it is generally the human beings whose material advantages are the greatest, who have the most unsatisfied and unhappy expression of countenance. Look at the portraits of cabinet-ministers and the like. Few work with a light heart, and with enjoyment in their work. Many forebodings, and many cares, sit heavily upon the heart and brain of most. Oh for more practical belief in Beginnings and Ends!

It is characteristic of those things which possess a Beginning and an End, that they also possess a Middle, of greater or less extent. But we do not

mind about the middle nearly so much. The middle is much less affecting and striking. It is the first start, and then the close, that we mainly feel. You know the peculiar interest with which we look at the setting sun of summer, in his last minutes above the horizon. Of course he was going on just as fast through all the day: but at mid-day, we did not know the value of each minute, as we do when he is fast going down. I have been touched by the sight of human life, ebbing almost visibly away: and you could not but think of the sun in his last little space above the mountains, or above the sea. I remember two old gentlemen, great friends: both on the extreme verge of life. One was above ninety: the other above eighty. But their wits were sound and clear; and, better still, their hearts were right. They confessed that they were no more than strangers and pilgrims on the earth: they declared plainly that they sought a country, far away, where most of those they had cared for were waiting for them. But the body was very nearly worn out: and though the face of each was pleasant to look at, paralysis had laid its grasp upon the aged machinery of limb and muscle which had played so long. I used, for a few weeks, to go one evening in the week and sit with them, and take tea. They always had tea in large breakfast cups: other cups would not have done. I remember how the two paralytic hands shook about, as they tried to drink their tea. There they were, the two old friends: they had been friends from boyhood, and they had been over the world together. You could not have looked, my friend, but with eyes somewhat wet, at the large tea-cups, shaking about; as the old men with difficulty raised them to their lips. And there was a thing that particularly struck me. There was a large old-fashioned watch, always on a little stand on the tea-table, ticking on and on. You seemed to feel it measuring out the last minutes, running fast away. It always awed me to look at it and hear it. Only for a few weeks did I thus visit those old friends, till one died: and the other soon followed him, where there are no palsied hands or aged hearts. No doubt, through all the years the old-fashioned watch had gone about in the old gentleman's pocket, life had been ebbing as really and as fast as then. And the sands were running as quickly for me, as for the aged pilgrims. But then with me it was the middle; and to them it was the end. And I always felt it very solemn and touching, to look at the two old men on the confines of life; and at the watch loudly ticking off their last hours. One seemed to feel time ebbing; as you see the setting sun go down.

Beginnings are difficult. It is very hard to

begin rightly in a new work or office of any kind. And I am thinking not merely of the inertia to be overcome, in taking to work: though that is a great fact. In writing a sermon or an essay, the first page is much the hardest. You know, if costs a locomotive engine a great effort to start its train: once the train is off, the engine keeps it going at great speed with a tenth, or less, of the first heavy pull. But I am thinking now of the many foolish things which you are sure to say and do in your ignorance, and in the novelty of the situation. Even a Lord Chancellor has behaved very absurdly in his first experience of his great elevation. It would be a great blessing to many men to be taken elsewhere, and have a fresh start. As a general rule, a clergyman should not stay all his life in his first parish. His parishioners will never forget the foolish things he did at his first coming, in his inexperienced youth. There, he cannot get over these: but elsewhere he would have the good of them, without the ill. He would have the experience, dearly bought: while the story of the blunders and troubles by which it was bought, would be forgotten. I daresay there are people, miserable and useless where they are; who if they could only get away to a new place, and begin again, would be all right. In that new place they would avoid the errors and follies by which they have made their present place too hot to hold them. Give them a new start: give them another chance: and taught by their experience of the scrapes and unhappiness into which they got by their hasty words, their ill temper, their suspicion and impatience, their domineering spirit, and their determination in little things to have their own way; you would find them do excellently. Yes, there is something admirable about a Beginning! There is something cheering to the poor fellow who has got the page on which he is writing, hopelessly blotted and befouled, when you turn over a new leaf, and give him the fresh unsullied expanse to commence anew! It is like wiping out a debt that never can be paid, and that keeps the poor struggling head under water: but wipe it out; and oh with what new life will the relieved man go through all his duty! It is a terrible thing to drag a lengthening chain: to know that, do what you may, the old blot remains, and cannot be got rid of. I know various people, soured, useless, and unhappy, who (I am sure) would be set right for ever, if they could but be taken away from the muddle into which they have got themselves, and allowed to begin again somewhere else. I wish I were the patron of six livings in the Church. I think I could make something good and happy of six men who are turned to poor account now. But alas, that in many things there is no second chance! You take the wrong turning; and you

are compelled to go on in it, long after you have found that it is wrong. You have made your bed, and you must lie on it. And it is sad to think how early in life, all life may be marred. A mere boy or girl may get into the dismal lane which has no turning; and out of which they never can get, to start afresh in a better track. How many of us, my readers, would be infinitely better and happier, if we could but begin again!

An End is sometimes a very great blessing. I have no doubt, my readers, that in your childhood you have often felt this when a sermon was brought to a close. Perhaps in maturer years you have experienced a like emotion of relief under the like circumstances. I can say deliberately that never in my youth did I once wish that such a discourse should be longer than it was. Yet we all remember how we have shrunk from Ends. You may have read a fairy tale by Mr. Thackeray, with illustrations by its author. One of these is a cartoon, representing a boy eating a bun, apparently of superior quality; and at the same time expressing a sentiment common to early youth. He eats: and as he eats, he speaks as follows: "Oh what fun! Nice plum-bun! How I wish it never was done!" I remember the mental state. I have known it well. In my mind it is linked with the thought of plum-pudding, and of other luxuries and dainties. It was sad to see the object lessen, as it was enjoyed: to see it melt away, like a summer sunset! And about Christmas-time, one had sometimes a like feeling as to the appetite and relish for plum-pudding and the like. Would it were unceasing! I mean the appetite. But you remember how it flagged. And though you stimulated it with cold water, yet the fourth supply beat you: and had to be taken away. And you remember, too, how you shrunk from the end of your holiday season: and wished that time would stand still. You may have read the awful scene in Christopher Marlowe's *Faustus*, where the hapless philosopher, on the verge of his appointed season, seems to cling to each moment as it passes away from him. And oh my reader, if the great work of life have not been done while the day lasted, think how awful it will be to feel that the end of the day of grace is here! Think of poor Queen Elizabeth in her dying hour, offering all the wealth of her kingdom for another day of life! We cannot, in the commonplace days of ordinary health and occupation, rightly realize the tremendous fact: but think of the End of this life, to the man without the good part in the Redeemer! To feel that all in the world you have toiled for and loved is going from you: to feel your feeble hand losing its grasp of all: to see the faces around grow dim through the mists of death: to feel the weary

heart pausing, and the last chill creeping upwards: to feel that you are drawn irresistibly to the edge of the awful gulf,—and no hope beyond! May God, for Christ's sake, save every soul that shall ever read this page from that awful End!

It is the end of a career that gives the character to it all. We feel as if a life, however honourable and happy, were blighted by a sorry ending. The thought of Napoleon at St. Helena squabbling about the thickness of his camp soup, and the number of clean shirts to be allowed him, casts back an impression of pettiness upon the man even in his mid-career. There is a graver consideration. If a man had lived many years in usefulness and honour, but finally fell into grievous sin and shame, we should think of his life as on the whole a shameful one. But if a man end his career nobly: if his last years are honourable and happy: we should think of his life on the whole as one of happiness and honour, though its beginning were ever so lowly and sad. You remember how a great king of ancient days asked a philosopher to name some of the happiest of the race. The philosopher named several men, all of whom were dead. The king asked him why he did not think of men still living: "Look at all my splendour," he said to the philosopher: "why do you not think of me?" "Ah," said the wise man; "who knows what your life and your lot may be yet? I call no man happy before he dies!" [Distinguished classical scholar, I am not telling the story for you.] And, sure enough, that monarch was reduced to captivity and misery; and died a miserable captive: and so you would not say that his life was a happy or a prosperous one on the whole. But in the most important of all our concerns, my friend, the End is far more important than that. You know that though the monarch, vanquished and uncrowned, died in a dungeon, *that* could not blot out the years of royalty he had actually lived. He had been a king, once; however fallen now. The man who sits by his lonely fireside, silent and deserted, can yet remember the days when that quiet dwelling was noisy and gladsome with young voices: they were real days, when his children were round him; and it does him good yet to look back on them,—though now the little things are in their graves. But the fearful thing about the professing Christian who ends in sin and shame, is this: He dare not comfort himself under the present wretchedness, by looking back to better days, when he thought he was safe. The fearful thing is that this present end of sin has power to blot out those better days: if a man, however fair his profession, end at last manifestly not a Christian, this proves that he never was a Christian at all! You see what tremendous issues depend upon the Christian life ending well! It is little to say that

ending ill is a sad thing at the time : it is that ending ill flings back a baleful light on all the days that went before ! If the end be bad, then there was something amiss all along, however little suspected it may have been. It is only when the end is well over, that you can be perfectly sure you are safe. You remember Mr. Moultrie's beautiful poem, about his living children and his dead child. The living children were good : were all he could wish : but God only knew how temptation might prevail against them as years went on : but as for the dead one, *he* was safe. "It may be that the Tempter's wiles *their* souls from bliss may sever : But if our own poor faith fails not, *he* must be ours for ever !" Yes : that little one had passed the End : no evil nor peril could touch *him* more.

I daresay you have sometimes found that for a day or two, a line of poetry or some short sentence of prose would keep constantly recurring to your memory. I find it so ; and the line is sometimes Shakspeare's ; sometimes Tennyson's : often it is from a certain Volume (the Best Volume) of which it is my duty to think a great deal. And I remember how, not long since, for about a week, the line that was always recurring was one by Solomon, king and philosopher (and something more) : it was "Better is the end of a thing than the beginning." And at first I thought that the words sounded sad : and more heathen-like than Christian. Has it come to this, that God's Word tells us concerning the life God gave us, that the best thing that can happen to us is soonest to get rid of that sad gift ; and that each thing that comes our way, is something concerning which we may be glad when it is over ? I thought of Mr. Kingsley, and wondered if the sum of the matter, after all, is "The sooner it's over, the sooner to sleep : " and of Sophocles, and how he said "Not to be, is best of all : but when one hath come to this world, then to return with quickest step to whence he came, is next." But then I saw, gradually, that the words are neither cynical nor hopeless ; that they do but remind us of the great truth, that God would have our life here one of constant progress from good to better, and so the End best of all. We are to be "forgetting those things which are behind, and reaching forth unto those which are before," because the best things are still before us. If things in this world go as God intended they should, then everything is a step to something else ; something farther : which ought to be an advance on what went before it ; which ought to be better than what went before it. And above all, the End of our life here (if it end well), so safe and so happy, is far better than its Beginning, with all the perils of the voyage yet to come.

I thought of these things the other Sunday after-

noon, seeing the Beginning and the End almost side by side. At that service I did not preach : and I was sitting in a square seat in a certain church, listening to a very good sermon preached by a friend. A certain little boy, just four years old, came and sat beside me, leaning his head on me as a pillow : and soon after the beginning of the sermon, the little man (very properly) fell sound asleep. And (attending to the sermon all the while) I could not but look down at the fat rosy little face, and the abundance of curly hair ; the fresh, clear complexion, the cheerful, innocent expression ; and think how fair and pleasing a thing is early youth :—how beautiful and hopeful is our life's Beginning. And after service was over, on my way home, I went to see a revered friend, who, at the end of a long Christian life, was dying. There was the worn, ghastly face, with its sharp features : the weary, worn-out frame ; the weakened, wandering mind, so changed from what it used to be. And standing by that good believer's bed, and thinking of the little child, I said to myself, There is the Beginning of life : Here is the End : what shall we say in the view of that sad contrast ? And I thought, there and then, that "Better is the end of a thing than the beginning !" Yes : better is the end of a dangerous voyage than its outset. You have seen a ship sailing away upon a long, perilous voyage over the ocean : the day was fair and sunshiny, and the ship looked gay and trim, with her white sails and her freshly-painted sides. And you have seen a ship coming safe into port at the end of her thousands of miles over the deep, under a gloomy, stormy sky, and with hull and masts battered by winds and waves. And you have thought, I dare say, that better far was this ending, safe and sure, than even that sunshiny beginning, with all the risks before it. And here, in the worn figure on the weary bed, here is the safe end of the voyage of life ! Oh what perils are yet before the merry little child ! Who can say if that little one is to end in glory ? But to the dying Christian all these perils are over. He is safe, safe ! And then, remember, *this* is not yet the end, you see. It is not the end, that weary figure, lying on that bed of pain. It is only the last step before the end. A very little : and how glorious and happy that sufferer will be ! You would not wish to keep him here, when you think of all the blessedness into which the next step from this pain will bear him. Nay : but you may take up, in a sublimer significance than that of deliverance from mere earthly ill, the beautiful words of the greatest poet :

"Vex not his soul : oh let him pass ! He hates h'm,
That would, upon the rack of this rough world,
Stretch him out longer !"

A. K. H. B.

MOSHESH, THE CHIEF OF THE MOUNTAIN.

BY J. M. LUDLOW.

A PLEASANT work by a late French Protestant missionary, now director of the Paris Mission-House, M. Casalis, published in 1860, and recently translated into English, *The Basutos*, gives some details as to the above-named remarkable personage, whose name is familiar to most inhabitants of our South African colonies,—a man to whom nothing seems to have been wanting for greatness but a wider sphere, and, it must be said, a more single heart. Only, however, by comparing M. Casalis' work with the collection of the French *Journal des Missions*, can we form to ourselves a tolerably complete portrait of this singular savage, who, alone of all wild chiefs that I ever heard of, had the wisdom to sue for peace from an English general on the morrow of an English repulse. The details thus collected have indeed been in many instances confirmed to me by an English officer, who was himself in Sir George

Cathcart's campaign after referred to, and whose estimate of Moshesh and of his people is no less favourable than that of the French missionaries.

Of the two great races spread more or less over the whole of South Africa, the Hottentots and Kaffirs, the latter again subdivides into two branches, Kaffirs proper and Bechuanas; the former stretching along the East coast from the frontiers of Cape Colony to Mozambique, the other residing more inland. Among the Bechuanas, the Basutos form one of the chiefest families. Their country extends on the west side of the Maluti range, itself the westerly border of our colony of Natal.

Rather more than thirty years ago, the French Society of Evangelical Missions, shut out from missionarizing in the French colonies, sent its first missionaries to South Africa, whither, after the Revocation of the Edict of Nantes, a certain num-

ber of French families had emigrated. Their earliest labours were amongst a Bechuana tribe situate to the north of the Basutos. Three additional missionaries, amongst whom was M. Casalis, were about to rejoin them, when there came a call from Basuto-land, or Lesuto, as it is termed. Some Koranna and Griqua marauders (Hottentot tribes both), armed with muskets, which the Basutos did not possess, were making havoc of the country, and carrying away all the cattle. A few Basutos followed stealthily the invaders back to their country, and were surprised to find amongst their enemies a few persons who treated them kindly. One of these having gone some time afterwards to hunt near the Basuto frontier, was invited by the chief to come and see the desolation of Lesuto. The stranger had been taught by some English missionaries. He told the Basuto that Christianity alone could restore his country to prosperity, and promised, if he could, to send a missionary. A little while after, to remind him of his promise, the chief sent him some oxen in exchange for the promised "praying man." This strange news reached the Cape just as the new missionaries had arrived. They determined to find out, on the Orange river, the friendly Griqua. He confirmed the tale, and offered to be their guide to Moshesh, the Basuto chief.

The name Moshesh, meaning "the barber," has been assumed in after-life, when the chief had "shaved" all his enemies (see Isa. vii. 20). In his youth, Lesuto was highly peopled and prosperous, and so remained till about 1820, when the tyranny in Natal of the Zulu Chaka drove other chiefs, themselves at war with each other, over the Maluti chain. Lesuto was thus brought to frightful desolation. Driven desperate by the ravages of their more warlike invaders, the Basutos became in time mere bandits; and at last there grew up in the mountains gangs of actual cannibals. Speaking of the caverns where they had established themselves, M. Casalis tells us you may walk there on a thick stratum of half-roasted skulls, shoulder-blades, broken bones; whilst huge red spots mark the places where the flesh used to be laid.

Moshesh belonged to a family considered to be the hereditary sovereigns of the tribe; but, during prosperity, the power of the supreme chiefs had almost melted away, each petty chief aiming at independence. When adversity came, he succeeded in rallying round him all the more energetic portion of his tribe, establishing firmly his headquarters on a table-land called Thaba-Bossiu (which forms a natural five-angled fort), and by war, by cunning, by well-timed acts of generosity, in subduing, dividing, or winning over his enemies. Once, we are told, after a defeat by the Zulu

Kaffirs, he saw himself, with only four or five of his warriors, surrounded by the enemy, who already were striking on their bucklers, and hissing, as is their custom in times of triumph. Moshesh sat down, and bade all his men do the like. Then rising up, after a moment's silence, "Follow me," he said; "it is not thus that kings are killed." Walking erect towards the Zulus, "Make way!" he calls. They open, and he departs with his men unmolested. As soon as he saw himself somewhat established, he recalled the scattered members of his tribe, distributing amongst them some cattle won by successful forays. One of his first objects was to extinguish cannibalism. Those Basutos who had not taken part in it wanted to exterminate the cannibals. Moshesh declared that men-eaters were living graves, and that one could not make war upon graves. Cannibalism gradually died out.

A new danger was, however, impending. Zulu bands from the dominions of the dread chief Moselekatse invaded Lesuto from the north, whilst the Korannas did so from the west. The Basutos took refuge on Thaba-Bossiu, where the Zulus assaulted them, advancing in close column, a formation in which they were accustomed to conquer. But huge fragments of rock rolled down from the mountain, and, mixed with smaller stones and spears, broke their ranks. In vain were they led to a second assault. They had to withdraw, and started on the morrow homeward. As they were leaving, a "Mosuto," i.e., one of the Basutos, driving before him some fat cattle, stopped before the first column, and said—"Moshesh greets you. Supposing that hunger brought you into his country, he sends you these to eat by the way." Years after, M. Casalis, meeting at Cape Town some envoys from Moselekatse, asked if they knew Moshesh. "Know him!" they exclaimed; "that man, after rolling rocks upon our heads, gave us oxen to eat. We will never again attack him." And they never did. The struggle with the Korannas lasted longer, and was not yet terminated at the arrival of the missionaries, who found the country, in consequence, a wilderness, except near Thaba-Bossiu, of which indeed Moshesh is wont to say, "This mountain is my mother; without it all the land would have been deserted."

The missionaries were kindly received by the chief, who placed two of his sons near them, at their first established station of Moriah. Their pacific counsels, aided by the ill-success of an offensive expedition against the Kaffirs, then at war with us, undertaken with a view to conciliate English favour, soon decided him on the adoption of a peace-policy, from which he has never since voluntarily swerved. Then they obtained from him the exercise of clemency towards the re-

mainder of a band of Amakosa Kaffirs, who, having received the hospitality of the Basutos, and sworn allegiance to the chief, had taken to plundering travellers, and who were suddenly surrounded, and, in great measure, cut to pieces. Moshesh next availed himself of a blunder of Sir Benjamin d'Urban, who, after a war with the Kaffirs, not knowing the difference between Kaffirs and Basutos, or the enmity between the two peoples, had expelled thousands of the latter, immigrants from Lesuto during the civil war. These, by contact with Europeans (among whom their services as labourers, and especially as herdsmen, were in great request), had acquired some elements of civilisation, and often some notion of Christianity; among them were the representatives of families which had formerly ruled in parts of Lesuto, and had been engaged in conflicts with Moshesh. The latter proclaimed a complete amnesty and general oblivion, and welcomed the exiles to a large frontier tract to the south,—rich pasture-land, but almost deprived of inhabitants,—where the missionary station of Beersheba had been founded. Another station, founded to the north, served equally to attract several thousands of Bechuanas of another tribe, much tormented by the Zulus.

A striking quality of Moshesh is the mildness and clemency of his rule. During his twenty-three years' stay, M. Casalis never knew a single person put to death for any personal interest of the chief. Passing by a rock from whence, according to African custom, he had once two rebels thrown down, Moshesh told the missionary that he had often reproached himself with this execution, and attributed his subsequent misfortunes to it. It was, indeed, his unwillingness to punish that drew upon the Basutos one of the most terrible crises in their history, the war with England.

Accustomed to herding from earliest childhood, familiar with all the ways and habits of cattle, the South African generally is, whenever he pleases, a most expert cattle-thief. Among the Basutos, however, the missionaries declare that, although in their tribe wars cattle was the most precious booty, cattle-stealing, as an individual offence, was unknown at their first arrival. Owing to the sense of mutual responsibility between the different members of a tribe, such an act by an individual would have been a lawful and readily accepted cause of war with his tribe. Indeed the first Basutos who ventured among the colonists gave great anxiety to their chiefs on their return, owing to what seemed the inordinate quantity of cattle which they brought back; the chiefs could not believe that they had been honestly earned, or if so, that it was not a trap laid by the whites in order to come and claim back their property. The first occasion, the missionaries declare, of the

growth of the actual offence, has been invariably the neighbourhood of white settlers. The European carries with him his European idea of individual ownership. He is unaware of the native law or custom (similar, apparently, to that of Palestine in the days of the Hebrew patriarchs), according to which the land belongs to the whole tribe; but the "stranger," once received, may establish himself, build, cultivate, occupy, as long as he pleases, yet without acquiring any right of property in the land. The European thus finds himself hospitably received, does what he pleases, exercises what seem to him all rights of ownership. But when he wishes to change his location, either retaining the settlement previously occupied, or selling it to a third party, a claim is set up, which he often does not take the trouble to understand, to all that he has held. The natives repossess, or seek to repossess, themselves of the land, according to custom. He, or his successor, treats them as intruders, robbers,—repels them by force. This amounts, for the tribe, to an actual declaration of war. They retaliate, according to custom still, by swooping down upon the enemy's cattle. He is confirmed in the notion that they are mere robbers; they are encouraged to continue what they deem a lawful war, by finding that his tribe does not come to his assistance; that there seems to be no mutual responsibility between man and man. After a time the chiefs interfere and patch up a truce, almost always willingly assenting to give compensation. But the more reckless of the tribe have seen how much easier and safer it is to lift the cattle of a white man than of a black; they acquire a taste for the practice; at last it becomes inveterate, and the whole border is infested with regular cattle-thieves.

The process thus described may happen with any European settlers. But the frontier population in South Africa consists in great measure of "Dutch Boers," a race at all times most hostile to the natives, and the whole history of whose relations with them, whilst the Dutch still held Cape Colony, is little more than one tissue of cruelties and treacheries practised upon them. When the country passed under English rule, and the Boers, from a privileged aristocracy, sank to the condition of a conquered race,—found themselves attacked in their fortunes by the appearance among them of English and Scotch settlers, far more active, energetic, and industrious than themselves, and who soon beat them in the race of competition; above all, when they began to realize the novelty of equal justice between man and man, black or white,—when the condition of the Hottentots, who even when not absolutely enslaved, were kept in a most degraded state, began to be improved,—when kidnapping became an offence,—when, lastly, slavery,

after various mitigations, was abolished, whilst efforts were being made on all sides to civilize the savage, and missionary stations were planted far in advance of the last settler,—the Boers began to move towards the frontier, pushing farther and farther as the Englishman and his laws came up with them, till they reached the well-known domain of Moshesh and his tribe. After several hundreds of years of sojourn in the land, they could hardly, as newcomers might have done, allege ignorance of the native laws of property. They showed, in fact, that they were not ignorant of these, by the extreme precautions which they took at first in establishing themselves, and the unwonted deference which they paid to their native hosts. But they crept on and on, till the Basutos saw part of their country slipping out of their hands. Then came remonstrances, conflicts, cattle-lifting, and disorders of all kinds. The Boers had by this time become intermixed with English settlers, who complained to the Colonial Government. Sir Harry Smith thought to do good by extending British sovereignty beyond the Orange river, near Lesuto, declaring at the same time that it was meant to be a moral one only, and that the rights of Moshesh and other native chiefs were not to be infringed upon. But the act gave a new impetus to European settlement, to new encroachments on native rights, and new acts of retaliation by cattle-stealing. An arrangement was made for restoring to the colonists the cattle and horses which the natives had carried off. The conditions of the arrangement were not fulfilled, nor was cattle-lifting put an end to. Personally quite guiltless, Moshesh, with his usual repugnance to severe measures, only remonstrated and threatened. It must be stated that his own authority was by this time really compromised among his subjects, through what was considered by many his undue partiality for the English; and that the Boers, on their part, continued their hostilities.

On the 11th December 1852, Moshesh received intelligence that Governor Sir George Cathcart was about to cross the Orange river with 2500 soldiers and several pieces of cannon. A few days after he was summoned, as the last word of the Governor, to give up 10,000 head of cattle and 1000 horses in three days. In vain he begged for six. Calling together all the neighbouring chiefs, he asked them to come to his aid. They were very unwilling, declaring that they were innocent, the border chiefs being the real culprits. By the term assigned he sent in 3500 head of cattle only. The English troops now marched on Thaba-Bossiu, attacked it from three sides at once, and carried off about 4500 head of cattle, at the cost of about twenty killed and as many wounded among the Basutos (besides, unfortunately, some women and

children); thirty-eight killed and fifteen wounded among the English. The figure of English loss indicates a vigorous resistance. Enjoying, as the Basutos did, the advantages of position and number, they had, in fact, had the better of and repelled all three columns of the English attack. Quite undaunted, they spoke already of taking refuge, if pressed still further, in the heights of the Maluti chain. But Moshesh, after a sleepless night, determined upon trying conciliation once more. He wrote to Sir George Cathcart, suing for peace, and begging him to remain satisfied with the cattle he had taken. Sir George had not himself expected so stout a resistance, and peace was concluded. This affair, showing at once the pluck of the Basutos and the wisdom of their ruler, was, of course, greatly favourable to the authority of Moshesh.

Soon, however, he found himself compelled to undertake, though, as the missionaries have testified, with extreme regret, an expedition against the Mantaetis, another Bechuana tribe, whose chief, Sekoniela, had set all his neighbours against him, and had, in particular, repeatedly provoked and broken faith with the Basutos. Feeling that the work had to be done, Moshesh did it most effectually, entirely crushing the Mantaetis. His speech to his men on the frontier (26th October 1853) deserves to be quoted:—

"Comrades! behold the battle which you have so long asked of me. Men of Lesuto! see the frontier which Sekoniela made for us in our own country. There are the waters of the Putiatsana; quench your thirst in those waters, of which the son of Mohocho has robbed us. From on high God sees and protects us. I have told the Church, I have told the representative of the English in this country, that I was about to avenge myself of the insults of the Mantaeti. Had he not sworn to me his faith last year? He has broken his faith. Had I not spared his herds? He has taken mine. It is he who of old besieged us at Butabut. I wished to forgive him the evil which he then did us; but he defies me to do him good. . . . Tomorrow, brothers, you will have reconquered for me yonder high rock, whereon the Mantaeti sits at ease; you will offer it to me for my seat, mine." Here the whole army *hissed* its applause, crying, "Thou shalt sit, thou shalt sit on the rock, O king." Moshesh continued: "Women and children shall be respected as if they were my own; you will make them prisoners. Men shall fight without noise . . . like the soldiers of the Queen of England, that the mouth of the muskets may speak alone and sound louder. You shall drive the enemy, leaving his herds behind without gathering them together, for it is there that his arrows would reach you. Is it not true that you killed one

another at the battle of Kounonyana, for want of recognising each other? Watch over your lives; let every one to-day take white chalk, mix it in his hand with water, and paint his face with it. Letsie, my son, I have borrowed these men; I trust them to thee; this war is thy matter."

His adversary's capital was found deserted. There remained in it only Letlala, an aged uncle of the chief. "My lord," said he on coming before Moshesh, "I have lived long, bid me be put to death." "No, my father, we do not kill the aged; thou shalt yet live." "But life is too heavy for me, my sons are no more, destroy me too, I entreat thee." "I cannot, my lord, grant thee this request. Have a nobler courage than that of knowing how to die,—live on." Some of the Christians in the army asked permission to celebrate public worship. Moshesh said he would himself be present; and after an exhortation by a convert, he rose up and said, "What this man has proclaimed, I confirm. This is the book which declares that God resists the proud. Letsie, my son, think of this big word of the book. Thou art growing in thy limbs, watch also over thy heart, lest it remain poor in knowledge, I say poor and thin." And he pointed to the fortress they had just reduced as a monument of discomfited pride. On receiving the submission of the conquered, he liberated a prisoner without ransom, whenever a kinsman of his brought an ox by way of homage. He then left the country in charge of three chiefs, twining first a brass wire round their necks, and saying, "You shall remain all three united, as are your heads in the circle I have made."

But the worst trial for the Basutos and their missionaries has been the giving up of the English sovereignty beyond the Orange and the Vaal rivers to the "Orange River Free State" and the "Trans-Vaal Republic," peopled chiefly by the Boers. Moshesh paid a farewell visit (10th March 1854) to Sir George Clerk, the English Commissioner; and in an interview with the then head of the new state, thus adroitly expressed his apprehensions:—

"When a man marries, he expects to find in his wife, not bad qualities, but good ones. Generally, his wife will have both good and bad qualities, and very likely he will be much more struck by the latter than by the former. But should she die, in burying her he buries also whatever he has seen bad in her, only retaining the recollection of the good. Should he wish to marry again, what does he look out for in a second helpmate? Only the good qualities of the first. If he finds them, he will be content; if he discovers new ones, he will be happy."

In a further interview with the chiefs of the

new government, Moshesh expressed his desire to see whites and blacks live in harmony together. And whilst acknowledging himself to be but a poor ignorant man, who knew but what experience had taught him, he reminded them that there was a book of God which should serve as a groundwork for their laws, and begged them to be just in all their acts, towards blacks as well as whites. Then suddenly he exclaimed, "Let us fear drink! let drunkenness be allowed neither among blacks nor whites! May God bless you!" he concluded,—"May He direct you in all your dealings! May He be your light, your wisdom, your strength! May it be given to you to do His will and to please Him! Amen." No wonder that one of the members of the new government asked of the missionary who was present whether Moshesh was not a Christian?

Nor are these mere words. Moshesh has endeavoured, by law (8th November 1854), to put a stop to the import of spirits among his people, who, until the introduction of them by the whites, had nothing but a sort of beer, made from a grain of the country. Of his forgiveness he gave an instance at the interview last referred to, offering at once his hand to Sekoniela, the Mantaeti chief, his late enemy.

The forebodings of evil from the neighbourhood of the Boers were soon realized. After some first threatenings (beginning of 1857), which came to nothing, through a quarrel between the two Dutch states themselves,—when this had been patched up, war was declared (10th March 1858) by the President of the Free State on Moshesh, on the ground of a refusal by the Basutos to cede a portion of territory, and of losses of cattle. Following the example of their kinsmen beyond the Vaal, who already, before the formation of the Orange River Free State, had ruined two flourishing English missionary stations, and fined and expelled English missionaries, the Boers chiefly struck at the missionaries and their converts. They attacked Lesuto by means of two expeditions, or *commandos*, one from the south, the other from the north. The former had easy work of it,—sacking the flourishing missionary station of Beersheba, near to the town of Smithfield (built itself on land ceded by Moshesh for religious purposes only to the Dutch Presbytery), the Basutos of which were more advanced in civilisation than all the remainder of the tribe, and were confessedly guiltless of all offence towards their white neighbours. The northern *commando*, however, having been repulsed with some loss from the missionary station of Berea, both *commandos* united together, and sacked in turn the important missionary station of Moriah.

The orders of Moshesh to his sons and chiefs were to offer no resistance beyond what was needed

to save life, but to fall back on his old stronghold of Thaba-Bossiu. The Boers pushed on thus as in triumph, plundering and destroying all the deserted villages on their line of march. Making war leisurely in their waggons, as they saw the natives flee before them, nothing, we are told, could be droller than their braggadocio. But on reaching Thaba-Bossiu they found whole legions of Basutos posted in every ravine and gorge, under every rock. Placing their waggons in a circle, and planting in front two pieces of field-artillery, the Boers opened fire, and, after a few skirmishes, a portion of them—chiefly, I am 'sorry to say, Englishmen in their camp—crossed a ravine, in order to storm the village. But a host of Basutos, raising their war-cry, "Hioo, hioo," drove them back to their waggons. After five hours' firing, the Boers withdrew, and entrenched themselves in their camp. The cannonade was renewed the second day. On the third, the Boers gave up the attempt, and marched off. Meanwhile numerous bands of Basutos had been let loose on the Free State, where they took an enormous booty in cattle, horses, and sheep, and set fire to a great number of farms. The tables were so completely turned, that Boshoff, President of the Free State, begged for peace. Moshesh thus answered him:—

"Your messenger came last night, bearing a letter in which you begin to speak of peace. I am sorry that you should ever have spoken of war. It is not Moshesh who began; nor have I yet fought. When you attacked the inhabitants of Beersheba, who had done you no harm, I was surprised and grieved beyond anything that I could say. I then ordered all the chiefs who are under me to fall back on Thaba-Bossiu, so that your warriors found on their road but men of some remote village, the old and the sick. . . .

"I wished, before fighting, to know the real intentions of the Boers, and what they were capable of. Whilst they were making their camp at Thaba-Bossiu, I said to myself, 'If Boshoff treats me as a dog, and beats me, I will bite him.' But for reasons which I do not know, your army would not accept battle, and after a short visit to me withdrew.

"Gather together all the commanders of your army, and reprove them, for they have done you the greatest harm during their march through my country.

"You call yourself a Christian in the letter which you wrote to me. I have long known that you are a Christian, but the commanders of your army are not Christians; and if they persisted in saying that they are, they would force us to believe that there is no God. What! should their Christianity consist in destroying Christians? Have they not destroyed the beautiful station of Beersheba? Did

they not burn the missionary's house of Moriah? . . . When you presented yourselves before Thaba-Bossiu you fired more than ten cannon shots at the mission-house, but the Lord did not allow your balls to reach it. No, your officers are not Christians; for I will never believe that Christianity consists in carrying away women and children prisoners, shooting down the old and the sick; and this is what your children have done. . . . When I made war on Sekoniela, I ordered my people not to touch the church which was in the country of that chief; and it was respected. What will the world say, when it learns that the children of a Christian chief have sacked and destroyed churches, whilst the children of a heathen chief had feared to touch God's house?

"Your warriors deserve another great reprimand. I must believe you when you tell me that they consented to withdraw from my country, because they hoped to see peace restored; but if they had such notions, their retreat was, or at least should have been, a beginning of peace. Why then did they burn the deserted villages which they found on their way, and even to the grass of the fields? . . .

"You have declared unanimously that warfare should continue till one of our two nations ceased to exist. As I wished to do nothing which might be blamed by the British Government, I allowed the Boers to try this plan of extermination. Could any one be surprised if I, a barbarian and a heathen, were to follow the example of a civilized and Christian community? . . . It is the custom, in our country, that when the people of one place have gone to dance in another, they should return the compliment; and, according to this custom, we were about to invade the Free State from all sides, and to burn everything on our passage. But the Lord has inspired you with the thought of hindering us from rendering you evil for evil.

"As the most rigorous part of the winter is nigh, I wish your deputation to come as soon as possible, that, if we cannot understand one another, we may vigorously push on the war. . . . For ourselves, we have several good reasons for wishing to fight. We have hitherto only acted on the defensive. Again, you have destroyed the corn in various parts of our country, and as the inhabitants of those parts will be hungry during the winter, we should like to fetch food in your country. Lastly, the reports of your commanders and correspondents, as published, are a tissue of inventions and falsehoods; but some of the inhabitants of your country might believe them, and holding for certain that we have been beaten, hereafter they might raise new wars against us on the most futile pretexts. Besides, these re-

ports have offended my warriors, and I have the greatest trouble in appeasing their resentments. The English know we are no cowards, and we should like the Boers too to learn that we know how to defend our rights. Though I wish for peace, perhaps one or two battles might not be without profit. We should learn to know one another better, and the Boers would be more sincere in seeking for peace.

"But my name is Moshesh, and my sister is called 'peace.' I never loved war in my youth; how should I love it now that I am old? Only I regret that you should have spoken so loud of all the great misfortunes that you were about to bring down upon myself and upon my people; and I regret still more that your conduct should have proved the reality of such evil intentions.

"I have already apprised all the subordinate chiefs of what is taking place between you and me, and my desire is that we should both pray God that this correspondence may result in the restoration of peace.

"Such are the true words of your servant Moshesh."

In listening to the proposals of peace, however, Moshesh insisted on a reference of differences to Sir George Grey, Governor of the Cape; and this having been accepted, an armistice was signed, 1st June. Sir George began by paying a friendly visit to Moshesh, who received him most amicably. Sir George Grey's award, however, although fixing a compensation to be paid for the sack of Beersheba station, decided that it should henceforth be included in the Free State.

For years Moshesh gave great hopes of conversion to Christianity. On the first arrival of the missionaries, and especially when first a mission-house was built at the foot of his citadel, he listened with great attention to their preaching, came down every Sunday at ten o'clock to hear them, remaining till the afternoon for a second service. He earnestly encouraged their attempts to introduce reading, and took pains to convince unbelievers that they could really "make paper speak." He gave them still more important aid in authorizing their first convert at Thaba-Bossiu to have his sister Tseniei buried according to Christian rites, and not according to Basuto custom, in the cattle yard. Nay, on the death of one of his favourite wives, when the missionary had refused to offer a prayer over a grave dug in the cattle-yard, and when the brother of the dead woman protested against any deviation from ancient custom, he addressed the crowd, saying, "The missionaries give us a reason for all they do. Man dies, because he has received in Adam the seed of death. The dead should be buried in the same place, for it is beautiful to think that they are sleeping together the

long sleep of death. Man is only alone in his mother's womb; as soon as born, he clings to the breast of her who bare him; he lives from thenceforth in the company of his fellow-men. Ye say that we must make sacrifice to our ancestors. But they are only men like us. Ye too, when ye are dead, ye will be made gods of; would ye have us worship you now? . . . If ye are but men now, shall ye be mightier when death shall have reaped the half of yourselves?" And when the advocates of heathenism had been in vain summoned to defend the old custom, turning towards the missionary, the chief said: "You have conquered; the woman whom I weep for shall go and sleep with Tseniei; and I too, I mean one day to rest by them." He gave the missionaries also very efficient help and advice in translating the Bible, for which he professes great admiration, especially for the first chapter of Genesis, the Ten Commandments, and the 13th chapter of the 1st Epistle to the Corinthians, of which he is fond of repeating the poem. The story of Joseph used to throw him into ecstasies, and M. Casalis has heard him once tell it to a chief, who had come to visit him, with the most singular dramatic effect, and as if entirely forgetful of all around.

It is sad to believe that such a man should have remained in heathenism. Nevertheless, whilst still occasionally attending, sometimes even inviting the celebration of Christian worship, he yet continues to use, and of late years has even revived various heathen practices, and avows the policy of "putting one foot only into the church." The true state of things I imagine to be this:—He really prefers Christianity to heathenism; but he sees or thinks that his whole people is not prepared to embrace it. He knows that Christianity commands obedience, even to a heathen ruler, and he expects, therefore, that, by continuing to practise heathen rites, he will retain the allegiance of the heathen portion of the people, whilst by encouraging Christianity, he will earn the firm support of the converts.

Evidence of, I think, a genuine conflict of feelings is to be found in an address delivered by Moshesh, upon the grave of M. Casalis' own wife (24th June 1854).

"Men, women, and children, come nigh and receive instruction. Death is no new thing for us, but the sight which our eyes behold is very new. . . . Ye say that my ancestors Pete and Monabeng are your gods, and perhaps after my death ye will say also that Moshesh is your god. Ah! why should ye not acknowledge the Lord of the gods? Know ye not that a single seed of a tree may bring forth many? So white and black proceed from one God. That God, O Molapo! O Moshupa! my sons, I hoped that by your means

our people might come to know Him. But ye have forsaken Him, and ye leave me alone, me who know not yet the truth. Will a swimmer throw himself into the Orange river at its full, unless he see near him other swimmers disposed to follow him? Will not the fish itself hesitate to cross the great sea alone? Who saved us in the wars which we had to sustain? Were they our own weapons which rendered us victorious? No, it is this God, invoked by the missionaries, who kept and protected us. Now, this house of our missionary, from whence proceeded so many prayers for us, it has just fallen upon his head. Yet . . . after having so often spoken over the graves of persons to whom he was a stranger, our missionary speaks to-day over the grave of his departed helpmate; and, as always, he speaks of resurrection and of life. Friends, this is in nowise like falsehood. Our mother, before dying, expressed the conviction that the gospel would triumph ere long in this country. It was, perhaps, a prophecy, and from the heights on which she then found herself, she no doubt was able to see things which we do not yet perceive. Our mother wrote no books for us; but she has written footsteps for us to follow." Then turning to M. Casalis, "This day thou art a man; thou knowest all trials through which a man may pass, and thou wilt be all the fitter to comfort us."

Fifteen months later (September 1855), M. Casalis was recalled to take charge of the Paris mission-house. Moshesh thus wrote to him:—

"TO MY MISSIONARY,—Ah! my missionary, I am Moshesh! Sorrowful news is brought to me,—the French ministers have told you to return to them. I shed many tears, which almost disturb my mind; for, O Casalis, you are my teacher, my father, my mother, the buckler by means of which I have warded off all mischief;—moreover, you have been my light, my ears, and my feet—you have told us the good and the true; you are not in fault. You are a true Mosuto; one of our own.

How shall we comfort ourselves? . . . I have put my trust in you; I hope that to restore my loss you will send us many bucklers. . . . Go in peace, we remain in tears. May God lead you back and keep you! Pray God also for us. This is what I have to say, I, my sons, my counsellors, and all the tribe."

Some years later, when news came of the shipwreck of M. Arbousset, the missionary of Moriah, and the drowning of his wife off the coast of Cornwall, on their return to Europe, Moshesh was inconsolable for two days, and wrote to the widower an equally beautiful letter. Yet we hear of his alarm at the progress of Christian principles in his harem, of efforts made by him and his sons to turn people away from Christianity, of his receiving (December 1860, a few months after the letter to M. Arbousset) a tribute from the neighbouring heathens to make rain; and then again, when the showers would not fall, of his proclaiming that the rain had but one master, forbidding the sorcerers to make any fresh attempts to bring it down, and allowing for the first time Christian worship to be celebrated upon the hill of Thaba-Bossiu.

Now old, Moshesh retains still a most expressive countenance; famed always for eloquence, he seems to have become rather too long-winded, and in his set speeches seldom starts from any more recent epoch than the creation of the world. He dresses on all occasions of ceremony in European costume, in which, however, he is said to feel not altogether at his ease; but though he has had two houses built for him in European fashion, for state purposes and purposes of storage, he still lives in his hut. His sons unfortunately are not equal to him, with one exception perhaps, Molapo, a man of noble character in many respects, but who occupies the same equivocal position in respect to religion as his father, and is moreover an actual apostate from Christianity.

MISTRESS AND MAID.

A HOUSEHOLD STORY.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

CHAPTER X.

LIVING in lodgings, not temporarily, but permanently, sitting down to make one's only "home" in Mrs. Jones's parlour or Mrs. Smith's first-floor, of which not a stick or a stone that one looks at is one's own, and whence one may be

evicted or evade, with a week's notice or a week's rent, any day—this sort of life is natural and even delightful to some people. There are those who, like strawberry-plants, are of such an errant disposition, that grow them where you will, they will soon absorb all the pleasantness of their habitat,

and begin casting out runners elsewhere; nay, if not frequently transplanted, would actually wither and die. Of such are the pioneers of society,—the emigrants, the tourists, the travellers round the world: and great is the advantage the world derives from them, active, energetic, and impulsive as they are. Unless, indeed, their talent for incessant locomotion degenerates into rootless restlessness, and they remain for ever rolling stones, gathering no moss, and acquiring gradually a smooth, hard surface, which adheres to nothing, and to which nobody dare venture to adhere.

But there are others possessing in a painful degree this said quality of adhesiveness, to whom the smallest change is obnoxious; who like drinking out of a particular cup, and sitting in a particular chair; to whom even a variation in the position of furniture is unpleasant. Of course, this peculiarity has its bad side, and yet it is not in itself mean or ignoble. For is not adhesiveness, faithfulness, constancy—call it what you will—at the root of all citizenship, clanship, and family love? Is it not the same feeling which, granting they remain at all, makes old friendships dearer than any new? Nay, to go to the very sacredest and closest bond, is it not that which makes an old man see to the last in his old wife's faded face the beauty which perhaps nobody ever saw except himself, but which he sees and delights in still, simply because it is familiar, and his own?

To people who possess a large share of this rare (shall I say, fatal?) characteristic of adhesiveness, living in lodgings is about the saddest life under the sun. Whether some dim foreboding of this fact crossed Elizabeth's mind, as she stood at the window watching for her mistresses' first arrival at "home," it is impossible to say. She could feel, though she was not accustomed to analyse her feelings. But she looked dull and sad—not cross,—even Ascott could not have accused her of "savagery."

And yet she had been somewhat tried. First, in going out what she termed "marketing," she had traversed a waste of streets, got lost several times, and returned with light weight in her butter, and sand in her moist sugar; also with the conviction that London tradesmen were the greatest rogues alive. Secondly, a pottle of strawberries, which she had bought with her own money, to grace the tea-table with the only fruit Miss Leaf cared for, had turned out a large delusion, big and beautiful at top, and all below small, crushed, and stale. She had thrown it indignantly, pottle and all, into the kitchen fire.

Thirdly, she had a war with the landlady, partly on the subject of their fire, which, with her Stowbury notions on the subject of coals, seemed wretchedly mean and small, and partly on the question of

table-cloths at tea, which Mrs. Jones had "never heard of," especially when the use of plate and linen was included in the rent. And the dinginess of the article produced at last out of an omnium-gatherum sort of kitchen-cupboard, made an ominous impression upon the country girl, accustomed to clean, tidy country ways,—where the kitchen was kept as neat as the parlour, and the bed-rooms were not a whit behind the sitting-rooms in comfort and orderliness. Here, it seemed as if, supposing people could show a few respectable living-rooms, they were content to sleep anywhere, and cook anyhow, out of anything, in the midst of any quantity of confusion and dirt. Elizabeth set all this down as "London," and hated it accordingly.

She had tried to ease her mind by arranging and re-arranging the furniture—regular lodging-house furniture—table, six chairs, horse-hair sofa, a what-not, and the chiffonnière, with a tea-caddy upon it, of which the respective keys had been solemnly presented to Miss Hilary. But still the parlour looked homeless and bare; and the yellowish paper on the walls, the large patterned, many-coloured Kidderminster on the floor, gave an involuntary sense of discomfort and dreariness. Besides, No. 15 was on the shady side of the street,—cheap lodgings always are; and no one who has not lived in the like lodgings—not a house—can imagine what it is to inhabit perpetually one room where the sunshinè just peeps in for an hour a day, and vanishes by eleven A.M., leaving behind in winter a chill dampness, and in summer a heavy dusty atmosphere, that weighs like lead on the spirits in spite of one's-self. No wonder that, as is statistically known and proved, cholera stalks, fever rages, and the registrar's list is always swelled, along the shady side of a London street.

Elizabeth felt this, though she had not the dimmest idea why. She stood watching the sunset light fade out of the topmost windows of the opposite house,—ghostly reflection of some sunset over fields and trees far away; and she listened to the long monotonous cry melting away round the Crescent, and beginning again at the other end of the street—"Straw-berries—straw-ber-ries." Also, with an eye to to-morrow's Sunday dinner, she investigated the cart of the tired costermonger, who crawled along beside his equally tired donkey, reiterating at times, in tones hoarse with a day's bawling, his dreary "Cauli-flow-er! Cauli-flow-er!—Fine new peas, sixpence peck."

But, alas! the peas were neither fine nor new; and the cauliflowers were regular Saturday night's cauliflowers. Besides, Elizabeth suddenly doubted whether she had any right, unordered, to buy these things, which, from being common garden necessities, had become luxuries. This thought,

with some others that it occasioned, her unwonted state of idleness, and the dulness of everything about her—what is so dull as a “quiet” London street on a summer evening?—actually made Elizabeth stand, motionless and meditative, for a quarter of an hour.

Then she started to hear two cabs drive up to the door; the “family” had at length arrived.

Ascott was there too. Two new portmanteaus and a splendid hat-box, cast either ignominy or glory upon the poor Stowbury luggage; and—Elizabeth’s sharp eyes noticed—there was also his trunk which she had seen lying detained for rent, in his Gower Street lodgings. But he looked quite easy and comfortable; handed out his Aunt Johanna, commanded the luggage about, and paid the cabmen with such a magnificent air, that they touched their hats to him, and winked at one another as much as to say, “That’s a real gentleman!”

In which statement the landlady evidently coincided, and curtsied low, when Miss Leaf, introducing him as “my nephew,” hoped that a room could be found for him. Which at last there was, by his appropriating Miss Leaf’s, while she and Hilary took that at the top of the house. But they agreed, Ascott must have a good airy room to study in.

“You know, my dear boy,” said his Aunt Johanna to him—and at her tender tone he looked a little downcast, as when he was a small fellow and had been forgiven something—“you know you will have to work very hard.”

“All right, Aunt! I’m your man for that! This will be a jolly room; and I can smoke up the chimney capitably.”

So they came down stairs quite cheerfully, and Ascott applied himself with the best of appetites to what he called a “hungry” tea. True, the ham, which Elizabeth had to fetch from an eating-house some streets off, cost two shillings a pound, and the eggs, which caused her another war below over the re-lighting of a fire to boil them, were dismissed by the young gentleman as “horrid stale.” Still, woman-like, when there is a man in the question, his aunts let him have his way. It seemed as if they had resolved to try their utmost to make the new home to which he came, or rather was driven, a pleasant home, and to bind him to it with cords of love, the only cords worth anything, though sometimes—Heaven knows why—even they fail, and are snapped and thrown aside like straws.

Whenever Elizabeth went in and out of the parlour, she always heard lively talk going on among the family: Ascott making his jokes, telling about his college life, and planning his life to come, as a surgeon in full practice, on the most extensive

scale. And when she brought in the chamber candles, she saw him kiss his aunts affectionately, and even help his Aunt Johanna—who looked frightfully pale and tired, but smiling still—to her bed-room door.

“You’ll not sit up long, my dear? No reading to-night?” said she, anxiously.

“Not a bit of it. And I’ll be up with the lark to-morrow morning. I really will, Auntie. I’m going to turn over a new leaf, you know.”

She smiled again at the immemorial joke, kissed and blessed him, and the door shut upon her and Hilary.

Ascott descended to the parlour, threw himself on the sofa with an air of great relief, and an exclamation of satisfaction, that “the women” were all gone. He did not perceive Elizabeth, who, hidden behind, was kneeling to arrange something in the chiffonnière, till she rose up and proceeded to fasten the parlour shutters.

“Hollo! are you there? Come, I’ll do that when I go to bed. You may ‘slope,’ if you like.”

“Eh, sir?”

“Slope, mizzle, cut your stick; don’t you understand? Anyhow, don’t stop here bothering me.”

“I don’t mean to,” replied Elizabeth; gravely, rather than gruffly, as if she had made up her mind to things as they were, and was determined to be a belligerent party no longer. Besides, she was older now: too old to have things forgiven to her that might be overlooked in a child; and she had received a long lecture from Miss Hilary on the necessity of showing respect to Mr. Ascott, or Mr. Leaf, as it was now decided he was to be called, in his dignity and respectability as the only masculine head of the family.

As he lay and lounged there, with his eyes lazily shut, Elizabeth stood a minute gazing at him. Then, steadfast in her new good behaviour, she inquired “if he wanted anything more to-night?”

“Confound you! No! Yes; stop.” And the young man took a furtive investigation of the plain, honest face, and not over-graceful, ultra-provincial figure, which still characterized his aunt’s “South Sea Islander.”

“I say, Elizabeth, I want you to do something for me.” He spoke so civilly, almost coaxingly, that Elizabeth turned round surprised. “Would you just go and ask the landlady if she has got such a thing as a latch-key?”

“A what, sir?”

“A latch-key—a—oh, she knows. Every London house has it. Tell her I’ll take care of it, and lock the front-door all right. She needn’t be afraid of thieves.”

“Very well, sir.”

Elizabeth went, but shortly reappeared with the

information that Mrs. Jones had gone to bed : in the kitchen, she supposed, as she could not get in. But she laid on the table the large street-door key.

"Perhaps that's what you wanted, Mr. Leaf. Though I think you needn't be the least afraid of robbers, for there's three bolts, and a chain besides."

"All right," cried Ascott, smothering down a laugh. "Thank you ! That's for you," throwing a half-crown across the table.

Elizabeth took it up demurely, and put it down again. Perhaps she did not like him enough to receive presents from him ; perhaps she thought, being an honest-minded girl, that a young man who could not pay his rent had no business to be giving away half-crowns ; or else she herself had not been, so much as many servants are, in the habit of taking them. For Miss Hilary had put into Elizabeth some of her own feeling as to this habit of paying an inferior with money for any little civility or kindness which, from an equal, would be accepted simply as kindness, and only requited with thanks. Anyhow, the coin remained on the table, and the door was just shutting upon Elizabeth, when the young gentleman turned round again.

"I say, since my aunts are so horridly timid of robbers and such like, you'd better not tell them anything about the latch-key."

Elizabeth stood a minute perplexed, and then replied briefly : "Miss Hilary isn't it a bit timid ; and I always tells Miss Hilary everything."

Nevertheless, though she was so ignorant as never to have heard of a latch-key, she had the wit to see that all was not right. She even lay awake, in her closet off Miss Leaf's room, whence she could hear the murmur of her two mistresses talking together, long after they retired—lay broad awake for an hour or more, trying to put things together—the sad things that she felt certain must have happened that day, and wondering what Mr. Ascott could possibly want with the key. Also, why he had asked her about it, instead of telling his aunts at once ; and why he had treated her in the matter with such astonishing civility.

It may be said, a servant had no business to think about these things, to criticise her young master's proceedings, or wonder why her mistresses were sad : that she had only to go about her work like an automaton, and take no interest in anything. I can only answer to those who like such service, let them have it ! and as they sow they will assuredly reap.

But long after Elizabeth, young and hearty, was soundly snoring on her hard, cramped bed, Johanna and Hilary Leaf, after a brief mutual pretence of sleep, soon discovered by both, lay consulting together over ways and means. How could

the family expenses, beginning with twenty-five shillings per week as rent, possibly be met by the only actual certain family income, their £50 per annum from a mortgage ? For the Misses Leaf were of that old-fashioned stamp which believed that to reckon an income by mere probabilities is either insanity or dishonesty.

Common arithmetic soon proved that this £50 a year could not maintain them ; in fact they must soon draw on the little sum—already dipped into to-day, for Ascott—which had been produced by the sale of the Stowbury furniture. That sale, they now found, had been a mistake : and they half feared whether the whole change from Stowbury to London had not been a mistake,—one of those sad errors in judgment which we all commit sometimes, and have to abide by, and make the best of, and learn from if we can. Happy those to whom "Dinna greet ower spilt milk"—a proverb wise as cheerful, which Hilary, knowing well who it came from, repeated to Johanna to comfort her—teaches a second brave lesson, how to avoid spilling the milk a second time.

And then they consulted anxiously about what was to be done to earn money.

Teaching presented itself as the only resource. In those days women's work and women's rights had not been discussed so freely as at present. There was a strong feeling that the principal thing required was our duties—owed to ourselves, our home, our family and friends. There was a deep conviction—now, alas ! slowly disappearing—that a woman, single or married, should never throw herself out of the safe circle of domestic life, till the last extremity of necessity ; that it is wiser to keep or help to keep a home, by learning how to expend its income, cook its dinners, make and mend its clothes, and by the law that "prevention is better than cure," studying all those preservative means of holding a family together—as women, and women alone can, than to dash into men's sphere of trades and professions, thereby, in most instances, fighting an unequal battle, and coming out of it maimed, broken, unsexed ; turned into beings that are neither men nor women, with the faults and corresponding sufferings of both, and the compensations of neither.

"I don't see," said poor Hilary, "what I can do but teach. And oh, if I could only get daily pupils, so that I might come home of nights, and creep into the fireside ; and have time to mend the stockings and look after Ascott's linen, so that he need not be so awfully extravagant."

"It is Ascott who ought to earn the family income, and have his aunt to keep house for him," observed Johanna. "That was the way in my time ; and I believe it is the right way. The man ought to go out into the world and earn the

money; the woman ought to stay at home and wisely expend it."

"And yet that way is not always possible. We know, of ourselves, instances where it was not."

"Ah, yes!" assented Johanna, sighing. For she, far more than Hilary, viewed the family circumstances in the light of its past history—a light too sad almost to bear looking at. "But in ours, as in most similar cases, was something not right, something which forced men and women out of their natural places. It is a thing that may be sometimes a mournful inevitable necessity, but I never can believe it a right thing, or a thing to be voluntarily imitated, that women should go knocking about the world like men—and—"

"And I am not meaning to do any such thing," said Hilary, half laughing. "I am only going to try every rational means of earning a little money to keep the family going till such time as Ascott can decide on his future, and find a suitable opportunity for establishing himself in practice. In some of the new neighbourhoods about London he says he has a capital chance; he will immediately set about inquiries. A good idea, don't you think?"

"Yes," said Johanna, briefly. But they did not discuss this as they had discussed their own plans; and, it was noticeable, they never even referred to, as a portion of the family finances, that pound a week which, with many regrets that it was so small, Ascott had insisted on paying to his aunts, as his contribution to the expenses of the household.

And now the dawn was beginning to break, and the lively London sparrows to chirp in the chimneys. So Hilary insisted on their talking no more, but going to sleep like Christians.

"Very well. Good-night, my blessing!" said Johanna, softly. And perhaps indeed her "blessing," with that strange, bright courage of her own—years after, when Hilary looked back upon her old self, how utterly mad this courage seemed!—had taken the weight of care from the elder and feeble heart, so that Johanna turned round and soon slept.

But long after, till the dawn melted into perfect daylight, did Hilary lie, open-eyed, listening to quarter after quarter of the loud St. Pancras clock. Brave she was, this little woman, fully as brave and cheerful-hearted as, for Johanna's sake, she made herself out to be; and now that the paralysed monotony of her Stowbury life was gone, and that she was in the midst of the whirl of London, where *he* used to work and struggle, she felt doubly bright and brave. The sense of resistance, of dogged perseverance, of "fighting it out" to the last, was strong in her, stronger than in most women, or else it was the reflection in her own of that nature which was her ideal of everything great and good.

"No," she said to herself, after thinking over

for the hundredth time every difficulty that lay before them all,—meeting and looking in the face every wild beast in the way, even that terrible beast which, happily, had often approached but never yet visited the Leaf family, "the wolf at the door,"—"No, I don't think I am afraid. I think I shall never be afraid of anything in this world, if only—only"—

"If only he loves me." That was it, which broke off, unspoken; the helpless woman's cry—the cruel craving for the one deepest want of a woman's life,—deeper than the same want in man's, or in most men's, because it is more individual,—not "If only I am loved," but "if only *he* loves me." And as Hilary resolutely shut her eyes, and forced her aching head into total stillness, sharper than ever, as always was the case when she felt weary, mentally or physically, came her longing for the hand to cling to, the breast to lean against,—the heart at once strong and tender, which even the bravest woman feels at times she piteously needs. A heart which can comfort and uphold her, with the strength not of another woman like herself, but of a man, encouraging her, as perhaps her very weakness encourages him, to "fight it out," the sore battle of life, a little longer. But this support, in any shape, from any man, the women of the Leaf family had never known.

The nearest approach to it were those letters from India, which had become, Johanna sometimes jestingly said, a family institution. For they were family letters; there was no mystery about them; they were passed from one to the other, and commented on in perfect freedom,—so freely indeed, that Selina had never penetrated into the secret of them at all. But their punctuality, their faithful remembrance of the smallest things concerning the past, their strong interest in anything and everything belonging to the present of these his old friends, were to the other two sisters confirmation enough as to how they might believe in Robert Lyon.

Hilary did believe, and in her perfect trust was perfect rest. Whether he ever married her or not, she felt sure, surer and surer every day, that to her had been sent that best blessing—the lot of so few women—a thoroughly good man to love her, and to love.

So with his face in her memory, and the sound of his voice in her ear, as distinctly as if it had been only yesterday that he said, "You must trust me, Hilary," she whispered to herself, "I do, Robert, I do!" and went to sleep peacefully as a child.

CHAPTER XI.

WITH a sublime indifference to popular superstition, or rather because they did not think of it till

all their arrangements were completed, the Misses Leaf had accomplished their grand Hegira on a Friday. Consequently, their first day at No. 15, was Sunday.

Sunday in London always strikes a provincial person considerably. It has two such distinct sides. First, the eminently respectable, decorous, religious side, which Hilary and Selina observed, when, about eleven A.M., they joined the stream of well-dressed, well-to-do-looking people, solitary or in families, who poured forth from handsome houses in streets or squares, to form the crowded congregation of St. Pancras' Church. The opposite side Hilary also saw, when Ascott, who, in spite of his declaration, had not risen in time for breakfast, penitently coaxed his "pretty aunt" to let him take her to the afternoon service in Westminster Abbey. They wended their way through Tottenham Court Road, Oxford Street, Regent Street, and across the Park, finding shops open, or half-open, vehicles plying, and people streaming down each side of the streets.

Hilary did not quite like it, and yet her heart was tender over the poor, hardworked-looking Cockneys, who seemed so excessively to enjoy their Sunday stroll, their Sunday mouthful of fresh air; or the small Sunday treat their sickly, under-sized children had in lying on the grass, and feeding the ducks in St. James's Park.

She tried to talk the matter out with Ascott, but though he listened politely for a minute or two, he evidently took no interest in such things. Nor did he even in the grand old Abbey, with its tree-like, arched avenues of immemorial stone, its painted windows, through which the coloured sunshine made a sort of heavenly mist of light, and its innumerable graves of generations below. Hilary woke from her trance of solemn delight to find her nephew amusing himself with staring at the people about him, making *sotto voce* quizzical remarks upon them, in the intervals of the service, and, finally, the instant it was ended, starting up in extreme satisfaction, evidently feeling that he had done his duty, and that it had been, to use his own phrase, "a confounded bore."

Yet he meant to be kind to his pretty aunt—told her he liked to walk with her, because she was so pretty, praised her dress, so neat and tasteful, though a little old-fashioned. But he would soon alter that, he said; he would dress all his aunts in silk and satin, and give them a carriage to ride in; there should be no end to their honour and prosperity. Nay, coming home, he took her a long way round—or she thought so, being tired—to show her the sort of house he meant to have. Very grand it seemed to her Stowbury eyes, with pillars and a flight of steps up to the door, more fit, she ventured to suggest, for a retired merchant than a struggling young surgeon.

"Oh, but we dare not show the struggle, or nobody would ever trust us," said Ascott, with a knowing look. "Bless you, many a young fellow sets up a house, and even a carriage, on tick, and drives and drives about till he drives himself into a practice. The world's all a make-believe, and you must meet humbug with humbug. That's the way, I assure you, Aunt Hilary."

Aunt Hilary fixed her honest eyes on the lad's face—the lad, so little younger than herself, and yet who at times, when he let out sayings such as this, seemed so awfully, so pitifully old; and she felt thankful that, at all risks and costs, they had come to London to be beside him, to help him, to save him, if he needed saving, as women only can. For, after all, he was but a boy. And though, as he walked by her side, stalwart and manly, the thought smote her painfully that many a young fellow of his age was the stay and bread-winner of some widowed mother or sister, nay, even of wife and child, still she repeated, cheerfully, "What can one expect from him? He is only a boy."

God help the women who, for those belonging to them—husbands, fathers, brothers, lovers, sons—have, ever so tenderly, to *apologize*.

When they came in sight of St. Pancras Church, Ascott said, suddenly, "I think you'll know your way now, Aunt Hilary."

"Certainly. Why?"

"Because—you wouldn't be vexed if I left you? I have an engagement—some fellows that I dine with, out at Hampstead or Richmond, or Black-wall, every Sunday. Nothing wicked, I assure you. And you know it's capital for one's health to get a Sunday in fresh air."

"Yes; but Aunt Johanna will be sorry to miss you."

"Will she? Oh, you'll smooth her down. Stay! Tell her I shall be back to tea."

"We shall be having tea directly."

"I declare I had quite forgotten. Aunt Hilary, you must change your hours. They don't suit me at all. No men can ever stand early dinners. Bye, bye! You are the very prettiest auntie. Be sure you get home safe. Hollo, there! That's my omnibus."

He jumped on the top of it, and was off.

Aunt Hilary stood, quite confounded, and with one of those strange sinkings of the heart which had come over her several times this day. It was not that Ascott showed any unkindness—that there was any actual badness in his bright and handsome young face. Still there was a want there—want of earnestness, steadfastness, truthfulness, a something more discoverable as the lack of something else, than as aught in itself tangibly and perceptibly wrong. It made her sad; it caused her to look forward to his future with an anxious heart. It

was so different from the kind of anxiety, and yet settled repose, with which she thought of the only other man in whose future she felt the smallest interest. Of Robert Lyon she was certain that whatever misfortune visited him he would bear it in the best way it could be borne; whatever temptation assailed him he would fight against it, as a brave and good Christian should fight. But Ascott?

Ascott's life was as yet an unanswered query. She could but leave it in Omnipotent hands.

So she found her way home, asking it once or twice of civil policemen, and going a little distance round—dare I make this romantic confession about so sensible and practical a little woman?—that she might walk once up Burton Street and down again. But nobody knew the fact, and it did nobody any harm.

Meantime at No. 15 the afternoon had passed heavily enough. Miss Selina had gone to lie down—she always did of Sundays; and Elizabeth, after making her comfortable, by the little attentions the lady always required, had descended to the dreary wash-house, which had been appropriated to herself, under the name of a “private kitchen,” in the which, after all the cleanings and improvements she could achieve, she sat like Marius among the ruins of Carthage, and sighed for the tidy bright house-place at Stowbury. Already, from her brief experience, she had decided that London people were horrid shams, because they did not in the least care to have their kitchens comfortable. She wondered how she should ever exist in this one, and might have carried her sad and sullen face upstairs, if Miss Leaf had not come downstairs, and glancing about, with that ever-gentle smile of hers, said kindly, “Well, it is not very pleasant, but you have made the best of it, Elizabeth. We must all put up with something, you know. Now, as my eyes are not very good to-day, suppose you come up and read me a chapter.”

So, in the quiet parlour, the maid sat, down opposite her mistress, and read aloud out of that Book which says distinctly—

“Servants, be obedient to them that are your masters according to the flesh, with fear and trembling, in singleness of heart, as unto Christ: knowing, that whatsoever good thing any man doeth, the same shall he receive of the Lord, whether he be bond or free.”

And yet says immediately after—

“Ye masters, do the same things unto them, forbearing threatening: knowing that your Master also is in heaven; neither is there respect of persons with him.”

And I think that Master whom Paul served, not in preaching only, but also in practice, when he sent back the slave Onesimus to Philemon, praying that he might be received, “not now as

a servant, but above a servant, a brother beloved,” that Divine Master must have looked tenderly upon these two women—both women, though of such different age and position, and taught them through His Spirit in His word, as only He can teach.

The reading was disturbed by a carriage driving up to the door, and a knock, a tremendously grand and forcible footman's knock, which made Miss Leaf start in her easy-chair.

“But it can't be visitors to us. We know nobody. Sit still, Elizabeth.”

It was a visitor, however, though by what ingenuity he found them out, remained, when they came to think of it, a great puzzle. A card was sent in by the dirty servant of Mrs. Jones, speedily followed by a stout bald-headed, round-faced man, —I suppose I ought to write, “gentleman”—in whom, though she had not seen him for years, Miss Leaf found no difficulty in recognising the grocer's 'prentice boy, now Mr. Peter Ascott of Russell Square.

She rose to receive him; there was always a stateliness in Miss Leaf's reception of strangers; a slight formality belonging to her own past generation, and to the time when the Leafs were a “county family.” Perhaps this extra dignity, graceful as it was, overpowered the little man; or else, being a bachelor, he was unaccustomed to ladies' society: but he grew red in the face, twiddled his hat, and then cast a sharp inquisitive glance towards her.

“Miss Leaf, I presume, ma'am. The eldest?”

“I am the eldest Miss Leaf, and very glad to have an opportunity of thanking you for your long kindness to my nephew. Elizabeth, give Mr. Ascott a chair.”

While doing so, and before her disappearance, Elizabeth took a rapid observation of the visitor, whose name and history were perfectly familiar to her. Most small towns have their hero, and Stowbury's was Peter Ascott, the grocer's boy, the little fellow who had gone up to London to seek his fortune, and had, strange to say, found it. Whether by industry or luck—except that industry is luck, and luck is only another word for industry—he had gradually risen to be a large city merchant, a drysalter I conclude it would be called, with a handsome house, carriage, etc. He had never revisited his native place, which indeed could not be expected of him, as he had no relations, but, when asked, as was not seldom of course, he subscribed liberally to its charities.

Altogether he was a decided hero in the place, and though people really knew very little about him, the less they knew the more they gossiped; holding him up to the rising generation as a modern Dick Whittington, and reverencing him extremely

as one who had shed glory on his native town. Even Elizabeth had conceived a great notion of Peter Ascott. When she saw this little fat man, coarse and common-looking in spite of his good clothes and diamond ring, and in manner a curious mixture of pomposity and awkwardness, she laughed to herself, thinking what a very uninteresting individual it was about whom Stowbury had told so many interesting stories.

However, she went up to inform Miss Selina, and prevent her making her appearance before him in the usual Sunday *deshabille* in which she indulged when no visitors were expected.

After the first awkwardness, Mr. Peter Ascott became quite at his ease with Miss Leaf. He began to talk—not of Stowbury, that was tacitly ignored by both—but of London, and then of “my house in Russell Square,” “my carriage,” “my servants”—the inconvenience of keeping coachmen who would drink, and footmen who would not clean the plate properly; ending by what was a favourite moral axiom of his, that “wealth and position are heavy responsibilities.”

He himself seemed, however, not to have been quite overwhelmed by them; he was fat and flourishing—with an acuteness and power in the upper half of his face which accounted for his having attained his present position. The lower half—somehow Miss Leaf did not like it, she hardly knew why, though a physiognomist might have known. For Peter Ascott had the under-hanging, obstinate, sensual lip, the large throat—bull-necked, as it has been called; indications of that essentially coarse nature which may be born with the nobleman as with the clown; which no education can refine, and no talent, though it may co-exist with it, can ever entirely remove. He reminded one, perforce, of the rough old proverb: “You can’t make a silk purse out of a sow’s ear.”

Still, Mr. Ascott was not a bad man, though something deeper than his glorious indifference to grammar, and his dropped h’s—which, to steal some one’s joke, might have been swept up in bushels from Miss Leaf’s parlour—made it impossible for him ever to be, by any culture whatever, a gentleman.

They talked of Ascott, as being the most convenient mutual subject; and Miss Leaf expressed the gratitude which her nephew felt, and she earnestly hoped would ever show, towards his kind god-father.

Mr. Ascott looked pleased.

“Um—yes, Ascott’s not a bad fellow—believe he means well: but weak, ma’am, I’m afraid he’s weak. Knows nothing of business—has no business habits whatever. However, we must make the best of him; I don’t repent anything I’ve done for him.”

“I hope not,” said Miss Leaf, gravely.

And then there ensued an uncomfortable pause, which was happily broken by the opening of the door, and the sweeping in of a large, goodly figure.

“My sister, Mr. Ascott; my sister Selina.”

The little stout man actually started, and, as he bowed, blushed up to the eyes.

Miss Selina was, as I have stated, the beauty of the family, and had once been an acknowledged Stowbury belle. Even now, though nigh upon forty, when carefully and becomingly dressed, her tall figure, and her well-featured, fair-complexioned, unwrinkled face, made her still appear a very personable woman. At any rate, she was not faded enough, nor the city magnate’s heart cold enough, to prevent a sudden revival of the vision which—in what now seemed an almost antediluvian stage of existence—had dazzled, Sunday after Sunday, the eyes of the grocer’s lad. If there is one pure spot in a man’s heart—even the very worldliest of men—it is usually his boyish first love.

So Peter Ascott looked hard at Miss Selina, then into his hat, then, as good luck would have it, out of the window, where he caught sight of his carriage and horses. These revived his spirits, and made him recognise what he was—Mr. Ascott of Russell Square, addressing himself in the character of a benevolent patron to the fallen Leaf family.

“Glad to see you, Miss. Long time since we met—neither of us so young as we have been—but you do wear well, I must say.”

Miss Selina drew back; she was within an inch of being highly offended, when she too happened to catch a glimpse of the carriage and horses. So she sat down and entered into conversation with him; and, when she liked, nobody could be more polite and agreeable than Miss Selina.

So it happened that the handsome equipage crawled round and round the Crescent, or stood pawing the silent Sunday street before No. 15, for very nearly an hour, even till Hilary came home.

It was vexatious to have to make excuses for Ascott; particularly as his god-father said with a laugh, that “young fellows would be young fellows,” they needn’t expect to see the lad till mid-night, or till to-morrow morning.

But though in this, and other things, he somewhat annoyed the ladies from Stowbury, no one could say he was not civil to them—exceedingly civil. He offered them Botanical Garden tickets—Zoological Garden tickets; he even, after some meditation and knitting of his shaggy grey eyebrows, bolted out with an invitation for the whole family to dinner at Russell Square the following Sunday.

“I always give my dinners on Sunday. I’ve no time any other day,” said he, when Miss Leaf gently hesitated. “Come or not, just as you like.”

Miss Selina, to whom the remark was chiefly addressed, bowed the most gracious acceptance.

The visitor took very little notice of Miss Hilary. Probably, if asked, he would have described her as a small, shabbily-dressed person, looking very like a governess. Indeed, the fact of her governess-ship seemed suddenly to recur to him; he asked her if she meant to set up another school, and being informed that she rather wished private pupils, promised largely that she should have the full benefit of his "patronage" among his friends. Then he departed, leaving a message for Ascott to call next day, as he wished to speak to him.

"For you must be aware, Miss Leaf, that though your nephew's allowance is nothing—a mere drop in the bucket out of my large income—still, when it comes year after year, and no chance of his shifting for himself, the most benevolent man in the world feels inclined to stop the supplies. Not that I shall do that—at least not immediately: he is a fine young fellow, whom I'm rather proud to have helped a step up the ladder, and I've a great respect"—here he bowed to Miss Selina—"a great respect for your family. Still there must come a time when I shall be obliged to shut up my purse-strings. You understand, ma'am?"

"I do," Miss Leaf answered, trying to speak with dignity, and yet patience, for she saw Hilary's face beginning to flame. "And I trust, Mr. Ascott, my nephew will soon cease to be an expense to you. It was your own voluntary kindness that brought it upon yourself, and I hope you have not found, never will find, either him or us ungrateful."

"Oh, as to that, ma'am, I don't look for gratitude. Still, if Ascott does work his way into a good position—and he'll be the first of his family that ever did, I reckon—but I beg your pardon, Miss Leaf.—Ladies, I'll bid you good-day. Will your servant call my carriage?"

The instant he was gone, Hilary burst forth—

"If I were Ascott, I'd rather starve in a garret, break stones in the high-road, or buy a broom and sweep a crossing, than I'd be dependent on this man, this pompous, purse-proud, illiterate fool!"

"No, not a fool," reproved Johanna. "An acute, clear-headed, nor, I think, bad-hearted man. Coarse and common, certainly; but if we were to hate everything coarse or common, we should find plenty to hate. Besides, though he does his kindness in an unpleasant way, think how very, very kind he has been to Ascott."

"Johanna, I think you would find a good word for the de'il himself, as we used to say," cried Hilary, laughing. "Well, Selina, and what is your opinion of our stout friend?"

Miss Selina, bridling a little, declared that she did not see so much to complain of in Mr. Ascott.

He was not educated certainly, but he was a most respectable person. And his calling upon them so soon was most civil and attentive. She thought, considering his present position, they should forget—indeed, as Christians they were bound to forget—that he was once their grocer's boy, and go to dine with him next Sunday.

"For my part, I shall go, though it is Sunday. I consider it quite a religious duty—my duty towards my neighbour."

"Which is to love him as yourself. I am sure, Selina, I have no objection. It would be a grand romantic wind-up to the story which Stowbury used to tell—of how the 'prentice-boy stared his eyes out at the beautiful young lady; and you would get the advantage of 'my house in Russell Square,' 'my carriage and servants,' and be able to elevate your whole family. Do, now! set your cap at Peter Ascott."

Here Hilary, breaking out into one of her childish fits of irrepressible laughter, was startled to see Selina's face in one blaze of indignation.

"Hold your tongue, you silly chit, and don't chatter about things you don't understand."

And she swept majestically from the room.

"What have I done? Why, she is really vexed. If I had thought she would have taken it in earnest, I would never have said a word."

But Miss Selina's fits of annoyance were so common, that the sisters rarely troubled themselves long on the matter. And when, at tea-time, she came down in the best of spirits, they met her half-way, as they always did, thankful for these brief calms in the family atmosphere, which never lasted too long.

It was a somewhat heavy evening. They waited supper till after ten; and yet Ascott did not appear. Miss Leaf read the chapter as usual; and Elizabeth was sent to bed, but still no sign of the absentee.

"I will sit up for him. He cannot be many minutes now," said his Aunt Hilary, and settled herself in the solitary parlour, which one candle and no fire made as cheerless as could possibly be.

There she waited till midnight, before the young man came in. Perhaps he was struck with compunction by her weary white face—by her silent lighting of his candle, for he made her a thousand apologies.

"'Pon my honour, Aunt Hilary, I'll never keep you up so late again. Poor dear Auntie, how tired she looks!" and he kissed her affectionately. "But if you were a young fellow, and got among other young fellows, and they over-persuaded you."

"You should learn to say, No."

"Ah"—with a sigh, "so I ought, if I were as good as my Aunt Hilary."

OLD MAIDS AND YOUNG MAIDS.

A YOUNG girl, in the shelter and the freedom of an English home, growing and unfolding day by day almost as unconsciously as those sweet types of her—her favourite roses—do; the new life and hope of her parents; the gaiety and exhilaration of the whole house; naturally intelligent and carefully cultivated; high principled and happy tempered,—has human life a pleasanter picture to show us than this? What a beauty there is in her perfect physical health,—the brave out-door English girl, no more afraid of winter and cold weather, of a mountain scramble or a spirited horse, than one of her brothers might be; what a fascination about her active, ardent, inquiring turn of mind; what a charm in the thoroughness and intensity of her affections! I don't wonder, for my part, that her parents look upon her with unlimited satisfaction, just as she is, with her fervours of love and pity; her vehement intolerance of whatever is cowardly or mean; her exuberances of every kind. I have not the least inclination to approach her with didactic rule and measure. Her life is full of healthy energies and active enjoyment; night and morning she asks and receives better teaching than the best of ours. For all its wild dancing in the early breeze, the fair plant is firmly and safely rooted; its sweet luxuriance nourished by sun and shower from heaven; a pleasant picture truly, as I said.

And beside it I like to place one other picture, on which I gaze just as willingly. Not that of a young maiden standing hopefully, fenced round by parents' love; to look on life's land of promise outspread before her. This woman has known loss and sorrow, and she is now alone. When she finds time for purely personal thoughts, they sweep her not onwards, but "back to long ago." If she indulges in day-dreams at all, they are woven out of memory's dusky and tear-stained threads. But the young girl's brow is hardly brighter, certainly not so calm; nor is her life more abundantly occupied than that this lady leads. She is ministering angel to the whole country-side. Wherever there is sorrow and sickness, or sin, which is the worst sorrow, there is she to help and cheer. No outward vows bind her to this charitable career, but she has steadily persevered in it for more years than our young beauty numbers. But you are not to suppose that her whole life is so exclusively devoted to the service of the poor as to leave her neither time nor thought for the benefit of her equals. The most thoroughly social gatherings in the neighbourhood are in her beautiful garden in strawberry time, or round her tea-table in the winter. She is the friend of all,

but more especially the friend of the young. The girls around delight in her society, and often help in missions not otherwise attractive to them, just for the sake of it. They will trust their most timid secrets to her keeping. They are never weary of admiring her in her quiet costume, dove-coloured, draped, and much in advance of her years. Sometimes they will talk together in under-tones about her youth, wonder whether that early lover who died then (so their mothers have told them), was by possibility worthy of her; and decide that she never could have been quite as great a darling as anything else but what she is. The name Old Maid has lost all its terrors to many a youthful ear, because it is consecrated by her. I do not think she has read or theorized much respecting woman's mission, but plainly there is no need for any didactic exposition of it to such as she is. But these are ideal cases among young maids and old maids alike. Not, indeed, that we do not all know or remember such; "realized ideals," whose beauty and worth has been hinted rather than described in the foregoing sketches; only there are not many of them. Such happy combination of character and circumstance, "fortune coming with both hands full," is rare in every department of life. Amongst our unmarried women, as elsewhere, the majority do not appear to be making the best of themselves. There is some want of fitness between their nature and their position; of congruity between will and way; the former wants stimulus, for the latter making plain. The more thoughtful among them, as they look, discern abundant scope for direction and advice, and put pen to paper accordingly. Book follows book, on the conditions, the capabilities, the crosses, the compensations of the great sisterhood of the unmarried; and their rapid sale proves that they supply a widely-felt need. In short, woman, her wants and her work, is becoming the most prominent question of the day.

This question may be said to divide itself naturally into two heads. There are among our unmarried women those who want to work for their own support, and those who want to work for the good of others; and both these are increasing classes. How many new channels are opening out to the former, and yet how inadequate they as yet are, all who take an interest in social progress know something of. With the encouragements and the difficulties that attend this important cause, we, however, are not at present concerned. The books that have turned our attention to the subject of Old Maids and Young, address themselves to the women whose proper vocation seems

the work without the wages; the women of independent means, who need to be roused out of the sadness of inaction, or to have definite and worthy occupations presented to their activity.

We take up the first that comes, *Papers for Thoughtful Girls*. An attractive book in every way. Full of cheerful, healthy wisdom; of shrewd observation, of such intimate knowledge of the youthful heart as proves that the writer loves it even better than she knows. Surely the girls for whom it is especially written will enjoy it as much as we; or will any of them—with something of that perverse preference for other people's concerns which makes the fashionable novel the delight of low life, and the records of low life the refreshment of the fashionable world—put down the pleasant pictures of their own fresh existence to take up the second book on our table, *The Afternoon of Life*, in order to see what can be said of that far-off and appalling period? If so, full of tenderness, piety, and instruction though it be, ten to one they will put it down with a sigh. Its very resignation will chill them. We can recommend the third book, *My Life; what shall I do with it?* with its practical directions for outward and visible work, as more cheerful reading, even if they do pronounce it a little dry.

The first effect upon the mind after the perusal of books like these two last, is a rather weary impression of their having exhausted the subject, catalogued every possible snare into which women—not only as human beings, but as women; nay, not only so, but as unmarried women, can possibly fall; prescribed every conceivable remedy; taken an inventory, in short, of all our nature. No need for further books of the kind. What more minute than this moral anatomy; what more judicious and approved than these moral therapeutics? Guidance! We have only too much guidance. Henceforth let each try to *learn*, and, except by example, refrain from trying to *teach* any more. But presently we begin to surmise that, on subjects like these, there is no such thing as speaking a last word. Be our own stand-point where it may, we seem to catch some stray light which we fancy has not fallen exactly on this or that aspect of the question before, and which we may as well jot down. Theory is so much more easy than practice, we long to theorize a little too, as to how others may best keep their footing where our steps have such a tendency to slip. And so it is that I now proceed to throw some of the thoughts these three admirable works have suggested to me, into the form of more or less desultory observations upon young maids and old, as they are, and as they might be.

In the annals of medicine, one notices that there is generally some prevalent malady or other which,

for the time especially, occupies the imagination of the Faculty, so that any anomalous case is likely to be referred to it. Some years ago, it was liver complaint; now it is disease of the heart. It will be something else by and by. And no doubt all these complaints do put on an epidemic character; the widely-spread cause has widely-spread results. But the cleverest practitioner will probably lay more mischief at the door of the disease of the day than it is really accountable for. And I suspect that, in the same way, there is rather too exclusive a tendency to refer all the unhappiness among girls and women to one and the same cause, want of occupation. Yet no one can doubt that it is at present an evil which produces a greatly-increased amount of conscious suffering.

I am no friend to schools; on the contrary, I am rather bigoted to home education. Wherever the parents have one heart and mind (better anything, than that the young girl witness the squabble or the stratagem, become the partisan of father or mother), wherever the young life can develop freely in the house, and a fair amount of systematic teaching be secured there, surely she is in the safest place. I never see a file of girls, after their formal walk, re-entering the prison gates of some staring, stuccoed house, with pretentious name, in the precincts of one of our large towns, without a suspicion that the advantage of the best masters, which congregate them there but poorly makes up for the dangers of so artificial a life. But school days are generally looked back upon as happy. They are too regular and too busy to be otherwise. This is their strong point. What the girls acquire may not be worth much, but the trouble of acquiring it has kept off all sense of purposelessness. There is no spare time to hang heavy; no listless indecision as to what had better be done next. Every hour brings its allotted task, and the young spirits are bright with the dignity and complacency that comes from being thoroughly employed.

Nor indeed is it often in the first years of home life, when so-called education is recently over, that girls know much of this great want we are thinking about. A bright future plays before their imagination; small events take up a large space in the mind; amusements are energetic; life excitingly full of possibilities. And yet, even in these early days, we have seen sisters who loved each other and loved their parents, less happy together than apart, just because when both were at home there was less necessary occupation for either. They trenched upon each other's undefined province; ran both, as it were, on the same line; and so there came little jealousies, little collisions, little fits of alienation, each wondering why the other was so hard to live with, and the mother

afraid of some inherent incompatibility between her girls' tempers; and all the time it was only because there was not enough for the two to do. Later, one of these girls took to drawing, for which she had a decided talent, with a quite professional earnestness, leaving to the other a more exclusive domestic sphere; and then, all clashing and all commenting over, they were as much attached as heart could wish. I think a good deal of energy is often spent in blaming character when its real use would be in modifying circumstance; and that, in addition to telling young people of the duty of love and concord, parents should be careful to examine the conditions most favourable to those virtues. If each girl has a special pursuit of her own, much will be done toward insuring them. Should not her education be carried on with a view to this? And when there is no particular talent of any kind, might we not take a hint from German households, and give to the daughter who cares least for books and art some domestic province more especially her own?

But it is as years roll on that dangers and difficulties multiply for the daughters at home. The cultivation of their minds, the keeping up their accomplishments, may have been occupation enough while waiting for that bright future that seemed so sure and so near. But how if there be no such future? To some of them it has got to look very dim indeed. They begin to suspect that their life is never to be more complete than it is now; to have no fuller blossoming; its only change now a gradual withering. Then the pursuits that used to fill the time, to stand out distinctly before the mind as adequate aims, collapse into utter insignificance. Then comes a disgust of that daily practising, that studying German, that frequent letter-writing to friends. It is not only that the heart aches for the love which seems a woman's birthright, but the mind too pines for lack of stimulus, and scope, and action on others. Disappointed affection is a common lot for man and woman; but for man there are "sword, gown, gain, glory," with their several offers in exchange, while woman, whose nature feels the disappointment much more keenly, has so very little to divert her from it. Who can wonder, then, at her deep depression when this her one stake—as she has come to view it—is on the point of failure? Parents, "having had all in their case," are generally slow to understand this. They are often perplexed at a change in their dear girls, as they still call them, who, with all their old materials of happiness around them, are evidently no longer happy. Health must be in fault, the doctor has to be called in; and, to the sufferer "from a vague disease," the relief of hearing a well-sounding name given to it—indigestion, neuralgia, what not

—is often so great; strenuous attention to regimen and change of scene cheat the sense of inaction so well, that she is in great danger of adopting invalidism as the business of her life! Cases like this are familiar to us all, and we have all seen perfect cures brought about alike by unexpected happiness and sudden adversity, both having provided steady, definite, and engrossing occupation.

Granted these on all sides. From want of adequate occupation proceed gloom, hypochondria, family disputes, foolish flirtations, what not. Good Dr. Watts taught it us in our childhood in two homely lines which we all remember. But now comes some practical person, who asks of what use it is to go on detailing symptoms of so familiar a disease, and challenges us to bring forward any panacea which can come within the reach of all. And another, perhaps, reminds us that we seem in danger of laying too much stress upon the outward circumstances, and forgetting the "grace sufficient" under all; the motive which may dignify the most trivial employment; the control which is to be learned in the school of the Divine Master whatsoever the state. It is good to be thus reminded; every truth wants the balance of some others. Still we would suggest that in one family there are often the most opposite natures; that different natures imperatively demand different spheres; that the recklessness and dissatisfaction one sister feels with the way of life that satisfies another is no necessary proof of want of resignation to God's will; is often proof that God's will concerning her is that she should enter upon a wider field, a more active service. Pain of body, weariness of spirit are sent to warn us of something wrong. There is indeed no panacea for all the sorrows of any class. There will always be daughters at home neither fitted to enjoy nor to do greatly. We do not suppose that every young woman who feels her life dreary is consequently qualified or inclined to devote it to the service of the poor and the afflicted. But where the spirit is finely touched to fine issues, it will be a happy thing for the parents and the daughter if this inward vocation be willingly recognised; if, instead of thwarting, they encourage and assist her to seek out some more satisfying career than home life affords, even though it take her away from home for many hours of every day; nay, even though it take her away from home altogether. The Catholic mother gives her daughter cheerfully to the convent; will not the Protestant mother consent to one of hers devoting herself *unreservedly* to some of those good works, those labours of love, that are the glory of the Christianity of our time?

But we pass from the daughters at home to the class of unmarried women who have lost their parents; who are—as the chill phrase runs—alone

in the world, and who do not own to themselves the very slightest expectation of changing their lot by marriage.

It is pleasant and encouraging to our belief in progress to contrast the tone in which this portion of the community is thought, spoken, and written of in our day, with that which prevailed in the society and the literature of a hundred, or even fifty years ago. The sour and spiteful old maid we so often meet with there, punished for the coquetry and heartlessness of her youth by ridicule and unloved isolation in her age, is almost an obsolete character. We have come to discern that amongst our single women are many of the noblest and purest spirits of the time. It is to them that society mainly looks for reformatory efforts and civilizing influence among the poor and the ignorant. The peculiar trials of their lot are no longer overlooked; on the contrary, it is because they are so feelingly recognised that we expect to find in our unmarried women such tender beneficence and such sublime self-sacrifice. Perhaps, indeed, there has even been of late a slight tendency to exaggerate these trials. Perhaps sympathy has been rather unduly concentrated on the darker features of the unmarried life. Some of the books written with the professed purpose of enumerating its compensations, leave on the mind a disguised impression of its grief. We shrink a little from their minute analysis; and although their wide circulation shows that they do supply a present want, we think their tone will change in the course of a few years, and that, *as a class*, unmarried women will no more continue to excite commiseration, than they have continued to excite ridicule. More and more varied scope for labour paid and unpaid; more and more freedom of action and recognition of equality (not identity) of influence and pursuit, will place them much in the same category as unmarried men, for whose especial benefit no books of condolence or direction have, we believe, ever appeared! Already there are a goodly array of feminine names in literature, art, social science, philanthropy, with which our reverential admiration has never associated the least shade of pity. They stand alone, indeed, by their own choice (whether sorrow or struggle attended that choice we presume not to inquire); and they have strength so to stand. We do not lament, rather we glory in their independent attitude, and should probably feel some tincture of regret if names, that have so often "helped us in our daily need," were to be exchanged for any others.

Meanwhile, though we believe that there will be increasingly less and less general reference to it needed, we are quite justified in drawing an argument from the comparative blankness and desolation of many an individual unmarried lot. There

are fervent spirits, whose only satisfaction lies in the exercise of their affections. Their intellect is valueless to them, unless as the handmaid of their heart. Material comforts are not even recognised as compensations. The one luxury of their nature is to spend and be spent for another. Now let none of these blame themselves for their intense yearning after a fuller life, or starve their souls by an attempt to subsist upon small interests and personal pleasures, because these satisfy the majority of their friends and acquaintance. Not for *this* have they been "chosen in the furnace of affliction." They are the very women to "minister with their substance," their time, their energy, their culture, to the poor, the ignorant, the sick, and the criminal. The strong sympathy of their nature that tortures them now unbestowed, will incalculably promote their success in all such undertakings. The "loving much" that has made them weak hitherto, will be their strength in this new career. Not one craving, one pang that will have been wasted, since each has added to the keenness of their insight, and the tenderness of their toleration. Of these, too, in their measure, we may venture to pronounce it true, that "inasmuch as they have suffered, being tempted, they shall be able to succour them that are tempted."

We will not attempt to indicate here the numerous calls upon unmarried women of this stamp. We would not say, Do not fear to accept the life for which your whole nature yearns. Do not let any make you despondent or discouraged by suggesting that you want this occupation of systematic beneficence for your own sakes; not purely out of pity for the poor or love for Christ. Sometimes we meet a spiritual over-refinement of this kind, which makes sad very unnecessarily. "The labourer is worthy of his hire," of increased personal happiness, and we need not fear to find a motive in the Divine appointment, "He that watereth shall himself be watered."

It may, too, be worth remarking, that whenever a woman of this peculiar temperament takes a decided step, and makes for herself a life-purpose, a *profession*, as it were, of some department or other of the charitable effort of our day, she does good not only directly to herself, and to the cause in which she enlists herself, but indirect good to that other large class of unmarried women who have no such special vocation. She leaves them more scope in a different and lowlier sphere. For there are, and always will be, characters of less energy, or quite different energy,—satisfied with mental culture, social enjoyments, domestic avocations, or, at least, sufficiently satisfied not to look beyond these, confining their highest aspirations, and their most strenuous efforts, to a better performance of

the "common round, the daily task." And indeed, when we come to think how important the ditties that it comprehends, we feel we have no right after all to pronounce that theirs is a lowlier sphere. But if it be idle to contend which life is best in itself, it is, at all events, very certain that relatively that is best which is most in harmony with the individual character, and most fully calls out the capabilities the Creator has given.

Let both classes respect each other. Let the unmarried women, in their comfortable homes, leading gracious and kindly lives there, and conscious of no unemployed time, be yet very slow to pronounce that sister injudicious or fanatical, who has

betaken herself to the Reformatory or the Hospital, to grapple with the darker forms of evil in the heart of some great city. Nor again let this hard worker suppose that all are necessarily idle and frivolous who are content with a life of much apparent ease and little apparent self-denial. We want these two classes of unmarried women. Some to help us by what they do; others to cheer us by what they are. It is too much to expect often to find completeness. In some women we shall have pre-eminently to honour the instrument; in others, let us be satisfied to love the character. Both lives alike may be lived "unto the Lord."

AUTHOR OF "MEMOIRS OF AN UNKNOWN LIFE."

THE CRIMSON FLOWER.

BY THE COUNTESS DE GASPARIN, AUTHOR OF "THE NEAR AND HEAVENLY HORIZONS."

Do you understand the process of budding? No. Well then, you will not learn it from me. To explain in precise terms any mechanical operation, to describe a machine, or merely to give an account of a series of movements executed by one's ten fingers, has always appeared to me one of those difficulties of the first order, before which all great idlers and small geniuses stop short at once.

Enough, then; on that particular day (a June morning) I was budding. The manor-house rose higher in the limpid atmosphere, the martins flew

about the weather-cock, scattering a very rain of small shrill cries through the air; the fountain beneath the great sycamores babbled in such clear notes that you felt, merely listening to them, the freshness rise and caress your face. Uncertain puffs of wind kept blowing down every now and then from the mountain; they upheaved the sycamore branches—a most languid movement. Every separate leaf thrilled for a moment, then grew calm again, and cast its shadow down, its broad cool shadow.

Budding is no easy matter; you may take my word for that.

If you are a nervous person, don't bud, nor if you are impatient, or timid, or conceited; the three cardinal virtues, nothing less are requisite—and even then success is doubtful.

Do you see that green shoot? a graft cut in the form of a scutcheon. Do you see its eye? a bud—there—in the hollow of the leaf-stalk. Very well, then. Hold it delicately between your lips. Now choose a good strong branch amongst these young shoots. Pull it out from the midst of the thorns round. Make your incision. Put in your bud."

"What! is it as simple as that?"

Very good! Your lips have trembled. There is your bud on the ground; you look for it; it is nowhere to be seen. Your pen-knife has cut the bark across; the graft bends, does not get fixed in. Your branch is deficient in sap; the bud will wither off-hand. Alas! how many withered buds there are for the want of a little sap. The thing is done! No, your worsted catches—entangles. The thing is done! No such luck; you have cut the shoot itself with one stroke.

If you bud with a latent irritability, you are awkward, the graft fails. If you bud, filled with a confidence which borders upon the pride of life, the wind of the desert sweeps over your bud and burns it up. If you graft without faith, sure beforehand that you shall fail,—you have a run of bad luck, the thorns tear you, the pen-knife is blunt, the ligature slackens, the graft dies.

I told you so before; the three cardinal virtues are wanted; we can't spare one.

And so that particular morning, modest, but hopeful, and possessing my soul in patience, I was budding. At every knot I made my arteries beat. And when the bent branch sprung back again with a proud delight, bound round with its little scarlet bracelet, I, too, drew myself up, and breathed freely. Then the fragrance of the carnations, blowing in tufts on the old walls, came mingling with the faint smell of wax that the bees carried about with them. Then I could hear the little children along the path which takes down to the brook, sometimes frisking about barefooted, sometimes stopping before a bit of hedge, all singing the same air with their monotonous and silvery voices. The words of that song, simple to very folly, have often rocked my dreams—

"Tell me yes, tell me no,
Tell me if you love me;
Tell me yes, tell me no;
Tell me Yes, not No."

And so it went on invariably. And sung along that pathway, listened to in that rose thicket, under those great sycamores, with the accompaniment that the fountain made, and the thousand

different hummings of a thousand busy insects that little song had a poetry of its own, was indeed fraught with charm.

These young rose-shoots we are looking at have hosts of enemies. Caterpillars rolled up in the newborn leaf, grey larvæ, ensconced in the middle of the still tender stalk—up to the very spiders, those inveterate carnivora, that the gardeners accuse of taking to a vegetable diet on purpose to spite them, up to those malachite-coloured beetles, with their gold-spotted garb, diamond eyes, and slender waist, who saw the boughs neatly across, and leave you for consolation nothing but a bit of dry wood. These last, however, have some sense of their iniquity. No sooner do they perceive you coming—and they can see you a good way off—than they instantly counterfeit death. They fall, heavy as lead, through the labyrinth of leaves. And, even if you found them, could you very well kill them? A sportsman who destroys the hare that has taken refuge between his legs has always appeared to me the type of cowardice and ferocity.

Now, all this—I mean these hosts of enemies to rose-trees—all this makes one passionately fond of roses. Of those climbing ones, so delicate in their tints, those damasks with great intoxicated flies in their glowing core, those moss-roses, hidden beneath the exuberant curliness of their calyx. And so one goes on budding roses as long as the summer lasts,—throughout the dog-days, under the thunder-showers, pricked, scratched, provoked in all sorts of ways, but still supremely happy, a very holiday of the soul after all.

All at once, the nightingale sang. To understand the full effect of those three words, I must premise that on the particular site of the manor-house—a rather wild site—the nightingale hardly ever sings. His haunt is in the wood, under the oak-trees. Here not at all, or very seldom. Why is this? I refer you to the gentleman himself. He is capricious, like other artists. Wrens, finches, linnets, larks, red-breasts, as soon as ever the month of March comes, meet here by special arrangement to execute their symphonies. The brook rolls its wavelets over a pebbly bed; the lilacs and privets steep their clusters in its slackening tide; there are giant trees around on which to perch mid-air, and fling down songs of triumph from a fitting height; there are Syringas white with blossom in which to shelter from the noontide heat; the place is neither deserted (the dwellers in the manor-house are hard by) nor noisy (they are not great talkers);—but what is the use of proving to people that their true happiness runs counter to their fancy?

The nightingale then began to sing. One full dilating note—an arrow of vivid light shot through space. The graft fell from my hands. Where

was he singing? There, a hundred paces lower down; there where the brook loses itself in the brushwood, on its way to sweep round a wooded hill which we call La Rochette.

La Rochette has oaks centuries old, dotted here and there; it has precipices where you may break your limbs if you like; honeysuckles that trail their garlands along the face of the rock; it has its winged denizens who warble there from dawn to twilight. This morning it had a nightingale.

To many, a nightingale is no more than a bird-organ; a thing that trills and gurgles; executes certain *tours de force* very neatly, but always the same thing, say they; in a short time these grow wearisome. To others, the nightingale is the very essence of the spring, triumph of life over death, beauty of shining nights, climax of earth's harmonies—all these in one!

I cut across the field, I followed the brook; the nightingale sang on.

He sings. The stream glides between banks of waving grass, plays with shining pebbles, loses itself beneath the branches,—you only hear the whispering together of leaves and ripple. The trunk of an old willow leans over and rests its elbow on the other side, a bridge cushioned here and there with brown velvet moss. Then every sound but one ceases; the long notes of the nightingale pervade the wood, full, brilliant, reminding one of the rays of the sun; then soft, quivering, throbbing with an emotion that recalls the human voice.

When he had shot arrow after arrow, scattered very sheaves of song, given out his defiance, his triumph, told all his sadness and all his love, he stopped quite suddenly, as he had begun. For a moment, completest silence. Then a wren hazarded a few notes in a whisper, a linnæ tried her humble triplet, the blackbird began to whistle, somewhat uncertainly, as if to put himself into voice again; and then they all set to, a melody of glad sounds, a dance of sparks, as it were, in the summer air; and I know not how, I know not why, I began to dream of the crimson flower.

What that flower exactly was, or where it grew, I should have some difficulty in telling you. I had seen it once, when quite a little child, in a stony road, amongst the briars of the hedge; and I had gathered it. Oh, yes, that at least was certain! The flower swayed to and fro on the top of a long stalk, it had petals of flaming red, its shape was like nothing known, neither a star nor a circle—something like a censer, out of which came golden stamens.

Since then, had I not looked for it, had I not inquired about it? When I spoke of it, people laughed at me. I left off speaking of it, but I looked for it still.

You know the nature of those childish pursuits,

that perseverance of theirs that nothing can weary.

Impossible! Experience inscribes this word in the dictionary of the man; in the vocabulary of the child it has no place. To the child the marvellous is quite natural. Each day some fresh knowledge opens upon him, a star suddenly kindled in the darkness. So many beautiful things, the existence of which he never suspected, have come and ranged themselves along his path; why not this or that other marvel as well? Later, precise limits will fix for him the extent of his domain. First a slight line, then a fence, then a wall, then the wall will rise, will shut in the man; will form a prison, and to get out of it he must have wings. But around the child neither walls nor fences,—a boundless extent, all iridescent with brilliant colours. In far-away depths reality blends with reverie. It is like an ocean shore; blue waves, lustrous with light, rise and rise up to the horizon, up to the enchanted islands whose shores they kiss.

I went on then looking for the crimson flower. And you, have you never looked for it?

That morning, in that vernal atmosphere, its image returned to my mind. It seemed as though I should really find it, and so I walked on at random.

And oh, if you only knew the delight of doing, every now and then, something quite different from what one had intended to do!

Well-arranged days have, I confess, a harmony which pours peace into the spirit. I think I see the smiling hours, with an austere grace, intertwining their white arms, and with measured step performing their skilful and intricate round. Mysterious concords, as ancient theories hold, accompany days that the hours lead on thus, from dawn to the dying light. But to escape from them, to leave them standing there, a little taken by surprise, and to run, I mean to saunter with slow and idle steps through the country; this is one of those unusual delights, fraught with a boldness that makes the heart beat higher.

I take my way then, by the most solitary paths. The labourers have all gone back to the village for their mid-day rest. Besides, the scythe has not yet begun to mow the fields; one does not yet hear that hissing sweep, that sigh of the grass which falls wave on wave, withered almost as soon as fallen.

The fields have all their first exuberance,—with dashes of colour bold enough to make a battalion of city landscape-painters fall back in dismay.

There are certain weeds, which have got in, in spite of all precaution, and now take the liberty of displaying a golden carpet beside the pink sainfoin. In the ditches are jungles of pale blue forget-me-not; on their edges, tufts of dark-blue

speedwell; half bending over the brooks the straw-coloured lotus. Under the still green corn a harvest of red poppies is swaying to and fro. Every breeze raises scarlet waves—they run along, swell, and disappear. The stiff blue corn-flowers entangle themselves with the wheat.

And then this great silence of great nature. Man has disappeared for the nonce. He will come back to destroy everything by and by. At this particular moment of the year—this brief moment, too short almost to catch—he has finished the labours of the spring, and not begun those of summer; he has not yet cut the hay; the women have hardly begun to prune the vines on the steep hill-slope. The country, left to itself, shines out resplendent for its own pleasure, and for the delectation of the living myriads who wander at large in their kingdom.

There are certain lofty spirits who look down in compassion on the puerile contemplations into which every individual ant who drags its little load along can plunge the child and the dreamer. What care such for the golden lustre of the burnished wing-cases, and the crested heads, and the mysterious mazes of the dance, and the giant-like ferocity of creatures almost invisible, and these labours of Hercules that a breath destroys? Are you a scientific observer? Very good. Study with your net in your hand. Are you an ignoramus? Go your way, then, and let us have none of your idle talk.

What would you have? That morning there were blue butterflies, which formed my escort, clustering, scattering again, petals that had taken flight! On the umbelliferous plants there was a perfect pavement of coleoptera, a black and purple mosaic. On the tufts of the bryony were insects in armour, emblazoned like that of the knights of the middle ages. The quail was calling in the long grass—three notes here, three there. So that with all this I found myself, in time, a long way from the manor-house, on the edge of a pine-wood, and I sat down to rest on the ground.

What of the crimson flower? I declare I never thought of it; the butterflies had wafted it away. I was thinking that life is beautiful on a spring morning; that it is a joy to open one's lips and inhale the fresh air; a festival to open one's eyes and see the earth in her bridal robes; that it is an ecstasy to open one's hands, and gather sheaves of fragrant flowers. Then I thought of the God of heaven; the boundless arch overhead spoke to me of his power. I thought of the Lord of the humble; the little winged creatures fluttering here and there spoke to me of his goodness. A book that I carried with me spoke of his love: an inward voice of my own sinfulness; and from these diverse accents emanated a perfect harmony like that which

made so beauteous the flowery meadows before me. When I had inspired their perfumes to the full, I went on, sometimes under the wood, sometimes outside it.

There is nothing perhaps about that particular spot more than any other. Only it has this merit, that you find there no woodman with his hatchet; no sportsman with his gun; and that the earth sends up its green herbs as God pleases.

That morning, however, I was destined to find some one there. In a glade inundated with sunlight, surrounded by brambles, which spiders had hung round with their nets, a figure was lying. A tall young girl, with a woollen petticoat twisted round her form, her face hidden in an armful of fodder contained in her blue apron, which was tied at the corners, and overflowed with poppies, sainfoin, and ox-eyed daisies.

The attitude of the girl, the shadow she cast, the mottled light, her abundance of light-brown hair, the sober, and somewhat rigid grace of her outline, reminded me of the Magdalen of Correggio.

She suddenly lifted her head, and then I saw that she was crying.

What, Suzette! all alone!

Suzette resolutely hid her face in the bundle of grass.

I am not fond of taking hearts by surprise. Suzette, if she chose, had a right to indulge her grief in solitude. A right often ignored in our age, which is certainly not one of exaggerated delicacy. I slept noiselessly by. I had seen nothing. A sigh heaved for that purpose—so at least it seemed to me—made me turn round. Suzette was looking at me with an expression no longer unsocial. When she saw that I stopped, she half rose, and drew her petticoat to one side, as if to make room for me. I went back and sat down.

"Well then, Suzette?"

Suzette looked down, pulling up the moss sprig by sprig.

"Always the same difficulties?"

"My brothers have said they would kill him for me."

"And your mother?"

"Mother!"—here Suzette blushed, and hung her head a little more—"mother has no objection."

"Well then?"

"Since father's death, mother does not dare to speak."

"They must be brought to reason, those boys must."

"They are the masters!" Suzette answered in a dismal voice.

"And Frederic, he does not know then how to insist upon what he wishes?"

Suzette's blue eyes flashed.

"A little resolution is all that's wanted, Suzette."

"I shall get him killed by them," repeated Suzette.

"But tell me, what fault have they to find with him?"

"None. He is the son of a foreigner."

"A worthy young man."

"They make fun of him."

"Why?"

"Because"—Suzette hesitated a moment—"because he studies."

"I see him mowing and digging; there is not a labourer about who gets on better."

"He is not fond of drinking, nor of fighting; then they say—"

"They say?"

Suzette buried her head again in her bundle, stifled a sob, and was silent. There was one word she could not pronounce. That word must be forcibly attacked and dispelled for ever. For, in point of fact, it was that word which tortured the poor girl's heart.

"Suzette, your brothers are wrong. Frederic is not afraid of them."

Suzette shuddered as if a red-hot iron had touched her.

"Do not let yourself be troubled, Suzette. The one you love will give you no reason to blush for him."

Suzette sat up straight; her eyes shone through their tears.

"And then, Suzette, put your trust in your God. What God has decreed no man can prevent, not even your brothers."

And so I left her.

Poor Suzette, thou too art seeking the crimson flower!

Who has said that the spring-time of life is the season of happiness? This spring-time did not number twenty years.

Discrepancy between realities and the aspirations of the heart, harsh notes blending with every chord; legions of ironical smiles that greet every disaster; granite barriers against which strike foreheads impatient for liberty; internal tumults, protests, and rebellions of the soul; he who has known you all will never celebrate the serenity of an April sky. Too many thunderstorms burst there;

too many heavy rains drown the flowers; too many tempests bruise the young foliage. There happiness still skims the earth too closely; she has not got full command of her wings; has not yet taken her flight towards the land of peace.

There, in that region to which go later our wearied thoughts and affections, there blessed breezes blow, there flowers blossom that never will shine upon the earth. But the way that leads thither is one that in early youth we do not know. Nay, if we knew it, our feet would hardly venture there. When the burden and heat of the day comes, we find it out. Some messenger in mourning garb, one of those reapers that mow our sheaves down, calls us thither, takes the path disdained of yore;—a sad-looking path indeed, but, for that reason, it pleases now,—pleases us thus solitary, pleases us thus bare. Whither it leads, you know well.

As I was walking along, something shone in the grass; something dazzled my eyes, made my heart leap. It was the crimson flower.

I seized it,—I held it; I kept my hand closed. It was the flower. Yes, it was indeed,—strange, bright, and beautiful. I had it, and I dared not look at it.

Suddenly I felt the flower throb beneath my fingers; they relaxed their hold; the flower dilated. It spread out its carmine petals, lightly spotted with green; it displayed a purple cup; two stamens, two anthers vibrated for a moment; the flower stirred, some breath had made it quiver, wings unfolded; I continued to gaze on it; it trembled, it rose, it soared away in a golden beam, it sparkled two or three times from different heights, red in the azure, in the remoter ether lost to sight.

Oh, my flower! I know whither thou goest; I know whence thou art come. I know the hidden sources which give thee an eternal freshness; I know the word that created thee, the Eden which preserves.

Winged flower! He who despairs of thee will never meet thy beauty; he who pursues thee on earth may perhaps find, will certainly lose thee. Flower of Paradise! thou belongest alone to those who go to gather thee where thou hast been planted by God.

CHURCH SCANDAL IN ROME IN THE THIRD CENTURY.

ROME early became the great centre of doctrinal and ecclesiastical opinion for the rest of the world. It did so not by virtue of any remarkable intellectual activity in the Roman Church. On the contrary, in comparison with that of Alexandria, or even of Carthage, the Church of Rome lagged greatly behind in the career of intellectual distinction. "Not many wise men after the flesh, not many mighty, not many noble," were called to it. There was a theology at Alexandria, and a theology in North Africa, long before there were any symptoms of theological life and fruitfulness at Rome. Moreover, the first theology that showed itself there was not Latin but Greek. Clemens *Romanus* was a Greek, and wrote in Greek. His Epistle to the Corinthians takes its place beside the letters of Ignatius, and the fragments of the Apostolic Fathers generally, all of which are or were originally Greek. From Clemens to Hippolytus, that is to say, from the close of the first to the middle of the third century, not a single name of intellectual note adorns the Roman Church. Caius, the Presbyter, may be mentioned, but nothing survives of him but the name; and his date, besides, is scarcely earlier than that of Hippolytus. The famous treatise, which the comment of Baron Bunsen did so much to bring into notice, was at first ascribed by one or two scholars to Caius.

Yet with all this paucity of native intellectual life, Rome early asserted a predominating or regulating influence over theological opinion and ecclesiastical ceremonies. The Church there showed its genius for government, even while struggling in a somewhat feeble and helpless infancy. It was looked to as a kind of court of appeal when controversy arose and discussion ran high on any topic. The influence it exercised, and the arrogance it displayed, in the earliest of all disputes within the Church—if we except the division between Peter and Paul at Antioch—the dispute concerning the celebration of Easter, is one of the best-known passages in the Church history of the second century. Some notice of it has already been presented to our readers in the sketch of Irenæus. Such a dispute was quite within its province, akin to the ecclesiastical tendency which it showed from the first, and which became so characteristic of it. It would have been well if it had only meddled in such matters; but it delighted to show its influence in other things less within its province and capacity. It wished to be a power in doctrinal discussions as well as in the settlement of ecclesiastical observances.

The results which followed, in the first instance,

from this incompetent intellectual ambition of the Roman Church are very curious, and have not sufficiently attracted the attention of our ecclesiastical historians. Some scholars, indeed, have imparted too much prominence and importance to them. The extreme school of German theology has started speculations and raised theories as to the whole development of Christian doctrine, arising out of the peculiar state of religious opinion in Rome in the beginning and middle of the third century. The facts are significant enough, but they are far from bearing the weight of such constructive hypotheses as have been founded on them. They really represent a retrograde and not a progressive state of opinion. It is not so much Christian doctrine in process of formation that we contemplate, as Christian doctrine in process of degeneracy and corruption; and not only so, but we are able, by the study of the long-lost Treatise of Hippolytus, to detect the influences under which the corruption was set agoing. The veil has been lifted from a very curious scene, in which we see Bishop and Presbyter in hot conflict about the faith,—the mistress of the Emperor and the head of the Roman Church in friendly communication,—ignorance upon the episcopal throne and low-born intrigue around it, and even successful roguery and unquestionable heresy raised to occupy it!

A church at once ignorant and ambitious like the early Roman, became the natural prey of heresy. Heretical teachers from all quarters looked towards it for the possible countenance of their peculiar opinions. Milman has drawn attention to the fact of how they flocked thither to vend their "strange doctrines" in the great mart of the world. Not one of their doctrines was indigenous to the church itself. The teachers were strangers and foreigners: Gnostics from Alexandria, Montanists from Phrygia, Unitarians from Asia, Patropassians from Smyrna;—all gathered to Rome as to a centre. All received a more or less welcome reception. The church tried to hold the balance of authority among them, but especially to increase its own influence, by its patronage of what seemed the strongest and winning cause for the time.

This is a serious accusation to make against the Roman Church of the third century. But the facts scarcely admit of any other explanation. Our present object is more to unveil these facts in their own nature, to set before our readers the *chronique scandaleuse* into which they weave themselves, than to show how they affect the history of theological opinion. It is impossible,

however, to narrate them without remarking their theological influence. Personal detail, unscrupulous cunning, low intrigue and crime, and theological error, all mingle themselves up in the picture in a very curious and piquant manner. The contemplation is not calculated, like many of our previous sketches, to raise admiration of the early Church. But we are bound to "look on this picture as well as on that." While we let in the bright lights of early faith and piety, we must not hide the darker features which are there as well. Then, as now, the "wheat and the tares" were permitted to grow together; and, unfortunately, the social condition of the great city of the world was a rank and fitting soil for the upgrowth of many tares.

There is one other thing also that, in fairness to the Church of Rome in the third century, we are bound to remember. It is only owing to the accurate and unfavourable narrative of Hippolytus that we know anything of the details of this scandal. His position in relation to the Roman Church gave him peculiar means of knowing the secret history of it; his position also, perhaps, rendered him a sharp and somewhat harsh critic of it; orthodox zeal, as well as a sense of offended personal dignity, were concerned in his judgment. It must be received, therefore, if not with deduction, yet with caution. There is no reason whatever to believe that Hippolytus states anything but what he knew to be facts; but the grouping and colouring of the facts may owe something to his vivid personal feeling in the whole business. That Zephyrinus was both ignorant and presumptuous, and Callistus a rogue, notwithstanding that both of them sat upon the episcopal throne, unfortunately can admit of no manner of doubt; but the piquancy with which the details of the early history of the latter are shown forth, may borrow something from the indignation of party spirit as well as of virtuous resentment.

Nor must we be supposed to select the early Roman Church as an exceptional example of such things, while other churches were pure. That church, from its position, was peculiarly exposed to moral as well as intellectual dangers from its commencement; it was more likely than some others to have a secret and equivocal history from the mingled influences that affected it: but other churches were also exposed to the same dangers; and had we the means, as we happen to have in the pages of Hippolytus regarding the Church of Rome, of reading their private history—of penetrating beneath the decorous veil of external events to the hidden springs which sometimes move these events—we might find that there were other bishops as incompetent as Zephyrinus, and even as unscrupulous

as Callistus. At any rate, it would be an utterly wrong lesson to draw from our story, that one church has any reason to exalt itself over another. The only true lesson is one of humility to all churches. Worldliness and intrigue lie too near to ecclesiastical machinery everywhere, not to call for watchfulness and jealousy from every church, lest they creep in unawares.

But to our story. There lived in Rome, in the time of Victor, Bishop of Rome (190-200), a worthy Christian citizen, of the name of Carpophorus. He had a slave of the name of Callistus, who professed the faith of his master. The latter, stirred with the wish to advance his slave in the world, gave him the charge of a bank, which he established in the famous quarter of Rome known as the *Piscina Publica*. A Christian banker in Rome, in the end of the second century, or at least one set agoing in such a manner as Callistus, was not likely to do a large business. Still there were those who needed his assistance, and who intrusted to him their moneys. Many brethren and widows are said to have confided in the Christian character of Callistus, and to have freely given him their little sums. The temptation proved too strong for the slave. He appropriated the money to his own use, squandered it, and, when the depositors got alarmed, and the truth became known, he fled. He escaped to Portus, the harbour of Rome, about twenty miles down the Tiber, found a vessel ready to sail for some foreign destination, and was speedily on board, and secure, as he supposed, from his creditors and indignant master. No time, however, was lost in pursuing him; Carpophorus hastened, with the speed of a detective, to Portus, found the ship moored in the middle of the harbour, ready to set off, took a boat, and hailed his runaway and unfaithful servant. Callistus, seeing no way of escape, leapt into the sea, and was with difficulty rescued, and given up to his master, who, taking the matter into his hands, gave him, as Bunsen translates,* "the domestic treadmill of the Roman slaveholders—the *pistrinum*."

Callistus, however, was not without friends in his degradation. Such plausible rogues seldom are. It was represented to Carpophorus, by certain Christian brethren, that he ought not to deal too harshly with his slave, but give him a chance in some degree to retrieve his character. He pretended, moreover, that some of the moneys which he had embezzled were recoverable, if he had only an opportunity of personally attending to the recovery of them. The good Carpophorus was easily moved to pity, and he said, without much hesita-

* Bunsen has told the story at length in one of his letters on Hippolytus. Our narrative will be found to coincide in many expressions with his.

tion, "Well, let him go, and try what he can recover; I do not care much for my own money, but I mind that of the poor widows." Callistus, accordingly, went forth on his errand. He went on Sabbath (Saturday),—professing to have money to get from some Jews, but probably not knowing very well what to do. Something might turn up in his favour, or, at any rate, he might make his escape, and save himself from the degrading punishment to which he had been subjected. He wandered into a Jewish synagogue, where worship was going on, and, under what impulse it is impossible to say, he began a disturbance, interrupting the service, and protesting that he was a Christian. The Jews, naturally indignant at his conduct, fell upon him, beat him, and carried him before the prefect Fuscianus. Here, notwithstanding the timely intercession of Carpophorus, who, upon hearing of the riot, hastened to assure the judge that Callistus was no Christian, but a fellow who had robbed him of his money, and been driven to desperate courses, he was sentenced to be scourged and then banished to Sardinia, the climate of certain parts of which was so fatal in summer.

This might have seemed a final riddance of such a man as Callistus; but the tenacity of life and purpose is strong in men of his stamp. Amid the pestilential vapours of Sardinia, he still cherished restless schemes of worldly aggrandizement and ambition. Return to Rome appeared hopeless enough: but hope had evidently not died out of his breast; and at length the opportunity came which he knew how to improve. The mistress of the Emperor Commodus, the unworthy son of the philosopher Marcus Aurelius, had become, if not a convert to Christianity, a friend of Christians. Hippolytus calls her *Φιλοθεος*, or God-loving—an expression singular enough in contrast with her conduct. Mistress of the Emperor, and wife of the captain of his guards, the position of Marcia (such was her name) scarcely seems compatible with a profession of Christian faith. Whatever her own failings, however, she was a friend of the poor and proscribed Christians. She was moved with pity for their suffering, and requested to be informed by Bishop Victor as to those that had been banished to Sardinia, in order that she might solicit the Emperor for their release. Victor sent her a list of names, but without including that of Callistus, who had so grossly forfeited all claim to the Christian character. When the messenger—a presbyter of the church—arrived at Sardinia on his errand of mercy, and delivered his list to the governor of the island, the news became speedily known. It reached the ear of Callistus, and finding his own name was not in the list, he began to lament and entreat till the messenger was moved to solicit his release also. It is not very clear by what means he succeeded in his purpose; but he did so, and obtained his freedom along with the others. He returned with them to Rome, which it might have been supposed he would have been anxious to avoid.

When Victor heard of the return of Callistus he was greatly disquieted. Carpophorus, his master, was still alive, and the scandal of his dishonesty was not entirely forgotten. The bishop was glad to persuade him to retire to Antium, and to give

him a monthly allowance to keep him quiet and out of trouble. It was here, possibly, that he made the acquaintance of Zephyrinus. But whether here or elsewhere, he became the familiar of this presbyter, to whom he made himself useful, and who found in him a congenial companion and tool. After the death of Victor, Zephyrinus was raised to be Bishop of Rome, and his friend Callistus shared in his elevation. He made, we are told, the *quondam* slave and dishonest banker of the *Piscina Publica* "his coadjutor to assist him to keep his clergy in order, and gave himself so entirely up to him, that Callistus did with him what he liked."

This was a strange turn of fortune; and yet such things have happened not unfrequently. The Sardinian convict now stood upon the steps of the episcopal throne. The real power of the Episcopate was in fact in his hands; and the dignity, as well as the power, was soon to be seized by him.

It may be easily imagined what blind leaders of the church two such men as Zephyrinus and Callistus must have been. Surrounded by a fermenting mass of strange opinions, how little could they tell what was false and what was true? Zephyrinus was "very stupid and ignorant," and fond of money; Callistus was not without cleverness; but what kind of cleverness! It is melancholy to reflect on a church abandoned to such guidance.

Sabellius was now at Rome propagating his peculiar views as to the Trinity. He taught that the Father, Son, and Holy Spirit were not three distinct persons in the Godhead, but only three expressions or powers of the One God. In other words, he taught a "Trinity not of Essences, but only of Manifestations"—as his heresy has been well defined. His views had attracted attention, and Hippolytus leads us to believe that he and others of the Roman presbytery had protested strongly against them. The bishop and his coadjutor secretly encouraged them, although they did not venture openly to espouse them. They "did not side openly with Sabellius," says Hippolytus, "but in private, Callistus told each freely that he was favourable to their views, setting them as much as he could against each other." This was exactly the part suited to his unscrupulous cunning. He knew or understood but little of doctrinal differences; but he recognised how they might be turned to the account of his own power. Sabellius, adds Hippolytus, did not at the time see through the selfish roguery of Callistus; but afterwards he knew it.

On the death of Zephyrinus, Callistus was elected to fill the vacancy. Carpophorus, his old teacher, was long since dead. The affair of the Bank was forgotten or misunderstood: the Church had got accustomed to his exercise of authority in the time of Zephyrinus. Yet withal the result is an astonishing one, and indicates a very unhappy and unhealthy condition of the Roman Church.

Callistus on his accession saw fit to disown Sabellius. In the face of the opposition of Hippolytus, he did not dare to espouse openly the heresy which he had hitherto secretly encouraged. Yet he had not, as could not have been expected,

the manliness to own his error, and embrace the orthodox doctrine. He had said to Hippolytus and his supporters in the Roman presbytery, who maintained the distinct personality of the Father and the Son: "You are *Ditheoi* (Ditheists);" and he felt it necessary to make good his word. While abandoning Sabellius accordingly, he espoused the doctrine of Noetus and his school, which differed little from Sabellianism. The system of Noetus had been taught for some time at Rome; it had obtained a footing; and if there was any honest and intelligent impulse in Callistus at all, it seems to have been towards this system. Even in the time of Zephyrinus he had sought to incline Sabellius to it, representing how nearly his own system agreed with it. He now established a school in which it was taught, and so far identified himself with it, that it came to pass in a slightly modified form under his name. He did not exactly say with Noetus that the Son is the Father, and that the Father consequently was born of a virgin, conversed among men as a man, and suffered and died (Patropassianism); but he said, "What is seen is the Son; but the Spirit that dwells in the Son is the Father; for I will not say that there are two Gods, the Father and the Son, but one. The Father who was in the Son, took flesh and made it God, uniting it to himself, and made it one. The Father and Son was therefore the name of one God, and this one person (*πρόσωπον*) cannot be two; the Father consequently suffered *with* the Son." He wished to avoid saying that the Father suffered, and yet he clearly only escaped it by a verbal quibble. "This foolish shifting fellow," we may well say with Hippolytus, "invents blasphemies above and below, in order to speak against the truth." Without any theological insight or comprehension of his own, he veers about and loses himself in words without meaning.

Callistus's principles of church discipline were

of a not less flexible and accommodating character. He announced the doctrine, "that he forgave the sins of all," and many whose misconduct had banished them from Christian communion, flocked to the easy door of entrance which his liberality made for them. With some reminiscence probably of his own crime, he is also said to have laid down the farther startling principle: "If a bishop commits a sin, be it even a sin unto death, he must not be deposed, or obliged to abdicate for all that." An easy-going ecclesiasticism of this kind made many friends to him. His party greatly increased, but only, says Hippolytus, to the detriment of the Church, and the ruin of its order. Bishops, presbyters, and deacons were received into the ministry, after having been married twice or even thrice. Even one who married, after he became a priest, might do so undisturbed! Over such corruptions the worthy Bishop of Portus deplores. Yet if these were the worst things of which he could be accused, we might forgive Callistus. His arguments were worse than his practice in this respect: "Did not our Saviour say, Let the tares grow with the wheat? Were there not unclean beasts in the ark? Such, therefore, must also be in the Church."

Such arguments moved the indignation of the honest and pious suffragan, and infused a drop of bitterness into his lively description of his Metropolitan's follies and heresies. Let us remember while we read that Hippolytus was no friend to Callistus; and that, consequently, the portrait which he has left of him is not likely to want in touches of contemptuous severity; but unfortunately any abatement we might make will still leave a very darkened and unhappy picture. While we contemplate the picture, let us be thankful that it is a rare one; that so many pure and bright and shining spots surround this soiled page in the Church's early history.

JOHN TULLOCH.

IS HE STINGY?

Wife. Edward Garrett is as good a man as lives; kind to me; kind to the children; a little absent, perhaps; reads books and papers when he should be talking; still, a good man. *But then*, he is so stingy.

Uncle Ludovic. Stingy! why, you and your children, and all, seem quite comfortable.

Wife. If we do, thanks to my clipping, darning, and cheese-paring. Why, there isn't a rag or an old bone lost in this house.

Uncle. I'm glad to hear of it.

Wife. So you may, for extravagance is a fearful thing; but then you know there's a medium. It is one thing to be a miser, and another thing to be a spendthrift. Now, Edward is miserly, and I've told him so more than once.

Uncle. And what does he say?

Wife. He stares at me, shaking his head, or groans. Just look here, Uncle. What is the use of money; is it not to live on? We can't take money to the grave with us; we must have the comforts of life; we must be neighbourly; we must have a house of the same kind as other people's; we must dress, give parties, eat, drink, have summer lodgings, and educate our children

as other people do. Nay, don't sneer, Uncle; you know I am speaking good sense.

Uncle. You are doing nothing of the sort!

Wife. Well, you needn't look so ill-natured. You men say that we women can't argue.

Uncle. Neither you can.

Wife. So you say.

Uncle. Well, Maria, my dear, let us try if you can conduct an argument. What is the proposition that you are prepared to defend?

Wife. This simple, clear one, that people must live like their neighbours.

Uncle. Admitted that people must live. *Quoad ultra* denied.

Wife. Is that law, or Latin, or what?

Uncle. It is both, and common sense into the bargain. Listen to me, niece of mine. To live like your neighbours involves two things: *primo*, that they are living as they should do; and *secundo*, assuming that to be the case, that you can afford to live as they do.

Wife. There now was the Hamiltons' christening; what an elegant turn-out, and how happy everybody was!

Uncle. Bah!

Wife. Bah! Uncle, do you deny that plate, dishes, decorations, *everything*, was not of the best? and that everybody was so pleased?

Uncle. Of course I don't. Pray, do you recollect when that party took place?

Wife. Yes, I think I do. You remember there were pine-apples at the dessert. It was just after Josie was weaned, poor dear! It must have been this time last year; but why do you ask?

Uncle. For a reason which I would not tell you, unless you were a silly wife. That dinner was supplied by a purveyor, and to my certain knowledge is not yet paid. The plate and crystal were hired from him, and all are still unsettled for.

Wife. Vile calumny! There's the supper and ball party at Thornton's last week; I suppose you'll be asserting that it—"

Uncle. In regard to it, Maria, I shall assert nothing, except that Mr. Kitto, the hosier, told me the other day that Thornton did not pay him for his marriage outfit for a number of years, which I shall not quote, in case that you might think Kitto or myself insane.

Wife. Scandal!

Uncle. Be it so. The mere paying of accounts by the Hamiltons or the Thorntons doesn't affect my argument. Granted that they can afford pine-apple desserts, and other things in keeping, it doesn't follow that you can.

Wife. Uncle, Mr. Garrett has a good business.

Uncle. I hope so.

Wife. Hope so! You don't mean to hint, gracious me, that there is anything going wrong?

Uncle. Not I. On the contrary, I think that he has a good rising business, poor fellow!

Wife. Why should he be so niggardly then?

Uncle. Have you any notion what he makes by his business?

Wife. Well, eh, to be sure, I can't exactly say that I do know; but I recollect, when he proposed, he spoke about £500 a year, and I am sure, uncle, there's nothing to be seen here to that tune.

Uncle. In business, Maria, £500 may be in the books, but £400 only may be available. What is your house rent?

Wife. Eighty pounds.

Uncle. Well, let us take the slate:—

Rent and taxes,	£100
Food, four adults and three children,	120
Clothing,	80
Education, medicine, summer lodgings, extras, etc.,	150
	£450

There's £450 without anything special for Garrett, and I know that he pays £50 a year for life assurance.

Wife. I didn't think of that; but it appears to me that Edward looks too much to the future, and does not sufficiently attend to the present.

Uncle. Maria, your safety lies in that. Your husband is what is called a professional man, and, consequently, if he should be taken from you, he leaves you nothing but a few book debts, the furniture of this house, and his life assurance. Did it ever occur to you what would be your position in the world if Garrett were suddenly cut off?

Wife. Never, uncle,—that is, seriously.

Uncle. Well, listen. Supposing he were to die this night.

Wife. Uncle, you frighten me.

Uncle. Life is at all times a serious thing; death is still more so; and we would all be wiser to think oftener about the responsibilities of both. I repeat, therefore, supposing Garrett to die to-night, your whole estate would stand something in this way—

His Accounts,	£50
His Life Assurance,	1000
His Furniture,	400
	£1450
Deduct rent, taxes, household accounts, funeral expenses,	250
	£1200

Twelve hundred pounds would be all that you would have in the world, and what could you do with it? Investing it in the best way possible, all you could make of it would be £60 a year.

Wife. Nonsense!

Uncle. Sober truth.

Wife. Why, I should starve.

Uncle. Not exactly. Do you know that I have seen widows left with nothing?

Wife. Not positively nothing.

Uncle. Well, next to it; that is, they had simply their furniture left.

Wife. What in all the earth did they do?

Uncle. Why, this friend helped, and that friend helped; and they kept lodgers; and they sewed; and this boy got into an office, and that boy went to sea; and this girl would become a companion, and t'other a governess, and so on. And I have seen widows shedding tears of joy, that every one of their children had turned out well.

Wife. My children are not old enough for me to be thinking about their conduct.

Uncle. It is one of the things in life that will yet cause you joy or sorrow. The Duke of Wellington once asked a friend, who, on that day, was the happiest man in England. The friend replied that he could not tell. It is Dr. Wordsworth, replied his Grace, whose three sons have carried off the three highest University honours. At a railway station the other day, I overheard one labourer say to another that he had reared five sons and five daughters to full age, and that none of them had ever caused him a red face. This was a great consolation for poverty. Don't suppose, therefore, that all is lost when riches flee away.

Wife. And yet you want me to save money?

Uncle. Certainly; live within your income, whatever it is. Avoid poverty if you can; but have philosophy to meet it, if it should overtake you in spite of yourself.

Wife. Life seems a tangled web.

Uncle. As a wife and mother you will find that more and more every day. Don't lightly conclude that your husband is stingy. Watch, pray that you enter not into the temptation of spending foolishly or unnecessarily that which might lighten the lot of your possible orphan children. Good morning!

JAMES KNOX.

"UNTIL HER DEATH."

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

I.

"Until her death!" the words read strange yet real,
Like things afar off suddenly brought near:
Will it be slow or speedy, full of fear,
Or calm as a spent day of peace ideal?

II.

Will her brown locks lie white on coffin pillow?
Will these her eyes, that sometime were called
sweet,
Close, after years of dried-up tears, or meet
Death's dust in midst of weeping? And that billow—

III.

Her restless heart—will it be stopped, still heaving,
Or softly ebb 'neath age's placid breath?
Will it be lonely, this mysterious death,
Fit close unto this solitary living,—

IV.

A turning of her face to the wall, nought spoken,
Exchanging this world's light for heaven's;—
or will
She part in pain, from warm love to the chill
Unknown, pursued with cries of hearts half-broken?

V.

With fond lips felt through all the mists of dying,
And close arms clung to in the struggle vain;—
Or, these things past, will death be only gain,
Unto her life's long question God's replying?

VI.

No more. Within His hand, divine as tender,
He holds the mystic measure of her days;
And be they few or many, His the praise,—
In life or death her Keeper and Defender.

VII.

Then, come He soon or late, she will not fear Him;
Be her end lone or loveful, she'll not grieve;
For He whom she believed in—doth believe—
Will call her from the dust, and she will hear Him.

At Home in the Scriptures.

A SERIES OF FAMILY READINGS FOR THE SUNDAY EVENINGS OF MAY.

FIRST EVENING.—A BROTHER'S LOVE TO BROTHERS.

"Love the brotherhood."—1 PET. II. 17.

"HONOUR all men. Love the brotherhood. Fear God." Such is the order in which these three brief pregnant precepts stand. They constitute an ascending series, and the series is complete. It begins on earth, and ends in heaven. The first points to human kind in their fallen state; the second to renewed men in the body; and the third to God over all.

On the two extremes are fallen humanity, and God most high; and in the midst the saved from among men, who are now reconciled to God through the death of his Son. Peter tells the scattered Christians in his letter, that on the lowest sphere they should honour, or value highly, human creatures as such, and on the highest sphere reverently worship the Supreme; but between these two he recognises a brotherhood to whom a different affection is due. "Love the brotherhood." Distinct, on the one hand, from the respect due to immortal man as our Maker's greatest work, and, on the other hand, from the worship due to Deity, brotherly love, pure and fervent, should be exercised toward all who have been redeemed by the Saviour's blood, and renewed into the Saviour's image. The family and the family affections constitute our specific theme to-day. We mean, however, by the brotherhood, as the apostle meant, not those who have been born into the same family on earth, but those who have been "born again" into the family of God.

The obvious order of our exposition is—the object first, and then the emotion—the Brotherhood whom Christians love, and the Love with which Christians regard the brotherhood.

I. *The brotherhood.* It is a winsome word. There is a whole sermon in its sound. It falls kindly on my wearied ear in the intervals of the world's strife. It is a sweet morsel, and I am disposed to roll it a while under my tongue. The word itself soothes and edifies, even before we have advanced a single step in the exposition of its meaning.

Like the term in the preceding clause, it is universal. It includes a whole class without exception, although, in the nature of the case, the class is less numerous than the one immediately preceding. As the whole is greater than its part, the brotherhood is a group indefinitely smaller than mankind.

When we speak of the larger class, "honour all men,"—it is as if we should say, all waters; comprehending those that are in the sea, in the earth, and in the air; comprehending the salt and the fresh, the pure and the impure, absolutely and universally, all waters: when we speak of the smaller class, "love the brotherhood,"—it is as if we should say, all the clouds. These are waters too: these waters were once lying in the sea, and

lashing themselves into fury there, or seething, putrifying under the sun in hollows of the earth's surface; but they have been sublimed thence; they are now in their resurrection state, and all their impurity has been left behind. They are waters still, as completely and perfectly as any that have been left below. But these waters float in the upper air, far above the defilements of the earth and the tumults of the sea. Although they remain essentially of the same nature with that which stagnates on the earth or rages in the ocean, they are sustained aloft by the soft, strong grasp of a secret universal law. No hand is seen to hold them, yet they are held on high. The command has been addressed to them by their Maker and Redeemer, "Come out from among them, and touch not the unclean thing, and I will receive you."

As the clouds which soar in the sky to the universal mass of waters, so are the *brotherhood* of God's regenerated children to the whole family of man. Of mankind these brothers are in origin and nature, but they have been drawn out and up from the rest by an unseen omnipotent law. Their nature is the same, and yet it is a new nature. They are men of flesh and blood, but they have been elevated in station and purified in character. They are nearer God in place, and liker God in holiness. They are washed and justified and sanctified in the name of the Lord Jesus, and by the Spirit of our God. Besides the command, "Come out from among them, and be ye separate," which they have heard and obeyed, the promise has been fulfilled to them, "Ye shall be my sons and daughters, saith the Lord Almighty."

Let no reader think that the expressions employed to designate this change are far-fetched or extravagant. The language is not too strong, but too feeble. When a guilty man has been forgiven, and reconciled to God through the death of Christ, the change of condition is greater than can be expressed in human language. No formula can adequately express the distance between the carnal mind which "is enmity against God," and the spirit of adoption that cries "Abba, Father." In the nature of the case, those who have been in only one of the two conditions cannot compute the distance between them. Only those who have experienced both can appreciate the magnitude of the transition. To pass spiritually from death into life, is a great passage. From the sullen enmity of the guilty to the glad confidence of the forgiven, is as far as from east to west, or from earth to heaven.

Think of this class now in connexion with the human relation which has been employed to express it,—the brotherhood. This is one of the relations by which human creatures are bound

together in families. The conjugal, parental, and fraternal bonds constitute the strands of the three-fold cord by which our Creator, in the constitution of our nature, has knit his intelligent offspring together in groups for their mutual support and comfort. The brotherhood are those who have been born together in the same family. They have one Father, a pervading likeness, and, at least in the earlier period of their life, a common home.

This human relation is a great and good thing. It is one of the wonderful works of God. It is a contrivance in the system of the universe for binding a number of feeble rods into one, so that each of the fragile offshoots may, in the period of its weakness, enjoy all the strength of a tree. "Blood is thicker than water." The natural affections of brothers and sisters in a family are stronger than the general affinities of man to man in the world. This is the Lord's doing, and it should be marvellous in our eyes. All history testifies that attempts to substitute artificial communism for the natural, divinely-appointed constitution of the family, have passed through a wretched existence to an early grave.

I am well aware, on the other hand, that no quarrels are more keen than those which sometimes spring up between brother and brother; but this proves only that the best things when corrupted become the worst. When this rich material rots, it is more noisome than poorer stuff equally decayed. But when the instincts of nature have not been undermined by vice, and especially when they have been hallowed and elevated by divine grace, a brother's love is at once strong and sweet. Perhaps those who, like myself, enjoyed it once, and weep for want of it now, might give a lesson on its worth to those who possess but abuse the blessing. Ye who have brothers and fret against them, come to us who had them once, but who long ago laid their dear heads in the dust,—come to us, and we shall teach you how to value this good gift of God.

But this precious earthly thing is not introduced here for its own sake: it is borrowed as a term to express a spiritual and heavenly relation. The brotherhood in Peter's pointed precept means that great company on earth, of every nation and kindred, and people, and tongue, who are sons and daughters of the Lord Almighty. It is by a comparison with the first of the three precepts that the import of the second may be most certainly ascertained. Honour, that is, count precious, or value highly, "all men;" these terms include all of human kind who are born. But two births are possible for man. Many learners, like Nicodemus, find this lesson hard; "How can a man be born when he is old?" But those who simply sit at Jesus' feet and plead for his Spirit will overcome the difficulty. Those who are born again believe in the new birth. All men are born; and the brotherhood are born again. They have become new creatures in Christ Jesus. Their life now is hid with Christ in God. The two allied precepts of our text refer to these two births and lives. We should highly value the Generation—all human kind; but we should fondly love the Regeneration—those who are forgiven and reconciled and renewed. Clasp fellow-disciples to your bosom;

walk hand in hand with them across life's pilgrimage, and enter with them at last into the joy of the Lord.

II. Consider now the precise species of affection due by Christians to those who are fellow-members with themselves in the family of God; it is *Love*. There is a sense in which we ought to love the whole human race; but the love which is due to man as such, may be distinguished from the love which we owe to the disciples of Jesus. Love, indeed, is a generic emotion, comprehending several distinct species; and, as often happens in natural history, one of the species bears the same name with the genus. The generic love to mankind branches into pity for the wicked, and love, specifically so called, for the good.

1. Love to the brotherhood is an instinctive emotion. It is not an accident, but a nature. It springs in renewed hearts, as love of her offspring springs in a mother's breast. It is the result not of an artificial policy, but of a natural law. The new creature owns and exercises instincts as well as the old. The members of Christ cannot but love their fellow-members. In as far as they have drunk into their Master's spirit, they will follow their Master's steps.

2. The Lord Jesus was not satisfied with the measure of this affection which existed among his followers during his personal ministry. He desired that it should be increased. For its increase he pleaded alternately with God and man. "That they all may be one" was his prayer; "Love one another" was his command.

3. Those who are destitute of this affection themselves, are acute enough to observe the want or weakness of it in Christians. The bitterness, malice, and envy which obtain in the Church afford to scoffers a foundation all too solid for their railing. Among Christians the state of matters is bad, and among those who are not Christians it is counted and called worse than it is. We give some, and they take more, occasion to blaspheme.

4. Brotherly love among Christians, where it really exists, honours the Lord and propagates the gospel. Like the blood of the martyrs, it is the seed of the Church. It has convinced many who resisted harder arguments.

5. It is the most pleasant of all emotions to the person who exercises it. Other passions may, in certain circumstances, be right and useful, but none generate so much joy as they flow. You may be "angry and sin not;" but you cannot be angry and suffer not. As a cannon recoils violently, and is heated and defiled within by being discharged, a human spirit is similarly affected by discharges of anger, even when it does well to be angry against unrighteous deeds. But love is delightful in the exercise, both to the lover and the loved. It leaves no sourness and no sediment behind. "Love is of God," and its character corresponds to its origin. It constitutes the atmosphere of heaven, where there is no defilement and no pain.

Love of the brotherhood is the command of God, and consequently the duty of man; but another thing goes before it to prepare its way; lies beneath it to bear its weight. Before you can love the brotherhood, you must be a brother. It is the new creature that experiences this hallowed

affection. These pulses do not throb through severed limbs; these beauteous blossoms do not open on withered branches. Those who are one with Christ in living faith are in spiritual com-

munion with "the whole family in heaven and in earth." When you and I are, and know that we are members of Christ, we should love one another as he loved us.

SECOND EVENING.

KNOWING THE TRUE, AND DOING THE RIGHT.

"I send thee to open their eyes, and to turn them from darkness to light, and from the power of Satan unto God; that they may receive forgiveness of sins, and inheritance among them which are sanctified, by faith that is in me."—ACTS XXVI. 18.

WHEN the tiger has tasted blood, who shall dare to scare him from his prey? Such, in energy and appetite, was Saul of Tarsus. After he has gloated over the death of Stephen, and started on the scent of other victims, woe to the man who ventures to cross his path! By nature and in fact this is a kingly man; and the king's heart is, in the resistless outgush of its energy, a river of water. What power may stem or turn it? The word of the Crucified—"Saul, Saul, why persecutest thou me?"—that word, suddenly thrown across its bed, arrests the rushing volume, and makes it flow the other way.

The same voice, still and small, dropping like the dew, had called Matthew from the receipt of custom, and Peter from his fishing nets; now, uttered in majesty from an opened heaven, it turns Saul aside from his bloody errand, and sends him forth on the greatest mission of mercy ever accomplished by the ministry of men. To the twelve Jesus appeared as the shining light, which, from the dim and doubtful struggle of the dawn, shineth more and more unto the perfect day; to the apostle of the Gentiles he appeared at once a light above the brightness of the sun. The twelve who were called to minister in Israel were gently drawn and gradually prepared; the one who was chosen the apostle of the Gentiles received a baptism of fire, and was fully furnished for his work in a day. Here are diversities of operation by the same Lord. But we must not suppose that one of these works is easy and the other hard. To our view, the enmity against God may appear stronger in one sinner than in another; but without Divine power that enmity cannot be overcome where it is feeblest; and with Divine power it can be overcome where it works in greatest strength. To our minds, the upheaving of these mountains from the bowels of the earth seems the result of a very great force, while the balancing of the clouds in the sky seems a thing of easy accomplishment. But there is no difference: nothing short of the power that raised these mountains could make the white mist creep up their sides. The power of God changed Saul the persecutor into a missionary: no meaner power can turn a self-pleasing, earthly-minded man into a self-sacrificing, brother-loving disciple of Christ. The power which made Saul an apostle is needed to make me a Christian.

Under this aspect let us examine the text. This word of Christ was quick and powerful when first spoken. By the ministry of the Spirit the same word may be quick and powerful still. These words of Jesus Christ were not spoken during the period of his ministry on earth, and recorded like

the rest by the Evangelists. These words, like the man who reported them, were "born out of due time." They fell from the lips of the Lord after he had ascended. Late in life, when conducting his defence before Festus and Agrippa, Paul gathered up the fragments and recorded them for our use.

We find here in combination the same two things which everywhere and at all times go to constitute a Christian: a work performed in the man, and a gift bestowed upon the man. The *first* is a change which, in becoming Christians, we undergo; and the *second* is a benefit which, in becoming Christians, we receive. Let it be our aim, then, to point out what these are, as distinct ingredients of the Christian life, and how both exist in combination in every true disciple.

I. *The change which we undergo*: "To open their eyes, and to turn them from darkness to light, and from the power of Satan unto God." Even this first part of the process is complex. As expressed here, it consists of two parts, the enlightenment of the mind, and the renewing of the life. The one is to *know* the True, and the other is to *do* the Right. The eyes are opened, and the life-course is turned.

These two parts may be separately expressed, but they cannot separately exist. They may be expounded as successive topics, but they must be joined together as parallel attainments. You do not first get your eyes opened, and thereafter your heart and life turned round. Neither do you practically turn first, and intelligently observe afterwards. The opening helps you to turn; but the turning also helps you to open. In the Christian life, true understanding and right action go together as the right and left side of a living man. The regeneration is made up of truth and righteousness. Like the rays of light and rays of heat which proceed in company from the sun, they may be distinguished by philosophical analysis, but can never be separated in fact. The more that I actually turn from the power of Satan, the more do I intelligently perceive and appreciate God's truth; and the more that I know of God's truth in my mind, the more do I turn from wickedness in my life.

An artist may first paint a man's body, expressing the form and action of every limb, and thereafter attach the head, or he may portray first the countenance, with the expression of every feature complete, and thereafter represent the body. But there is a great difference between the methods of nature and of art. The man was not made as he was painted. From the dim deep of non-existence

the being emerges, minute, but not mutilated. Head and body are small and shadowy at first, but head and body are both there, and both grow together unto perfection. So grows also the new man. It is not first the body of right life brought to perfection, and thereafter the spiritual understanding attained; nor is it spiritual understanding first attained, and thereafter the body of a right conduct added. When the least faint glimmer of the gospel begins to shine in the understanding, it forthwith impels the man toward a righteous course. The impulse is feeble and the effort infantile, but both the knowledge and the obedience have begun. That infantile effort to turn from evil permitted some more light to enter the mind, and in the increased light the man made another step of progress in the path of righteousness. Both, and both together emerge in embryo, under the great Creator's hand, and both grow together up to the stature of a perfect man in Christ,—a man who knows God's will, and therefore does it; does it, and therefore knows it.

To open their eyes, although a figurative expression here, scarcely requires any exposition. It is that aspect of the Spirit's regenerating work which concerns the knowing of saving truth. It is the work of regeneration as it affects the understanding: it is that unction of the Holy One which enables the renewed to know all things that God has revealed for his own glory and men's good. The practical turning on the other hand, being perhaps more difficult of comprehension, is here more fully expressed. There is only one turning, but you turn *from* two things and *toward* two things. At least, two expressions are employed to indicate what you turn from, and as many to indicate what you turn to:

From Darkness and the power of Satan: *to* Light and God.

The things on this side seem two; and the things on that side seem two: yet on either side there is substantially only one. God and Light do not here represent separate and different objects; for God is Light. Darkness and the power of Satan do not here represent separate and different objects, for the power of Satan is darkness.

According to the word of Christ the Master, the foremost part of the servant's work is to turn men from darkness and the power of Satan. When the Saviour's word goes forth upon the world, it finds every man standing with his face to darkness and his back to light; therefore the true foundation of all preaching is *turn*. "Turn ye, turn ye, why will ye die?" was the key-note of Old Testament preaching; and "Repent, for the kingdom of heaven is at hand," was the harbinger of the gospel in the fulness of time.

Observe how and where we obtain the information that we are all at first in sin and under condemnation. It is not announced by an angry judge; we gather it from the breathings of a compassionate Redeemer. It is a friend who tells us the terrible truth that we are lost in our own sin; we should therefore all the more willingly take it in, and take it home. He who tells us knows all the case. He knows what is in man to deserve the sentence, and what is in God to inflict it. "Hear ye Him."

Suppose two prisoners—such as the butler and the baker of Pharaoh in Joseph's time—have both forgotten their sorrows and dangers in a long, deep, sweet sleep. They are both, and both alike, for the time, as unconscious of danger, as free from fear, as if they had never been deprived of liberty. For the moment neither captive knows or feels that he is in prison. But both will discover it soon. When they awake they will know it all. Now, suppose that two messengers from the king are sent simultaneously to these two men in their separate cells, bearing to each his sovereign's final decree, and that the messengers bearing those decrees find the prisoners asleep, and awake them. Both the one and the other are by the call of a royal messenger awakened to the conviction and consciousness that they are surrounded by strong prison walls, and kept in by iron bars. Both make the same discovery as to their present personal condition. But the sound which reveals to this sleeper his captivity is his own death-warrant: the sound which reveals to that sleeper his captivity is the invitation to instant escape by the messenger of the king. Both learn that they are in prison, the one by being shut up to doom, the other by being led into liberty.

See from that case how good it is to learn even a terrible truth, if we learn it in a day of mercy, and from a Saviour's voice. It should be sweet even to learn how low and dark a dungeon we lie in, when we learn the fact from Christ's command to come out of it into glorious liberty. It is by the invitation to safety that we discover our danger. Prisoners of hope are we: the messenger who bears the King's free pardon opens the gates and bids us flee.

Suppose a captive in an inner prison, with many successive circles of strong walls around him; and suppose further that he has never been led or carried through these outer gates, but has been born and reared within the fastness. If he is led out at last into liberty, he will discover the number of the retaining walls and the thickness of each. The discovery will be pleasant, although it is the discovery of the strength of his prison, when his escape first reveals the depth of his bondage. Thus the man whom the Son of God makes free, discovers the strength of his prison-house. It is in going out of it that you learn how deep and dark it is.

In the spiritual darkness Satan's power is put forth. That power seeks the darkness, the darkness favours that power. They work to each other's hands. When you turn from the darkness, it is to the light; when you wrench yourselves out of the tempter's power, it is to come to God. Perhaps some are thinking about this grand decisive change. They are afraid of remaining in the darkness; but alas! they are also afraid to come to the light. They are afraid of being longer in the power of Satan; but there is one thing of which they are still more afraid, and that is to come near to God.

The prodigal was for a long time unhappy after his money was all spent. When the pleasures of sin were exhausted, he endured its miseries many a day, because he dreaded more to be seen at home a beggar, and to meet an angry father's face, than to endure hunger and filth and nakedness in

a foreign land. Perhaps some of our readers are in the condition of the prodigal during that interval between the time when he fell into beggary, and the time when he fell on his father's neck. You are not easy where you are. The darkness is now dreary; but the light, with all your sins upon you, is more dreadful still. Satan's chain is heavy; but you would rather bear it than go right into the hands of the living God. Blessed are those prodigals who are brought the length of the grand decisive turning, "I will arise and go to my father!"

To the filthy in his filthiness, the prospect of being exposed in the light is dreadful: to the rebellious, who has broken his father's heart, the prospect of meeting his father is more formidable than all the miseries of his condition. But when he turns, all is changed: when he is clothed in the fairest robe, he need not shrink from the light of his father's dwelling, or the glance of a brother's eye: when he lies on the father's bosom, deep in the father's fathomless love, he will no longer think it dreadful to come to his father.

THIRD EVENING.—FORGIVEN AND REWARDED.

"... That they may receive forgiveness of sins, and inheritance among them which are sanctified by faith that is in me."—Acts xxvi. 18.

THE gift, like the work, is twofold: it consists of Forgiveness and the Inheritance. It takes away from you what you deserve, and bestows upon you what Christ deserves. To you, by birthright and life, belongs condemnation: to Him, by birthright and life, belongs the inheritance. He receives your portion, and you receive his. The gift deals with both; and it deals with both in the way of making them exchange places. Christ takes that which belongs to us, and gives that which is his own.

It is against this part of the gospel that all the wisdom of this world kicks. Never was this hinging point of the gospel more cried down than it is now. *The just for the unjust*—this is the offence of the cross still. But if it is greatly loathed by the proud, it is greatly loved by the humble. It is the old story over again: the cross of Christ is to the Jews a stumbling-block, and to the Greeks foolishness; but, to them that believe, the power and wisdom of God. It is not the doctrine of forgiveness by the mercy of God that is so distasteful to the wise of this world. They have no objection to forgiveness; they will confess that they need it, and expect God to give it: the obnoxious feature is the sacrifice of Christ; the death of the Substitute, in order that pardon from the righteous Judge may reach the outcast. A little pardon for little sins sits well enough in a philosopher's creed; but when you speak of the Son of God shedding his blood to take my sin away, that makes my sin look exceeding sinful. That cannot be a little pardon which was bought with so great a price; that cannot be a little sin which needed so great a pardon. Forgiveness of sin, as God forgives it, is a dreadful thing. That which comes lightly goes lightly: if I receive pardon without the Substitute's sacrifice—a pardon which God flings at me in an easy way, without thinking much of his own righteousness; if I receive, or think I receive, pardon in this way, it takes no deep hold of my heart or life: I do not feel either my sin or God's mercy to be very great. Not feeling that I have been forgiven much, I will not love much. I will live as if I had a right to all I get, and would have had ground to complain if I had gotten less. But when I get pardon of my sin through the blood of Christ—when I see Christ crucified that I may be forgiven—when I see the Holy One of God bearing sin, that I may not bear it,—then it goes deep. I measure the pardon by the price which the Redeemer paid. I

acquire a deep dread of sin, when I know that nothing but the death of God's own Son, in our stead, could deliver me from its curse and power. I am forgiven much, and I love my Forgiver much. Oh that I could calculate and express to you the difference between expecting forgiveness as an unbroken heart would like to get it, and forgiveness as God in Christ has chosen to bestow it! But who shall measure the depth either of our condemnation or of his forgiving grace!

The Pardon and the Inheritance go together. Those who are not forgiven have no inheritance among the sanctified; and those who have no inheritance among the sanctified are not forgiven. No human being is forgiven and then left an outcast: no human being is admitted as an heir, and yet unforgiven.

Man's work is often left half done, for want of power or want of will to finish it. God's work is never left incomplete. When he forgives a sinner, he has secured another inhabitant for his holy home; when he has entered a name on the family record as an heir, he has also blotted out all the sins that stood against that name in the book of Judgment. None, with his sins standing at his own account, is admitted among the children; none of the children have their sins left standing to their own account. He who begins a good work in you, will perform it until the day of Christ.

How imperfect are all human plans! An honourable, upright, solvent firm propose to admit a junior partner. They intimate to the applicant that a fundamental condition of admission is that he have no debts adhering to himself personally. The candidate declares that he owes no man a penny. He is admitted partner in due form of law. But he entered under false colours; he owes five thousand pounds. His creditors, thinking his new position gives them an advantage, press for payment. The damning secret is discovered; the partnership is dissolved, and the culprit has fled. Ah, no such mistake is made when our Father admits another into the circle of his sons and daughters—admits another heir to the inheritance of the saints. God seeth not as man seeth. He never places a name on the Lamb's book of Life as an heir, who has any sin chargeable as debt against himself. You must be clear of all encumbrance ere you are entered heir. Conditions hard, do you think? oh, no. He who has the inheritance to bestow, has also the pardon to make you

meet for it : He who has infinite riches of inheritance for every seeking sinner, has infinite forgiveness to bestow : and He who loves to admit another heir, loves to forgive the debtor, that he may be fit for the inheritance. With our God there is plenteous redemption : the blood of Jesus Christ cleanseth from all sin. The forgiveness is as abundant and as free as the inheritance. Both are in the gift of God, and God is love. "Ask, and ye shall receive ; seek, and ye shall find ; knock, and it shall be opened unto you."

Fall in with his way : ask both, and he will bestow both. Pardon and the inheritance ! both or neither ! Christ is not divided : the Father will not divide Christ for you : He will not tear off a part, and let you get mere forgiveness, so as not to be cast into hell, unless you accept also and now an inheritance among the holy : nor will he give you an inheritance among the holy if you do not seek and get forgiveness through the blood of Christ.

Observe, a specific qualification is attached to the inheritance ; it is an inheritance among the sanctified. This word directs our hopes into the right path, and checks our hopes when they go astray. The only inheritance that Christ bestows is inheritance among the holy. Company is the test of character. The hope of a future heaven without a relish for present holiness is mere superstition. If by heart's choice you now linger among the impure, the snapping of the string of life will not throw your spirit into the society of the saints in glory. Like draws to like. The boundary between death and life, between time and eternity, does not abolish that law. The last messenger does not give you a new bent when he comes to lead you over the boundary of time : he only gives you the top of the bent you have at his arrival. Be assured of this plain truth—death carries us the way we are going. Now the new creature, and then company to your taste ; here the people of God, and yonder their rest remaineth.

In the text there is yet another touch, and that touch determines the expression of the whole picture : The company provided in heaven for the entrant heir, are sanctified, says our Lord Jesus, "*by faith that is in me.*" From Christ these white-robed multitudes derived the holiness in which they shine. Faith was the channel through which it flowed, and faith fastened on Jesus. Faith was a conductor that reached up from their empty bosoms while they sojourned on earth, and terminated in the fulness of the Godhead dwelling bodily in the Mediator Jesus. Through the connecting channel of faith, the Spirit took of Christ's holiness, and poured it into them. That white-robed company, as they wait to receive new heirs within their ranks, proclaim in their songs that they owe all their holiness to the Lamb that

was slain : "Thou hast redeemed us, and washed us from our sins in thy blood."

These, then, are Christ's words, dropped from heaven after he ascended, and caught as they fell by the Apostle of the Gentiles, for our use in this farthest end of the world. The Lord has given them expressly for the conversion of sinful creatures. Some who read these words stand with their faces to the world, and their backs to the Saviour. The attitude of their souls to-day is such that unless they be turned in time they shall perish in eternity. Brother, our dear compassionate Redeemer, as if not satisfied with all the gracious words that he uttered during his ministry on earth, had more last words to speak after he had ascended to heaven—more longing looks and burning words for us, for you and me.

These words of Christ are like rain-drops falling from heaven ; do we eagerly catch them on our lips as they fall ? Here is one who has quenched his thirst from a well that springs out of the ground, and therefore listlessly allows a shower to descend and sink into the earth, without an effort to intercept a drop. But yonder, a shipwrecked seaman clings to a raft, and has clung to it for many days alone. He has not a drop of water to cool his parched tongue. At length the sky is overcast, and the clouds begin to pour forth their treasures. Behold the man ! He turns his face right towards heaven, and opens his mouth, and gathers the drops more eagerly than if they had been gold. Such is the difference between two ways of listening to Christ's kind invitation. This man has satisfied himself with the pleasures that spring from the earth ; and the words of the risen Redeemer, distilling like dew from heaven, have no sweetness to his taste : they are insipid, and wearisome. But that man, having no other portion for his soul, drinks greedily the word of eternal life. A thirsty soul longs vehemently for God's house, and for the saving truth that drops down there. Blessed are they that thirst.

But here is yet a third person, differently situated ; he is like the second in that he thirsts, and like the first in that he does not drink. He is a shipwrecked seaman too. He sits alone upon his raft. No shower is falling, and no black cloud of promise appears upon the burning sky. A salt fiery sea seethes beneath his feet, and a bright fiery sun beams above his head. What will this man do ? The first despised and neglected the falling rain ; the second eagerly caught and drank every drop that came within his reach ; and the third,—what shall this man do ? He dies of thirst, because no rain falls from heaven on him.

Behold a picture of those who waste the day of grace, and go unsaved to the throne of judgment !

FOURTH EVENING.—CONSECRATED ART.

"Then wrought Bezaleel and Aholiab, and every wise-hearted man, in whom the Lord put wisdom and understanding, to know how to work all manner of work for the service of the sanctuary, according to all that the Lord had commanded."—Ex. xxxvi. 1.

INTERESTING notices of the mechanic arts occur in the Exodus. It is certain that they were cultivated with great success in Egypt both before and

after the time of Moses. It is probable that the Hebrews, although kept in a servile condition, were equal to their masters in mechanical skill.

We are too apt to form our conception of slaves in eastern countries and ancient times, on the model of the examples which have occurred in our own experience. In at least one decisive feature the cases are totally different; the slaves whom the Egyptians oppressed were, as a race, in all respects, equal to their oppressors. Instances were not rare in which they rose to the highest offices in the state. Joseph was bought from a gang of travelling chapmen; and yet he became virtually the ruler of Egypt. How different is the relation between master and slave in the States of America! Not long ago a member of the servile race, although personally a freeman, and a doctor of divinity to boot, was by the decision of a legal tribunal in New York, denied the right of riding in an omnibus beside men who owned a whiter skin. Doubtless, some Hebrew patriots followed the standard of Moses, who had by their skill ornamented the palace of the Pharaohs. The talent which they had acquired in the house of bondage, was afterwards employed in the interests of liberty. The Egyptians by the Exodus were spoiled of the jewelers as well as the jewels,—of the goldsmiths as well as the gold.

It is sadly instructive to notice that the first application of mechanical skill among the liberated Hebrews, was the construction of an idol. The golden calf is the earliest specimen of their art after they obtained their independence. The readiness with which they fell into idolatry reads a humiliating lesson to human kind in every age. Aaron, in his lame apology, says (xxxii. 24), "I cast it into the fire, and there came out this calf." Thus a naughty child, caught in the act, ventures half a lie to hide his transgression. No doubt, he or the workman at his bidding, cast the gold into the furnace, and the calf came out; but this is not the whole truth in the case. They planned and executed the image.

Yet it was true in a deeper sense than the equivocal intended, that they poured in the metal and the calf came out. This was the form of art into which both their hands and their hearts readily glided. Apis, the chief deity of ancient Egypt, was an ox. The figure of an ox, accordingly, was most familiar to the Hebrew artisans, and into this figure their effort naturally fell, as soon as they began to make images on their own account. They did for themselves when free, what they had done for their masters in bondage.

The history here is transparent, and the moral shines clearly through. It is not necessary to fetch the lesson from afar; the lesson offers itself unsought. Wisdom crops out on the surface here. Mark the terrible pervasive power of early habit and education on the moral and religious sentiments of a community. Moses, by divine inspiration, was raising the people up to worthy conceptions of God's being and character; but when his hand was removed for a day, the dead-weight gravitated into idolatry. From childhood, that generation of Hebrews had seen and heard the pomp of heathen worship. Their memory was charged with it; and the lessons taught them of Abraham's faith were not able to overcome the tide of daily universal habit. How hard it is for even true converts in a heathen land to shake off en-

tirely the bondage of idolatry; and how precious to us is our birthright in this land! Let us learn to pity and bear with the weakness of those who have been steeped in heathen habits in their youth; and let us learn also not to think of ourselves more highly than we ought. I tremble to think what I might have been and done in matters of religion, if I had not enjoyed the goodly heritage of gospel light and liberty won by the struggles of faithful forefathers.

From the history of the Exodus, we learn that, while the application of art in the service of idolatry came easy and natural to the artists, the application of art to the worship of God was the result of divine qualification and call. The workers were chosen, and their work prescribed; "I have called by name Bezaleel and Aholiab." Farther, at the very time when the men of Israel were applying their skill to the construction of an idol, God was intimating to Moses in the mount his choice of that skill for the purposes of his own worship. Whether the same two men, Bezaleel and Aholiab, who were selected as the architects of the tent-temple for the worship of God, were employed by Aaron to make an idol in imitation of the Egyptian Apis, we do not certainly know. The artificer of the golden calf is not named in the Scriptures. But it is in every way probable that the same men who constructed the idol were afterwards employed in the service of true religion. The skill of those men would be well known throughout the community. A talent such as this cannot be hid. It is the ordinary method of the Divine government not to create new faculties, but in a kingly way to take possession of faculties already existing, and impress them by the power of love into the service of the King.

Thus, Saul of Tarsus was taken captive, and his skill transferred to the service of the Conqueror. The chief priests kept that man in constant employment. His task was to destroy the Church. His great and peculiar talents were laid out in the service of the enemy, before he became a vessel to bear the name of Christ. But, as in the case of the ancient Hebrew artists, the decree had gone forth on the mount, while they were in the flagrant act of idol-making in the valley, that their skill should be forthwith consecrated to the service of God; so, at the very time that the young man Saul kept the clothes of the ruffians who murdered Stephen, the purpose of the Lord was sure, and the decree was already on the wing that should arrest the man, and employ his varied learning in establishing the kingdom of Christ. It is a common method of Divine Providence to take from the adversary his ablest hands, and make them willing workers on the side of righteousness. The skill that made an idol winsome, so as to lure human souls into idolatry, will be employed to decorate the temple of the living God. The native energy and scholastic acquirements, which in Saul the persecutor compassed the death of a few believing men and women in Jerusalem, in Paul the apostle carried the gospel over Europe, and undermined the foundations of idolatry.

A movable temple in miniature was constructed for the use of the nomade tribes. Considering the

circumstances and condition of the people, there was a great measure of completeness and splendour in the provision made for Divine worship amongst them. Each portion of the structure and each appointed ceremony had a typical significance. On a similar plan, and with larger dimensions, the temple was afterwards reared and furnished at Jerusalem. Both in the earlier tent, and in the later temple, art in the highest forms then available was lavishly employed. The ritual was sumptuous to the outward eye, as well as spiritually significant to the faith of the thoughtful.

But the partisans of the Romish ritual take nothing by this. The sensuous and gorgeous devotional culture of the Papacy, so far from being an imitation of the Hebrew worship, is in violent opposition to it on the vital cardinal point. By Hebrew law and practice the method of modern Rome would have been condemned and destroyed as idolatry. In the Theocracy there was only one temple; there was no duplicate of the gorgeous culture established there. When a portion of the tribes settled on the east of Jordan were suspected of an intention to establish another altar, the nation rose in arms, and were prepared to blot the stigma out, if necessary, in the blood of their brethren (Josh. xxii.) In later times, a distinguished proselyte of Ethiopia, when he desired to worship, found it necessary to travel all the way to Jerusalem. He could find no altar and no priesthood nearer home.

The fine-art worship of Rome is set up everywhere. It is repeated like echoes among the hills, or ripples on the sea. The costly, decorated, sensuous worship of the Hebrews was one. Sternly were the people forbidden, under pain of death, to set up any second. There is a world of meaning in this. We know that the divinely-appointed symbolic ritual of Israel was a type of true heavenly things. The Coming Event cast this shadow before it. One light throws only one shadow. Where there are many shadows, we know there must be many lights. The light in heaven which spreads day on earth is one: the many lights are of man's kindling, and tenants of the darkness. Besides, when the sun reaches the zenith, even the one shadow ceases. Such is the condition of the Church since the Light of the world has come in full. The shadows have disappeared, and "looking unto Jesus" through the transparent glass of the Word is now the common and equal privilege of all believers.

Art, both in its useful and ornamental departments, revives and flourishes in our day. How can it be baptized by the Spirit, and employed in the service of Christ? Not by bringing it bodily into Christian worship. Art thus employed will, like a drunken mother, overlay in the night her living child. Let "the simplicity that is in Christ" preside in the worship of God, and let Art as a servant go out to the field and gather tribute for the king.

How vast is the mechanical power, how exquisite the skill and taste of the civilized nations in modern times! Let the Great Exhibition testify. Can

this power be yoked to the chariot of the gospel, in order to hasten its progress through the world? Can this beauty be employed in making the truth more attractive, so that it may win the nations to the Saviour? They may; they shall; but the blessed consummation cannot be attained by any rude material process. Gold and silver, wood and iron, are not plastic in the Holy Spirit's hands. In the human soul sits the disease that perverts art; to the human soul must the cure be applied which shall make all art loyal again to the King Eternal. Alas, our art, with the wealth which it brings, seems to gravitate, like that of the Hebrews, to idolatry! We do not make a calf and dance round it. Covetousness is a more refined and equally real idolatry. Other worships, less reputable, but even more imperious, draw devotees in thousands to their shrines. If the skillful, wealthy, powerful persons were converted to Christ, the skill, and wealth, and power would become tribute in his treasury.

The Art of Britain lacks the blessing, because her artisans, the pith and marrow of the nation, are in a great measure ignorant of the gospel and estranged from its ordinances. It is vain to expect that those who do not fear God will regard man. The chief effort of the Church should be directed toward the chief constituent of the population. What the artisans are, this country will eventually be. If this mighty mass run to corruption, nothing will save the commonwealth.

There has been great danger; but the worst is past. We are in a much healthier condition today than we were ten years ago. There is no cause to despair or despond. Christian patriots may well thank God and take courage. Much has been already gained, and the capital already in hand, if well laid out, may greatly increase the ratio of our profits in the next decade. Hopeful hearts are needed, and active hands. Art and all its products will be truly consecrated when the artists are new creatures in Christ. There is no royal, at least there is no easy, superficial road to this consummation. As Saul's learning and energy were wrenched from the service of the wicked one, and consecrated to the honour of God and the welfare of man, so must the skill of our manufacturing population be diverted from multi-form vices, and compelled to flow in a great, pure stream of devotion and beneficence. The men must be met in the way of their wickedness, and laid prostrate before Christ. When they are raised again, they will cherish another spirit and tread another path. By the power of redeeming love in their hearts, many of those who were formerly counted not only wise, but also repulsive and dangerous as serpents, have become harmless as doves. The progress already made in this direction should rebuke our fears, kindle our hopes, and redouble our efforts. Value them as men; love them as brothers; stand beside them in human sympathy, and pour the gospel as balm on their wounded spirits. "He that winneth souls is wise."

W. ARNOT.

FIVE SHILLINGS' WORTH OF THE GREAT WORLD'S FAIR.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

FIVE shillings' worth! Yes, it certainly was, and full worth too: though, according to statistics at the doors, the public in general do not seem to think so. Only season ticket-holders as yet throng the great World's Fair, that magnificent piece of daring incompleteness, which has lately been the talk of London, as if it were a sudden only half-comprehended fact which had just started up under one's very eyes. For, in truth, whatever might be the excitement in the provinces and abroad, the general body of working London had taken the International Exhibition very quietly. After the great gloom of Christmas-time, everybody said that of course it would be put off, must be, ought to be, till everybody acquiesced in the wiser judgment and deeper tenderness which made the accurate and sacred carrying out of the wishes of the dead the best tribute to his memory. Afterwards "everybody" seemed to think very little about the matter. Hundreds and thousands of the middle class, living within an easy radius of five miles, had actually never seen more of the Great Exhibition than those two ugly domes, that rose month by month, and week by week, first as skeleton scaffolding, and then as dazzling crystal, catching the sun's rays from over the house-tops and the park trees. Country cousins alone, who seem to have the constitutions of elephants, the legs of camels, and the eyes of Argus himself, went to see it, and brought back wonderful stories of that town under glass, with its myriads of workmen, running to and fro along the ground like ants, clustering like bees over the galleries, or dangling perilously from the roof like spinning caterpillars; creating around them an atmosphere which might truly be considered "the dust of ages," and a Babel-like noise of unwearied hammers, and—may we say tongues? As to the building itself—its beauty, convenience, desirability, payability, and the contrary—there were disputes and arguments without end:—ending, as most arguments do, in each side sticking only the firmer to its own opinion. But on one point everybody was agreed, namely, that it could not possibly be finished by the first of May.

Consequently London, as a whole, cared very little about it; and even up to the middle of April it was a rare thing to find an acquaintance who had done the desperate deed of buying a season-ticket, and actually meant to be present at the opening. Rumours were rife, to the very last, of that opening being quite impracticable: of the infinite difficulties, perplexities, and hindrances

which beset the hapless Commissioners: how more than even at first feared, was felt, day by day, the want of that guiding Head, to whose clear, calm wisdom, unbiassed and universal kindness, and decision at once acute and rapid, every doubtful point could be brought,—and was brought in 1851, but, alas! not in 1862. Now, though no trouble or exertion was spared, though the Commissioners almost lived in the building, still there were incessant complaints on the one side, incessant changes of purpose on the other. There was no definite ruler to pronounce distinctly of any disputed question, "It had better be so and so;" no dignified autocrat to settle differences by a gentle word or two, being universally obeyed, because universally trusted. It is a strange comment on the text: "Death is better than life, and the end of a thing better than its beginning"—that until we lost him we never knew what we lost in that good man, true man, true gentleman, true Christian, whom all England now glories in, with an affectionate remembrance almost unparalleled in history, as the

"Silent father of her kings to be."

Deep, inexpressibly deep and tender, is now the thought of him; especially among the British middle classes, by whom a character like his, the beauty of which takes half a lifetime to find out, but once found out, is cherished for ever. The regret for him, an almost household regret, was probably at the root of the great indifference with which most people viewed the Exhibition. Many, both men and women, said outright, "No, they should not like to go; they had seen the '51 opening, with the Queen and Albert there, and—and"—with a quiver of the lip—"they had rather not see this one; they did not like to make fools of themselves in public."

Even to the very last week of April, when the *Times* told us daily of the almost miraculous exertions that were being made to get the Exhibition open, nobody seemed to heed, or to believe that the event would really come to pass. And those who took the trouble to make the circumbendibus down Exhibition Road, along Cromwell Road, and up Prince Albert's Road, into the main western thoroughfare, shook their heads ominously, and declared it was all nonsense to expect it; the thing was impossible.

As the day arrived, however, the public found to its intense amazement that this resolute body of Englishmen were working on the polite Frenchman's principle: "Madame, had it been possible,

it would have been done already; and if it is impossible, it shall be done." And now stories began to grow concerning the throng, gathering from all parts of the world to see the grand show—itsself the grandest part of it; of the terrific rush for season tickets; of the despair of Sir Richard Mayne, to whom the Lord Mayor had sent word that he was coming with "six hundred carriages," and who was reported to have answered to a nobleman wanting to know, supposing he started from May Fair about 9 A.M. on Thursday, what time he might expect to reach the Great Exhibition? "On Saturday, my lord; or perhaps, if you are very lucky, by Friday afternoon."

These tales, gently irritating, tickled the public ear; but the general mass of society, living only a few miles from the scene of action, was very little disturbed thereby; read its *Times*, and congratulated itself that it was "out of the way." A few, who, sitting in their parlours, or walking in their gardens that bright May morning, heard the distant sound of the Park guns, stopped to think, "Oh, this is the Great Exhibition day!" and in every heart—every woman's heart assuredly—must have been a stab of pain to remember how heavy a day it must be to another Woman, and be thankful that she was far away.

"I'm glad of it," one house-mother was heard to say with a sob, as she read aloud the brief intimation of the Queen's having that morning reached Perth to breakfast. "I care more for those two lines than for all the rest of the newspaper." And such was the universal feeling.

If it were right to intrude on such grief, it would be to notice how, as all grief should have, it has its blessed side. We can hardly appreciate the effect produced on the general community by discovering, as death only fully could have discovered, such virtues in high places,—virtues based on the deepest inward conviction and steadiest outward recognition of the one great truth of Christianity, self-abnegation, "I will spend and be spent for you." We know not how much good may unconsciously be done to many careless, unloving heads of families, in all ranks, to find that the head of the first Family in the realm, was (not to name any tenderer duties sacredly fulfilled) voluntarily as hard-working a man as if he had had to earn his daily bread in a profession or trade: that he was a scrupulous paymaster, a wise, prudent, exact governor of his household; a liberally educated gentleman, who by his methodical use of talents and opportunities, in spite of his innumerable occupations, found time for everything and everybody. Ay, everybody: from his own loyally cherished wife, to the poorest author or artist who came to him for a little help, or a few kindly words. And all this,

this noble, admirable, heroic life, was lived with such a simple, silent, and reticent humility, that the nation, much as it respected him, never really knew what he was, till he was gone.

No more—for it is only saying what everybody has said and felt, and will feel while this generation lasts—this generation, which remembers the familiar face, so sweet and grave, the graceful figure, gradually changing from boyish slenderness into the stateliness of fatherly middle age,—then suddenly missed from among us, out of all our pomps and shows and ceremonies, which, to such a nature as his, must have seemed such little things, less than nothing and vanity. But I think any one, joining in that May-day festival, over which hung such a cloud of solemnity if not sadness, must have felt, as the long-drawn hallelujahs pealed down the crowded aisles, and up to the glittering roof, that it was still better to be away. Better than all this turmoil of jubilee, to be where he was; where, we know not, nor need to know, except that it is among those who, all life's duties done, and burdens borne, and sorrows perfected, sit down among the saints at the feet of "the mighty God, the everlasting Father, the Prince of peace."

Of that May-day ceremonial this present writer does not pretend to have anything to say, being among the innumerable number who contented, or discontented, themselves with the columns of the *Times* newspaper on the day following; having not even attempted to get within sight of that wonderful crowd—a crowd is always wonderful—which "Our own Correspondent" describes so graphically: which for hours listened outside for the music, and tried at the faint echoes of "God save the Queen" to take off its honest, loyal, British hat, and reverberate with true British warmth, the cheers within, until street after street caught the sound, and carried it even to Hyde Park Corner. Yes, it must have been a grand thing, even that crowd. We shall always count it as one of the "mistakes" one makes sometimes, and repents of too late, that we spent May-day 1862, at least a day's journey on the International Exhibition.

But time has its rewards as well as revenges. The 6th of May found us bound, resolutely, in defiance of all impediments, to get a good, honest five shillings' worth out of the commissioners.

"Well, I wish you joy," observed a consolatory friend. "If you go every day regularly for two months, perhaps you may contrive to see the whole of it."

"Still, on the principle that faint heart never won—never anything in this world; also, that half a loaf is better than no bread, we'll see as much of it in one day as we can."

But the strict Government regulation of "no change given" was near stopping us on the thresh-

hold. I beg to confess, for the information and warning of future visitors, that my five shillings—a really important five shillings, since, as before stated, the public has as yet declined to invest that sum in so incomplete a show—was composed of a borrowed half-crown, a florin, a “threepenny bit,” a generously bestowed penny, and four half-pennies. Government—in the shape of one of these commissionnaires, invalided soldiers, whom one is so glad to see filling useful positions about London—hesitated a little at taking such eccentric payment; but, finally, thinking he might as well make the best of it, consented, and we passed in.

No—there may be substitutions—higher and better things even than the things gone; but in this world are no repetitions. As well might a man expect to find a second first-love, as a second Crystal Palace of 1851. It was quite *per se*; a fairyland; a dream. Who does not recall his or her first entrance into its exquisite transept, with that lovely vista of trees and fountains, gleaming statues, gorgeous carpets and fabrics of all sorts, making every conceivable combination of form and colour? Also the perpetual under-tone of music; organs, pianofortes, and instruments of all sorts, sufficiently apart not to jar unpleasantly on the ear, and yet producing an incessant, circumfluent harmony; an atmosphere of sound, soothing as that of a wood full of birds?

Oh, how delicious it was! the like of it can never be again; nor would we wish it. Let it vanish, like a dream of youth, into the immortality of the past.

And now, let us take a fair, wide, unprejudiced view of the Great International Exhibition of 1862; making no comparisons; for indeed there are none to be made. This is no fairyland, but a gigantic building, whose very size alone is impressive. Overhead is an enormous glass dome—they say as large as that of St. Peter's at Rome—and opposite stretches the long aerial nave, ending in a second dome, the counterpart of the first. On the right hand and the left run other avenues, the north-west and south-west transepts, both terminating in curved arches; but the whole three lines of view melt into such shadowy distance, that one can at first hardly distinguish how they end. There is no glow or glare of colour; and, on the whole, the effect is extremely subdued; the chief thing that catches the eye being the inscriptions, in sufficiently large, legible letters, which run along under the rim of the dome, and are formed into arches over the entrance, and at the termination of either transept:—

“*Tua sunt Domine, regnum, magnificentia, et potentia et gloria atque victoria; et tibi laus: cuncta enim quæ in cælo sunt et in terra, tua sunt.*”

“*Gloria in excelsis Deo, et in terra pax.*”

“*Domini est terra et plenitudo ejus.*”

“*Deus in terram respexit, et implevit illam bonis suis.*”

This silent recognition, in the grand old tongue common to all nations, of Him who is the Father of all the nations of the earth, is more impressive than I can describe. It contributes much to the feeling which many people have already expressed, that the difference between this second building and the first is exactly like that between youth and maturity—less of beauty, more of real greatness; the greatness of deliberate, perfected work. It is not a palace; but it gives in no small degree the idea of a temple—a true temple of industry;—*laborare est orare.*

That is, it will do—by and by—for now it is in such an incomplete state that no wonder the sapient British public declines to pay five shillings to behold the sight. However it might have been polished up for the opening day, at present the whole scene presented the appearance of a gigantic “fitting.” Packing-cases everywhere; planks lying about to be tumbled over; nails ready to run into your shoes; rude calico hangings, confronting you with the warning, “No admission:” elegant furniture, in hay-bands and Holland pinafores; statues, so thoroughly draped with real drapery, that scarcely an obnoxious toe could appear to wound the feelings of our Transatlantic friends; china and ornaments dispersed about the half-empty, or wholly vacant glass-cases in every stage of that pitiable confusion which all house-keepers, or rather house-quitters, understand. In fact, nothing in the whole building looking complete and comfortable, except the roof, and the clear glass dome, through which the blue May-morning sky smiled serenely and cheerily.

Yes, everybody seemed cheerful. Though everybody was as busy as busy could be—workmen, attendants, exhibitors, policemen, commissionnaires, running hither and thither, or gathered in little knots, talking vociferously in every language under the sun; still they all appeared quite at home, and in the best of spirits. The people who looked most uncomfortable and most “in the way,” were the unhappy visitors or season-ticket holders, who were eyed much as a *materfamilias* would eye a select party of well-dressed guests coming in to spend a social evening on the very first evening of “fitting” into a new house. They swept the dust, nails, and packing-cases with their flounced trains; they brushed against the china with their tremendous hoops; they sat down where they had no business to sit, and stood where they ought not to stand, and altogether made themselves as elegantly inconvenient as might naturally be expected under the circumstances.

But we, who came on business, had no conscien-

tions qualms. We determined to begin systematically, and see as much as we possibly could see in a given number of hours. So, to economize space, we walked through the north-west transept—where Austria is in a perfect chaos, a wreck of nations—to the north-west Annex—which is devoted to machinery.

There is something intensely British in machinery. One felt one's heart swell with true Anglo-Saxon pride as one walked down the long row of locomotive engines, painted in marvellous colours—bright blue, dark blue, grass green, sea green, rifle green, and polished as to their brass and iron to the last extremity of glitter. In their very best coats—of varnish—they stood, these silent monsters,—the genii of our iron roads. There was one belonging to the Caledonian line, made by Neilson & Co., Glasgow—a very fine monster he or “she” was, too; and there was C. England’s “Little England”—a brilliant dark-blue creature. Sharp, Stewart, & Co., Manchester, furnished another, shining in the very brightest green; and there was one “designed by R. Sinclair,” which was stated to have “run on the Eastern Counties line 44,450 miles, with no repairs except turning the leading wheels, and painting.”

On the other side was machinery of every sort: a paper-mill from George Bertram, Sciennes, Edinburgh, which “made paper from vegetable fibre, at the rate of 100 feet per minute,” and various specimens of “mules,” and other kinds of dumb factory labourers, attended by live labourers from the same region; a Manchester “chap” who stood patiently picking each thread as it broke; and two tidy Manchester lasses, working as briskly as if they were in their own factory. The centre of the Annex is occupied by a model of the great sugar-mill of Merrilees and Tait, Glasgow, and near it is a rival mill of Heckmann’s, Berlin, where the brilliant copper and brass of the sugar-boiler is a perfect picture of mechanical elegance.

There is something strangely fascinating in fine machinery,—man’s design and handiwork, yet in its accuracy, harmony, and, above all, in its invisible force, giving a sense of superhuman perfectness. Wheel upon wheel incessantly convolving, each acting on the other in such a slight and yet miraculous way; life-like motion; life-like perpetual sound, as if some spirit were at work in the inert mass which enabled it to go on for ever and ever. Involuntarily, the mind reverts from this to the great mechanism of the universe, of which we know so little, and on that little seem so ready to dogmatize.—Fools that we are! It is as if one of these ever-spinning reels, one of these threads which break in the instant, one of these tiny wheels whose small gyration influences so many more, were to stop and say to itself,—“This whole

mechanism was made for me; and I—I understand it all.”

But on; for time does not trot but gallop in this International Exhibition; on, through chaotic Austria, bewildered Belgium, and sober Holland, which, like most sober people, is a little beforehand with its neighbours; on, between the two enormous mirrors that should have been; but, alas! one broken in the transit, shows only the melancholy empty frame; past the wonderful diamond, “Star of the South,” round which is a circle of those most annoyingly fashionable ladies in hoops and trains. Long may they remain there, staring at what looks to our unappreciating eyes no better than a large piece of cut-glass dangling in the centre of a case of other specimens of glass uncut, which look no better than pebbles on the road, but which we understand are of inappreciable value—worth a king’s head or a queen’s heart. Verily, the world is under some extraordinary delusion about jewellery, especially diamonds.

Now we came to something really beautiful. It is a group of statuary by Molin of Sweden, “The Grapplers.” Two men, elder and younger, are wrestling; evidently for life or death; both being armed with short knives. If murder ever could be grand, it is made so here. The fierce intensity of the elder man’s face, the wild fury of the younger, and the clasp of terrible hate, closer than that of love, are absolutely sublime. Four bas-reliefs round the pediment tell the story: “Jealousy,” “The dream of vengeance,” “The contest of battle,” “A woman weeping at the grave.” It is awfully real; for as I watch two young men who stand gazing at it, I can read the reflection of its reality in one of their faces. God help us! human nature is always the same. But is it not a question whether an artist who can so dignify crime, would not have done wiser in choosing a subject that should immortalize virtue?

Here is the French Court; our neighbours having invaded and appropriated about a fourth of the whole Exhibition. Well, let them! if they do it as charmingly as no doubt they will. Even now, in its imperfectness, our eyes are dazzled by half unpacked splendours; silks that “stand alone;” laces of fabulous value; diamonds which, as a busy but civil assistant of Jacta & Cie, pauses to inform us, “sont vrais—tous vrais, madame;” and certainly arranged in tiaras, sprays, and wreaths, are almost as pretty as a common wild-flower. In these domains we could feel ourselves in Paris, so incessant is the clatter of French around, and so numerous are the specimens of the genus *ouvrier*, one of whom, complete in beard and blue blouse, and exquisitely worked slippers, is just descending from giving the last arrangement to a large plaster statue, on whose base is painted the characteristic

translation, "Fondu d'un seul jet"—"Cast in single spout."

From France—which, when finished, will likely be one of the most attractive regions in the building—we go on to Italy. There, scattered about in every phase of "pack" and disarrangement, are countless treasures of beauty, especially statuary. We can only stop to admire one, *Bella Italia*, as she was a few years since, when Norchi the sculptor of Milan thus personified her,—a grand-limbed, majestic matron, with overhanging brows, and lips protruding, sitting passive, sullen, and fierce with her wrongs. Norchi of Milan! try again, and give us *Bella Italia* awakening to her hopeful Now.

Here too, stands Gibson's tinted Venus. Much has been said about this statue, and much will be said. Yet, I doubt, most people will own regretfully that it is a great mistake. Marvellously beautiful; for this is no Venus Anadyomene, or Venus Aphrodite, but the "Alma Venus Genitrix," the fruitful chaste mother of gods and men. Had it been in pure white marble, the Venus de' Medici, even the lovely Venus of Milo, could hardly have equalled it; but as it is, it is neither classic nor human; it loses all the severe grace of colourless form, and yet approaches no nearer to life than a bad imitation of a wax-work figure. The tinted eyes, the slightly reddened lips, and the hue, certainly not that of flesh, which has been given to the marble limbs, produce an effect at once painful and unnatural. Some connoisseurs may admire, and antiquaries may argue that the Greeks are supposed to have tinted most of their statues; but a large portion of us fond ignorant art-lovers will always protest, that it is not the advance but the decadence of true classic art.

But we must go back into the nave, and, consulting the plan, make a determined search after that ignominious necessity, food. Certainly, here is plenty, but it is arranged in a hopeless manner in the shape of Trophies. There is one trophy entirely composed of pickles; another of sweatmeats; another, which looks, at a distance, like a Greek temple with alabaster columns, is fabricated of candles. There is an erection invitingly labelled "To the Juveniles," which consists of every sort of toy that can be imagined; and another, the centre figure of which is a light-ship, stuck round with telescopes, reflector, etc. All down to the eastern dome are dotted these abominations of bad taste, completely obscuring the perspective of the nave, and some of them in themselves grotesque to the last degree of imaginable ugliness. They ought to be swept away with the besom of destruction. May it speedily be done!*

The eastern dome, and the north-east and south-

east transepts, have their corresponding inscriptions written in English:—

"The wise and their works are in the hand of God."

"Lord, both riches and honour come of thee: thou reignest over all; and in thy hand is power and might, and in thy hand it is to make great."

And two blank-verse lines (Query, From what author?) not too poetical—

"Each climate needs what other climes produce."

"Alternately the nations learn and teach."

The south-east transept is devoted chiefly to iron-work: the north-east, to the products of the colonies. Here is the only trophy which is enduring—a fine pile of ornamental woods from Tasmania. Near it is the Australian quarter, where our eyes were caught by a specimen of art, which proved that the antipodes can boast as bad painters as some of those who, under the wise selection of this year's hanging committee, we yesterday beheld on the Royal Academy's walls;—acres of canvas spent over full-length portraits, and pounds of good colour lavished over what high art and anti-pre-Raphaelite painters consider flesh and blood, but which is in reality like nothing in nature,—or art either, for art is the highest nature. However, what care they, the ancient leaders of our illustrious Forty? Like Sir Joshua, Nature always "puts them out."

It is to be feared that we are growing savage as wild beasts for want of food, so let us quit the obnoxious picture, and proceed at once to the refreshment-room. In any place of public resort like this, there is always considerable entertainment in watching the people feed. So much character peeps out, so many phases of domestic or social life, in the little groups that gather themselves round the table. You may, if you have quick observation, make up a whole novelette in ten minutes, or at least gain fragmentary studies of human nature. Of such was a trio beside us, finishing off with ices what had apparently been a very comfortable lunch.

I have said nothing hitherto of the visitors to the Exhibition, and yet we had noticed them a good deal. They consisted—besides the fashionable dames aforesaid, who were always annihilating us with their hoops, or turning round upon us with sudden fierceness, when we accidentally trod on their demi-trains—of people that you at once decided were "from the country;" healthy-looking squires, with stout matronly squires; magisterial county magnates; tall, aristocratic gentlemen, possibly peers; and a large sprinkling of clerical personages, with sedately clad wives and pretty daughters. Also, and they were a goodly sight to see, not a few ancient couples, just husband and wife alone, who took their quiet pleasure together

* N.B. of proof corrector: It is done. Hurrah!

in their life's decline, looking as happy and contented in one another's company as when they were young lovers. Such a pair we saw beside the Armstrong gun, and the elderly, rather military-looking gentleman, was explaining it minutely to his elderly wife. She listened, dear soul! with a devotedness of attention that indicated a habit, possibly thirty years old, of listening to all he said, admiring all he admired, and sharing with him every pleasantness, as doubtless every pain, in a fulness of love that shines out as sweetly in an old woman's face as in a young girl's. Perhaps more sweetly, because it has been tried—tried and not found wanting.

A second bit of nature, almost as charming, was beside us in the trio I have mentioned, father, mother, and growing-up daughter. They were evidently country people; for he spoke with a slight provincial accent; and they were dressed—oh, how many thoughts and mutual consultations those splendid gowns and bonnets must have cost, after "papa" decided to take three season-tickets and come to London. And what planings—what arrangements—what joyous anticipations, before they were fairly started, and had located themselves in some sober "family hotel," which the squire may have frequented in his young days, when George the Fourth was king. Thence, now, they doubtless emerge, every morning, to spend the day in the International Exhibition. And night after night, while poor mamma rests her wearied limbs, is benign papa coaxed by that coaxing girl—(what a winning way she has, and how mischievously she drinks up the remainder of his wine, which he himself holds playfully to her lips!)—coaxed into taking her to some theatre or other, where she will laugh, and cry, and look about her, with the intense enjoyment that no *blasé* London young lady ever knows. And how, when the week or fortnight is over, she will go home and tell all the village—the rector's daughter, her bosom friend—and old Betty at the lodge, her nurse—every single thing that has happened in every single day; and all will decide that there never was such a place as the International Exhibition.

Be it so. Even such little episodes as this—of which there must be so many now going on, and will be all year—constitute it a good thing, a source of wholesome natural enjoyment to thousands.

Enjoyment? Well, it has its limits, and so have human powers of locomotion. This is the great drawback to the Exhibition—its enormous size. You may walk miles upon miles without recognising the fact, until you suddenly drop, feeling, that if your life depended on it, you could not proceed a step farther. And the staircases, when one has been on one's feet for half a day,

are literally awful to contemplate! How we overcame them I hardly know, but at last we found ourselves on one of those delicious settees that some merciful and enlightened Commissioner has provided, in glorious plenty—sitting in peace opposite to Gainsborough's "Blue Boy;" and vaguely staring alternately at the washed-out Reynoldses, Hogarths, and Laurences on the walls, and the living phantasmagoria of graceful figures, pretty—or occasionally pretty faces, and universally charming toilettes, which moved in a continuous stream up and down along the gallery of British pictures.

Dare we confess that among all these art-treasures, at first we principally studied nature—especially clothes? There can be no doubt that a thoroughly well-dressed elegant Englishwoman is a very charming sight. These spring toilettes, in which, on the whole, was great simplicity, harmony, and above all unity of colour, were quite refreshing to behold. Nor, except the atrocious hoops, was there any great exaggeration or ugliness of costume. It is the under-bred class of quasi-fashionables, who wear spoon-bonnets, with bushels of flowers stuck on the top, and gowns trailing in the mud, or kilted up over scarlet stockings and glaring petticoats, stiff and circular as an iron cage. These gentlewomen, with their black or subdued-coloured silks, their delicate muslins, their flowing white bournous, or dark rich Indian shawls, had, whether or not they possessed actual beauty, general graciousness, dignity, and sobriety of mien, that I doubt if the Prado, or the Corso, or Unter den Linden, or even Longchamps itself, could rival. Excellent season-ticket holders! May they promenade there, gratifying their eyes, and improving their minds if possible, all summer, in this most perfect picture-gallery that England ever possessed.

It occupies the whole length of the part of the building parallel with Cromwell Road. Well lit, well ventilated; every picture hung where it really can be seen; no careless juxtaposition, whereby two equally admirable works of art are made actually to "kill" one another; arrangement without confusion; the different masters being, wherever it was possible, hung in groups, so that the eye easily takes in the distinctive peculiarities of each; no dust, no heat, no crowding;—it is little to be wondered at if all London makes for the next four months of this place its favourite promenade.

Of the two galleries, British and Foreign, it were almost invidious to decide which is the finer. Ours has decidedly, and especially among its living painters, the richest glow of colour, the truest rendering of nature, the highest and purest moral tone. Our Continental brethren paint large pictures, of gallery rather than cabinet size; are finer draughtsmen, and choose subjects of tragic

and personal rather than domestic interest. Some of these are intensely painful. One could hardly find anywhere such a horribly well-painted collection of corpses as that which may be found along one wall of the Foreign gallery. One picture, representing the lying in state of two unfortunate gentlemen, Egmont and Count Horn, *after* their decapitation, is quite ghastly. The two bodies are stretched side by side on a bed, and the two heads, which, as is plainly perceptible, are only just stuck on to the bodies, lie loosely, each in its place, and look as if, with the least shake of the canvas, they would roll down upon the gallery floor. Query—What high purpose can be attained, or what good can possibly be done to any human being by such art as this?

On the whole, in spite of many excellent pictures in the combined foreign schools, our British artists may hold their heads honourably high. Setting aside all the elder painters, our Hunt, Millais, Noel Paton, Faed, Leighton, Hughes, Clark, McCallum, Hook, and many others, who twenty, or even fifteen years ago, were mere "Academy lads," form of themselves a noble national school: A school that, whatever its shortcomings, is pure, refined, natural; free from every coarse, meretricious, or melodramatic taint; appealing to one's highest and tenderest emotions, and without being strictly religious art, having throughout a strongly religious and always moral tone. On pictures such as these, the eye, educated or uneducated, rests and lingers with an unconscious sense of refreshment and calm. They "do one good," so to speak; ay, down to the tiniest bit of green landscape, or the humblest cottage interior,—J. Clark's "Sick Child," for instance; and what can the grandest so-called high art painters desire more? Truly, as we walked slowly up and down the long gallery—not attempting to particularize or examine—only taking a fond look at long-missed familiar favourites, and a speculative glance at the very few, here and there, that we did not know, our British hearts thrilled with a not unnatural delight, to think that "our own" were the best after all.

Ay, without any obnoxious insular pride, we cannot but feel, cursory and imperfect as has been our investigation of this magnificent building, that no other country in the world could in so short a space, or in any space of time, have erected such an one. No other race than the brave Anglo-Saxon, with its dogged perseverance, its untiring energy, and its strong, patient, passive rather than active will, could have so maintained its ground against insuperable difficulties, and finally carried out a purpose which even to the very last day, the last hour, appeared all but impracticable.

There is much to be done still. It will be weeks

before the chaos settles into anything like order: and even then, the daily working arrangements of such an enormous undertaking, must present difficulties, mistakes, mismanagements, perplexities without end.

But for all that, the thing is done, and done successfully. The building, so much ridiculed for its external ugliness (and, perhaps, even by the most enthusiastic Briton the less said on that subject the better), has been found substantial, convenient, and within, not unbeautiful. The unpaid, unthanked Commissioners, have toiled early and late to accomplish their self-imposed duties. The whole country, let us say the whole world, has now before it for the next six months, a nucleus of interest, entertainment, instruction if they will, nay, almost whether they will or not; for the dullest clown, the most indifferent aristocrat, could hardly go through the International Exhibition without feeling his brains, or his heart, or some recondite portion of his common humanity, a little the better for it.

And one thing, the grandest thing about the whole, is the public acknowledgment of our nation, of all nations, both in the opening ceremonial, in the inscriptions I have copied, of the Source from whence all these good things do come. It is, more even than the former Exhibition, our confession of faith before the whole world. We owe this, doubtless, as we owe the pristine design of Industrial Exhibitions, to that deeply religious heart and active brain now at rest for ever.

He sleeps, and others have completed his plans; he laboured, and lived not to see the fruit of his labour. To us, this may seem infinitely sad; probably no one, gentle or simple, of the myriads that will visit this place, will do so without a sigh to the memory of our Prince Consort. But for him, who lived so much for others and so little for himself, whose almost perfect life was carried out without the smallest show, or vain-glorying, or personal assertion of any kind, for him it would be enough to know that what he wished done has been done, though done without his aid. What matter? The good servant desires only that his master's will should be accomplished, in his master's own way. He was that servant, and so, thus early, the Master called him.

Coming away from this busy place, with its clang of incessant work, its tramp of innumerable feet, its confused mingling of all possible sights and sounds, one could not but think of him, the originator of it all, now a disembodied soul. Ay, so it is! We toil and struggle, wrangle and praise, enjoy and endure.

"But thou, dear spirit, happy star,
O'erlook'st the tumult from afar,
And smilest, knowing all is well."

MAY - DAY, 1862.

AN ODE.

It is the morn of May !
 The flowery holiday
 Of Shakspeare's England—with its golden hours
 As bright as ever passed,
 In glitt'ring waters glassed,
 And threading labyrinths of leaves and flowers.

The trees fresh-clad and cool,
 Of murmur'd bliss are full,
 A deep content is poured on nature's needs ;
 And joy is in the flow
 Of each pulsation low,
 Which sends the lakelet rippling to its reeds.

Fair princess ! woodland queen !
 The slender birch is seen,
 With silken tresses to the sunshine spread ;
 With gleams, like dazzling smiles,
 And gay coquettish wiles,
 The light laburnum shakes her golden head.

Like bride on bridal morn,
 There stands the snowy thorn,
 White, fragrant, flowery ; and the lilac there,
 From every peachy plume,
 Shakes out a rich perfume,
 In waves of incense on the happy air.

So glad a day and fair,
 Why do they not prepare
 The May-pole gay, the dance upon the green ?
 The wooing in the glade
 Would want no serenade,
 The nightingales would greet the young May Queen.

There is a jubilee !
 With sound as of the sea
 Wind-stirred—not angrily,
 But with each foamy crest
 Sunlit and laughing—to the west
 The people flow,—flow on and do not cease
 Toward the wide-domed hall, the palace Hall of
 Peace.

The golden noon is high,
 And still the crowds draw nigh,
 And flow within and surge the walls about ;
 With chorus and acclaim,
 Their meeting they proclaim,
 Each shout within is echoed from without.

Again the nations bring
 Their peaceful spoils, and sing
 Of earth restored, inherited, subdued ;
 The primal blessing through the curse renewed,
 And all the gifts of God
 Again pronounced good.

Her jubilee half-sad ;
 Her pageant grave, not glad ;
 Care at her heart, and sorrow on her brow,
 The England of to-day
 Sits neither glad nor gay ;
 Mother of many nations is she now.

And darker are the days
 Than when she *first* did raise
 The *first* fair Hall of Peace :—upon her breast
 Children with hunger rave ;
 While sounds across the wave
 The strife her sons are warring in the West.

Nor want and war alone.
 Death's shadow on her throne
 Has fallen ; and yet she builds to Peace again ;
 Broader and deeper the foundation lays ;
 Higher and louder peals the song of praise.
 She builds in faith, in faith renews the strain ;
 Dark though the days ; though distant peace may be,
 Her second Temple may the advent see.

ISA CRAIG.

THREE PRESENT-DAY TRACTS.

BY THE EDITOR.

I.—THE RIGHT WORK AT THE RIGHT TIME.

No man need be idle from "not finding work" in Christ's kingdom. The Master gives to each servant "*his work*,"—that which *he* is best suited for by his peculiar gifts and position in life; and that, consequently, which *he* can best do. No servant, then, who is "willing to work," can long search for *his work* in vain. But how often is the work searching for the servant! In how many ways does it come seeking him, and saying, "Do this!" What we require is not so much to find our work, as to be found by our work; and when it does find us, to do it with all our might,—to "labour while it is called to-day, seeing the night cometh, when no man can work."

How much is lost by the crime of slothful indecision and off-putting! We call this a "little sin," forsooth!—we smile at it as if it were a petty infirmity; and yet if we review life, or even one year of life, and consider what we have lost to ourselves and others by not doing our given work at the given time,—O friends, we shall no longer think that a trifling sin which has been followed by losses of good which we can reckon up to an "intolerable sum!" We had no want of work; our hands found abundance; but we either did not do it, or if we did it, certainly not "with all our might!"

I can at this moment easily remember very many grievous losses to myself, and maybe to others, from (what at the time appeared to be) the *trifling* sin of off-putting. But instead of recording those, let me mention one or two instances of an opposite character, that will illustrate the good of doing at once what is *given* us to do, and the evil that might have ensued from delay.

I once attended an old man on his death-bed. He was very lonely, and very poor, and more than fourscore years of age. He was naturally very shy and timid, and suffering from many unbelieving doubts and fears. It was sad to see an old man so far from peace with his Father; yet he had been a church-member, and had led what is termed "a quiet, inoffensive life." I found him, however, very earnest, inquiring, and thoughtful; but very weak in his faith as to the good-will of God towards *him*, and in the freeness of the gospel offers of pardon and grace to *him*. I felt much interested in him. One afternoon I was passing his door. I had seen him the day before. His illness seemed to be the lingering weakness of old age. It was within a few minutes of my dinner-hour, and I had been labouring since morning. A strong

impulse seized me to enter the sick man's house. But the flesh argued for delay, and pleaded fatigue, and want of time, and to-morrow, etc. Yet the words, "What thy hand findeth to do, do it," rung in my mind.

I entered, and found the old man very weak. "O sir!" he exclaimed, alluding to a previous conversation, "is the Lord indeed willing to receive a poor sinner like me?" I again pressed a few truths upon his mind; and, when parting, I strongly urged the importance of believing in the love of God to him through Jesus Christ. In bidding him farewell, I said, "As freely as I offer you my hand, and with infinitely more love, does Jesus offer as *your* Saviour every possible good, and Himself as the greatest good of all. Believe, and *thou* shalt be saved!" He seized my hand eagerly, saying, "I believe it!" and promised, according to my request, to resign himself and all his concerns in earnest prayer into Christ's hands the moment I left his poor and lonely room. "You will pray for me, sir?" he asked, as I was departing. "Yes," I replied. "To-day, sir?"—"This hour," was my promise; "but," I added, "no delay—no, not a minute!—remember you are to pray immediately to Jesus, and to tell Him all your cares, sins, and sorrows, and to commit your soul to His keeping now and for ever. Farewell!" I sent for a person to sit by the old man, as he seemed weaker than usual. In about half an hour after parting from him, the woman whom I had requested to attend him came running to my door with the intelligence, that *she had found him dead!*

It is now many long years since this happened; and I have so far remembered the impression which it made upon me as to the importance of doing *at the time* whatever work is given us to do, that I could relate not a few remarkable instances (amidst, alas! many more neglects) of the good results of *immediate* attention to duty, which the memory of this very case helped to enforce. One occurred at a later period, which I cannot help recording.

One evening, and, as in the previous case, after a laborious day, I was passing, in the street of a small provincial town, a house which had been an hospital in "the cholera year," and which, since then, had been occasionally used for any cases of fever, or dangerous disease occurring among the resident or vagrant poor. Again, by one of those strange suggestions that come, we hardly know how or whence at the time, I was induced to ask

if there was any one in the hospital. But again the flesh pleaded for delay. Yet I could not somehow pass the door without inquiry, though I almost smiled at my impulse to do so as being superstitious. I was told that a poor woman was there who seemed to be dying of consumption. She had been found a few days before as a beggar on the highway. I entered the room where she lay. I found her confined to bed, an emaciated creature, with skeleton hands and sunken eyes, a severe cough, and apparently about fifty years of age. She did not know me; and all I knew of her was, that she was very poor and very lonely in the world, and a stranger. After a few ordinary observations about her weak state of body, when she expressed her sense of hopelessness as to recovery, I said, "I suppose when you die, no one in the world, poor woman, will miss you?" "No one cares for me," she replied in a tone of sadness. "No one?" I asked. "No, sir, not one that I know of." "Do you not think God cares for you?" I said kindly to her. "I don't know," she replied in a half whisper, turning her eyes away. "He knows you, at all events," I said. "No doubt of that, sir." "And is it not something," I continued, "to be known personally—even you with all your cares, and pains, and anxieties—to the great God who made heaven and earth, and who is able, at all events, to help and supply every want of your body and soul?" "Ay, sir, I did not think of that. It is something indeed!" "But what," I asked, "if this God has an interest in you—cares for you—loves you?" "O sir! I have been a great sinner—a great sinner." "God knows that better than you do," I replied; "and He hates your sins with infinite hatred,—but what if that same God, nevertheless, commands you, saying, 'Believe in the Lord Jesus Christ, and thou shalt be saved?'—and beseeches you to be reconciled to Himself?—and says to you, 'Come now, and let us reason together, though your sins should be as scarlet, I shall make them white as snow?'" And then I spoke to her for a long time of the love of God to lost sinners.

I have been privileged to address the same words of truth and life to many a sinner, in health and sickness. I have seen, in many cases, the power of the truth, through God's grace, to enlighten the mind and change the heart; but never did I behold so visible an effect produced upon a human spirit, in the same time, as upon that poor and unknown woman! Even as the mercury is seen slowly rising in the tube when heat is brought near it, so did her heart and soul seem to rise more and more to God, in faith, love, hope, and penitence, as the grand theme of the love of Jesus was presented to her. At first she looked thoughtfully,—then

she raised herself up in bed,—then clasped her hands and lifted her eyes to heaven,—and often exclaimed, "Oh! thank God! thank God! that I have heard such words as these!" After remaining more than an hour, and praying with her, she besought me to come back next day. I promised to do so; but earnestly urged her immediately to pray to Jesus Christ, and to tell Him her whole heart,—to confess her sins to Himself, and to ask, nothing doubting, the blessings which I had taught her to expect from Him. She gladly promised to do so, but said, "Don't forget to-morrow, sir." "Never fear," I replied, "if I am alive and able to come; but remember there is no to-morrow given us! Don't you forget to-day; for now is the accepted time,—now is the day of salvation." "God bless you, sir! Oh, thank God! thank God!" were the last words I heard.

I called, according to promise, next day at the door of the small hospital, and found she *had died the night before, and was already buried!* What her name was, or history, I never could learn; but I have good hope that the name of that poor woman will be found in the Lamb's book of life!

I cannot illustrate at present by other cases, though many crowd upon my memory, the importance of our doing whatsoever our hands find to do. But let me give one or two advices, to my young readers especially.

Never judge by appearances as to the relative importance of duties. What seems the least important may be all-important. Had the widow not given her mite the day she did to the treasury, but delayed it for another week, how much would she herself, and the whole Christian Church, have lost by the delay! Our only safe rule is, "Whatsoever our hand findeth to do, to do it with all our might." Let it be a subject of daily prayer, as well as an object of daily endeavour, to do our right work at the right time. God, in his providence, will never leave you at a loss as to what to do, and when to do it: but will lead you, if you will only be led by him. Oh, when will we learn the lesson so essential to our peace—to live well the one hour, and do well the one work which God in that hour gives us! And thus, by attending to each short step, we shall reach the end of our journey, though the far-off horizon may be veiled in clouds!

II.—THE QUESTION OF FUTURE PUNISHMENT.

DOES any one honestly believe that eternal blessedness must be bestowed on him, and upon every man immediately after death, irrespective of character? I question whether such faith in a falsehood exists. Were it faith in a fact, then suicide would be wisdom, and the murderer a missionary! But the belief in future punishment of

some kind is almost an instinct in man. The only question connected with future punishment which perplexes them is its duration. Many repudiate with abhorrence the thought of its being endless. Let us consider one aspect of this momentous subject.

The idea which they have formed of punishment is that of a mere arbitrary annexation of a certain amount of suffering in the next world to a certain amount of crime committed in this—so many stripes for so many sins; and, as if obvious injustice were inflicted on men, they exclaim, "Surely such sins do not deserve such punishment!" But if sin itself, by an eternal moral necessity, carries with it its own punishment, even as the shadow accompanies the substance, then the real question in regard to the possible ending of future woe is reduced to the deeper one, of the possible ending of future sin. And if so, what evidence have we from any one source to inspire the hope, that the man who enters the next world loving sin, and therefore suffering punishment, will ever cease to sin, and thereby cease to suffer? It must, remember, be admitted as an indisputable fact, that life eternal can only co-exist with a right state of the soul. "This is life eternal, to know thee, and Jesus Christ whom thou hast sent." Up to the moment in which the spirit turns with filial confidence and obedience to God, there cannot be a cessation either in the curse that must rest upon enmity and disobedience, or in the pain which must be produced by so terrible a malady. Some time or other, be it near or remote, in one year or in a million, there must be repentance in the sinner, a turning away from sin and to God, as the only possible means of bridging over the otherwise impassable gulf that separates the bad from the good, or hell from heaven. There is no salvation for man but from sin; there is no restoration for him but to love.

But if this change in the sinner is not accomplished in this world, what evidence have we that it can be accomplished in any place of even limited punishment? In what conceivable way, we ask with deepest awe, is a moral and responsible being, who ends this life and begins another at enmity to God, rejecting Christ, disbelieving the gospel, dead in trespasses and in sins, hateful and hating, to be made holy after death, and before entering heaven, by a temporary discipline of mere suffering?

What advantages, for example, will such an one possess elsewhere for the attainment of piety that are denied him here? If all that God has done to gain his heart has so far failed up till the hour of his death, that he is morally unfit by his habits or even desires for the society of God and his people, what appliances can we conceive of

more likely to influence the will and gain the affections in a prison-house set apart for the reformation of the impenitent? Does any reader of these lines despise God's counsel now, and reject all his reproofs, from the infatuated notion that some limited course of suffering and of discipline hereafter will change his heart, and prepare him for the fellowship of heaven? If so, let me address him personally, and beseech of him to examine well the ground on which he intends to build a house so high, whose ruin, if it fall, will be great indeed. You tell me, I shall suppose, that you would not utterly despair if you even died impenitent. This is your forlorn hope, because you have made up your mind, that, though there must be suffering awaiting you, it cannot be endless, and that some time or other your character will be so much changed as will warrant the Saviour to say, what it is acknowledged he could not say to you before death, "Well done, good and faithful servant!" If these are your expectations, do consider on what evidence they are founded. Do you, for instance, expect to meet, in this supposed place of punishment and consequent reformation, more loving friends to win you by such solemn counsels and tender ministrations as earth did not afford? Do you look for daily returning mercies and sources of enjoyment, more rich and varied than those possessed here, in order to bring you back to God? Will you possess a healthier body, a happier home, holier society, a more beautiful world with fairer skies and brighter landscapes, or any of those innumerable blessings which have such a tendency to tame and soften the rudest nature? Do you anticipate means of grace more powerfully calculated to enlighten the mind, convince the understanding, influence the will or draw the affections of the heart towards God? Shall Sabbaths of more peaceful rest dawn upon you, or sacraments of more healing virtue be administered? Can retreats be afforded where God's Word may be read and prayer enjoyed with more undisturbed repose? Will the gospel be preached more faithfully, and a people be found more loving and pious to assemble for public or private worship? Shall a Saviour be offered more able or willing to save, and the Spirit of God be poured down upon the burning soil in more plentiful or life-giving pentecostal showers? Is this what you picture to yourselves of the place in which you expect to atone for past sins by limited suffering? Impossible! You are thinking of a world better and more glorious than the present;—not of a hell, but of a heaven!

But even if there be such a place prepared for the impenitent and wicked, what conceivable security is there that a new mind and spirit will be the necessary result of those new and enlarged benefactions? We must assume that the power of

sinning remains, or otherwise man's responsibility ceases, and punishment thereby would become mere cruelty. But if sin be thus possible, then why may not the sinner there indulge in the same selfishness, disobedience, and rebellion which characterized him here? Why may it not be with him as with many a man who loves sin in the low haunts of profligacy and crime, but loves it still though brought into circumstances of greater comfort and among society of greater godliness? But should it be otherwise,—should the supposed place of future punishment have none of those advantages, and we are forced by the necessity of the case to assume their absence, at least for a limited period, and to admit, in some form or other, the presence of a dread and mysterious sorrow,—I ask again, on what grounds do you conclude that this anticipated punishment shall itself possess a healing virtue to produce, some time or other, that love to God which, up till this moment, has never been produced in you, and which, arguing from your own past experience, will never be produced so long as you live on earth? You attach, perhaps, some omnipotent power to mere suffering, and imagine that if hatred to sin and love to God are all that is needed, then a short experience of the terrific consequences of a godless past must insure a godly future. Why do you think so? Is this the effect which mere punishment generally produces on human character? Is its tendency to soften, or to harden the heart—to fill it with love, or with enmity? It cannot fail, indeed, to make the sufferer long for deliverance from the pain; but does it follow that he thereby longs for deliverance from the sin, and for possession of the good? It is certainly not the case in this world, that bad men are disposed to repent and turn to God, in proportion as they suffer from their own wilfulness, and become poor from idleness, broken in health from dissipation, or alienated from human hearts by their selfishness or dishonesty, and pass, with a constantly increasing anguish, through all the stages of outcasts from the family; dwellers among the profligate; companions in crime; occupiers of prisons; chained in convict gangs, till the scaffold with its beam and drop ends the dreadful history. Such punishment as this, constantly dogging the crime which at first created it and ever preserves it, only makes the heart harder, fans the passions into a more volcanic fire, and possesses the soul with a more daring recklessness and wilder desperation. And arguing from the experience to which men appeal from the Word of God, what special virtue will punishment have in the next world more than in this? What tendency will there be in this long night of misery to inspire a man with the love of that God whose very character, and whose holy and righteous will

has annexed the suffering to the sin? And if the character is not thereby reformed, and yet the sinner all the while retains his responsibility—as he must do on the assumption that reformation is possible—and if he continues to choose sin with more diabolical hatred to the good, is it imagined that such a process as this, of continued sin, accompanied by continued mental suffering, will, at any period, render him more meet to enjoy the holiness of heaven than when he first departed from the world to enter upon this new and strange probation? Oh, the more we think of it, the darker does the history grow; the faster does the descent of the evil spirit become, down that pit which, from its very nature, seems to be bottomless! If means are discoverable there more suited to gain the end of moral regeneration than any that exist here, let them be pointed out! We have searched in vain to discover them with the eye of reason, or to find them in the mind or history of man. And yet upon the mere "maybe" that future punishment does not exist, or at all events is limited in the period of its duration,—a supposition for which there is no evidence whatever from what man knows or can himself find out, and which the Bible everywhere contradicts,—men risk their immortal souls in the pursuit of sin, that even here is vanity and vexation of spirit!

God knows we have no wish to "dogmatize" upon this subject. There is no living man who attaches a meaning to crime or to punishment who would not rejoice to discover a single plank floating in the eternal sea by which a lost soul could at any time float to the shore. But we protest against the dogmatism, on the other side, which alleges with such confidence the certainty of man's deliverance; and we ask with pain, On what evidence is it founded? Let it be admitted that in the vast resources of Deity deliverance may ultimately be discovered—yet, surely the thought is a very solemn one, that the Christian Church, as a whole, with all its human sympathies, has never been able to discover any revelation of the supposed boon. Let it be remembered, moreover, that the happiness of every member of the human family, here or hereafter, is not the highest end of creation, but rather the righteousness of God's government. On this depends the good and consequent well-being of the whole universe.

But, apart from the difficulties felt by the noblest and most holy in attempting to reconcile suffering hereafter with the infinite number of cases in which those conditions of salvation could not be fulfilled that involve anything like love to God as revealed in Christ,—difficulties with which we heartily sympathize, and on which we can as yet see no light,—yet we believe most people are repelled by the thought of future punishment from

associating suffering with terrific bodily pain. But what if there is to be no bodily pain? What if the wicked shall be punished only by permitting them to have "their own way, and to be filled with their own devices?" What if, instead of the wrath of God being poured upon them to the utmost, it is inflicted in the least possible measure, and only in the way of natural consequence? What if the sin which makes the hell hereafter, is, in spite of all its suffering, loved, clung to, as the sin now is which makes the hell here? Nay, what if every gift of God, and every capacity for perverting his gifts, are still continued; and that the sinner shall suffer only from that which he himself chooses for ever, and for ever determines to possess? I do not say that it shall be so; but if it were so, then might a hell of unbridled self-indulgence, be preferred then as now to a heaven whose blessedness consisted in perfect holiness, and the love of God in Christ, for ever and ever.

Let the fairest star, therefore, be selected, like a beauteous island in the vast and shoreless sea of the azure heavens, as the future home of the criminals from the earth, and let these possess whatever they most love, and all that it is possible for God to bestow; let them be endowed with undying bodies, and with minds which shall for ever retain their intellectual powers; let no Saviour ever press his claims upon them, no Holy Spirit visit them, no God reveal himself to them, no Sabbath ever dawn upon them, no saint ever live among them, no prayer ever be heard within their borders; but let society exist there for ever, smitten only by the leprosy of hatred to God, and with utter selfishness as its all-prevailing and eternal purpose, then, as sure as the law of righteousness exists, on which rests the throne of God and the government of the universe, a society so constituted must work out for itself a hell of solitary and bitter suffering, to which there is no limit except the capacity of a finite nature! Alas! the spirit that is without love to its God or to its neighbour is already possessed by a power which must at last create for its own self-torment a worm that will never die, and a flame that can never more be quenched!

III.—THE CURE OF SCHISM.

"SCHISMS" are not peculiar to the Church of the present day, nor are they "the result of Protestantism," as some allege, unless Protestantism is understood to represent that doctrine which is termed "the right of private judgment;" but which might be described rather as the absolute necessity for each man to believe the truth for himself, because he himself sees it to be true, and cannot be satisfied that another man see and believe for him. This "doctrine," which is essential to the reception of any truth whatever, must neces-

sarily, of course, open the way to error, just as the possession of reason, which is essential to a man's thinking at all, must, in every case, involve the risk of his thinking wrong.

But we know of a church founded by an apostle, presided over for a time by an apostle, which was full of schisms. This was the Church of Corinth. (See 1 Cor., first three chapters.)

These schisms were marked by "differences of mind and judgment;" and by "envying, strife, and division." Its "Protestantism" may, no doubt, have occasioned this.

But along with these, and partly their cause, partly their effect, there was a warm attachment to particular ministers. From the sameness of human nature in every age, we can quite understand how each party would glory in the minister around whom it rallied: "We are of Apollos!" some may have said. "We do not admire Peter. He is too much of a Jew for us; besides, he denied his Lord, and dissembled along with Barnabas at Antioch. We prefer our minister even to Paul. He is a much more eloquent man; of a much more commanding figure and appearance; and how profound he is in his knowledge of the Scriptures!" "We are of Paul," cried others; "for he was chosen specially by Christ; and he has been honoured by Christ more than all; and does not the Church of Corinth owe its very existence to his preaching and labours? It is a shame to belong to any other!" "We cling to Peter!" said a third party; "he lived with Christ when he was on earth, saw his miracles, heard his words, was treated after the resurrection with special love, and received from him a special commission to feed his sheep. Apollos is no apostle; and as for Paul, he persecuted the Church, and confesses himself that he is not meet to be called an apostle. Apollos is good, Paul better, but Peter is best!" "We belong to neither," others might have boasted: "your divisions are so many, your differences so great, that we have retired from all your meetings in weariness; we are of Christ only, and call no man master but him; you should all join the *Christ-ians*." Such were some of the schisms; and to the schismatics Paul said: "Ye are yet carnal: for whereas there is among you envying, and strife, and divisions, are ye not carnal, and walk as men? For while one saith, I am of Paul; and another, I of Apollos; are ye not carnal?"

Paul desired to heal those schisms, and to bring the members of the Church to one mind. How did he try to effect this?

Had he been a "Roman Catholic," he might have said—"Why thus divided? Because you are not building on the one true foundation, which is Peter! Do you not understand the meaning of

his name, *Cephas*, or the Rock, given to him by the Lord, and intended to teach all Christians that the temple of the Church was to be built on *this* rock, and this only; against which the gates of hell cannot prevail. Therefore, you who say, 'I am of Cephas,' are right; all others are schismatics." Never, apparently, had a man a better opportunity of revealing to the world this great secret of unity than Paul had, if such was his faith, especially when he compares the Church to a building (1 Cor. iii. 9-11), and speaks of a foundation-stone: "As a wise master-builder," he says, "I have laid the foundation, and another buildeth thereon. . . . For other foundation can no man lay than that is laid, which is"—Cephas, or the rock? No! but "*Jesus Christ*." Not one word of Cephas as the centre of unity! Strange silence for a "Roman Catholic" saint or apostle!

Had Paul been a "High Churchman," full of profound veneration for the sacraments, and viewing with deep awe the mystery of sacramental grace, we can understand how he would have spoken to the schismatic Corinthians of the vast importance of their submitting to absolute apostolic authority, and of the "awful powers with which God's ministers had been vested, of regenerating souls by the waters of baptism!" and how "such a clergy should command their unqualified obedience." If these, or anything like these, were Paul's sentiments, and such as we are every day familiar with, it is not easy, to say the least of it, to account for his language to the Corinthians. What does *he* say of the exalted privilege of being able to baptize? "I thank God I baptized none of you, save Crispus and Gaius." Strange words from a "High Churchman!" or, we may add, an equally "High" Baptist! "I baptized also the house of Stephanas: besides, *I know not* whether I baptized any other." Strange forgetfulness on such a supposed centre-point of Church unity. "For Christ sent me not to baptize, but to preach the gospel!" Strange idea of the relative importance of preaching and baptizing for a "High Churchman" to hold!

And as to the "commanding authority" of the apostles, merely because they were apostles, apart from the commanding authority of the eternal truth which they "commended" to the conscience and judgment of their hearers, Paul asks: "Who, then, is Paul, and who is Apollos?" Methinks we hear some exclaim: "Oh, these great men were the greatest, the ——" But we will not take up space by repeating the laudations with which some would cry up their authority, with a view merely of magnifying the mere official authority of the clergy. But what says Paul himself? He says they were only "ministers by whom ye believed." It was not the minister who did good, but the truth which he ministered, and which he had re-

ceived from another. It was not the man who sowed the seed, or the basket which held it, that gave the crop; but the living seed itself. Hence he adds: "So, then, neither is he that planteth *anything*, nor he that watereth!" What? Neither presbyter nor bishop,—neither Paul nor Apollos *anything*? Strange words, again we say, from a "High Churchman!" whether Episcopalian, Presbyterian, or of any other denomination, for "High Churchmen" are common to all. Yet not strange from Paul, who knew how true his words were, and that not man, but God, was "everything," who gave the increase.

What, then, was Paul's method of curing schism, and of making men truly one, who had been "divided?"

He directed every eye, and every heart, and every spirit, to one object, JESUS CHRIST, the personal Saviour, the centre and source of unity; in fellowship with whom all men find their fellowship with each other!

"We preach Christ crucified." "I determined not to know anything among you, save Jesus Christ, and him crucified." "For other foundation can no man lay than that is laid, which is Jesus Christ." These are his declarations. And his conclusion from this great and blessed principle is just what we might expect: "He that glorieth, let him glory in the Lord." "Let no man glory in men: for all things are yours; whether Paul, or Apollos, or Cephas, or the world, or life, or death, or things present, or things to come: all are yours; and ye are Christ's, and Christ is God's."

Professing Christians would do well to weigh Paul's cure of schism. Our divisions of heart and alienation of spirit have been unworthy of educated men; and to the citizens of a free state, utterly subversive of the whole principles of Protestantism. What! not willing to hear the gospel preached from the lips of a minister of another church? Not willing to remember Jesus with him? Not willing even to be on kind, or, perhaps, speaking terms with him? Such things not only have been, but *are*; and while, thank God, they are repudiated and detested by men of all churches, they are common, we fear, in many districts. No wonder Roman Catholics point at our frequent boasting of Protestant "oneness in all essentials," and ask with triumph, how it happens, then, that we are such enemies on mere non-essentials? How is it that we pretend to be one when attacking Papists, and then turn our backs on each other when left alone? No wonder the High Churchman asks Presbyterians in Scotland when they attack him to be charitable, and to forgive *him* if he never enters our Presbyterian churches, hears our clergy, partakes of our sacraments, when so very many among ourselves practically excommuni-

cate each other! Can he love us more than we love ourselves? Shall we ignore the ministry and ordinances of Presbyterian brethren, and must he, forsooth, acknowledge them? No wonder the infidel lecturer describes to crowds of intelligent mechanics, in vivid and powerful language, the spectacle presented by Christian clergy and congregations, and asks, with a smile of derision, if this is a religion of love which they see around them?—if these men believe the gospel?—if Christians have really more kindness and courtesy than “publicans and sinners?” Worse than all, no wonder our churches languish, and the ground is thirty under our feet, and the heavens as brass over our heads; and men are asking with pain, why the ministry is not producing more spiritual fruit? The churches are, no doubt, *doing* much. We have meetings, associations, and organizations, with no end of committees, resolutions, and motions; we raise large sums of money; we have large congregations; and we take care that the world shall know all we are doing, and that our left hand shall not long remain ignorant of what the right is about; we are bold, forward, impetuous, and not over scrupulous in attacking all who differ from us. Yet all this, and much more, we can do from pride, vanity, love of party, love of power, the spirit of proselytism, and the like. But where is that which man alone cannot do, and God alone can? Where is the growth of the living Church from influences unseen but felt, apparently weak yet omnipotent, as the showers of spring on the mown grass, or as the warming, quickening, and cheering sunlight? Where is the deep, all-pervading, increasing love to Jesus Christ; and the manifestation of his love in us to the Church and

to the world? Where the love that seeketh not her own, but beareth all things, endureth all things, and is not easily provoked? Where the carrying of one another's burden, and each man esteeming his neighbour better than himself, and pleasing him to his good for edification? Where the assembling of ourselves as Christians of all churches, to consider one another, and provoke to love and good works?

Are there not districts in Scotland even, especially in the North, where, in this nineteenth century, the Presbyterians are more alienated from one another by fanatical hate than are sincere and pious Protestants from Roman Catholics in Tipperary or Connaught? Who is to blame for this barbarism?

Surely our schisms may be healed, if there be a Saviour to heal them!

Without even becoming one Church outwardly (which is, comparatively speaking, unimportant), we might be one inwardly, and enjoy more of the blessedness of loving and being loved. We might in God's sight *be* better, though in man's sight we might *do* less. If we are ever to deliver our brother from evil, correct error in him, and lead him to all truth, we must first love him. In one word, all will go well with us, our schisms will be healed, our envyings cease, our carnal boastings and gloryings depart, when we can lay down *self* at the Cross, and resolve, like Paul, “to know nothing save JESUS CHRIST, and him crucified!”

“Pray for the peace of Jerusalem: they shall prosper who love thee. For my brethren and companions' sakes, I will now say, Peace be within thee! Because of the house of the Lord our God, I will seek thy good.”

HOW AN IRISH GIRL RAISED THE FACTORY.

IN SOME LITERAL EXTRACTS FROM THE DIARY OF HER LATE EMPLOYER.

I HAVE taken on an additional hand, an Irish hand, old fool—not the woman, but I myself. I suppose I must confess to a weakness for these rascals of Paddies,—true king's-jesters, with wit for every one but themselves. However, this is not one of the “low Irish,” whom we call the curse of the factories, but a tidy girl from a national school and a pattern mill; Galway born indeed, but Ulster bred. Beveridge, the manager, had refused her, and she waited for me at the gate. “Please Master (“plase Mister,” she pronounced it), “if you cannot give me a place, will you give me a direction to another mill? I did not like to keep the manager, for he was busy.”

Of course I was not busy, though I had the whole lot, Beveridge and all, on my shoulders. I

was disposed to tell the lass to go about her business, to get a list of the mills at her lodging-house, not to plague me; but it was a girlish voice that spoke, without a particle of fear or doubt; and when I looked at the owner, it was a girlish face, with a look of my own little Hay's,—queer enough that, for Hay is thin and white, poor dear; and though she has all that money can get—little enough after all—is ever like a flower in the shade, sweet, dewy, fragrant, but without strength or colour. Now, this girl is stout, and with a show of roses for a mill girl; is high cheek-boned and wide-mouthed; has a Celtic face, but red and white like a daisy; the only thing dark about her is the blue-black hair, which they say is Galway hair. She wears a blue cloth cloak, with the hood drawn

over her head—a faint reflex of a Spanish fashion. Every way it is a great improvement on the dingy shawls drawn over the heads, and the shapeless bonnets of our mill-girls in their work-a-day chrysalis state. On Sundays, they are as fine as they can be, being fully impressed with the superficial notion that “bonnie feathers make bonnie birds.” Poor simple, thoughtless lasses.

“Have you worked in a mill before?” I asked gruffly, and out the whole history came, in a flow of words which I could no more stop than I could have arrested the old mill gush, when we worked in the country with the big water-wheel. There I stood, helpless; Knox and Herriot passing and laughing at me, as I could see by their long faces, the sneekdrawers! The lass had no fear or doubt, as I said, except where to put in another smile and another “plase, sir.” She had crossed the north channel with some neighbours to get more regular work and higher wages, leaving some old relatives behind her, whom she was to bring over as soon as she could pay their passage-money. A blue look-out this, to whoever saddled themselves with the girl.

I don’t believe I was carried off by her “plase, sir,” and her glittering teeth, or even by her queer likeness about the eyes and mouth to Hay. Of course I am too old a soldier to be caught by such fancies. But as it was the quickest way to get rid of the girl, and as one hand more or less was not worth a pinch of snuff’s consideration, I told Beveridge to find her a place for a week’s trial, and bolted from her thanks. She was not profuse in that commodity for her country. She only said, with a flash of a smile, “I’ll do my best; and I’m obliged to you for letting me have a chance, Master.”

By good luck, the mill is on full time, so that there is no jealousy to be apprehended for a stranger.

As I passed through the factory, talking with Beveridge, I looked out for my Irish girl, and saw her on the floor with the other tenters, although she did not see me. She was working briskly and pointedly, as if she would do a higher job with extra care. She had off her blue cloak, but I knew her by her blue-black hair, gleaming out from beneath her close cap. Her hair was the only shady thing about her; yet she is not a beauty, with her wide mouth, and her broad cheeks, fresher than ordinary for her class though they be. I asked Beveridge if he knew where she lodged. Daresay the manager wondered at my curocity. “With the Veitches,” he said. The Veitches! one of the families Hay groans about; people who eat and drink, and dress and sleep with their whole hearts and souls. Hay says such sets have biscuits and

cakes to tea, and pies to supper, flounces to their gowns, and feathers to their bonnets, as long as the tide is at the flow; but so soon as the ebb begins, they are the first at the pawn-shop. Still, it seems they are the readiest to entertain or lodge a stranger.

Spoke to my Irish friend to-day. She observed me as I walked along, and looked so expectant of a greeting, that I could not resist. The other girls would either have looked down, and been as mute as fishes—the cunning women,—or stared at me doggedly without a sign of recognition, while my Celt lifted up her eyelashes, showed all the ivory of her teeth, and paused, ready with her nod and her reply.

“How are you getting on, my girl? and—eh! What’s your name?” Little Hay will have everything wormed out of me about the Irish young woman soon, and she will be mortally disappointed if the name is not forthcoming with the rest. Hay is like the Vicar of Wakefield, she “loves to be particular.”

“Honor Barry, sir; thank you for asking; and plase sir, I’m doing finely.”

Honor, no! Hay should have been Honor, and Honor, Hay. There is nothing of the fields about my little girl except her name, and I’m sure she’s the soul of delicate tender old honour, scrupulous in deeds of self-denial, earnest in search after her fellows to benefit and bless. But this poor lass may have her version of honour too. It was something like it when she answered me so cheerily, and yet I found in half a minute, that she had been accustomed to finer and far more remunerative tenting than what she had been put to. Beveridge is an honest fellow, but he’s all for routine, like those we’re pleased to call our antiquated Generals,—“last come worst served.” Honor was complying with the necessity.

I’ll have enough to do if my workers go on the confessional with me. It was more a bit of confidence than a confession, I suppose, because Honor’s been brought up a true-blue Protestant and Presbyterian in the Orange town of Belfast. I caught her watching me to-day, as if she wanted to speak to me, and as I thought the girl looked less blythe than I had seen her do since she came, I was mad enough to provoke a complaint.

There certainly it was: “Oh, Master, will you grant me a word?”

“What is it, Honor Barry?” I demanded sharply, for I feared, from the piteous tone, somebody had been doing the young creature a cruel wrong.

“Peggy and Nelly Veitch are with the piecers in the upper room; plase sir, it’s of them I want to speak.”

"Are the Veitches ill-using you, girl?"

"Oh no, sir; they are as kind as kind can be to a stranger, and sure, they're as fine-handed as if they were from the old country."

"Then, if you have so much in common, what is your objection to them?" I asked impatiently, and with a little disappointment. I scorn to gossip with my workers, or even with Beveridge. I don't encourage tell-tales, and I did not like to

find one in this Honor Barry, though she was no more than an ignorant, impulsive young girl.

"Oh, sir, I've no objection to them," burst out Honor, opening wide her hazel eyes; she had been mending the snapped threads before she stopped here, and stepped aside as if the matter was of such consequence that it could not be mixed with ordinary business. "That is no objection, such as counting myself better than they, and

Honor Barry, from a Sketch by one of the Factory "hands."

casting their faults in their teeth, but Master, I must tell you how the Veitches are going on. The girls are to leave their father and mother, and keep house for themselves, because they are not allowed to go to the penny dances and the singing rooms," concluded Honor, with an extreme gravity approaching to awe and terror.

"Are the Veitches bad girls?" I asked abruptly, frowning to get rid of a little sense of ludicrousness and awkwardness, though I am sixty and odds, and to impress Honor Barry with a stern sense of my morality."

III-22

"What, sir, the girlies?" cried Honor, half in amazement, half in indignation.

"How old are they?" I then asked.

"Peggy is not more than fifteen, and Nelly is only thirteen-and-a-half."

"Humph! discreet ages to set up housekeeping. Do they not attend the school?"

"No, sir, they won't be got over since they were put on full time. They say they're tired of schoolmasters. There's no fun going; it is only for the half-workers and the children."

"They are the judges! But it is their father's

business to keep them at home, Honor, and if you meddle, you may look out for the redder's lick,—you understand?"

She did not understand, but she continued—

"Their father won't give them more liberty; he'll give them anything else, but not that, since his first girl went wrong."

"They must manage the best way they can then. It is clear Veitch should rule his own children, and if he cannot, he must be the sufferer."

And, philosopher as I was, in my old-fashioned coat and checked neckerchief, I condescended to show the wild Irish girl the reason of the matter.

"Honor Barry, you must see a master cannot interfere; there would be no end to such interferences, and they would prove intolerable, in the main, as bad as the meddling of the Jesuits. Girl, I would never stomach them if I were a workman."

"But the girlies," pleaded Honor, with a pertinacity growing plaintive in its repetition, "what is to become of the witless things? You would not like if the young ladies, your own daughters,—green be the grass beneath their feet, Master,—were to leave you, and venture out into the world; you would not blame any one, sir, who helped you to turn them back to the shelter of your roof."

I was wearied with the girl's naïve frankness. It was very well for a moment, but soon it got oppressive, and the last comparison had the reverse effect from what she intended,—it annoyed and offended me. To compare my little Hay—my dreaming, unworldly, pure, meek, loving, little girl, who lived for me, for all her fellow-creatures, if they would let her; for beauty, and goodness, and Christ, and God—to those bounding, headstrong, coarse, rude lasses, with their frowsy hair, small brows, thick lips, South Sea Islander passion for glass beads and brass buttons, with their unceremonious slaps and pinches when they were wrathful, and their still more unceremonious hugs when they were kind,—to compare them to my little Hay, all brow and eyes, as shy as a little bird, as gentle as a little lamb! I was hot with affront.

"Honor Barry, I have only one daughter, Miss Hay, and she's not like the girls here. In that light, I could venture her out into the wide world without a thought of fear, except for her breaking her heart over its sins." It showed how much I was left to myself, when I mentioned Miss Hay at all, far less spoke of her in such terms.

But Honor Barry's eyes only grew rounder with interest and wistfulness. "She must be like a saint or an angel, master. I am glad to hear it. If she would stoop down and speak to Peggy and Nelly, maybe they would mind her."

I could fancy little Hay stooping down from

Heaven itself to help the ignorant and the unhappy, but I was still more aggrieved by the suggestion.

"Tut, girl, mind your work, this is no place for Miss Hay, neither are the Veitches fit associates for her;" and I turned on my heel to avoid the pained, bewildered look that clouded the honest, cordial eyes, and the sad murmur, "the poor girlies."

Those wretched brats, the Veitches! But how can I help it, if girls of thirteen are judged able to earn women's wages? I say it is a great blessing to many a widow and poor family. If this father and mother cannot inspire their children with due reverence save so long as they are dependent on their parents for the gross material of life, I ask myself crustily, Am I the defaulter?

Our yearly holiday.* I hope the mill people will make the best of it. They may pack steamers or trains, or tramp in crowds to volunteer reviews according to fancy, but they need not come back to their work to-morrow like so many colts, breaking their knees and galling their backs in their tumble on the turf, and with aching heads and yellow faces. I'm sure Hay was as anxious for good weather as if it had been for her wedding-day. God help my little girl! I'm sure she prayed for fine weather in her prayers last night, and whether in answer to Hay's prayer or not, it has been a good day, with only a light enough breeze to bring down the apple-blossoms, and enough dust to make one glad to get into meadows where there are lush grass and king-cups, and into woods where the larch and the birch are striving which shall busk herself in the gayest gown, and open the sweetest coffer.

Hay had information beforehand, that some of our people were to spend their holiday at the Haughs, near our country-house of Houndslow; and after luncheon, when she had me to herself, she would neither drive nor ride, but would walk in that direction, and have a glimpse of them. I had an objection to the proceeding, as if I were spying upon my own operatives, but I was loath to contradict Hay. She liked to see the Haughs astir with the mill people; old folks seated, men smoking, women gossiping, children playing at games or rolling on the grass; young men and women sauntering and gathering cowlips; a fiddler drawing his bow on a hillock; a company of staid, sober work-people decorously dancing Sir Roger de Coverley. My word, the old Court dance has come down to the people, and this is high life among our fields and hedges,—and an honest Beggar's Opera, too. I don't know that I

* The Queen's birthday.

ever saw its bows and curtsies more profoundly and demurely executed. I certainly never enjoyed them as a spectacle half so much. Then a fellow stood up in the middle of a circle to sing. Phew! that young chap must have pluck. Hark! "The heaving of the lead" rolling over the rye-grass and the clover. How prone land-lubbers are to salt-flavoured ditties!

Hay will have it that these Haughs are picturesque, but I'm ashamed of this freak of the girl's fancy; and she, too, has seen the Gareloch, and Loch Long, and the Kyles, and the Cobbler, and Goatfell.

Hay soon singled out Honor Barry in her blue cloak, and the two half-grown girls, the Veitches, who had enough of children in them yet to be pleased with leaves twisted about their hats. Honor was making herself at home, laughing and telling stories; and she was, evidently, a chief contributor to the diversions. She had instituted a swing for the young ones. She had made them so many daisy chains that, stout girl though she was, if they had all been gathered together, she might have swung in them. She had produced pipes from oat-straws, which squeaked like penny trumpets; and had tied together crowslip balls, which smelt a thousand times sweeter than the girl's ambition—the scent-bottles. She was now summoning oracles into the field; twirling butter-cup stalks, and proclaiming to her grinning auditors whether they liked butter or no, and puffing at the seeds of dandelions in order to calculate what time it was on the mill-clock.

Hay had made acquaintance with Honor by this time, and made a sign to her, to which the girl responded without any consciousness or confusion, though all aglow from her sport. It was as good as a fair. Yet very few had been drinking in the Haughs, and not many of the very young lads—the gossoons, Honor called them—were smoking, as she denounced it as "not wholesome at all, at all," for their fresh, young stomachs. Suddenly Honor beamed round upon me.

"Master, the Veitches have not gone into lodgings after all; it's all right."

I admit I felt relieved, though, of course, it was not my concern.

"Oh, it's all right, is it?" I echoed. "What kept them?" forgetting that it was a dangerous precedent to betray interest.

"They thought better of it, and took a word of advice, and the summer weather is coming in for a walk in the evening, and I'm teaching them to knit an open cotton-stocking. And these are the Veitches," ended Honor, proudly indicating two of those red-headed, freckled, half-honest, half-deficient faces, with their look of mingled simplicity and shrewdness, which strangers say are

oftenest met with in Scotland; doubly often in public works, as though the chesnut locks and the turkey-egg complexions were the growth of the north wind and the machinery. A couple of brats, to order meals, and go in and out at their pleasure! Yes, I've no doubt they would have poisoned themselves with sweetmeats, and caught their deaths from draughts within a fortnight. Yet, Andrew Veitch had growled—

"Dang them, let them gang, only they shall not cross my threshold again; that I promise the two young hussies. I will take them by the shoulders and turn them to the door, as I did their sister before them."

Poor Mrs. Veitch exclaimed it would be her death, and held up her hands, and wiped her eyes with her apron, but she had no power to prevent the common rent in the fireside band, until she said, "that at least her bairns should not go out into the world like 'waffies' and times good; she would wash their white petticoats, their cotton stockings, and their braw muslins once again." Sympathetic Honor stayed at home from the mill to help the mother in her last preparations. It was a solemn ceremony, but in the midst of it, while Mrs. Veitch was dropping tears into her starch, and Honor shaking her head while she tested the iron against her round cheek, Peggy and Nelly walked into their dinner. They could not stand the sight, they were not bad-hearted, only ill-advised, arrogant, conceited infants in law, and so Nelly the youngest sat down on her "kist," and cried that she had a sore head, and she was not going away from her mother to-morrow,—she was not going away at all. Upon which Miss Nelly turned, and would have denounced Peggy as the instigator of the deed of disobedience, and disdain, and shocking selfishness; but Honor Barry came between, and clapped them on the shoulders, and hushed them, and stopped their mouths with kisses; and I'm perfectly convinced their mother would take their hands piteously, and thank them for the reprieve, and pledge herself to appease their father, and bear the brunt of his just anger, and engage to do all she could to please them better, as if the infatuated body had been the grand criminal in the case.

Honor Barry has been nearly a year in the mill, and to my knowledge she has not bought more than a calico gown, a warm shawl, a fresh ribbon or two since she came. Thrifty lass, and generous as thrifty, for I am aware that she is gathering her money into a sum sufficient to bring over the old relatives, whom she is not frightened to take upon her young shoulders. God bless them! Hay tells me she understands the Veitches are a little less foolish in their way of living since Honor dwelt among them. Mrs. Veitch has sponged her old

gown instead of buying a brand-new one. The girls have acquired an ambition to have purses of their own like Honor; instead of wearing their hard-won gains like those of the old knights on their silly backs. Nay, Hay assures me with moist eyes, that it has been certified to her those violent uncouth girls have eaten their plain slice of bread that they might carry their delicate bits to invalid companions, because Honor would live simply, and would find it a choice luxury to procure a dainty at a time, for an ailing neighbour.

Honor has another grievance. She was in a passion to-day, and insisted that she did well to be angry. "Peggy Veitch is going to get married, sir; she's keeping company with young Roland, and he has even persuaded her to marry him at Martinmas."

"What, then, Honor? Women must marry. You're not going to set up your back against the holy state of matrimony?" "Oh, ho!" I said to myself, "this comes of blue cloaks, and lessons, and visiting the sick; the lass is uplifted above human nature, like the nuns with their 'vocation' in the Middle Ages."

"Peggy is only seventeen," averred Honor, flaming up more and more.

"She'll grow older."

"Young Roland is not twenty."

"Well, he'll grow older too. They are a pair of young fools, you know, Honor; but there is no law to prevent them tying themselves together by the same tether, although they should be

'Twa doos that hae nae dovecot,'

and I thought of my good Lady Nairne's humorous wise song.

"And Roland wants Peggy to continue working in the mill," went on Honor, plucking at her apron.

"So I shall not lose my workers," I observed, to try the girl.

"He's a baste of a man to ask it," cried out Honor with an astounding burst of Celtic ire.

"Why, Honor, where's the harm? they cannot marry unless they club their means."

"And where's the home, sir; and what do they want to marry for without the home? How will the lass get the thoughts or ways of a wife unless in the breathing space when she's spending all the day making the house bright for him, and looking out for his return? Mother learnt all her songs, and the most of her hymns, when father first made her his wife."

"But, Honor, this pretty, private housekeeping of yours would be an expensive process for working folk."

"All the people of the earth are made of the

same flesh, Master, and they can work and wait. What hinders them from working and waiting?" urged Honor, with her faithful, fearless look into the future. "Only he's a baste, and will not work till his arm's fit to drop, or miss a spree, for any woman or child, and she's nought but a weak wench," ended Honor, with a gesture of strong disgust.

"I was not aware that Young Roland was such a reprobate."

Honor started and looked up at me, to see if I was serious, and got much vexed.

"Oh, my tongue runs away with me. I could bite it out when it plays such tricks, and goes abusing people. Don't credit that Young Roland is a bad one from what I said; please don't, sir; he worked on when there was word of a strike three months ago; and he's terribly fond of Peggy. I daresay it is a trial to him," grunted Honor in a low tone.

Honor Barry hurt in the mill; not badly, no; not badly, only her shoulder and her arm; but I cannot tell how it could happen, and she so active and attentive; she set her teeth either with pain or resolution, and gave no explanation, open as she has been. I've a notion it was through one of these worthless Veitches—worthless compared to Honor. Honor had words with the girl on the imprudent marriage on which she was bent, and the two former friends were hardly on speaking terms. Honor took it to heart; and when Peggy Veitch, with her recklessness, was going too near one of the wheels, Honor had not presence of mind to stop her in the usual way, but pushed in between, and was caught and partly dragged forward herself. And now, poor thing, she lies heroically silent, while the girl Veitch is in an agony of repentance and remorse, as she well may be. Poor Honor, it might have been a fatal accident; and you such a good, friendly, merry girl; the only one almost with a mouthful of common sense and mother-wit; who said Master as you would have said friend, and yet never presumed, was the furthest from presumption; a reverential, loving, human being, a stranger, too. I remember, now, when you spoke to me first of these girls Veitch setting up house for themselves, you muttered that if evil befell them, it would be worse than if tidings were carried back to your grandfather and grandmother and poor mother in old Ireland, that their girl had been plucked up and whirled round by one of the big wheels, and it has proved a prophecy. These Veitches, too, who are at the bottom of the disaster, go about their dusky work unharmed. Are the good always to be the victims, always to be bound to the altar as the sacrifice? But the old kindred are just about to be shipped to the child,

after she has worked with such steadfastness, constancy, and sweet affection to receive them. Ay, that must be seen to.

I fell into a common fault. I admired this hearty, healthy, Irish lass Honor, and I fancied she must be sufficient for all emergencies. I did not suppose that she would be, as they tell me she is, a restless baby on a sick-bed, wanting to be up and doing, fretting that she is laid on her back, counting the money she must spend in her sickness, leaping to the monstrous conclusion that the whole establishment, workers, manager, master, must go wrong because of her absence. The lass must be light in the head with her injury; where in the world has her fine self-control and reasonableness gone?

All to the fore yet, jumbled and overturned as they may be. Hay has come to the rescue, and found what there was a risk we would lose sight of. She can point out how sorry Honor is for giving trouble, how penitent after a fretful or morose fit, how soft to Peggy Veitch, whose turnip face is swollen with crying, and whose heart is turned like a stone to young Roland. Even Roland has some manly compunction, either from the threatened danger to his sweetheart, or from the actual damage to Honor. I saw him hovering disconsolately about the door. Serve them right! I could rap the empty heads of that lad and lass together with great satisfaction. Hay says it is all because Honor is not used to sickness, and laughs, and recalls how she herself could bear a darkened room and rice-water for weeks and weeks together, and could amuse herself with the very flickering shadows of the leaves on the floor at Houndslow, and the inverted, oddly fore-shortened reflections of the passers-by thrown up on the ceiling of the room in the square in Glasgow, and scarcely know what weariness meant. Nor did my patient little girl; but it is a mighty mercy to me that experience belongs to the past. Honor is fond of hearing of that sickness of months and years. It does her more good than anything, lying there with her fever-flushed face and tossed limbs standing out against the pale checked curtains and the faded patched quilt. Honor does not agree that resignation is a mere matter of custom; she thinks "Miss Hay, the darling," is the meek Mary who had the one thing needful, and she is the boisterous Martha who needed to be cast down and bruised and broken.

Honor is better to-day,—sure sign she has forgotten herself entirely,—and is as pleased and proud as a peacock because young Roland and Peggy Veitch have agreed to defer their marriage

till they see their way more clearly, or are more fit to be man and wife.

That provoking piece of precious womankind is on her feet again, tottering about with a white face all radiant. She will be in the mill in another week, among these wheels "singing, droning," getting herself killed outright, if she is not prevented. There was no keeping her still after those two crows and that comical carle, smirched with age but sparkling with inextinguishable Irish gaiety, arrived, doing a reversal of the experience of Naomi,—setting off in their old age at the first wag of the finger, to follow the fortunes of their Ruth. Then Honor bounded up like an india-rubber ball. She to lie on her bed, and old grandfather and grandmother and mother to sit on chairs, and look at her! She must wait on them; the more they wanted to wait on her, the more she was determined on the contrary. She must provide for them. It was kind in Master and Miss Hay to bring them over, but she must provide for them. And right, too! God has given them to her and she to them, and by my word she shall have her will. Everybody will be glad to see her back in the mill, from dry-haired Beveridge to the careworn fathers of the lads and lasses she sought to serve, and the thoughtless lads and lasses themselves. They would miss a balmy, breezy spirit like Honor from her stand at their side, as they would miss a mild spirit like Hay placed above them in her watch-tower.

That girl Honor Barry has improved the family of Veitches, and through them the eddy of her influence is circling fainter, but still distinctly visible, among the other hands in the mill. And I cannot say that the healthful disturbance of the old gross, sluggish current, will end here, but will affect the hands in other mills. Honor has gone to school again in the evenings, as she says, "not to forget her larning," and many of the elder girls have followed her example, till Hay has been pricked on to carry through her cherished scheme of a regular sewing-school for the young women in connexion with the school at the mill, and it has been so solidly successful that she talks now quite openly and courageously of such enormities as cooking-schools and singing-classes. I will hold I have got off cheap if she does not proceed to the Greek alphabet and conic sections. I declare I don't think there is near so much guzzling and snoozing, to say nothing of rioting, as there used to be among the mill-people. I see the lasses' names in the library books, and where the lasses take the lead, the lads come, blate and awkward, sneaking after.

ON GLACIERS.

PART I.

"It is a gauntlet of ice which, centuries ago, Winter, the king of these mountains, threw down in defiance to the sun, and year by year the sun strives to lift from the ground on the point of his glittering spear."—LONGFELLOW.

THE quaintly elegant conceit which this sentence of the American poet expresses rests on a real physical phenomenon, which will continue for all ages to excite a pleasing surprise, on the first sight of a glacier, in the minds even of those who are perfectly acquainted with the laws by which it can be adequately explained.

Long familiarity with the fact—learnt either from observation or early instruction—that mountain-tops extend into regions of ever-enduring cold, makes it a matter of no astonishment to any of us that *there* snow and ice should abound, and that in those elevated regions, rarely trod by the foot of man, verdure disappears, and perpetual winter usurps an undisturbed possession of the soil.

It is much otherwise, however, when the ice of the upper world seems to threaten an invasion of valleys fitted for human occupation. Nor is any aspect of Switzerland, for instance, more curiously beautiful than what we obtain in some warm and wooded valley, when with our back turned to the snowy Alps—concealed, moreover, by the shadows of the pines—we have suddenly brought before us at an unexpected turn the glittering pinnacles of a snow-white glacier, wasting, indeed, under the meridian heat, yet apparently unconsumed, and, it may be, in close contact with pastures, fruit-trees, corn-fields, and human habitations. Such a relic of winter perpetuated all the summer long, and stationary, or apparently so, from year to year, and from century to century, is certainly a standing paradox.

It is of late years only that either poets or philosophers have condescended to pay much attention to these, the most characteristic and most wonderful elements of Alpine scenery. Until within a generation or two, travellers, whether in search of the sublime or the picturesque, hurried, wrapped in furs, over the Alps, as if the aspects which they revealed were only endurable as a foil to more genial and interesting scenes.* Physical geographers, though less incurious, seemed to give a reluctant attention to the glacier-world; and some even of the most accomplished of them betrayed, by their mistakes, the reluctant brevity of their researches in those realms of ice. Artists, also, have shrunk, until recently, from the faithful portraiture of those glittering fields, which dis-

turb the conventional balance of light, shade, and colour in common landscapes. It is but of late that some bolder pencils have ventured to portray the truth of the Alps, as Mr. Ruskin, in his noble volume on *Mountain Beauty*,† has vindicated for the glacier and snowy peak their legitimate place as objects of art.

It is so frequently remarked by Swiss tourists, that their first impression on seeing a glacier is one of disappointment, that we must be prepared to allow that there is a foundation for the feeling. All glaciers are not equally striking, and perhaps few are approached under circumstances fitted to show them to full advantage. Many are disfigured by sand and rocky fragments obscuring the purity of their surface; others intersect valleys, otherwise beautiful, upon mounds of their own debris, which almost painfully recall a railway embankment, and seem like works of art, gigantic, indeed, yet out of harmony with the sweeping outlines of mountain slopes. In perhaps every instance, also, the apparent incongruity of a mountain of unmelted ice piled up in a sunny valley suggests a contrariety almost too unaccountable to be entirely pleasing. In this we find a fresh proof of the general principle that merely æsthetic as well as intellectual pleasures are immeasurably enhanced by a capacity for appreciation which has been enlarged by knowledge and experience. The more we study objects of human art, the more perfectly do we discern their beauties; not less so in the contemplation of nature, and most of all in those parts of creation in which the mystery of beauty and greatness is in a measure shrouded by what, to the untutored mind, offers something of sternness and repulsion,—the ocean in tempest, the thunder-storm, and the glacier.

Except to a certain class of minds, the interest which the scenery of the higher Alps, and especially of glaciers, excites, is certain to grow by a repeated and close acquaintance with their phenomena. And as these are by no means palpable at first sight, even to persons possessing the full enjoyment of eye-sight, and of ordinary faculties for noting what they see, it is proposed in this strictly popular sketch to attempt to convey an idea of what is most instructive and curious about glaciers, as well to those who may not have the opportu-

* See, for example, Gray's *Letters*.

† Vol. iv. of *Modern Painters*.

ity of visiting them, as to those who, having the opportunity, may wish to use it well.

The existence of what we strictly call *glaciers* is not revealed by those distant panoramic views, which enchant the eye of the spectator who is fortunate enough to see the Swiss Alps from Neufchatel, for example, or from the heights of the Jura.* But they are seen in their true relations to the perpetual snows which cover the highest ranges, when we view these from such closer stations as the Brevin at Chamouni, and the Faulhorn at Grindelwald. The glaciers are then intuitively understood to be *ice rivers*, or outlets from the vast snow-fields, whose winter accumulations, only partially thawed by the whole warmth of summer, are found stored in the spacious valleys which wind through the deepest recesses of the Alps. A truer idea of the relation of the Glacier to the Snow-field is to be obtained from such elevated and comparatively distant stations than from the surface of the ice itself.

Most usually, however, the tourist reaches the glacier valley through the prolongation of the valley itself. He is thus debarred from any comprehensive view, and is brought, almost at once, face to face with the glacier.

These icy masses—these out-pourings of perennial snows—descend at Chamouni to a level of 3400 English feet above the sea, and at Grindelwald, of only 3300 feet. To these valleys we cannot attribute an annual heat of much less than 45 degrees of Fahrenheit, which is the temperature of many parts of Scotland; whilst in summer it is by comparison vastly hotter. No wonder, then, that we find verdure and cultivation in close contact with the ice. In a majority of instances, however, we have a warning of our approach to these lingering monuments of winter. We often find that a desolate interval occurs between the last traces of man's handiwork, or of the luxuriance of forest or field, and the ice pyramids or bastions. This interval is frequently a mere valley of stones, where vegetation has taken no hold, and which, moreover, is devastated by periodic incursions of the flooded stream, escaping from underneath the glacier, and making its devious and ever-changing course amongst the bullet-

* I say *fortunate*, advisedly. It is rather exceptional, that a traveller hastening through the defiles of the Jura, or across the lower parts of Switzerland, catches one of those celestial glimpses of the distant range of Alps, which convey to the mind a sense of more than earthly sublimity, rendered the more impressive by its invariable disappearance as the heat of the day advances. I speak of what happens at least in summer mornings, when the entire phenomenon has rather the character of a vision of glory than of a subliminary landscape.

shaped stones and gravel of which the soil is composed. The stream itself, foaming and tumbling along, dislodges from time to time these gigantic pebbles, and, grinding them together, hurries them forward with a noise at once discordant and imposing, from the sense of power which it conveys. The stream is turbid to an extreme degree, especially in summer, when, by the melting of the snow and ice, it attains its greatest volume. This turbidity is occasioned by the intimate suspension in the water of the pulverized matter of the rocks, abraded by the incessant friction of the glacier. These first elements of soil are carried to prodigious distances in all directions by the noble rivers which radiate from the Alpine chain, and they contribute to form the alluvial *deltas* found at the mouths of those rivers in the very opposite regions of the German Ocean, the Mediterranean, and the Black Sea.

Let us now proceed to survey the Glacier itself. For clearness, we shall take its three divisions in succession: *First*, Its terminal portion—that which attains the level of the valley. *Secondly*, Its middle region, where the glacier proper is most characteristically seen. *Thirdly*, The *névé*, or upper *glacier*, and the ice-covered summits.

I.—THE TERMINAL PORTION OR INFERIOR GLACIER.

The lower end of a glacier is usually nearly inaccessible. It rises either in cleft masses and towering pyramids of ice, or else in a steep and tolerably unbroken convex surface. In the latter case the danger of climbing directly upon it is increased by the circumstance that almost invariably stones descend from the upper surface. Being disengaged from the ice by the heat of the sun, they keep up a dangerous intermittent fire upon the heads of those who approach too near. On this account it is almost always best to gain the upper surface of the glacier by a lateral track over rocks or turf. The most striking feature of the extremity of the glacier is the vault or cavern in the ice from whence flows the full bodied stream already spoken of. This vault increases in size and height as summer advances. The beautiful blue tint of the ice, and the tender illumination of the interior, caused by the semi-transparency of the ice, give it a character at once peculiar and exquisite. Accordingly the source of the Arveron at Chamouni, and that of the Lutschine at Grindelwald, have been the resort of tourists ever since Switzerland was a centre of attraction. The blueness of the glacier is even intenser than it is commonly supposed to be. The writer possesses a correct drawing, from the truthful pencil of Mr. Barnard, of the Grindelwald glacier, which appears almost extravagant in point of colour, but is yet essentially accurate. The

charming glacier of Rosenlani, which is equally well known, abounds in such magical grottos. The blue colour is probably inherent both in river water and in ice. It is manifested, as every one knows, in the Rhone at Geneva, and in other rivers, and it may be detected in favourable circumstances in newly fallen snow when viewed by transmitted light.*

We have mentioned the stones which slide or roll from the terminal face of the glacier. These vary in size from that of a house to the finest gravel. They are generally most abundant near the sides of the glacier, as we shall immediately proceed to explain. But it is here worthy of remark, that the continued discharge of the rocky freight of the glacier upon the ground at its termination

FIG. 1.—View of the Aletsch Glacier.

inevitably forms mounds, which go on increasing from age to age, and as it might appear, without limit. That these accumulations are not larger than we find them to be, is a just ground for arguing, that existing causes have not worked in-

* The writer believes that he first called attention to this fact.

definitely without powerful modification. Such modifications might be found in geological catastrophes of various kinds, as, for instance, the celebrated *débâcle* of 1818, in the valley of Bagnes, when a glacier, acting as a barrier to an impetuous stream and then suddenly giving way, became the origin of a flood of almost unexampled violence, thus

clearing the valley of rocky obstructions raised by the glacier itself. But a more direct process may be found in the important variations in the magnitude of glaciers themselves, which occupy, one year with another, greater or less areas. Such invasions and alternate retreats of the ice-floods of the Alps are chronicled in almost every valley. After a series of cold snowy years, the glacier forces itself forward into the midst of woods and pastures untouched by it perhaps for centuries, pushing before it with its icy ploughshare the thick turf in wrinkled folds to a great distance in advance. Again, after a group of hot or dry seasons, the glacier dwindles, and leaves behind it in the valley which it had overspread, a wilderness of rolled stones and abraded rocks, without one single blade of grass. This space, termed by the Germans *Gletscherboden*, is usually free from the angular blocks which we have spoken of as borne down on the surface of the glacier, and which have all been shoved to a lower part of the valley. Now it is found that, valleys surmounted by glaciers at their origin, are dotted over, more or less, with such primitive boulders for distances of miles and miles from such glaciers. The probability is, that in a remote geological epoch, the rock-depositing ice had invaded these lower valleys, and that in its gradual retreat it has distributed over an enormous surface, the materials which otherwise would have formed accumulations even more gigantic than we see.

Before we quit the terminal or lowest portion of the glacier, let us notice an important conclusion to which the mere inspection of the ice in such a situation inevitably conducts us. The glacier, as we have already observed, is there exposed to a thousand thawing influences, the intense sunshine, the mild rains, and the perpetual contact of warm air which at night does not necessarily in summer even approach to the freezing-point. And there indeed we see the substance of the ice wasting in every direction. Above, below, within, it trickles with water at every pore. It is in a state of actual dissolution, and yet the Glacier neither disappears nor diminishes. Of this paradox there can be but one explanation. The glacier can only be maintained by the constant though imperceptible advance of its entire mass from the mountains towards the lower valley. At one season, or in one year, the supply of ice may exceed the waste at its extremity, and consequently it may appear to invade the valley. At another time, the waste predominating over the supply, the glacier seems to retreat. Yet in truth it is always in an advancing state, and its general stability of position results from a nice balance between the contending powers of dissolution and reproduction. Hence the progressive descent of a glacier, not at its lowest point merely but

throughout its entire length, is an incontrovertible truth, even were it based on such general considerations alone.

II.—THE MIDDLE GLACIER.

The most characteristic view of a glacier is obtained from its central region, or that which intervenes between the terminal slope, where it precipitates itself (often with considerable steepness) into the lower valley, and the upper snow-fields and icy slopes which repose within the recesses of the mountains, or which cling to the highest acclivities of the giant summits of the chain. This middle region is usually the most level portion, and the larger and more extended the glacier, the slope is there more gentle, and the accessibility greater. The two greatest glaciers of Mont Blanc, the Mer de Glace, and Glacier of Miage, present in many places comparatively unbroken surfaces of cohering ice of an extent really vast, and, apparently, still vaster. In another well-known group of mountains, that which lies between Berne and the Vallais, we have two not less noble glaciers, those of the Lower Aar and of Aletsch, the last being the greatest, and perhaps the most majestic, in Europe.

No traveller has done any justice to the scenery of Switzerland, who has not made a point of surveying a glacier from a commanding position towards its central region. Such a view has, for a century, formed the attraction of tourists to the Montanvert at Chamouni, and within the last fifteen years or less, has been drawing them to survey the great ice-stream of Monte Rosa—the Gorner glacier—from the Rifelberg, and the Aletsch glacier from the *Æggischhorn*. These three points offer the accommodation of hotels, and those who really desire to enter into the charm and mystery of the glacier-world, would do well to remain at one or other, not for a few hours merely, as ordinary tourists do, but for some days and nights, so as to know what are the aspects of these Alpine scenes under the varying circumstances of sunshine and twilight, when the glacier reflects the placid moonlight, or is fitfully illuminated by the midnight thunderstorm. All its aspects are inexpressibly grand and emphatic. Those who have never witnessed them but whilst surrounded by an unthinking, busy crowd of pleasure-seekers, may be sure that they have narrowly missed enjoyments to which this earth offers few parallels. From all these localities, it is not difficult to penetrate at leisure over the icy highway of the glacier into the deepest and sternest recesses of the mighty Alps. The awfulness of solitude in scenes where no single trace of human life could even with a telescope be discovered, the purity of the snows, the calm of the glacier expanse over which the eye

wanders as over the ocean vainly seeking to measure distance on its resplendent level, the soaring pinnacles of the *Aiguilles*, rising like cathedral spires towards the deep-set blue of that cloudless heaven, from whence the invigorating beams of a midsummer sun convey a grateful warmth,—how do these glorious recreations of the senses and of the spirit awake in us a conviction of the greatness, yet also of the goodness, of God; of the littleness, yet also of the high destinies, of man! Seated there all alone, or with but one faithful and unobtrusive companion, the wanderer may well feel grateful to be permitted to taste such pure emotions of reverential joy. Spiritually, as well as physically, he has left earth in a measure beneath him, and tastes that freedom from meaner cares and interests which may be, under right guidance, the persuasive to true and heartfelt devotion :—

“Then stirs the feeling infinite, so felt

In solitude, where we are *least* alone :

A truth which through our being then doth melt
And purifies from self.”

Yet a while, and the scene changes; not to one of less magnificence, yet more fraught with an awful sense of power, and, it may be, of fear. The heavens blacken, the muttering thunder is heard, and the tempest approaches with a rapidity of which the wanderer has little warning, and perhaps less experience. He has been lured into the recesses of the mountains, having the wide-spread glacier, easily traversed in the morning, interposed between him and effectual shelter or aid. As the wind howls from crag to crag in fitful gusts, and the heavy pellets of hail fall thicker, and the sullen roar of heaven's artillery bursts into louder crashes, and blinding lightnings seem to strike the earth at his very feet, then is he driven to desert the poor rocky shelter under which, at first, he cowered, and, for ultimate safety, to brave the elemental war even in its own regions of intensest strife. He may then learn to realize in some measure what are the terrors of these glacier scenes when traversed in the wintry or autumnal season of the year. To the other obstacles to be encountered may be added the *tourmente*, or whirlwind, with its freight of blinding snow, driven every way at once, and with its mortal chill stupifying the inner man at the moment when the elements seem to conspire to deprive the wanderer of the exercise of his outward senses. Then it requires the strong nerve and steady power of pilotage, which is to some men a natural gift, for safe extrication from the bewilderments of the glacier which often, even in sunshine, perplex the less experienced traveller. There is no time for picking steps and taking cautious circuits; *crevasses* are leaped, before which at another time he would quail, and should the

party be a numerous one, then it is too often “each man for himself.” In these struggles for life often has friend left friend to perish, and brother brother, though often, too, the noble instinct of self-sacrifice has prevailed, and both have sunk or both been saved.

But it is time to return from our digression to the nearer inspection of the Middle Glacier. Though comparatively even and unbroken, it is not always easy to make progress on its surface. The novice is astonished by the magnitude of the icy hillocks which, from the shore, appeared to be but ripples, or at most, gently heaving billows on its wide expanse. They are numerous, steep, and separated by deep clefts called *crevasses*, which compel the pedestrian to make continual circuits. So much is this the case that, except in very exceptional instances, the course across a glacier consists of enormous zig-zags, including countless acclivities to be ascended, and slopes down which the pedestrian must cautiously scramble. A mile an hour is not too moderate an estimate of progress over an average glacier of considerable extent and variety of surface. Hence the natural inference as to the area of a glacier, derived from the expenditure of muscular power in traversing it, seconds the deception arising from optical causes, and there is, perhaps, not an instance in which, previously to actual survey, the dimension of glaciers has not been over-estimated.

Crevasses.—The clefts or crevasses of which we have spoken are common to all glaciers. They tend in general to stretch *across* the glacier, and, *in plan*, their direction is slightly arched upwards, that is, forms a curve convex towards the origin of the glacier. To infer from this that the sides of the glacier move faster than the centre (as it might seem natural to do) would, however, be incorrect. The reverse is the case. The crevasses, which seemed to the spectator to be almost the most impressive feature of the glacier, and from their immense size and depth, to be among the most permanent, of its conditions, are in reality short-lived, undergoing continual mutation. Most of them, probably, are sealed up every autumn by and during the reconsolidation of the glacier due to its enormous weight and its plastic nature, and they reappear in spring, subject to the conditions of strain which the form of the rocky channel imposes. Hence, year after year the same systems of crevasses, and the same intricacies of glacier obstacles, recur on the ice opposite to the same rocky promontories and indentations. The guides recognise them from year to year; but, though strikingly similar, they are, in consequence of the continual descent of the glacier, really new. The dimension of crevasses in the glacier proper is very considerable, perhaps occasionally extending trans-

versely for one-third of a mile, and the breadth of such a crevasse may be from one to ten yards, or more. The depth is uncertain; the sides being nearly vertical, it is almost impossible to sound them with a plummet. Perhaps it rarely exceeds 100 feet, and is oftener half that quantity. Casual observation would lead us to suppose it much greater. The depth of any large glacier being certainly many hundred feet, we can understand that the crevasses, being, in fact, superficial furrows or gashes, have not that mechanical importance which we might, at first sight, suppose. The glacier, as a whole, possesses continuity and coherence, and is entirely removed from the condition of a mass of icy fragments confusedly shot down a slope. It is very doubtful whether such a description can be given of any glacier which does not descend by *avalanches* over absolutely precipitous places.

Structure of the Ice.—When we look into a crevasse in a well-formed glacier, two remarkable peculiarities strike us. The first is, that in many parts of the glacier (and more conspicuously near its edges), the ice is traversed by beautiful veins, usually nearly vertical; and as these follow a direction not very different from one parallel to the bank, they are cut through nearly at right angles by the crevasses. When best displayed, the varied structure of the ice closely resembles that of chalcidony or marble, and varies by the tenderest shades of colour imaginable, from blue-green to greenish-white. We shall not here attempt to explain the manner in which this remarkable structure seems to be developed. The other observation which the examination of a crevasse naturally suggests, is the perfect purity of the ice, and the absence of any rock or even pebble enclosed within it, although the surface of the glacier (as we shall immediately show), is in many parts covered with such fragments, which, falling into the crevasses, might be expected to be confused with the substance of the ice.

Moraines.—To perceive the interest and curiosity attaching to the facts last mentioned and others allied to them, we next direct attention to the rocky charge or freight which, as we stated before, a glacier is continually bearing downwards from its mountain recesses to the lower valleys. These stony accumulations on the surface of the glacier are called "*moraines*." Their origin and distribution, and the local peculiarities which they present, suggest many interesting considerations.

The Moraines of glaciers are either *lateral* or *medial*. The lateral moraine is a fringe of rocky fragments more or less angular, and of almost every conceivable magnitude, which coats the parts of the ice adjoining either bank of the glacier, and extends throughout the greater part of its

length. The medial moraines are ridges of similar materials, also disposed lengthways on the glacier-surface, but occupying its middle portion, and separated by a wide, clear space of ice from the lateral fringes before mentioned. There may also be several of these medial moraines perfectly distinct from and parallel to one another. In some glaciers these singular arrays of blocks have an almost artificial aspect, and seem like gigantic causeways erected by human hands, and extending for miles upon the glacier. The view of the Aletsch glacier on p. 344, gives an idea of the general course and aspect of these moraines. Their artificial appearance is heightened by the fact that the blocks of which they are composed are usually quite angular, as if fresh from the quarry, and also that they are somewhat elevated, especially near the centre, above the lateral ice-fields.

To explain the occurrence of lateral moraines, we must accept as admitted the fact that the glacier is in a condition of continual but imperceptible motion in the direction of the valley. Were other proofs wanting, the moraine itself furnishes one of the most palpable. The peasants of Chamouni have long observed that a conspicuous block thus borne upon the ice is found every successive summer opposite to new portions of the shore or valley wall of the glacier. All that rests upon the ice travels with it, however slowly. The action of weather and the elements is, year by year, detaching from the cliffs and *aiguilles* by which glaciers are hemmed in, portions of their rocky substance. Of these agents of dismemberment alternate frosts and thaw are the most irresistible: and it is superfluous to say that glaciers abound most in localities where the temperature undergoes the most violent and considerable changes about the freezing-point. Every spring, in particular, there are detached, not from one but from a thousand rocky spurs or dominant crags, their annual tribute of blocks, which bounding or sliding down ravines or slopes of snow or rock, inevitably find their level on the surface of the glacier at which these slopes and inclines invariably terminate. Deposited on the ice, the ice carries them along with its irresistible march; but the deposition of stones continues, and the same ravine (or *coulouir*, as it is locally called) affords in successive months and successive years an unfailing supply of similar materials, which thus contribute their contingent to the lateral moraine. The same process going on at a hundred or more different points, past which the glacier is successively carried, we can understand the general uniformity of the stony selva of the glacier web.

The Medial Moraines, which, as we have seen, divide the glacier lengthways into parallel strips, have their origin in the lateral moraines of the inde-

pendent branch-glaciers which unite (exactly as tributary rivers do) to form a common stream. This process will be more plainly understood from Fig. 2, which gives an ideal plan of a glacier having four tributary branches, A, B, C, and D. Each of these glaciers being fringed right and left by its lateral moraine, the two ice-streams, as A and B, when they unite, necessarily contribute their rocky charges also, which, coalescing at *e*, form the medial Moraine No. 1 of the commonstream. No. 2 is, in like

FIG. 2.

manner, derived from the point of union *f*, of the glaciers B and C, and No. 3 from the point *g*, where the branch glacier D joins the trunk glacier. One result of this curious arrangement is that each moraine accurately represents the mineralogical character of the spur of the mountains whence it takes its origin, and which might otherwise be inaccessible to the hammer of the geologist. This circumstance was unquestionably known to the crystal-hunters of the Alps before glacialists had satisfied themselves of the origin of these "giant's causeways."*

Since a moraine resembles nothing so much as the mounds of "*pierres perdues*" which we see thrown out fresh from a quarry to form the basement of a pier or sea-wall, it may easily be imagined what a chaos they form after they have been tossed hither and thither by the labouring movements of the glacier, and by the opening of crevasses amongst and beneath those massy piles. The following description, by the present writer, of the Glacier de Miage, on the Italian side of Mont Blanc, may give a faint idea, to those who have not witnessed such scenes, of their extraordinary peculiarities:—

"The narrowness of the main valley [in which the Glacier de Miage lies] makes it like an unfinished excavation intended to have cut the

chain of Mont Blanc in two, and struck me with surprise, although I was somewhat prepared for it, after viewing the prodigious mass of solid matter which the glacier has poured into the Allée Blanche. It may be cited as a most striking instance of excavation by the ceaseless action of seemingly trifling causes.

"The continual fall of fragments detached from the neighbouring summits, loads the glacier with debris, which it bears incessantly down from the head of the valley; and as we judge of the size of a quarry from viewing its rubbish-heaps, so here we have the mould and the cast, the die and the relief, the matter transported, and the spot of its excavation. . . . I scarcely ever remember to have had a more laborious or rougher walk than the traverse of the lower part of the Glacier de Miage. . . . After struggling for a long time amongst fissures and moraines, I at length mounted a heap of blocks higher than the rest, and surveyed at leisure the wonderful scene of desolation, which might compare with that of chaos, around me. The fissures were numerous and large, not regular like those of the Mer de Glace, traversing the glacier laterally, but so uneven, and at such angles, as often to leave nothing like a plain surface to the ice, but a series of unformed ridges, like the heaving of a sluggish mass struggling with intestine commotion, and tossing about over its surface, as if in sport, the stupendous blocks of granite, which half choke its crevasses, and to which the traveller is often glad to cling when the glacier itself yields him no farther passage. It is then that he surveys with astonishment the strange law of the ice-world, that stones always falling seem never to be absorbed; that, like the fable of Sisyphus reversed, the lumbering mass, ever falling, never arrives at the bottom, but seems urged by an unseen force still to ride on the highest pinacles of the rugged surface. But let the pedestrian beware how he trusts to these huge masses, or considers them as stable. Yonder huge rock which seems 'fixed as Snowdon,' and which interrupts his path along a narrow ridge of ice, having a gulf on either hand, is so nicely poised, 'obsequious to the gentlest touch,' that the fall of a pebble, or the pressure of a passing foot, will shove it into one or other abyss, and the chances are, may carry him along with it. Let him beware, too, how he treads on that gravelly bank, which seems to offer a rough and sure footing, for underneath there is sure to be the most pellucid ice; and a light footstep there, which might not disturb a rocking stone, is pregnant with danger. All is on the eve of motion. Let him sit awhile, as I did, on the moraine of Miage, and watch the silent energy of the ice and the sun. No animal ever passes, but yet the stillness of death is not there;

* Thus, at the Mer de Glace of Chamouni, the rose-coloured crystals of fluor spar, which are highly valued by mineral collectors, are and have been always sought upon the particular medial moraine which descends from the tributary glacier of Taléfre, and has its origin at the "Tours des Courtes," where the substance is found *in situ*.

the ice is cracking and straining onwards—the gravel slides over the bed to which it was frozen during the night, but now lubricated by the effect of sunshine. The fine sand detached, loosens the gravel which it supported, the gravel the little fragments, and the little fragments the great, till, after some preliminary noise, the thunder of clashing rocks is heard, which settle into the bottom of some crevasse, and all is again still. In walking over ordinary rugged ground or rocks, the presumption is, that the masses have become shaken

into the position of stable equilibrium; that is, that if a block be movable, it will tend to roll back to its former position. But, on the glacier, the conditions are exactly reversed, and the consequences are proportionally more serious.*

The mention in this extract of the effect of sunshine in thawing the surface of the ice, and thus loosening the stones on its surface and throwing them into unwonted positions, requires further notice, for it leads to some important and to some curious results.

J. D. FORBES.

GOD'S HAND IN THE PADDLE POWER OF ENGLAND.

A LECTURE DELIVERED IN A HERTFORDSHIRE DISSENTING SCHOOL-ROOM.

THALES, a Greek philosopher, maintained that the sea was the mother of life. And we have drawn some of our noblest national life from the sea. We may look upon the ocean influence as one of the mightiest of those influences which have led to the present greatness and glory of our country. That mother-sea has nursed up into heroic manhood many of the best and bravest spirits, whose names may be found written for ever upon the map of the world. She has quickened and kindled our young blood with the virtue of her salt savour. She has driven the fresh tides of ruddy health right to the heart of this people. Her breath has often fanned the fading fire of freedom, and made it soar up again on the old island rock, as on an altar of God,—in many a dull day and dark night, the beacon of a world. Her voice has been one of the most awful and emphatic in which the Almighty has spoken with man, and it has found infinite echoes in the English heart. There is something wondrously weird and strange in the most familiar sounds of that sea, from the solemn rolling march of the mid-Atlantic waves to the long drowsy swash of the surge on the shingle, where the lazy billow breaks in whispering foam. The sea for ever moves about our island, waves about our race the spell of her enchantment, and murmurs in our ears the strange stories and tidings of other lands. And in our time of need it is from the sea that the mystic arm rises, holding aloft that sword of victory intrusted to the keeping of the waters by Arthur the king, when his sun went down.

We all know that our British race is a compound of many races. Undoubtedly nature understood the art of inoculation long before Dr. Jenner discovered and practised it, and she has transfused into our race some of the ripest and best blood, the finest virus, the newest and noblest vigour that she could find in the world. Far back, in the dim dawn of history, we look through the morning shadows, and find the Celts in ancient Britain. Then came our Roman invaders. Next the Saxon, so-called, element is infused, and gradually the Anglo-Saxon race is formed. Anglo-Saxon is the name we often pride ourselves upon, especially when we look abroad and see how it spreads onwards round the world for ever. But I think that we have not yet given full credit to the influence of the Norsemen on the Anglo-Saxon race as regards our British portion of it. We hear of

Norman and Saxon as two representative terms which have come to signify the aristocracy and democracy of our race. But the truth is, that these Normans who boast to be the crown and flower of our race, were only a degenerate kind of Norsemen. They went forth from their northern homes, and subdued Normandy 160 years before they came over here. In Normandy they lost their language, and became what we should now-a-days call Frenchified. They tried hard to make up for their loss of some of the old rough virtues by putting a higher polish on their vices. Much worse men did they come out of that country, but a glittering chain-armour of more courtly manners, as it were, concealed the weakness of their moral force. In their own chronicles they have called their conquest the "Memory of Sorrows." They only conquered England at Hastings, because the people had been so exhausted, and the land so desolated, by the many bloody battles that had been fought all round its coasts, to stem the tides of Norsemen as they passed, surging in wave after wave, year after year, from sea. Only nineteen days before he fell at Hastings, our beloved English Harold had beaten off a vast ravaging army under King Harold Sigurdsson. We must look back a little further than the advent of Norman William, if we would see how the more vital stamina of our race was put into it, and how this country became the furnace and the forge in which God shaped anew that hardy metal of the North. "Skin a Russian," says an old proverb, "and you will find the Tartar underneath." Skin an Englishman, say we, or only touch his skin if you dare, and you will find the old Norse spirit waking up like a war-dog. Few of us really know how much we owe to the Norseman. How much of the "grit" that is found in the British oak, was begotten of the grey granite of Iceland! What a glow of fresh colour they struck into the national face, and what a vein of mineral strength they added to our race! The Anglo-Saxon, we may look upon as the mother-principle of our race, but the Norseman brought the fire and expanding force, the advancing foot and driving fist of the father. The Saxons' was the home-loving, patriot soul, but it was the Norsemen who gave us the spirit of our sea-kings. Those ruddy fair-haired fellows gave us that

* *Travels in the Alps of Savoy.*

paddle-power which has floated out from this little island the vast force that has covered the great deep with ships, peopled the ends of the earth with human life, and made the voice of Christ be heard through this English tongue all over the world. 1400 years ago, and 600 before the coming of Norman William, there landed at Ebbsfleet in the Isle of Thanet, three boat-loads of Norse pirates. These were the first of the brave, and bold, and bloody sea-kings of whom we have record. Wild, fierce, and adventurous fellows were these, who loved danger, and went forth trampling down the might of tempests with their tossing prows, making the white sea-horses rear and foam along in front of them. The children of a mighty mother, they had been rocked and reared on a bosom that heaved with storms, and the strength and the calm and the cruelty of the sea had passed into their race. Few might return from these long viking voyages and wild desperate work. Long, long, might the poor wives and widows wait for them till the tearful tidings came creeping home slowly and sadly. But out they rode in their long galleys from those lonely steel-blue northern fiords, and on they sailed to fight and overcome, absorbing the strength of the conquered into their own as they went, ready to erect the throne of their power on every isle of the ocean or continent of the earth. These are the men who are sent to do almighty work, although the Quaker spirit may tremble at the mention of their name.

At that time the empires of the old world had passed away, and the old races were fast decaying, for they had reached their dark ages. So nature brought forth a new race of men, who had had hardship for their teacher, and been brought up close to her sterner realities. The graceful Greeks were gone the ways of sophistry and voluptuousness. The strong, silent Romans no longer marched forward in their conquering phalanx, the outward surging circle of their strength being broken, and so God opened up the rude storehouses of strength in the North, and the prime elements of nature were to supply the world with a new force. For the world just then especially needed a race of men who should become masters of the sea, as the mastery of the sea would lead to world-wide empire, and make room for the workers of a world. A race that should be strong to wrestle with such hard facts as the Greeks had shunned. A race of builders as well as battlers, who could strike fresh root as well as pluck the fruit they found, plant as well as plunder, colonize as well as conquer, and succeed where the Romans had failed. Not a race that should float lightly and gracefully on the sea of time in pastime and sport, but one that should strike out manfully from love of labour and service for dear life. Not a race of nonentities who can give up their individuality, as the Celts have so often done, and bend as the ready-made victims of temporal or spiritual tyranny, worshipping any unity of power, and believing on the authority of others; but a race that should rise up into Protestant attitude in the presence of all oppression and wrong, and demand of necessity to live under such national laws as should give the greatest latitude for evolving the noblest nature of the indi-

dual. And in the far north was found the fresh fuel to kindle and quicken the Anglo-Saxon into the present English race. They gave us the very spirit of that Protestantism which has become the touchstone and corner-stone of the nations. They wrestled here with Papal Rome for spiritual possession of the island people, and they remained as conquerors. They gave us the impulse of our maritime enterprise, and sowed many seeds of that public and private freedom which crowns each man king in his own castle or cottage. They possessed the germ of our representative governments, in their open parliaments, and they had the spirit which in their parliaments would go straight up to the lying ghost of any pretended right-divine-to-do-wrong, and show it to be only a lie. And if it persisted in not giving up the ghost, they beheaded it.

An Englishman for the first time reading old Snorro Sturleson's Sagas of the Sea-Kings (how few have read this more than Homeric epic!) feels very like one who, in the faint dawn of his life, was taken away from childhood's home, and who revisits it again in after years. He does not consciously remember, yet he is strangely familiar with so many things that he sees and hears,—those sleeping instincts wake whereby kinship of nature will assert itself. A mystic light flashes from out its dark hiding-places of the mind which gives us glimpses that are evanescent but known to us. In the far misty morning of the past he sees heroic forms, noble in stature, large of look, grim in energy. The countenances of the young are ruddy with those clear blue eyes that mirror back the childhood of nations. The long hair of their women is golden fair, and looks as though it had been crimped and crisped with wandering sunbeams caught in it. Or the aged warriors stand up in their courts of justice, and say their say very briefly, but with a voice that has in it a ring of true steel. He sees them coming into the sea-fight with the dragon-heads of their long ships all agape and richly gilt, as they glitter and flash like many lights in the morning mist. There sits the king in his splendid helmet and short red cloak, steering his own ship—sword in one hand, and tiller in the other—trying to meet with the foremost foe man there! The war-horns sound the ships close up together, and they fall to. When the spears and arrows are all spent, the fight goes on still more fiercely with battle-axe and sword. And how they make the steel sparks fly, and the brown blades ring, till the mail-shirt of glittering grey grows ruddy as the red sard, and the wild war-music wakes in your British blood as you read. "You strike well, but do not wound," cries King Olaf. "The swords are blunt, and full of notches," reply the men, who get fresh, sharp ones, and then, in their mad death-rage, did not see that the enemy's vessels were drawn back from their side somewhat daunted, and so they went overboard trying to get at them, and thinking they were fighting on plain ground. We see their downrightness and heart-homeness in all they do. They live heart to heart with friends, and no place more warm and soft than the rough Norse arms—set foot to foot with foes, stared face to face with sternest facts of life or death. We see them grip hands in love or hate, as Thor

gripped his hammer, "till the knuckles grew white." We hear Gittorm tell King Olaf that it is right royal work to fulfil royal words, and we are told that Olaf hated lies like hell. We see how they will stick together and stand by one another. How they always strike hard on the anvil, or lay ship to ship in a war-embbrace, and there, live or die, one of them shall go down. Then we see them living their simple life at home with the king, perhaps in his guest-quarters, visiting house by house, collecting his own taxes, sitting with them on the bench, drinking the ale by fire-light, and passing the cup across the fire; for they sit round it, and the smoke goes up through a hole in the roof. We see them there with their faces shining on each other, full of the affections of home, and we, too, feel at home in the old place, at home with the old faces, at home with the old race. Trait after trait, and touch after touch, in those chronicles do we recognise as our own, as what we emphatically call "so English." When passionate they turn red in the face; the blood flies out, and lets you know. It does not sneak into the dark caves of the heart to thicken with black thoughts. They have also a deal of that common sense which makes the British race master of the modern world. They have a pretty sure grip of reality, and do not go into blind hysterics about theories, nor hunt shadows, nor climb any slippery pole, unless there be a tangible, touchable leg of mutton atop. They have the firmness of foot that will make its own standing-place, and an expansive energy that must make room for itself, and what follows. They can do a magnanimous thing, and save a life without any fuss of words. "Sire, give me your cloak," says an old true-heart, as he rides out of the battle beside his king, with the foe pursuing close behind them. "What would you do with it?" says the king. "I would like to have it; you have given me greater gifts, sire." The king gives him the cloak. He puts it on and rides away. The enemy think it is the king who is escaping, pursue him, and the monarch's life is saved. There is about them such a frolic freedom of manly boyhood, and so frank are they, that foes will nod to each other going into the battle, and bid one another good-bye going out of it. They love fair play, a clear deck for a stand-up fight, and want no favour. Like us, if they are in the right they will persist to the end, but if in the wrong their obstinacy grows sublime. In all these and in other characteristics, we behold our own early kindred the Norsemen, living their sturdy life and doing their brave deeds, and the affinities of race stir within us, and draw us closer to the heroes of the old Scandinavian Sagas. In our own day, we have seen a valour more noble than any which illumines the pages of Greek or Roman or Norse story. More noble, because it has so often been the high calm courage that reveals all the danger in the clearest light, and conquers not by striking mere blind blows. But among our old Norse fathers we may find the real ground-rootage of such courage as is required to storm the St. Sebastians and Badajos; hold a steady footing on the slippery boarding-planks at Trafalgar, keep the bloody slopes of Inkermann, blow in Cashmere gates, cleave a way into beleaguered Lucknow, or die any such desperate

deaths as our fellows will die in their country's cause. These men seem to have had no sense of danger, and pain had no power to bend the unyielding will. With frank, fearless face they would enter the presence of death, calm, and looking up with a beautiful boy-like trust, that the grim old fellow would not hurt them, and so they smilingly received the kiss of his angels, the Valkyrie. They could die horrible deaths with silent, closed lips, or shouting a song of indomitable defiance. When our English Harold paused amid the carnage at the battle of Stamford Bridge to offer them quarter, as their king fell dead across his heap of slain, they shouted altogether across the field, "No quarter!" and at it they went again tooth and nail. In one of their sea-fights, as the Saga tells us, Erling's men began to fall; at the same moment his ship was boarded, and every man of his died in his place. Not a man remained standing on the ship but Erling alone.

"High on the stem, a sight to see,
In his lone ship alone stood he."

There was none who had asked for quarter, or none who got it if he did ask.

Valour was the name of the Norseman's religion,—valour that was often wild and bloody, but sometimes very grand. He lived and wrought and fought valiantly, in earnest; but he thought it shameful to die what we should call a natural death. "At one time," said Egil Ullsark, "I was afraid that I might come to die the death of old age," as he snuffs the battle on the air, and rejoices in the prospect of yet falling fighting beside his king. Others, if they could not get dreadfully mutilated in battle, would cut and slash their bodies on purpose to win their entrance into the warrior's heaven. They thought the only doorway for the soul into that was through a wide, wide wound. "Clothe me," said the dying Seaward, "in my impenetrable armour, gird me with my sword, cover my head with my helmet, place my shield in my left, and my gilded battle-axe in my right hand, that I, the bold warrior, may die like one." And so attired in full armour he passed away. Old kings when about to die would do like King Hako, who, when he could stand up no longer in the battle, told them to make ready his warship, with its freightage of dead men, and weapons bloody and broken, ship the tiller, spread the sails, and let it drift to sea. He then set fire to the vessel, and lay down on the deck to die. The wind blew seawards. The sails filled. The slow fire kindled up into a towering flame, and dying eyes were brightened in its splendour as with the nearing glories of the Norse heaven. Out between the islands to the open sea went the blazing ship on its last voyage, away and away into the unknown, drifting to its doom, until, consumed to the water's edge, it died down afar like a sinking sunset, and the rude Norse heart was at rest, sleeping in its ocean-bed, that majestic mausoleum of the race of the old sea-kings.

But the robust Norse heart had something beside this rugged strength. The eternal springs also touched with tenderness this grim rock of valour, and the healing waters could gush up through its fire-rent fissures. Thorer Hund was heard to tell,

after the battle of Stiklestad, that when he sought out the body of his dead foe, King Olaf, from among the slain, and wiped the blood off the face that was dead, it was very beautiful, and there was red in the cheeks, as if he only slept, and it was even much clearer than when he was in life. How touching, too, in its homely simplicity, is that story of Balder's wife in the Norse mythology, mentioned by Carlyle. She volunteers to die with her husband. Balder's mother sends his brother to pray the Fates for their deliverance; but, no! they cannot come back from the death-kingdom. So Balder sends his ring to Odin, his father, as a token of remembrance. And his wife—she sends *her thimble* to their mother. That seems to me a touch of heart, to call up the mother in our eyes. There also were eyes that had caught a glimpse of the eternal, and heard the rustle of wings hovering overhead. Through all heathenism there shines some ray from that Sun which was yet to rise and shed its glory on the nations. The Creator is dimly felt in the human heart long before he is clearly revealed to the human mind. Amongst all peoples, and in all times, hints of the higher life and the better day will visit the human soul. Under the most adverse conditions, in the darkest hour, will this inspiration spring up heavenward, just as we may see the exiled palm-trees reaching up so tall in their alien home, as though they were trying to overlook all the barriers that shut out from view that far native East of theirs. Even so we know the Norse heart had its prophetic sense of the future, and felt that its personified powers and nature gods would all pass away when their work was done. That a strange trouble would come upon them in the latter day, as they faded in the twilight, and went down in the final dark; that Ygdrasil, the Tree of Life, whose roots reached down through all times into the kingdom where death gnaws at the roots of life, whose stem rose up through three worlds to have its branches watered at the sacred well, on whose leaves were written all human history, and whose rustle was the sound of the passing generations—that this tree should be consumed, and there should be a new heaven and a new earth. And not only would it seem that the Norse heart got this glimpse of the things that should be, but it would appear that Olaf the Saint, the man who saw in trance, foresaw how this Norse strength, that was first rooted in heathenism, should blossom and bear fruit in Christianity, and followed it in prophetic vision as it spread out over land and sea. The Saga tells us that one day Olaf was riding along with his people, and he was silent in thought a great part of the way. He was asked what made him so still and sad, who was wont to be so cheerful. The king replied, "Wonderful things have come into my mind a while ago. As I just now looked over Norway, out to the West from the Fjeld, it came into my mind how many happy days I have had in the land. It appeared to me at first as if I saw over all the Drontheim country, and then over all Norway. And the longer this vision was before mine eyes, the farther, methought, I saw, until I saw over the whole wide world, both land and sea. Well, I knew the places at which I have been in former days;

some even of which I have only heard speak of. But some I saw of which I had never heard, both inhabited and uninhabited, in this wide world." Our English race has fulfilled this wide vision of Olaf the Saint, and walked in the light which lighted that vision to the ends of the earth. I say in the light which lighted that vision, because King Olaf was the man who lighted up the dim vast dome of the Norse mind with the splendour that shone from the thorn-crowned head of the "white Christ," as they called the Saviour. Olaf found these Norsemen desperate hard fellows to convert to Christianity, and some of his persuasions were fully as desperate. The Saga tells us that on one occasion he had an obstinate heretic bound to a cross. They then stuck the head of a serpent into his mouth, and pinched its tail with a pair of red-hot tongs to make it wriggle its way down his throat. But it was all in vain. He would not melt to such moral suasion, and he died unconverted. Desperate hard fellows to convert, but, like Saul of Tarsus, well worth converting, as history has recorded. They seem to have been marked out by Providence, just as Saul was, for some special work. They were to put some of that Norse iron into our British blood. They belonged to the last of the races that were converted, and their best strength migrated to our land, and was merged in that Anglo-Saxon race which seems destined to carry Christianity all over the earth.

See how the unfolding vision of Olaf has come to pass for his branch of the Scandinavians who came our way. In England they got, as it were, into the Gulf Stream of milder influences amongst historical currents. The northern snows and ice melt from the hard granite strata which gets a soft covering, and is clothed on with a new spring. The volcanic fires of Iceland have here been covered in, so that instead of fierce eruptions of fire, we have a diffused and genial warmth which ripens into a national life of mellow fruitful strength. The old oak which struck its great giant gnarly roots down through the grey granite of Iceland, and held fast there in spite of the lava torrents, has here flourished in immortal green, until it overshadows land and sea, and gives shelter to the nations. The bold, and brave, and bloody sea-kings who broke forth in such a wide-wasting, world-warring whirlwind of conquering strength, have brought forth our Drakes and Grenvilles, our Blakes and Nelsons, our Franklins and Peels. The metal may be tempered to finer issues, but it has in it the old Norse ring. Right through our history runs the Norse spirit, for centuries, of daring and maritime enterprise, with its irresistible longing for new fields of action, its wonderful spawning force and victorious strength; and it has surged on and on in the English race until it has won the supremacy of the sea, until its conquering flag floats over so many strong places of the earth, and the most distant isles of the sea, until its empire contains some three hundred millions of souls, and its myriads of British descent pouring over the vast plains of Australia, over the mountain ranges of America, and the fair Indian streams, are shouting back to England their all-hail to the Mother of Nations, whose children rise up and call her blessed.

MISTRESS AND MAID.

A HOUSEHOLD STORY.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

CHAPTER XII.

MONTHS slipped by; the trees in Burton Crescent had long been all bare; the summer cries of itinerant vegetable dealers and flower sellers had vanished out of the quiet street. The three sisters almost missed them, sitting in that one dull

parlour from morning till night, in the intense solitude of people who, having neither heart nor money to spend in gaieties, live forlorn in London lodgings, and knowing nobody, have nobody to visit, nobody to visit them.

Except Mr. Ascott, who still called, and occa-

sionally stayed to tea. The hospitalities, however, were all on their side. The first entertainment—to which Selina insisted upon going, and Johanna thought Hilary and Ascott had better go too—was splendid enough, but they were the only ladies present; and though Mr. Ascott did the honours with great magnificence, putting Miss Selina at the head of his table, where she looked exceedingly well, still the sisters agreed it was better that all further invitations to Russell Square should be declined. Miss Selina herself said it would be more dignified and decorous.

Other visitors they had none. Ascott never offered to bring any of his friends; and gradually they saw very little of him. He was frequently out, especially at meal times, so that his aunts gave up the struggle to make the humble dinners better and more to his liking, and would even have hesitated to take the money which he was understood to pay for his board, had he ever offered it,—which he did not. Yet still whenever he did happen to remain with them a day, or an evening, he was good and affectionate, and always entertained them with descriptions of all he would do as soon as he got into practice.

Meantime they kept house as economically as possible upon the little ready money they had, hoping that more would come in—that Hilary would get pupils.

But Hilary never did. To anybody who knows London this will not be surprising. The wonder was in the Misses Leaf being so simple as to imagine that a young country lady, settling herself in lodgings in an obscure metropolitan street, without friends or introduction, could ever expect such a thing. Nothing but her own daring, and the irrepressible well-spring of hope that was in her healthy youth, could have sustained her in what, ten years after, would have appeared to her, as it certainly was, downright insanity. But Heaven takes care of the mad—the righteously and unselfishly mad, and Heaven took care of poor Hilary.

The hundred labours she went through—weariness of body and travail of soul; the risks she ran; the pitfalls she escaped—what need to record here? Many have recorded the like, many more have known them, and acknowledged that when such histories are reproduced in books imagination is nothing compared with reality. Hilary never looked back upon that time herself without a shuddering wonder how she could have dared all and gone through all! Possibly she never could, but for the sweet old face, growing older yet sweeter every day, which smiled upon her the minute she opened the door of that dull parlour, and made even No. 15 look like home.

When she told, sometimes gaily, sometimes with burning bursting tears, the tale of her day's efforts

and day's failures, it was always comfort to feel Johanna's hand on her hair, Johanna's voice whispering over her, "Never mind, my child, all will come right in time. All happens for good."

And the face, withered and worn, yet calm as a summer sea, full of the "peace which passeth all understanding," was a living comment on the truth of these words.

Another comfort Hilary had—Elizabeth. During her long days of absence, wandering from one end of London to the other, after advertisements that she had answered, or governess institutions that she had applied to, the domestic affairs fell almost entirely into the hands of Elizabeth. It was she who bought in, and kept a jealous eye, not unneeded, over provisions; she who cooked and waited, and sometimes even put a helping hand, coarse, but willing, into the family sewing and mending. This had now become so vital a necessity that it was fortunate Miss Leaf had no other occupation, and Miss Selina no other entertainment, than stitch, stitch, stitch, at the ever-beginning, never-ending wardrobe wants which assail decent poverty everywhere, especially in London.

"Clothes seem to wear out frightfully fast," said Hilary one day, as she was putting on her oldest gown, to suit a damp foggy day, when the streets were slippery with the mud of settled rain.

"I saw such beautiful merino dresses in a shop in Southampton Row," insinuated Elizabeth; but her mistress shook her head.

"No, no; my old black silk will do capitally, and I can easily put on two shawls. Nobody knows me; and people may wear what they like in London. Don't look so grave, Elizabeth. What does it signify if I can but keep myself warm? Now, run away."

Elizabeth obeyed, but shortly re-appeared, with a bundle—a large old-fashioned thick shawl.

"Mother gave it me—her mistress gave it her; but we've never worn it, and never shall. If only you didn't mind putting it on, just this once—this terrible soaking day?"

The scarlet face, the entreating tones—there was no resisting them. One natural pang Hilary felt—that in her sharp poverty she had fallen so low as to be indebted to her servant, and then she too blushed, less for shame at accepting the kindness than for her own pride that could not at once receive it as such.

"Thank you, Elizabeth," she said, gravely and gently, and let herself be wrapped in the thick shawl. Its gorgeous reds and yellows would, she knew, make her noticeable, even though "people might wear anything in London." Still, she put it on with a good grace; and all through her peregrinations that day, it warmed, not only her shoulders, but her heart.

Coming home, she paused wistfully before a glittering shoe-shop—her poor little feet were so soaked and cold. Could she possibly afford a new pair of boots? It was not a matter of vanity—she had passed that. She did not care now how ugly and shabby looked the “wee feet” that had once been praised; but she felt it might be a matter of health and prudence. Suppose she caught cold—fell ill—died:—died, leaving Johanna to struggle alone,—died before Robert Lyon came home. Both thoughts struck sharp. She was too young still, or had not suffered enough, calmly to think of death and dying.

“It will do no harm to inquire the price. I might stop it out in omnibuses.”

For this was the way every new article of dress had to be procured—“stopping it out” of something else.

After trying several pairs—with a fierce, bitter blush at a small hole which the day’s walking had worn in her well-darned stockings, and which she was sure the shopman saw, as well as an old lady who sat opposite—Hilary bought the stoutest and plainest of boots. The bill overstepped her purse by sixpence, which she promised on delivery, and paid the rest. She had got into a nervous horror of letting any account stand over for a single day.

Look tenderly, reader, on this picture of struggles so small, of sufferings so uninteresting and mean. I paint it not because it is original, but because it is so awfully true. Thousands of women, well-born, well-reared, know it to be true—burnt into them by the cruel conflict of their youth; happy they if it ended in their youth, while mind and body had still enough vitality and elasticity to endure! I paint it, because it accounts for the accusation sometimes made—especially by men—that women are naturally “stingy.” Possibly so: but in many instances, may it not have been this petty struggle with petty wants, this pitiful calculating of penny against penny, how best to save here and spend there, which narrows a woman’s nature in spite of herself? It sometimes takes years of comparative ease and freedom from pecuniary cares, to counteract the grinding, lowering effects of a youth of poverty.

And I paint this picture too, literally, and not on its picturesque side—if indeed poverty has a picturesque side—in order to show another side which it really has,—high, heroic, made up of dauntless endurance, self-sacrifice and self-control. Also to indicate that blessing which narrow circumstances alone bestow, the habit of looking more to the realities than to the shows of things, and of finding pleasure in enjoyments mental rather than sensuous, inward rather than external. When people can truly recognise this, they cease either to be afraid or ashamed of poverty.

Hilary was not ashamed—not even now, when hers smote sharper and harder than it had ever done at Stowbury. She felt it a sore thing enough; but it never humiliated nor angered her. Either she was too proud or not proud enough; but her low estate always to her seemed too simply external a thing to affect her relations with the world outside. She never thought of being annoyed with the shopkeeper, who, though he trusted her with the sixpence, carefully took down her name and address: still less of suspecting the old lady opposite, who sat and listened to the transaction—apparently a well-to-do customer, clad in a rich, black silk, and handsome sable furs—of looking down upon her, and despising her. She herself never despised anybody, except for wickedness.

So she waited contentedly, neither thinking of herself, nor of what others thought of her; but with her mind quietly occupied by the two thoughts, which in any brief space of rest always recurred, calming down all annoyances, and raising her above the level of petty pains—Johanna, and Robert Lyon. Under the influence of these her tired face grew composed, and there was a wishful, far-away, fond look in her eyes, which made it not wonderful that the said old lady—apparently an acute old soul in her way—should watch her, as we do occasionally watch strangers in whom we have become suddenly interested.

There is no accounting for these interests, or for the events to which they give rise. Sometimes they are pooh-pooh-ed as “romantic,” “unnatural,” “like a bit in a novel;” and yet they are facts continually occurring, especially to people of quick intuition, observation, and sympathy. Nay, even the most ordinary people have known or heard of such, resulting in mysterious, life-long loves; firm friendships; strange yet often wonderfully happy marriages; sudden revolutions of fortune and destiny: things utterly unaccountable for, except by the belief in that inscrutable Providence which

“Shapes our ends,

Rough-hew them as we will.”

When Hilary left the shop, she was startled by a voice at her elbow.

“I beg your pardon, but if your way lies up Southampton Row, would you object to give an old woman a share of that capital umbrella of yours?”

“With pleasure,” Hilary answered, though the oddness of the request amused her. And it was granted really with pleasure; for the old lady spoke with those “accents of the mountain tongue” which this foolish Hilary never recognised without a thrill at the heart.

“Maybe you think an old woman ought to take a cab, and not be intruding upon strangers; but I

am hale and hearty; and being only a street's length from my own door, I dislike to waste unnecessary shillings."

"Certainly," acquiesced Hilary, with a half-sigh: shillings were only too precious to her.

"I saw you in the boot-shop, and you seemed the sort of young lady who would do a kindness to an old body; so I said to myself, 'I'll ask her.'"

"I am glad you did." Poor girl! she felt unconsciously pleased at finding herself still able to show a kindness to anybody.

They walked on and on—it was certainly a long street's length—to the stranger's door, and it took Hilary a good way round from hers; but she said nothing of this, concluding, of course, that her companion was unaware of where she lived—in which she was mistaken. They stopped at last before a respectable house near Brunswick Square, bearing a brass plate, with the words "Miss Balquidder."

"That is my name, and very much obliged to you, my dear. How it rains! Ye're just droukit."

Hilary smiled, and shook her damp shawl. "I shall take no harm. I am used to go out in all weathers."

"Are you a governess?" The question was so direct and kindly, that it hardly seemed an impertinence.

"Yes; but I have no pupils, and fear I shall never get any."

"Why not?"

"I suppose, because I know nobody here. It seems so very hard to get teaching in London. But I beg your pardon."

"I beg yours," said Miss Balquidder—not without a certain dignity—"for asking questions of a stranger. But I was once a stranger here myself, and had a 'sair fecht,' as we say in Scotland, before I could earn even my daily bread. Though I wasn't a governess, still I know pretty well what the sort of life is, and if I had daughters who must work for their bread, the one thing I would urge upon them should be—'Never become a governess,'"

"Indeed! For what reason?"

"I'll not tell you now, my dear: standing with all your wet clothes on; but as I said, if you will do me the favour to call—"

"Thank you!" said Hilary, not sufficiently initiated in London caution to dread making a new acquaintance. Besides, she liked the rough-hewn, good-natured face; and the Scotch accent was sweet to her ear.

Yet when she reached home she was half shy of telling her sisters the engagement she had made. Selina was extremely shocked; and considered it quite necessary that the London Directory—the nearest clergyman—or, perhaps Mr. Ascott, who,

living in the parish, must know—should be consulted as to Miss Balquidder's respectability.

"She has much more reason to question ours," recollected Hilary, with some amusement, "for I never told her my name or address. She does not know a single thing about me."

Which fact, arguing the matter energetically two days after, the young lady might not have been so sure of, could she have penetrated the ceiling overhead. In truth, Miss Balquidder, a prudent person, who never did things by halves, and, like most truly generous people, was cautious even in her extremest fits of generosity, at that very moment was sitting in Mrs. Jones' first-floor, deliberately discovering every single thing possible to be learned about the Leaf family.

Nevertheless, owing to Selina's indignant pertinacity, Hilary's own hesitation, and a dim hope of a pupil which rose up, and faded like the rest, the possible acquaintance lay dormant for two or three weeks: till, alas! the fabulous wolf actually came to the door; and the sisters, after paying their week's rent, looked aghast at one another, not knowing where in the wide world the next week's rent was to come from.

"Thank God we don't owe anything! not a penny," gasped Hilary.

"No; there is comfort in that," said Johanna. And the expression of her folded hands and upward face was not despairing, even though that of the poor widow, when her barrel of meal was gone, and her cruse of oil spent, could hardly have been sadder.

"I am sure we have wasted nothing, and cheated nobody—surely God will help us."

"I know He will, my child."

And the two sisters, elder and younger, kissed one another, cried a little, and then sat down to consider what was to be done.

Ascott must be told how hard things were with them. Hitherto they had not troubled him much with their affairs: indeed, he was so little at home. And, after some private consultation, both Johanna and Hilary decided that it was wisest to let the lad come and go as he liked; not attempting—as he once indignantly expressed it—"to tie him to their apron-strings." For instinctively these maiden ladies felt that with men, and, above all, young men, the only way to bind the wandering heart was to leave it free, except by trying their utmost to make home always a pleasant home.

It was touching to see their efforts when Ascott came in at evenings, to enliven, for his sake, the dull parlour at No. 15: how Johanna put away her mending, and Selina ceased to grumble, and Hilary began her lively chat, that never failed to brighten and amuse the household. Her nephew even sometimes acknowledged that where-

ever he went, he met nobody so "clever" as Aunt Hilary.

So, presuming upon her influence with him, on this night, after the rest were gone to bed, she—being always the boldest to do any unpleasant thing—said to him,—

"Ascott, how are your business affairs progressing? When do you think you will be able to get into practice?"

"Oh, presently. There's no hurry."

"I am not so sure of that. Do you know, my dear boy"—and she opened her purse, which contained a few shillings—"this is all the money we have in the world!"

"Nonsense," said Ascott, laughing. "I beg your pardon," he added, seeing it was with her no laughing matter, "but I am so accustomed to be hard up, that I don't seem to care. It always comes right somehow; at least with me."

"How?"

"Oh, I don't exactly know; but it does. Don't fret, Aunt Hilary. I'll lend you a pound or two."

She drew back. These poor, proud, fond women, who, if their boy, instead of a fine gentleman, had been a helpless invalid, would have tended him, worked for him, nay, begged for him—cheerfully, oh, how cheerfully! wanting nothing in the whole world but his love—they could not ask him for his money. Even now, offered thus, Hilary felt as if to take it would be intolerable.

Still, the thing must be done.

"I wish, Ascott"—and she nerved herself to say what somebody *ought* to say to him—"I wish you would, not lend, but pay us the pound a week you said you could so easily spare."

"To be sure I will; what a thoughtless fellow I have been; but—but—I fancied you would have asked me if you wanted it. Never mind, you'll get it all in a lump. Let me see; how much will it come to? You are the best head going for arithmetic, Aunt Hilary. Do reckon it all up."

She did so; and the sum-total made Ascott open his eyes wide.

"Upon my soul! I had no idea it was so much. I'm very sorry, but I seem fairly cleaned out this quarter—only a few sovereigns left to keep the mill going. But you shall have them, or half of them, and I'll owe you the rest. Here!"

He emptied on the table, without counting, four or five pounds. Hilary took two, asking him gravely, "If he was sure he could spare so much? She did not wish to inconvenience him."

"Oh, not at all; and I wouldn't mind if it did; you have been good aunts to me."

He kissed her, with a sudden fit of compunction, and bade her good-night, looking as if he did not care to be "bothered" any more.

Hilary retired, more sad, more hopeless about him than if he had slammed the door in her face, or scolded her like a trooper. Had he met her seriousness in the same spirit, even though it had been a sullen or angry spirit—and little as she said, he must have felt—she wished him to feel—that his aunts were displeased with him; but that utterly unimpressible light-heartedness of his—there was no doing anything with it. There was, so to speak, "no catching hold" of Ascott. He meant no harm. She repeated over and over again that the lad meant no harm. He had no evil ways; was always pleasant, good-natured and affectionate, in his own careless fashion; but was no more to be relied on than a straw that every wind blows hither and thither; or, to use a common simile, a butterfly that never sees anything farther than the nearest flower. His was, in short, the pleasure-loving temperament, not positively sinful or sensual, but still holding pleasure as the greatest and only good: regarding what deeper natures call "duty," and find therein their stronghold and consolation, as a mere bugbear, or a sentimental theory, or an impossible folly.

Poor lad! and he had the world to fight with; how would it use him? Even if no heavy sorrows for himself or others smote him, his handsome face would have to grow old, his strong frame to meet sickness—death. How would he do it? That is the thought which always recurs. What is the end of such men as these? Alas! the answer would come from hospital wards, alms-houses and work-houses, debtors' prisons and lunatic asylums.

To apprehensions like this—except the last, happily it was as yet too far off—Hilary had been slowly and sadly arriving about Ascott for weeks past; and her conversation with him to-night seemed to make them darken down upon her with added gloom. As she went upstairs, she set her lips together hard.

"I see there is nobody to do anything, except me. But I must not tell Johanna."

She lay long awake, planning every conceivable scheme for saving or earning money; till at length, her wits sharpened by the desperation of the circumstances, there flashed upon her an idea that came out of a talk she had had with Elizabeth that morning. True, it was a perfectly new and untried chance—and a mere chance; still it was right to overlook nothing. She would not have ventured to tell Selina of it for the world, and even to Johanna, she only said—finding her as wakeful as herself—said it in a careless manner, as if it had relation to nothing, and she expected nothing from it,—

"I think, as I have nothing else to do, I will go and see Miss Balquidder to-morrow morning."

CHAPTER XIII.

MISS BALQUIDDER'S house was a handsome one, handsomely furnished, and a neat little maid-servant showed Hilary at once into the dining-parlour, where the mistress sat before a business-like writing-table, covered with letters, papers, etc., all arranged with that careful order in disorder, which indicates even in the smallest things the possession of an accurate, methodical mind, than which there are few greater possessions, either to its owner, or to the world at large.

Miss Balquidder was not a personable woman; she had never been so even in youth; and age had told its tale upon those large, strong features—"thoroughly Scotch features," they would have been called by those who think all Scotchwomen are necessarily big, raw-boned, and ugly, and have never seen that wonderfully noble beauty, not prettiness but actual beauty, in its highest physical as well as spiritual development, which is not seldom found across the Tweed.

But while there was nothing lovely, there was nothing unpleasant or uncomely in Miss Balquidder. Her large figure, in its plain black silk dress; her neat white cap, from under which peeped the little round curls of flaxen hair, neither grey nor snowy, but real "lint-white locks" still; and her good-humoured motherly look—motherly, rather than old-maidish—gave an impression which may be best described by the word "comfortable." She was a "comfortable" woman. She had that quality, too rare, alas! in all people, and rarest in women going solitary down the hill of life, of being able, out of the deep content of her own nature, to make other people the same.

Hilary was cheered in spite of herself; it always conveys hope to the young when in sore trouble, if they see the old looking happy.

"Welcome, my dear; I was afraid you had forgotten your promise."

"Oh, no," said Hilary, responding heartily to the hearty clasp of a hand, large as a man's, but soft as a woman's.

"Why did you not come sooner?"

More than one possible excuse flashed through Hilary's mind, but she was too honest to give it. She gave none at all. Nor did she like to leave the impression that this was merely a visit, when she knew she had only come from secondary and personal motives.

"May I tell you why I came to-day? Because I want advice and help, and I think you can give it, from something I heard about you yesterday."

"Indeed? From whom?"

"In rather a round-about way; from Mrs. Jones, who told our maid-servant."

"The same girl I met on the staircase at your

house? I beg your pardon, but I know where you live, Miss Leaf; your landlady happens to be an acquaintance of mine."

"So she said; and she told our Elizabeth that you were a rich and benevolent woman, who took a great interest in helping other women—not in money,"—blushing scarlet at the idea—"I don't mean that, but in procuring them work. I want work—oh, so terribly! If you only knew."

"Sit down, my dear;" for Hilary was trembling much, her voice breaking, and her eyes filling, in spite of all her self-command.

Miss Balquidder—who seemed accustomed to wait upon herself—went out of the room, and returned with cake and glasses; then she took the wine from the sideboard, poured some out for herself and Hilary, and began to talk.

"It is nearly my luncheon-time, and I am a great friend to regular eating and drinking. I never let anything interfere with my own meals, or other folks' either, if I can help it. I would as soon expect that fire to keep itself up without coals, as my mind to go on working, if I don't look after my body. You understand? You seem to have good health, Miss Leaf. I hope you are a prudent girl, and take care of it?"

"I think I do;" and Hilary smiled. "At any rate my sister does for me, and also Elizabeth."

"Ah, I liked the look of that girl. If families did but know that the most useful patent of respectability they can carry about with them is their maid-servant! That is how I always judge my new acquaintances."

"There's reason in it too," said Hilary, amused and drawn out of herself by the frank manner and the cordial voice,—I use the adjective advisedly: none the less sweet because its good terse English had a decided Scotch accent, with here and there a Scotch word. Also there was about Miss Balquidder a certain dry humour essentially Scotch,—neither Irish "wit" nor English "fun," but Scotch humour; a little ponderous perhaps, yet sparkling; like the sparkles from a large lump of coal, red-warm at the heart, and capable of warming a whole household. As many a time it had warmed the little household at Stowbury,—for Robert Lyon had it in perfection. Like a waft as from old times, it made Hilary at once feel at home with Miss Balquidder.

Equally, Miss Balquidder might have seen something in this girl's patient, heroic, forlorn youth, which reminded her of her own. Unreasoning as these sudden attractions appear, there is often a hidden something beneath, which in reality makes them both natural and probable, as was the case here. In half an hour these two women were sitting talking like old friends; and Hilary had explained her present position, needs, and desires.

All ended in the one cry—familiar to how many thousands more of helpless young women!—"I want work!"

Miss Balquidder listened thoughtfully. Not that it was a new story—alas, she heard it every day! but there was something new in the telling of it: such extreme directness and simplicity, such utter want of either false pride or false shame. No asking of favours, and yet no shrinking from well-meant kindness: the poor woman speaking freely to the rich one, recognising the common womanhood of both, and never supposing for an instant that mere money or position could make any difference between them.

The story ended, both turned, as was the character of both, to the practical application of it—what it was exactly that Hilary needed, and what Miss Balquidder could supply.

The latter said, after a turn or two up and down the room, with her hands behind her—the only masculine trick she had—

"My dear, before going further, I ought to tell you one thing—I am not a lady."

Hilary looked at her in no little bewilderment.

"That is," explained Miss Balquidder, laughing, "not an educated gentlewoman like you. I made my money myself—in trade. I kept an outfitter's shop."

"You must have kept it uncommonly well," was the involuntary reply, which, in its extreme honesty and *naiveté*, was perhaps the best thing that Hilary could have said.

"Well, perhaps I did," and Miss Balquidder laughed her hearty laugh, betraying one of her few weaknesses—a consciousness of her own capabilities as a woman of business, and a pleasure at her own deserved success.

"Therefore, you see, I cannot help you as a governess. Perhaps I would not if I could, for, so far as I see, a good clearance of one half the governesses into honest trades would be for their own benefit, and greatly to the benefit of the other half. But that's not my affair. I only meddle with things I understand. Miss Leaf, would you be ashamed of keeping a shop?"

It is no reflection upon Hilary to confess that this point-blank question startled her. Her bringing-up had been strictly among the professional class: and in the provinces sharper than even in London is drawn the line between the richest tradesman who "keeps a shop," and the poorest lawyer, doctor, or clergyman, who ever starved in decent gentility. It had been often a struggle for Hilary Leaf's girlish pride to have to teach a *unc* to little boys and girls whose parents stood behind counters; but as she grew older she grew wiser, and intercourse with Robert Lyon had taught her much. She never forgot one day, when Selina

asked him something about his grandfather or great-grandfather, and he answered quickly, smiling, "Well, I suppose I had one, but I really never heard." Nevertheless it takes long to conquer entirely the class prejudices of years, nay, more, of generations. In spite of her will Hilary felt herself wince, and the colour rush all over her face, at Miss Balquidder's question.

"Take time to answer, and speak out, my dear. Don't be afraid. You'll not offend me."

The kindly cheerful tone made Hilary recover her balance immediately.

"I never thought of it before; the possibility of such a thing did not occur to me; but I hope I should not be ashamed of any honest work for which I was competent. Only—to serve in a shop—to wait upon strangers;—I am so horribly shy of strangers." And again the sensitive colour rushed in a perfect tide over cheeks and forehead.

Miss Balquidder looked half amused, half compassionately at her.

"No, my dear, you would not make a good shop-woman, at least there are many better fitted for it than you; and it is my maxim that people should try to find out, and to do, only that which they are best fitted for. If they did, we might not have so many cases of proud despair and ambitious failure in the world. It looks very grand and interesting sometimes to try and do what you can't do, and then tear your hair, and think the world has ill-used you—very grand, but very silly; when all the while, perhaps, there is something else you can do, and do thoroughly well; and the world will be exceedingly obliged to you for doing it,—and *not* doing the other thing. As doubtless the world was to me, when, instead of being a mediocre musician, as I once wished to be—it's true, my dear—I took to keeping one of the best ladies' outfitting warehouses in London."

While she talked, her companion had quite recovered herself, and Miss Balquidder then went on to explain, what I will tell more briefly, if less graphically, than did the good Scotchwoman; who, like all who have had a hard struggle in their youth, liked a little to dilate upon it in easy old age.

Hard as it was, however, it had ended early, for, at fifty, she found herself a woman of independent property, without kith or kin, still active, energetic, and capable of enjoying life. She applied her mind to find out what she could best do with herself and her money.

"I might have bought a landed estate to be inherited by—nobody; or a house in Belgravia, and an opera-box, to be shared by—nobody. We all have our pet luxuries; none of these were exactly mine."

"No," assented Hilary, somewhat abstractedly.

She was thinking, if *she* could make a fortune, and—and give it away! if, by any means, any honourable, upright heart could be made to understand that it did not signify, in reality, which side the money came from; that it sometimes showed deeper, ay, the very deepest attachment, when a proud, poor man had self-respect and courage enough to tell a woman plainly, 'I love you, and I will marry you; I am not such a coward as to be afraid of your gold.'

But, oh! what a ridiculous dream!—and she sat there, the penniless Hilary Leaf, listening to Miss Balquidder, the rich lady, whose life seemed so easy. For the moment, perhaps, her own appeared hard. But she had hope, and she was young. She knew nothing of the years and years that had had to be lived through before those kind eyes looked as clear and cloudless as now; before the voice gained the sweet evenness of tone which she liked to listen to, and felt that it made her quiet and "good," almost like Johanna's.

"You see, my dear," said Miss Balquidder, "when one has no duties, one must just make them; when we have nobody to care for us, we must take to caring for everybody. I suppose"—here a slight pause indicated that this life, like all women's lives, had had its tale, now long, long told—"I suppose I was not meant to be a wife; but I am quite certain I was meant to be a mother. And"—with her peculiar, bright, humorous look—"you'd be astonished, Miss Leaf, if you knew what lots of 'children' I have in all parts of the world."

Miss Balquidder then went on to explain, that finding, from her own experience, how great was the number, and how sore the trial, of young women who now-a-days are obliged to work,—obliged to forget that there is such a thing as the blessed privilege of being worked for—she had set herself, in her small way, to try and help them. Her pet project was to induce educated women to quit the genteel starvation of governess-ship for some good trade, thereby bringing higher intelligence into a class which needed, not the elevation of the work itself, which was comparatively easy and refined, but of the workers. She had, therefore, invested sum after sum of her capital in setting up various small shops in the environs of London, in her own former line, and others—stationers, lace-shops, etc.—trades which could be well carried on by women. Into the management of which she put as many young girls as she could find really fitted for it, or willing to learn, paying them regular salaries, large or small, according to their deserts.

"Fair work, fair pay; not one penny more or less; I never do it; it would not be honest. I overlook each business myself, and it is carried on

in my name. Sometimes it brings me in a little profit; sometimes not. Of course," she added, smiling, "I would rather have profits than losses; still, I balance one against the other, and it leaves me generally a small interest for my money—two or three per cent., which is all I care about. Thus, you see, I and my young people make a fair bargain on both sides: it's no charity. I don't believe in charity."

"No," said Hilary, feeling her spirit rise. She was yet young enough, yet enough unworn by the fight to feel the deliciousness of work—honest work for honest pay. "I think I could do it," she added. "I think, with a little practice, I really could keep a shop."

"At all events, perhaps you could do what I find more difficult to get done, and well done, for it requires a far higher class of women than generally apply—you could keep the accounts of a shop; you should be the head, and it would be easy to find the hands. Let me see; there is a young lady, she has managed my stationer's business at Kensington these two years, and now she is going to be married. Are you good at figures; do you understand book-keeping?"

And suddenly changing into the woman of business, and one who was evidently quite accustomed both to arrange and command, Miss Balquidder put Hilary through a sort of extempore arithmetical catechism, from which she came off with flying colours.

"I only wish there were more like you. I wish there were more young ladies brought up like"—

"Like boys!" said Hilary, laughing, "for I always used to say that was my case."

"No, I never desire to see young women made into men." And Miss Balquidder seemed a little scandalized. "But I do wish girls were taught fewer accomplishments, and more reading, writing, and arithmetic; were made as accurate, orderly, and able to help themselves, as boys are. But to business. Will you take the management of my stationer's shop?"

Hilary's breath came hard and fast. Much as she had longed for work, to get this sort of work,—to keep a stationer's shop! What would her sisters say? what would *he* say? But she dared not think of that just now.

"How much should I be able to earn, do you think?"

Miss Balquidder considered a moment, and then said, rather shortly—for it was not exactly acting on her own principles; she knew the pay was above the work—"I will give you a hundred a year."

A hundred a year! actually certain, and over and above any other income. It seemed a fortune to poor Hilary.

"Will you give me a day or two to think about it, and consult my sisters?"

She spoke quietly, but Miss Balquidder could see how agitated she was; how she evidently struggled with many feelings that would be best struggled with alone. The good old lady rose.

"Take your own time, my dear; I will keep the situation open for you for one week from this date. And now I must send you away, for I have a great deal to do."

They parted, quite like friends; and Hilary went out, walking quickly, feeling neither the wind nor the rain. Yet when she reached No. 15, she could not bring herself to enter, but took another turn or two round the Crescent, trying to be quite sure of her own mind before she opened the matter to her sisters. And there was one little battle to be fought which the sisters did not know.

It was perhaps foolish, seeing she did not belong to him in any open way, and he had no external right over her life or her actions, that she should go back and back to the question, "What would Robert Lyon say?"

He knew she earned her daily bread; sometimes this had seemed to vex and annoy him, but it must be done; and when a thing was inevitable, it was not Mr. Lyon's way to say much about it. But being a governess was an accredited and customary mode of a young lady's earning her livelihood. This was different. If he should think it too public, too unfeminine: he had such a horror of a woman's being anything but a woman, as strong and brave as she could, but in a womanly way; doing anything, however painful, that she was obliged to do, but never out of choice or bravado, or the excitement of stepping out of her own sphere into man's. Would Robert Lyon think less of her, Hilary, because she had to learn to take care of herself, to protect herself, and to act in so many ways for herself, contrary to the natural and right order of things? That old order—God forbid it should ever change!—which ordained that the

women should be "keepers at home;" happy rulers of that happy little world, which seemed as far off as the next world from this poor Hilary.

"What if he should look down upon me? What if he should return, and find me different from what he expected?" And bitter tears burned in her eyes, as she walked rapidly and passionately along the deserted street. Then a revulsion came.

"No; love is worth nothing that is not worth everything, and to be trusted through everything. If he *could* forget me—*could* love any one better than me—me myself, no matter what I was, ugly or pretty, old or young, rich or poor,—I would not care for his love. It would not be worth my having; I'd let it go. Robert, though it broke my heart, I'd let you go."

Her eyes flashed; her poor little hand clenched itself under her shawl; and then, as a half reproach, she heard in fancy the steady, loving voice—which could have calmed her wildest paroxysm of passion and pain—"You must trust me, Hilary."

Yes, he was a man to be trusted. No doubt, very much like other men, and by no means such a hero to the world at large as this fond girl made him out to be; but Robert Lyon had, with all people, and under all circumstances, the character of reliability. He had also,—you might read it in his face,—a quality equally rare, faithfulness. Not merely sincerity, but faithfulness; the power of conceiving one clear purpose or one strong love—in unity is strength;—and of not only keeping true to it at the time, but holding fast to it with a single-minded persistency that never even takes in the idea of voluntary change, as long as persistency is right or possible.

"Robert, Robert," sobbed this forlorn girl, as if slowly waking up to a sense of her forlornness, and of the almost universal fickleness, not actual falseness, but fickleness, which prevails in the world and among mankind, "O Robert, be faithful! faithful to yourself—faithful to me!"

AN ESSAY ON AN OLD ESSAYIST—MONTAIGNE.

It is astonishing how much of our most popular modern literature has for its subject-matter the literary men and literary achievements of former generations. The modern literary man is an ivy drawing sustenance from the walls of former greatness. Contemporary reputations resemble the tents of Arabs pitched among the stones of dead cities. But seldom we witness a Columbus stretching across the ocean in search of a new world; but we have Old Mortality everywhere clearing away with reverential hand the mosses of forgetfulness from the sepulchres of the great, and making fresh the half-obliterated inscriptions. The literature of the past is so rich that modern men are proud if they can write a comment upon a page here and there. If we cannot say a new thing ourselves, we can do the next best, say something new about the men who said new things. The literary giants in the early time saw nature and fact clearly as they saw sunrise or sunset; but we unfortunate moderns cannot see nature *because* of these giants; they stand up between her and us, and the only glimpses we have of her are caught as it were by peeping between their legs. Shut out to some extent from the fair apparition, we can hear the report of those who see, and picture it as best we can to ourselves; at all events, we hear what they say and how they say it, and can be critical thereon to our heart's content. They put their sickles into the virgin fields of intellect; we are the posterity of which they stood so much in fear, and being a somewhat late posterity, we find sufficient employment in weighing their merits and delivering judgment thereupon. We stand in mutual awe of one another. We cannot drive our chariots at such a pace as they, but then we have the laurel-crowns and the applauses in our keeping, and are quite right to make the best of our advantages, and to be chary in awarding either the one or the other. Everything that ever will be much worth saying in the world has been said in one form or another long ago, and we may as well hunt the rainbow as seek originality. We can touch nothing that a man's hand has not touched before. The stones that compose the modern House of Fame have been drawn from the Greek temple or the Roman amphitheatre. We have only great men to write about, and are writing with commendable industry. What libraries on Shakspere, elucidatory and otherwise, will fall a prey at the great conflagration!

Never will mortal tread such forlorn shades as Dante; never will there be a month of May like Chaucer's; never will there be a lover like Romeo,

a witty fellow like Mercutio; never such a silvery voice heard as Portia's on the moonlight lawn at Belmont; never more will a heart break like Lear's. These things cannot be repeated. But the men who created them remain, and we can criticise and biographize. On the whole, perhaps, as matters stand, biography is the most fruitful field in which the modern intellect can work. But then it is so difficult: biographical talent of a high order is quite as rare as poetical. Mr. Carlyle is perhaps the only living writer who possesses it in anything like perfection. In fact, supreme biographical talent includes every other talent, poetical included. The present venture is entirely without pretension; it professes to be neither biography nor criticism, although in its limited scope it may deal a little with both. Its purpose will be served if it interests the reader—perhaps till, now unacquainted with him—in a great and peculiar Frenchman who lived three centuries ago, and who, above any other writer of his nation, has coloured the universal thought of the world—Montaigne the Essayist. The reader may never have read a line of his writings, or have heard a fact of his biography, but he has nevertheless been acted upon by the influence which radiates from the old Gascon château.

Michel de Montaigne was born at the château of Montaigne, in the wild district of Perigord, in France,—shadowed by chestnut woods in which droves of swine fed,—on the last day of February 1533. His father had peculiar notions on the matter of education, and these he resolved to carry out in the case of his infant son. His god-father and god-mother were selected from the peasantry of the district, and he drew milk from the breast of a peasant woman. This Spartan treatment was designed to give him a scorn of fine living, and to prevent him in after life from ripening into effeminacy. But his father was tender enough in other things, and the child was never roused from slumber save by the sound of some musical instrument. The acquirement of Latin had proved a mighty torture to the father, and that torture it was resolved the son should be spared if possible. Accordingly a German was procured, innocent of French but deeply learned in Latin, and to his care the youthful Michel was intrusted, while he could barely totter from chair to chair. French was avoided like infection, his father brushed up his Latin which had become sorely rusted, the household might have been a Roman one, as far as language was concerned, and without turning over a page of a lexicon or grammar Latin formed

itself on the tongue of the future essayist quite as easily and naturally as it did on the tongue of the youthful Coriolanus. At the age of six years—what will Professor Blackie say to *that*?—Master Michel was sent to the College of Guyenne, at that time considered the best in France, and there he finished his education by the time he reached his thirteenth year. After leaving Guyenne, he pursued the study of law for several years, but at what school or schools his biographers have only been able to conjecture. He does not seem, however, to have taken kindly to legal studies. He visited Paris in early life, made his appearance at Court, is said to have pleased King Henry II. with his brilliant talk, and ever afterwards he speaks of the capital with the rapture of a true Frenchman. "I love it for itself," he says, "and more in its own simplicity than glossed over with foreign pomp. I love it tenderly, even to its warts and stains." While yet a young man he was a good deal about the Court. There he saw our own Mary Stuart in the first splendour of that beauty which was afterwards fatal to so many. We guess from an allusion in his Essays that he witnessed the death of Henry in the royal lists. Into that brilliant and dissolute Court he carried a keen eye that quietly noted down this and that, and put it past for future use. It is said that he did not shine as a courtier, but he made a better use of his experience than any of his more successful competitors. It was about this time that he formed his famous friendship for Estienne de la Boétie, a friendship so complete, so noble, so unselfish and satisfying, that it seems rather to have grown in the gracious imagination of Shakspeare "where no planet strikes" than in the actual world of men.

La Boétie was a remarkable man. Montaigne heard of him accidentally, yearned towards him, and when they met they ran together like quicksilver. Four years after the acquaintance was formed, La Boétie died, and the first shadow fell over Montaigne's life. In the heroic essay on Friendship he thus speaks: "For the rest which we commonly call friends and friendships are nothing but acquaintances and familiarities, either occasionally contracted, or upon some design by means of which there happens some little intercourse betwixt our souls. But in the friendship I speak of, they mix and work themselves into one piece, into so universal a mixture, that there is no more sign of the seam by which they were first conjoined. If a man should importune me to give a reason why I loved him, I find it could no otherwise be expressed, than by making answer, because it was he, because it was I." "For, in good earnest, if I compare all the rest of my life, though thanks be to God I have passed my time pleasantly enough and at my ease, and, the loss of such a friend ex-

cepted, free from any grievous affliction and in great tranquillity of mind, having been contented with my natural and original conveniences, without being solicitous after others; if I should compare it all, I say, with the four years I had the happiness to enjoy the sweet society of this excellent man, to nothing but smoke, but an obscure and tedious night from the day I lost him. I have only but a sorrowful and languishing life; and the very pleasures that present themselves to me, instead of administering anything of consolation, double my affliction for his loss. We were halves throughout, and to that degree that methinks, by outliving him, I defraud him of his part. I was so accustomed to be always his second in all places, and in all interests too, that methinks I am no more than half a man, and have but half a being. There is no action nor imagination of mine wherein I do not want him." Montaigne was with La Boétie when he died, and remembering all that the dead man had been to him, he ever afterwards speaks tenderly of him, as David might of Jonathan—if, instead, of being a Hebrew and filled with the austere traditions of his race, David had been a sixteenth century Frenchman, living in the time of the St. Bartholomew, nurtured on the classical authors, and filled with admiration for the heroes of antiquity.

After the death of his friend, Montaigne married—and with no excess of passion, if we may trust himself. The Essays are full of sly hits at the married state; and, speaking of the crosses incident thereunto, he crows lustily, and vaunts his prowess; from which we infer that his wife was somewhat of a shrew, and that, in conjugal combat, he was often glad to strike his colours, and purchase peace by submission. It is so easy to be bold when one is writing essays, and the sharp voice is silent! In the thirty-eighth year of his age, Montaigne—somewhat world-weary—retired to his château; he placed his library in the "great tower overlooking the entrance to the court," and there he spent his days reading, meditating, writing. Over the central rafters he, in large letters, inscribed the characteristic device, I DO NOT UNDERSTAND; I PAUSE; I EXAMINE. When he began writing his Essays, he had no great desire to shine as an author; he wrote simply to relieve his teeming heart and brain. The best method to lay the spectres that haunt the mind is to commit them to paper. Speaking of the Essays he says, "This book has a domestic and private object. It is intended for the use of my relations and friends; so that, when they have lost me, which they will soon do, they may find in it some features of my condition and humours, and by this means keep up more completely, and in a more lively manner, the knowledge they have of me."

In the *Essays* he meant to portray himself, his habits, his modes of thinking, his opinions, what fruit of wisdom he had gathered from experience, sweet and bitter,—and the task he has executed with wonderful fidelity. He does not make himself a hero. Cromwell would have his warts painted, and Montaigne paints his, and he paints them with a certain fondness. He is perfectly tolerant of himself, and of everybody else. Whatever be the subject, the writing flows on easy, equable, and self-satisfied. Each event of his past life he looks upon as a fact of nature; creditable, or the reverse, there it is; something to be speculated upon, not in the least to be regretted. If it is worth nothing else, it may be useful as an illustration. He does not seem to have any idea of the relative importance of things. That his moustache, if stroked with his perfumed glove or handkerchief, will retain the odour a whole day, is related with as much gravity as a king's death, or the march of a desolating plague. Nervously apprehensive of pain and death, he builds around himself a rampart of stoical maxims edifying to witness, but which will yield when the terror comes, like a knot of river flags, to the shoulder of Behemoth.

The *Essays* first saw the light at Bordeaux, and soon became popular among the best French minds, and such a man could not but be keenly alive to the pleasures of praise. But painful days were at hand, and his stoical philosophy was to be put to the test. He was attacked by the stone, the disease which, from childhood, he most feared. From this period, on to the end, his life was embittered with frequent paroxysms of agony. Like his father, he hated doctors and drugs, and he bore up against his disease as best he could. The speculating and experimenting turn of the man fastens upon the fierce pain itself, and turns it to use. "When they suppose me to be most cast down, and spare me, I often try my strength, and start subjects of conversation quite foreign to my state. I can do everything by a sudden effort, but, oh! take away duration. As soon as the pain passes, I can return to my ordinary posture, for my soul is no otherwise affected than by the influence of the body; and this I certainly owe to the care which I have always taken to prepare myself by reason for such accidents. It is true that I am tried somewhat severely, for I have suddenly passed from a very sweet and very happy condition of life, to the most painful that can be imagined." In a lull of the disorder, urged by the insatiable curiosity which consumed him, and by that irresistible sympathy with his race, which made the sordidest peasant more interesting to him than Mont Blanc at sunset, or statues that enchant the world, or white marble cathedrals cutting southern azure with

groves of pinnacles, he mounted horse, and, accompanied by a secretary and servants, started for Italy. Passing from city to city, the keen noticing eyes found sufficient employment, and everything that struck him was noted down in his journal—often with curious comments. He was always conscientious in attending divine service; and it is characteristic that once or twice after visiting the churches, he remarks on the paucity of pretty faces amongst the female worshippers. While lingering at the baths of Della Villa, news arrived that he had been elected Mayor of Bordeaux (an office which his father had once held), and he returned at once. On entering office, Montaigne took up his residence in the city, and fulfilled his duties to the satisfaction of the citizens. Yet he hankered after his château, his library, and his old employment of essay-writing. When his period of mayoralty expired, he returned to his old home, and completed his Third Book. France was in a troubled state, and Montaigne's studies were frequently interrupted. Visiting Paris, he suffered a short imprisonment in the Bastille. Feeling his career was drawing to a close, he resided chiefly at Montaigne, making the last corrections of his works. Dwelling there, and about to issue a final edition, he was seized with a quinsy. Conscious that his end was near, he sent for his neighbours, that he might bid them a last farewell. When they came, and when the priest was elevating the Host, "this poor gentleman leaped forward as well as he was able on his bed, with his hands clasped; and in this last act gave up his soul to God." He was buried at Montaigne, but his body was afterwards removed to the chapel of the Feuillans at Bordeaux. A monument was erected to his memory, and around it during the last three centuries the foot of many a pilgrim has lingered.

The *Essays* are comprised in three books, ranging over an infinite variety of subjects, and the manner of treatment is always peculiar and characteristic. Although delighting in classical quotation and illustration, Montaigne is not a pedant; on the contrary, there is a fine gentleman air about much of his writing, and he wears his classics as he wears his rings, not from ostentation, but as a matter of course. In his books there is a healthy smack of country life; he occasionally uses a provincialism; his grapes have the true flavour of the Gascon soil. In point of style, the *Essays* are different from anything that could now be produced. Not only is the thinking different, the manner of setting forth the thinking is different also. There is a certain want of ease in the old writers which is irresistibly charming. The language flows like a stream over a pebbled bed, with propulsion, eddy, and sweet recoil—the pebbles, if retarding movement, giving a dimpled surface and a natural music.

There is a ceremoniousness in the mental habits of these ancients. Their intellectual garniture is picturesque, like the garniture of their bodies. Their thoughts are courtly and high-mannered. They carried gallantry (so to speak) into literature. They touched the hand of truth as they would the hand of a high-born lady in a minuet. A singular analogy exists between the personal attire of a period and the written style of a period. The peaked beard, the starched collar, the quilted doublet, have their correspondences in the high sentence and the elaborate ornament (worked upon the thought like the figures upon tapestry) of Sydney and Spenser. In Pope's day, men wore rapiers, and their weapons they carried with them into literature, and unsheathed them frequently too. Style went out with the men who wore knee-breeches and buckles in their shoes. Montaigne, in his graver and sedater passages, reaches the high-wrought and intricate eloquence to which we refer; but then his moods are Protean, and he is constantly alternating it with familiarity, anecdote, humour, and coarseness. His Essays are like a mythological landscape; you hear the pipe of Pan from the thicket, the goddess moves past, the leering satyr is there also. At the core of him, essentially melancholy, and consumed with a hunger for truth, he stands like Prospero in the Enchanted Island, with Ariel and Caliban to do his behests. These sudden alternations are very characteristic of Montaigne. Whatever he says immediately suggests its opposite. He laughs at himself and his reader. He builds his castle of cards for the mere pleasure of knocking it down again. He is ever unexpected and surprising. And with this curious mental activity, this play and mingling of discordant elements, his page is restless and alive, like the constant flicker of light and shadow in a mass of foliage which the wind is stirring.

Montaigne is avowedly an egotist, and by those who are inclined to make this a matter of reproach, it should be remembered that the value of egotism depends upon the egotist. If the egotist is weak, the egotism is drivel, and gravitates towards oblivion by a necessity of its nature. If the egotist is strong, acute, and full of distinctive character, the egotism is precious, and remains a possession of the race. If Shakspeare had left personal revelations, how we should value them! if, indeed, he has not in some sense left them, if the tragedies and comedies are not personal revelations altogether—the multifarious nature of the man rushing toward the sun at once in Falstaff, Hamlet, and Romeo. But calling Montaigne an egotist does not go a great way to decipher him. No writer takes the reader so much into his confidence, and no one more completely escapes the penalty of confidence. He tells us everything about himself,

we think, and when all is told it is astonishing how little we really know. The esplanades of Montaigne's palace are thoroughfares, men from every European nation may jostle there, but somewhere in the building there is a secret room in which the master sits, of which no one but himself wears the key. We read in his Essays about his wife, his daughter, his daughter's governesses, of his cook, of his page, "who was never found guilty of telling the truth," of his library, the Gascon harvest-fields outside the château, his methods of composition, his favourite speculations, but somehow the man himself is constantly eluding us. His daughter's governess, his page, and the ripening Gascon fields are never introduced for their own sakes; they are employed merely to illustrate and set off the subject on which he happens to be writing. A brawl in his own kitchen he does not consider worthy of being specially set down, but he has seen and heard everything,—it comes in his way when travelling in some remote region, and accordingly it finds a place. He is the frankest and most out-spoken of writers, but that very frankness and out-spokenness puts a reader off his guard. If you wish to preserve your secret, wrap it up in frankness; if you wish to mislead at play, be careful to show your hand. The Essays are full of this trick. The frankness is as well simulated as the grape-bunches of the Grecian artist which the birds flew towards and pecked. When Montaigne retreats he does so like a skilful general, leaving his fires burning as brightly as possible. In other ways, too, he is an adept in putting his reader out. He discourses with the utmost gravity, but you suspect mockery or banter in the tones. He is serious about the most trifling subjects, and he trifles about the most serious. "He broods eternally over his own thought," but who can tell what his thought may be for the nonce? He is of all writers the most vagrant, surprising, and—to many minds—illogical. His sequences are not the sequences of other men. His writings are as full of transformations as a pantomime or a fairy tale. His arid wastes lead up to glittering palaces, his banqueting-halls end in a dog-hutch. He begins an Essay about trivialities, and the conclusion is in the other world. And the peculiar character of his writing arises—as the peculiar character of all writings which are worth anything do—from constitutional turn of mind. He is constantly playing at fast and loose with himself and his reader. He mocks and scorns his deeper nature, and—like Shakspeare in Hamlet—says his deepest things in a jesting way. When he is gayest, be sure there is a serious design in his mood. Singularly shrewd and penetrating—sad, not only from the sensibility of exquisite nerve and tissue, but from meditation, and an eye that

pierces the surfaces of things—fond of pleasure, yet strangely fascinated by death—profoundly sceptical, yet clinging to what the Church taught and believed—lazily possessed by a high ideal of life, yet unable to reach it, careless perhaps often to strive after it, consequently with no very high opinion of his own goodness nor of the goodness of his fellows—and with all those serious elements, an element of humour, which assumed a variety of forms, now pure fun, now mischievous banter, now blistering scorn; humour in all its shapes, carelessly exercised on himself and his readers,—with all this variety, complexity, contradiction almost of intellectual forces within him, Montaigne wrote his bewildering Essays—with the exception of Rabelais, the greatest modern Frenchman—the creator of a distinct literary form, and to whom, down to our own day, even in point of subject-matter, every essayist has been more or less indebted.

Montaigne was not in any strict sense of the word a teacher. He wrote in support of no theory, moral, æsthetic, political, or theological. Constantly saying the most shrewd and memorable things, his turn of mind is vagrant and discursive. With no particular end in view he saunters through the fields of speculation. He owns allegiance to nothing, not even to himself. He had as great a contempt for consistency as Mr. Emerson. He is not in the least disturbed if the opinion set forth to-day flies right in the face of the opinion set forth yesterday. A melancholy Gascon gentleman, who had seen a good deal of the world, and who suffered constantly under the oppression of thought, he remained at his château, and amused himself with his own speculations. His philosophy is worldly. He knows that life is full of bitters, and he holds it wisdom that a man should console himself with its sweets—the principal of which are peace, leisure, travel, and the writing of essays. He values obtainable Gascon bread and cheese more than the unobtainable stars. He thinks crying for the moon the foolishest thing in the world. He knows that pain will come, disease will come, death will come, and he fortifies himself against their approach by a stoicism which is more pagan than Christian. This practical acquiescence of Montaigne, this acceptance of life as rather a sad thing at best, does not promise much fruit save to himself. How then came he to take his place in the visible forces of the world?

He lived in the times of the French religious wars. The rulers of his country were execrable Christians, but most orthodox Catholics. Heretics were burned almost every day, and the Court ladies flocked to witness the spectacle. On the

Queen-mother and on her miserable son lay all the blood of the St. Bartholomew. The country was torn asunder; everywhere there was battle, murder, pillage, and such woful partings as Mr. Millais has represented in his incomparable picture. To Montaigne, this state of things was hateful and incomprehensible. He was a good Catholic in his easy way; he attended divine service regularly; he crossed himself when he yawned. He conformed in practice to every rule of the Church; but if orthodox in practice, he was daring in speculation. He waged war with every form of superstition. He worked like a mole under the foundations of priestcraft. While in this way doing signal service to the reformed cause, he had but little sympathy with reformers. If they had but remained quiet, but kept their peculiar notions to themselves, France would have been at rest. That a man should go to the stake for an opinion, was as astonishing to him as that priest or king should send him there for an opinion. He was easy tempered, and humane—in the hunting-field he could not hear the cry of a dying hare with composure—the stake, consequently, had no attractions for such a man. His scepticism came into play, his melancholy scorn, his sense of the illimitable which surrounds man's life, and mocks and defeats his thought. Man is here, he said, with bounded powers, with limited knowledge, with the unknown behind, the unknown in front, certain of nothing but that he was born and that he must die: Why, then, should he burn his fellow? Out of his merciful disposition, out of his scepticism, grew, in that fiercely intolerant age, the idea of toleration of which he was the apostle. Widely read, charming every one with his wit and his wisdom, his influence spread from mind to mind, and assisted in bringing about the change which has taken place in European thought. His ideas certainly did not spring from the highest sources. He was no ascetic, he loved pleasure, he was tolerant of everything except cruelty; but do not let us stint our praise on that account for the good he actually performed. It is in this indirect way that great writers affect the thoughts of the world. They may not be powerful in action, but they send forth ideal armies which fight for the good cause long after the brain is dust from which they sprang. And the man who is fighting against wrong to-day is assisted, more perhaps than he is himself aware, by the sarcasm of this writer, by the metaphor of that, by the song of the other, even although the writers themselves professed indifference, or were even counted as belonging to the enemy.

ALEXANDER SMITH.

THE SUMMER WOODS.

Go gather sunbeams where they lie

On every hill-side sleeping,

And put them where they will not die,

Within your young heart's keeping.

They paint with light, with loving hand, the blossom
when it's blowing,

They tune the lays of every land, and bless where'er
they fall ;

Keep every day, like Summer gay, for yellow Autumn's
glowing,

For happy hearts have summer aye, and sunshine over
all.

Then merry all—go merrily,

And happy foot go free,

With laughter ringing cheerily ;

I would not stint your glee.

Wake up, you gladsome voices, till the grand old wood
rejoices,

Let beauty claim her kindred where the lordly Sum-
mer's hand

His path of light is spreading for the bride that he is
wedding ;

Go all, and greet the rosy Queen that's coming through
the land.

The primrose blooms for Easter-tide,

The daffodil for May ;

But June's the lordly Summer's bride,

And this her bridal day.

And who but you, as pure as dew, as true as ye are
tender,

So light of heart, should bear your part, amid her
bridal cheer ?

And who but you, to life so new, should dance amid her
splendour,—

Should rise with living rapture through the radiance
of the year ?

Then dance away the merry day,

Your meed of music bringing,

Where household cares hush half the lay

The birds were lately singing ;

The Robin in his summer haunt, his woodland place of
wooing,

Has all forgot the welcome note that sang away the
snow ;

The Cuckoo calls among the firs, the green Cuckoo
cuckooing,

Your little mimic voices stirs to music as ye go.

See there, the glimpse of grassy dales

Is gleaming through the larches,

And here, like dim cathedral aisles,

The gloom of beechen arches ;

The heather glows on every bank, the wild-rose on its
thorn ;

The woodbines o'er the dusky gean their golden gar-
lands fling ;

And there the flush of noontide rays, and here the blush
of morn,

Where fainting fair anemones lie left behind the
Spring.

And all flowers are blowing

To the fulness of their noon,

Where the Summer king is going

With his queenly lady June.

Her cheek is like the apple-bloom before it opens
fairly ;

She strews the ground with flowers around, with ever-
radiant hand ;

Her mantle-fold of green and gold is floating round her
rarely ;

We'll greet with love the rosy Queen that's coming
through the land.

Then wake the gladsome greenwood way,

With all your young delight ;

I've seen your fathers' hearts as gay,

Your mothers' eyes as bright.

And they are all the gayer, all the brighter are their
eyes,

For days they spent in merriment among the woods
of old ;

And they are all the gayer all, for happy thoughts that
rise,

And far-off hours like these recall all clad in robes of
gold.

Some brown as nuts in nutting days,

Some blushing red as maples ;

They rolled about the heather braes

Like rosy-cheek'd apples ;

And up and down the woodland brown the merry band
went dancing,

Their hearts as light as any bird's to memory and
me ;

As sunset beams on sparkling streams their bright young
eyes were glancing ;

Their voices sweet and happy feet kept time with
tuneful glee.

And hope may pour its richest store

With every promise true ;

Yet golden halcyons shine no more

Like those that shine on you.

And ye will seek, as I have sought, for beauty's fading
traces,

The footprints of the Summers where ye danced in
other years ;

And find that sunshine never dies when shed on happy
faces,

But lives through life-long memories, though maybe
fringed with tears.

Then dance away with merry din,

I love your laughter dearly ;

The linnet on his muirland whin

Could never sing so clearly.

The golden thrush, within his bush, the blackbird on
his tree,

Have kept their sweet-love songs to greet the bridal
joys of June ;

And far away the skylark's lay rings o'er the lowan lea ;

Oh, happy song of happy hearts with song and heart
in tune !

The rosebuds, with their ruby lips,
To Summer's kisses cling;
The larches' crimson finger-tips
Wave farewell to the Spring;

The chestnut's hyacinthine flower, the ever-fragrant
haw,

Are shedding balms through sun and shower, and
beauty where they stand;

The ancient oaks, like brave old kings, who kept the
world in awe,

All greet with love the rosy Queen that's coming
through the land.

Then make the merry greenwood ring
With voices sweet to hear;
As songs that fairy maidens sing
At milking of the deer.

It is the time when Summer, all his golden glory shed-
ding,

His joys on every corner, all his love on sea and
shore,

His path of light is spreading, for the bride that he is
wedding,

His radiant Queen in bridal sheen, his loved one ever-
more.

Then dance through all their rosy reign,
Be merry while you may;
You'll never dance so young again,
Though dancing every day.

The old divine emotion that is throbbing everywhere,
Is waking into beauty, and is breaking into song:
The ever-young whose raptures sprung when Eden first
was fair,
Makes hearts as light, and eyes as bright, and
blithe's the day is long.

There's joy in every blossom-fold,
There's peace among the leaves;
And all the sunshine turns to gold
Among the harvest sheaves.

But all the harvests are not when the grain is waving
yellow,
And brown October apples in their ruddy ripeness
fall!

Then gather sunshine while you may, to make your
Autumn mellow,
And let you keep, in after day, an open heart for
all.

WILLIAM FORSYTH.

ON SOME GUESSERS AT TRUTH.

FOR now wellnigh six thousand years mankind has been guessing at Truth, with what result its mythologies, philosophies, wise sentences, and the rest may declare to those that read them. That the Truth itself has been meanwhile declared, nay, has been declared from the beginning, has proved little check. For most of those years it has been known in the narrowest circle, a mere pin-point of light

within a sphere of darkness; and even now it is but advancing with a slow and irregular step, and as if fighting its way over the barricades. Four-fifths of men are still reduced to guesswork for any knowledge of the things that are, and failing the sun and stars, make shift to grope their way by a fitful firefly radiance. But even with positive truth known as widely as may be, there is abun-

NOVALIS.

dant room and perhaps necessity for guessing. For the truth is so manifold, and by its nature hidden, that although discovered in its outline, various of its parts are still shrouded, and to be humbly guessed at rather than rudely unveiled. And if the True Light now shineth, and all that are not blind may see it; yet on how many ulterior and distantly related truths it falls, not so much revealing them as revealing that they are! To take

truth in its most positive form, as contained in the Scriptures, is there not room and demand for abundant guessing concerning the meaning of its last solemn words of "Revelation;" and concerning those higher and reconciling truths that shall unite what we see at present as the opposite poles of truth; and concerning many matters purely spiritual, but left over as yet to speculation divinely guided? While, if we wander out into regions less

known and dimly lighted, this necessity of guessing becomes more evident. Every fresh fact sets out some new relation of truth; but then what relation? Even science will not always yield to the thrusts of logic, but will sometimes open its knottiest secrets to the "inspiration of a guess." And if the patient and pregnant guesses of certain noted thinkers have given us higher and more satisfying knowledge of physiology and psychology and magnetism, it is but rational to expect similar and larger gains in morals and politics, and in the infinite bearings of the spiritual world upon the material.

Guessing of this sort is no light and haphazard matter, a sport for idle hours, or for other than serious and profound minds. Least of all is it that shrewdness and cunning of insight into motive, which it has come to mean in transatlantic speech, and of which Mr. Lowell has fitly sung in his last *Yankee Idyll*,

"Ole Uncle Sam, sez he, I guess,
I on'y guess, sez he."

Those only who come with reverent and tractable minds to the truth they know, are likely to guess at the unknown; those who search after it lovingly for its own sake, and serve for it in patient and long and rigorous servitude. Like the well-known ideal Knight of Nature in *Glaucus*, they "must be of a reverent turn of mind; not rashly discrediting any report, however vague and fragmentary; giving man credit always for some germ of truth, and giving nature credit for an inexhaustible fertility and variety, which will keep him his life long always reverent, yet never superstitious; wondering at the commonest, but not surprised by the most strange; free from the idols of size and sensuous loveliness; able to see grandeur in the minutest objects, beauty in the most ungainly; estimating each thing, not carnally, as the vulgar do, by its size, or its pleasantness to the senses, but spiritually, by the amount of Divine thought revealed to him therein; holding every phenomenon worth the noting down; believing that every pebble holds a treasure, every bud a revelation; making it a point of conscience to pass over nothing through laziness or hastiness, lest the vision once offered and despised should be withdrawn; and looking at every object as if he were never to behold it again. Moreover, he must keep himself free from all those perturbations of mind which not only weaken energy, but darken and confuse the inventive faculty; from melancholy, testiness, pride, and all the passions which make men see only what they wish to see."

It is an ideal picture, no doubt, but at least it may set forth that the guesser at truth must be a truth-seeker, qualified for the search by proper gifts of mind and temper, and by a diligent and

unceasing training. Not but that there have been strange guesses, without guessers, so to say, and so strange that they almost bear in them the mystery of some dim prophetic vision. They may be stumbled on in the traditions and sacred books of most heathen nations. Paul, at Athens, could appeal to a poet who sung of men as the offspring of God; a Latin poet made the golden age centre in a marvellous child. The legends of Buddha and Zoroaster represent each as born of a virgin; according to Cæsar, the Gauls offered human sacrifices because a man was the fittest sacrifice for sins. The Karens looked for a coming of God with a resurrection and a new creation; and there is a saying in India that the day will come when there will be neither idol nor caste. But, passing by these and many similar, which can be traced to no definite source, but have lain in the heart of heathendom like "unconscious prophecies," as they have been called, there are those others that have been guessed out, with more or less of conscious effort. We have those pregnant sayings of Socrates, whose dialogue was but the method of right guessing, and by which, as De Quincey somewhere wittily says, a man was fairly "backed into the well of truth." Eupolis, one of his scholars, gets the credit of a hymn which in one stanza contains the original of Pope's "Jehovah, Jove, our Lord;" and in another is singular for its nearness to the Gospel:—

"A greater hero far
(Unless great Socrates could err),
Shall rise to bless some future day,
And teach to live and teach to pray."

And how rich in such border-truths are the beautiful and solemn thoughts of Plato—the most striking of all antiquity for their marvellous approach to Christian verity; such as his picture of the soul as a chariot drawn by two horses, black and white; or again, as a "tyrannized city, poor and starved, and that cannot do what it would;" of the wise man as the rightful king, of the just man as he who must pass through tribulation, and (capable surely of a fuller meaning than Plato's), "who will suffer stripes, bonds, the rack, will have his eyes burnt out, and after all other sufferings will be crucified." And if we turn to Rome, there are other voices as clear, and uttering words that tremble on the verge of truth, like those of Seneca, for example: "We reach innocence through sin;" "No one of himself is able to rise out of the depths, but must clasp some outstretched hand;" or that profound saying of Pliny: "Nothing is more proud or more wretched than man." Nay, so frequently does Seneca speak "almost as a Christian," that certain learned German treatises have been written to prove his familiarity with the writings of Paul; and Jerome, as is well known, calls him "our Seneca."

It is curious to linger among these old Pagan thoughts; to find how near they sometimes touch upon the truth; how, like distant mountain summits flushing with light before the sun has risen, they seem to catch the earliest rays that issue from the Cross. But it is tantalizing as well. You are always on the point of a discovery which is never made, winding through "passages that lead to nothing," and in the reverse of the Apostle's picture, seeming to have all things, yet having nothing. The transition to the Christian thinker places us in an entirely other world, with our own familiar sky as it is traversed by its daily sun and set with its familiar stars, with the well-known objects and suggestions of home, with things positive and real, that we apprehend by the same unconscious habit by which we live and move. The Christian thinker may be still a guesser, but thought is no longer one great guess. It is based upon the common verities of revelation; on these it builds its speculations concerning the yet unknown; by these it shapes its wise sentences, and welds the truths of God into the facts of life; out of these it springs, and back to these it ever returns. Some of the earliest of such Christian guesses are crude enough, and with a great baldness and sameness of form: at times, however, with the distinctness and pregnancy of a proverb; often the simple setting of words of Scripture; not seldom trifling and fanciful. Their range is narrow, extending over the teaching of life and the experience of the Christian, but avoiding philosophy, science, and politics. Perhaps those two collections that have floated down uninjured into our present century, as they are the readiest, so they afford the best examples, and do really contain some

"Thoughts whose very sweetness yieldeth proof
That they were born for immortality."

About the middle of the third century, Sixtus was Bishop of Rome for rather less than a year, his episcopate being shortened by martyrdom during the Valerian persecution. Brief as it was, it has given his name to a small collection of *Wise Sayings*, and of which, perhaps, he was the author. At all events, from his time they had considerable circulation, and have even been translated into modern tongues. Some of these sayings run thus:—"It is by no means a small matter not to despise small matters." "Unrighteousness has its root in selfishness." "Whatever a man has beyond his need is his enemy." "A lust is insatiable, and therefore is it always poor." "A wise man is always like himself." "The flatterer of the wicked is more wicked than they." "It is better to be overcome, and yet speak the truth, than to lie and overcome"—(with which may be compared Shelley's well-known but terrible saying about

Plato and Malthus). "All wounds are light but a word"—(in the Hindoo *Kûral* it is said:—

"The wound may heal, though from a burning brand,
And be forgotten; but the wound ne'er heals
The burning tongue inflicts").

"Do great things although thou dost not promise them." "It is pride that makes us bear grudgingly the tabernacle of the body." "Living is in our power, but right living is not."

About a century after these words had been issued into the world, one Nilus was Exarch of Constantinople. He was of good family, still young, happily married, and with certainty of a brilliant career. Chrysostom was preaching in the city, and Nilus bowed to the eloquence of him of the golden mouth. Now it was the spring-time of monachism, and the world was corrupt and dying, and the Church in the capitals was swayed by intrigue. And to Nilus, as to many another, to the man of the world most of all, there seemed to be no escape and no purity but by fleeing into the desert. His wife and daughter retired to an Egyptian cloister, one of those calm, lonely spots along the Nile, such as have been inimitably painted in *Hypatia*. He himself, with his son, withdrew to the grim solitudes of Mount Sinai; and there, among the awful shadows of the place, he dwelt for thirty years, asking no fellowship but His at whose presence the earth had shaken, and whose voice still spoke through the thunder as it rolled round the jagged peaks. There he meditated, and toiled at his herbs, and corresponded with his friends, and when he died, left near twenty books and a thousand letters to the future printer. They were ascetic, such as a monk must inevitably write, shutting out from him the healthful, loving intercourse of his fellows, and moving within the ever-narrowing circle of his own life. But they were the thoughts of a manly and vigorous thinker, who knew the world he had deserted, and, from a distance, watched it with much interest, eagerness, and wisdom; a man who is clearly distinguishable even from the monks of his time, by the breadth of his views, his sagacity, the simplicity of his gospel. He also, in those solitudes, searching for the truth, put it into words of power,—few, concentrated words,—in which it has been kept for many generations. To any one curious about the monks of the East, there are other of his writings richer in information; but to the guesser at truth there is none so interesting as the *Capita Parænetica*, from which some sentences may be taken at random:—"Rejoice not over the bloom of thy life for the flower of grass withereth at the touch." "The ear and the tongue are ever in danger." "Let thy mouth be filled with psalms and prayers, for the evil spirits flee at the name of God." "Drive away wicked thoughts by good." "If

thou wilt have the devil weak, put away thy sin ; for if he lose his wings he is no bigger than a sparrow." "Suffer affliction; the virtues grow beneath, as the roses blossom from under the thorns." "Hold idleness to be the mother of sin; it both robs thee of the good thou hast, and hinders thee of what thou hast not." "The joys and sorrows of this life are like a shadow and a wheel: for like a shadow they abide not, and like a wheel they roll round." "Always expect death, but never fear it." "Adam's children must work; Eve's children must suffer."

Now, there is truth, sometimes profound truth in these sayings, and it is singular to find them so free from monkish extravagance and corruptness of doctrine; nay, upon occasion, protesting against both. But two examples may well suffice for a large class, not always careful to rise above being mere utterers of sentences. Such as they are, their art has perished with them, and probably the absence of any legitimate successor accounts for their surviving so many abler works. They represent, moreover, exclusively the inner life of the Christian. But while to a certain mental type and mental condition they will always be welcome, and an age that is marked by the revival of devotional literature is likely enough to witness the revival of Sixtus and Nilus and the rest; it may be hoped that some other Christian guesser will arise, moving within less narrow and arbitrary limits, with more creative energy of thought, and essaying rather than shunning the problems of modern life and modern science.

As for what of guessing has prevailed in these later centuries, it has taken a most free and comprehensive range, and assumed a set character and culture very different from earlier occasional and accidental efforts. It is now indeed a distinct form of literary effort, with its special crowned names, and special critics and admirers. Felicity of expression was always essential to it, but this felicity is cultivated and polished up to an unusual brilliance, and in cutting the diamond to make it glitter, it is sometimes reduced to a marvellously small jewel. On the other hand, a notable laxness has crept in as regards terseness of expression; for, while the proverb has been left on the beaten highway, the path of the guesser wanders "at its own sweet will" through ever-varied fields and flowers of thought. Nay, it is sometimes difficult to see wherein his writing differs from mere unfinished work, which a man's idiosyncrasy, or, more intelligibly, laziness, has prevented him shaping into a comely and harmonious whole; a reproach to which one of the best books of the kind—that of the brothers Hare—is not unjustly exposed.

Perhaps Joubert in one direction, and the

Guesses at Truth in the other, represent the extreme limits to which this kind of writing may be pushed. A step over on either side would be fatal. A man may polish a sentence till it sparkles, and yet it may neither be a "thought," nor worth a thought. Mere verbal antithesis is only a trick of words, unless it rings with the truth; and it is just that trick from which the real, and humble, and earnest thinker will recoil. But the recoil is not to throw us down among the jottings of Brown's commonplace book, or Jones's efforts to comprehend the universe, or Smith's pencillings by the way, none of which betray the faintest polish, and in which there is nothing to finish, for it cannot be said there is anything begun. Thoughts of the true kind, guesses at truth, must have a separate completeness. They represent the results of the writer's reflection on a given subject. He may express that with exceeding point and brilliance, or may choose a more homely, unaffected, even rambling style. But to whatever length the guess runs, it must bear being detached and looked at apart, and have a unity in itself. And it is the peculiarity of some minds, that their thoughts lie detached, and that they have no wish or power to bring them together into one system. There are books, of which every one feels the real value lies in the looser and informal notes, books which ought to be written in notes; and there are thinkers whose loose, almost slipshod utterances by the way, are worth more than any of their formal and pretentious efforts. These are already born guessers, and need no more than the culture of their special faculty. For though every man has, at least once in his life, guessed earnestly at the solution of some problem or other of existence, comparatively few have the power of mastering such thoughts so as to make them intelligible. And of those who can, it is only some who busy themselves with such solutions. So that, while every man is guessing at some truth, the guessers, so-called, are rare.

We can reckon only in our modern period two or three names in England, and as many in Germany, and not many more in France. As for those of other countries, it does not much matter, for they have had no influence upon the thought of Europe. Each country appears to have a distinct individuality. The German thoughts are mystical, busying themselves altogether with the higher spheres of truth, struggling with the most vexed questions of metaphysics, soaring so high and so near the sun, that the unpractised eye drops from them dazzled. Not that they are unintelligible, but on the brink of it, and you follow them feeling painfully near the edge. They represent fairly enough a speculative people, whose thoughts outrun their acting, and who search into the ele-

ments of being, while others, taking them for granted, perhaps on insufficient grounds, are raising up great national histories. What Englishman would have thought out such thoughts as these of Novalis? "Death is nothing but the interruption of the interchange between the soul and the world." "Love is the Amen of the universe." "The curve is the triumph of free nature over rule." "Bodies are thoughts precipitated into space." "The woman is the symbol of goodness and beauty; the man is the symbol of truth and righteousness." "Every science becomes poetry after it has been philosophy." "Mathematics is only common elementary philosophy; and philosophy is only higher mathematics." "Much scepticism is nothing but unripe idealism." "We can know nothing of ourselves; all genuine knowledge must be given us." "All arts and sciences rest on partial harmonies." "In the *I* we are all in fact perfectly identical; from that we separate into individuality. *I* is the central point." "Speech is for philosophy just what it is for music and painting, not the right medium." "Philosophy is the *Poëm* of the understanding." Not that all his utterances are of this sort, but that this is their prevailing tendency presented in examples as intelligible as may be; for there are some so wild and mysterious, and awfully daring in their flights, that they seem at first little better than word-puzzles. Yet that they are not likely to be that, such golden sayings as these may show—*ex magno tollere acervo* :—"The poet understands nature better than the man of science." "Poetry heals the wounds which the understanding makes." "Poetry is the absolute real. This is the core of my philosophy. The more poetical the truer." "Most revolutionists do not know what they would—form, or no-form." "There comes an energy out of sickness and weakness, and it works more mightily than the true, but, alas! it ends in yet deeper weakness." "Science is only the one half: Faith is the other." "Prayer is in religion what thought is in philosophy." "The whole life is public worship." "The letter is like a temple or monument; without meaning it is dead." "Where children are, is a golden age." "Many a man lives on better terms with the past and the future than the present." "Spectres rule where there is no God." "There are many flowers of heavenly origin in the world; they do not flourish in this climate, and are properly heralds, clear-voiced messengers of a better existence: Religion is one; Love is another." "History is a huge anecdote." "Genuine innocence is as little lost as genuine life." "God is only known [comprehended] by God." "A people, like a child, is a separate educational problem." "The less the work, and the slower, so much the

nearer being perfect. The more one can do with little, the more one can do also with much. If you know how to love one, you know best how to love all." "He who will seek God once will find him everywhere." "The preacher must first seek to rouse enthusiasm, for this is the element of religion. Every word must be clear and hot out of the heart." "Philosophy should not answer more than it is asked." "To contrast vice with virtue is to do it too much honour." These are thoughts, one might say, of remarkable plainness, not burdened with any superfluous mysticism of expression. If there are others that seem doubly or trebly veiled, may it not be supposed they also are uttered as simply as may be; that it is the remoteness and profoundness of the thoughts that make them wear so strange an aspect? For that many of them have that aspect there is no manner of doubt, and one who is reputed the least intelligible of English writers, and to whom, if to any, a German thinker might be supposed an open secret, has himself reported that "here we cannot always find our own latitude and longitude, sometimes not even approximate to finding them; much less teach others such a secret."

The thoughts remain much as Mr. Carlyle has left them, the delight of a few, but often a puzzle and mystery even to them. How they shaped themselves through so simple and brief a life is itself a mystery; and, this taken into account, Novalis stands first among all the guessers at the true. A childhood passed in a strict Moravian household, office work requiring constant attention, the seclusion of a country residence, and death at twenty-nine, out of these slender materials his life was built,—these and such others as lay in his own nature. That nature seems to have been as tremulous with passion as Shelley's, whom he resembled in more respects than an early death: a richly sensuous, but at the bottom essentially reverential and religious nature. He had much of the poet's gifts, and in their finer and subtlest form, yet he wrote but few poems: and while his speculations drew him away to the vast scheme of an Encyclopedia of the Sciences, in which each should mutually illustrate the other, the Moravians were filling the Church with the exquisite music of his hymns. Like Pascal, he was a master in mathematics, and had a united quickness and accuracy of apprehension that enabled him to acquire a new science with amazing rapidity. Like Coleridge, he speculated much on the philosophy of religion, and towards some final system in which the sciences would have their proper adjustment to religion, as of planets to their sun. In such transcendental speculations, he seems to move with ease, and to pursue them with singular daring into regions where the mind falters to

follow him ; while in common life, he was practical, sifting each detail, and imposing on himself mechanical labours from which most clerks would have shrunk. The dominant impression he leaves is of a mystic speaker ; and we recall his friend Tieck's picture of the tall, slender figure, the wavy curls of brown hair, the transparent skin, the brilliant eye, "the shape of the head and expression of the features like Dürer's St. John," and how he would sit through the night with Schlegel and the rest, pouring out the thick-coming thoughts, and lighting up the darkest and hardest by the dazzling play of his imagination. But it is worth noticing the qualities that went to make up his character, and that, being a mystic, he could be thoroughly intelligible on other men's ground, and thoroughly practical on his own. Instead of apprehending less of truth than other men, is it not possible that the true mystic may apprehend the most ; also, that he is not necessarily an idle, profitless dreamer, but may be a serious, reflective, diligent man ?

If in Germany the guesser at truth is somewhat of a transcendentalist, in France, it must be allowed, he is clear of whatever obscurity that word implies ; and while the thoughts of Novalis are loose and straggling, those of Pascal and others are orderly and proper as soldiers on parade. They excel all others in precision and system, as their language excels others in preserving delicate, sharp outlines of meaning, and nice subtleties of division. Pascal, Coleridge, and Novalis, each formed the conception of a vast inclusive religious philosophy ; each has left his thoughts upon it ; each was led to conclusions far in advance of his time, and to investigations in advance of his conclusions. Novalis may be said to have penetrated the farthest, and formed the grandest plans, and to have had the subtlest intellect. Pascal has left the nearest approach to a system, and confined himself within the narrowest limits. He is occupied mostly with what is historically true, and in that mostly with the Christian verities. His thoughts lean to a more accurate setting forth of Christian doctrine, philosophically accurate,—so that the dogmas of the Bible may be seen to harmonize with the results of philosophic inquiry ; and his speculations move much within the sphere of religious experience and consciousness. There is most genuine gain to be drawn from him, for he is the most positive of the three in his results, and troubled himself less with those faint, far-off nebulae of truth, that we have as yet no power to resolve. No one can take him up without feeling that he is a man of uncommon reflective power ; no one can lay him down without feeling that he is a man of uncommon clearness of speech. As a mere writer of thoughts, he is not only first of the three, but first of all. And as a

Christian thinker, and one in whom the Christian will find a fresh, perpetual strength and pleasure, he is specially pre-eminent. To take but one or two of his sayings—and they are taken just as they come to hand,—it would be impossible to find better or finer things than—"To know God and not to know our misery, is pride. To know our misery and not to know Jesus Christ, is despair. But to know Jesus Christ delivers us from both pride and despair, because in him we find God, and our misery, and the only way to repair it." "Not merely do we only know God by Jesus Christ, but we only know ourselves by Jesus Christ." "Jesus Christ says the grandest things so simply, that it does not seem as if He had thought them, and nevertheless so clearly, that it is manifest he thought them." "Holy Scripture is not a science of *esprit*, but of the heart." "The incredulous are the most credulous. They believe the miracles of Vespasian in order not to believe the miracles of Moses." Or that, well known : "The multitude that is not reduced to unity is confusion ; the unity which does not belong to multitude is tyranny." Or Neander's favourite motto : "All contradictions are reconciled in Jesus Christ." Yet Joubert is a more national type. His mind seems to let off its pointed sayings as you might let off fireworks. You never meet him in undress. He hands you, as his most recent commentator has well said, a tray of diamonds. You forget that you were in search for truth, and not for clever sayings. The whole has too much the air of a work of art, and that art too nearly mechanical. The truth is not very much, nor very far to seek ; the philosophy is not so profound ; but each saying represents a definite and limited thought, and each is presented with an admirable perfectness of expression. Coleridge's *Aids to Reflection*, on the other hand, are only divided wilfully into so-called aphorisms. His mind was not of a character to break up into fragments, each of which would contain a certain completeness in itself. And while here and there you are surprised by a happy thought standing out by itself, or a guess at some far-off possible truth, the whole runs together as imperatively as if the divisions were all removed. The portions of his system that he has left are fragmentary, only because the whole is unfinished, and it must always be read as belonging to that whole. Had he given the pains, he could have done better. One-hundredth part of the care bestowed by Joubert on a page, would have established for his book a tolerable reputation in aphorisms. But at least there is this compensation, that he makes you feel his love and honour for truth ; that it is not, as too much with the other, the man of the world, the man of letters, who speaks, anxious to set forward his talent to advantage, but the man who recog-

nises truth to be so noble and worthy, that he has fairly lost sight of himself.

Better types however among our English writers are Lord Bacon and the Hares. Bacon's *Sentences*—called *Elegant* by some strange blunder—are instinct with a healthy freedom and naturalness and power. To read in the *Guesses at Truth by Two Brothers* is like wandering over the broad English downs, while the wind is curling up fresh and crisp over the grass. The firm moral grasp of these English guessers is noticeable; their practical sense, and great breadth of wisdom. There is something characteristic even in their downright blunt honesty; in their love of moral and æsthetical questions; in their free handling of political science; in their reverence and religious basis. "Without good nature," says Lord Bacon, "man is but a better kind of vermin." "The master of superstition is the people; and in all superstition wise men follow fools." "A civil war is like the heat of a fever; but a foreign war is like the heat of exercise, and serveth to keep the body in health." "Suspicious among thoughts are like bats among birds; they ever fly by twilight." "The best part of beauty is that which a picture cannot express." "Extreme self-lovers will set a man's house on fire, though it were but to roast their eggs." "He that cannot see well, let him go softly." And these from the *Guesses at Truth* are not unworthy to be beside them:—"The intellect of the wise is like glass; it admits the light of heaven and reflects it." "The ancients dreaded death; the Christian can only fear dying." "Friendship is love without either flower or veil." "Hell, a wise man has said, is paved with good intentions. Pluck up the stones, ye sluggards, and break the devil's head with them." "Surely half the world must be blind, they can see nothing unless it glitters." "People stare much more at a paper kite than a real one." "The most benighted persons I have known, have been in some things the most sceptical. The most sceptical are often notoriously the greatest bigots." "Be what you are. This is the first step towards becoming better." "Self-depreciation is not humility." "None but a fool is always right; and his right is the most unreasonable wrong."

To do anything like justice to this book would, indeed, demand longer extracts. Its happiest utterances are those in which there is least of the apothegm, and throughout it represents the fullest interpretation that can be given to its technical title. But of its kind we have no English book like it, none so compact of ripe and suggestive thoughts, nor so nearly approaching that ideal of what *Guesses at Truth* ought to be.

Other guessers no doubt there are, though the great world shall never hear of them, like ripe-hearted, genial Claudius, sitting in his poet's corner at Wandsbeck, or even young Novalises, burdened with mystery of vague, limitless thought. And if men say *cui bono*, is not the truth reward sufficient for those at least who value it? The rest are likely to guess but little, or move an inch out of the safe road of accepted commonplace. For those who do venture, and with honest purpose of discovery, there are infinite and abundant pleasures, joys like Columbus's when he touched the new land, or Le Verrier's when he found his planet. Our world is still full of hard and tangled problems; may we not guess at the loosing of them? Science is not rounded off like a measured and definite sphere; is there not yet some further region to him that will manfully go out and seek it? Are there not certain great gaps in our knowledge, confusions in the things we know? May they not lead the quiet and patient thinker to those truths that will fill up the one and explain the other? Nay, even in spiritual wisdom how much each generation learns from the last, how much has still to be learnt! But Christ is absolutely true, the point whence we start and where we must end. From Christ and to Christ includes the whole circle of our knowledge and the whole circle of our uncertainty. All truth and all ways to truth must end in Him who is the Truth and the way. Being in Him, what is unknown need not perplex us, cannot baffle us, for He knows it, in whom are hid all treasures of wisdom and knowledge. And above all, we have by Him that knowledge which is eternal—whatever way human guesses may shift—of a Redeemer from the woe, and wreck, and curse of sin, the knowledge of God and Jesus Christ whom He hath sent.

S. W.

SUMMER EVENING.

WITH what calm grandeur comes the summer eve,
 When o'er the forest-crownèd hill the bright
 Far-beaming Sun spreads through the heaven his
 light,
 And golden fringes to the clouds doth weave
 That overhang the portals of the west.
 And still towards the horizon sinking slow,
 Among the woods his deepening lustres flow,

And shadowy gold upon the grass doth rest,
 And while the purpling clouds his pomp receive,
 Less proudly glides along the eastern sky
 The Moon, from out the mists emerging dim;
 Scarce seen within the heavens' serenity.
 And distant sheep-calls tell that night is nigh,
 And o'er the earth soft shades of twilight swim.

JOHN HOLLINGSHEAD.

At Home in the Scriptures.

A SERIES OF FAMILY READINGS FOR THE SUNDAY EVENINGS OF JUNE.

FIRST EVENING.

WHEREIN CHRISTIANS ARE OF THE WORLD.

"They are not of the world, even as I am not of the world. I pray not that thou shouldst take them out of the world."—JOHN xvii. 14, 15.

How carefully the Great Teacher guards his doctrine, lest dull scholars should on either side misapprehend his meaning! Christians are indeed no longer "of the world;" but they have not been taken "out of the world." The converted and the unconverted are in many things entirely alike, and in many things totally unlike each other. The difference between the saved and the unsaved is not like the difference between angels and men, or between men and brutes. It is of first-rate importance that the distinction should be understood, and represented to be neither greater nor less than it really is. The straight line of truth lies in the middle, and error on either side is fatal. Those who falsely diminish the difference will be lulled into spiritual carelessness; those who falsely exaggerate it, will be driven into despair. If the chasm that divides saints from sinners is infinitesimally small, I may keep myself easy in my sin, for I can step over into safety on the first alarm of danger: and if that chasm be very wide, it is vain to attempt the passage. Extremes meet here. To make too little of the difficulty, and to make too much, lead practically to the same result; and that result is to do nothing. In the one case it is the inaction of levity, and in the other the inaction of despair; but in both cases it is inaction.

A renewed man is still a man in all the essential attributes of his nature. "If any man be in Christ, he is a new creature," but he is not another or a different creature. In natural history an individual cannot pass from one species or one genus to another. A thorn cannot become a vine: a lion cannot become a lamb; but a flower or a fruit-tree may, by engrafting and culture, undergo a more beneficent change as to beauty and worth, than if it had passed from one species to another. An apple-tree may be changed in nature from barrenness or bitterness to the bearing of wholesome fruit, and yet remain as much as ever an apple-tree. So, while a man cannot in any essential feature of his constitution, cease to be a man, he may notwithstanding undergo a more beneficent transformation. He who is made a new creature in Christ is still a man, and yet he has obtained a more valuable promotion, than he would have possessed if he had by the fiat of the Almighty become an angel.

It is our business here to guard the truth first on the right hand, and then on the left. We shall enumerate, first, some points in which Christians are of the world like other people; and next,

some points in which they are not of the world, but of God.

1. They are of the world in the constituents, construction, and vitality of the body. According to the Scriptures, man was made from the dust of the ground. Here, as in many other things, Scripture has anticipated philosophy. The first man was made of dust, and all men are dust to-day. From dust we have come, and to dust we shall return. There is great beauty in the form and colour and movements of the human body. It is fearfully and wonderfully made: it is a glory to God its maker; but however excellent the workmanship may be, the stuff is still only dust.

It is of use to note here what has been discovered by accurate observation in modern times, regarding the connexion between the living body and the dust of the ground. All the elements that constitute the body lie in the earth or float in the air. We are continually taking them in, and continually throwing them off. Of the particles that constituted my body ten years ago, there may be few or none remaining now. The body is buried several times piecemeal during life, as well as once in the lump at the close. In imperceptibly small portions, the matter of which it consists is carried off by respiration, perspiration, and the other functions of life: while through the food that we eat, and the air that we breathe, new matter is introduced to supply the place of that which has been thrown away. Lime, for example, is an important constituent of animated bodies, especially of their bones. This element lies first in the land: thence it is taken up and elaborated by the functions of vegetable life, and fused into the substance of grain. Thus in eating bread we are supplying material of strength to the bones within our bodies. Farmers have learned to grind bones and cast them on the land, that the growing corn may absorb the constituents from the ground, and that living creatures may in their turn absorb these elements from the grain. Thus the dust of the earth circulates as busily, as mysteriously, and as beneficently as the water of the sea. As the water rises from the ocean to the sky, thence drops on the mountains, and flows back again by rivers to the sea; so the atoms rise from the earth through the corn stalks, thence find their way into animated bodies, and return in due time to the dust from which they came.

"What is the age of your boat?" inquired a

passenger, as the ferryman in a remote rural valley was leisurely rowing him across the sluggish stream. "It was an old boat," replied the countryman, "when I received it in charge thirty years ago, and it is the same boat still; and yet not an atom of the old boat is here. I have renewed it all several times, replacing one plank this year, and another plank the next." The change in the constituents of our bodies is as frequent and as complete, although the processes of nature are indefinitely more finely graduated and imperceptible than those of art. To know that our bodies are formed of dust, and that the dust of which they are composed is in constant circulation, exalts the glory of God, and does not dim the hope of man. I am the same man that I was twenty years ago. I cannot get, and I do not want any surer evidence of my identity than I now possess. The evidence is perfect. To doubt it were madness; and to reason against that doubt, were argument thrown away. This humbling discovery helps my hope for the world to come. I shall not be troubled by the question, With what body shall I rise? even as I refuse to be troubled with the question whether I possess to-day the same body that I possessed twenty years ago. I live to-day, although what has become of the constituent elements of the body I was born in, I wot not. Even so I shall rise again, and if I am in Christ, I shall rise in glory; I shall not be troubled about the particles of matter whereof God will constitute the immortal bodies of his own redeemed children.

2. In the various faculties which constitute the intellect, the renewed man remains still a man—nothing more, and nothing less. The mind's eye may be closed or open, the mind itself may be diseased or healthful, but these differences of condition do not constitute varieties of kind.

3. Christians, as long as they are in the body, are of the world like other men, in that their hearts and lives are tinged with varied impurity. The distinction between the disciple of Christ and the man of the world does not consist in this, that the one is sinless, and the other sinful.

When two streams, one pure and another filthy, meet and mingle in the same channel, the unclean imparts some of its own likeness to the clean water. Thus good and evil flow in parallel lines across the world, and the evil imparts its own dark hue to the whole united volume.

As a river in its course grows more and more turbid from two causes,—from friction on the earth of its own bed, and from the confluence of other impure streams; so the life even of Christians on the earth is stained both by evil thoughts that spring up within, and by the ingress of temptation from without. Brother, at the peril of your soul's eternity, you must not remain "almost," you must become "altogether," a Christian; but it does not follow that your whole being shall immediately be Christianized. Even when you are in Christ, you are not done with the evil that is in

the world; not until you depart and be with him, will you be like him, and see him as he is. The spirit of a Christian, at the best, is much tinged with the spirit of the world as long as he is here.

4. The disciples of Christ must remain citizens of the world until their Master call them hence. When he says, "I pray not that thou shouldst take them out of the world," he means to intimate that his desire is to keep them in it for a while. It was expedient that the Head should go away, but it was also expedient that the members should remain behind. Paul, although he longed to depart, confessed frankly that the necessities of the infant Church demanded a longer period of his care.

Nor is it enough that Christians remain in the body; it is necessary that they should mingle in the affairs of men. It is a capital mistake to suppose that, in order to serve God, you must shun the society of your fellows. You may be very devout, but the world derives no benefit from your devotion, if you flee to the wilderness or hide in a cave. "Ye are the salt of the earth," said the Lord to his disciples; but if the salt do not come into contact with the earth, the earth will derive no benefit from its pungency.

To retire from the world in person is not the surest way to avoid being of the world in spirit. In company, you may do good to your neighbours; in monkish solitude, you will certainly do harm to yourself. "Satan finds some mischief still, for idle hands to do." When you want to keep machinery from rusting, you oil it well, and keep it going. It is in a similar way that a human spirit may be kept sweet. I tremble for a Christian when he manifests symptoms of sourness, and avoids contact with the world, on the ground of the world's impurity. There is no safety for a disciple except in downright earnest activity, as long as the Lord leaves him in this world. Meditative retirement is precious if it is administered in small doses at frequent intervals, and as the means of invigorating soul and body for renewed work; but if you drink into it deeply, and indulge in it long, the locks of your strength are shorn. Meditative retirement is like sleep, necessary and precious at intervals, between the labour of to-day and the labour of the morrow; but if you observe a man sleeping in bed continuously through the day and the night and the day following, you may be assured disease has come, or is quickly coming. You must be "of the world" in this sense, although Christ is now your portion, and heaven your home; you must be of it, as one of its citizens; you must have your heart open to its griefs, and your hand busy in its affairs. Plunge into the thickest of it, and do what your hand finds to do. If the world is wicked, it has all the more need of one who fears God to mingle in its mass, and mitigate its evil. This is not the resting-place; this is the field of labour; and "there remaineth a rest for the people of God."

SECOND EVENING.

WHEREIN CHRISTIANS ARE NOT OF THE WORLD.

"They are not of the world."—JOHN xvii. 16.

1. By regeneration, they have passed from the world into the family of God. The second birth is as decisive and well marked as the first, if we possessed the faculty of discerning it. There is joy on earth when one is born; and there is joy in heaven when one is born again. Conversions are the birthdays that are recorded in the registers of Christ's kingdom. A king's strength lies in the multitude of his people. That kingdom prospers in which the births preponderate over the deaths. The difference between the two expresses the addition made to the commonwealth. But in the kingdom of heaven there are no deaths, and all the births are gain. All the king's subjects are the Father's children. The family is co-extensive with the realm. Every one of that innumerable company is admitted on a birthright title. "It is God that justifieth, who is he that condemneth?" Who shall forbid to the Father's children a mansion in the house, or a share of the inheritance?

You cannot be at the same time the subject of two independent governments. You may have property both in Britain and France, but in one or other you hold it as a foreigner. It is possible to transfer your allegiance, but in the act of becoming a citizen of France, you cease to be a citizen of Britain. You may retain on certain conditions your right to your property, but when you have transferred your allegiance to another sovereign, you have sacrificed a citizen's privilege. A similar law holds good in spiritual politics. As long as you are of the world, you have no part in Christ's new kingdom; and as soon you are admitted by birthright into God's family, you cease to be a citizen of this present evil world. "A stranger here" becomes your title and your character. The days of life are a period of exile. To depart and to be with Christ is far better. His call will be heard, when his time has come.

2. Christians are not of the world in spirit, character, and aim. This is the most obvious test whereby to try our profession. A tree is known by its fruits. The shortest and easiest method of illustrating the spirit of a Christian is to set over against it in contrast the spirit of the world.

Evil begins with each generation at the beginning. A very young child, when his will is thwarted, frets and kicks rebelliously against all that he knows of God and man. Here you have in miniature at once an infidel and a rebel. His own little self is the God whom the infant has set up to worship, and he rages like the sea in a storm against everything that seems to interfere with his idolatrous devotions. At the next stage, selfishness becomes more cunning, and falsehood more bold. You may have observed that when an insect is touched, it draws in its horns, and turns, and cowers, and runs, and tries to hide itself. Your eye follows it all the while, and your arm could reach it, and crush it at any moment. It is thus

that a child, arrived at the age of intelligence though not of maturity, stops short, when you cross the path of his selfish wickedness, and flings out his sting, and doubles, and lies, and flatters himself that he has covered his sin. You know it all: and if you leave him unpunished, it is in amazement at his duplicity, and pity for the premature hardness of his heart. When men are full-grown, their falsehood is more skilfully covered. They hide it in the heart of thick ledgers. Through those coverings a brother's eye may not be able to penetrate; but in God's sight all is open. The darkness hideth not from him, but the night shineth as the day. Thus, those who are alienated in heart, and by wicked works, strive against their Maker. The fool hath said in his heart, No God; but this saying of the fool does not cast God from his throne in the heavens, or hide from his inspection the wickedness that is done on earth. The carnal mind is in all things enmity against God. In one territory there can be only one king. No kingdom will less brook a divided allegiance than the little busy kingdom of a human life. There you cannot serve two masters. When the spirit of Christ comes in, the spirit of the world departs, as the night recedes before the dawn. The evil spirit is cast out, and the possessed man restored to his right mind, has taken his seat at the feet of Jesus. A new heart has been created within him. That mind is in him which was also in Christ Jesus. His treasure is in heaven, and there will his heart also be. Blessed are the poor in spirit, for theirs is the kingdom of heaven.

3. Christians are not of the world, inasmuch as they lie loose upon its surface, and are in some measure therefore independent of its movements. This is a point of great practical importance. The secret of living a happy life lies here. How miserable is the man who is glued by his heart's affections to the fashion or the gain of the world! If you are bound by your heart-strings to any earthly possession, your life is torn asunder when that possession slips away. A boy was placed in charge of a horse on the pasture. He tied the end of the halter round his own arm, and lay down on the grass to sleep. The horse started and ran off; and the boy's arm was torn from his body. Ah, if he had held it loosely in his hand, the animal might, indeed, have escaped, but he would have received no harm. It is thus that men foolishly bind, not their arms, but their very souls to some possession of the earth, and having made it fast, lie down to rest. When that possession falls away, as it often does in a commercial crisis or a civil commotion, like an avalanche from the mountain side, the man's heart is torn. When the miser's gold has gone, the miser is riven asunder. If he had held it loosely, he might indeed have lost the money, but he would have retained possession of himself.

A ship is safest in the deep sea. There is comparatively little danger to be dreaded as long as she has several fathoms of blue water beneath her keel. When her hull is bedded in the solid ground, she goes to pieces. As long as she floats loose, there is safety; as soon as she is fixed, she is gone. In this respect living men are like ships on the troubled sea of time. As long as one is free on all sides, and moves easily, he may, indeed, be made at times uncomfortable, but cannot be unsafe. It is when the immortal fastens himself by his soul to this shifting world, that he makes shipwreck sure.

4. Christians are not of the world in its destiny and doom. "God is our refuge and our strength, a very present help in trouble: therefore will not we fear though the earth be removed, and though, the mountains be carried into the midst of the sea" (Ps. xli. 1, 2). If the ground should give way beneath our feet, we must sink with it. If the convulsion should become so great, that the whole city and the land, as far as the horizon all around, should sink slowly into the caverns of the earth, making sure the death of every living thing that moved upon the ground, how eagerly would the helpless, perishing inhabitants look up towards the calm blue heavens, and how fervently would they wish for wings whereon they might fly away and be at rest! If at that moment a flock of birds should appear overhead, darkly relieved in the distance against the sky, and soaring safely through the air to some unhurt region of the earth,

a keener pang would pierce the souls of those who were sinking, at the sight of a safety which they could not hope to reach.

"O that I had the wings of a dove, that I might fly away and be at rest!" O that I were not bound to a perishing world! A better thing is within your reach. Not when flesh and heart are failing, not when the heavens and the earth are passing away with a great noise, not when the wicked believe and tremble, calling on the mountains to fall, and shelter them from apprehended judgment,—not then, but now, is the accepted time, now is the day of salvation.

Reader, have you stood beside a deathbed where blessed hope in Jesus was triumphing in a fainting heart, and beaming from a wan countenance: and beside another where, while the understanding remained unclouded, the spirit, oppressed by fear, held frantically by the corrupting clay, and was torn away, unwilling and desponding, into the unseen eternity? Look in memory and imagination on this picture and on that, and choose to-day your side. The desire is older than Balaam,—it is as old as sin—the desire, Let me die the death of the righteous, and let my last end be like his. That fond thought about life's solemn close will be very precious, if it take effect now in life's busy course. Hear first the Saviour: "I am the resurrection and the life; he that believeth on me, though he were dead, yet shall he live." Hear next, the saved: "Though I walk through the valley of the shadow of death, I will fear no evil; for thou art with me."

THIRD EVENING.

THE GRACE THAT BARNABAS SAW.

"Who, when he came, and had seen the grace of God, was glad, and exhorted them all, that with purpose of heart they would cleave unto the Lord."—Acts xi. 23.

"THE persecution that arose about Stephen" dispersed the disciples, and the dispersed disciples preached the gospel wherever they went. The blast which the adversary raised had the usual effect of spreading the sowers and their seed. Some of those involuntary missionaries found their way to Antioch. Their preaching was eminently successful in that rising capital of the East. "The hand of the Lord was with them, and a great number believed, and turned to the Lord." A wide field lay before the labourers; they cultivated it diligently, and were soon cheered by the sight of a harvest waving like Lebanon. Great numbers were converted, both of Jews and Greeks.

This thing could not be kept in a corner. The rumour of it quickly spread. Friends and foes alike published the tidings. The world, at one of its great central marts, was turned upside down by those Galilean teachers. In such a case those who love the change and those who loathe it spread the report with equal diligence. It reached the ears of those believers who had remained at Jerusalem. The Church immediately despatched a messenger to the spot, with instructions to examine and report. Barnabas was chosen for this

important mission. "He was a good man, and full of the Holy Ghost." He could discern between the chaff and the wheat. He was a man who might be trusted. He could observe with discrimination, and report with faithfulness. It were greatly to be desired that modern synods should adopt the same method in similar emergencies, and that they had equally judicious agents at their disposal. The plan was good, and it was well executed. Barnabas, sent by the assembled Church at Jerusalem as their commissioner, to examine and report upon the state of religion in Antioch, was the right man in the right place.

The result is briefly recorded under three heads:—

1. What he saw: "The grace of God."
2. What he felt: "He was glad."
3. What he did: "He exhorted them all."

I. What he saw; "When he came, and had seen the grace of God." What a man sees in any place depends, in a great measure, on what he looks for. Different persons observe different objects on the same spot. The taste of the observer goes far to determine what kind of sight he shall see.

An architect, visiting Antioch in those days, would have seen many gorgeous edifices in the city. He would have found much to attract his attention in the commingling of Greek and Roman styles with the indigenous oriental tastes of the people. A merchant would have examined the wares that were exposed in the market, and speculated on new openings for trade. A soldier would have scanned the fortifications, and measured their capacity to withstand a besieging force. In such a case, a Christian, too, has an eye in his head, and a bias in his heart to turn it in a particular direction.

Barnabas had an eye to business as well as other people, when he entered the eastern metropolis. The edifice that arrested his regard was a holy temple built of "living stones." To "win souls" was the gain he coveted. From the soldier's viewpoint, too, he looked upon the city, and considered how its teeming multitudes might be made the subjects of Christ the King. Barnabas came to Antioch looking for the grace of God, and he found it in abundance there. He saw also other sights; sights that made him weep. The multitude of that heathen city was wicked, and the wicked are like the troubled sea when it cannot rest. The corruption that met his eye on every side grieved, but did not surprise him. Here and there in the desolation he observed portions of that "new earth wherein dwelleth righteousness." These were the spots which he came to seek, and these accordingly arrested and absorbed his attention. When a navigator is sent out on a voyage of discovery, he observes wide tracts of sea; but he does not report that fact on his return. Green islands, great or small, protruding here and there above the level waters—these are the objects for which he searched during the voyage, and of which he speaks when he comes home again. Such was the errand on which Barnabas was sent, and such the method that he followed. Of a sea of sin that was spread before his eyes at Antioch we read not a word: his report refers exclusively to the grace that rose above it. As the coral islands of the Pacific rise and bask in the light of heaven, flowery and fertile, while their base is surrounded by the barren salt angry waves of an unfathomable ocean; so the group of Christians that clustered together as a church in Antioch, were rich in all the graces of the Spirit, although they had sprung from a dreary heathenism, and were surrounded by it still. He reports not the sin of men, but the grace of God.

Barnabas had grace in himself; otherwise he would not have seen it in others. When the Christian doctrine first spread in the empire, certain Roman philosophers, intelligent and impartial as matters go among men, reported to the Government that a vile superstition was inundating the land. It was the truth as it is in Jesus that was so characterized. It was the pure gospel, as it came from the lips of the apostles, transfused into the hearts and lives of believing men. Those who called it a vile superstition did not intend to give a false representation. The thing that was ex-

hibited before them was the very thing that Barnabas saw at Antioch. It appeared before them, but they did not perceive it. They did not see grace, because they did not possess it. Some persons among ourselves, not deficient in understanding and the power of observation, perseveringly and energetically represent earnest Christians as a set of loathsome, selfish hypocrites. They think that they are telling the truth, and doing good service to God and man; but they are in the main mistaken. Although they had entered Antioch in company with Barnabas, these men would not have seen the grace of God. They would have reported that they found the majority of the population living in undisguised vice, but that a knot of knaves might be observed in the crowd, who wore long faces and spoke in snivelling tones, and were tenfold more detestable than other people, because they falsely professed to be holier. Grace—that is, God's favour bestowed through Christ, and accepted in faith—is a spiritual thing, and it is "spiritually discerned." It requires grace in one man to enable him to observe and own grace in another.

But this grace, this favour freely bestowed, is nothing less and nothing else than free pardon of all sin given by God and accepted by men. He who has obtained it is forgiven through the blood of Christ, and renewed by the Spirit. He is reconciled and at peace. The quarrel between his conscience and the divine law is settled. He is in Christ Jesus, and therefore there is to him now no condemnation. The man no longer dreads God as an offended King, but trusts and loves him as a Father. Now this grace, as it comes in the covenant from God, is an unseen thing. It is a secret in the soul. How then can it be seen by Barnabas or by any other man? Like other things both good and bad, it is known by its fruits. Life is invisible; and yet you know well where life is; you know life by the actions of the living. It is thus that grace in human hearts becomes known; it is known by its fruits in human life. Grace in its germ is invisible to all; but those who, like Barnabas, have tasted it themselves, can detect its presence by the fruits which it bears.

The Christians in Antioch had abandoned idols. They bore the name of Christ, although it might expose them to persecution. They lived "soberly, righteously, and godly" in the world. They were patient in tribulation, and instant in prayer. The rich gladly helped the poor, and the poor industriously helped themselves. "Faith, Hope, Charity, these three," beamed in their eyes, and moulded their actions. There was a Great Exhibition in the Eastern capital at this time, and Barnabas went down to see it. It was a noble palace, built of living stones, growing together into a holy temple. He scanned it from its foundation on the Rock of ages, up to the brotherly love that effloresced richly from its loftiest pinnacles; and while he acknowledged a beneficent change in the life of those saved men, he ascribed it all to the goodness of God their Saviour.

FOURTH EVENING.

THE GLADNESS THAT BARNABAS EXPERIENCED.

"Who, when he came, and had seen the grace of God, was glad."—Acts xi. 23.

II. BARNABAS "was glad" when he saw the blessed effects which the gospel had already wrought in Antioch. Incidentally this throws light upon the character of the commissioner himself. Tell me what gladdens or grieves a man, and I will tell you what sort of a man he is.

The prosperity that made him glad was moral and spiritual, rather than material. Men of such an eye and such a taste are greatly needed in our modern commonwealths. We are carried away in a mighty tide of material progress, and although moral worth is gracefully owned as indispensable, there is a tendency strong and constant, to give it only a secondary place. The vastness of a nation's wealth and power will only make its fall more terrible, if it is rotten at the root. Physical resources, even when directed by cultivated intellect, do not insure the happiness or the safety of a people. Man has been made with a side for God and a side for the world; if the side that lies toward eternity loses its life, then, however actively the side towards time may perform its functions, the whole body is paralysed. We have railways, and telegraphs, and ships; and these, in their present measure of perfection, are new acquisitions made by our own generation; but the gospel is a more precious treasure, and our ancestors possessed it in its fulness long ago. I rejoice in the recent attainments of my country, for they are good; but I rejoice more in the "grace of God" that reigns in the hearts of my fellow-Christians, for it is better.

The grace or virtue that made Barnabas glad was possessed and exercised by others. There is not a finer feature in any man's character than the capacity and tendency to rejoice in a neighbour's prosperity. This is the mark of a true Christian, for it is a mark that belonged to his Master. Christ's command is, "Love one another, as I have loved you." Another law of the spiritual commonwealth is, "Put off the old man; put on the new man" (Eph. iv. 22, 24). When the old man is put away, his essential and characteristic affections go with him. Selfishness and envy are cast off, and a generous, self-forgetting love springs up in their room. "Charity envieth not."

But the fruit in which the Evangelist rejoiced not only grew in other hearts; it was planted, too, by other hands. It is easy for a minister of the gospel, if he be a true man at all, to be glad when he sees his own work prospering. It is a lawful and pure enjoyment. The apostle John experienced it: "I have no greater joy than to hear that my children walk in truth." It is pleasant employment for Paul or Apollos to come back to the garden which his own hands have planted or watered, and find the trees all laden with ripened fruit. But a deeper humility and a loftier faith are implied where an evangelist rejoices to see another man's garden prospering, while comparative barrenness broods over his own. Indeed, there is scarcely any

weakness into which even sincere ministers of the gospel are more liable to fall, than into that species of jealousy which consists in rejoicing less heartily over fruit which another hand has cultivated. In recent times, a spirit of more enlarged charity has been poured upon the Church. True workers rejoice in each other's success. Of late, Christians have frequently been called to visit scenes of revival, and have learned to be glad, like Barnabas, over a more vigorous and devoted spiritual life in some hitherto heathenish Antioch, than they had ever witnessed under their own inspection in a privileged Jerusalem. The sovereign Lord is still teaching us that converting power does not reside in an arm of flesh. To him every knee must bow; to him every tongue confess. He may, for wise purposes in his administration, employ in his work a feeble instrument, and lay the stronger for a while aside. Some unknown, ungifted refugees may successfully found a church in Antioch, while the greatest apostles seem to be spending their strength in vain.

Although only the gladness of the Evangelist is recorded, we know well that a great grief lay beside it in his heart, as he paced the streets of Antioch. He saw the evil as well as the good. The good shone more brightly in his eyes by contrast with conterminous evil; and the evil seemed blacker because the good was beaming so near. This is a feature that adheres to all the delight of Christians in the present world. Such is our condition here, that we cannot open our eyes to look on purity, without perceiving impurity lying near. It is even by the dark shade of contiguous wickedness, that we are able to trace the features of holiness among men. As a painter fills his background with darkness, deeper and deeper according as he desires to project his central figure more vividly into view, so, by the necessary conditions of our present state, the beauty of the new creature, implanted by divine grace in true disciples, is brought more brightly out by the surrounding of sin in which it is set. The sadness that sat silently on the heart of Barnabas, while he was making his inspection, did not destroy, but rather enhanced his joy. The heaving sea of wickedness that stretched on all sides as far as the eye could reach, made more lovely the green islands that were projected above its surface, and seemed to lie upon its breast.

The gladness of the deputy from the Church at Jerusalem was not a sentimental emotion terminating in the person who enjoyed it. It was an active outgoing operative passion. It was a spark that lighted up a flame within the man; and that flame quickly spread over surrounding objects. A selfish joy is an ignoble thing. The gladness that goes no farther than the childish exclamation of the ancient idolaters, "Aha! I am warm," as they sat round their fire, is a matter that belongs to man

in common with the brutes. But the joy which thrills in a Christian's heart at the sight of "grace" in the life of men, makes its higher nature known by its instant energetic action. When a true Christian is made glad by seeing some grace, he forthwith begins to labour with all his might for more. It is a well-known law, operating both in the temporal and in the spiritual spheres, that while the heart is hopeless, the hands also hang down. The desponding cannot work any deliverance. Glad hope that makes a man happy, makes him also useful. Had Barnabas seen no good in Antioch, he would probably have done no good there. There were many adversaries, but there was a door of hope. With the unerring instincts of a true disciple, when he gets encouragement, he both gave himself to the work, and enlisted others. "Then departed Barnabas to Tarsus, for to seek Saul: and when he had found him, he brought him unto Antioch. And it came to pass, that a whole year they assembled themselves with the church, and taught much people" (vers. 25, 26).

There is no enjoyment stronger or sweeter within our reach in Time, than that which filled the Evangelist's heart at Antioch; but those who do not share his zeal, cannot share his joy. Those who do not keenly desire to see Christ's kingdom coming, experience no delight when it comes.

Here is a group of travellers halting on their journey, and drinking from a well that springs by the side of the dusty road: who of all the band enjoys most the cold water? The thirstiest soul. "Blessed are they that hunger and thirst after righteousness, for they shall be filled." They who wait for the Lord, as lonely night-watchers wait for the morning, are sure of their reward; for to them that look for Him, he will appear, and his coming will be like the morning. If I long to see Christ's likeness in the life of my neighbours, I will certainly be made joyful one day. This desire is a vital seed which will bear its complete fulfilment either in earth or in heaven.

The man who rejoiced in the Grace of God, as he saw it struggling through hard soil, under ungenial skies, in the young believers at Antioch, looks on brighter things to-day. By this time he has asked, in astonishment, with the beloved disciple, "Who are these that are arrayed in white clothing, and whence came they?" They who have an eye to see, and a heart to sympathize with true believers, defaced by many imperfections on earth, shall look, ere long, upon the saints made perfect, standing before the throne in white clothing. The eye that glistens now at the sight of "grace" will be permitted soon to gaze on "glory."

FIFTH EVENING.

THE EXHORTATION THAT BARNABAS GAVE.

"And exhorted them all, that with purpose of heart they would cleave unto the Lord."—ACTS xi. 23.

BARNABAS was happy but not satisfied. The taste which he obtained of God's goodness to the Christians of Antioch, whetted rather than satiated his appetite. When a miser who is already rich, suddenly obtains a great accession to his wealth, the effect of the increase is to stimulate his desire for more. That "sacred thirst" of a dropsied soul, rages more imperiously after every draught. The thirst after the reign of grace in the world which burns in the breasts of earnest Christians, is equal as well as opposite. It also grows by what it feeds on. The more it gets, the more it desires to obtain. The Evangelist did not let the Christians of Antioch alone, because he saw they were truly converted. Perhaps, if he had observed nothing but a grovelling earthliness, or a hollow hypocrisy in the infant church, then he might have held his peace. His experience might have been like Ezekiel's: "Thou shalt be dumb, and shalt not be to them a reprover; for they are a rebellious house" (Ezek. iii. 26). It is comparatively easy to administer reproof to those who are willing to receive it. Hence "to him that hath shall be given, and he shall have abundance."

This is a useful and needful example. There is much fickleness even in true Christians; there is much deceitfulness even in a renewed heart. "Let him that thinketh he standeth take heed lest he fall." We should not assume, either for ourselves or others, that after conversion, the time for warning and exhortation has passed.

God knows our weak points better than we ourselves. His promises of help may serve to show us where we are liable to fall. One of those rich and precious promises that were addressed to Israel through the prophets, is, "I will heal their backslidings." We learn what disease is wasting us from the physician's offer to cure it. Alas! this malady is still epidemic in the Church! How difficult it is to hold fast even the attainments that we may have reached. That same Saul whom Barnabas brought from Tarsus, to be his coadjutor in Antioch, at a later date, and after he had attained a larger experience, placed on record a very full and specific warning against backsliding; "Therefore we ought to give the more earnest heed to the things which we have heard, lest at any time we should let them slip" (Heb. ii. 1). The allusion in the original points to leakage from a vessel. In such a case the water slips gradually and secretly away, and is all absorbed in the earth. Thus, some who seemed charged to the full with grace, have gradually lost the spiritual mind. How shall a wooden vessel be kept watertight, so that the precious supply of the household may not ooze through its joints into the ground? Keep it always full of water. It is by a similar method that grace may be preserved in the heart of a Christian. Keep the vessel full, and the vessel will not leak. Comparatively few make shipwreck of the faith through a deliberate change of opinion in the direction of infidelity. Many

more are ruined ere they are well aware, by a secret backsliding in heart and life. If positive, expressed, argumentative unbelief slays its thousand, a secret, unconfessed, unsuspected backsliding slays its ten thousand. It was to his own disciples and not to strangers that the Master himself addressed the warning, "Watch and pray that ye enter not into temptation."

He "exhorted them all," and therein he acted wisely. He warned old and young, male and female, rich and poor. If the word of truth is rightly divided, every member of the Church will get his share of reproof as well as encouragement. In the Christian brotherhood there is no privileged class. If any one thinks that his age or attainments or office should exempt him from listening to a warning word, that very thing shows that he needs a warning more than his neighbours. Here, perhaps, we may discover one of the reasons why those who, through great attainments, have been raised to a high place in the esteem of brethren and the government of the Church, seem sometimes to stand still or even to fall back in the spiritual life. They have been deprived of their share of reproof. Life remains, but growth is impeded through defect of a necessary element. Some Christian spirits might have retained in later life a sharper edge, if they had not been elevated above the sphere in which the grinding process of faithful reproof goes on.

The substance of the exhortation was, that they should cleave to the Lord. Those who ministered in the Church at that time, went straight to the root of the matter. There is no dallying here about sacramental grace, and the true church, and a rightly consecrated priesthood. One thing in those days possessed the preacher's heart, and burst from his lips, when he addressed the assembled Christians,—“Cleave unto the Lord.” In this “primitive Christianity” everything is made to depend on personal union to a personal Saviour. The exhortation in its nature refers not to the commencement, but to the continuance of faith. Those who have not yet returned, like the prodigal, to the father's bosom, can neither understand nor comply with it. Only those who have embraced Christ can continue cleaving to him. If you bid a man hold fast who has not yet gotten hold, your words will be unintelligible to him. It is as if you should advise a man to lean on the air: if he try to comply, his hands go through, and find no support. But a dove finds that same air a sufficient support for her body's weight. Faith is the wing that spreads and leans on the omnipresent Spirit. As a bird without wings, is a human soul that has never learned to trust in God. There is that around and underneath us which would sustain our weight, but the unbelieving feel nothing firm, and fall helpless. The exhortation to cleave unto the Lord is appropriate to disciples, who have already come to him and tasted his mercy.
